Scotiand.

jAMES couid never forgive Henry for the lofs of his brave officer. He fent to demand fatisfaction; but all the anfwer he received was, that Barton and his crews were lawlefs pirates, and that what had been done againft them ought never to have been refented amongft fovereign princes. James afferted, that Barton was no pirate, becaufe he bore his commiffion; and that he ought to have been convicted of piratical acts before he was treated as being guilty of them. Henry intimated to James, that he was willing to accommodate the affair by way of negociation ; but James thought himfelf affronted by the propofal. foives to in-other affairs till the year 1513 ; when James, though made Erg- he had for fome time before beerı fully refolved upon a lend. war with England, thought it highly neceffary that it fhould have the fanction of his parliament, which he affembled for that purpofe. The young nobility were not only infpired with the fentiments of James, but had been won over by the French ; and the majority of then, as well as of the clergy (which was fomewhat extraordinary, as James was, in effect, to fight againt the pope and his allies), were keen for a war with England. The old counfellors, on the other hand, who faw the flourihing flate of Scotland, arifing fiom a long peace and their commerce, which was protected by a fleet, dreaded the ruinous confequences of the war. The queen naturally headed this party; and the was joined by the earl of Angus and the wiffet part of the nobility. Their argyments made no impreffion upon James, who had re. ceived a prefent from Louis of four fhips laden with wine and flour, and two fhips of war completely equipped, one of them carrying 34 pieces of brafs ordnance. He promifed to the French queen, upon his honour, that he would take the field againit the Englifh ; and the had fent him a frefh letter, gently reproaching him for want of gallantry, and for not being fo good as his word. In fhort, the reafonings of the wifeft and beft part of the nobility were over.reled, and the expedition againf England was refolved on.

The earl of Hume, who was chamberlain of Scotland, was, at this juncture, at the head of 7000 or 8000 men , with whom he committed prodigious de-

vaftations on the Engliih borders. Henry's queen, Catharine of Spain, whom he had left regent of his dominions, iffued a commiffion of array, directed to Sir Thomas Lovel, knight of the garter, for aftembling the militia of the counties of Nottingham, Derby, Warwick, Leicefter, Stafford, Rutland, Northampton, and Lincoln. The management of the war, however, was chiefly committed to the earl of Surry, who affembled the militia of Chefter, Lancafter, Northunberland, Weftmoreland, Cumberland, and the bihopric of Durham. The earf of Hume had by this time laid great part of Northumberland wafte; and his men were returning home laden with booty. The earl of Surry, refolving to intercept them, ordered Sir William Bul. mer to form an ambufh with 1000 archers, at a place called Broomboufe, which was extremely cenvenient for that purpofe, as the Scots were obliged to pafs that way. As the latter expected nothing of that kind, Bumer exécuted his orders with great fuccefs. The archers affaulted the Scots all at once, and made fo good ufe of their arrows, that their main body was put to fight, 500 were killed, and 400 taken, with the Lord Hume's ftandard, which he left on the field of battle; the greatelt part of the plunder being recovered at the fame time. The commonalty of Scotiand termed this expedition of the Lord Hume's the Ill road.
James was more exafperated than ever by this ie- The queer feat, and continued his preparations for invading Eng- endeavours land with additional vigour. His queen did all that $t o$ difuare hecame a wife and prudent wife to divert hiin from his Janies frome fatal purpofe. Janes de-
luded by
his miftrefs earneftly inquired after him.
formed to appear like St Andrew, the apoftle of Scotland, as he is reprefented in painting and fculpture. The church being crowded, this perfonage, with fome difficulty, made his way to the king's feat ; and leaning over it, he fpoke to the following purpofe : "Sir (faid he), I am fent hither to intreat you for this time to delay your expedition, and to proceed no farther in your intended journey: for if you do, you fhall not profper in your enterprife, nor any of your followers. I am further charged to warn you, if ye be fo refractory as to go forward, not to ufe the acquaintance, company, or counfel of women, as ye tender your honour, life, and eftate." After delivering thofe words, he retired through the crowd, and was no more feen, though, when the fervice was ended, James

That this fcene was acted, feems to be paft difpute; for Sir David Lindlay, who was then a young man, and prefent in the church, reported it both to Buchanan and Lindfay the hiftorian. It is, however, equally certain, that the whole was a contrivance of the queen, to whofe other afflictions the ftings of jealoufy were now added. In one of the Scotch inroads into England, one Heron, the proprietor of the caftle of Ford, had been taken prifoner, and fent to Scotland; where he was detained on a charge of murder, of which he feems to have been innocent. The Englifh hiftorians mention this as having paffed after James entered England : but from the latter part of the fuppofed phantom's fpeech, it is probable that it happened before; and that Heron's wife and beautiful daughter had been for fome time foliciting James for his deliverance. Be that as it may, it is too probable that James was fmitten with the charms of the daughter; and that her mother, who was a moft artful woman, knew how to avail herfelf of the conquef. Pretending that fhe had interett enough to procure the releafe of the lord Johnton and Alexander Home, who were prifoners in England, fhe was permitted by James to keep a conftant correfpondence with the earl of Surry, to whom fhe is faid to have betrayed all James's fecrets and meafures. 'The rendezvous of Janes's army was at the Burrow-moor, to which James repaired; and having given orders for the march of his artillery, he lodged at the abbey of Holyroodhoufe. While he was there, another attempt was made to divert him from his purpofe of invading England : but James, deaf to all the folicitations and inventions of his queen, muftered his arny ; and on the 22d of Augut he paffed the Tweed, encamping that night near the banks of the Twiffel. On his arrival at Twiffelhaugh on the Ifth, he called an affembly of his lords together, and made a declaration, that the heirs of all fuch as fhould die in the army, or be killed by the enemy during his ftay in England, fhould have their wards, relief, and marriages of the king ; who, upon that account, difpenfed with their age. This is faid to have been the crifis of that prince's fate. Abandoned to his páffion for his Englifh miftrefs, fhe prevailed with him, at her mother's inftigation, to trifle away his time for fome days; during which interval, the junction of the Englifh army was formed. The earl of Surry, the Englifh general, was then at Pomfret: but ordered the landholders of the neighbouring counties to certify to him in writing what number of men each could furnifh, charging them to
be ready at an hour's warning; and he laid his plan fo, Scotlance. as not to bring lis army into the field till James had advanced fo far into England as to render it very difficult for him to retire without a general battle. This precaution affifted the lady Ford (as fhe is called) in perfuading James that there was no danger in the delay, becaufe the Englifh had not the face of an arny in the field.

In the mean time, the earl of Surry ordered the governors of Berwick and Norham, the two Atrongelt places on the frontiers of England, to prepare for a vigorous refiftance in cafe they were attacked; and directed them to certify low long they could hold out, in hopes, that if they made a refolute defence, James would march on; and leave them in his rear, The governor of Norham's anfwer was, that his caftle was fo well provided, as to leave him no doubt, in cafe of a fiege, to be able to defend it till king Henry fhould return from abroad, and relieve it in perfon. James, ${ }^{3}{ }^{365}$ however, befieged it on the 25 th of Auguft, and bat-take the tered it fo furioufly, that he took it by capitulation the cafles of fixth day after. James then proceeded to the caftle of Norhan, Etal belonging to the family of Manners (now duke Warls. of Rutland) ; which he took and demolifhed likewife, as he alfo did Wark, and arrived before the caftle of Ford. The Scotch army is generally allowed to have confifted of at leaft 50,000 men when it paffed the Tweed. At this time it was encamped on the heights of Cheviot, in the heart of a country naturally barren, and now defolate through the precautions taken by the Englifh general. Being obliged to extend their quarters for the benefit of fubfiffence, the mercenary part of them had acquired a confiderable plunder, with which, as ufual, they retired to their own country, as many more did for want of fubfiftence. The earl of Surry knew their fituation, and ordered the rendezvous of his army, firt at Newcaftle, and then near Norham, having certain intelligence of the vaft defertions daily happening in the Scotch army, which had reduced it greatly. The wetnefs of the feafon rendered his march, efpecially that of the artillery, extremely difficult; but being joined by feveral perfons of diftinction, he marched on the $3^{\text {d }}$ of September to Alnwic, where he was reinforeed by 5000 hardy veteran troops, fent from the Englifh army on the continent, under the command of his fon the lord-admiral of England; fo that the Englifh authors admit his army to have confifted of 26,000 men, all completely armed and provided for the field. James having, in the manifefto which he difperfed on his entering England, given the death of Barton as one of the caufes of his invafion, the lord-admiral had prevailed with Henry to fend him upon this fervice; and he informed James by a letter, that he intended to juftify the death of that pirate in the front of the Englifh army.

By this time the army of James was, by defertion 366 and other caufes, reduced to lefis than half its numbers; fulds fevebut the chief misfortune attending it was his own con-ral of his duct. His indolence and inactivity, joined to the fcan-nobilityo dalous examples of his amours, at fuch a feafon, had difgufted feveral of his greateft men and beft friends; and fome of them more than fufpeeted a correfpondence between the Englifh lady and the earl of Surry. James was deaf to all their remonftrances; and the earl of Angus declared, that he was refolved to return home, as he forefaw that the ruin of the army was inevitable
through
scotland. through the obtinacy of James. He accordingly withdrew to Scotland, but left behind him his two fons. The lord Hume and the earl of Huntley were likewife difcontented. The former had brought his men into the field; but, according to fome Scotch hiftorians, with a defign rather to betray than to ferve Jamcs: but Huntley, though he difliked his matter's conduct, remained firmly attached to his perfon.

The defection or backwardnefs of thofe great men feemed to make no impreffion upon James. He had chofen a ftrong camp in the neighbourhood of Ford, on the fide of a mountain called Floddon-hill; and he was feparated from the Englifh army by the river Till. This advantageous fituation put the carl of Surry under great difficulties ; for it rendered the Scotch army inacceffible, as it was fortified by artillery, and was now well fupplied with provitions by the change of its fituation. The earl drew up a maniffefo, with which he charged Rouge Croix herald, who was attended by a trumpet. It contained fome propofals for an exchange of prifoncrs, which feems to have been calculated to give the lady Ford the more credit with James; but concluded with reproaches for his perfidious invafion of England, and a defiance to James to fight him in a general battle. The herald was farther charged with a verbal commiffion to acquaint James, that the earl of Surry had iffued orders that no quarter fhould be given to any of the Scotch army but the king himfelf.

A council of war was called on this occafion; in which the earl of Huntley and others made ftrong remonftrances againt a general engagement. They fhewed how fatal it muft be to Scotland, fhould it prove unfuccefsful; and that the wifeft courfe James could follow was to return home, where, if he was purfued by the enemy, he could fight to great advantage. The earl of Huntley, however, added, that his opinion fhould be determined by that of the king and council; and that he was equally ready to Thare in his majefty's danger as his glory.

Huntley and the other noblemen were oppofed by the French ambaffador, who reprefented a retreat as dffgraceful to the nobility of Scotland and the arms of Jamcs; and ufed many romantic arguments of the fame kind, which but too well fuited with the king's difpofition. According to Drummond, the council were of opinion, that the king fhould immediately befiege Berwick; but be that as it will, the majority of them were certainly of opinion, that it was beneath the dignity of James to fight the earl of Surry at that nobleman's requifition, and that James could lofe no honour by returning home. Patrick lord Lindfay of Byres, mentioned on a former occafion, and who was prefident of the council, expreffed himfelf fo ftrongly on that head, that James, in a paffion, is faid by the hiftorian Lindfay to have fworn, that if ever he lived to return to Scotland, he would hang that nobleman at his own gate. He ordered Rouge Croix to be called in; and after treating him with great politenefs, he fent a meffage to the earl of Surry by one of his own heralds (Inlay), importing, that he would give the Englifh battle on the Friday following; and that had he received fuch a meffage from the earl even in his own caftle of Edinburgh, he would have left that, and all other bufinefs, to have fought him. With this meflage,

31 S C O
a fmall manifetto, in vindication of James's conduet, was fent by the fame herald.

The carl of Suny, who was then fo infirm that le was càrried about in a fedan or chariot, had forefeen that James would return an anfwer by one of his own heralds; but, unwilling that he thould obtain any knowledge of the fituation of the Englifh camp, he ordered proper perfons to receive him at two miles diftance, where foon after he attended himfelf in perfon. Inay executcd his commiffion without paying much refpect to the, perfon of the Englifh general; who dif. miffed hin, after beftowing great compliments upon the honour and courage of James. The earl then ordered his army to march in the line of battle towards Wollerhaugh. There he was joined by Rouge Croix, herald, who gave him an account of the ftrong fituation of the Scotttifh camp; but the advanced polts of the Englifl army were then within three miles of their enemies, and the earl of Surry found his dificultics daily increafing. The roads were broken up, the fivelling of the rivers cut him off from the neceffary communications for fupplying his army, and nothing but a battle could fave him either from being difbanded or deftroyed.

James feems to have fo far regarded the advice of lis wifeft counfellors, as not to abandon his frong fituation. They endeavoured to perfuade him, that it was a fufficient guard to his honour, if he did not decline the battle on the day appointed; and that his engagement did not bind him to fight upon difadvanta. geous ground. The Scots, at the fame time, knew of their enemy's diftreffes; and, as Drımmond eleanantly expreffes it, they remonftrated to their king, that he lacked nothing but patience to be victorious. The His ${ }^{369}$ Scots thus lying on the defenfive, the earl of Surry dent conagain fent Rouge Croix to inform James that he was duct. ready to give him battle. James was fenfibly nettled at this tacit imputation upon his honour, and perhaps was inwardly vexed for having followed the wife advice of his noblemen. It is certain, from the beft authorities, that he neglected the neceflary precautions for guarding the paffages of the Till, which the Englifh crofled, partly at a place where it was fordable, and partly at a bridge. We are told, not without a great appearance of probability, that while the Englifh were paffing the bridge, Borthwick, mafter of the Scotch artillery, fell upon his knees, and begged permiffion from James to point his cannon againt the bridge ; but that James anfwered him in a paffion, that it muft be at the peril of his (Borthwick's) head, and that he was refolved to fee all his enemies that day on the plain before him in a body. The earl of Surry, after paffing the Till, took poffef fion of Braxton, which lay to the right of the Scotch camp; and by that fituation he cut off the communica. tion of his enemies with the Tweed, and commanded the Till below Eton-cafte. The Scotch generals faw themfelves now in danger of being reduced to the fame ftraits in which their enemies had been involved two days before, and their country open to an invafion of the Englifh army. James had fecret intelligence that this was far from being the intention of the Englifh general ; and imagining that the latter's intention was to take poffeffion of a ftrong camp upon a hill between him and the Tweed, which would give the Englifh a farther command of the country, he refolved to be be-
A. 2
forc.

Scotland fore-hand with the earl, and gave orders for making large fires of green wood, that the fmoke might cover his march along the height, to take advantage of that eminence. But while this ftratagem concealed his march from the Englifh, their movements were concealed from him: for when he came to the brow of the height over which he had marched, he found the enemy drawn up in order of battle on the plain, but fo clofe to the height where he was, that his artillery, on which his great dependence was, mult overfhoot them.
370 Acrount of A battle was now not only unavoidable, but the only the battle of means of faving the Scotch army, which was probably Flodden. far from being a difagreeable circumftance to James. His perfon was fo dear to his troops, that many of them dreffed themfelves as nearly as they could in the fame coats of armour and with the fame diftinctions that James wore that day. His generals had earneftly defired hin to retire to a place of fafety, where his perfon would be fecure in all events: but he obftinately refufed to follow their advice; and on the ninth of September, early in the morning, difpofitions were ordered for the line of battle. The command of the van was allotted to the earl of Huntley; the earls of Lenox and Argyle commanded the Highlanders under James, who, fome fay, ferved only as a volunteer; and the earls of Crawford and Montrofe led the body of referve. The earl of Surry gave the command of his van to his fon, the lord-admiral; his right wing was commanded by his other fon, Sir Edward Howard; and his left by Sir Marmaduke Conttable. The rear was commanded by the earl himfelf, lord Dacres, and Sir Edward Stanley. Under thofe leaders ferved the flower of all the nobility and gentry then in England. Other writers give different accounts of the difpofition of the Englifh army, but they may be reconciled by the different forms into which the battle was thrown before it was decided. The lord Hume is mentioned as ferving under the earls of Crawford and Montrofe, and Hepburn earl of Bothwel was in the rear.

The firt motion of the Englifh army was by the lord-admiral, who fuddenly wheeled to the right, and feized a pafs at Milford, where he planted his artillery fo as to command the moft floping part of the afcent where the Scots were drawn up ; and it did great execution. The Scots had not forefeen this manocuvre ; and it put them into fuch diforder, that the earl of Huntley found it neceffary to attack the lord-admiral ; which he did with fo much fury, that he drove him from his polt; and the confequence muft have been fatal to the Englifh, had not his precipitate retreat been covered by fome fquadrons of horfe under the lord Dacres, which gave the lord-admiral an opportunity of rallying and new-forming his men. The carl of Surry now found it neceffary to advance to the front, fo that the Englifh army formed one continued line, which galled the Scots with perpetual difcharges of their artillery and bows. The Highlanders, as ufual, impatient to come to a clofe fight, and to thare in the honour of the day, which they now thought their own, rufhed down the declivity with their broad-fwords, but without order or difcipline, and before the reft of the army, particularly the divifion under lord Hume, advanced to fupport them. ' Their impetuofity, hewever, made a confiderable impreffion upon the main battle of the Englifh; and the king bringing up the earl of

Bothwel's referve, the battle became genieral and doutl. Scoltand. ful: but by this time the lord-admiral, having again formed his men, came to the affiftance of his father, and charged the divifion under the earls of Crawford and Montrofe, who were marching up to fupport the Highlanders, among whom the king and his attendants were now fighting on foot: while Stanley, making a circuit round the hill, attacked the Highlanders in the rear. Crawford and Moutrofe, not being feconded, according to the Scotch hiftorians, by the Humes, were routed; and thus all that part of the Scotch army which was engaged under their king, was completely furrounded by the divifion of the Englifh under Surry, Stanley, and the lord-admiral. In this terrible fituation, James acted with a coolnefs not common to his temper. He drew up his men in a circular form, and their valour more than once opened the ranks of the Englifh, or obliged them to ftand aloof, and again have recourfe to their bows and artillery. The chief of the scotch nobility made frefh attempts to prevail with James to make his $\in$ fcape while it was practicable; but he obitinately continued the fight; and thereby became acceffory to his own ruin, and that of his troops, whom the Englifh would gladly have fuffered to retreat. He faw the earls of Montrofe, Crawford, Argyle, and Lenox, fall by his fide, with the brave, The Scots Argyle, and Lenox, fall by his fide, with the bravelt and their
of his men lying dead on the fpot; and darknefs now king killed.
coming on, he himfelf was killed by an unknown hand. coming on, he himfelf was killed by an unknown hand. The Englifh were ignorant of the victory they had gained; and had actually retreated from the field of battle, with a defign of renewing it next morning.

This difafter was evidently owing to the romantic difpofition of the king himfelf, and to the want of difcipline among many of his foldiers; though fome writers have alcribed it to the treachery of lord Hume. Many of James's domeftics knew and mourned over his body; and it appeared that he had received two mortal. wounds, one through the trunk with an arrow, and the other on the head with a ball. His coat of armour was prefented to queen Catharine, who informed her hurband, then in France, of the victory over the Scots. The lofs on both fides, in this engagement, is far from being afcertained; though Ṕolydore Virgil, who lived at the time, mentions the lofs of the Englifh at 5000, and that of the Scots at 10,000 .

After the death of king James IV. the adminiftra- The qureern tion devolved on the queen-dowager; but fhe being bigdi,uager af with a polthumous child, and unable to bear the weight funnes the of public bufinefs, accepted of Beaton archbifiop at ment. Glaigow and chancellor of Scotland, with the earls of Huntley, Angus, and Arran, to affit her in the affairs of government. Soon after her hufband's death fle had wrote an affecting letter to her brother the king of the king of England, informing him of her pregnancy, fetting forth Englaido the deplorable flate of the kingdom, with her own condition, and imploring his friendfhip and protection for herfelf and her infant fon. This letter feems never to have been communicated by Henry to his council; but he anfwered it, and informed his fifter, that if the Scots would have peace, they fhould have peace, and war if they chofe it. "He added (according to Drummond), that her hufband had fallen by his own indif. creet rafhnefs, and foolifh kindnefs to France; that lee regretted his death as his allys, and frould be willing to prohibit all boftility againft the country of Scotland

## $\mathrm{S} \mathrm{C} O$

Seotland. during the minority of her fon. For a remedy of prefent evils, one year's truce and a day longer was yielded unto; in which time he had leifure to profecute his defigns againft France, without fear of beinr difturbed or diverted by the incurfions and inroads of the Scots upon his borders."

Thus far Drummond: but though Henry might grant this time to his fifter's intreaty, yet it certainly did not become a national meafure ; for it appears by a letter dated two years after, from che Scots council to the king of France, publifhed by Rymer, that the Scots never had defired a truce. So far from that, the French influence, joined to a defire of revenge, remained fo ftrong in the kingdom, that after the meeting of the parliament, fome of the members were fo violent as to propofe a renewal of the war. This motion was indeed over.ruled by the more moderate part of the affembly: but they could not be brought to make any advances towards Henry for a peace ; and every day was now big with public calanity, which feems to have gathered frength while the queen was in child-bed. The arclibifhopric of St Andrew's being vacant, it was offered by univerfal confent to Elphinfton bifhop of Aberdeen; but being now old and infirm, he declined it. Three competitors for that high dignity then appeared. The firft was Gawin Douglas, who was then abbot of Aherbrothwic, to which he was prefented by the queen upon her recovery (having been brought to bed of a fon) the very day before her marriage with his nephew the earl of Angus: and upon the death of bifhop Elphinton in November following, the prefented him likewife to the arelibifhopric of St Andrew's. The fecond competitor was John Hepburn, prior of St Andrew's; a bold, avaricious, reftlefs, but threwd and fenfible prieft. By his office he had received the rents of the fee during its vacancy; and having prevailed with the canons, on pretence of ancient privileges, to elect him archbifhop, without regard to the nomination either of the queen or pope, he drove Douglas's fervants from the cafle of St Andrew's, of which they had taken poffeffion. The third and moft powerful competitor was Forman Eifhop of Moray in Scotland, and archbihop of Bourges in France, a dignity to which he had been raifed for his public fervices. He had in his intereft not only the duke of Albany (fon to the traitor duke) firft prince of the blood, but alfo the court of Rome itfelf; and having received the pope's bull and nomination to the dignity, he was confidered by the Scoteh clergy in general, and by the principal temants and dependents upon the fee, as the legal archbiftop.

The preference given to Forman difcouraged Douglas from purfuing his pretenfions; but Hepburn, being fupported by the clan of his nwn name and by the Humes, made fo formidable a head againft his rivals, that none could be found daring enough to publifh the papal bull in favour of Forman. The friends of the latter, however, having intimated to the earl of Hume, that his credit' at 'the court of Rome could eafily procure the rich abbey of Coldingham for his younger brother, the earl put himfelf at the head of his followers, and, notwithfanding all the oppofition given by the Hepburns, he proclaimed the pope's bull over the crofs of Edinburgh, This daring action plainly proved that the eanl of Hume had nore power than

## : 1 s co

the queen-regent herfelf; but Hepburn's refolution, Sco:land. and the greatnefs of his friends, obliged Forman to agree to a compromife. Hepburn was advanced to the fee of Moray, without accounting for the revenues of the archbifhopric, which he had received during its vacancy; and he gave Forman a prefent of three thoufand crowns, to be divided among his friends and followers.

In April 1514 , the pofthumous fon, of whom the The queenqueen had been delivered in Stirling caftle, was by the dowager bifhop of Caithnefs baptized Alexander. On the 6th married to of Augult this year fhe was married to the earl of An- ${ }_{\text {Angus. }}^{\text {the earl }}$ gus ; than which nothing could be accounted more impolitic. She had neither confulted her brother nor the ftates of Scotland in the match; and by her having accepted of a hufband, the in fact refigned all claim to the regency under the late king's will. The Douglaffes did not difpute her having divefted herfelf of the regency: but they affirmed, that the ftates might lawfully reinftate her in it; and that the peace of the kingdom required it, as it was the only meafure that could preferve the happy tranquillity which then fubfifted between Scotland and England. The carl of Hume put himfelf at the head of the oppofition to this propofal. He knew that he had enemies, and he dreaded that the farther aggrandizement of Angus mult weaken his intereft on the borders. He was joined by a number of the young nobility, who, though otherwife divided, united againft Angus. In fhort, the general opinion was, that the Douglaffes were already too great ; and that; fhould the queen be reinftated in the regency, they mult be abfolute within the kingdom, and engrofs all places of power and profit. It was added by the earl of Hume, that he had, out of refpect to 'the late king's memory, fubmitted to the queen's goverrment; and that, now the had made a voluntary abdication of it by her marriage, it ought not to be rencwed.

e duke
After fome delib ations, the duke of Albany was The duke chofen regent. He was a man poffeffed of all the qua- of Albangs
lities requifite for a good govemor; nor did he deceive chofen relities requifite for a good govemor; nor did he deceive cholen
the expectations of the public. On his arrival at ${ }^{\text {gent. }}$ Glafgow, he took upon him the titles of earl of March, Marr, Garioch, lord of Annandale, and of the ifle of Man, regent and protector of the kingdom of Scotland. On his arrival at Edinburgh he was received in form by the three eftates of the kingdom, and the queen had met him at fome diftance from the town. The parliament then refumed its feffion, and the three eftates took an oath of obedience, till the king, then an infant of four years old, fhould arrive at the years of maturity.

The firt thing at which the regent aimed, was the conciliating the differences amongit the various contending families in the kingdom; at the fame time that he fuppreffed fome daring robbers, one of whom is faid to have. had no fewer than 800 attendants in his infamous profeffion.. So great was his love of good order and decency, that he punifhed the lord Drummond with the lofs of his eftate for having fruck Lyon: king at arms, whofe perfon, as the firit herald in ocotland, ought to have' been held facred. Nay, it was at the earneft folicitation of Lyon himfelf, and many of the chief nobility, that a greater punifhment was not inflicted. However, the forfciture was afterwards: remitted:

Scotland. remitted; but not before Drummond had, upon his knees, acknowledged his offence, and fubmitted himfelf before Lyon.
377
Hepburn The regent had not been long in office before he hecomes his took into favour Hepburn the prior of St Andrew's, chief favaurite. whom lie confulted for information concerning the fate of Scotland. Hepburn acquainted him with all the feuds and animofities which raged among the great families of Scotland, their ferocious character, and barbarous behaviour to their enemies. He reprefented the civil power as too weak to curb thefe potent chieftains; and gave it as his opinion that the regent's adminittration ought to be fupported by foreign arms, meaning thofe of France.

Hepburn is faid allo to have gained an afcendency over the regent by means of large fums of money laid out among his domeftics, by a fawning and plaufible addrefs, and by well-directed flatteries ; and he employed this afcendency to deftroy thofe who were obnoxious to himfelf. The earl of Hume, as being the firt fubject in rark and authority, became obnoxious to the regent through the infinuations of Hepburn; and as that nobleman had frequent occafion to be at court in virtue of his office of chamberlain, he foon perceived that neither he nor his friends were welcome guefts there. Alarmed for his own fafety, he refolved to form a party alongft with the queen-mother and her new hufband againft the regent. This was by no means a difficult tafk: for the queen naturally imagined that her new hufband ought to have had fome fhare in the government ; and the earl of Angus readily concurred in the fcheme. In the mean time, the regent was making a progrefs. through Scotland, while bloody feuds were raging among the nobles: but before any remedy could be applied to thefe diforders, he was informed of the fchemes laid by the queen-mother and her party; and that fhe had refolved to fly into England with her two infants. On this he inftantly returned to Edinburgh; and, as no time was to be loft, fet out at midnight that very night, and furprifed the caftle of Stirling, where he found the queen-mother and her two infants.

The regent, after this bold ftep, took care to fhow that the care of the royal infants was his chief ftudy. As he himfelf was nearly allied to the crown, in order to remove all fufpicions and calumnies on that account, he committed the care of the king and his brother to three noblemen of the moft unexceptionable characters in the kingdom, but of whom we now know the name only of one, viz. the earl of Lenox. They were appointed to attend the princes by turns; to whom alfo a guard, confiting partly of French and partly of Scots, was affigned; and the queen-mother was left at liberty to refide where fhe pleafed.

The earl of Hume, finding his fchemes thus abortive, retired to his own eftate; from whence he was foon after drawn, and obliged to fly into England, by the earls of Arran and Lenox. The queen-mother retired to a monaftery at Coldftream ; and meffengers were difpatched to the court of England, to know how Henry would have his fifter difpofed of. He ordered the lord Dacres, his warden of the marches, to attend her to Harbottle-caftle in Northumberland; and here The was delivered of her daughter the Lady Mary Douglas, mother to Henry lord Darnley, father to James I.
of England. The regent difpatched ambaffadors to Hen. Scotiand ry, in order to vindicate his own conduct. He likewife fent to affure the queen that fhe had nothing to fear in Scotland; and to invite her to return thither, where fhe fhould at all times be admitted to fee her children. This offer, however, fhe declined; and fet out for Lon- The queen don, where the was affectionately received and enter- goes to tained by her brother. But in the mean time many England. diforders were committed throughout the kingdom by the party of the queen-mother; though, by the interpofition of archbifhop Forman, they were at prefent terminated without bloodfhed, and fome of the principal offenders were perfuaded to return to their duty. Among thefe was the earl of Angus himfelf, the queen's ${ }^{38}{ }^{38 \mathrm{r}}$ huf hufband; which when king Henry heard, he exclaim-band fubed, "That the earl, by deferting his wife, had acted nits to the like a Scot." Lord Hume refufed to furrender himfelf, regent. or to accept of the regent's terms; and was of confequence declared a traitor, and his eftate confifcated. All this time he had been infefting the borders at the head of a lawlefs banditti; and now he began to commit fuch devaftations, that the regent found it neceffary to march againft him at the liead of 1000 difciplined troops. Hume being obliged to lay down his arms, was fent prifoner to Edinburgh caftle; where the regent very unaccountably committed him to the charge of his brother-in-law the earl of Arran. Hume eafily found means to gain over this near relation to his own party; and both of them, in the month of October 1515 , efcaped to the borders, where they foon renewed 382
Rebellion hottilities. Both the earls were now proclaimed traitors, aud combut Hume was allowed fifteen days to furrender him- motions in felf. This fhort interval the regent employed in quafh- different ing the rebellion, for which purpofe the parliament had ${ }^{\text {places. }}$ allowed him 15,000 men. He befieged the caftle of Hamilton, the earl of Arran's chief feat, which was in no condition of defence : but he was prevailed upon by Arran's mother, daughter to James II. and aunt to the regent himfelf, to forbear further hoftilities, and even to pardon her fon, provided he fhould return to his duty. Arran accordingly fubmitted; but the public tranquillity was not by that means reftored. An affo. ciation, at the head of which was the earl of Moray, the king's natural brother, had been formed againft the earl of Huntley. 'I'hat nobleman was too well attended to fear any danger by day; but his enemies found means to introduce fome armed troops in the nighttime into Edinburgh. On this a fierce fkirmifh enfued, in which fome were killed on both fides; but farther bloodfhed was prevented by the regent, who confined all the lords in prifon till he had brought about a general reconciliation. One Hay, who had been very active in ftirring up the quarrels, was banifhed to France ; and only the earl of Hume now continued in arms.

In 1516 died the young duke of Rothefay: an event which brought the regent one degree nearer the crown, fo that he was declared heir in cafe of the demife of young James. Negociations were then entered into about prolonging the truce which at that time fubfifted with England; but Henry infifting upon a removal of the regent from his place, they were for the prefent dropped. Finding, however, that he could neither prevail on the parliament as a body to difmifs the regent, nor form a party of any confequence againt him,

## S C O [ 7 ] S C O

3 cotland. .383
he at laft confented to a prolongation of the truce for a year.
In ${ }^{1} 517$, the affairs of the regent requiring his prefence in France, he refolved, before his departure, to remove the earl of Hume, who, as we have feen, alone continued to difurb the public tranquillity. Under pretence of fettling fome differences which ftill remained with England, he called a convention of the nobility; and fent fpecial letters to the earl of Hume and his brother to attend, on account of their great knowledge in Englifh affairs. Both of them imprudently obeyed the fummons, and were feized and executed as foon as they arrived at Edinburgh. But whatever occafion there might be for this feverity, it loft the affections of the people to fuch a degree, that the regent could fcarce get the place filled up which Lord Hume had poffeffed. That of lord warden of the marches he at laft gave to his French favourite La Beaute, called by hiftorians Sir Anthony D'Arcy. The poft of lord chamberlain was given to Lord Fleming. Soon after this, the regent levied an army, on pretence of reprefsing fome difturbances on the borders. Thefe being fpeedily quelled, he feized on his return upon the earl of Lenox, and forced him to deliver up his caftle of Dumbarton; not choofing to leave it, during his intended abfence in France, in the cuftody of a nobleman of fufpected fidelity; and from fimilar motives, he afterwards took him along with him on his departure for the continent. He then procured himfelf to be nominated ambaffador to France, in which character he left the kingdom; having committed the government to the archbifhops of St Andrew's and Glafgow, the earls of Arran, Angus, Huntley, and Argyle, with the warden D'Arcy, on whom was his chief dependence.

On the departure of the regent, the queen-mother Ieft the Englifh court ; and arrived with a noble retinue at Berwick, on purpofe to vifit her fon. Here fhe was received by her hufband; for whom the had contracted an invincible averfion, either on account of his infidelities to her bed, or becaufe he had deferted her in the manner already related. However, fhe fup. preffed her refentment for the prefent, and accompanied him to Edinburgh. Here, in confequence of the propofals made by the regent, fhe demanded accefs to her fon; but was refufed by D'A rcy. Lord Erfkine, however, who was one of thofe to whom the care of the young king was comnitted, conveyed him to the caftle of Craigmillar (where D'Arcy had no jurifdiction), on pretence that the plague was in Edinburgh; and there the queen was admitted; but this gave fuch offence to D'Arcy, that Lord Erkine was obliged to carry back the king to the caftle of Edinburgh, where all further accefs was denied to his mother. In fhort, the behaviour of this favourite was on all occafions fo haughty and violent, that he rendered himfelf univerfally odious; and was, at laft murdered, with all his attendants, in his way to Dunfe, where he propofed to hold a court of juftice.-His death was very little regretted; yet his murderers were profecuted with the utmoft feverity, and feveral perfons of diftinction declared rebels on that account.
Meanwhile, the regent was treated with high marks of diftinction in France. The king flowed him the greateft refpect, promifed to affilt in eftablifing his
authority in Scotland, and folemnly confirmed the an- Scotland. cient league between the two kingdoms. Soon after, the earl of Lenox arrived from France, with affurances of protection and affiftance from the king, who was highly pleafed at the zeal of the governors in puniffing D'Arcy's murderers; and 500 foldiers arrived with him, to reinforce the garrifons, efpecially that of Dunbar.

All this time the queen-mother continued at Edin- The queen burgh, employing herfelf in attempts to procure a di. attempts to vorce from her hufband, under pretence of his having divorce herbeen previoufly contracted to another. The affairs of hußand. the kingdom again began to fall into confufion, and many murders and commotions happened in different parts of the country. The earl of Arran had the chief direction in the ftate; but the earl of Angus, notwithftanding the difference with his wife, had ftill great intereft, and waited every opportunity to oppofe him. This emulation produced an encounter at Edinburgh; Skirmifh in which victory declared for Angus, and 72 of the bet ween the routed party were killed. This fkirmifh was fought on followers of the 30 th of April 1519 , and has been known in Scots Arran and. hiftory by the name of Cleanfe the Cauferway.

On the 19th of November 1521, the regent returned from France. He found the kingdom in great diforder. The earl of Angus domineered in the field, but his antagonifts outvoted his party in the parliament: The queen mother, who had fixed her affections on a third hufband, hated all parties almoft equally; but joined the duke of Albany, in hopes of his depriving the other two of their power. 'I'his happened according to her expectation; and fhe was with the regent when he made a kind of triumphal entry into Edinburgh, attended by a number of perfons of the firft rank. - The carl of Angus was now fummoned to appear as a criminal; but his wife interceded for him, not out of any remains of affection, but becaufe he gave her no oppofition in the procefs of divorce which was depending between them.-In the mean time, Hen. ry VIII. of England, perceiving that the Scots were War witio entirely devoted to the lrench intereft, fent a letter full England. of accufations againft the regent, and threats againft the whole nation, if they did not renounce that alliance. No regard being paid to thefe requifitions, lord Dacres was ordered to proclaim upon the borders, that the Scots muft ftand to their peril- if they did not fall in with his meafures by the firft of March 1522 . This producing no effect, Henry feized the effects of all the Scots refiding in England, and banifhed them his dominions, after marking them, according to bihop Lefley, with a crofs, to ditinguifh them from his other fubjects. A war was the unavoidable confequence of thefe proceedings ; and, on the 30 th of April, the earl. of Shrewfury, Henry's fteward of the houfehold, and knight of the garter, was appointed commander in chief of the army that was to act againft the Scots; and, in the mean time, Lord Dacres made an inroad as far as Kelfo, plundering and burning wherever he came.
The regent ordered his army to rendezvous at Rof: The Scat9lin ; but the Scots, remembering the difafter at Elod. refife to $1 \mathrm{ra}_{\text {. }}$ don, fhowed an extreme averfion to the war, and even vade Eng told the regent to his face, that though they would de- ${ }^{\text {and }}$ fend themfelves in cafe they were attacked, they would not engage in a French cquarel. The regent remon-

Arated, but without effees; and as the malcontents continued obftinate, he was in danger of being left by himfelf, when the queen-mother interpofed, and prevailed upon Lord Dacres to agree to a conference, the event of which was a renewal of the negociations for peace.
The regent perceiving, by the difgrace of this expedition, that he had loft his former popularity, determined to revenge himfelf; and therefore told thofe whom he could truft, that he was about to return to France, fron whence he fhould bring fuch a force by fea and land, as fhould render it unneceffary for him to afk leave of the Scots any more to invade England. Accordingly he embarked for France on the 25th of October, but publicly gave out that he would return the enfuing Auguft.

On the regent's arrival in France, he made a de. mand of 10,000 foot and 5000 horfe for carrying on the war againft England; but the fituation of King Francis did not then allow him to fare fo many at once, though he was daily fending over fhips with men, ammunition, and money, for the French garrifons in Scotland. At laft it was publicly known in England that the regent was about to return with a ftrong fleet, and 4000 of the beft troops in France; upon which Henry deternnined, if pofible, to intercept him. Sir William Fitz-Williams, with 36 large fhips, was ordered to block up the French fquadron in the harbour of Finhead; Sir Anthony Poyntz cruized with ano. ther in the weftern feas, as Sir Chriftopher Dow and Sir Henry Shireburn did in the northern.with a third fquadron. The duke of Albany, being unable to cope with Fitz-Williams, was obliged to fet out from another port with 12 fhips, having fome troops on board. 'They fell in with Fitz-Williams's fquadron; two of their fhips were funk, and the reft driven back to Dieppe. Fitz-Williams then made a defcent at I'report, where he burnt 18 French flips, and returned to his fation off Finhead. By this time the French had given the duke fuch a reiuforcement as made him an overmatch for the Englifh admiral, liad the men bcen equally good; but the regent had no dependence upon French failors when put in competition with the Eng. lifh. Inftead of coming to an engagement, therefore, as foon as Fitz.Williams appeared, he difembarked his foldiers, as if he had intelided to delay his expedition for that year but a form foon arifing, which obliged the Englifh fleet to return to the Downs, the regent took that opportunity of reimbarking his men, and, failing by the weftern coatts, arrived fate in Scotland.
All this time the earl of Surry had been carrying on the moft cruel and deftructive war againt Scotland; infomuch that, according to Cardinal Welley, " there was left neither loufe, fortrefs, village, tree, cattle, corn, nor other fuccour for man," in the countries of 'Tweeddale and March. .The regent's return did not imme. diately put a ftop to thefe devaftations; for the inteftine divifions in Scotland prevented him from taking the field. His party was weakened by his long abfence, and the queen-mother had been very active in ftrengthening the Englifh intereft. A parliament was called in 1522 , where it was debated, Whether peace or war with England Thould be refolved on? and the determinatiors of this parliament were evidently on the worft fide of the queftion. Henry was at this time fo
well dipofed to cultivate a' friendfhip with Scotiand, Scotland. that he offered to James his eldeft fifter Mary in marriage ; but the Scots, animated by the appearance of their French auxiliaries, and corrupted by their gold, rejected all terms, and refolved upon war. However, when the army was affembled, and had advanced to the borders, he found the fame difficulty he had formetly which is experienced ; for they flatly refufed to enter England. With great difficulty he prevailed upon part of the army to pafs the Tweed; but not meeting with fuccefs, he was obliged to return to Scotland, which at this time was divided into four factions. One of thefe was lieaded by the regent, another by the queen, a third by the earl of Arran, and a fourth by the earl of Angus, who had lived as an exile under Henry's protection. Had it been poffible for the earl of Angus and his wife to have been reconciled to each other, it would have been much for the intereft of the kingdom; but all the art even of Cardinal Wolfey could not effect this. At The duke all parties united againf him, refigned his office refigns his all parties united againft him, refigned his office of re-refigns his gent of Scotland. On the 14 th of March that year, he went on board one of his own fhips for France, from whence he never returned to Scotland. He did not indeed make a formal abdication of his government; fo far from that, he requefted the nobility, whom he convened for that purpofe, to enter into no alliance with England during his abfence, which he faid would continue no longer than the firt of September following ; to make no alteration in the governinent; and to keep the king at Stirling.

The nobility, who were impatient for the abfence of the regent, readily promifed whatever he required, but without any intention of performing it : nor, indeed, was it in their power to comply ; for it had been previoully determined that James limfelf fhould now take the adminiftration into his own hands. According to Buchanan, the regent had no fooner returued to France than Scotland relapled into all the miferies of anarchy. The queen-dowager had the management of public affairs, but her power was limited. The earl of Arran, apprehendiug danger from the Englifh, entered into the views of the French party. 'The queen-mother's diflike to her luubaud continued as great as ever, which prevented an union among thofe who were in the Englifh intereft; and Wolfey took that opportunity of reftoring the earl of Angus to all his importance in Scotland.The queen-mother, therefore, had no other way left to keep herfelf in power, but to bring James himfelf into action. On the 29th of July, therefore, he removed from Stirling to the abbey of Holyroodhoufe; where he took upon himfelf the exercife of government, upon him by convoking the nobility, and oblifing them to fwear felf the goallegiance to his perfon a fecond time. The truce with Bngland was now prolonged, and the queen's party carried all before them. On the very day in which the laft truce was figned with England, the carl of Angus entered Scotland. He had been invited from his exile in France into England, where he was careffed by Henry, who difregarded all his fiter's intreaties to ferd him back to France, and now refolved to fupport him in Anそus roScotland. Yet, though his declared intention in fend- turns to ing the earl to Scotland was, that the latter might balance the French party there, the king enjoined him to fue, in the nott humble manner, for a reconciliation

## $\$ \mathrm{~S} 0 \quad 1$

Scotland. with his swife, and to co-operate with the carl of Arran, who now acted as prime minitter, as long as he Thould oppofe the French party. On his return, however, he found himfelf excluded from all fhare in the governmert, brat foon found means to form a ftrong party in oppofition to Arrau. In the mean time, ambaffadors were fent to the court of England, in order At the fame time a match was propofed between the young king of Scotland and Menry's daughter. This had originally been a fcheme of Henry himfelf; but the emperor Charles V. had refolved to outbid him, by offering James a princefs of his own family, with an immenfe treafure. The ambaffadors arrived at Lourdon on the 19th of December, and found Henry very much difpofed both to the peace and to the match. Commiffioners were appointed to treat of both; but they were inftructed to demand by way of preliminary, that the Scots fhould abfolutely renounce their league with France, and that James chould be fent for education to England till he fhould be of a proper age for marriage. The Scottifh commiffioners declared, that they had no inftructions on thefe points : but one of them, the earl of Caffils, offered to return to Scotland, and bring a definitive anfwer from the three flates; and in the mean time the truce was prolonged to the 15 th of May 1525. gus the leading man in parliament; by whofe influeuce it was determined that the Scots fhould renounce their league with France, and frbftitute in place of it a $\mathfrak{G}$ milar league with England; and that the king fhould be brought up at the Englifh court till he was of an age proper for marriage : but at the fame time they required of Henry to break off all engasements with Charles V. who was the bitter enemy of Francis, and at that time detained him prifoner. 'To this the Englifh monarch returned but a cold anfwer, being then engaged in a number of treaties with the emperor, among which one was concerning the marriage of the princefs Mary with his imperial majefty hinnfelf ; however, before Caffils returned, a trice of two years and a half was concluded between England and Scotland. been a warm advocate for an alliance between the two nations, yet difilked the means of bringing it about.She faw her hufband's party increafing every day in power ; fo that now the had no other refource than in keeping poffeffion of the king's perfon, whom fhe removed to the caftle of Edinburgh. Being now under the neceffity of convening a parliament, it was refolved to lold it within the caftle; which, being an unconftitutional meafure, gave a great handle to the earl of Arran and his party to complain of the innovation. They began with remonftrances; but finding them ineffectual, they formed a blockade of the cattle with 2000 men, and cut off all communication with the town by means of trenches. As no provifions could thus be got into the caftle, the queen ordered fome of the cannon to be turned againft the town, in order to force the citizens to put an end to the blockade. Several fhot were fired: but when all things appeared ready for a civil war, matters were compromifed, though in fuch an imperfect manner as left very little room to hope for perfect tranquillity. It was agreed, that the king fhould remove out of the caftle of Edinburgh to the palace of Holy-

Vou. XVII. Part I.

97 S C
roodhoufe, from whence he thould repair with all pol- Scotland. fible magnificence to his parliament, in the houfe where it was commonly held ; and there a finining hand was to be put to ail differences. 'This agreement was figned on 401 the $25^{\text {th }}$ of February 1526. T'he parliament accord-Marriage invly met, and the king's marriage with the princefs of of James England was confirmed ; but no mention was made of Englifh the king's being fent for his education into that coun-princefs res try; on the contrary, he was committed to the care of folved ono eight lords of parliament. Thefe were to have the cuftody of the king's perfor, every one his month fucceffively, and the whole to ftand for the government of the ftate ; yet with this limitation, "that the king, by their counfel, fhould not ordain or determine any thing in great affairs to which the queen, as princefs and dowager, did not give her confent." This partition of power, by giving the queen a negative in all public matters, foon threw every thing into confurfion. 'The earl of Angus, by leading the king into varions fcenes of pleafure and diffipation, fo gained the afcendency over liim, that he became in a manner totally guided by him. The queen-mother, perceiving that the could not have accefs to her fon, without at the fame time being in company, with her hufband, whom fhe hated, re- 40 z tired fuddenly with her domeftics to Stirling. Thus the He is left king was left under the fole tuition of the earl of An- in the gus, who made a very bad ufe of his power, engroffing the carl of into his own hands, or thofe of his friends, all the Angus. places of honour or profit. The archbifhop of St Andrew's, having now joined the king's party, advifed her to make a formal demand upon her hulband, that the order of government which had been fettled lait parliament fhonld take place, and that under a penalty he fhould fet the king at liberty. To this the earl anfivered by a kind of manifeito drawn up by his brother; in which he declared, that " the earl of Angus having been (o highly favoured by his good uncle the king of England, and that James himfelf being under great obligations to him, neither the queeu nor the other lords need be in any pain about him, as he chofe to fpend his time with the earl of Angus 1 ather than with any lord in the kin?dom." james hinfelf, however, Attempts had difcernment fufficient to perceive, that, notivith-to recower ftanding all the fair pretences of the earl of Angus, he his liberty. was in fact no better than his prifoner; and refolved to attempt the recovery of his liberty. The earls of Argyle and Arran had for fome time retired from court, where they had no fhare in the adminiftration, and were living on their own eftates; but the earl of Lenox diffembled his fentiments fo well, that he was neither fufpected by the earl of Angus, nor any of the Douglas family, who were his partifans. The king being gained upon by his infinuating behaviour, opened his mind to him, and requefted his affiftance againft his treacherous keepers. At the fame time lie fent letteis to his mother, and the heads of her party, by fome of his domeftics whom Lenox had pointed ont, intreating them to remove him from the carl, and not fuffer him any longer to remain under bis imperious jurifdiction; adding, that if this could not be done by any other means, they fhould ufe force of arms.

On receiving this letter, the queen and her party affembled their forces at Stirling, and without lofs of time began their march for Edinburgh. Angus, on the other hand, prepared to give them a warm recep-

Seetiand. tion, but at the fame time to carry along with him the king. This refolution being made known to the queenmother, the was fo much concerned for the fafety of her fon, that the whole party difanded themelves ; and thus the authority of the earl of Angus feemed to be more eftablifhed than ever. Nothing, indeed, was now wanting to render him defpotic but the poffeffion of the great feal, which the archbifhop of St Andrew's had carried with him to Dunfermline. As no deed of any confequence could be executed without this, he prevailed upon the king to demand it by a 「pecial meflage; in conlequence of which, the archbifhop was obliged to give it up. About this time the divorce which had been fo long in agitation between the queen-mother and the carl of Angus actually took place; which, no doubt, increafed the diflike of James to his confinement, while the imprudence of Angus gave every day frefh matter of difgult. As Angins knew that he had no firm fupport but in the attachment of his followers to his perfon, he fuffered them to rob and plunder the effates of his opponents without mercy. Thefe, again, did not fail to make reprifals; fo that, towards the end of the year 1526 , there was fcarcely any ajpearance of civil government in Scotland. Thus the court becamealmoft totally deferted; every nobleman being obliged to go home to defend his own eftate. Even Angus himfelf fiared in the common calamity, and hence was frequently obliged to leave the king to the cuftody of Lenox. To this nobleman the king now made the moft grievous complaints, and charged him to contrive fome plan for his efcape. Lenox accordingly recommended to him the baron of-Buccleugh, who was very powerful in the fouthern parts, and a vielent enemy to Angus and the whole family of Douglas. To him he gave orders to foment the diforders in the fouthern parts to fuch a degree as to require the king's perfonal prefence to compole them. Bucclcugh was then to attack the party, and take the king by force from the Douglaffes. This fcheme was put in execution, but Buccleugh had the misfortune to be defeated; fo that the attempt proved abortive, and James found himfelf in a worfe fituation than ever. After this attempt, however, as the earl of Angus could not but know that Lenox had been acceffory to it, the former behaved towards him with fuch vifible indifference, that Lenox openly declared againt him, and advifed the king to form a friendthip with the archbifhop of St Andrew's, in order to effect his liberty. 'This was accordingly done; but the intereft of the archbifhop and Lenox was overbalanced by that of Arran and the Hamilton
and fhould you be torn in pieces in the ftruggle, we Seotland. will carry off part of your $\dot{\text { Lody." Upon this Speech, }}$ which James never forgot, he mounted his horle and fet forward to Linlithgow, but with a very flow pace; infomuch that Sir George Dontglas, afraid of not coming in time to fuccour his brother, made ufe of many indecent expreffions and actions to puft James on to the field of battle. Three expreffes arrived from the earl of Angus; the firt informing his brother that he was about to engage with a fuperior army ; the fecond, that Angus was engaged witis a divifion of Lenox's army, commanded by the earl of Glencairn; and that Lenos himelf was engaged with the Hamiltons. The third informed him that Lenox, if not acually defeated, was on the point of being fo. Upon receiving this laft news, James haftened to the field of battle, that he mivht fave Lenox, and pit an end to the bloodfred. But he came too late : for the royal party was already defeated with great flaughter; and Lemox himelf, after being wounded and taken prifoner, was murdered by Sir James IFanilton.

On the night of the battle, the king was removed to Linlithgow; and though he was uader the greatelt grief for the fate of Lenox, the behaviour of the Douglaffes ftruck him with fuch terror that he diffembled his fentiments. The earl of Angus led his victorious troops into Fife, in hopes of furprifing the queen and the archbifhop of St Andrew's. The queen, on the news The queen of his approach, fled, with her new hufband Henry mother and Stuart, brother to lord Evandale, to Edinburgh, and ohliged to both were admitted into the cafte. The archbifhop fled eq. to the mountains, where he was obliged to keep cattle as a fhepherd. Angus, after having plundered the caftle of St Andrew's and the abbey of Dunfermline, re* turned in triumph to Edinburgh, where he prepared to befiese the caftle; but the queen, hearing that her fon was among the number of the befiegers, ordered the gates of the caftle to be thrown open, and furrendered herfelf and her hufband prifoners to James, who was advifed to contine them to the caftle. After thefe repeated fucceffes, the earl of Angus eftablifhed a kind of court of juftice, in which he profecuted thofe who had oppofed him, anong whom was the earl of Caffils. Trial an He was offered by Sir James Hamilton, natural fon to murder of the earl of Arran, the fame who had murdered Lenox, Caffils. an indemnity if he would own himfelf a vaffal of that houfe; but this condition was rejected. Being called to his trial, and accufed of having taken arms againit the king, a gentlemarr of his name and family, who was his advocate, denied the charge, and offered to. produce a ketter under James's own hand, defiring him. to affift in delivering him from his gaoters. This ftriking evidence confounded the profecutor fo mach, that the earl was acquitted; Dut on his return home he was. way-laid and murdered by one Hugb Campbell;, at the: infligation of Sir James Hamilton.

During thefe tranfactions in the fouth, many of the Highland clans were perpetrating the mofthorrid feenes of rapine and murder, which in fome places reigned alfo in the Lowlands. The ftate of the borders was. little better than that of the Highlands; but it engaged the attention of Angus more, as he had great intereft in thefe parts. Marching, therefore, againft the banditti which infefted thefe parts, he foon reduced them to reafon. His power feemed now to be firmly eftablifhed,

Scotland. infomuch that the archbifhop of St Andrew's began to treat with Sir George Douglas, to whom he offered lucrative leafes and other emoluments if he would intercede with the regent, as Angus was called, in his favour. This was readily agreed to; and the archbifhop was allowed to return in lafety to lis palace about the fame time that Angus returned from his expedition againft the borderers. .Nothing was then feen at court but feftivities of every kind, in which the queen-mother, who was now relieved from her confinement, took part : and fhe was afterwards fuffered to depart to the caftle of Stirling; which Angus, not attending to its value, had neglected to fecure. In the mean time the archbifhop invited the Douglaftes to fpend fome days with him at his caftle ; which they accordingly did, and carried the king along with them. Here James diffembled fo well, and feemed to be fo enamoured of his new way of life, that Angus thought there could be no danger in leaving him in the hands of his friends till he fhould return to Lothian to fettle fome public as well as private affairs. Having taken leave of the king, he left him in the cuftody of his uncle Archibald, his brother Sir George, and one James Douglas of Parkhead, who was captain of the guards that watched his majefty on pretence of doing hin honour. The earl was no fooner gone than the archbifhop fent an invitation to Sir George Douglas, defiring hin to come to St Andrew's, and there put the laft hand to the leafes, and finifin the bargains that had been fpoken of between them. This was fo plaufible, that he immediately fet out for $\mathrm{St} \mathrm{An}^{-}$ drew's ; while his uncle the tréafurer went to Dundee, where he had an anour. James thinking this to be the beft opportunity that ever prefented to him for an efcape, refolved to avail himfelf of it at all events; and found means, by a private meffage, to apprife his mother of his defign. It was then the feafon for hunting and diverfion, which James often followed in the park of Falkland; and calling for his forrefter, he told him, that as the weather was fine, he intended to kill a ftag next morning, ordering him at the fame time to fummon all the gentlemen in the neighbourhood to attend him with their beft dogs. He then called for his cliief zomeltics, and commanded thens to get his fupper carly, becaufe he intended to be in the field by day-break; and he talked with the captain of his guard of nothing but the excellent $\mathfrak{S}_{\text {port }}$ he expected next morning. In the mean time, he had engaged two young men, the vne a page of his own, the cther John Hart, a helper about his ftables, to attend him in his figlt, and to provide him with the drefs of a groom for a difguife. Having formally taken leave of his attendauts, charging them to be ready early in the morning, and being left alone, he flole foftly out of lis bed-chamber, went to the ftable unperceived by the guards, dreffed himfelf in his difguife; and he and his companions nounting the three beft horfes there, gatloped to Stirling caflle; into which, by the queen's appointment, he was admitted foon afier day-break. He commanded all the gates to be fecured; and the queen having previounly prepared every thing for a vigurous defence, orders were given shat none fhould be admitted into the cafte without the king's permiffion.

About an hour after the king efcaped from Falkland, Sir George Douglas returned; and being affiured that this rmajefty was alleep, he weut to bed. It appears
that James had heen feen and known in his flight, for Scotlando in the morning the bailiff of Abernethy came poft-hafte to inform Sir Gcorge that the king had paffed Stirling bridge. They had, however, fome glimmering hope that the king might be gone to Bambrigh : but that furmife was foon found to be falfe; and an exprefs was difpatched, informing A ngus of all that had happened. The earl quickly repaired to Falkland, where he and his friends came to a refolution of going to Stirling, and demanding accefs to the king.

James by this time had iffued letters to the earls of $\mathrm{He}^{412}$ preHuntley, Argyle, Athol, Glencairn, Menteith, Rothes, pares to rea and Eglinton ; the lords Graham, Levington, Lindfay, felf. Sinclair, Ruthven, Drummond, Evandale, Maxwell, and Semple. Before all of them could arrive at Stirling, the earl of Angus and his friends were upon their journey to the fame place; but were ftopped by a herald at arms, commanding them on their allegiance not to approach within fix miles of the king's refidence. This order having fufficiently intimated what they were to expect, the earl deliberated with his party how to proceed. Some of them were for marching on and taking the caftle by furprife : but that was found to be impracticable, efpecially as they had no artillery. The earl and his brother therefore refolved to make a fhow of fubmiffion to the king's order; and they accordingly went to Linlithgow. By this time all the nobility already mentioned, and many others, had affembled at Stirling; and James, calling them to council, inveighed againtt the tyranny of the Douglaffes with an acrimony that fufficiently difcovered what pain it muft have given him when he was obliged to bear it in filence. He concluded lis fpeech with thefe words: "Therefore I defire, my lords, that I may be fatisfied of the faid earl, his kin, and friends. For I vow that Scotland fhall not hold us both, while 1 be revenged on him and his."

The refult of the council's deliberation was, that proclamation fhould be made, renewring the order for the Douglaffes not to approach the court, and divefting the earl of Angus and his brother of all their public enployments. In the mean time, fuch was the moderation of the affembly, that by their advice James ordered the carl to retire to the north of the Spey till lis plea. fure fhould be known ; but his brother was commanded to furrender himfelf a prifoner in the cafte of Edinburgh, to take his trial in a. very full parliament (all the members being fummoned to attend), to be held in that city next September. The earl and his brother confidered their compliance with thofe conditions as a prelude to their deftruction; and refolved to juttify their treafons by ftill greater exceffes, in furprifing the town of Edinburgh, and holding it againft the king and parliament, before the latter could affemble. HiRorians have not done that juftice to the proceedings of the royal party on this occafion which they deferve. The management of the king's efcape, his reception into Stirling, the fortifying that caftle, and the ready obedience of his great nobility, fome of whom attended him with their followers before they received any fummonfes for that purpofe, are proofs of wife and fpirited deliberations. Their conduct at this time was equally confiftent with the fame plan of forefight.

It was naturally to be fuppofed that the Douglaffes, who remained affembled in a numerous body, would $\mathrm{B}_{2}$ make

make the attempt already meutioned; but the royalits had the precaution to difpatch the Lord Maxwell and the baron of Lochinvar, with a body of troops, to take poffeffion of the town, till James could arrive with 2000 forces to their relief. Maxwell and Lochinvar made fuch difpatch, that they were in poffeffion of the town - when the Douglafles appeared before it, and repulfed them; while a moft terrible ftorm 1.1 fcattered the troops under Janes before he could come to their af. fiftance, fo effectually, that, being left almoft without attendants, his perfon might have been taken by the fmalleft party of the enemy. Upon the retreat of the Douglafies from Edinburgh, the parliament met ; and none of them appearing in purfuance of their fummons, the earl of Angus, his brother Sir George Douglas, his uncle Archibald Douglas, and Alexander Drummond of Carnock, with fome of their chief dependents, were indicted and forfeited for the folloving offences: "The affembling of the king's lieges, with intention to have affailed his perfon ; the detaining of the king againt his will and pleafure, and contrary to the articles agreed upon, for the fpace of two years and more ; all which time the king was in fear and danger of his life." We know of no advocate for the earl and his friends but one Banantyne, who had the courage to plead their caufe againtt thofe heinous charges; and fo exafperated were both the king and parliament againt them, that the former fwore he never would forgive them, and the latter that they never would intercede for their pardon. Thus it was not deemed fufficient fimply to declare their refolutions ; but the folemnity of oaths was added with an intention to difcourage the king of England from continuing the vigorous applications he was every eay making, by letters and otherwife, for the pardon of Angus; and to fhut out all hopes of that kind, James created his mother's third hufband (to whom the thad beea married for fome time) lord Methven, and gave him the direction of his artillery.

The difgrace and forfeiture of the Douglafles having created many vacancies in the ftate, Gavin Dunbar, - archbihhop of Glafgew, and tutor to the king, was nominated lord chancellor, though but indifferently qualified for a poft that ought'to have been filled by an able ftatefman ; and Robert Carncrofs, a perfon (fays Buchanan) more eminent for wealth than virtue, was made treafurer: but this laft was foon after difplaced, being fufpected of favouring the Douglaffes; and Robert Barton, one of the king's favourites, was appointed to fucceed lim. The Douglaffes ftill kept their arms ; and being joined by a great number of outlaws and robbers in the fouth, they ravaged all the lands of their enemies, carrying their devaftations to the very gates of Edinburgh. A commiffion of lieutenancy was offered to the earl of Bothwell to act againft thofe rebels: but he declining it, it was accepted by the earl of Argyle and lord Hune, who did great fervice in protecting the country from the outlaws. Several villages, however, in the neighbourhood of Edinburgh, were burnt; and all the provifions the Douglaffes could find were carried off to their caftle of Tautallon, which now ferved as their head-quarters, and was threatened with a fiege.

It is remarkable, that the caftle of Dunbar remained Atill in the hands of the duke of Albany's garrifon, who zecognifed no mafter but him. The place was well
ftored with artillery of all kinds; and lying in the scotlane neighbourhood of Tantallon, it was eafy to tranfport them to the fiege : but James thought he had no right to make ufe of them without the confent of one Maurice, governor of the caftle. Having fummoned, by proclamation, the inhabitants of Fife, Angus, Strathern, Stirlingflire, Lothian, Merfe, and Teviotdale, to be ready to compear at Edinburgh on the roth of December, with 40 days victuals, to affift in the fiege, he fent three noblemen to borrow artillery from Maurice, and to remain as pledges for the fafe redelivery of the fame; and the feveral pieces required were accordingly fent him. This delicacy is the more remarkable, as we james is 416 are told that the duke of Albany had given orders that difappoine every thing in his caftle fhould be at the kiug's fervice. ed in his However unanimous the parliament might appear againit rcheme of the Douglaffes, yet James was but ill-feconded in this attempt. The unfortunate, if feverely proceeded againft, generally find friends; and the enemies of the Douglaffes had impolitically rendered it treafonable for any perfon to fhelter or protect the earl of Angus, his kinfmen, or followers. This proceeding, in a country where the Douglaffies.had fo many connections, carried with it an appearance of cruelty and a thint of revenge, efpecially as James had chofen fuch a feaforn of the year for carrying on the fiege. In fhort, after battering the place for fome days, and lofing one Falconer, his chief engineer, the king was obliged to abandon his enterprife, or rather to turn the fiege into a blockade, with no great credit to his firit effay in the field. Some hitorians intimate, that Angus found means to corrupt the other engineers ; but we find, that before this time, a negociation was going forward between James and the king of England ; the nature of which. proves that the former was now rendered more placable towards the Dou. glaffes, and was the true reafon why the fiege was fufpended.

The truce between Scotland and England was now near expiring ; and Henry, under that pretence, gave a commiffion to the prior of Durham, Thomas Maynus, $\operatorname{Sir}$ Anthony Ughtred captain of the town and caftle of Berwiek, William Frankelyn chancellor of Durham, and Sir Thomas Tempeft. James feems to have been in no hafte to enter upon this negociation, becaufe he underftood that the Englifh commiffioners were privately inftructed to infift upon the I Youglaffes being reftored to their eftates and diguities. England was at that time the principal ally of Francis againft the emperor ; and pla Dou this gave a handle for Francis to interpofe fo far in fa-tain a fevour of the Douglaffes, that he brought James to con-cure retrea fent to a preliminary negociation for their obtaining at leaft a fecure retreat in England. I'his was at laft complied with.
James being now delivered from all dread of the Douglaffes, and under no controul from any party, fhowed excellent difpofitions for government. Finding that the r 418 borderers were by no means pleafed with the late treaty, duces the and that they were renewing their depredations, he re-bordereren folved to ftrike at the root of an evil which had fo long proved difgraceful and dangerous to his anceftors, by giving no quater to the chiefs of thefe robbers, whofe principal refidence was in Liddefdale. This was the more neceffary, as their daring attempts had exalperated the Englifh fo much, that they had actually burnt a town in Teviotdale; and they had killed one Robert

Kerrs, $_{\text {s }}$

## $\mathrm{S} C 0$ [13]

scotland. Kerr, a man of fome confequence. Two of the chiefs of the Scotch borderers were Cockburn of Kenderlaw, and Adam Scot, commonly called king of the thieves. Both of them were barons ; and had been fo inured to the practice, that they thonght there was no crime in robbing: they therefore appeared publicly in Edinburgh; where James ordered them to be apprehended, aried, and hanged. He next procceded with grear firmnefs againft many noblemen and principal gentlemen, who were only fufpected of being difaffected to the late peace. All of them had behaved with great loyalty, and fome of them had done him the moft inportant fervices. Of this number were the earl of Hume, the lord Maxwell, with the barons of Buccleugh, Farniherft, Polwart, Johnfton, and Mark Kerr. 'Though we know nothing particularly of what was laid to the charge of thofe noblemen and gentlemen, yet fo zealous was James for the impartial adminitration of juttice, that he ordered them all, with many other chief gentlemen of the borders, to be fent to prifon; where they lay, till they entered into recognizances themfelves, and found bail for their good behaviour.

Of all the party of the Douglaffes, none of any note excepting Alexander Drummond of Carnock was fuffered to return home, at the earneft requeit of the ambaffadors and the treafurer Barton. This lenity was of very little confequence; for James having appointed the earl of Murray to be, fole warden of the Scoteh marches, with power to treat with the earl of Northumberland, their conferences had broken off on account of frefh violences happening every day; and fome information he had received from them, had prevailed with James to inprifon the noblemen and gentlemen we have already mentioned. He now refolved to attempt in perfon what his predeceffors and he had fo often failed in by their deputies. As he was known to be violently addicted to hunting, he fummoned his nobility, even on the north of the Forth, to attend him with their horfes and dogs; which they did in fuch numbers, that his hunting retinue confifted of above 8000 perfons, two-thirds of whom were well armed. This preparation gave no fufpicion to the borderers, as great hunting-matches in thofe days commonly confifted of fome thoufands; and James having fet out upon his diverfion, is faid to have killed 540 deer. Among the other gentlemen who had been fummoned to attend him, was John Armitrong of Gilnockhall. He was the head of a numerous clan, who lived with great pomp and fplendour upon the contributions under which they laid the Englifh on the borders. He was himfelf always attended by twentyfix gentlemen on horfeback, well mounted and armed, as his body-guards. Having received the king's invi- tation, he was fond of difplaying his magnificence to his fovereign; and attiring himfelf and his guard more pompoufly than ufual, they prefented themfelves before James, from whom they expected fome particular mark of diftinction for their fervices againtt the Englifh , and for the remarkable protection they had always given to their countrymen the Scots. On their firft appearance, James, nut knowing who he was, returned Armitrong's falute, imagining him to be fome great no-
bleman; but upon hearing his name, he ordered him and his followers to be immediately apprehended, and lentenced them to be hanged upon the fpot. It is faid that James, turning to his attendants, afked them, pointing at Armitrong, "What does that knave want that a king fhould have, but a crown and a fword of honour ?" Armftrong begged hard for lis life; and offered to ferve the king in the field with forty horfemen, befides making him large prefents of jewels and money, with many other tempting offers. Finding the king inexorable, "Fool that I am (faid he) to look for warm" water under ice, by afking grace of a gracelefs face;" and then he and his followers fubmitted to their fate. Thofe and fome other executions of the fame kind reftored peace to the borders.

Hitherto we have confidered only the civil tranfactions of Scotland; but henceforth religion will claim the refor os confiderable fhare of the hitorian's attention. The opination. confiderable fhare of the hiltorian's attention. The opi-
nions of Luther had been propagated in. Britain foon after his preaching in 15.7 . They had for fome years infenfibly gained ground; and, at the time the contentions began betwren James and his nobility, were become formidable to the eftablifhed religion.. We have feen how James efcaped from the hands of his nobles by means of the archbifhop of St. Andrew's. To the clergy, therefore, he was naturally favouiable; and as they of neceffity oppofed the reformation, James became a zealous perfecutor of the reformed. On the other hand, the nobility having already oppofed the king and clergy in civil affairs, did fo likewife in thofe of retigion. The clergy finding themfelves unequal in argument, had recourfe to more violent, methods.' Rigorous inquifitions were made after heretics, and fircs were everywhere prepared for them.

The firt perfon who was called upen to fuffer for Martyrdomas the reformed religion was Patrick Hanilton, abbot of ${ }^{\circ}$ l'atrick $^{\text {rand }}$ Ferne. At an early period of life he had been appointed to this abbacy; and having imbibed a favourable idea of the doctrines of Luther, he had travelled into Germany, where, becoming acquainted with the moft eminent reformers, he was fully confirmed in theis opinions. Upon his return to Scotland, he ventured to expofe the corruptions of the church, and to infift on the advantages of the tenets which lie had embraced. A conduct fo bold, and the avidity with which his difconrfes were received by the people, gave an alarm to theclergy. Under the pretence of a religious and friendly conferencé, he was feduced to St Andrew's by Alexander Campbell, a dominican friar, who was inftructed to remonftrate with him on the fubject of the reformation. The converfations they held only ferved to eftablifh the abbot more firmly in his fentiments, and to inflame his zeal to propagate them. The archbifhop of St Andrew's, the archbifhop of Glafgow, and other dignitaries of the church, conftituting a court, called him to appear before them.
'I'he abbot neither lof his courage nor renounced his opinions. He was convicted accordingly of heretical pravity, delivered over to the fecular arm, and executed in the year $1527(\mathrm{~N})$. This reformer had not attained
(iv) His tenets were of the following import, and are enumerated in the fentence pronounced againft him.
scotland, the 2 th year of his age. His youth, his vintue, his magnanimity, and his fufferings, all operated in his favour with the people. To Alexander Campbell, who infulted him at the ftake, he objected his treachery, and cited him to anfwer for his behaviour before the judge-ment-feat of Chritt. And this perfecutor, a few days after, being feized with a frenzy, and dying in that condition, it was believed with the greater fincerity and confidence, that Mr Hamilton was an innocent man and 423 a true martyr.
Excires ge- A deed fo affeeting, from its novelty and in its cirneral indig-cumftances, excited throughout the kingdom an univer-

In 1533 , Henry Foreft, a benedictine friar, who difcovered a propenfiry to the reformed doctrines, was not fo fortunate. After having been impiifoned for fome time in the tower of St Andrew's, he was brought to his trial, condemned, and led out to the flames. He had faid, that Mr Hamilton was a pious man, and a martyr; and that the tenets for which he fuffered might be vindicated. This guilt was aggravated by the difcovery that friar Foreft was in poffeffion of a New Teftament in the Englifh language; for the priefts ef. teemed a careful attention to the Scriptures to be an infallible fymptom of herefy. A cruelty fo repugnant to the common fenfe and feelings of mankind, while it pleafed the infulent pride of the ecclefialtics, was deStroying thei: importance, and exciting a general difpofition in the people to adopt in the fulleft latitude the principles and fentiments of the reformed.

The following year, James Beaton archbifhop of St Andrew's, though remarkable for prudence and mo. deration, was overawed by his nephew and coadjutor David Beaton, and by the clergy: In his own perfon, or by commiffion granted by him, perfecutions were carried on with violence. Many were driven into ba-

## 14 ] S C O

nilkment, and many were forced to acknowledge what Scatland. they did not believe. The more ftrenuous and refolute were delivered over to punifhment. Among thefe were $A,{ }^{425}$ two private gentlemen, Norman Gourlay and David Gourlay Straton. They were tried at Holyroodhoule before and Strathe bifhop of Rofs; and refufing to recant, were con- ${ }^{\text {ton }}$; demned. King James, who was prefent, appeared exceedingly folicitous that they fhould recant their opinions; and David Straton, upon being adjudged to the fire, having begged for his mercy, was about to receive it, when the priefts proudly pronounced, that the grace of the fovereign could not be extended to a criminal whom their law and determination had doomed to fuffer.

A few years after, the bifhops having affembled at With fevea Edinburgh, two Dominican friars, Killor and Beverage, ral otherm with Sir Duncan Sympfon a prieft, Robert Forrefter a gentleman of Stirling, and Thomas Forreft vicar of Dolour in Perthhire, were condemaned to be confurned in the fame fire.

At Glafgow, a fimilar fcene was acted in 1539: Hieronymus Ruffel a gray-friar, and a young gentleman of the name of Kennedy, were accufed of herefy before the bifhop of that fee. Ruffel, when brought to the ftake, difplaying a deliberate demeanour, reafoned gravely with his accufers, and was only anfwered with reproaches. Mr Kennedy, who was not yet 18 years of agre, feemed difpofed to difavow his opinions, and to fink under the weight of a cruel affiction ; but the exhortation and example of Ruffel awakening his courage, his mind affumed a firmnefs and conftancy, his countenance became cheerful, and he exclaimed with a joyful voice, "Now, I defy thee, Death; I praife my Goc, I am ready."

James Beaton, the archbifhop of St Andrew's, having died about this time, the ambition of David Beaton, his coadjutor, was gratified in the fulleft manner. He had before been created a cardinal of the Roman church, and he was now advanced into the poffeffion of the primacy of Scotland. No Scottifh ecclefiattic had been ever invefted with greater authority ; and the reformers had every thing to fear from to formidable an enemy. The natural violence of his temper had fixed itfelf in an overbeariug infolence, from the fuccefs which had atterded him. His youth had been pufedtis in fcenes of policy and intrigue, which, while they com-ter. municated to him uddrefs and the knowledge of men, corrupted altogether the fimplicity and candour of his mind. He was dark, defigniug, and artificial. No principles of jutice were any bar to his fchemes; nor did his heart oyen to any impreffions of pity. His ruling paffion was an inordinate love of power; and the fupport of his confequence depending alone upon the church of Rome, he was animated to maintain its fuperflitions with the warmeft zeal. He feemed to take a delight in per dioufnefs and diffimulation: he had no religion; and he was ftained with an inhuman cruelty,

[^0]
## S C O

Scotland.
and the moft open profligacy of manners. In connection with thefe defects, he poffeffed a perfevering obftinacy in purfuing his meafures, the ability to perceive and to practife all the arts which were necefflary to advance them, and the allurements of oftentation and prodigality.

He was fcarcely inveftcd in the primacy, when he exhibited an example of his talte for magnificence, and of his averfion to the reformed. He proceeded to St Andrew's with an uncommon pomp and parade. The earls of Huntley, A rran, Mariichal, and Montrofe, with the lords Fleming, Lindey, Erfkine, and Scton, honoured him with their attenciance; and there appeared in his train, Gavin archbifhop of Glafgow and lord high chancellor, four biflops, fix abbots, a great many pivate gentlemen, and a vaft multitude of the inferior clewgy. In the cathedral church of St indrew's, from a tho one erected by his command, the harangued concerning the fate of religion and the church, to this company, and to a crowd of other auditors. He lamented the increafe of heretics ; he infifted upon their audacity and contempt of order; he faid, that even in the court of the fovereign too much attention was fhown to them; and he urged the Atrong necefiity of acting againt them impeached that he had cited Sir John Borthwick to appear before it, for maintaining tenets of faith hotile to the church, and for difperfing heretical books; and he defired that he might be affitted in bringing him to juttice. The articles of accufation (0) were accordingly read againft him; but he neither appeared in his own perfon, nor by any agent or deputy. He was found, notwithflanding, to be guilty; and the cardinal, with a folemnity calculated to ftrike with awe and terror, pronounced fentence againt him. His goods and eftate were con ificated; a painted reprefentation of him was burned publicly, in telimony of the malediction of the church, and as a memorial of his obitinacy and condemnation. It was ordained, that in the event of his being apprehended, he fhould fuffer as a heretic, without hope of grace or mercy. All Chrittians, whether men or women, and of whatever degree or condition, were prohibited from affording him any harbour or fuf-
$15]$

tenance. It was declared, that every office of humani. Seothant ty, comfort, and folacement, extended to him, fhould be confidered as criminal, and be penifhed with conifications and forfeitures.
Sir John Borthwick having been apprifed of his He fies ino danger, fled into England; where he was kindly re-to Engceived by Henry VIII. who employed him in negoci- land. ations with the Proteftant priuces of Germany: Cardinal Beaton perceived with concern that this act of feverity did not terrify the people. New defections from the church were announced to him. Andrew Cunningham fon to the mafter of Glencairn, James Hamilton brother to Patrick Hamilton the martyr, and the celebrated George Buchanam the hiltorian, were imprifoned upon fuipicious of herely; and, if they had. not found mearis to efcape, mult have died at the ftake. In this declining condition of Popery, the cardinal held many mournful confultations with the bihops. All their intrigues and wifdom were employed to devife methods to fupport themfelves. The project of an inquifiterial court was conceived, and exhibited a diflant view of the extirpation of heretics. To erect this tribunal, they allured James V. with the hopes of the confifcation and fpoils, which might enrich him, from the perfecution and punihment of the reformed. He yielded himfelf to their folicitations, and gave them the fanction of his authority.
A formal commiffion was granted, conflituting a court of inquiry after heretics, and nominating for its prefident Sir James Hamilton of Fennard, natural brother to the gir James earl of A rran. The officious affiduity of this man, his Happititons ambition, and his thirft of blood, were acceptable in a a appointed of high degree to the clergy ; and to this bad eminence inquifitiontheir recommendation had promoted him. Upon the liighteft furficion he was allowed to call any perfon before him, to fcrutinize into his creed, and to abfolve or to condema him. A tribunal fo dreadful could not have found a director more fuited to it. He was in hatte to fill the prifons of the kingdom with culprits, and was marking down in lifts the names of all thofe to whom herefy was imputed by popular report, and whom. the arts of malicious men had reprefented as the objeCts. of correction and punifhmeat. But, while he was brood-
(o) They are preferved by archbifhop Spotifwood, and difplay great liberality of mind, in a period when phibofophy may be faid to have been unknown in Scotland. They are thus detailed by this judicious writer.

1. "That he held the pope to have no greater authority over Chriftians than any other bifhop or prelate had-
2. "That indulgences and pardons granted by the pope were of no. force nor effect, but devifed to abufepeople, and deceive poor ignorant fouls.
3. "That bihops, priefts, and other clergymen, may lawfilly marry.
4. "That the herefies, commonly called berefies of England, and their new liturgy, were commendable, and tow be embraced of all Chriftians.
5. "That the people of Scotiand are blinded by their clergy, and profeffed not the true faith.
6. "That churchmen ought not to enjoy temporalties.
7. "That the king ought to convert the rents of the church into other pious ufes.
8. "That the church of Scotland ought to be governed after the manner of the Englifhi.
9. "That the canons and decrees of the church were of no force, as being contrary to the law of God.

1o. "That the orders of the friars and monks fhould be abolifhed, as had been done in England:
11. "That he did openly call the pope fimoniac, for that he fold fpiritual things.
12. "That he did read heretical books, and the New Teflament in Englifh, and fome other treatifes written: by Melanelhon, Oecolampadius, and Erafmus, which he gave likewife unto others.
13. "The laft and greateft point was, that he refufed to acknowledge the authority of the Roman fee, or be: fubject thereunto." Hij. of the Church, p. 7 p .

${ }^{432}$
the ruin of Patrick
Hamilton's brother.

433
By whom
he is accitSed of trea Eun.

The brother of Mr Hamilton the martyr, to avoid perfecution, had been obliged to go into banifhment ; but, by the interceffion of his friends, he was permitted to return for a flort time to his own country, that he might regulate the affairs of his family. He was connected with Sir James Hamilton; and, trulting to the ties of blood, ventured to prolong his ftay beyond the period allotted to him. This trefpafs was trivial. Sir James Hamilton, being willing to give a fignal example of feverity, and by this means to ingratiate himfelf the more with the priefthood, took the refolution to make his own relation the firt victim of his power. Mr Hamilton, attentive to his perfonal fecurity, and not unacquainted with the moft private machinations of this inquifitor, difpatched his fon to the king, who was about to pafs the Forth in a barge, and intreated him to provide for his fafety, as Sir James Hamilton had confpired with the houfe of Douglas to affaffinate him. James V. being at variance with the houfe of Douglas, had reafons of fufpicion, and was difpofed to believe every thing that is moft flagitious of Sir James Hamilton. He inftructed the young gentleman to go with expedition to Edinburgh, and to open the matter to the privy-council; and that he might be treated with the greater refpect, he furnifhed him with the ring which he was accuftomed to fend to them upon thofe important occafions which required their addrefs and activity. Sir James Hamilton was apprchended and imprifoned. An accufation of having devifed and attempted the king's death at different times, was preferred againft him. His defence appeared to be weak and unfatisfactory. A jury, which confifted of men of rank and character, pro-

434 Condemned and executed. nounced him guilty; and, being condemned to fuffer the death of a traitor, he loft his head, and the quarters of his body were expofed upon the gates of the city of Edinburgh. The clergy, who could not prevent his trial and execution, regretted his dcath, but did not think of appointing a fucceffor to him in their court of inquifition.

In other refpects, however, James fhowed great concern for the welfare of his people. Being diffatisfied with the ordinary adminifiration of juftice, he had recourfe to the parliament of Paris for a model of the like inftitution in Scotland. Great objections lay to juries in civil matters, and to ambulatory courts of juflice. The authority of the heritable jurifdictions was
almoft exclufive of all law; for though the king might prefide in them, yet he feldom did; and appeals before the council were difagreeable and expenfive. The inftitution of the lords of articles threw too much weight into their fcale, as no bufinefs could be tranfacted in parliament but what they allowed of and prepared; and it was always in the power of the crown to direet them as the king pleafed. The true founce of the public grievances, in matters of property, lay in the difregard fhown to the excellent acts which had paffed duaing the reigns of the three firft James's, and which had not been fufficiently fupported in the late reigns. The evil had gathered ftrength during the minority of James V.; and he refolved to cftablifh a itanding jury
for all matters of lave and equity (for, properiy peas. Scorland ing, the court of feffion in Scotland is no other), with a prefident, who was to be the mouth of the affembly. Oriyin of ${ }^{436}$ On the 13 th of May, this year, as we find by a curious the court manufcript in the Britifh mufeum, the lords of the ar-offeflion. ticles laid before the parliament the propofition for infituting this court, in the following words: "Item, anent (concerning) the fecond artickel concerning the order of juftice ; becaufe our fovereign lord is maift defirous to have ara permanent order of jultice for the univerfal of all his liege; and therefore tendis tó inftitute an college of cunning aud wife men for doing and adminiftration of juftice in all civil actions : and therefore thinke to be chofen certain perfons mait convenient and qualified yair (there), to the number of fifteer. perions, half fpiritual, half temporal, with an prefident."

In the year 1533 , hoftilities were recommenced with England; but after fome flight incurfions on both fides, a truce again took place. The moft remarkable tranf- Negociaactions of thefe years, however, next to the religious toins for, perfecutions already mentioned, were the negociations the king's for the king's marriage. Inrleed, there is farce any monarch mentioned in hifory who feems to have had a greater variety of choices, or who was more difficult to be pleafed. The fituation of affairs on the continent of Europe, had rendered Scotland a kingdom of great confequence, as holding the balance between France, England, and the emperor of Germany ; and each of the rival powers endeavoured to gain the favour of James, by giving him a wife.-In 1534, king Francis offered him his daughter; and the match was ftrongly recommended by the duke of Albany, who was ftill living in France, and ferved James with great fidelity. The fame year the Imperial ambaffador arrived in Scotland, and prefented, in the name of his mafter, the orinver the golcen fleece to James, who had already been manyo invefted wwith that of St Michael by Francis. At the fame timc, he offered him his choice of three princeffes; Mary of Auftria, the emperor's fifter, and widow of Lewis king of Hungary; May of Portugal, the daughter of his fifter Eleonora of Auftria; or Mary of England, the daughter of Catharine and Henry. Another condition, however, was annexed to this propofal, viz. that, to fupprefs the herefies of the time, a council fhould be held for obviating the calamities which threatened the Chriftian religion. Thofe propofals would have met with a mote ready acceptance from James, had not his clergy, at this time, been difgufted with Charles, for allowing too great a latitude to the Proteftants of Germany. James, in his anfwer, w 439 returned the emperor his acknowledgments in the moft rejected by polite terms, for the fplendid alliances he had offered James. him. He tonched the propofal of the council as being a meafure rather to be wifhed for than hoped, becaufe it ought to be free and holy, and upon the model of the firf councils; its members confifting of the moft charitable, quiet, and difinterefted part of the clergy. He faid, that if fuch a council could be obtained, he would willingly fend ecclefiaftics to it ; but if not, that every prince ought to reform the errors of doctrine, and the faults of the clergy, within his owa dominions. He bewailed the obftinate conduct of his uncle in his divorce and marriaşe; and offcred his beft offices for effecting a reconciliation between him and the emperor,

## S C O

Kotianl. wifniag that ali the princes of Chritendons would unite their arms againf their common enemy the Turks. He-hinted, very jufty, that his Imperial majetty had offered more than he could perform, becaufe his coufin, Mary of Eugland, was not at his difpofal. 'The ambaffador replied, that his mafter, if perfuafions failed, wonld compel Henry by force of arms to refign her. lames anfivered this ridiculous declaration by obferving, that the emperor then would be guilty of a breach of all laws both divine and human; that it would be impolitic to give a preference to any of the three princeffes, all of them being fo illuftrious and deferving: but, to fhow how much he valued an alliance with his Imperial majefty, he would become a fuppliant to that prince for his niece, daughter to Chritiern king of Deımark, to become his bride. The ambaffador's anfwer to this unexpected requeft was, that the was already betrothed to the count palatine, and that before that time the marriage was probably confummated.

But whether the Imperial ambaffador had any right to offer the Englifh princefs or not, it is agreed by mof hitorians, that he was offered either Mary or Elizabeth by their father Henry himfelf. To Mary of Bourbon, the daughter of the duke of Vendofme, he
is faid to have been contracted; but for fome reafon or other all thefe matches were broken off; and the Ling at laft went to France, where he married Magdalen the eldeft daurgter of Francis. The nuptials were celebrated at Paris in the year 1537, with great magnificence; and among other things ferved up by way of defert at the mariage-feat, were a number of covered cups filled with pieces of gold and gold-dult, the native product of Scotland, which James diftributed amons the guelts. This gold was found in the mines of Crawford-moor, which were then worked by the Germans. In the beginning of May, the royal pair embarked for Leith, under convoy of four large thips of war, and landed on the 28 th of the fame month. The joy of the Scots was inexpreflible, but it was of flort continuance; for the young queen died of a fever on the 22 d of July the fame year.

King James did not long remain a widower; for the fame jear he fent Beaton abbot of Arbroath, to treat of his fecond marriage with a French lady, Mary of Guife, dnchefs-dowaser of Longueville. Int this he was rivalted by his uncle Henry VIII. but not before James had been contracted to her. But this was nothing to Henry; for he not only infifted upon having this lady for his wife, but threw out fone menaces againt Francis, becaufe he would not comply with this rujuftifiable requeft. In January 1538 , the was married to James, and efcorted to Scotland by the admiral of France with a confiderable fquadron; both James and Fiancis being fufpicious that Henry would make fome attempt to intercept the royal bride. But nothing of this kind happened, and the landed fafely at Tifenefs; from whence fle was conducted to the king at St Andrew's.

But white James appeared thus to be giving himfelf up to the pleafures of love, he was in other refpects Mowing himfelf a bloody tyrant. Some differences fublifted between the families of Gordon and Forbes in the north. The heir of the houfe laft-mentioned had been educated in a loofe diffipated manner, and kept Vol. XVII. Part :
company with a woithlefa fellow named Straban。 Ha. ving refuled this favourite fomething he had afked, the

Gcotland. latter attached himfelf to Gordon earl of Huntley, who, it is faid, aflitted him in furming a charge of treafon againt Forbes. He was accufed of iutending to reftore the Douglaffes to their forfeited eftates and honours; which improbable ftory being fupported by fome venal evidences, the unhappy young iman was condemned and executed as a traitor. The king could not but fee the injuftice of this execution; and, in order to make fome amends for it, banihed Strahan the kingdom. The following execution, which happened a few days after, was much more inhuman, infomuch that it would have ftained the annals even of the moft defpotic tyrants. The earl of Angus, finding that he could not regairs the favour of the king, had recourfe to the method ufual in thofe days, viz. the committing of depredations on the borders. This crime was fufficient with James And of the to occafion the death of his innocent fitter, the dowager- dowager lady of Glamis. She had been courted by one Lyon, mis. whom the had rejected in favour of a gentleman of the name of Campbell. Lyon, exafperated at his repulfe, found means of admittance to James, whom he filled with the greateft terrors on account of the practices of the family of A ngus ; and at laft charged the lady, her hufband, and an old prieft, with a defign of poifoning the king in order to reftore Angus. The parties were all remarkable for the quict and imocent lives they led; and even this circumitance was by their diabolical accufer turned to their prejudice, by reprefenting it as the effect of cunning or caution. In this reign an accufation of treafon was always followed by condemnation. However, the evidence againft the lady appeared fo abfurd and contradictory, that fome of th: judges were for dropping the profecution, and others for recommending her cafe to the king : but the majority prevailed to have it determined by a jury, who brought her in guilty; and ihe was condemned to be burnt alive in the Catle-hill of Edinburgh. The defence the made would lave done honour to the ableft orator, and undeniably proved her innocence ; but tho' it was reported to fames, it was fo far from miti,yating her fenterce, that it was aggravated by her hufban 1 being obliged to be'nold her execution. The unhappy hufband hinfelt endeavoured to make his way over the cafle wall of Edinburgh ; but the rope proving too fhort, he was dafhed in pieces: and lord Glamis her fon, though but a child, was imprifoned during the remainder of this reign. The old priett, thourh put to the torture, confeffed nothing, and was freed. Lyon, like the other accufer alieady mentioned, was banifhed the kingdom:

Whether thefe and other cruelti.s had affected the king's confcience, or whether his brain had been touched by the diftractions of the different parties is a kind of touched by the diftractions of the different parties, is diftraction. unknown ; but it is certain, that, in the year 1540, he began to live retired : his palace appeared like the cloittered retreat of monks; his 月eep was haunted by the mott frightful dreans, which he conftrued into apparitions; and the body of Sir James Hamilton, whofe execution has already been mentioned, feemed continually prefent to his eyes. Perhaps the lofs of his two fons, who died on the fame day that Sir James was executed, might have contributed to bring this man more remark.

## S C O [ 18 ] S C O

scotland. ably to his remembrance. No doubt, it added to the gloom of his mind ; and he now faw his court abandened by almof all his nobility.

447 Hoftilities commence between Scotland and England.

At laft James was in fome degree roufed from his inaction, by the preparations made againft him by his uncle Heury VIII. of England. Some differences had already taken place; to accommodate which, Henry had defired a conference with James at York. But this the latter, by the advice of his parliament, had declined. The confequence was a rupture between the two courts, and the Englifh had taken 20 of the Scots trading veffels. Henry threatened to revive the antiquated claim of the Englifh fuperiority over Scotland, and had given orders for a formidable invafion of the Scotch borders. He complained that James had ufurped his title of Defender of the Faith, to which he had added the word Chrifian, implying that Henry was an infidel : but the kings of Scotland had, fome time before, been complimented by the papal fee with that title. James, on the other hand, threw his eyes towards Ireland, the north part of which was actually peopled with inhabitants who owned no fovereign but the king of Scotland, and who offered to ferve James againft the Englifh; fome of their chiefs having actual-
ly repaired to Scotland, and done homage to James. Henry had, about this time, declared himfelf king of Ireland, of which he was before only fyled the lord; and James roundly afferted, that he had a preferable claim to at leaft one half of that ifland, which had been peopled by the fubjects of Scotland. Though the Scotch hiftorians of this reign take very little notice of this incident, yet James appears to have been very, tenacious of his title; and that there was a valt intercourfe carried on between the fubjects of Scotland and the northern Irifh, who unanimoufly acknowledged James for their natural fovereign. Indeed, this was the only ground of quarrel that the king, with the leaft fhadow of juftice, could allege againt Henry.

His parliament being met, many public-fpirited acts were piffed; and before the affembly was diffolved, the members renewed the acts againft leafing-making; by which is meant the mifreprefenting of the king to his nobles, or the nobles to their king: and James, to difmifs them in good humour, paffed an act of free grace for all crimes committed in lis minority ; the earl of Angus, and Sir George and Sir Archibald Douglas, being excepted.

Henry, after cutting off the head of his wife Catharine Howard, married and divorced the princeifs Anne of Cleves, and found himfelf either deferted or diftrufted by all the princes on the continent, Proteftant as well as Roman Catholic. James and his clergy relied greatly on this public odium incurred by Henry; but the emperor having again quarrelled with Francis, left Henry, whofe dominions they had threatened jointly to invade, at liberty to continue his preparations againft the Scots. He firft ordered his fleet, then the moft formidable of any in the world, to make frefh defcents upon Scotland. At the fame time, he appointed a very confiderable army to rendezvous upor the borders, under the command of Sir Robert Bowes, one of his wardens, the earl of Angus, and his two bro. thers Sir George and Sir Archibald Douglas. James was every day expecting fupplies of money, arms, and other neceffaries from Francis; but thefe not arriving,
he reaffembled his parliament on the $14^{\text {th }}$ of March, Scotland which gratified him in all his demands. Many excellent regulations were made for the internal government, peace, and fecurity of the kingdom, and againtt the exportation of money inftead of merchandife. Acts were paffed for fortifying and embellifhing the town of E dinburgh, and for better fupplying the fubjects with wine and all the other neceffaries of life. The royal revenue was increafed by many additional eftates; and the laft hand was put to one of the beft plans for a national militia that perhaps ever appeared. As yet, excepting in the difappointment which Henry met with from his nephew in not meeting him at York, he had no grounds for commencing hoftilities. But it is here Dtach of proper to obferve, that the queen-mother was then the queen dead; and confequently the connection between James mother. and Henry was weakened. Whatever her private character might have been, fhe was certainly a happy inftrument of preventing bloodfhed between the two kingdoms. She was buried with royal honours at Perth.

Janes, to all appearance, was at this time in a moft defirable fituation. His domain, by forfeitures and otherwife, far exceeded that of any of his predeceffors. He could command the purfes of his clergy ; he had large fums of ready money in his excliequer ; his forts were well ftored and fortified; and he was now daily receiving remittances of money, arms, and ammanition from France. All this Show of happinefs was only in appearance ; for the affections of his nobility, and the wifer part of his fubjects, were now alienated from him tions of h more than ever, by the exceffive attachment he fhowed to bigotry and perfecution.

He had nominated the earl of Huntley to command his army on the borders, confifting of 10,000 men ; and his lieutenant-general was Sir Walter Lindfay of Torphichen, who had feen a great deal of foreign fervice, and was efteemed an excellent officer. Huntley acquitted himfelf admirably well in his commiffion; and was fo well ferved by his fpies, as to have certain intelligence that the Englifh intended to furprife and burn Jedburgh and Kelfo. The Englifh army under Sir Robert Bowes and the Douglaffes, with other northern Englifhmen, continued ftill upon the borders; and one of the refolutions the Scotch nobility and gentry had come to, was, not to attack them on their own ground, nor to act offenfively, unlefs their enemies invaded Scotland. Huntly being informed that the Engliih had advanced, on the 24 th of Auguft, to a place called Haldanrig, and that they had deftroyed great part of the Scotch and debateable lands, refolved to engage them: and the Englifh were aftonihed, when at day-break they faw the Scotch army drawn up in order of battle. Neither party could now retreat with-The En out fighting; and Torphichen, who led the van, con-lifin defea filting of 2000 of the beft troops of Scotland, charged ed by the the Englifh fo furioully, that Huntley gained a com- earl of plete and an eafy victory. A bove 200 of the Englifh were killed, and 600 taken prifoners; among whom were their general Sir Robert Bowes, Sir William Mowbray, and about 60 of the moft diftinguifhed northern barons; the earl of Angus efcaping by the fwift. nefs of his horfe. 'I'he lofs of the Scots was inconfiderable.

In the meanwhile, the duke of Norfolk having rai.

## S C O

fed a great army, had orders to march northıwards, and to difperfe a manifefo, complaining of James for having difappointed him of the interview at York, and reviving the ridiculous claim of his own and his ancertors fuperiority over the kingdom of Scotland. It was plain, from the words of this manifefto, that Henry was ftill placable towards James; and that he would eafily have dropt that claim, if his nephew would have made any perfenal advances towards a reconciliation.

The condition of James was now deplorable. The few faithful counfellors he had about him, fuch as Kirkaldy of Grange, who was then lord treafurer, plainly intimated, that he could have no dependence upon his nobles, as he was devoted to the clergy ; and James, fometimes, in a fit of diftraction, would draw his dagger upon the cardinal and other ecclefiaftics when they came to him with frefh propofitions of murder and profcriptions, and drive them out of his prefence. But he had no conftancy of mind; and he certainly put into his pocket a bloody fcroll that had been brought him by his priefts, beginning with the earl of Arran, the firt fubject of the kingdom. In one of his cooler moments, he appointed the lord Erfkine, and fome others of his nobility, to make a frefh attempt to gain time : and Henry even condefcended to order the duke of Norfolk (who was then advanced as far as York), the lord privy feal, the bifhop of Durham, and others, to treat with him. The conferences were fhort and nnfucceffful. The duke bitterly complained, that the Scots fought only to amufe him till the feafon for action was over. In fhort, he confidered both them and Learmouth, who was ordered to attend him, as fo many fpies, and treated them accordingly. It was the 2 Ift of October before he entercd the eaft borders of Scotland. A.ccording to the Scotch hiftorians, his army confifted of 40,000 men ; but the Englifh have fixed it at 20,000 .

James affected to complain of this invafion as being unprovoked; but he loft no time in preparing to repel the danger. The fituation of his nobility, who were prefied by a foreign invafion on the one hand, and domeftic tyrants on thic other, induced them to hold frequent coufultations; and in one of them, they refolved to renew the fcene that had been acted at Lawder bridge under James III. by hanging all his grandfon's evil counfellors. The Scots hiftorians fay, that this refolution was not executed, becaufe the nobility could not agree abont the victims that were to be facrificed; and that the king, who was encamped with his army at Fallamoor, having intelligence of their confultation, removed haftily to Edinburgh ; from which he fent orders for his army to advance, and give battle to the duke of Norfolk, who appears as yet not to have entered the Scotch burders. The anfwer of the nobility was, that they were determined not to attack the duke upon Englifh ground ; but that if he invaded Scotland, they kuew their duty. The earl of Huntley, who commanded the van of the Scottifh army, confirting of $10,000 \mathrm{men}$, was of the fame opinion: but no fooner did Norfolk pafs the Tweed, than he haraffed the Englifh army, cut off their foraging parties, and diftrefled them in fuch a manner, that the duke agrecd once more to a conference for peace ; which was managed, on the part of the Scots, by the bifhop of Orkney and Sir james Learmouth; but nothing was con.

## S C O

cluded. The Englifh general, finding it now impof- Scotiand. fible on many accounts to profecute his invafion, repaffed the Tweed; and was haraffed in his march by the earl of Huntley, who defited from the purfuit the moment his enemies gained Englifh ground.

James, whofe army at this time amounted to atove The ${ }^{458}$ 3c,000 men, continued ftill at Edinburgh, from which refure to he fent frequent meffages to order his nobility and ge-purfue. nerals to follow the duke of Norfolk into England; but thefe were difregarded. James was flattered, that now he had it in his power to be revenged for all the indignities that had been offered by England to Scotland. In this he was encouraged by the French ambaffador, and the high opinion he had of his own troops. About the beginning of November, he came to a refolution of reaffembling his army, which was difbanded upon the duke of Norfolk's retreat. This project appeared fo feafible and fo promifing, that feveral of the nobility are faid to have fallen in with it, particularly the lord Maxwell, the earls of Arran, Caffils, and Glencairn, with the lords Fleming, Somerville, and Erkine: others reprefented, but in vain, that the arms of Scotland had already gained fufficient honour, by obliging the powerful army of the Englifh, with their moft experienced general at their head, to make a fhameful retreat before a handful; that the force of Scotland was inferior to that of England; and that an honourable peace was ftill practicable. It was faid, in reply to thofe confiderations, that the ftate of the quarrel was now greatly altered; that Henry had in his manifefto declared his intention to enlave their country ; that he treated the nobility as his vaffals; that the duke of Norfolk had been guilty of burning the dwellings of the defencelefs inhabitants, by laying above 20 villages and towns in afhes; and that no Scotchman, who was not corrupted by Henry's gold, would oppofe the king's will. The laft, perhaps, was the chief argument that prevailed on the lord Maxwell, a nobleman of cor fent to war into England by Solway, provided he was at the England. head of 10,000 men. It was at laft agreed that the earl of Arran and the cardinal fhould openly raife men, as if they intended to enter the eaf marches, where they wore to make only a feint, while the lord Maxwell was to make the real attempt upon the weft. Private letters were everywhere circulated to raife the men who were to ferve under the lord Maxwell; among whom were the earls of Caffils and Glencairn, the lords Fleming, Somerville, Erfkine, and many other perfons of great confideration. James, who never was fufpected of want of courage, probably would have put hiinfelf at the head of this expedition, had he not been diffuaded from it by his priefts and minions, who reminded him of the confultations at Fallamoor, and the other trealonable practices of the nobility. They added, that moft of them being corrupted by the Engglifh gold, he could not be too much on his guard. He was at laft perfuaded to repair to the caftle of Loch. maben or Carlaverock, and there to wait the iffue of

## the inroad.

It was probably at this place that James was pre- lected in vailed on to come to the fatal refolution of appointing one Oliver Sinclair, a fon of the houfe of Roflin, and mand by a favourite minion at court, to command the army in oliver Sin chief; and his commiffion was made out accordingly.
scotland, $\xrightarrow{\text { mand }}$

461
The Scots thamefu'ly defeated at Solway Mofs.
at midnight ; and having paffed the Efk, all the adjacent villages were feen in flames by the break of day. Sir 'Ihomas Wharton, the Englifh warden of thofe marches, the baftard Dacres, and Mufgrave, haftily raifed a few troops, the whole not exceeding 500 men, and drew them up upon an advantageous ground ; when Sinclair, ordering the royal hanner to be difplayed, and being mounted on the fhoulders of two tall men, produced and read his commiffion. It is impoffible to $i$ magine the confternation into which the Scots were thrown upon this occafion; and their leaders fetting the example, the whole army declared (according to the Scotch authors), that they would rather furrender themfelves prifoners to the Englip, than fubmit to be commanded by fuch a general. In an inftant, all order in the Scotch army was broken down ; horfe and foot, foldiers and fcullions, noblemen and peafants, were intermingled. It was eafy for the Englifh general to perceive this confufion, and perhaps to guefs at its caufe, A hundred of his light-horfe happened to adwance : they met no refiftance: the nobles were the firt who iurrendered themfelve's prifoners; and the reft of the Englifh advancing, they obtained a bloodlefs victory ; for everi the women and the boys made prifoners of Scotch foldiers, and few or none were killed. The lord Herbert relates the circumftances of this thameful affair with fome immaterial differences; but agrees with the Scotch authorities upon the whole. He mentions, however, no more than 800 common foldiers having been made prifoners. The chief of the prifoners were the earls of Caffils and Glencairn, the lords Maxwell, Fleming, Somerville, Oliphant, and Gray, with above 200 gentlemen befides.

James was then at Carlaverock, which is about 12 miles diftant from the place of action, depreffed in his fpirits, and anxious about the event of the expedition, which is to this day called the Raid of Solway mo/s. When the news came to his ears, and that the earl of Arran and the cardinal were returned to Edinburgh, he was feized with an additional dejection of mind, which brought him to his grave. In fuch a fituation every cruel action of his former life wounded his confcience ; and he at latt funk into a fullen melancholy, which admitted of no confolation. From Carlaverock he removed to Falkland; and was fometimes heard to exprefs himfelf as if he thought that the whole body of his nobility were in a confpiracy againft his perfon and dignity. The prefence of the few attendants who were admitted into his chamber, and who were the wicked inftruments of his mifconduct, feemed to argravate his fufferings, and he either could not or would not take any fuftemance. His death being now inevitable, Beaton approached his bed-fide with a paper, to which he is faid to have directed the king's hand, pretending that it was his laft will. On the I8th of December, while James was in this deplorable ftate, a meffenger came from Linlithgow, with an account that the queen was brought to bed of a daughter; and the laft words he was diftinetly heard to fay, were, "It will end as it began : the crown came by a woman, and it will go with one; many miferies approach this poor kingdom ; king Henry will either mafter it by arms, or win it by marriage." He then turned his face to the wall, and in broken ejaculations pronounced the word

Solneay moft, and fome faint expreffions nlluding to the Seotland difgrace he fuffered. In this flate he languiihed for fome days; for it is cestain he did not furvive the ${ }^{1} 3^{\text {th }}$.

James V. was fucceeb'ed by his infant daughter Mary, is fuccee whofe birth we have already mentioned. James had ed by Ma taken no fleps for the fecurity of his kingdom, fo that ry. ambitious mell had now another opoortunity of throwing the public affairs into confulion. The fituation of Scotland indeed at this time was very critical. Many of the nobility were prifoners in Ensland, and Critizal fin thofe who remained at home were factious and turbu-tuation of lent. 'ithe nation was difpirited by an unfuccefsful dfairs. war. Commotions were daily excited on account of religion, and Henry VIII. had formed a defign of adding Scotland to his othe dominions. By a teftamentary deed which cardinal Beaton had forged in the name of his fovereign, he was appointed tutor to the queen and governor of the realm, and three of the principal nohility were named to act as his counfellors in the adminiftration. The nubility and the people, however, calling in queftion the authenticity of this deed, which he could not eftablifh, the cardinal was degraded from the dignity he had affumed; and the eftates of the kingdom advanced into the regency Earl of James Hamilton, earl of Arran, whom they judged ran apto be entitled to this diftinction, as the fecond perfon pointed re of the kingdom, and the neareft heir, after Mary, to the gent. crown.

The difgrace of cardinal Beaton might have proved the deftruction of his party, if the earl of Arran had been endowed with vigour of mind and ability. But his views were circumferibed; and he did not compenfate for this defect by any tirmnefs of purpofe. He was too indolent to gain partizans, and too irrefolute ter. to fix them. Slight difficulties filled him with embarraffment, and great ones overpowered him. His enemies, applying themfelves to the timidity of his difpofition, betrayed him into weakneffes; and the efteem which his gentlences had procured him in private life, was loft in the contempt attending his public conduct, which was feeble, fluctuating, and inconfiftent.

The attachment which the regent was known to $\mathrm{He}{ }^{467}$ be profefs for the reformed religion, drew to him the love cones po of the people; his high birth, and the mildnefs of his pular on virtues, conciliated their refpect; and from the circum account of his attach. ftance, that his name was at the head of the roll of he - ment to th retics which the clergy had prefented to the late king, a reformafentiment of tendernefs was iningitd with his populari-tion. ty. His conduct correfponded, at firft, with the im: preflions entertained in his favour. Thomas Guillame and John Rough, two celebrated preachers, were invited to live in his houfe; and he permitted them to declaim openly againft the errors of the church of Rome. 'I'hey attacked and expofed the fupremacy of the pope, the worhip of images, and the invocation of faints. Cardinal Beaton and the prelates were exceedingly provoked, and indefatigably active to defend the eftablifhed doctrines.

I his public fanction afforded to the reformation was of little confequence, however, when compared with a meafure which was foon after adopted by Robert lord Maxwell. He propofed, that the liberty of reading the permitted fcriptures in the vulgar tongue fhould be permitted to feriptures the people ; and that, for the future, no heretical guilt in their

## S C O

Mou'd be inferred againa any perfon for having them in his poffefton, or for making ufe of them. The regent and the three eftates acknowleged the propriety of this propofal. Gavin Dunbar archbifhop of Glafgow, and chancellor of Scotland, protetted, indeed, for himfelf and for the church, that no act on this fubject fhould pals and be effectual, till a provincial council of all the clergy of the kingdom fhonld confider and determine, whether there was a necefity that the people fould confult and fudy the feriptures in the vulgar tongue. But his pratefation being difregarded, the bill of the lord Maxwell u as carried into a law, and the regent made it generally known by a proclamation.

From this period copies of the Bible were imported in great numbers from England; and men, allured by an appeal fo flattering to their reafon, were proud to recover from the fupine ignorance in which they had been kept by an antful priefthood. To read became a common accomplifhment : and books were multiplied in every quarter, which difclofed the pride, the tyranny, and the abfurdities of the Romih church and fupertitions.

The death of James V. proved very favourable to the ambitious defigns of Hensy. He now propofed an union of the two kingdoms by the maniage of his fon Edward VI. with Mary the young queen of Scotland. To promote this, he releafed the noblemen who had been taken prifoners at Solway, after having engaged them on oath, not only to concur in promoting the alliance, but to endeavour to procure him the charge and cuftody of the young queen, with the government of her kingdom, and the poffeffion of her cattles. 'The earl of Angus and his brother, who had been fifteen years in exile, accompanied them to Scotland, and brought letters from Henry recommending them to the refitution of their honours and eftates. The regent was inclined to favour the demands of perfons of fuch eminent flation; but though the fates were inclined to the marriage, they refufed to permit the romoval of the queen into England, and treated with contempt the idea of giving the government of Scotland and the care of the caftles to the king of England. Sir Ralph Sadler, the Englifh ambaffador, exerted all his endeavours to induce the regent to comply with the requifitions of his mafter; but all his intrigues were unfuccefsful ; and Henry perceiving that he mult depart from fuch extravagant conditions, at laft authorifed the commiffioners monfent to tieaties of amity and marriage, on the molt favourable terms that could be procured. In confequence of thefe powers given to the commiffioners, it was ayreed that a frim peace and alliance fhould take place between the two nations, and that they fhould mutually defend and protect one another in cafe of an invafion. The queen was to remain within her own dominions till the was ten years of age; and Henry was not to claim any fhare in the government. Six nobles, or their apparent heirs, were to be furrendered to him in fecurity for the conveyance of the young queen into England, and for her marriage with prince Edward, as foon as fhe was ten years of age. It was alfo itipulated, that though the queen fhould have iffue by Edward, Scotland Mould retain not only its name,

Beaton, who had been imprifoned on pretence of trea. fonable fchemes, and was now releafed from his confine. ment by the influence of the queen dowager, took all epportunities of exclaiming argainft the alliance, as tending to deftroy the independency of the kingdom. He pointed out to the churchmen the dangers which arofe from the prevalence of herefy, and urged them to unanimity and zeal. Awakening all their fears and felfifnnefs, they granted him a large fum of money with which he might gain partizans; the friars were inttrue.ed to preach argainft the treaties with England; and fanatical nien were inftructed to difplay their rage in offering indignities to Sir Ralph Sadler.

Cardinal Beaton was not the only antagonift the re. And by $f=0$ gent had to deal with. The Earls of Argyle, Hunt- veral nuble" ley, Tothwel, and Murray, concurred in the oppofi- men; tion; and having collected fonie troops, and poffered themfelves of the queen's perfon, they affumed all the authority. They were joined by the earl of Lenox, who was made to hope that he might efpoufe the queendowager and obtain the reyency. He was alio inclined to oppofe the earl of Arran, from an ancient quarrel which had fubfifted between their two families; and from a claim he had to fuperfede him, not only in the enjoyment of his perfonal cftates, but in the fucceffion to the crown. The regent, alarmed at fuch a powerful combination againft him, inclined to attend to fome advances which were made him by the queendowager and cardinal. 'l'o refufe to confirm the treaties, But cor:after he had brought them to a conclufion, was, how, firms the ever, a ftep fo repugnant to probity, that he could not tieaties of be prevailed upon to adopt it. He therefore, in a amity and folemn manner, ratified them in the abbey-church of marriage Holyroodhoufe, and commanded the great feal of Scot-land. land to be appended to them. The fame day he went to St Andrew's, and iffued a mandate to the cardinal, requiring him to return to his allegiance. 'To this the prelate refufed to pay any attention, or to move from his caftie; upon which the rergent denounced him a rebel, and threatened to compel him to fubmiffion by military force. But in a few days after, the puillani- He abanmous regent meeting with Beaton, forfook the intereft dons the of FIenry VIII. and embraced that of the queen-dow. Pnglifh in -1 ager and of France. Being in hafte alfo to reconcile terett, and himfelf to the church of Rome, lie renounced publicly, renounces at Stile abfolution from the hands of the cardinal.

By this mean-fpirited conduct the regent expofed hinfelf to univerfal contempt, while cardinal Beaton uiurped the whole authority. The earl of Leriox, finding that he had no hopes of fuccefs in his fuit to the queen dowager, engaged in negociations with Henry, to place himfelf at the head of the Scottifh lords who were in the Englif intereft, and to affert the caule of the reformation. The confequence of all this was a $\mathrm{Heni}^{478}$ rupture with England. Henry not only delayed to violent pron ratify the treaties on his part, but ordered all the Scot- ceeding:tifh hips in the harbours of England to be taken and confifcated. This violent proceeding inflamed the national difguits againit the Englifh alliance; and the party of the cardinal and queen.dowager thus obtained an increafe of popularity. Henry himfelf, however, was fo much accuttomed to acts of outrage and violence, that he feemed to think the ftep he had juft now taken.a matter of no moment; and therefore he demanded

## S CiO

Seotland broken off
manded that the hoftages, in terms of the treaty of marriage, fhould fill be delivered up to him. But the cardinal and regent informed his ambaffador, Sir Ralph Sadler, that from their own authority they could not command any of the nobles to be committted to him as hoftages; and that the offenfive ftrain of behaviour affumed by the Englifh monarch might have altered the fentiments of the Scottifh parliament with regard to a meafure of fuch importance. After much altercation, the conferences were broken off; and as the lords who were releafed from captivity had promifed to return prifoners to England, it now remained with them to fulfil their promife. None of them, however, had the courage to do fo, excepting the earl of Caffils; and Henry, being ftruck with his punctilious fenfe of honour, difmiffed him loaded with prefents.

Cardinal Beaton being thus in poffeffion of power, took meafures to fecure it. The folemnity of the coronation of the young queen was celebrated at Stirling. A council was chofen to direct and affitt the regent in the greater affairs of ftate, at the head of which was the queen-dowager. John Hamilton, the abbot of Paifley, who had acquired an afcendency over the regent, was alfo promoted to the privy feal, and made treafurer of the kingdom; and cardinal Beaton, upon the requeft of the regent and the tliree cflates, accepted the office of lord high chancellor.

After the flatteries and the hopes with which the earl of Lenox had been amufed, the cardinal had reafon to dread the utmoft warmth of his refentment. He had therefore written to Francis I. giving a detail of the critical fituation of affairs in Scotland, and intreating him to recal to France the earl of Lenox, who was now interefled to oppofe the influence and operations of the queen-dowager. But the indignation with which the treachery of the cardinal had inflamed the earl of Lenox, precipitated him into immediate action, and defeated the intention of this artifice. In the hoftile fituation of his mind towards Scotland, an opportunity of commencing hoftilities had prefented itfelf. Five fhips had arrived in the Clyde from France, loaded with warlike ftores, and having on board the patriarch of Venice, Peter Contareni, legate from Paul III. with La Broffe, and James Mefnaige, ambaffadors from France; and 30,000 crowns; which were to be employed in ftrengtliening the French faction, and to be diftributed by the queen-dowager and the cardinal. Prevailing with the commanders of thefe veffels, who conceived him to be the faft friend of their monarch, he fecured this money for his own ufe, and depofited the military ftores in his caftle of Dumbarton, under the care of George Stirling the deputy-governor, who at this time was entirely in lis interefts.

By the fuccelifful application of this wealth, the earl of Lenox called forth the full exertion of his party in levying a formidable army, with whicl he thrcatened the deftruction of the regent and the cardinal, offering them battle in the fields between Leith and Edinburgh. The regent, not being in a condition to accept the

480 Lenox fuf. dinal Beaton and the earl $f$ en negociation. Carfers himfelf of amity, and exerted themfelves with fo much addrefs, fod by his that the earl of Lenox, lofing the opportunity of cha. enemies. ftifng his enemies, confented to an accomnodation, and indulged anew the hope of obtainirg the queen-
dowager in narriage. His army was difmiffed, and sontian.t. he threw himfelf at the feet of his miftrefs, by whom he was, in appearance, favourably received : but many of his friends were feduced from him under different pretences; and at laft, apprehending his total ruin from fome fecret enterprife, he fled to Glafgow, and fortified himfelf in that city. The regent, colleeting an army, Anct is marched againft him; and having defeated his friend obliged to the earl of Glencairn in a bloody encounter, was able to reduce the place of ftrength in which he confided. In this ebb of his fortune, the earl of Lenox had no hope but from England.

The revolution produced in the political fate of Scotland by the arts of cardinal Beaton, while it defeated the intrigues of Henry VIII. pointed all its ftrength againft the progrefs of the reformation. Af. ter abandoning his old friends, the regent, in connection with the cardinal, was ambitious to undo all the fervices he had rendered to them. The three eftates annulled the treaties of amity and marriage, and em-with France powered commiffioners to conclude an alliance with concluded, France. The regent difcharged the two preachers proteftant Guillame and Rough, whom he hâd invited to impugn protececuted. the doctrines of the church. He drove back into England many pious perfons, whofe zeal had brought them to Scotland, to explain and advance the new opinions. He careffed with particular refpect the legate whom the pope had fent to difcourage the marriage of the young queen with the prince of Wales, and to promife his affitance againft the enterprifes of Henry VIII. He procured an act of parliament to be paffed for the perfecution of heretics; and, upon the foundation of this authority, the moft rigorous proceedings were concerted againft the reformed; when the arms of England, roufing the apprehenfiona of the nation, gave the fulleft employment to the regent and his counfellors.

In the rage and anguifh of dilappointed ambition, the earl of Lenox made an offer to affila the views of Lerages in the king of England; who, treating him as an ally, the Englion engaged, in the event of fuccefs, to give him in mar-interea. riage luis niece the lady Margaret Douglas, and to inveft him in the regency of Scotland. To eftablifh the reformation in Sc. tland, to acquire the fuperiority over it to Henry VIII. and to effectuate the marriage of the prince of Wales with the queen of Scots, were the great objects of their confederacy.

Henry, though engaged in a war with France, which required all his military foice, could not refift the earlieft opportunity in his power to execute his vengeance againt Scotland. Edward Symour earl of Hartford was appointed to command 10,000 men; who were enbarked at Tinmouth, aboard a fleet of 200 hips , under the direction of Sir John Dudley lord Lifle. This army was landed without oppofition near Leith; and the earl of Hartford made it known to Sir Adam Otterburn, the provoft of Edinburgh, that his commiffion empowered him to lay the country waite and defolate, unlefs the regent fhould deliver up the young queen to the king of England. It was anfwered, that every extremity of diftrefs would be endured, before the Scottifh nation would fubmit to fo ignominious a demand. Six thoufand lemand. who com 48 Evers, now joined the earl of Hart lond. Leith and devataEdinburgh, after a feeble refiftance, yielded to the ions, and Englin commander; who abandoned them to pillage, nen fud-

## S C O

scotand. and then fet fire to them. A cruel devattation enfued in the furrounding villages and country, and an immenfe booty was conveyed on board the Englifh fleet. But, while an extreme terrar was everywhere excited, the earl of Hartford re-imbarked a part of his troops, and ordered the remainder to march with expedition to the frontiers of England.

The regent, affifted by cardinal Beaton and the earls of Huntley, Argyle, Bothwell, and Murray, was active, in the mean time, to collect an arny, and to provide for the fecurity of the kingdom. He felt, therefore, the greatelt furprife on being relieved fo unexpectedly from the moft imminent danger; and an expedition, conducted with fo little difcernment, did not advance the meafures of' Henry VIII. To accomplifh the marriage of the young queen with the prince of Wales, to poffefs himelf of her perfon, or to atchieve a conqueft over Scotland, were all circumftances apparently within the reach of the Englifh commander : and yet, in the moment of victory, he neglected to profecute his advantages; and having inflamed the animofities of the Scottifh nation, by a difplay of the paffions and cruelty of his mafter, left them to recover from their difalter, and to improve in their refources.

The earl of Lenox, taking the opportunity of the the defperate ftate of his affairs. He renewed his engagements with this monarch; and received in marriage the lady Margaret Douglas, with poffeffions in England Soon after, he arrived in the frith of Clyde, with 18 fhips and 600 foldiers, that he might fecure the caftle of Dumbarton, and employ himfelf in plundering and devaftation. But George Stirling, to whom the caftle was intrutted, refufed to furrender it ; and even obliyed him to reimbark his troops. After engaging in a few petty incurfions and fkirmifhes, he returned to England.

In 1544, Henry confented to a truce; and Scotland, after laving fuffered the miferies of war, was fubjected to the horrors of perfecution. The regent had procured an act of parliament for the perfecution of the reformed; and the cardinal, to draw to hinfelf an additional 〔plendour and power, had obtained from the pope the dignity of legate a latere. A vifitation of his own diocefe appeared to him the moft proper method of commencing the propofed extirpation of herefy; and he carried with him in his train the regent, and many perfons of diftinction, to affit in his judicatories, and to fhare in his difgrace.
488 Many crucl In the town of Perth a great many perfons were executions accufed and condemned. The moft triffing offences jects of profecution and punifhment. Robert the fubwas hanged for affirming that the invocation of faints had no merit to fave. William Anderfon, James Reynold, and James Finlayfon, fuffered the fame death, for having abufed an image of St Francis, by putting horns upon his head. James Hunter, having kept their company, was found to be equally guilty, and punifhed in the fame manner. Helen Stirke, having refufed, when in labour, to invoke the affitance of the Virgin, was drowned in a pool of water. Many of the burgeffes of Perth, being fufpected of herefy, were fent into banifhment; and the lord Ruthven, the provoft, was upon the fame account difmiffed from his office.

## 23 J S C O

The cardinal was frenuous in perfecuting herefy in Scotand. other parts of his diocefe. But the difcontents and clamour attending the executions of men of inferior itation were now loft in the fame of the martyrdom of Georye Wifhart; a perfon who, while he was refpec- 489 table by his birth, was highly eminent from the opi-Mr Georganion entertained of his capacity and endowments. The Wiflart. hitorians of the Proteftant perfuation have fpoken of this reformer in terms of the higheft admiration. They extol his learning as extenfive, infitt on the extreme candour of his difpofition, and afcribe to him the utmotpurity of morals. But while the ftrain of their panegyric is expofed to fufpicion from its excefs, they have ventured to impute to him the finitit of prophecy; fo that we mult neceffarily receive their eulogiums with fome abatement. It may be fufficient to affirn, that Mr Wifhart was the moft eminent preacher who had hitherto appeared in Scotland. His mind was certainly cultivated by reflection and fudy, and he was amply poffeffed of thofe abilities and qualifications which awaken and agitate the paffions of the people. His minittry had been attended with the moof flattering fuccefs; and his courage to encounter danger grew with his reputation. The day before he was apprehended, he faid to John Knox, who attended him; "I ant weary of the world, fince I perceive that men are weary of God." He had already reconciled himfelf to that terrible death which awaited him. He was found in the houfe of Cockburn of Ormifton, in Eaft Lothian ; who refufing to deliver him to the fervants of the regent, the earl of Bothwell, the fheriff of the county, required that he fhould be intrufted to his care, and promifed that no injury fhould be done to him. But the authority of the regent and his counfellors obliged the earl to furrender his charge. He was conveyed to the cardinal's cafte at St Andrew's, and his trial was hurried on with precipitation. The cardinal and the clergy proceeding in it without the concurrence of the fecular power, adjudged him to be burnt alive. In the circumftances of his execution there appears a deliberate and moof barbarous cruelty. When led out to the ftake, he was met by priefts, who, mocking his condition, called upon him to pray to the virgin, that fhe might intercede with her Son for mercy to him. "Forbear to tempt me, my brethern," was his mild reply to them. A black coat of linen was put upon him * by one executioner, and bags of powder were fattened to his body by another. Some pieces of ordnance were pointed to the place of execution. He fpoke to the fpectators, intreating them to remember that he was to die for the true gofoel of Chritt. Fire was communicated to the faggots. From a balcony in a tower of his caftle, which was hung with tapeftry, the cardinal and the prelates, reclining upon rich cufhions, beheld the inhuman fcene. This infolent triumph, more than all his afflictious, affected the magnanimity of the fufferer. He exclaimed, that the enemy, who fo proudly folaced himfelf, would perifh in a few days, and be expofed ignominioufly in the place which he now oc~. cupied.

Cardinal Beaton took a pleafure in receiving the : cong:atulations of the clergy upon a deed, which, it was thought, would fill the enemies of the church with terror. Put the indignation of the people was more excited than their fears.. All ranks of men were difo

Bro land.
gulad with an exercife of power which sefpifat every boundary of moderation and jultice. The prediction of Mr Wifhart, fuggefted by the general odium whlich attended the cardinal, was confidered by the difciples of this maityr as the effulion of a prophet; and per. haps grave oceation to the affaffration that followed, 'Their complaints were attended to by Norman Lefly, the eldef fon of the earl of Rothes, whom the cardinal had treated with indignity, though he had urofited by his fervices. He confented to be their leader. The cardinal was in his caftle at St Andrew's, which he was fortifying after the ftrongeft famion of that age. The confpirators, at different times, early in the morning, entered into it. The gates were fecured ; and appointing a guard, that no intimation of their proceedings might go to the cardinal, they difmiffed from the catte all his workmen Ceparately, to the number of 100 , and all his domertics, who anounted to no fewer than 50 perfons. The eldeft fon of the earl of Arran, whom he kept as an hoflage for his father"s behaviour, was alone detained by them. The prelate, alarmed with their noife, looked from his window, and was informed that his cafte was taken by Norman Ledy. It was in vain that he endeavoured to fecure the door o! his chamber by bolts and chefts. The confpirators breught fire, and were ready to apply it, when, admitting them into his prefence, he implored their mercy. Two of them fruck him haftily with their fwords. But James Melvil, rebuking their paffion, told them, that this work and judgment of God, though fecret, ought to be done with gravity. He reminded the cardinal, in general terms, of the enormity of his fins, and reproached him in a more particular manner with the death of Mr Wihhart. He fwore, that no hopes of his riches, no dread of his power, and no hatred to hia perfon, were any motives which actuated him ; but that he was moved to accomplifh his deflruction, by the obftinacy and zeal masifefted by him againtt Chrift Jefus and his holy gofpel. Waiting for no anfiver in his haranrue, he thruft the cardinal three times throwith the body with his dagerer, on the 20th of May 159.6.

The rumour that the calte was taken giving an alarm to the inhabitants of St Andrew's, they came in crowds to gratify their curiofity, and to offer their affifance, ac. cording to the fentiments they entertained. The adherente and dependents of the cardinal were clamorous to fee him; and the confpirators, carrying his dead body to the very place from which he had beheld the fuffer. ings of Mr Wihart, expofed it to their view.

The truce, in the mean time, which hat been concluded with England was frequently interrupted; but no memorable battles were fought. Mutual depreda. tions kept alive the hotite fpirit of the two kingdoms; and while the regent was making military preparations, which gave the promife of important eventa, a treaty of peace was finifted between England and France, in which Francis I, took care to comprelend the Scottifh wation. In this treaty it was fipulated by Henry, that lie was not to waye war againft Scotland, unlefs be thould be provoked by new and juft caufes of hotility.

But the murderers of cardinal Beaton, apprehenfive of their fafety, had difpatched meffengers into England, with applications to Henry for affitance; and being wined by more than 120 of their friends, they took she refolution of keeping the caftle, and of defending

## $24 \quad 1$ <br> \& C G

themfelves. Henry, notwithetanding his treaty with scotiand. France, refolved to embrace this opportunity of augmenting the difturbances of Scotland. Ie haflened to collect troops ; and the regent and his counfellors preff: ed France for fupplie in men and money, and military tlores and artillery.
The high places which the cardinal occupied were filled up immediarely upon his death. John Hamilton ings sgainf abbot of Paifley was eleeted archibifopo of St Andrew's, ers of the and George earl of Huntley was promoted to be chan-c.rdiad. cellor, By thefe officers the regent was urged to procecd with vigour againft the confpirators; and it was a matter of the greatef anxiety to him to recover his eldeft fon, whom they detained in cultody. The clergy had, in the moit folemn manner, pronounced them to be accurfed ; and agreed to furnifh, for four months, a monthly fubfidy of 30001 . to defray the expence of reducing them to obedience. The queen dowager and the French faction were eager, at the fame time, to concur in avenging the aflaffination of a man to whofe courfels and lervices they were fo greatly indebtec. And that no dangerous ufe might be made of the eldeft fon of the earl of Arran, who, after his father, was the heir of the monarchy, an act of parliament was pafled, excluding him from his birthright while he re: mained in the poffeflion of the enemies of his country, and fubitituting his brothers in his place, according to their feniority, The dark politics of Henry fuggetted the neceflity of this expedients and in its meaning and tendency there may be remarked the fpirit and greatnefo of a free people.

A powerful army laid fege to the caftle of St An-Cattle of 4 drew's, and contianed their operations during four Sea drew months; but no fuccefs attended the affallants. The belieged. fortifications were frong; and a communication with the befieged was open by fea to the king of Enoland, who fupplied them with arme and provifion. The garrifon received his pay, and the principal confpirators had peufions from lim. In return tor his generofity, they were engaged to promote the marriage of his fon with the young queen ; to advance the reformation : and to keep in cuftody the eldeft fon of the regent. Nego. ciation fucceeded to hoftility; aud as the rerent expect. ed affiftance from France, and the confpirators had the profpect of fupport from an Englifh army, both partics were difpofed to gain time. A treaty was entered into and cranfacted, in which the regent engaged to procure from Rome an abfolution to the confpirators, and to obtain to then from the three eftates an exemption from profecutions of every kind. Upon the part of the befieged, it was ftipulatec, that when thefe conditions were fultilled, the caftle thould be furrendered, and the regent's fon be delivered up to him. In the mean time Henry VIII. died ; and a few weeks after Fran- Hellty of cis I. alfo paid his debt to nature. But he former, be. and trart. fore his death, had recommended the prolecution of the cs ${ }^{\text {o }}$ Scottifh war ; and Henry II. the fucceffor of Francis, was eager to fhow his attention to the ancient ally of his nation. When the abfolution arrived from Rome, the confpiratora refufed to confider it as valid; and a: expreffion ufed by the pope, implying an abfurdity, furnifled an apology for their conduct. They knew that the counfellors of Edward VI. were making vigorous preparations to invade Scotland; they were coalident of cheir prefent ability to defend themfelves; and the

## S C O [ 25 ] S C O

otland. advocates for the reformation encouraged them with hopes and with flattery.

The favourers of the reformation, in the mean time, adopting the intolerant maxims of the Roman Catholics, were highly pleafed with the affaffination of Beaton; and many of them congratulated the confpirators upon what they called their godly deed and enterprife. John Rough, who had formerly been chaplain to the regent, entered the cafle and joined them. At this time alfo John Knox began to diftinguifh himfelf in an eminent manner, both by lis fuccefs in argument and the unbounded freedom of his difcourfe; while the Roman clergy, every where defeated and afhamed, implored the afliftance of the regent and his council, who affured them that the laws againift heretics fhould be put in execution.
In the mean time the caftle of St Andrew's being invefted by a fleet of 16 fail under admiral Strozzi from France, was obliged to capitulate. Honourable conditions were granted to the confpirators; but after being conveyed to France, they were cruelly ufed, from the hatred entertained by the Catholics agrainf the Proteftants. Many were confined in prifons; and others, among whom, fays Dr Stuart, was John Knox, were fent to the galleys. The caftle itfelf was rafed to the ground.

The fame year, 1547 , Scotland was invaded by an Englifh army under the duke of Somerfet, who had been chofen protector of England during the minority of Edward VI. The defign of this invalion was to oblige the Scots to comply with the fcheme of Henry VIII. and conclude a marriage between Edward and the young queen of Scotland. The Englifh army confifted of 18,000 men ; befides which the protector had a fleet of 60 fail, one half of which werè fliips of war, and the others confifted of veffels laden with provifions and military ftores. On the other hand, the regent oppofed him with an army of 40,000 men. Before the commencement of hoftilities, however, the duke of Somerfet addreffed a letter or manifefto to the government, in which he preffed the marriage with fuch powerful arguments, and fo clearly fhowed the benefits which would refult from it to both nations, that the regent and his party, who were averfe to peace, thought proper to fupprefs it, and to circulate a report that the Englifh had come to force away the queen, and to reduce the kingdom to a ftate of dependence. All liopes of an accommodation being thus removed, the Englifh army advanced in order to give battle to the Scots. They feund the latter pofted in the moft advantageous fituation, around the villages of Muffelburgh, Inverefk, and Monckton; fo that he could not force them to an action, at the fame time that he found himfelf in danger of haviug his communication with his fhips cut off, which would have totally deprived his army of the means of fubfiftence. In this dangerous fituation he had again recourfe to negociation, and offered terms ftill more favourable than before. He now declared himfelf ready to retire into England, and to make ample compenfation for the injuries committed by his army, if the Scottifh government would promife that the queen fhould not be contracted to a foreign prince, but fhould be kept at home till the was of age to choofe a hufband for herfelf, with the confent of the nobility. Thefe conceffions increafed the confidence of the regent so much, that,
Vol. XVII. Part I.
without taking advantage of the ftrength of his fitua. Scotiand. tion, he refolved to come to a general engagement.- -498 The protector moved towards Pinkey, a gentleman's $\mathrm{Bat:ic}^{498}$ of houfe to the eaftward of Muffelburgh; and the regent Piukey. conceiving that he meant to take refuge in his fleet, changed the ftrong ground in which he was encamped. He commanded his army to pafs the river Efk, and to approach the Englifh forces, which were pofted on the middle of Fafide-hill. The earl of Angus led on the van; the main body of the battle marched under the regent; and the earl of Huntley commanded in the rear. It was the regent's intention to feize the top of the hill. The lord Gray, to defeat this purpofe, charged the earl of Angus, at the head of the Englif cavalry. They were received upon the points of the Scottifh feears, which were longer than the lances of the Englifh horfemen, and put to flight. The earl of Warwick, more fuccefsful with his command of infantry, advanced to the attack. The ordnance from the fleet affited his operations; and a brifk fire from the Englifh artillery, which was planted on a rifing ground, ferved Atll more to intimidate the Scottifh foldiery.The remaining troops under the protector were moving flowly, and in the beft order, to take a fhare in the engagement. The earl of Angus was not well fupported by the regent and the earl of Huntley. A panic fpread itfelf through the Scottifh army. It fled in differeut ways, prefenting a fcene of the greateft havoc and confufion. Few perihed in the fight ; but the chafe continuing in one direction to Edinburgh, and in another to Dalkeith, with the utmoft fury, a prodigious flaughter was made. The lofs of the conquerors defeated did not amount to 500 men ; but 10,000 foldiers pe. with great rifhed on the fide of the vanquifhed. A multitude of ${ }^{\text {faughter. }}$ prifoners were taken; and among thefe the earl of Huntley, the lord high chancellor.

Amidft the confternation of this decifive victory, the duke of Somerfet had a full opportunity of effectuating the marriage and union projected by Henry VIII. and on the fubject of which fuch fond anxiety was entertained by the Englifh nation. But the cabals of his enemies threatening his deftruction at home, lie yielded to the neceffities of his private ambition, and marched back into England. He took precautions, Duke of however, to fecure an entry into Scotland, both by fea someriet and land. A garrifon of 200 men was placed in the returnst to ine of St Columba in the Forth, and two fhips of war England. were left as a guard to it. A garrifon was alfo ftationed in the cafle of Broughty, which was fituated in the month of the 'Tay. When lie paffed through the Merfe and Teviotdale, the leading men of thefe counties repaired to him; and taking an oath of allegiance to king Edward, furrendered their places of ftrength. Some of thefe he demolifhed, and to others he added new fortifications. Hume caftle was garrifoned with 200 men, and intrufted to Sir Edward Dudley; and he pofted 300 foldiers, with 200 pioneers, in the caftle of Roxburgh, under the command of Sir Ralph Bul. mer.

The only refource of the regent now was the hope of affitance from France. The young queen was lodged in the cattle of Dumbarton, under the care of the lords Erfkine and Livingftone ; and ambaffadors were fent to Henry II. of France, acquainting him with the difatter at Pinkey, and impluring his affiftance. The' regent $\begin{array}{r}\text { had }\end{array}$

peace, and the earl of Warwick was appointed to wait for them at Berwick, but none were ever fent on the part of Scotland. It was not long, therefore, before hoftilities were recommenced by the Englifh. Lord Gray led an army into Scotland, fortified the town of Haddington, took the caftles of Yefter and Dalkeith, laid watte the Merfe, and the counties of Laft and Mid Lothian. On the other hand, in June 1548, Monfieur de Deffe, a French officer of great reputation, landed at Leith with 6000 foldiers, and a formidable train of artillery.
In the mean time, the regent was in difgrace on account of the difafter at Pinkey; and the queen-dowager being difpofed to fuperfede his authority, attempted to improve this circumftance to her own advantage. As the perceived that her power and intereft could beft be fupported by France, fhe refolved to enter into the ftricteft alliance with that kinodom. It had been propofed that the dauphin of France fhould marry the queen of Scotland; and this propofal now met with many partizans, the hoftilities of the Englifh having lof a great number of friends to the caufe of that country. It was refolved to fend the queen immediately to France, which would remove the caufe of the prefent contentions, and her fublequent marriage with the dauphin would in the fulleft manner confirm the friend!hip betwixt the two nations. The French government alfo entered deeply into the fcheme; and in order to promote it made prefents of great value to many of the Scottifh nobility. The regent himfelf was gained over by a penfion of 12,000 livres, and the title of duke of Chatelherault. Monfieur de Villegagnon, who commanded four galleys in the harbour of Leith, making a feint as if he intended to proceed inftantly to France, tacked about to the north, and, failing round the ines, received the queen at Dumbarton; whence he conveyed her to France, and delivered her to her uncles the princes of Lorraine, in the month of July 1548.

Thefe tranfactions did not put an end to the military operations. 'The fiege of F-Faddington had been undertaken as foon as the French auxiliaries arrived, and was now conducted with vigour. 'To reinforce the garrifon, 1500 horfe advanced from Berwick; but an ambufcade being laid for them, they were intercepted, and almolt totally deftroyed. Another body of Englifh troops, however, which amounted only to 300 perfons, was more fuccefsful. Eluding the vigilance of the Scots and the French, they were able to enter Haddington, and to fupply the befieged with ammunition and provifions. The lord Seymour, high admiral of England, made a defcent upon Fife with 1200 men, and fome pieces of artillery; but was driven back to his fhips with great flauchter by James Stuart, natural brother to the young queen, who oppofed him at the head of the militia of the county. A fecond defcent was made by him at Montrofe ; but being equally unfuccefsful there, he was obliged to leave Scotland without performing any important or memorable atchievement.

Having collected an army of $17,-00$ men, and adding to it 3000 German Proteftants, the protector put it under the direction of the earl of Shrewfbury. Upon the approach of the Englif., Deffe, though he had
been reinforced with 15,000 Scots, thought it more Seotland prudent to retreat than to hazard a decilive battle. He raifed the fiege of Haddington, and marched to Edinburgh. The earl of Shrewfury did not follow him to Scots and the French. The infolence and vanity of be ween the latter, encouraged by their fuperior Akill in military Erench. arts, had offended the quick and impatient fpirit of the former. The fretfulnefs of the Scots was augmented by the calamicies infeparable from war; and after the conveyance of the young queen to France, the efficacious and peculiar advantage conferred upon that kingdom by this tranfaction was fully underfood, and appeared to them to be highly difgraceful and impolitic. In this ftate of their humour, Deffe found not at Edinburgh the reception he expected. The quartering of his foldiers produced difputes, which ended in an infurrection of the inhabitants. The French fired among the citizens. Several perfons of diftinction fell, and among thefe were the provolt of Edinburgh and his fon. The national difcontents and inquietudes were driven, by this event, to the moft dangerous extremity ; and Deffe, who was a man of ability, thought of givin. employment to his troops, and of flattering the people by the fplendour of fome martial exploit.

The earl of Shrewfury, after fupplying Hadding- Unfuccel ton with troops, provifions, and military fores, retired ful attem with his army into England. Its garrifon, in the en- $\frac{1}{d i n g t o n}$. joyment of fecurity, and unfufpicious of danger, might be furprifed and overpowered. Marching in the night, Deffe reached this important poft; and deftroying a fort of oblervation, prepared to ftorm the main gates of the city, when the garrifon took the alarm. A French deferter pointing a double cannon to the thickeft ranks of the affailants, the fhot was incredibly deftructive, and threw them into confufion. In the height of their confternation, a vigorous fally was made by the befieged. Deffe renewed the affault in the morning, and was again difcomfited. He now turned his arms againft Broughty caftle; and, though Deffe th unable to reduce it, be yet recovered the neighbouring French, town of Dundee, which had fallen into the poffeffion fome ad of the enemy. Hume caftle was retaken by ftratagem. vantage Deffe entered Jedburgh, and put its garrifon to the fword. Encouraged by this fuccefs, he ravaged the Englifh borders in different incurfions, and obtained feveral petty victorics. Leith, which from a fmall village had grown into a town, was fortified by him; and the ifland of Inchkeith, which is nearly oppofite to that harbour, being occupied by Englifh troops, he undertook to expel them, and made them prioners after a brifk encounter.

His activity and valour could not, however, compofe the difcontents of the Scottifh nation ; and the queen-dowager having written to Henry II. to recal him, he was fucceeded in his command by Monfieur de Thermes, who was accompanied into Scotland by Mon:luc bihop of Valence, a perfon highly efteemed for his addrefs and ability. This ecclefiattic was defigned to fupply the lofs of cardinal Beaton, and to difcharge the office of lord high chancellor of Scotland. But the jealonfies of the nation increafing, and the queen-dowager herfelf fufpecting his ambition and turbulence, he attained not this dignity, and foon returned to his own country.

## 

otand. De Thermes brought with him from France a reillforcement of 1000 foot, 2000 horfe, and 100 men. at-arms. He erected a fort at Aberlady, to diftrefs co of she the garrifon of Haddington, and to intercept its fupplies of provifion. At Coldingham he deftroyed a troop of Spaniards in the Englifh pay. Fatt-caftle was regained by furprife. Dittractions in the Englith court did not permit the protector to act vigorounly in the war. The earl of Warwick was diverted from marching an army into Scotland. An infectious diftemper had broke out in the garrifon at Haddington ; and an apprehenfion prevailed, that it could not hold out for any length of time againtt the Scots. The eart of Rutland, therefore, with a body of troops, entered the town ; and efter fetting fire to it, conducted the garrifon and artillery to Berwick. The regent, in the poffeffion of Haddington, was folicitous to recover the other places which were yet in the power of the Englifh. De Thermes laid fiege to Broughty cafte, and took it. He then befieged Lawder; and the garrifon was about to furrender at difcretion, when the news arrived that a peace was concluded between Irance, England, and Scotland.

By this treaty Henry II. obtained the reftitution of Boulogne and its dependencies, which had been taken from him by the king of England, and for which he paid 400,000 crowns, No oppofition was to be given to the marriage of the queen of Scotland with the dauphin: the fortreffes of Lawder and Douglas were to be reftored to the Scots, and the Englifh were to deftroy the caltles of Roxburgh and Eymonth. - After the ratification of the articles, the queen-dowager embarked with Leon Strozzi for France, attended by many of the nobility. Having arrived there, the communicated to the king her defign of affuming the government of Scotland, and he promifed to affit her to the utmoit of his power. But the jealoufy which prevailed between the Scots and French rendered the accomplifiment of this delign very difficult. To remove the regent by an act of power might endanger the fcheme altogether ; but it might be poffible to perfuade him to refign his office voluntarily. For this purpofe intrigues were immediately commenced ; and indeed the regent himfelf contributed to promote their fchemes by his violent perfecution of the reformed. The peace was hardly proclaimed, when he provoked the public refentment by an aetion of fanguinary infolence. Adans Wallace, a man of fimple manners, birt of grear zeal
contumelious infults of the clergy; and by his conrage Scotland. and patience at the fake gave a fanction to the opinions. he had embraced,
Other acts of atrocity and violence ftained the adminiftration of the regent. In his own palace, William Crichton, a man of tanily and reputation, was affafina the regent's , a man of amily and reputation, was aflama-inhumatity ruated by the lord Semple. No attempt was made to and ingure punifh the murderer, His daughter was the concubine ${ }^{\text {tice. }}$ of the archbifhop of St Andrew's, and her tears and in. treaties were more powerful than jultice. John Melvil, a perfon refpectable by his birth and his fortune, had written to an Englifh gentleman, recommending to his care a friend who at that time was a captive in England. This letter contained no improper information in matters of ftate, and no fufpicion of any crime againt Melvil could be inferred from ir. Yet the regent brought him to trial upon a charge of high treafon; and, for ant act of humanity and friendfhip, he was condemned to lofe his head. The eftate of Melvil, forfeited to his family, was given to David the youngelt fon of the regent.

A midf the pleafures and amufements of the French Schemes of court, the queen-dowager was not inattentive to the the queenfcheme of ambition which the had projected. 'The earls dowager to of Huntley and Sutherland, Marifchal and Cafitis, with recrenc the lord Maxwell, and other perfons of eminence who had accompanied her to France, were gained over to her interefts, Robert Carnegie of Kinuaird, David Panter bifhop of Rofs, and Gavin Hamilton commendator of Kilwinning, being allo at this time in that kingdom, and having the greateft weight with the regent, were treated writh a moft punctilions refpect. Henry declared to them his earneft wifh that the queen-dowager might attain the government of Scotland. In cafe the regent thould confent to this meafure, he expreffed a firm intention that no detriment fhould happen to his confequence and affairs; and he defired them to inform him, that he had already confirmed his title of duke of Chatelberault, had advanced his fon to be captain of the Scots gendarmes in France, an! was ready to tender other marks of favour to his family and relations. Upon this bulinefs, and with this meffage, Mr Carnegie was difpatched to Scotland; and a few days after, he was followed by the bifhop of Rofs. The bilhop being a man of eloquence and authority, obtained, though with great difficulty, a promite from the regent to refign his high office ; and for this fervice he received; as a recompenfe, an abbey in Poitou.

The queen-dowager, full of hopes, now prepared to She recurns return to Scotland, and in her way thither made ufe of to Scota fafe-conduct obtained from Edward VI. by the king land. of Flance. The Englifh monarch, however, had not yet forgot the beautiful queen of Scotland; and did. not fail to urge his fuperiority of claim to her over the dauphin. The queen-dowager did not ferioully enter upon the bufinefs; only in general terms complained of the hoftilities committed by the Englifh; and two days after this converfation, fhe proceeded towards Scotland. where fhe was conducted by the earl of Bothwel, lord Hume, and fome other noblemen, to Edinburgh, amidft the acclamations of the people. She had not long been returned to the capital, when the bad conduct of the regent afforded her an opportunity of exerting her inRutence and addrefs to the advantage of her project. The regent baving propofed a judicial circuit throunh

## $\mathrm{S} \quad \mathrm{C} O$

Scosland. the kingdom, under pretence of repreffing crimes and diforders, molefted the people by plunder and rapine. Great fines were levied for offences pretended as well as real ; and the Proteftants in particular feemed to be the objects of his difpleafure and feverity. In his progrefs he was accompanied by the queen-dowager ; and as the affected to behave in a manner directly oppofite, the moft difagreeable comparifons were made between her and the regent. The bifhop of Rofs, to whom he had pronifed to refign his office, did not fail to put him in mind of his engagements ; but he had now altered his mind, and wifhed ftill to continue in power. His refoIution, however, failed him on the firft intimation of a parliamentary inquiry into the errors of his adminiftra-

515
He refigns his office, which is given to the queen. dowager. tion. An agreement with the queen-dowager then took place ; and it was ftipulated, that he fhould fucceed to the throne upon the death of the queen without iffue ; that his fon fhould enjoy the command of the gendarmes ; that no inquiry fhould be made into his expenditure of the royal treafures; that no fcrutiny into his government fhould take place; and that he fhould enjoy in the moft ample manner his duchy and his penfion. Thefe articles were ratified at an affembly of parliament, and the queen-dowager was formally invefted with the regency.

Mary of Lorraine, the new regent, though the had with great difficulty attained the fummit of her wifhes,

516
She renders
herfelf unpopular.

517
Attempts
in vain to efablifh a ftanding army. feemed to be much lefs verfant-in the arts of government than of intrigue. She was fcarcely fettled in her new office when the rendered herfelf unpopular in two refpects ; one was by her too great attachment to France, and the other by her perfecution of the reformed religion. She was entirely guided by the councils of her brothers the duke of Guife and the cardinal of Lorraine ; and paid by far too much attention to M. d'Oy. fel the French ambaffador, whom they recommended to her as an able and faithful minifter. Several high offices were filled with Frenchmen, which excited in the higheft degree the refentment of the Scottifh nobility; and the commonalty were inftantly prejudiced againft her by the partiality fhe fhowed to the Papits. At firlt, however, fhe enacted many falutary laws; and while the made a progrefs herfelf through the fouthern provinces of the kingdom to hold jufticiary courts, the endeavoured to introduce order and law into the weftern counties and ines; firt by the earl of Huntley, and afterwards by the earls of Argyle and A thole, to whom fhe granted commiffions for this purpofe with effectual powers. In another improvement, which the queen regent attempted by the advice of her French council, the found herfelf oppofed by her own people. It was propofed that the poffeffions of every proprietor of land in the kingdom fhould be valued and entered into regifters; and that a proportional payment fhould be made by each. The application of this fund was to maintain a regular and ftanding body of foldiers. This guard or army, it was urged, being at all times in readinefs to march againft an enemy, would protect effectually the frontiers; and there would no longer be any neceffity for the nobles to be continually in mation on

## 28 ]

every rumour of hoftility or incurfion from Englifh in. Scotlan vader3. No art, however, or argament, could recom. mend thefe meafures. A perpetual tax and a Aanding army were conceived to be the genuine characteriftics of defpotifm. All ranks of men confidered themfelves infulted and abufed; and 300 tenants of the crown affembling at Edinburgh, and giving way to their indignation, fent their remonftrances to the queen-regent in fuch ftrong and expreffive language, as induced her to abandon the fcheme. Yet ftill the attempt which fhe had made left an impreffion in the minds of the people. They fufpected her to be a fecret enemy to their government and liberties; and they were convinced that Henry II. was engaging her in refinements and artifices, that he might reduce Scotland to be a province of France.

While an alarm about their civil rights was fpread-John $\mathrm{Kn}_{\mathrm{n}}^{18}$ ing itfelf among the people, the Proteftants were rifing encourag daily in their fpirit and in their hopes. John Knox ( $p$ ), the refor whofe courage had been confirmed by misfortunes, and whofe talents had improved by exercife, was at this time making a progrefs through Scotland. The characteriftic peculiarities of Popery were the favourite topics of his declamation and cenfure. He treated the mafs, in particular, with the moft fovereign contempt, reprefenting it as a remnant of idolatry. Many of the nobility and gentry afforded him countenance and protection. They invited him to preach at their houfes, and they partook with him in the ordinances of religion after the reformed method. Religious focieties and affemblies were held publicly, in defiance of the Papilts ; and celebrated preachers were courted with affiduity and bribes to refide and officiate in particular diftricts and towns. The clergy cited him to appear before them at Edinburgh, in the church of the Black-friars. On the appointed day he prefented himfelf, with a numerous attendance of gentlemen, who were determined to exert themfelves in his behalf. The priefthood did not choofe to proceed in his profecution ; and Knox, encouraged by this fymptom of their fear, took the refolution to explain and inculcate his doctrines sepeatedly and openly in the capital city of Scotland. In 1556, the earl of Glencairn allured the earl Marifchal to hear the exhortations of this celebrated preacher; and they were Writes fo much affected with his reafonings and rhetoric, that offenfive they requelted him to addrefs the queen-regent up-letter to on the fubject of the reformation of religion. In com- the quee pliance with this requeft, he wrote a letter in very difagreeable terms; and the earl of Glencairn delivered it with his own hand, in the expectation that fome advantage might in this manner be obtained for the reformed. But the queen-regent was no lefs offended with the freedom of the nobleman than the preacher; and, after perufing the paper, fhe gave it to James Beaton arch bifhop of Glafgow, with an expreffion of difdain, "Here, my lord, is a pafquil."

Amidft thefe occupations, John Knox received an in- ${ }^{520}$ vitation to take the charge of the Englifh congregation Geneva, at Geneva; which he accepted. The clergy called up-and is bu on him, in his abfence, to appear before them, condemn-in effigy
(p) When he was fent to France (fays Dr Stuart), with the confpirators againft Cardinal Beaton, he was confined to the galleys; but had obtained his liberty in the latter end of the year 5549 :

## S C O [ 29 ] S C O

Scotland. ed him to death as a heretic, and ordered him to be burned in effigy.

The injurious treatment of John Knox did not in the leaft obftruct the progrefs of the reformation. Defer. tions were made from Popery in every town and village; and even many members of the church, both fecular and regular, were forward to embrace the new principles, and to atone for their paft miftakes by the bittereft railleries againft the corruptions and the folly of the Romifh faith. The priefts were treated in all places with ridicule and contempt. The images, crucifixes, and relics, which ferved to roufe the decaying fervours of fupertition, were ftolen from the churches, and trampled under foot. The bifhops implored the affiftance of the queen-regent. Citations were given to the preachers to appear in their defence. They obeyed; but with fuch a formidable retinue, that it was with difficulty fhe was permitted to apologife for her conduct. James Chalmers of Gaitgirth, prefling forward from the crowd, addreffed himfelf to her: "We vow to Grod, that the devices of the prelates fhall not be carried into execution. We are oppreffed to maintain them in their idlenefs. 'They feek to undo and murder our preachers and us; and we are determined to fubmit no longer to this wickednefs." The multitude, applauding his fpeech, put their hands to their daggers.

A trufty meffenger was difpatched to Geneva, inviting John Knox to return to his own country. But in the infancy of their connection, the Proteftants being apprehenfive of one another, uncertain in their counfels, or being deferted by perfons upon whom they had relied, it appeared to them that they had adopted this meafure without a due preparation; and, by oppofite difpatches, Knox was requefted to delay his journey for fome time.

To this zealous reformer their unfteadinefs was a matter of ferious affliction; and in the anfwer he tranfmitted to their letters, he rebuked them with feverity: but amidft this correction, he intreated them not to faint under their purpofes, from apprehenfions of danger, which, he faid, was to feparate themfelves from the favour of God, and to provoke his vengeance. To particular perfons he wrote other addreffes; and to all of them the greateft attention was paid.- In 1557, a formal bond of agreement, which obtained the appellation of the firf covenant, was entered into, and all the more eminent perfons who favoured the reformation were invited to fubfcribe it. The earls of Argyle, Glencairn, and Morton, with the lord Lorn, and John Ernkine of Dun, led the way, by giving it the fanction of their names. All the fubfcribers to this deed, renouncing the fuperfitions and idolatry of the church of Rome, promifed to apply continually their whole power and wealth, and even to give up their lives, to forward and eftablifh the word of God. They diftinguifhed the reformed, by calling them the Congregation of Chrift; and by the opprobrious title of the Congregation of Satan, they peculiarized the favourers of Popery.
${ }^{523}$, and Calvin the firft covenant, they addreffed letters to John Knox, invited intourging in the ftrongeft terms his return to Scotland; Scutland. and that their hopes of his affiftance might not be dif- appointed, they fent an addrefs to John Calvin, the celébrated reformer, begging him to join his commands to their intreaties. The archbifhop of St Andrew's, who
perceived the rifing form, was in a difficult fituation. Scotlandi A powerful combination threatened ruin to the church; and he had feparated himfelf from the politics of the queen-regent. The zeal of the Roman Catholics pointed out ftrong meafures to him ; and his difpofitions were pacific. The clergy were offended with his remiffinefs and neglect of duty. The reformers detefted his loofenefs of principles, and were fhocked with the diffolute depravity of his life and converfation. He refolved to try the force of addrefs, and did not fucceed. He then refolved to be fevere, and was ftill more unfuccefsful.

The earl of Argyle was the moft powerful of the re-The archformed leaders. To allure him from his party, the bifhop of archbifhop of St Andrew's employed the agency of $\mathrm{Sir}^{\mathrm{St}}$ AnDavid Hamilton. But the kindnefs he affected, and drew's atthe advices he beftowed, were no compliment to the $\begin{gathered}\text { tempts in }\end{gathered}$ the advices he beftowed, were no compliment to the un vain to federftanding of this nobleman; and his threats were re-duce the garded with foorn. The reformers, inftead of lofingearl of Artheir courage, felt a fentiment of exultation and tri-gyle. umph ; and the earl of Argyle happening to die about this time, he not only maintained the new doctrines in his laft moments, but intreated his fon to feek for honour in promoting the public preaching of the gofpel and Jefus Chrift, and in the utter ruin of fuperfition and idolatry.

It was determined by the archbifhop and the prelates, that this difappointment fhould be fucceeded by furious perfecution of the reformed. Walter Mill, a prief, had watter neglected to officiate at the altar; and having been long Mill exeunder the fufpicion of herefy, was carried to St An: account of drew's, committed to prifon, and accufed before the religion. archbifhop and his fuffragans. He was'in an extreme old age; and he had ftruggled all his life with poverty. He funk not, however, under the hardnefs of his fate. To the articles of his accufation he replied with fignal recollection and fortitude. The firmnefs of his mind, in the emaciated ftate of his body, excited admiration. 'Ihe infults of his enemies, and their contempt; ferved to difcover his fuperiority over them. When the clergy declared him a heretic, no temporal judge could be found to condemn him to the fire. He was refpited to another day; and fo great fympathy prevailed for his misfortunes, that it was neceffary to allure one of the archbifhop's domeftics to fupply the place of the civil power, and to pronounce the lentence of condemnation. When brought to the ftake, the refolution of this fufferer did not forfake him. He praifed God, that he had been called to feal up the truth with his life; and he conjured the people, as they would efcape eternal death, not to be overcome by the errors 'and the artifices of monks and priefts, abbots and bifhops:

The barbarity of this execution affected the refor-The Pro mers with inexpreffible horror. Subfcriptions for mu-tefiants retual defence were taken. The leaders of the reforma- foive to af tion, difperfing their emiffaries to every quarter, encou-- fert their raged the vehemence of the multitude. The covenant to eftablifh a new form of religion extended far and wide. The fharp point of the fword, not the calm exertions of inquiry, was to decide the difputes of theology.

When the leaders of the refornation were apprifed of the ardent zeal of the people, and confidered the great number of fubfcriptions which had been collected in the different counties of the kingdom, they affembled

Scothns. to deliberate cancerning the fieps to be purfued. It was refolved, accordingly, that a public and common fupplication of the whole body of the Proteltants fhould be prefented to the queen regent; which, after complaining of the injuries they lad fuffered, fhould require her to beftow upon them lier fupport and affiltance, and urge her to proceed in the work of a reformation. To explain their full meaning, a fchedule, containing particular demands, was at the fame time to be prefented to her ferutiny. To Sir James Sandilauds of Calder they committed the important charge of their manifefto and articles of reformation; and in appointing him to this commiffion, they confulted the refpect which was due both to the government and to themfelves. His character was in the higheft eftimation. His fervices to his country were numerous; his integrity and honour were fuperior to all fufpicion; and his age and experience gave him authority and reverence.
The petition or fupplication of the Proteftants was expreffed in ftrong but refpectful terms. They told the queen-regent, that though they had been provoked by great injuries, they had yet, during a long period, abftained from affembling themfelves, and from making known to her their complaints. Banifhment, confifcation of goods, and death in its moft cruel fhape, were evils with which the reformed had been afflicted; and they were ftill expofed to thefe dreadful calamities, Compelled by their fufferings, they prefumed to afk a remedy againft the tyranny of the prelates and the eftate ecclefiaftical. They had ufurped an unlimited domination over the minds of men. Whatever they commanded, though without any fanction from the word of God, muft be obeyed. Whatever they prohibited, tho' from their own authority only, it was neceffary to avoid. All arguments and remonftrances were equally fruitlefs and vain. The fire, the faggot, and the fword, were the weapons with which the church enforced and vindicated her mandates. By thefe, of late years, many of their brethren had fallen; and upon this account they were troubled and wounded in their confciences. For conceiving themfelves to be a part of that power which God had eftablifhed in this kingdom, it was their duty to have defended them, or to have concurred with them in an open avowal of their common religion. They now take the opportunity to make this avowal. They break a filence which may be mifinterpreted into a juftification of the cruelties of their enemies. And difdaining all farther diffimulation in matters which concern the glory of God, thoir prefent liappinefs, and their future falvation, they demand, that the original purity of the Chriftian religion thall be reftored, and that the government fhall be fo improved, as to afford to them a fecurity in their perfons, their opinions, and their property.

With this petition or fupplication of the Proteftants, Sir James Sandilands prefented their fchedule of demands, or the preliminary articles of the reformation. They were in the fpirit of their fupplication, and of the following tenor.
I. It fhall be lawful to the reformed to perufe the Scriptures in the vulgar tongue; and to employ alfo their native language in prayer publicly and in private.
II. It fhall be permitted to any perfon qualifed by knowledge, to interpret and explain the difficult paffages in the Scriptures.
III. The election of miniters fhall take pace acened stoulands ing to the rules of the primitive church; and thofe who eleet fhall inquire diligently into the lives and doctrines of the perfons whom they admit to the clerical office.
IV. 'The holy facrament of baptifm thall be celebrated in the vulgar tongue, that its inftitution and nature may be the more generally underfood.
V. The holy facrament of the Lord's fupper Thall likewife be adminiftered in the vulgar tongue; and in this communion, as well as in the ceremonial of baptifm, a becoming refpect fhall be paid to the plain infitution of Chrift Jefus.
VI. The wicked and licentious lives of the bifhops and eftate ecclefiatical fhall be refornied; and if they difcharge not the duties of true and faithful paftors, they fhall be compelled to defift from their miniftry and functions.

The queen-regent now found it neceffary to flatter The Prozef the Proteftants. She affured them by Sir James San-tants flatdilands, their orator or commiffioner, that every thing the ofueen they could legally defire fhould be granted to them; regent. and that, in the mean time, they might, without mo. leftation, employ the vulgar tongue in their prayers and religious exercifes. But, upon the pretence that no encouragement might be given to tumults and riot, fhe requefted that they would hold no public affemblies in Edinburgh or Leith. The Congregation, for this name was now affumed by the Proteltants, were tranfported with thefe tender proofs of her regard; and while they fought to advance ftill bigher in her efteem by the inoffenfive quietnefs of their carriage, they were encouraged in the undertaking they had begun, and anxious to accomplifh the work of the reformation.

Nor to the clergy, who at this time were holding a provincial council at Edinburgh, did the Congregation fcruple to communicate the articles of the intended reformation. The clergy received their demands with a ftorm of rage, which died away in an innocent debility. Upon recovering from their paffions, they offered to They offer fubmit the controverfy between them and the reformed to difpute to a public difputation. The Congregation did not with the refufe this mode of trial ; and defired, as their only con-clergy. ditions, that the Scriptures might be confidered as the ftandards of orthodoxy and truth, and that thofe of their brethren who were in exile and under perfecution might be permitted to affilt them. Thefe requefts, though reafonable in a high degree, were not complied with; and the church would allow no rule of right but the canon law and its own councils. Terms of reconciliation were then offered on the part of the eftate ecclefiaftical. It held out to the Proteftants the liberty of praying and adminiftering the facraments in the vulgar tongue, if they would pay reverence to the mals, acknowledge purgatory, invoke the faints, and admit of petitions for the dead. To conditions fo ineffectual and abfurd the Congregation did not deign to return any anfwer.

The meeting of the parliament approached. The parties in contention were agitated with anxieties, apprehenfions, and hopes. An expectation of a firm and open affiftance from the queen-regent gave courage to the reformed; and, from the parliarnentary influence of their filiends in the greater and the leffer baronage, they expected the moft important fervices. They drew up with eagernefs the articles which they wifhed to be
paffed

## S C O $\left[3^{1}\right] \quad \mathrm{S}$ C O

tranfactions are to be gathered in the completeft manner from the papers which were framed by themfelves, it is proper to attend to them with a punctilious exactnefs. Their petitions were few and explicit.
I. They could not, in confequence of principles which they had embraced from a conviction of their truth, participate in the Romifh religion. It was therefore their defire, that all the acts of parliament, giving authority to the church to proceed againft them as heretics, fhould be abrogated ; or, at leaft, that their power frould be fufpended till the difputes which had arifen were determined and brought to a conclufion.
II. They did not mean that all men fhould be at liberty to profefs what religion they pleafed, without the controul of authority. They confented that all tranfgreffors in matters of faith fhould be carried before the temporal judge. But it was their wifh that the clergy fhould have only the power to accufe; and they thought it conformable to juftice, that a copy of the criminal charge fhould be lodged with the party upon trial, and that a competent time fhould be allowed him to defend himfelf.
III. They infifted, that every defence confiftent with law fhould be permitted to the party acculed; and that objections to witneffes, founded in truth and reafon, fhould operate to his favour.
IV. They defired that the party accufed fhould have permiffion to interpret and explain his own opinions ; and that his declaration fhould carry a greater evidence than the depofition of any witnefs : as no perfon ought to be punifhed for religion, who is not obitinate in a wicked or damnable tenet.
V. In fine, they urged, that no Proteftant fhould be condemned for herefy, without being convicted, by the word of God, of the want of that faith which is neceffary to falvation.

The Congregation prefented thefe articles to the queen-regent, expecting that fhe would not only propofe them to the three eftates affembled in parliament, but employ all her influence to recommend them. But finding themfelves difappointed, they began to fufpect her fincerity; and they were fenfible that their petitions, though they fhould be carried in parliament, could not pals into a law without her confent. They therefore abftained from prefenting them; but as their complaints and defires were fully known in parliament, they ordered a folemn declaration to be read there in their behalf, and demanded that it fhould be inferted in the records of the nation. In this declaration, after expreffing their regret for having been difappointed in their fcheme of reformation, they protefted, that no blame fhould be imputed to them for continuing in their religion, which they believed to be founded in the word of God; that no danger of life, and no political pains, fhould be incurred by them, for difregarding ftatutes which fupport idolatry, and for violating rites which are of human invention ; and that, if infurrections and tumults fhould difturb the realm, from the diverfity of religious opinions, and if abufes fhould be corrected by violence, all the guilt, diforder, and inconvenience thence arifing, inftead of being applied to them, thould be afcribed to thofe folely who had refufed a timely redrefs of wrongs, and who liad defpifed petitions prefented with the humility of faithful fubjects, and for the purpofes of
eftablifhing the commandm and falutary reformation.

The three eftates received this formidable prote? with attention and refpect ; but the intention of inferting it in the national records was abandoned by the Congregation, upon a formal promife from the queen-regent, that all the inatters in controverfy fhould fpecdily be brought by her to a fortunate iffue.

While the Proteltants were thus making the moft vigorous exertions in behalf of their fpiritual liberties, the queen-regent, in order to eftablifh herfelf the more effectually, ufed every effort to promote the marriage of her daughter with the dauphin of France. In 1557, commiffioners were appointed to negociate this marriage; but while thefe negociations were goiny on, the court of France acted in the moft perfidious manner. At the age of 15 , after folemnly ratifying the independency of Scotland, and the fucceffion of the crown in the houfe of Hamilton, queen Mary was influenced by the king and her uncles the princes of Lorraine to fign privately three extraordinary deeds or inftruments. By the firft fhe conveyed the kingdom of Scotland to the king of France and his heirs, in the default of children of her own body. By the fecond the affigned him, if fhe fhould die without children, the poffeffion of Scot. land, till he fhould receive a million of pieces of gold, or be âmply recompenfed for the fums expended by him in the education of the queen of Scotland in France. By the third fhe confirmed both thefe grants in an exprefs declaration, that they contained the pure and genuine fentiments of her mind; and that any papers which might be obtained, either before or alter her marriage, by means of the Scottifh parliament, fhould be invalid, and of no force nor efficacy. On the Marriage 24 th of April, the nuptials were celebrated; and the of the dauphin, Francis, was allowed to affume the title of king queen of of Scotland. The French court demanded for him the the daucrown and other enliens of royalty belonging to Scot-phin of land; but the commifioners had no power to comply France. with their requeft. It was then defired, that when they returned home, they thould ufe all their influence to procure the crown-matrimonial of Scotland for the dauphin. This alfo was refufed; the court of France was difgufted ; and four of the commiffioners died, it was fuppofed of poifon, given them by the princes of Lorraine. This fubject, however, was preffed, on the return of the furviving commiffioners, by the king of France himfelf, the queen of Scotland, and the queenregent. The Proteftants alfo joined their intereft, hoping by that means to gain over the queen and queenregent to their party; fo that an act of parliament was at length paffed, by which the crown-matrimonial was given to the dauphin during the time of his marriage with queen Mary ; but without any prejudice to the li-- of ic t . berties of the kingdom, to the heirs of her body, or to under certhe order of fucceffion. With fo many reftraints, it ${ }^{t}{ }^{\text {iin }}$ reftric: is difficult to fee the advantages which could accrue ${ }^{\text {tions. }}$ from this gift fo earnefly fought after; and it is very probable, that the ufurpations of France in confequence of it, would have been productive of many difturbances; but thefe were prevented by the death of Francis in December 1560.

But before this event took place, Scotland was, by: the intrigues of France, involved in confufion on alluther account. After the death of Mary queen of Eng-

Scheme to defroy all the leaders of the Proteftant par. cy in Scotland.

539
Treacherous behaviour of the queen regent. erown of England, in preference to that of Elizabeth, whom they looked upon as illegitimate. 'This claim was fupported by the king of France, who prevailed with the queen of Scots herfelf to affume the title of queen of England, and to ftamp money under that character. The arms of England were quartered with thofe of France and Scotland ; and employed as ornaments for the plate and furniture of Mary and the dauphin. Thus was laid the foundation of an irreconcileable quarrel between Elizabeth and Mary; and to this, in fome meafure, are we to afcribe the inveteracy with which the former perfecuted the unhappy queen of Scotland, at every time fhe had it in her power.

But while they imprudently excited a quarrel with England, they yet more imprudently quarrelled alfa with the majority of the people of Scotland. As Elizabeth profeffed the Proteftant religion, it was eafily forefeen, that the Congregation, or body of the reformed in Scotland, would never confent to act againft her in favour of a Popifh power ; and as they could not be gained, it was refolved to deftroy them at once, by putting to death all their leaders. The queen-regent gave intimation of her defion to re-eftablifh Popery, by proclaiming a folemn obfervance of Eafter, receiving the facrament according to the Romifh communion, herfelf, and commanding all her houfehold to reccive it in the fame manner. She next expreffed herfelf in a contemptuous manner againf the reformed, affirmed that they had infulted the royal diçnity, and declared her intention of reftoring it to its ancient luftre. The preachers of the Congregation were next cited to appear at Stirling, to anfwer the charges which might be brought againft them. Alexander earl of Glencairn, and Sir Hugh Campbell of Loudion, were dcputed to admonifh her not to perfecute the prcachers, unlefs they had been obnoxious by circulating erroneous doctrines, or difturbing the peacc of government. The queen-regent in a paffion told them, that the preachers Thould all be banifhed Scotland, though their doctrines werc as found as thofe of St Paul. The deputies urged her former kind behaviour and promifes; but the queen-regent anfwered, that " the promifes of princes ought not to be exacted with rigour, and that they were binding only when fubfervient to their conveniency and pleafure." To this they replied, that in fuch a cafe they could not look upon her as their fovereign, and
540
Proesed. ings againft the Protefcants. mult renounce their allegiance as fubjects.
Soon after this tranfaction, the quecn-regent received the news that the reformation was eltablifhed in Perth. Lord Ruthven the provoft of the city was fummoned to anfwer for this innovation; but his reply was, that he had no dominion over the minds and confciences of men. The provoft of Dundee, being or dered to apprchend an eminent preacher, named $P$ aul Metbven, fent him intclligence of the order, that he might provide for his fafety. The proclamation for obferving Eafter was everywhere defpifed and neglected, and people exclaimed againft the mals as an idol. the preachers to appear at Stirling. They obeyed the cheir num - ummons; but attended by fuch multitudes, that the bers.
without arms, intreated Mr Erfkine of Dun, whom Scotland they had fent before as a deputy, to ftop their march; affuring him that all proceedings againft the preachers fhould be ftopped. In confequence of this, the multitude difmiffed; yet, when the day came on which the preachers fhould have appeared, the queen-regent, with unparalleled folly as well as treachery, caufed them to be declared traitors, and proclaimed it criminal to afford them any fubfiftence.

Mr Ernsine, exafpcrated by this fhameful conduct, haftened to the Congregation, apologifed for his conduct, and urged them to proceed to the laft extremities. At this critical period alfo John Knox returned John 542 from Geneva, and joined the Congregation at Perth. returns to 'The great provocations which the Proteftants had al. Scotland. ready received, joined to the impetuous paffions of the multitude, were now productive of the greateft diforders. Images were deftroyed, monafteries pulled down, and their wealth either feized by the nob or given to the poor. The example of Perth was followed by Cupar in Fife; and fimilar infurrections being apprehended in other places, the queen-regent determined to punifh the inhabitants of Perth in the moft exemplary marner. With this view fie collected an army : but being oppofed with a formidable power by the Proteftants, fhe thought proper to conclude an agreement. The Proteftants, however, dreaded her infincerity; and therefore entered into a new covenant to fland by and vecond con defend one another. 'I'heir fears were not vain. The Treachery queen-regent violated the treaty almoft as foon as made, queen and began to treat the Proteftants with feverity. The gent. earl of Argyle, and the prior of St Andrew's, who about this time began to take the title of lord Fames Stuart, now openly headcd the Proteftant party, and prepared to collect their whole frength. The queenregent oppofed them with what forces fhe had, and which indeed chiefly confilted of her French auxiliaries; but, being again afraid of coming to an engagement, fhe confented to a truce until commiffoners fhould be fent to treat with the lords of, an effectual peace. No commiffioners, however, were fent on her part; and the nobles, provoked at fuch complicated and unceafing trcachery, refolved to pufh matters to the utmoft extremity. The firf exploit of the reformed was the Per•h tataking of the town of Perth, where the quecu-regent ken by the had placed a French garrifon. The multitude, elated Protefwith this atchievement, deftroycd the palace and abbey ${ }^{\text {tants. }}$ of Scone, in fpitc of all the endeavours of their lcaders, even of John Knox himfelf, to fave them. The queenregent, apprehenfive that the Congregation would commit farther ravacres to the fouthward, refolved to throw a garrifon into Stirling; but the earl of Argyle and lord James Stuart were too quick for her, and arrived there the very day after the demolition of the $a b$ bey and palace of Scone. The people, incapable of reftraint, and provoked bcyond meafure by the perfidiors behaviour of the Catholic party, demolifined all the monafteries in the neighbourhood, together with the fine abbey of Cambunkenneth, fituatcd on the north bank of the Forth. From Stirling they went to Line lithgow, where they committed their ufual ravages; af. The queen ter which, they advanced to Edinburgh. 'The queen- to Dunhar, regent, alarmed at their approach, fled to Dunbar; and and the

tland. gregation affumed to themfelves the ruling power of the kingdom, appointed preachers in all the churches, and feized the mint, with all the inftruments of coining. The queen-regent, unable to difpute the matter in the field, publifhed a manifetto, in which the fet forth their feditious behaviour, commanding them to leave Edinburgh within fix hours, and enjoining her fubjects to avoid their fociety under the pain of treafon. The Congregation having already loft fomewhat of their popularity by their violent proceedings, were now incapable of coping with government. As they had not eftablifhed themfelves in any regular body, or provided a fund for their fupport, they felt their Atrength decay, and multitudes of them returned to their habitations. Thofe who remained found themfelves obliged to vindicate their conduct; and, in an addrefs, to the regent, to difclaim all treafonable inten. tions. Negociations again took place, which ended as ufual ; the queen-regent, who had taken this opportunity of collecting her forces, marched againft the Congregation on the 23 d of July 1559 . The Proteftants now found themfelves incapable of making head againtt their enemies; and therefore entered into a negociation, by which all differences were for the prefent accommodated. The terms of this treaty were, that the town of Edinburgh fhould be open to the queen-dowager and her attendarits; that the palace of Holyroodhoufe and the mint fhould be delivered up to her; that the Proteftants fhould be fubject to the laws, and abftain from molefting the Roman Catholics in the exercife of their religion. On the queen's part, it was agreed, that the Proteftants fhould have the free exercife of their religion, and that no foreign troops fhould enter the city of Edinburgh.

Notwithftanding this treaty, however, the reformed had no confidence in the queen's fincerity. Having heard of the death of Henry II. of France, and the acceffion of Francis II. and Mary to that kingdom, they feem to have apprehended more danger than ever. They now entered into a third covenant ; in which they engaged themfelves to refufe attendance to the queendowager, in cafe of any meffage or letter ; and that immediately on the receipt of any notice from her to any of their number, it fhould be communicated without referve, and be made a common fubject of fcrutiny and deliberation. It was not long before they liad occafion for all their conftancy and ftrength. The queen-regent repented of the favourable terms fhe had granted the reformed ; and being denied the favour which fhe requefted of faying mafs in the high-church of Edinburgh, fhe ordered them to be everywhere difturbed in the exercife of their religion.

In this imprudent meafure, the queen-regent was confirmed by letters which now came from Francis and Mary, promifing a powerful army to fupport her interefts. The envoy who brought thefe difpatches alfo carried letters to the lord James Stuart, now the principal leader of the Proteftants, and natural brother to the queen. The letters were filled with reproaches and menaces, mixed with intreaties ; and along with them the envoy delivered a verbal meffage, that the king his mafter was refolved rather to expend all the treafures of France than not to be revenged on the rebellious nobles who had difturbed the peace of Scotland. The lord James Stuart was not to be frightened by thefe menaVos. XVII. Part I.

## 33

ces. He returned a cool and deliberate anfwer, apolo- Scotland. gizing for the Proteftants, and vindicating them from the charge of rebellion; but at the fame time intimating his full refolution of continuing to head the reformed as he had already done.

The letters of Francis and Mary were foon followed French auby 1000 French foldiers, with money and military xiliaries arftores; and the commander was immediately difpatched rive, which arain to France, to folicit the affiftance of as many nation. more foldiers, with four fhips of war, and 100 men-at-arms. But before he could fet out, La Broffe, another French commander, arrived with 2000 infantry ; and that the Congregation might be defeated not only by arms but in difputation, the fame fhip brought three doctors of the Sorbonne, to fhow the pernicious tendency of the new doctrines. Thus matters were puhhed on beyond all hopes of reconciliation. The nation was univerfally alarmed on account of the introduction of French troops, to which they faw no end. The queen-regent attempted to quiet the minds of the public by a proclamation; but their fears increafed the more. The Congregation affembled at Stirling, where they were joined by the earl of Arran, and foon after by his father the duke of Chatelherault. They next deliberated on the meafures to be followed with the queen-regent; and the refult of their confultations was, that an expoftulatory letter fhould be addreffed to her. This was accordingly done; but as the queen behaved with her ufual duplicity, the nobles called the people to arms. Mutual manifeftos were now publifhed; and both parties prepared to decide the conteft by the fword. The Congregation having feized Broughty caftle, marched from thence to Edinburgh. The 552 queen-regent retired to Leith, which the had fortified The nobles and filled with French troops. Thither the nobles fent fend their their laft meffage to her, charging her with a defign to the meffage to overthrow the civil liberties of the kingdom. They queenrequefted her to command her Frenchmen and merce-regent. naries to depart from Leith, and to make that place open and patent, not only to the inhabitants who had been difpoffeffed of their houfes, but to all the inhabitants of Scotland. They declared, that her denial of this requeft fhould be confidered by them as a proof of her intention to reduce the kingdom to flavery; in which cafe, they were determined to employ their utmoft power to preferve its independency. Two days Receiv after this meffage, the queen-regent fent to them the Receive an lord Lyon, whom fhe enjoined to tell them, that fheableane. confidered their demand not only as prefumptuous, but ${ }^{\text {fwer. }}$ as an encroachment on the royal authority; that it was an indignity to lier to be dictated to by fubjects; that Frenchmen were not to be treated as foreigners, being entitled to the fame privileges with Scotfmen; and that fhe would neither diband her troops, nor command the town of Leith to be made open and patent. The lord Lyon then, in the name of the queenregent, commanded the lords of the Congregation to depart from Edinburgh, and difperfe themfelves, under the pain of high treafon. The Proteflants, irritated They de by this anfwer, after fome. deliberation degraded the grade ber queen-regent ; and to this purpofe the nobility, barons, from her and burgeffes, all agreed in fubfcribing an edict, which office, and was fent to the principal cities in Scotland, and publifh- lay fiege to ed in ed in them.

The next ftep taken by the Congregation was to fum.

## 

## Scotland.

 inftead of fubmiffion, it was refolved to take the town by fcalade. For this fervice ladders were framed in the church of St Giles; a bufinefs which, interrupting the preachers in the exercife of public worhhip, made them prognofticate misfortune and mifcarriage to the Congregation. In the difpleafure of the preachers, the common people found a fource of complaint; and the emiffaries of the queen-dowager acting with indefatigable induftry to divide her adverfaries, and to fpread chagrin and diffatisfaction among them, difcontent, animofity, and terror, came to prevail to a great degree. The duke of Chatelherault difcouraged many by his example. Defection from the Proteftants added ftrength to the queen-dowager. The moft fecret deliberations of the confederated lords were revealed to her. The foldiery were clamorous for pay ; and it was very difficult, to procure money to fatisfy their claims. Attempts to foothe and appeafe them, difcovering their confequence, engendercd mutinies. They put to death a domeftic of the earl of Argyle, who endeavoured to compofe them to order: they infulted feveral perfons of rank who difcovered a folicitude to pacify them ; and they even ventured to declare, that, for a proper reward, they were ready to fupprefs the reformation, and
to re-eftablifh the mafs.
It was abfolutely neceffary to give fatisfaction to the Proteftant foldiers. The lords and gentlemen of the Congregation collected a confiderable fum among them; but it was not equal to the prefent exigency.

557
Englim
fublidy
taken by
the queenregent.

The avarice of many taught them to withhold what they could afford, and the poverty of others did not permit them to indulge their generofity. It was refolved, that each nobleman fhould furrender his filverplate to be ftruck into money. By the addrefs, however, of the queen-dowager, the officers of the mint were bribed to conceal, or to convey to a diftance, the ftamps and inftruments of coinage. A gloomy defpair gave difquiet to the Congregation, and threatened their ruin. Queen Elizabeth, with whofe miniters the confederated lords maintained a correfpondence at this time, had frequently promifed them her affiftance ; but they could not now wait the event of a deputation to the court of England. In an extremity fo preffing, they therefore applied for a fum of money to Sir Ralph Sadler and Sir James Croft, the governors of Berwick ; and Cockburn of Ormilton, who was entrufted with this commiffion, obtained from them an aid of 4003 crowns. Traitors, however, in the councils of the Congregation, having informed the queen-dowager of his errand and expedition, the earl of Bothwel, by her order, intercepted him upon his return, difcomfited his retinue, and made a prize of the Englifh fubfidy.

To roufe the fpirit of the party, an attack was pro. jected upon Leith, and fome pieces of artillery were planted againit it. But before any charge could be made, the French foldiers fallied out to give battle to the troops of the Congregation, poffeffed themfelves of their cannon, and drove them back to Edinburgh. A report that the victors had entered this city with the fugitives, filled it with diforder and difmay. The earl of Argyle and his Highlanders haftened to recover the honour of the day, and haraffed the French in their retreat. This petty conflic, while it elated the queen-
dowager, ferved to-augment the defpondence of the Proteftants.
Vain of their prowefz, the French made new fally from Leith, with a view to intercept a fupply of provifions and ftores for the Congregation. "The earl of Arran and the lord James Stuart advanced to attack them, and obliged them to retire. But purfining them with too much heat, a frefh body of French troops made its appearance. It was prudent to retreat, but rhe Pro difficult. An obftinate refiftance was made. It was teftants the object of the French to cut off the foldiery of the again de. Congregation from Edinburgh, and by thefe means to feated. divide the ftrength of that ftation. The earl of Arran and the lord James Stuart had occafion for all their addrefs and courage. Though they were able, however, to effect their efcape, their lofs was confiderable, and the victory was manifefly on the fide of their adverfaries.

About this time William Maitland of Lethington, Maitlan fecretary to the queen-dowager, withdrew fecretly from the que Leith, and joined himfelf to the confederated nobles. dowager He had been difgufted with the jealoufies of the French fecretary revolts counfellors, and was expofed to dangers from having the Prot embraced the doctrines of the reformed. His reception flauts. was cordial, and correfponded to the opinion entertained of his wifdom and experience. He was fkilled in bufinefs, adorned with literature, and accuftorned to reflection. But as yet it was not known, that his want of integrity was in proportion to the greatnefs of his talents.

The acceffion of this ftatefman to their paty could not confole the lords of the Congregation for the unpromifing afpect of their affairs. The two difcomfitures they had received funk deeply into the minds of their followers. Thofe who affe §ted prudence, retired. privately from a caufe which they accounted to be defperate; and the timorous fled with precipitation. The wailings and diftruft of the brethren were melancholy: and infectious; and by exciting the ridicule and fcorn: of the partifans of the queen-dowager, were augmented the more. A diftrefs not to be comforted feemed to have invaded the Proteftants; and the affociated 1 nobles coufented to abandon the capital. A little after from Edi midnight, they retired from Edinburgh ; and fo great burgh to was the panic which prevailed, that they marched to ${ }^{\text {stirling. }}$ Stirling without any ftop or intermiffion.
John Knox, who had accompanied the Congregation J $h_{n}^{63} \mathrm{Kn}$ to Stirling, anxious to recover their unanimity and encourat courage, addreffed them from the pulpit. He repre-them. fented their misfortunes as the confequences of their fins; and intreating them to remember the gooduefs of their caufe, affured them in the end of joy, honour and victory. His popular eloquence correfponding to all their warmeft wifhes, diffufed fatisfaction and cheerfulnefs. They paffed from defpair to hope. A council was held, in which the confederated nobles determined to folicit, by a formal embafly, the aid of queen Elizabeth. Maitland of Lethington, and Robert Melvil, were chofen to negociate this important tranfaction; and they received the fulleft inftructions concerning the ftate and difficulties of the Congregation, the tyrannical defigns of the queen-dowager, and the danger which threatened England from the union of Scotland with France.

The queen of England having maturely confidered
cotland. thecafe, determined to affift the reformers; whofe leaders now difperfed themfelves, and went to different parts of the kingdom, in order to employ their activity there for the common caufe. The queen-dowager, was his object at the fame time, to keep the force of the Congregation entire, to hazard no action of importance, and to wait the approach of the Englifh army.
A fmall advantage was obtained by the French at Petance, and to wait the approach of the Englifh army. ticur; and they poffeffed thenofelves of Kinghorn. The lord James Stuart, with 500 horfe and 100 foot, entered Dyfart. With this inconfiderable ftrength he propofed to act againft an army of 4000 men. His admirable fkill in military affairs, and his heroic courage, mirable flill in military affairs, and his heroic courage,
were eminently difplaytd. During 20 days he prevented the march of the French to St Andrew's, intercepting their provifions, haraffing them with fkirmifhes, and intimidating them by the addrefs and the boldnefs of his ftratagems.

Monfieur d'Oyfel, enraged and afhamed to be difconcerted and oppofed by a body of men fo difproportioned to his army, exerted himfelf with vigour. The lord James Stuart was obliged to retire. Dyfart and Wemyfs were given to the French troops to be pillaged; and when d'Oyfel was in full march to St Andrew's, he difcovered a powerful fleet bearing up the frith. It was concluded, that the fupplies expected from France were arrived. Guns were fired by his foldiers, and their joy was indulged in all its extravagance. But this fleet laving taken the veffels which contained their provifions, and the ordnance with which they intended to improve the fortifications of the caftle at St Andrew's, a period was put to their rejoicings. Certain news was brought, that the fleet they obferved was the navy of England, which had come to fupport the Congregation. A confternation, heightenedby the giddinefs of their preceding tranfports, invaded them. Monfieur d'Oyfel perceived now the chvalue and merit of the fervice which had been performed by the lord James Stuart ; and thinking, no more of St Andrew's and conqueft, fled to Stirling, in his way to Leith, from which he dreaded to be intercepted; but he reached that important fation after a march of three days. hopes of being able to cruith the reformed at once. Her fanguine hopes, however,' were foon checked, on receiving certain intelligence that queen Elizabeth was refolved to give them affiftance. She now took the beft meafures poffible, as circumftances ftood; and determined to crufh her enemies before they could receive any affiftance from England. Her French troops took the road to Stirling, and wafted in their march all the grounds which belonged to the favourers of the reformation. After renewing their depredations at Stirling, they paffed the bridge there; and proceeding along the fide of the river, exercifed their cruelties and oppreffions in a diftrict which lad diftinguifhed itfelf by an ardent zeal againft popery. While the terror of their arms was thus diffufing itfelf, they refolved to feize the town and caftle of St Andrew's, which they confidered as an important military ftation, and as a convenient place of reception for the auxiliaries they expected from France.

But the lord James Stuart employed himfelf to interrupt their progrefs and retard their attempts; and
like the recal of her hhipss. This ambanfador affected to likewife to negociate concerning the evacuation of Scot-in vain land by the French troops, and to propofe methods by which the king of France might quarter the arms of England without doing a prejudice to queen Elizabeth. But to prevent the execution of vigorous refolutions againft the queen-dowager, and to gain time, were the only objects he had in view. With fimiliar intentions, John Monluc bifhop of Valence, a man of greater addrefs and ability, and equally devoted to the houfe of Guife, was alfo fent at this time to the court of England. Queen Elizabeth, however, and her minifters, were too wife to be amufed by artifice and dexterity. The lord Grey entered Scotland with an army of 1200 An Eng. horle and 6000 foot; and the lord Scroop, Sir James lifh army Creft, Sir Henry Percy, and Sir Francis Lake com- enters Scote manded under him. By an inclement policy, the queendowager had already wafted all the country around the capital. But the defolation fhe had made, while it was ruinous to the Scottifh peafants, affected not the army of England. The leaders of the Conyregation did not want penetration and forefight, and had provided themfelves asainft this difficulty. The duke of Chatelherault, the earls of Argyle, Glencairn, and Menteith, the lord James Stuart, and the lords Ruthven, Boyd, and Ochiltree, with a numerous and formidable force, joined the Englifh commander at Prefton.

Struck with the fad condition of her affairs, defpairing of a timely and proper fuccour from France, and reminded by ficknefs of her mortality, the queen-dowager E 2

574
The Proecftants invite her to an accommodation. herfelf under the protection of the lord Erfkine. At the period when fhe was appointed to the regency, the lord Erfkine had received from the three eftates the charge of this important fortrefs, with the injunction to hold it till he fhould know their farther orders; and giving way to the folicitations of neither faction, he had kept it with fidelity. By admitting the queendowager, he yielded to fentiments of honour and humanity, and did not mean to depart from his duty. A few only of her domeftics accompanied her, with the archbifhop of St, Andrew's, the bifhop of Dunkeld, and the earl Marifchal.

The confederated nobles now affembled at Dalkeith to hold a council; and comforming to thofe maxims of prudence and equity which, upon the eve of hoftilities, had been formerly exercifed by them, they invited the queen-dowager to an amicable conclufion of the prefent troubles. In a letter which they wrote to her, they called to her remembrance the frequent manifeftos and meffages in which they had preffed her to difmifs the French foldiery, who had fo long oppreffed the lower ranks of the people, and who threatened to reduce the kingdom itfelf to fervitude. 'I'he averfion, however, with which fhe had conftantly received their fuit and prayers, was fo great, that they had given way to a ftrong neceffity, and had intreated the affiftance of the queen of England to expel thefe ftrangers by the force of arms. But though they had obtained the powerful protection of this princefs, they were yet animated with a becoming refpect for the mother of their fovereign; and, abhorring to ftain the ground with Chriftian blood, were difpofed once more to folicit the difmiffion of thefe mercenaries, with their officers and captains. And that no juft objection might remain againft the grant of this their laft requeft, they affured her, that a fafe paffage by land, to the ports of England, fhould be allowed to the French; or that, if they judged it more agreeable, the navy of queen Elizabeth thould tranfport them to their own country. If thefe propofals fhould be rejected, they appealed and protefted to God and to mankind, that it fhould be underftood and believed, that no motive of malice, or hatred, or wickednefs of any kind, had induced them to employ the fatal expedient of arms and battles; but that they had been compelled to this difagreeable and diftrefsful remedy, for the prefervation of their commonwealth, their religion, their perfons, their eftates, and their pofterity. They begged her to weigh the equity of their petition, to confider the inconveniences of war, and to think of the reft and quiet which were neceffary to relieve the afflictions of her daughter's kingdom; and they befought her to embalm her own memory, by an immortal deed of wifdom, humanity, and jultice.

To give authority and weight to the letter of the affociated lords, the lord Grey directed Sil George Howard and Sir James Croft to wait upon the queendowager, and to ftipulate the peaceable departure of the Englifh troops, upon the condition that the French mercenaries were immediately difmiffed from her fervice, and prohibited from refiding in Scotland. Returning no direct anfwer to the applications made to her, fhe defired time to deliberate upon the refolution which it became her to adopt. This equivocal behaviour corre-

She ftill be
haves with infincerity.
fponded with the fpirit of intrigue which had uniformly diftinguifhed the queen-dowager; and it is probable, that her engagements with France did not permit her to be open and explicit.

The combined armies marched towards Leith. A The Rrer body of the French, pofted upon a rifing ground call- defeated ed Hawk-hill, difputed their progrefs. During five the Prohours the conflict was maintained with obftinate valouro allies, At length the Scottifh horfemen charged the French with a fury which they were unable to refift. They fled to Leith with precipitation; and might have been cut off from it altogether, if the Englifh cavalry had exerted themfelves. Three hundred of the French foldiers perifhed in this action, and a few combatants only fell on the fide of the Congregation.

Leith was invefted. The pavilions and tents of the who lay Englinh and Scottifh nobility were planted at Reftal-fieze to rig, and around it. 'Trenches were calt ; and the ord- Leith. nance from the town annoying the combined armies, a mount was raifed, upon which eight cannons were erected. A continued fire from thefe, againft St A nthony's tower in South Leith, being kept up and managed with fkill, the walls of this fabric were fhaken, and the French found it neceffary to difmount their artillery. Negligent from fecurity, and apprehenfive of no attack, the Englih and Scottifh officers occupied themfelves in amufements, and permitted a relaxation of military dif. cipline. The French, informed of this fupinenefs and levity, made a fally from Leith. While fome of the captains were diverting themfelves at Edinburgh, and off the foldiery were engaged at dice and cards, they entered the trenches unobferved, and, puihing their advan: tage, put 600 men to the fword. After this fiaughter, the Proteftants were more attentive to their affairs.Mounts were built at proper difances, which, being. fortified with ordnance, ferved as places of retreaf and defence in the event of fudden incurfions; and thus: they continued the blockade in a more effectual manner.

The army under the marquis $D^{\prime}$ Elbeuf, promifed fo often to the queen-regent, was in vain expected by her; but the received, at this time, fupplies in money and military ftores ; and Monluc bifhop of Valence, though defeated in dexterity by Elizabeth and her minifters, had arrived in Scotland to try anew the arts of delay and negociation. Conferences were held by him with the queen-dowager, with the Englifh commanders, and wher, ruitlefs agreem the confederated nobles; but no contract or with Eng ex lath neither land extended to the demolition of Leith, nor to the recal of the French mercenaries : and though he obtained powers from his court to confent to the former of thefe meafures, they were yet burdened with conditions which were difgraceful to the Congregation; who, in the prefent profperous ftate of their fortunes, were not difpofed to give up any of the objects for which they had ftruggled fo long, and to the attainment of which they now looked forward with a fettled hope and expecta. tion.

Though the grave and meafured orations of Monlue could not overpower the plain and ftubborn fenfe of the Congregation, yet as lie affected to give them admonitions and warnings, and even ventured to infult them with menaces, they appear to lave conceived a high indignation againft him. Under this impulfe, and

furance and ftability of a new league and covenant, more folemn, expreffive, and refolute, than any which they had yet entered into and fubfcribed.

The nobles, barons, and inferior perfons, who were parties to this bond and affociation, bound themfelves in the prefence of Almighty God, as a fociety, and as individuals, to advance and fet forward the reformation of religion, and to procure, by every poffible means, the true preaching of the gofpel, with the proper adminiftration of the facraments, and the other ordinances in connection with it. Deeply affected, at the fame time, with the mifconduct of the French ftatefmen, who had been promoted to high offices; with the oppreffions of the French mercenaries, whom the queendowager kept up and maintained under the colour of authority; with the tyranny of their captains; and with the manifeft danger of conquelt to which the country was expofed, by different fortifications upon the fea-coaft, and by other dangerous innovations; they promifed and engaged, generally and individually, to join with the queen of England's army, and to concur in an honeft, plain, and unreferved refolution to expel all foreigners from the realm, as oppreffors of public liberty; that, by recovering the ancient rights, privileges, and freedom of their nation, they might live for the future under the due obedience of their king and queen, be ruled by the laws and cuftoms of the country, and by officers and ftatefmen born and educated among them. It was likewife contrated and agreed by the fubferibers to this bond and covenant, that no private intelligence by writing or meffage, or communication of any kind, fhould be kept up with their adverfaries; and that all perfons who refifted the godly enterprife in which they were united, fhould be regarded as their enemies, and reduced to fubjection and obedience.

When the ftrong and fervid fentiment and expreffion of this new affociation were communicated to the queen-dowager, the refigned herfelf to forrow. Her mind, inclined to defpondence by the increafe of her malady, felt the more intenfely the cruel diftractions and difquiets into which the kingdom had been driven by the ambition of France, her own doating affection for the princes of Lorrane, and the vain prognoftications of flatterers and courtiers. In the agony of paffion, fhe befought the malediction and curfe of God to alight upon all thofe who had counfelled her to perfecute the preacherf, and to refufe the petitions of the moft honourable portion of her fubjects.

In the mean time the fiege of Leith was profecuted. But the Arength of the garrifon amounting to more than 4000 foldiers, the operations of the befiegers were flow and languid. An accidental fire in the town, which deftroyed many houfes and a great part of the public granary, afforded them an opportunity of playing their artillery with fome advantage; and a few days after they made a general affault. But the fcalingladders which were applied to the walls being too fhort, and Sir James Croft, who had been gained to the queendowager, having acted a treacherous part, the attempt
failed of fuccefs, and 1000 men were deftroyed. The Scottand. combined armies, however, did not lofe their refolution or their hopes. I'he Englifh and Scots animated the conftancy of one another; and in the ratification of the treaty of Berwick, which was now made, a new fource of cordiality opened itfelf. Letters alfo had come from the duke of Norfolls, promifing a powerful. reinforcement, giving the expectation of his taking upon him the command of the troops in perfon, and ordering his pavilion to be erected in the camp. Leith began to feel the mifery of famine, and the French to give themfelves to defpair. The befiegers abounded in $\begin{gathered}583 \\ \text { reine }\end{gathered}$ every thing; and the arrival of 2000 men, the expect-forcement ed reinforcement from England, gave them the moft de-arrives cifive fuperiority over their adverfaries. Frequent fallies fiom Eng: were made by the garrifon, and they were always unfuccefsful. Difcouraged by defeats, depreffed with the want of provifions, and languifhing under the negligence of France, they were ready to fubmit themfelves to the mercy of the Congregation.

Amidft this diftrefs the queen-dowager, wafted with Death of a lingering diftemper and with grief, expired in the the queen caftle of Edinburgh. A few days before her death, fhe ${ }^{\text {regent. }}$ invited to her the duke of Chatelherault, the lord James Stuart, and the earls of Argyle, Glencairn, and Marifchal, to bid them a laft adieu. She expreffed to them her forrow for the troubles of Scotland, and made it her earneft fuit, that they would confult their conftitutional liberties, by difmiffing the French and Englifh from their country ; and that they would preferve a dutiful obedience to the queen their fovereign. She profeffed an unlimited forgivenefs of all the injuries which had been done to her; and entreated their pardon for the offences fhe had committed againit them. "In to ken of her kindnefs and charity, fhe then embraced them by turns; and, while the tear ftarted in her eye, prefented to them a cheerful and fmiling afpect. After this interview, the fhort portion of life which remained to her was dedicated to religion ; and that the might allure the Congregation to be compaffionate to her Popifh fubjects and her French adherents, fhe flattered them, by calling John Willocks, one of the moft popular of their preachers, to affift and comfort her by his: exhortations and prayers. He made long difcourfes to her about the abominations of the mafs; but the appears to have died in the communion of the Romifh church; and her body being tranfported to France, was depofited in the monaltery of St Peter, at: Rheims, in Champagne, where her fifter Renée was an abbefs.

The death of the queen-dowager, at a period fo The Frenchit critical, broke altogether the fpirit of the Frenchtroops fube: troops. They were blocked up fo completely, that ${ }^{\text {mit. }}$ it was almoft impoffible for any fupplies to reach them either by fea or land; and France had delayed fo long to fulfil its magnificent promifes, that it was no longer in a capacity to take any fteps towards their accomplifh. ment. Its internal diftrefs and difquiets were multiplying. The nobility, impoverifhed by wars, were courting the rewards of fervice, and ftruggling in hoftility. The clergy were avaricious, ignorant, and vindictive. The populace, knowing no trade but arms, offered their fwords to the factious. Francis II. the hufband of Mary, was without dignity or underfanding. Catharine de Medicis his mother was full of artifice and falfehood. Infurrections were dreaded in every pro*

-
vince. The houfe of Guife was encompafted with difficulties, and trembling with apprehenfions, fo that they could not think of perfiting in their views of diftant conquefts. It was neceffary that they fhould abandon for a time all the proud projects they had formed for the extenfion of the French monarchy. It was chiefly in the exemption from foreign wars that they could hope to fupport their own greatnefs, and apply a
586 remedy to the domeftic difturbances of France.
Francis and It appeared to Francis and Mary, that they could Mary enter not treat in a direct method with the Congregation, into a negociation with Eliza weth. whom they affected to confider as rebellious fubjects, without derogating from their royal dignity. In negociating a peace, they therefore addreffed themfelves to queen Elizabeth. It was by her offices and interference that they projected a reconciliation with the confederated lords, and that they meant to extinguif the animofities which, with fo much violence, had agitated the Scottilh nation. They granted their commifion to John Monluc bihop of Valence, Nicholas Pelleve bifhop of Amiens, Jacques de la Broffe, Henry Clentin fieur d'Oyfel, and Charles de la Rochefaucault fieur de Randan; authorifing them in a body, or by two of their number, to enter into accords and agreements with the queen of England. The Englifh commiffioners were Sir William Cecil principal fecretary of ftate, Nicolas Wotton dean of Canterbury and York, Sir Ralph Sadler, Sir Henry Percy, and Sir Peter Crew; and the powers of treaty were to be exercifed by them

The plenipotentiaries of France, though empowered only to treat with England, were yet, by a feparate commiffion, entrufted to affure the Congregation, that, notwithftanding the heinous guilt incurred by them, Francis and Mary were inclined to receive them into favour, upon their repentance and retuan to obedience; and to abftain for ever from all inquiry into their conduct. They had full authority, at the fame time, by this new deed, to hear, in conjunction with the commiffioners of Elizabeth, the complaints of the Congregation, and to grant, with their confent, the relief which appeared to them to be the moft proper and fa. lutary.

The nobility and people of Scotland, choofing for their reprefentatives the lord James Stuart, the lord Ruthven, and Maitland of Lethington, expreffed their willingnefs to concur in reafonable meafures for the reeftablifhment of the public union and tranquillity. By the mode of a formal petition, they enumerated their grievances, laid claim to a redrefs of them, and befought And at lan thinorm protection their contitution and laws. To grant their petition.

389
Nature of
their treaty
with the
Proteftante ed the friendly attention of Francis and Mary; and upon a foundation concerted with fo much propriety, Monluc and Randan, Cecil and Wotton, the acting plenipotentiaries of England and France, drew up and authenticated the celebrated deed of relief and conceffion which does fo much honour to the firit, perfeverance, and magnanimity of the Scottifh nation.
By this accord and agreement, Francis and Mary ftipulated and confented, that no French foldiers and no foreign troops fhould ever be introduced into Scutland - without the counfel and advice of the three eftates. They concurred in the opinion, that the French mer. cenaries fhould be fent back into France, and that the
fortifications of Leith fhould be demolifhed. They agreed that commiffioners thould be appointed to vifit Dunbar, and to point out the works there which ought to be deftroyed; and they bound and engaged themfelves to build no new fortrefs or place of ftength within the kingdom, and to repair no old one, without a, parliamentary authority and fanction. They confented to extinguifh all debts which had been contracted for the maintenance of the French and Scotch foldiery in their fervice. 'They appointed the eftates of the realm to hold a parliament for the difcuffion of affairs of ftate; and they obliged themfelves to confider the acts of this affembly as valid and effectual in every refpect. 'They confirmed the ancient law of the country, which prohibited the princes of Scotland from making peace and war without the advice of the three eftates. It was accorded and agreed by them, that the three eftates, in concurrence with the queen, fhould elect a council for the adminiftration of affairs during her majefty's abfence. They became beund to employ the natives of Scotlard in the management of juftice both civil and criminal, in the offices of chancellor, keeper of the feals, treafurer, comptroller, and in other flations of a fimilar nature; and to abftain from the promotion of all foreigners to places of truft and honour, and from invefting any clergyman is the charge of affairs of the revenue. They determined to eftablifh an act of oblivion, and to forget and bury for ever the memory of all the late tranfactions of war and offence. It was concluded by them, that a general peace and reconciliation fhould take place among all parties. They expreffed their determination, that no pretence fhould be aflumed by them, from the late contentions, to deprive any of their fubjects of their eftates or offices. And they referred the reparation which might be proper to compenfate the injuries that had been fuftained by bifhops and ecclefiaftics, to the judgment of the three eftates in parliament.
Upen the fubject of the reformation, the plenipotentiaries of England and France did not choofe to deliberate and decide, although articles with regard to it had been prefented to them by the nobles and the people. They referred this delicate topic to the enfuing meeting of the parliament; and the leaders of the Congregation engaged, that deputies from the three eftates fhould repair to the king and queen, to know their in:ention concerning natters of fuch high importance.
After having granted thefe cewceffions to the nobility and the people of Scotland, upon the part of their refpective courts, Monluc and Randan, Cecil and Wotton, concluded another deed of treaty and agreement. By this convention it was determined, that the Englifh and French troops fhould depart out of Scotland ; that all warlike preparations fhould ceafe ; that the fort of Eymouth fhould he razed to the the treaty of Cambray; that Francis and Mary fhould abtain from bearing the title and arms of England or Ireland ; that it fhould be confidered, whetherad farther compenfation fhould be made to Elizabeth for the injuries committed againft her; and that the king and queen of Scots fhould be fully and fincerely reconciled to the nobility and the people of their kingdom. The interefts of England and France were the particular objects of this agreement. But though the conceffions to the Proteflauts were not inferted is it at full length, an

## 5 C 0

 tants, the meeting of the parliament approached. All perfons who had a title from law, or from ancient cuftom, to attend the great council of the nation, were called to afiemble there. While there was a full convention of the greater barons and the prelates, the inferior tenants in capite, or the, leffer barons, upon an occafion fo great, inftead of appearing by reprefentation, came in crowds to give perfonally their affiftance and votes; and all the commiffoners for the boroughs, without exception, prefented themfelves.It was objected to this parliment when it was af- scotland; fembied, that it could not be valid, fince Francis and Mary were not prefent, and lad not empowered any perfon to reprefent them. Bist by the terms of the late conceffions to the nobility and the people, they had in effect difpenfed with this formality ; and the objection, after having been aritated with heat for fome days, was rejected by a majority of voices. The lords of the articles were then chofen; and as the Proteftant party were fuperior to the Popifh faction, they were careful, in electing the members of this committee, to favour all thofe who were difpofed to forward the work of the reformation. The firft object which the lords Supplica, of 'the articles held out to the parliament was the fup- tinn of the plication of the nobility, gentry, and all the other per- Protelants; fons who profeffed the new doctrines. It required, that the Romifh church fhould be condemned and abolifhed. It reprobated the tenet of tranfubftantiation, the merit of works, papiftical indulgences, purgatory, pilgrimages, and prayers to departed faints; and confidering them as peftilent errors, and as fatal to falvation, it dcmanded; that all thofe who fhould teach and maintain them fhould be expofed to correction and punifinment. It demanded, that a remedy fhould be applied againft the profanation of the loly facraments by the Roman Catholics, and that the ancient difcipline of the church fhould be reftored. In fine, it infifted, that the fupremacy and authority of the pope fhould be abolifhed; and that the patrimony of the church thould be einployed in fupporting the reformed miniftry, in the provifion of fchools, and in the maintenance of the poor,

This fupplication of the Proteftants was received in parliament with marks of the greateft deference and refpect. The popifh doctrines it cenfured, and the Atrong language it employed, excited no difpute or altercation. The nobility, however, and the lay members, did not think it expedient that the patrimony of the church, in all its extent, fhould be allotted ta the reformed miniftry, and the fupport of fchools and the poor. Avoiding, therefore, any explicit fcrutiny into this point, the parliament gave it in charge to the minitters and the leading men of the reformation, to draw up, under diftinct heads, the fubftance and fenfe of thofe doctrines which ought to be eftablifted over A Confefthe kingdom. Within four days this important bu- ficnof Faith finefs was accomplifhed. The writing or inftrument. drawn up. to which the reformed committed their opinions was termed, "The Confeffion of Faith, profeffed and believed by the Proteftants withir the realm of Scotland (Q)." It was read firft to the lords of the articles. It was then read to the parliament; and the prelates of the Romifh church were commanded, in the name of God, to make publicly their objections to the doctrines it propofed. They preferved a profound filence. A new diet was appointed for concluding the tranfaction. The articles of the Confeffion were again read over in their order, and the votes of the parliament were called. Of the temporal nobility, three only refufed to beftow upon it their authority. The carl of Athol, and the lords Somerville and Bothwell, proteft-
(e) It is given at full length in Knox, in the collection of confeffons of faith, vol. 2. and in the fatute bools. warl. 1567.

## sco [ 40$]$ S C o

Beetrant ed, that " they would believe as their fathers had done before them." The bifhops and the eftate ecclefiaftical, from a confcioufnefs of the weaknefs of popery, feemed to have lof all power of fpeech. No diffent no vote, was given by them. "It is long (faid the earl Marifchal), fince I entertained a jealoufy of the Romifh faith, and an affection to the reformed doctrines. But this day has afforded me the completeft conviction. of the fallehood of the one, and the truth of the other. 'The bifhops, who do not conceive themfelves to be deficient in learning, and whofe zeal for the maintenance of the hiearchy cannot be doubted, have abandoned their religion, and their interelt in it, as objects which admit of no defence or juffification." All the other conflituent members of this great council were zealous for the eftablifhment of the reformation, and affirmed the propriety of its doctrines. Thus the high court of parliament, with great deliberation and folennity, examined, voted, and ratified the confeffion of the reformed faith.

A few days after the eftablifhment of the Confeffion of Faith, the parliament paffed an act againt the mafs and the exercife of the Romifh worfhip. And it fcrupled not to ordain, that all perfons faying or hearing mafs fhould, for the firt offence, be expofed to the confifcation of their eftates, and to a corporal chaftifement, at the difcretion of the magiftrate; that for the fecond offence, they fhould be banifhed out of the kingdom; and that for the third offence they fhould incur s97, fpirit of the be acknowledged, did not fuit the generofity of victory; $P$ rote ${ }^{2}$ ants. and while an excufe is fought for it in the perfidioufnefs of the Rominh priefthood, it efcapes not the obfervation of the moft fuperficial hiftorians, that thefe feverities were exactly thofe of which the Proteftants had complained fo loudly, and with fo much jutice. By another ordination, the parliament, after having declared, that the pope, or bifhop of Rome, had inflicted a deep wound and a humiliating injury upon the fovereignty and government of Scotland, by his frequent interferences and claims of power, commanded and decreed, that, for the future, his jurifdiction and authority fhould be dead and extinct ; and that all perfons maintaining the fmalleft connection with him, or with his fect, fhould be liable to the lofs of honour and offices, profeription, and banifhment.
Thefe memorable and decifive flatutes produced the overthrow of the Romilh religion. To obtain to thefe

598 prancis and bation of Francis and Mary was an obje of the Mary refurfe eft anxiety, and of infinite moment to the three eftates. 80 confirm ${ }^{2}$ Sir James Sandilands lord St John was therefore apthe acts of this parliament.
and topics of a reformation to Francis and Mary, by a petition or a narrative, the parliament had voted them into laws ; and from this informality the validity of its proceedings has been fufpected. But it is obfervable of the Proteftants, that they had not concealed their views with regard to religion and the abolition of Popery; that in the grant of redrefs and conceffion, and in the deed of treaty, no actual prohibition was made to bar the eftablifhment of the reformation; that a general authority was given to the parliament to decide in affairs of ftate; and that Francis and Mary were folemnly bound to authenticate its tranfactions. Though a formality was invaded, the fpirit of the treatics wds yet refpected and maintained. The nation, of confequence, imputed the condnct of Francis and Mary to political reafons fuggefted by the princes of Lorraine and to the artifices of the Popifh clergy ; and as Elizabeth did not refufe, upon her part, the ratification of the agreements, and folicited and preffed the French court in vain to adopt the fame meafure, a ftrength and force were thence communicated to this conclufion.

When the three eftates difpatched Sir James Sandilands to France, they inftructed the earls of Morton and Glencairn, with Maitland of Lethington, to repair to the court of England. By thefe ambaffadors they prefented to Elizabeth their fincere and refpectful thanks, for the attention hown by her to Scotland, in her late moft important fervices. And while they folicited the continuance of her favour and protection, intreated, in an earneft manner, that her majefty, for the eftablifhment of a perpetual peace and amity, would be pleafed to take in marriage the earl of Ar ran, the next heir after his father to the Scottifh monarchy. The queen made new and fervent proteftations of her regard and attachment ; and gave the promife of her warmeft aid when it fhould be neceffary, in their juft defence, upon any future occafion. She fpoke in obliging terms of the earl of Arran; but as fhe found in herfelf no prefent difpofition to marriage, the defired that he might confult his happinefs in another alliance. She expreffed a favourable opinion of the Scottifh nobility ; and as a demonftration of her affection and efteem, fhe took the liberty to remind them of the practices which had been employed to overturn their independency, and begged them to confider the unanimity and concord of their order as a neceffary guard againft the ambition and the artifice of the enemies of their nation.
The fuccefs of the Congregation, though great and illuftrious, was not yet completely decifive. The refufal of Francis and Mary to ratify their proceedings opened a fource of bitternefs and inquietude. The Popifh party, though humbled, was not annihilated. Under the royal protection it would foon be formidable. Political confiderations might arife, not only to cool the amity of England, but even to provoke its refentment. And France, though it could now tranfport no army againft Scotland, might foon be able to adopt that expedient. Cruel diftractions and fevere calamities were ftill to be dreaded. In the narrownefs of their own refources they could find no folid and permanent fecurity againft the rage and weight of domeftic faction, and the ftrenuous exertions of an extenfive kingdom. All their fair atchievements might

stland: Fe blated and averthrown Popery might again build up her towers, and a fangulnary domination deflroy alike their religious and civil liberties.

While the anguifh of melancholy apprehenfions repreffed the triumph of the Congregation, the event which could operate moft to their interefts was an nounced to them. This event was the death of Francis II, The tie which knit Scotland to France was thus broken. A new fcene of politics difplays itfelf. Catharine de Medicis, the queen-mother, ruled Charles IX. and was the perfonal enemy of the queen of Scots. The power and the credit which Mary had lent to her uncles, and the frequent and humiliating difappointments which the queen-mother had fuffered from her influence over Francis, were now repaid with 2. ftudied indifference and neglect. In the full perfection of her charms, with two crowns upon her head, and looking towards a third, fhe felt herfelf to be without grandeur and without confequence. Leaving a court where the had experienced all the enjoyments of which humanity is fufceptible, the retired to Rheims, to induige her forrow.

In the humiliation of their queen, and in the change produced in the councils of France, the Proteftants of Scotland found every poffible encouragement to proceed with vigour in the full eftablifhment of the reformed doctrines. After the diffolving of the parlia. ment, they turned their thoughts and attention to the plan of policy which might fuit beft the tenets and religion for which they had contended. The three eftates, amidft their other tranfactions, had granted a eclefiati- commiffion to Mr John Winram, Mr John Spottif1 govern-wood, John Willocks, Mr John Douglas, Mr John ent of otland iled. Row, and John Knox, to frane and model a fcheme or platform of ecclefiaftical government. They were not long in complying with an order fo agrecable to them, and compofed what is termed the Firf Book of Difcipline; in which they explained the uniformity and method which ought to be preferved concerning doctrine, the adminiftration of the facraments, the election and provifion of minifters, and the policy of the church.

A convention of the effates gave its fanction to the Preßyterian fcheme of governinent. But while the Book of Difcipline Iketched out a policy beautiful for its fimplicity, yet it required that the patrimony and the rich poffeffions of the ancient church fhould be allotted to the new eftablifhment. The reformers, however, fo fuccefsful in the doctrines and the policy they had propofed, were here very unfortunate. This convention of the eftates did not pay a more refpecfful regard to this propofal than the celebrated parliament had done, which demolifhed the mafs and the jurifdiction of the fee of Rome. They affected to confider it as no better than a dream. The expreffion "a devout imagination" was applied to it in mockery; and it was not till after long and painful ftruggles, that the new eftablimment was able to procure to itfelf a becoming and neceffary provifion and fupport. The Romifh clergy were ftrenuous to continue in their poffiffions, and to profit by them; and the nobles and the laity having feized upon great proportions of the property of the church, were no lefis anxious to retain the acquifitions they had made.

The averfion entertained from beftowing riches upon Vos. XVII. Part I.
the Prefbyterian eftablifiment, encouraged the ardour scotiand which prevailed for advancing all the other views and interefts of the reformed, And this end was alfo prow moted in no inconfiderable degree by the infidious policy of Catharine de Medicis. She was willing to increafe and to fofter all the difficulties and dangers in the fituation of the queen of Scots and her fubjects. Upori this account the had engaged Charles IX. to difpatch Monfieur Noailles to the Scotch parliament, to urge it in ftrong terms to renew the ancient league between the two kingdoms, to diffolve the alliance with England, and to re-eftablifh over Scotland the Popifh doctrines and the Popifh clergy. A new mpeting of the eftates was affembled, which confidered thefe frange requifitions, and treated them with the indignation they merited. Monfieur Noailles was inftructed to in. form his fovereign, that France having aeted with cruelty and perfidioufnefs towards the Scots, by attacking their independency and liberties under the cover and pretence of amity and marriage, did not deferve to know them any longer as an ally; that principles of juftice, a love of probity, and a high fenfe of gratitude, did not permit the Scottifh parliament to break the confederacy with England, which had generoully protected their country againft the tyrannical views of the French court, and the treacherous machinations of the houfe of Guife; and that they were never to acknowledge the Popifh clergy to be a diftinct order of men, or the legal poffeffors of the patrimony of the church; fince, having abolifhed the power of the pope, and renounced his doctrines, they could beftow no favour or countenance upon his vaffals and fervants.

To this council of the eftates a new fupplication was prefented by the Proteftants. They departed from the high claim which they had made for the riches and patrimony of the Popih church; and it was only re. quetted by them, that a reafonable or decent provifion fhould be allotted to the true preachers of the gofpel. This application, however, no lefs than their former exorbitant demand, was treated with neglect and indifference. But amidft the anxiety maniffted by the nobles and the tenants of the crown to hold the Prefbyterian clergy in fubjection and in poverty, they difcovered the warmeft zeal for the extenfion and continuance of the reformed opinions. For in this fupplication of the Proteftants, an ardent defire being intimated and urged, that all the monuments of idolatry which remained fhouid be utterly deftroyed, the fulleft and moft unbounded approbation was given to it. An act accordingly was paffed, which commanded that every abbey-church, every cloifter, and every memo- Final derial whatfoever of Popery, thould be finally overthrown fruction of and demolifhed: and the care of this cruel, but popu- nienafte. lar employment, was committed to thofe perfons who every mat were moft remarkable for their keennefs and ardour in of the Po. the work of the reformation. Its execution in the pif reliweftern counties was given in charge to the earls of Scotland Arran, Argyle, and Glencairn; the lord James Stuart attended to it in the more northern diftricts; and in the inland divifions of the country, it was intruited to the barons in whom the Congregation had the greateft confidence. A dreadful devaftation enfued. The populace, armed with authority, fpread their ravages oves the kingdom. It was deemed an execrable lenity to fpare any fabric or place where idolatry had been exer-

603
Mary folicited to return to her own country.
cifed. The churches and religious houfes were everywhere defaced, or pulled to the ground ; and their furniture, utenfils, and decorations, became the prizes and the property of the invader. Even the fepulchres of the dead were ranfacked and violated. The libraries of the ecclefiaitics, and the regifters kept by them of their own tranfactions and of civil affairs, were gathered into heaps, and committed to the flames. Religious antipathy, the fanction of law, the exhortation of the clergy, the hope of fpoil, and, above all, the ardour to put the laft hand to the reformation, concurred to drive the rage of the people to its wildeft fury ; and, in the midit of havock and calamity, the new eftablifhment furveyed its importance and its power.

The death of Francis II. having left his queen, Mary, in a very difagreeable fituation while the remained in France, it now became neceffary for her to think on returning to her own country. To this the was foli- cited both by the Proteftants and Papifts ; the former, that they might gain her over to their party; and the latter, hoping that, as Mary was of their own perfuafion, Popery might once more be eftablifhed in Scotland. For this deputation, the Proteftants chofe lord James Stuart, natural brother to the queen; and the Papifts, John Lefly, official and vicar-general of the diocefe of Aberdeen. The latter got the ftart of the Proteftant ambaffador, and thus had the opportunity of firt delivering his meffage. He advifed her ftrongly to beware of the lord James Stuart, whom he reprefented as a man of unbounded ambition, who had efpoufed the Proteflant caufe for no other reafon than that he might advance himfelf to the higheft employments in the ftatc ; nay, that he had already fixed his mind on the crown itfelf. For thefe reafons he advifed that the lord James Stuart fhould be confined in France till the government of Scotland could be completely eftablifhed. But if the queen was averfe to this meafure, he advifed her to land in fome of the northern diftriets of Scotland, where her friends were moft numerous; in which cafe an army of 20,000 men would accompany her to Edinburgh, to reftore the Popifh religion, and to overawe her enemies. 'The next day the lord James Stuart waited upon her, and gave an advice very different from that of Lefly. The fureft method of preventing infurrections, he faid, was the eftablifhment of the Protcftant religion; that a ftanding army and foreign troops would certainly lofe the affections of her fubjects; for which reafon he advifed her to wifit Scotland without guards and without foldiers, and he became folemnly bound to fecure their obedience to her. 'To this advice Mary, though fhe diftrufted its author, liftened with attention; and lord James, imagining that fhe was prejudiced in his favour, took care to improve the favourable opportunity ; by which means he obtained a promife of the earldom of Marre.

Before Mary fet out from France, fhe received an embaffy from queen Elizabeth, preffing her to ratify the treaty of Edinburgh, in which the had taken care to get a claufe inferted, that Francis and Mary fhould for ever abftain from affuming the title and arms of England and Ireland. But this was declined by the queen of Scotland, who, in her conference with the Englifh ambaffador, gave an eminent proof of her political abilities *. Her refufal greatly augmented the
jealoufies which already prevailed between her and E:- Scotland lizabeth, infomuch that the latter refufed her a fafe paffage through her dominions into Scotland. This was confidered by Mary as a high indignity ; fhe returned a very fpirited anfwer, informing her rival, that fhe could return to her own dominions without any affitance from her, or indeed whether the would or not. In the month of Auguft 156I, Mary fet fail from Calais for Scotland. She left France with much regret ; and at night ordered her couch to be brought upon deck, defiring the pilot to awaken her in the morning if the coaft of France fhould be in view. The night proved calm, fo that the queen had an opportunity once more of indalging herfelf with a fight of that beloved country. A favourable wind now fprung up, and a thick fog coming on, fhe efcaped a fquadron of men of war which Elizabeth had fet out to intercept her ; and on the 20th of the month the landed fafely at. Leith.

But though the Scots received their queen with the greateft demonftrations of joy, it was not long before an irreconcileable quarrel began to take place. The Proteftant religion was now eftablifhed all over the kingdom; and its profeffors had fo far deviated from their own principles, or what ought to have been their principles, that they would grant no toleration to the oppofite party, not even to the fovereign herfelf. In confequence of this, when the queen attempted to celebrate mafs in her own chapel of Holyroodhoufe, a vio- Is infulte lent mob affembled, and it was with the utmoft diffi-by the $P_{F}$ culty that the lord James Stuart and fome other per- ${ }^{\text {teftants. }}$ fons of high diftinction could appeafe the tumult. Mary attempted to allay thefe ferments by a proclanation, in which fhe promifed to take the advice of the ftates in religious matters; and, in the mean time, declared it to be death for any perfon to attempt an innovation or alteration of the religion which fhe found generally eftablifhed upon her arrival in Scotland. Againft this proclamation the earl of Arran protefted, and formally told the herald, the queen's proclamation fhould not protect her attendants and fervants if they prefumed to commit idolatry and to fay mafs. John Knox declared from the pulpit, that one mafs was more terrible to him than if 10,000 armed enemies. had landed in any part of the kingdom to re-eftablifh Popery. 'The preachers everywhere declaimed againtt idolatry and the mafs; keeping up, by their miftaken zeal, a fpirit of difcontent and fedition throughout the whole kingdom. John Knox was called before the queen to anfwer for the freedom of his fpeeches; but his unbounded boldnefs when there gave Mary mucb. difquiet, as not knowing in what manner to deal with. him. 'The freedoms, however, which were taken with the queen, could not induce her to depart from that plan of government which the had laid down in France. To the Proteftants fhe refolved to pay the greateft attention; from among them the chofe her privy-council, and heaped favours upon the lord James Stuart, who for his activity in promoting the reformation was the moft popular man in the kingdom ; while to her courtiers of the Roman Catholic perfuafion fhe behaved with a diftant formality.

In the mean time, the difference between the two rival queens became every day greater. The queen of Scotland preffed Elizabeth to declare her the neareft

## S C.O

 heir to the crown of England, and Elizabeth preffed Mary to confirm the treaty of Edinburgh. With this the latter could not comply, as it would in fact have been renouncing for ever the title to that crown for which fhe was fo earneftly contending. Endlefs negociations were the confequence, and the hatred of Elizabeth to Mary continually increafed. This year the queen of Scotland amufed herfelf by making a circuit through part of her dominions. From Edinburgh fhe proceeded to Stirling; from thence to Perth, Dundee, and St Andrew's. Though received everywhere with the greatelt acclamations and marks of affection, fhe could not but remark the rooted averfion which had univerfally taken place againft Popery ; and upon her return to Edinburgh, her attention was called to an exertion of this zeal, which may be confidered as higlly characteriftic of the timés. The magittrates of this city, after their election, enacted rules, according to cuftom, for the government of their borough. By one of thefe acts, which they publifhed by proclama. tion, they commanded all monks, friars, and priefts, together with all adulterers and fornicators, to depart from the town and its limits within 24 hours, under the pains of correction and punifhment. Mary, jufly interpreting this exertion of power to be an ufurpation of the royal authority, and a violation of order, difplaced the magiflrates, commanded the citizens to elect others in their room, and granted by proclamation a plenary indulgence to all her fubjects not convicted of any crime, to repair to and remain in her capital at their pleafure.Befides thefe difturbances on account of religion, the kingdom was now, in confufion on another account. jufticiar and lieutenant. He was to hold two criminal courts, the one at Jedburgh, and the other at Dumfries. To affift his operations againft the banditti, who who were armed, and often affociated into bodies, a military force was neceffary ; but as there were at prefent neither ftanding army nor regular troops in the kingdom, the county of Ediuburgh, and ten others, were commanded to have their ftrength in readinefs to affitt him. The feudal tenants, and the allodial or free proprietors of thefe diftricts, in complete armour; and with provifions for 20 days, were appointed to be fubfervient to the purpofes of his commiffion, and to obey his orders in eftablifhing the public tranquillity. In this expedition he was attended with his ufual fuccefs. He deftroyed many of the ftrong-holds of the banditti; hanged 20 of the moft notorious offenders; and ordered 50 more to be carried to Edinburgh, there to fuffer the penalties of law on account of their rebellious behavour. He entered into terms with the lord Grey and Sir John Fofter, the wardens of the Englifh borders, for the mutual benefit of the two nations; and he commanded the chiefs of the diforderly clans to fubmit to the queen, and to obey her orders with regard to the fecuring of the peace, and preventing infurrections and depredations for the future.
Ju the mean time the queen was in a very difagree-

## 43 ] <br> S C O

able fituation, being fufpected and diftrutted by both Seotland parties. From the conceffions the had made to the Pro- $-{ }_{6 r o}$ teftants, the Papits fuppofed that fhe had a defign of Mary dir renouncing their religion altogether; while, on the Marted by other hand, the Proteftants could fcarcely allow them-both parfelves to believe that they owed any allegiance to an ties. idolater. Difquiets of another kind alfo now took 6 Ir place. The duke of Chatelherault, having left the Ca . Characters tholics to join the oppofite party, was neglected by his of her diffovereign. Being afraid of fome danger to himfelf, he teren. fortified the caftle of Dumbarton, which he refolved to defend; and in cafe of neceffity to put himfelf under the protection of the queen of England. - The earl of Arran was a man of very flender abilities, but of boundlefs ambition. The queen's beauty had made an impreffion on his heart, and his ambition made him fancy himfelf the fitteft perfon in the kingdom for her hufband. But his fanaticifm, and the violence with which he had oppofed the mafs, difgufted her. He bore her diflike with an uneafinefs that preyed upon his intellects and difordered them. It was even fuppofed that he had concerted a fcheme to poffefs himfelf of her perfon by armed retainers ; and the lords of her court were commanded to be in readinefs to defeat any project of this fort. The earl of Bothwel was diftinguifhed chiefly by his prodigalities and the licentioumefs of his manners. The earl of Marifchal had every thing that was honourable in his intentions, but was overwary.and flow. The earl of Morton poffeffed penetration and ability, but was attached to no paity or meafures from any principles of rectitude: His own advantage and interefts were the motives which governed him. The earl of Huntley the lord chancellor, was unquiet, variable, and vindictive : His paffions, now fermenting with violence, were foon to break forth in the moll dangerous practices. The earls of Glencairn and Menteith were deeply tinctured with fanaticifm; and their inordinate zeal for the new opinions, not lefs than their poverty, recommended them to queen Elizabeth. Her ambaffador Randolph, advifed her to fecure their fervice, by addreffing herfelf to their neceffities. Among courtiers of this defcription, it was difficult for Mary to make a felection of minifters in whom to confide. The confequence and popularity of the lord James Stuart, and of Maitland of Lethington, had early pointed them out to this diftinction; and hitherto they had acted to her fatisfaction. They were each of eminent capacity: but the former was fufpected of aiming at the fovereignty ; the latter was prone to refinement and duphicity ; and both were more connected with Elizabeth than became them as the minifters and fubjects of another fovereign.

Befide the policy of employing and trufting ftatefmen who were Proteftants, and the precaution of maintaining a firm peace with England, Mary had it alfo at heart to enrich the crown with the revenues of the ancient church. A convention of eftates was affembled Sh 612 to deliberate upon this meafure. The bifhops were a part of alarmed with their perilous fituation. It was made the eccleknown to them, that the charge of the queen's houfe fiaftical re hold required an augmentation; and that as the rents of the church had flowed chiefly from the crown, it was expedient that a proper proportion of them fhould now be refumed to uphold its fplendour. After long confultations, the prelates and eftate ecclefialtical, confider-

## $\mathrm{S} \mathrm{C} O$

Seotiand. ing that they exifted merely by the favour of the queen, confented to refigu to her the third part of their benefices, to be managed at her pleafure; with the refervation that they fhould be fecured during their lives againft all farther payments, and relieved from the burden of contributing to the maintenance of the reformed clergy. With this offer the queen and the convention of eftates were fatisfied. Rentals, accordingly, of all their benefices throughout the kingdom, were ordered to be produced by the ancient ecclefiaftics; the reformed minifters, fuperintendants, elders, and deacons, were enjoined to make out regitters of the grants or provifions ne:ceffary to fupport their eftablifhment; and a fupereminent power of judging in thefe matters was committed to the queen and the privy-council.

While the prelates and eftate ecclefiaftical fubmitted to this offer from the neceffity of their affairs, it was by no means acceptable to the reformed clergy, who at this time were holding an affembly. It was their earneft wifh to effect the entire deftruction of the ancient eftablifhment, to fucceed to a large proportion of their emoluments, and to be altogether independent of the crown. But while the Proteftant preachers werc naturally and unanimoufly of thefe fentiments, the nobles and gentlemen who had promoted the reformation were difpofed to think very differently. To give too much of the wealth of the church to the reformed clergy, was to inveft them with a dangerous power. To give too great a proportion of it to the crown, was a ftep fill more dangerous. At the fame time it was equitable, that the ancient clergy fhould be maintained during their lives; and it confifted with the private interefts of the noblemen and gentlemen, who had figured during the reformation, not to confent to any fcheme that would deprive them of the fpoils of which they had already poffeffed themfelves out of the ruins of the church, or which they might fill be enabled to acquire.

Thus public as well as private confiderations contributed to feparate and divide the lay Proteftants and the preachers. The general affembly, therefore, of the church, was not by any means fuccefsful in the views which had called them together at this time, and which they fubmitted to the convention of eftates. Doubts were entertained whether the church had any title to affemble itfelf. The petition preferred for the complete abolition of idolatry, or for the utter prohibition of the mafs, was rejected, notwithftanding all the zeal manifefted by the brethren. The requeft that Mary fhould give authority to the book of difcipline, was not only refufed, but even treated with ridicule. The only point prefled by the church, which attracted any notice, was its requifition of a provifion or a maintenance; but the meafure invented for this end was in oppofition to all its warmeft defires.

This meafure, however, fo unpromifing to the preachers in expectation, was found to be ftill more unfatisfactory upon trial. The wealth of the Romifh church had been immenfe, but great invafions had been made upon it. The fears of the ecclefiaftics, upon the overthrow of popery, induced them to engagc in fraudulent tranfactions with their kinfmen and relations; in confequence of which many poffeffions were conveyed from the church into private hands. For valuable confiderations, leafes of church-lands, to endure for many years, or in perpetuity, were granted to ftrangers and adven.
urers. Sales alfo of ccclefiaftical property, to a great extent, had been made by the ancient incumbents; and a validity was fuppofed to be given to thefe tranfactions by confirmations from the pope, who was zealous to affilt his votaries. Even the crown itfelf had contributed to make improper difpofitions of the ecclefialtical revenues. Laymen had been prefented to bifhoprics and church-livings, with the power of difpofing of the territory in connection with them. In this diffufion of the property of the church, many fair acquifitions, and much extentive domain, came to be invefted in the no bles and the gentry.

From thefe caufes, the grant of the third of their benefices, made by the ancient ecclefiaftics to the queen, with the burden of maintaining the reformed clergy, was not near fo confiderable as might have bcen ex pected. But the direction of the fcheme being lodged in the queen and the privy-council, the advantage to the crown was ftill greater than that beftowed upon the preachers. Yet the carrying the project into execu. tion was not without its inconveniences. There were ftill many opportunities for artifice and corruption; and the full third of the ecclefiaftical benefices, even after all the previous abftractions of them which had been made, could not be levied by any diligence. For the ecclefiaftics often produced falfe rentals of their benefices; and the collectors for the crown were not always faithful to the truft repofed in them. The complete produce of the thirds did not amount to a great fum ; and it was to operate to the expences of the queen, as well as to the fupport of the preachers. A fcanty proportion went to the latter; and yet the perfons who were chofen to fix and afcertain their particular ftipends or provifions were the faft friends of the reformation. fta For this bufinefs was committed in charge to the earls preach of Argyle and Morton, the lord James Stuart, and Maitland of Lethington, with James Mackgill the clerkregifter, and Sir John Ballenden the juftice-clerk. One hundred Scottifh merks were deemed fufficient for a common minifter. To the clergymen of greater intereft or confideration, or who exercifed their functions in more extenfive parithes, 300 merks were allotted; and, excepting to fuperinteridants, this fum was feldom exceeded. 'To the earl of Argyle, to the lord James Stuart, to Lord Erßkine, who had large ecclefialtical revenues, their thirds were ufually remitted by the queen ; and upon the eftablifhment of this fund or revenue, fhe alfo granted many penfions to perfons about her court and of her houfehold.

The complaints of the preachers were made with little decency, and did not contribute to better their condition. The coldnefs of the Proteftant laity, and the humanity fhown to the ancient clergy, were deep wounds both to their pride and to their interefts. To a mean fpirit of flattery to the reigning power, they imputed the defection of their friends; and againft the queen they were animated with the bittereft animofity. The poverty in which they were fuffered to remain inflamed all their paffions. They induftrioufly fought to indulge their rancour and tmrbulence; and inveterate habits of infult fortified them into a contempt of authority.

To the queen, whofe temper was warm, the rudenefs of the preachers was a painful and endlefs inquietude, which, while it foftered her religious prejudices, had the good effect to confirm her conitancy to her friends,

## S C O

 efteem from his abilities, and his proximity to her in blood, had merited rewards and honours by his public fervices and the vigour of his counfels. After his fuccefsful difcharge of her commiffion as chief jufticiar and lord lieutenant, fhe could not think of allowing him to defcend from thefe offices, without beftowing upon him a folid and permanent mark of her favour. She advanced him into the rank of her nobility, by conferring up. on him the earldom of Marre. At the fame time fhe contributed to augment his confequence, by facilitating his marriage with Agnes the daughter of the earl of Marifchal ; and the ceremonial of this alliance was celebrated with a marnificence and oftentation fo extravagant in that are, as to excite the fears of the preachers left fome avenging judgment or calamity fhould afflict riotous feafting and banquets; and the mafquerades which were exhibited upon this occafion, attracting in cenfure and indignation. careffed his enemy with particular civilities. Upon her and to keep alive her gratitude for their activity. The lord James Stuart, who was intitled to her refpect and the land. They exclaimed with virulence againft his a ftill greater degree their attention, as being a fpecies of entertainment hitherto unknown in Scotland, and which was favourable to the profanenefs of gallantry, they pointed againft them the keenneft ftrokes of theirThe abilities of the earl of Marre, the afcendency he maintained in the councils of his fovereign, and the diftinetions which he had acquired, did not fail to expofe him to uncommon envy. The moft defperate of his enemies, and the moft formidable, was the earl of Huntley. In their rivalhip for power, many caufes of difgult had arifen. The one was at the liead of the Proteftants, the other was the leader of the Papits. Upon the death of Francis II.' Huntley and the Popifh faction had fent a deputation to Mary, inviting her to return to Scotland, and offering to fupport her with an army of 20,000 men. His advances were treated with attention and civility, but his offer was rejected. The invitation of the Proteftauts, prefented by the earl of Marre, was more acceptable to her. Huntley had advifed her to detain his rival in confinement in France till the Roman Catholic religion fhould be re-eftablifhed in Scotland. This advice the not only difregarded, but arrival in her own country, Huntley renewed his advances, uffering, to her to fet up the mafs in all the northern countics. He even converfed in a preffing manner upon this fubject with her uncles and the French courtiers who attended her. Still no real attention was paid to him. He came to her palace, and was reccived only with refpect. He was lord high chancellor without influence, and a privy counfellor without truft. The earl of Marre had the confidence of his fovereign, and was drawing to him the authority of government. Thefe were cruel mortifications to a man of high rank, inordinate ambition, immenfe wealth, and who commanded numerous and warlike retainers. But he was yet to feel a ftroke ftill more feverely excruciating, and far more deftructive of his confequence. The opulent eftate of Marre, which Mary had erected into ant earl. dom, and conferred upon his rival, had been lodged in his family for fome time. He confidered it as his property, and that it was never to be torn from his houfe. This blow was at once to infult moft fenfibly his pride, and to cut moft fatally the finews of his greatnefs.

## 45 ] <br> $S$ C O

After employing againit the earl of Marre thofe arts Scotland. of detraction and calumny which are fo common in courts, he drew up and fubfcribed a formal memorial, 619 in which he acculed him of aiminc at the fovereignty, He accufes of Scotland. This paper he prefented to the queen號 but the arguments with which he fupported his charge Stuart of being weak and inconclufive, the was the more confirm- treafor. ed in her attachment to her minifter. Huntley then addreffing himfelf to the earl of Bothwel, a man difpofed to defperate courfes, engaged him to attempt to involve the earl of Marre and the houfe of Hamilton in open and violent contention. Bothwel reprefented to Marre the enmity which had long fubfifted between him and 620 the houfe of Hamilton. It was an obftacle to his And ato greatnefs; and while its deftruction might raife him to tempts to the higheft pinnacle of power, it would be mot ac- affaifinats ceptable to the queen, who, befide the hatred which princes naturally entertain to their fucceffors, was ani-mated by particular caufes of offence againft the duke of Chatelherault and the earl of Arran. He concluded his exhortation with making an unlimited offer of his moft ftrenunus fervices in the execution of this flagitious enterprife. The earl of Marre, however, abhorring the bafenefs of the project, fufpicious of the fincerity of the propofer, or fatisfied that his eminonce did not require the aid of fuch arts, rejected all his ad. vances. Bothwel, difappointed upon one fide, turned himfelf to the other. He practifed with the houre of Hamilton to affaffinate the earl of Marre, whom they confidered as their greateft enemy. The bulinefs, he faid, might be performed with eafe and expedition. The queen was in ufe to hunt the deer in the park of Falkland; and there the earl of Marre, unfufpecting any danger, and fienderly attended, might be overpowered and put to death. The perfon of the queen, at the fame time, might be feized; and by detaining her in cuftody, a fanction and fecurity might be given to their crime. 'The integrity of the earl of Arran revolting againft this confpiracy, defeated its purpofes. Dreading the perpetration of fo cruel an action, and yet fenfible of the refolute determination of his friends, he wrote privately to the earl of Marre, informing him of his danger. But the return of Marre to his letter, thanking him for his intelligence, being intercepted by the confpirators, Arran was confined by them under a guard in Kenneil-houfe. He effected notwithftanding his efcape, and made a full difcovery of the plot to the queen. Yet in a matter fo dark he But fail could produce no witneffes and no written vouchers to in his asconfirm his acculations. He therefore, according to tempt. the fafhion of the times, offered to prove his information, by engaging Bothwel in fingle combat. And though, in his examinations before the privy council, his love to the queen, his attachment to the earl of Marre, the atrocity of the fcheme he revealed, and, above all, his duty and concern for his father the duke of Chatelherault, threw him into a perturbation of mind which expreffed itfelf violently. in his fpeech, his countenance, and his actions ; yet his declarations, in general, were fo confiftent and. firm, that it was thought advifable to take the command of the cattle of Dumbarton from the duke of Chatelherault, to confine the other confpirators to different prifons, and to wait the $s$ farther difcoveries which might be made by accident and time.

The:

## S C O

Eentiand. The earl of Huntley, inflamed by thefe difappointments, invented other devices. He excited a tumult while the queen and the earl of Marre were at St Andrew's with only a few attendants; imagining that the latter would fally forth to quell the infurgents, and that a convenient opportunity would thus be afforded for putting him to the fword without detection. The caution, howèver, of the earl of Marre, defeating this purpofe, he ordered fome of his retainers to attack him in the evening when he Thould leave the queen; but thefe affaffins being furprifed in their fation, Huntley affected to excufe their being in arms in a fufpicious place and at a late hour, by frivolous apologies, which, though admitted, could not be approved.

About this period, too, letters were received by Mary from the pope and the cardinal of Lorrain, in confequence of the intrigues of the earl of Huntley and the Roman Catholic faction. They preffed her to confider, that while this nobleman was the moft powerful of her fubjects, he was by far the moft zeallous in the interefts of the church of Rome. They intreated her to flatter him with the hope of her marriage with Sir John Gordon his fecond fon; held out to her magnificent promifes of money and military fupplies, if he would fet herfelf feriounly to recover to power and fplendour the ancient religion of her country; and recommended it to her to take meafures to deftroy the more ftrenuous Proteftants about her court, of whom a roll was tranfmitted to her, which included the name of her confident and minitter the earl of Marre. Thefe letters could not have reached her at a juncture more unfavourable for their. fuccefs. The earl of Marre, to whom fhe communicated them, was encouraged to proceed with the greatelt vigour in undermining the defigns and the importance of his enemies.

New incidents exafperated the animofities of the enemies of the earl of Marre and his own. Sir John Gordon and the lord Ogilvie having a private difpute, happened to meet each other in the high ftreet of Edin-- burgh. They immediately drew their fwords; and the lord. Ogilvie receiving a very dangerous wound, Sir John Gordon was committed to prifon by the magittrates. The queen, at this time in Stirling, was informed by them of the riot ; and while they expreffed a fear left the friends of the prifoner hould rife up in arms to give him his liberty, they mentioned a fufpicion which prevailed, that the partizans of the lord Ogilvie were to affemble themfelves to vindicate his quarrel. The queen, in her reply, after commending their diligence, inftructed them to continue to have a watch over their prifoner ; made known her defire that the law fhould take its courfe; and counfelled them to have no apprehenfions of the kindred of the parties at variance, but to rely upon the carl of Marre for providing a fufficient force for their protection. Sir John Gordon, however, found the means to break from his confinement; and flying into Aberdeenfhire, filled the retainers of his family with his complaints, and added to the difquiets of his father the earl of Huntley.

The queen, upon returning to Edinburgh, held a confultation upon affairs of fate with her privy council; and foon after fet out upon a progrefs to the northern parts of ler kingdom. At Aberdeen fhe was met by the lady Huntley, a woman of deep diff.

## 46 1. S C O

mulation and of refined addrefs; who endeavoured to Scotland conciliate her affections, was prodigal of flattery, expreffed her zeal for the Popih religion, and let fall infinuations of the great power of her hufband. She then interceded with the queen for forgivenefs to her fon: and begged with a keen importunity, that he might be permitted to have the honour to kifs her hand. But Mary having told her, that the favour fhe had folicited could not poffibly be granted till her fon fhould return to the prifon from which he had efcaped, and fubmit to the juftice of his country, the lady Huntley engaged that he fhould enter again into cuftody, and only intreated, that, inftead of being confined at Edinburgh, he fhould be conducted to the cafle of Stirling. This requeft was complied with; and in the profecution of the bufinefs, a court of jufticiary being called, Sir John Gordon made his appearance, and acknowledged hinfelf to be the queen's prifoner. The lord Glamis was appointed to conduct him to the caftle of Stirling. But upon the road to this fortrefs, he deceived the vi-And atgilance of his guards, haftened back, and gathering tempts to IOOO horfemen among his retainers, entrufted his fe-bellion. curity to the fword.

In the mean time, the queen continued her progrefs. The earl of Huntley joined himfelf to her train.... His anxiety to induce her to allow him to attend her to his houfe of Strathbogy was uncommon; his intreaties were even preffed beyond the bounds of propriety. The intelligence arrived of the efcape and rebellion of Sir John Gordon. The behaviour of the father and the fon awakened in her the moft alarming fufpicions. Affembling her privy-council, who, according to the farhion of thofe times, conftituted her court, and attended her perfon in her progreffes though her dominions; The, with their advice, commanded her heralds to charge Sir John Gordon and his adherents to return to their allegiance, and to furrender up to her their houfes of frrength and caftles, under the pains of high treafon and forfeiture. Difdaining now to go to the houfe of the earl of Huntley, where, as it afterwards appeared, that nobleman had made fecret preparations to hold her in captivity, fhe advanced to Invernefs by a different rout. In the cafte of Invernefs fhe propofed to take up her refidence; but Alexander Gordon the deputy governor, a dependent of the family of Huntley, refufed to admit her. : She was terrified with the profpect of a certain and imminent danger. Her attendauts were few in number, the town was without walls, and the inhabitants were fufpected. In this extremity, fome fhips in the river were kept in readinefs as a laft refuge; and fhe iffued a proclamation, commanding all her loyal fubjects in thofe parts immediately to repair to lier for her protection. The Frafers and Monroes came in crowds to make her the offer of their fwords. The Clan Chattan, though called to arms by the earl of Huntley, forfook his ftandard for that of their fovereign, when they difcovered that his intentions were hoftile to her. She employed this ftrength in laying fiege to the caftle, which furrendered itfelf upon the firt affault. The lives of the common foldiers were fpared, but the deputy. governor was inftantly executed. The queen, full of apprehenfions, returned to Aberdeen.

To intimidate the earl of Huntley, to punifh the troubles which his family had created to the queen, and to convince him that his utter ruin was at hand,

## S C O [, 47 ] S C O

otland, a meafure infinitely humiliating was now concerted and put in practice. The earl of Marre refigned the rich eftate of that name to the lord Erfkine, who laid claim to it as his right; and received in recompenfe, after its erection into an earldom, the territory of Murray, which made an extenfive portion of the poffeffions of the earl of Huntley.

The lady Huntley haftened to Aberdeen to throw herfelf at the feet of her fovereign, to make the offer of the moft humble fubiniffions on the part of her hufband, and to avert by every poffible means the downfal of his greatnefs. But all accefs to the queen was refufed to her ; and the earl of Huntley was fummoned to appear in perfon before the privy council, to anfwer for his conduct, and to make a full rcfignation of all his caftles and fortreffes. He did not prefent himfelf, and was declared to be in open rebellion. A new proclamation was circulated by the queen to collect together a fufficient ftrength to fubdue the infurgents. The command of her troops was given to the earl of Murby ray, who put them inftantly into motion. Huntley advancing towards Aberdeen to give them battle, was informed of their approach. He halted at Corrichie, folacing himfelf with the hope of a decifive victory. The army of the queen was the moft numerous; but there were feveral companies in it in whom little confidence conld be placed. Thefe the earl of Murray pofted in the front of the battle, and commanded them to begin the attack. They recoiled upon him in diforder, according to his expectation; but a refolute band in whom he trufted, holding out their fpears, obliged them to take a different courfe. Their confufion and flight made Huntley conceive that the day was his own. He therefore ordered his foldiers to throw afide their lances, and to rufh upon the enemy fword in hand. His command was obeyed, but with no precaution or difcipline. When his men camc to the place where the earl of Murray had fationed himfelf, the points of the extended fpears of his firm battalion put a termination to their progrefs. The panic communicated by this unexpected refiftance was improved by the vigour with which he preffed the affailants.: In their turn they took to fight. The companies of the queen's army which had given way in the beginning of the conflict were now difpofed to atone for their mifconduct; and taking a fhare in the battle, committed a fignal flaughter upor the retainers of the earl of Huntley. This nobleman himfelf expired in the throng of the purfuit. His fons Sir John Gordon and Adam Gordon were made prifoners, with the principal gentlemen who had affifted him.

Mary, upon receiving the tidings of this fuccefs, difcovered neither joy nor forrow. The paffions, however, of the earl of Murray and his party were not yet completely gratificd. Sir John Gordon was brought immediately to trial, confeffed his guilt, and was condemned to fuffer as a traitor. The fentence accordingly was executed, amidft a multitude of fpectators, whofe feelings were deeply affected, while they confidered his immature death, the manlinefs of his fpirit, and the vigour of his form.. Adam Gordon, upon account of his tender age, was pardoned; and fines were levied from the other captives of condition according to their wealth. The lord Gordon, after the battle of Corrichie, fled to his father-in-law the duke of Chatel-
herault, and put himfelf under his protection; but was delivered up by that nobleman, all whofe endeavours in his favour were ineffectual. He was convicted of treafon, and condemned; but the queen was fatisfied with confining him in prifon. The dead body of the earl of Huntley was carried to Edinburgh, and kept without burial, till a charge of high treafon was preferred againft him before the three eftates. An oftentatious difplay was made of his criminal enterprifes, and a verdict of parliament pronounced his guilt. His eftates, hereditary and moveable, were forfeited; his dignity, name, and memory, were pronounced to be extinct ; his enfigns armorial were torn from the book of arms; and his pofterity were rendered unable to enjoy any offices, honour, or rank, within the realm.

While thefe fcenes were tranfacting, Mary, who was fincerely folicitous to eftablifh a fecure amity between ${ }^{v}$ the two kingdoms, opened a negociation to effectuate ${ }_{t}$ an an interview with Elizabeth. Secretary Maitlane, ry and Ewhom fhe employed in this bufinefs, met with a moft lizabeth, gracious reception at the court of London. The city but in vain. of York was appointed as the place where the two queens fhould exprefs their mutual love and affection, and bind themfelves to each other in an indiffoluble union; the day of their meeting was fixed; the fafhion and articles of their interview were adjufted; and a fafe-conduct into England was granted to the queen of Scots by Elizabeth. But in this advanced fate of the treaty it was unexpectedly interrupted. The difturbances in France, the perfecution of the Proteftants there, and the dangerous confequence which threatcned the reformed countries, feemed to require Elizabeth to be particularly upon her guard, and to watch with eagernefs againft the machinations of the adverfaries of her religion. Upon thefe pretences the declined for a feafor the projected interview ; fending to Mary with this apology Sir Henry Sidney, a mimiter of ability, whom fhe inftructed to dive into the fecret views of the Scottifh queen. This was a fevere difappointment to Mary ; but it is reafonable to believe, that Elizabeth acted in the negociation without fincerity, and upon principles of policy. It was not her intereft to admit into her kingdom a queen who had pretenfions to her crown, and who might ftrengthen them ; who might raife the expectations of her Roman Catholic fohjects, and advance herfelf in their efteem ; and who far furpaffed her in beauty, and in the bewitching allurement of converfation and behaviour.
Amidlt affairs of great moment, a matter of fmaller confequence, but which is interefting in its circumftances, deferves to be recorded. Chatelard, a gentleman of family in Dauphiny; and a relation of the chevalier de Bayard, had been introduced to queen Mary by the ficur Damville, the heir of the houfc of Montmorency. Polifhed manners, vivacity, attention to pleafe, the talent of making verfes, and an agreeable figure, were recommendation to this man. In the court they drew attention to him. He made himfelf neceflary in all parties of pleafure at the palacc. His affiduities drew to him the notice of the queen; and, at different times, fhe did him the honour to dance with him. His complaifance became gradually more familiar. He entertained her with his wit and good-humour; he made verfes upon her beauty and accomplifiments; and her politenefs and condefcenfion infinuated

Sonfonh, into him ather fentiments than gratitude and revereaee, car He could not behold her charma without feeling their power: and infead of fiffing in its birth the mofe dangerous of all the paffions, he encouraged its growth. In an uuhappy moment, he entered her apartment; and, concealing himfelf under her bed, waited the ap. proach of night. While the queen was undreffing, her maids difcovered his fituation, and gave her the alarm. Chatelard was difmiffed with difgrace; but foon after received her pardon. 'The fremzy, however, of his love compelling him to repeat his crime, it was no longer proper to thow any compaffion to him. 'The delicate fituation of Mary, the noife of thefe adventures, which had gone abroad, and the rude fufpicions of her fubjects, required that he thould be tried for his offences and punifhed. This imprudent man was accordingly condemned to lofe his head; and the fentence was put in execution.

The difagreeable circumftances in which Mary found herfelf involved by reafon of her quarrel with Elizabeth, the exceffive bigotry and overbearing fpirit of her Proteftant fubjects, together with the adventure of of it, determined her to think of a fecond marriage. Her beauty and expectations of the crown of England, joined to the kingdom which fhe already poffeffed, brought her many fuitors. She was addreffed by the king of Sweden, the king of Navarre, the prince of Condé, the duke of Ferrara, Don Carlos of Spain, the arch-duke Charles of Auftria, and the duke of Anjou. Her own inclination was to give the preference, among thefe illuftrious lovers, to the prince of Spain; but her determination, from the firt moment, was to make her wifhes bend to other confiderations, and to render her decifion upon this important point as agreeable as poffible to queen Elizabeth, to the Englifh nation, and to the Proteitants in both kngdoms. Her fucceffion to the crown of England was the object neareft her heart; and Elizabeth, who wifhed to prevent her from marsying altogether, contrived to imprefs upon her mind an opinion that any foreign alliance would greatly ob. ftruct that much defired event. She therefore pitched upon two of her own fubjects, whom fhe fucceffively recommended as fit matches for the queen of Scots; and the promifed, that upon her acceptance of either of them, her right of inheritance fhould be inquired into and declared. Lord Robert Dudley, afterwards earl of Leicefter, was the sirt perfon propofed ; and except a manly face and fine figure he had not one quality that could recommend him to the Scottifh princefs. Whilit Mary received this fuitor with fome degree of compo fure, fhe did not altogether reprefs her fcorn. "She had heard good accounts (fhe owned) of the gentleman; but as queen Elizabeth had faid, that in propofing a hufband to her, the would confult her honour, the afked what honour there could be in marrying a fubject ?" The Englifh queen then brought under the eye of Mary another fuitor, left her thoughts fhould return to a foreign alliance. This was lord Darnley, of the houfe of Stuart itfelf, whofe birth was almoft equal to her own, and whom the Scottifn princefs was induced to accept as a hufband by motives which we have detailed elfewhere. (fee Mary.) Elizabeth however was not more fincere in this propofal than in the former ; for after permitting Darnley and his father the earl of Lenox to vifit

Scotland merely with the weew of diverthg the atwena of the Queen from the continent fle threv every-ph. ftacle in the way of the marriage which art and violeneo could contrive. When the found Mary fo much ea, tangled, that the conld bardly draw back, or make any other choice than that of Darnley, Elizabeth attempted to prevent her from going farther on ; and now intima ted her difappmbation of that marriage, which fie her felf had not only originally planied, but, in thefe latter ftages, had forwarded by every means in her power. The whole council of Elizabeth declared againtt the marriage. Even from her own fubjects Mary met with confiderable oppofition. An inveterate enmity had taken place between the duke of Chatelherault and the earl of Lenox, in confequence of which the former deferted the court, and very few of the Hamiltons repaired to it. The lord James Stuart, now earl of Mura ray, fought to promote the match with lord Dudley. In confequence of this he was treated openly with dif. refpect by the earl of Lenox; he lott the favour of his fovereign, and Darnley threatened him with his vengeance when he fhould be married to the queen. John Knox in the mean time behaved in the moft furious manner, forgetting not only the meek and peaceable behaviour of a Chrittian, but the allegiance of a fubject. This preacher even interfered with the marriage of his fovereign. He warned the nobility, that if they allow. ed a Papift or an infidel to obtain. her perfon and the government of Scotland, they would be guilty, to the full extent of their power, of banifhing Jefus Chrift from the kingdom, of bringing down upon it the vengeance of God, of being a curfe to themfelves, and of depriving their queen of all comfort and confolation. As Darnley was a Papift, he was of confequence execrated by the whole body of Proteftants, laity as well as clergy 3 while, on the other hand, he was fupported by the earls of Athol and Caithnefs, the lords Ruthven and Hume, and the whole Popith faction.

It was exceedingly unfortunate for the queen, that neither lord Darnley himfelf, nor his father the earl of Lenox, had any talents for bufinefs; and as they naturally had the direction of the queen's affairs, it is no wonder that they weee very ill managed. But a fource of oppofition, more violent than any imperfections of their own, rofe up to them in the attachment which they difcovered to a perfon upon whom the queen had of late beftowed her favour with an imprudent prodigality. David Rizzio from a mean origin raifed himfelf to a dif Account of tinguifhed eminence. He was born at Turin, where hiszio. father earned a fubfiftence as a mufician. Varieties of fituation and adventure, poverty, and misfortunes, had taught him experience. . In the train of the connt de Morette, the ambaffador from the duke of Savoy, he had arrived in Scotland. The queen, defirous to complete her band of mufic, admitted him into her fervice. In this humble fation he had the dexterity to attract her attention; and her French fecretary falling into difo grace, from negligence and incapacity, he was promoted to difcharge the duties of his office. A neceffary and frequent admiffion to her company afforded him now the fulleft opportunity to recommend himfelf to her ; and while the approved his manners, the was fenfible of his fidelity and his talents. His mind, however, was not fufficiently vieorons to bear with fuccefs and profperity. Ambition grew upon him with preferment. He

Molland. interfered in affairs of moment, intruded himielf into the conventions of the nobles at the palace, and was candidate for freatnefs. The queen confulted with him upon the moft difficult and important bulinefs, and intrufted him with real power. The fupplenefs, fervility, and unbounded complaifance which had characterifed his former condition, were exchanged for iufolence, oftentation, and pride. He exceeded the moft potent barons in the ftatelinefs of his demeanour, the fumptuoufuefs of his apparel, and the fplendour of his retinue. The nobles, while they defpifed the lownefs of his birth, and detefted him as a foreigner, and a favourite, were mortified with his grandeur, and infulted with his arrogance. Their anger and abhorrence were driven into fury ; and while this undeferving minion, to uphold his power, courted Darnley, and with officious affiduities advanced his fuit with the queen, he hattened not only his own ruin, but laid the foundation of cruel outrages and of public calamity.
To the carl of Murray the exaltation of Rizzio, fo offcufive in general to the nation, was humiliating in a more particular degree. His interference for the earl of Leicefter, the partiality he eatertained for Elizabeth, his comnections with fecretary Cecil, and the favowr he had fhown to Knox, had all contributed to create in Mary a fufpicion of his integrity. The practices of Darnley and Rizzio were thence the more offectual ; and the fulleft weight of their influence was employed to undermine his power. His paffions and difgufts were violent; and in his mind he meditated revenge. Mary, aware of her critical fituation, was folicitous to add to her ftrength. Bothwel, who had been imprifoned for confpiring againtt the life of the earl of Murray, and who had efcaped from confinement, was recalled from France; the earl of Sutherland, an exile in Flanders, was invited home to receive his pardion ; and George Gordon, the fon of the earl of Huntley, was admitted to favour, and was foon to be reinftated in the wealth and honours of his family.

As foon as Bothwel arrived, the earl of Murray infilted that he fhould be brought to a trial for having plotted againt his life, and for having broke from the place of his confinement. This was agreed to; and on the day of trial Murray made lis appearance with 800 of his adherents. Bothwel did not chufe to contend with fuch a formidable enemy; he therefore fled to France, and a proteftation was made, importing that his fear of violence had been the caufe of his flight. The queen commanded the judge not to pronounce fentence. Murray complained loudly of her partiality, and engaged deeper and deeper in cabals with queen Elizabeth. Darnley, in the mean time, preffed his fuit with eagernefs. The queen ufed her utmolt en. deavours to caufe Murray fubfcribe a paper expreffing a confent to her marriage; but all was to no purpofe. However, many of the nobility did fubferibe this paper; and fhe ventured to fummon a convention of the eftates at Stirling, to whom the opened the bufinefs of the marriage ; and who approved of her choice, provided the Proteftant religion fhould continue to be the eftablifhment.

In the mean time ambaffadors arrived from England, with a meffage importing Elizabeth's entire difapprobation and difallowance of the queen's marriage with hord Darnley. But to thefe ambaffadors Mary only

[^6]replied, that matters were gone too far to be recalled; and that Elizabeth had no folid caufe of difpleafure, fince, by her advice, the had fixed her affections not upon a foreigner, but upon an Englifman ; and fince the perfon fhe favoured was defcended of a dittinguifhed lineage, and could boaft of having in his veins the royal blood of both kingdoms. Immediately after this audience The created lord Darnley a lord and a kniyht. The oath of knighthood was adminiftered to him. He was made a baron and a banneret, and called lord Armanagh. He was belted earl of Rofs. He then promoted 14 geutlemen to the honour of knighthood, and did honage to the quecn, without any refervation of duty to the crown of England, where his family had for a long time refided. His advancement to be duke of Albany was delayed for a little time; and this was fo ruch refented by him, that, when informed of it by the lord Ruthven, he threatened to ftab that nobleman with his darger.
In the mean time the day appointed for the affembily of parliament, which was finally to determine the fubject of the marriage, was now approaching. The earl of Marray, encouraged by the apparent firmnefs of E, lizabeth, goaded on by ambition, and alarmed with the approbation beftowed by the convention of the eftates on the queen's choice of lord Darnley, perceived that the moment was at hand wher a decifive blow fhould be ftruck. To infpirit the refentments of his friends, and to juftify in fome meafure the violence of his projects, he affected to be under apprehenfions of being affaffinated by the lord Darnley. His fears were founded abroad; and he avoided to go to Perth, where he affirmed that the plot againtt him was to be carried ineto execution. He courted the enemies of Darnley with unceafing affiduity; and he united to him in a confederacy the duke of Chatelherault, and the earls $A n$ affocia of Argylc, Rothes, and Glencairn. It was not the fole tion againf object of their affociation to oppofe the marriage. They the queen engaged in more criminal enterprifes. They meditated ley. Darnthe death of the earl of Lenox and the lord Darnley; and while the queen was upon the road to Calander place to vifit the lord Livingiton, they propofed to intercept her and to hold her in captivity. In this ftate of her humiliation, Murray was to advance himfelf into the government of the kingdom, under the character of its regent. But Mary having received intelligence of their confpiracy, the earl of Athol and, the lord Ruthven raifed fuddenly 300 men to protect her in her journey. Defeated in this fcheme, the earl of Murray and his affociates did not relinquifh their cabals. They thought of new atchievements; and the nation was filled with alarms, fufpicions, and terror.
Amidft the arts employed by the Scottifh malcon- Difurba tents to inflame the animolities of the nation, they for- ces raifed got not to infif upon the dangers which threatened the by the Pro* Proteftant religion from the advancement of lord Darn-tefants. ley, and from the rupture that mult enfue with England. Letters were everywhere difperfed amoug the faithful, reminding them of what the eternal God had wrought for them in the abolition of idolatry, and admonifing them to oppofe the reftoration of the mafs. A fupplication was prefented to the queen, complaining of idolaters, and infifting upon their punifhment. In the prefent juncture of affairs it was received with unufual refpect ; and Mary inftructed the Popifh ecclefiaftics to

Stooland.
ablain from giving offence of any kind to the Protef-
tants. A prieft, however, having celebrated the mafs, was taken by the brethren, and expoled to the iufults and fury of the populace at the market-place of Edinburgh, in the garments of his profeffion, and with the chalice in his hand; and the queen having given a check to this tumuluous proceedirg, the Proteftants, rifing in their wrath, were the more confirned in the belief that fhe meant to overthrow their religion. The molt learned and able of the clergy held frequent confultations together ; and while the nation was difturbed with dangerous ferments, the genetal affembly was called to deliberate upon the affairs of the church. Their hope of finceefs being proportioned to the difficulties in the fituation of the queen, they were the lefs ferupulous in forming their refolutions; and the commiffioners, whom they deputed to her, were ordered to demand a parliamentary ratification of their defires.

They infilted, that the mafs, with every remain whatfoever of popery, fhould be univerfally fuppreffed through out the kingdom; that in this reformation, the queen's perfon and houfehold fhould be included; and that all Papits and idolaters fhould be punifhed upon conviction according to the laws. 'I'hey contended, that perfons of every defcription and degree fhould refort to the churches upon Sunday, to join in prayers, and to attend to exhortations and fermons; that an independent provifion fhould be affigned for the fupport of the prefent clergy, and for their fucceffors ; that all vacant benefices fhould be conferred upon perfons found to be qualified for the minittry, upon the trial and examination of the fuperintendants; that no- bifhopric, abbey, priory, deanery, or other living, having many churches, thould be beftowed upon a fingle perfon; but that, the plurality of the foundation beirig diffolved, each church fhould be provided with a minifter ; that the glebes and manfes fhould be allotted for the refidence of the minifters, and for the reparation of churches; that no charge in fchools or univerfities, and no care of education, either public or private, fhould be intrufted to any perfon who was not found and able in doctrine, and who was not approved by the fuperintendants; that all lands which of old had been devoted to hofpitality, fhould again be made fubfervient to it ; that the lands and rents which formerly belonged to the monks of every order, with the annuities, alterages, obits, and the other emoluments which had appertained to priefts, fhould be employed in the maintenance of the poor and the upholding of fchools; that all horrible crimes, fuch as idolatry, blafphemy, breaking of the fabbath, witchcraft, forcery, inchantment, adultery, manifeft whoredom, the keeping of brothels, murder, and oppreffion, fhould be punifhed with feverity ; that judges fhould be appointed in every diftrict, with powers to pronounce fentences and to execute them; and, in fine, that for the eafe of the labouring hufbandmen, fome order fhould be devifed concerning a reafonable payment of the tythes.
To thefe requifitions, the queen made an anfwer full of moderation and humanity. She was ready to agree with the three eftates in eftablifhing the reformed religion over the fubjects of Scotland; and fhe was fteadily refolved not to throw into hazard the life, the peace, or the fortune, of any perfon whatfoever upon account of his opinions As to herfelf and her houfehold, the was
perfuaded that her people would not urge her to adopt Scctind. tenets in contradiction to herown confcience, and thereby involve her in remorfe and uneafinefs. She had been nourifhed and brought up in the Romifh faith; fhe conceived it to be founded on the word of God; and the was defirous to continue in it. Brt, fetting afide her belief and religious duty, fhe ventured to affire them, that fhe was convinced from political reafons, that it was her intereft to maintain herfelf firm in the Roman Catholic perfuafion. By departing from it, fhe would forfeit the amity of the king of France, and that of other princes who were now frongly attached to her; and their difaffection could not be repaired or compenfated by any new alliance. 'To her fubjects fhe left the fullefl liberty of confcience; and they could not furely refufe to their fovereign the fame right and indulyence. With regrard to the patronage of benefices, it was a prerogative and property which it would ill become her to violate. Her neceffities, and the charge of her royal dignity, required her to retain in her hands the patrimony of the crown. After the purpofes, however, of her ftation, and the exigences of governinent, were fatisfied, the could not object to a fpecial affignment of revenue for the maintenance of the miniftry; and, on the fubject of the other articles which had been fubmitted to her, fhe was willing to be directed by the three eftates of the kingdom, and to concur in the refolutions which fhould appear to them the molt reafonable and expedient.

The clergy, in a new affembly or convention, expref. fed a high difpleafure with this return to their addrefs led a high difpleafure with this return to their addrefs. fancs are They took the liberty to inform the queen, that the difpleafed doctrines of the reformation which fhe refufed to adopt, with her a were the religion which had been revealed by Jefusfwer. Chrift, and tanght by the apofles. Popery was of all perfuafions the leaft alluring, and had the feweft recommendations. In antiquity, confent of people, anthority of princes, and number of profelytes, it was plainly inferior to Judaifin. It did not even reft upon a foundation fo folid as the doctrines of the alcoran. IThey required her, therefore, in the name of the eternal God, to embrace the means of attaining the truth, which were offered to her in the preaching of the word, or by the appointment of public difputations between them and their adverfaries. The terrors of the mafs were placed before her in all their deformity. The fayer of it, the action itfelf, and the opinions expreffed in it, were all pronounced to be equally abominable. 'Гo hear the mals, or to gaze upon it, was to commit the complicated crimes of facrilege, blafphemy, and idolatry. Her delicacy in not renouncing her opinions from the apprehenfion of offending the king of France and her other allies, they ridiculed as impertinent in the higheft degree. They told her, that the true religion of Chrift was the only means by which any confederacy could endure; and that it was far more precious than the alliance of any potentate whatfoever, as it would bring to her the friendfhip of the King of kings. As to patronages, being a portion of her patrimony, they intended not to defraud her of her rights: but it was their jucgment, that the fuperintendants ought to make a trial of the qualifications of candidates for the miniftry; and as it was the duty of the patron to prefent a perfons to the benefice, it was the bufinefs of the church to manage his infitution or collation. For withont this
retraints.

## S C o

Scolland. reftraint, there would be no fecurity for the fitnefs of the incumbent; and if no trials or examinations of minitters took place, the church would be filled with mifrule and ignorance. Nor was it right or juft that her majelty fhould retain to herfelf any part of the revenue of benefices; as it ought to be all employed to the ufes of the clergy, for the purpofes of education, and for the fupport of the poor. And as to her opinion, that a fuitable affignment fhould be made for them, they could not but thank her with reverence : but they begged to folicit and importunc her to condefcend upon the particulars of a proper fcheme for this end, and to carry it into execution; and that, taking into a due confideration the other articles of their demands, the would ftudy to comply with them, and to do juftice to the religious eftablifhment of her people.

From the fears of the people about their religion, difturbances and iufurrections were unavoidable; and before Mary had given her anfwer to the petitions or addrefs of the clergy, the Proteftants, to a formidable number, had marched to St Leonard's Craig ; and, dividing themfelves into companies, had chofen captains to command them. But the leaders of this tumult being apprehended and committed to clofe cuftody, it fubfided by degrees; and the queen, upon the interceffion of the magittrates of Edinburgh, inftead of bringing them to trial, gave them a free pardon. To quiet, at thie fame time, the apprehenfions which had gone abroad, and to controvert the inficious reports which had been induftrioufly fpread of her inclination to overturn the reformed doctrines, fine repeatedly ifued proclamations, affuring her fubjects, that it was her fixed determination not to moleft or difturb any perfon whatfoever upon account of his religion or confcience; and that the had never prefumed even to thiuk of any innovation that might endanger the tranquillity. or do a prejudice to the happinefs of the commonwealth. ment and ability, the earl of Murray and his confederates continned their coufultations and their intrigues. After their difappointment in the confpiracy ayainft the queen and the lord Darnley, they perceived that their only hope of fuccefs or fecurity depended upon Elizabeth ; and as Raridolph had promiled them her protection and affiftance, they fcrupled not to addrefs a letter to her, explaining their views and fituation. The pretences of their hoftility to their fovereign upon which they affected to infift, were her fettled defign to overturn the Proteftant religion, and her rooted defire to break all correfpondence and amity with England. Too prevent the accomplifhment of thefe purpofes, they faid, was the object of their confederacy ; and with her fupport and aid they did not doubt of being able to advance effectually the emolument and advantage of the two kingdoms. In the prefent ftate of their affairs, they applied not, however, for any fupply of her troops. An aid from her treafury was now only necefliary to them ; and they engaged to beflow her bounty in the manner the moft agreeable to her inclinations and her interelts. The pleafure with which Elizabeth received their application was equal to the averfion fhe had conceived againft the queen of Scots. She not only granted to them the relief they requefted, but affured then by Randolph of her efteem and favour while they should continue to uphold the reformed religion and the
connection of the two nations. Flattered by her affu- Scotland. rances and generofity, they were ftrenuous to gain partizans, and to difunite the friends of their fovereign ; and while they were fecretly preparing for rebellion, and for trying their frength in the field, they diffeminated among the people the tenets, That a Papif could not legally be their king; that the queen was not at liberty of herfelf to make the choice of a humand; and that, in a matter fo weighty, fhe ought to be entirely directed by the determination of the thice eftates affembled in parliament.

Elizabeth, at the fame time, carrying her difimula- Treachery tion to the moft criminal extremity, cominanded Ran of Elizadolph to afk an audience of Mary ; and to counfel her bech. to nourih no fufpicions of the earl of Murray and his friends ; to open her eyes to their fincerity and honour; and to call to mind, that as their fervices had hitherto preferved her kingdom in repofe, her jealoufies of them might kindle it into combuftion, make the blood of her nobles to flow, and caft into hazard her perfon and her crown. Full of aftonifhment at a meffage fo rude and fo improper, the queen of Scots defired him to inform his miftrefs, that fhe required not her inftructions to diftinguifh between patriotifm and treachery ; that fhe was fully fenfible when her will or purpofe was refifted or obeyed; and that the poffefled a power which was more than fufficient to reprefs and to punifh the enormities and the crimes of her fubjects. The Englifh refident went now to the earl of Lenox and the lord Darnley, and charged them to return to England. The former expreffed an apprehenfion of the feverity of his queen, and fought an aifurance of her favour before he could venture to vifit her dominions. The latter, exerting greater fortitude; told him, that he acknowledged no duty or obedience but to the queen of Scots. The refident treating this anfwer as difrefpectful to Elizabeth, turned his back upon the lord Darnley, and retired without making any reverence, or bidding lim an adieu.
The behaviour of Elizabeth, fo fierce and fo perfdious, was well calculated to confirm all the intentions of Mary ; and this, doubtlefs, was one of the motives with which fhe was actuated. But while the queen of Scots was eager to accomplifh her marriage, fhe was not inattentive to the rifing troubles of her country. The parliament which fhe had appointed could not now be held: it was therefore prorogued to a more diftant day ; and the violence of the times did not then permit it to affemble. By letters.fhe invited to her, with all their retainers, the moft powerful and the mof eminent of her fubjects. Bothwel was recalled anew from France; and by general proclamations fhe fummoned to her ftandard the united force of her kingdom. The cafle of Edinburgh was likewife provided amply with fores and ammunition, that, in the event of misfortunes, it might afford her a retreat and defence. The alacrity with which her fubjects flocked to her from every quarter, informed her of her power and popularity ; and while it ftruck Murray and his adherents with the danger to which they were expofed, it declared to them the opinion entertained by the nation ${ }^{\text {r }}$ of the iniquity and the felfifhnefs of their proceedings.

642
On the 29 th of July 1565 , the ceremony of mar-Marriage riage between the queen and lord Darnley was perform. of Mary ed. The latter had been previoully created duke of with lord

Albany. The day before the marringe, a proclamation was publifhed, commanding him to be tylled king of the realm, and thatrall letters after their marriage fhould be directed in the names of her hubband and herfelf. The day after it, a new proclamation was iffued confirming this act: he was pronounced king by the found of trumpets, and affociated with the queen in her government. This meafure feems to have been the effect of the extreme love the queen had for her hufband, which did not permit her to fee that it was an infringement of the conftitution of the kingdom; though perhaps fhe might alfo be urged to it by the preffing eagernefs of lord Darnley himfelf, and the partial counfels of David Rizzio. The earl of Murray made loud complaints, remonftrated, that a king was impofed upon the nation without the confent of the three effates, and called upon the nation to arm againft the beginnings of tyranny. The malcontents accordingly were immediately in arms; but their fuccefs was not anfwerable to their wifhes. The bulk of the nation were fatisfied with the good intentions of their fovereign, and the herfelf took the earlieft opportunity of crufhing the rebellion in its infancy. The earl of Murray was declared a traitor; and The rebel- rebels. She then took the field againft them at the lious nobies head of a confiderable army: and having driven them driven into from place to place, obliged them at laft to take refuge
in England. Queen Elizabeth received them with that duplicity for which her conduct was fo remarkable. Though fhe herfelf had countenanced, and even excited them to revolt, the refufed to give an audience to their deputies. Nay, fhe even caufed them to emit a public declaration, that neither fhe, nor any perfon in her name, had ever excited them to their rebellious practices. Yet, while the public behaviour of Elizabeth was fo acrimonious, fhe afforded them a fecure retreat in her kingdom, treated the earl of Murray in private with refpect and kindnefs, and commanded the earl of Bedford to fupply him with money. Mary, however, refolved to proceed agrainft the rebels with an exemplary rigour. The fubmiffions of the duke of Chatelherault alone, who had been lefs criminal than the reft, were attended to.. But even the favour which he obtained was precarious and uncertain; for he was commanded to ufe the pretence of ficknefs, and to pafs for fome time into foreign countries. A parliament was called; and a fummons of treafon being executed againft the earls of Argyle, Glencairn, and Rothes, with others
of the principal rebels, they were commanded to appear before the three eftates; in default of which their lives and eltates were declared to be forfeited.
In the mean time Throgmorton the Englifh ambaffador folicited the pardon of the rebels; which Mary was at firt inclined to grant. However, by the per-Mary ac fuafion of the court of France, fhe was not only indu-cedes to th ced to proceed againft them with rigour, but acceded treaty of th the treaty of Bayonne, by which the deftruction of the Proteltants was determined. This meafure filled the whole court with terror and difmay. The rebels were acquainted with the danger of their fituation; and being now driven defperate, they were ready to engage in the moft atrocious defigns. Unhappily, the fituation of affairs in Scotland rendered the accomplifhment of their purpofes but too eafy. Violent difgufts had taken place between the queen and her hufband. Her fondnefs had been exceffive; but fhe foon perceived between that the qualities of his mind were not proportioned to queen and his perfonal accomplifhments. He was proud, difdainful, and fufpicious. No perfuafions could correct his wilfulnefs; and he was at the fame time giddy and obttinate, infolent and-mean. The queen in confequence began to fhow an indifference towards him; which he took care to augment, by fhowing the like indifference towards her, and engaging in low intrigues and amours, indulging himfelf in diffipation and riot, \&c. However, the defire of dominion was his ruling paffion; and the queen, finding his total incapacity for exercifing his power to any good purpofe, had excluded him fiom it altogether. He was therefore at prefent a proper object for the machinations of the rebels, and readily entered into an agreement with them to depofe the queen; vainly thinking by that means that he fhould fecure the crown to himfelf. However, as the parliament was foon to affemble, in which the rebels had every reafon to believe that they would be condemned for high tieafon, it was neceffary tlat the kingdon fhould be thrown into diforder before that time came, otherwife their fate was inevitable. Practifing on the imbecillity of Darnley, they perfuaded him that a criminal correfpondence fublifted between the queen and David Rizzio (R). For this reafon the king refolved upon his deftuot ; and the deftru by not only to ret an indernity to thators hoped there- tion of Da effect a total revolution at court, and the entire hami- with the liation of Bothwel, Huntley, and Athol, who were the aflociates of Rizzio. However, in order to fave them-
felves,
(R) That there fubfifted a criminal intercourfe between Mary and Rizzio is a fcandal which is now given up by her enemies. It feems to reft on the authority of Buchanan and Knox; and their evidence in this cafe is clearly of no weight, not only from their being the ftrenuous partizans of her adverfaries, but from the multitude of falfehoods which they anxioully detail to calumniate her. The love fhe felt for Daruley was extreme, and their acquaintance commenced a month or two after the appointment of Rizzio to be her fecretaty for French affairs. She became pregnant foon after her marriage; and it was during her pregnancy that kizzio was affaffinated. Thefe are ftriking prefumptions in her tavour. And what feems to put her innocence out of all gueftion, is the filence of the fpies and refidents of Elizabeth with regard to this amour; for, if there had been any thing real in it, they could not have made their court to their queen more effectually than by declaring to her its peculiarities; and their want of delicacy, fo obfervable in other circumftances, would have induced them upon this occafion to give the greateft foulnefs and deformity to their information.

It appears that Rizzio was ill-favoured, and of a difagreeable form. Buchanan fays of him, "Non faciem cultus horeflabat, fed facies cultum deftruebat. Hift. Scot. lib. xvii. This expreffion is very ftrong; but it
would have little weight if other authors had not would have little weight if other authors had not concurred. in giving a fimilar defcription of Rizzio. In a book firmi, they engaged the king to fubicn be a bond, af together of his own devifing; acknowledging that he had folicited them to take a part in it, from the apprehenfions that refiftance might be made to him; and agreeing, upon the word and honour of a prince, to protect and fecure them ayaintt every hazard and injury to which they might be expofed from the atchievement of his enterprife. Having procured this fecurity, and having ailured the earl of Lenox the king's father to approve their meafures, they adjufted the method of the projected murder; and difpatched a meffenger to the Englifh frontier, advertifing the earl of Murray and the rebels of their intentions, and inviting them to return to the court.

Upon the 9 th day of March, about $70^{\circ}$ 'clock in the evening, armed men, to the number of 500 , furrounded the palace of Holyroodhoufe. The earl of Morton and the Lord Lindfay entered the court of the palace, - with 160 perfors. The queen was in her chamber at fupper, having in her prefence her natural fifter the countefs of Argyle, her natural brother Robert commendator of Holyroodhoure, Beton of Creich .mafter of the houfehold, Arthur Erfkine, and David Rizzio. The king entering the apartment, feated himfelf by her fide. He was followed by the Lord Ruthven, who being wafted with ficknefs, and cafed in armonr, exhibited an appearance that was hideous and terrible. Four ruffians attended him. In a hollow voice he commanded Rizzio to leave a place which did not become him. The queen, in aftonifhment and confternation, applied to the king to unfold to her this mytterious enterprife. He affected ignorance. She ordered Ruthven from her prefence, under the pain of treafon; declaring to him at the fame time, that if Rizzio had committed any crime, fhe would produce him before the parliament, and punifh him according to the kaws. Ruthven drawing his dagger, advanced towards Rizzio. The queen rofe to make an excrtion of her authority. The unfortunate ftranger laid hold of her garments, crying out for juftice and mercy. Other confpirators rulhing into the chamber, overturned the table, and increafed the difmay and confution. Loaded pitols were prefented to the bofom of the queen. The king held her in his arms. George Douglas, fnatching the dagger of his fovereign, plunged it into the body of Rizzio. The wounded and Icreaming vietim was dragged into the antichamber; and fo eager were the affaffins
to complete then work, that he was torn and mangled with 56 wounds.

While the queen was preffing the king to gratify her inquiries into the meaning of a deed fo execrable, Ruthven returned into their prefence. She gave a full vent to indignation and reproach. Ruthven, with an intolerable coldnefs.and deliberation, informed her, that Rizzio had been puit to death by the counfel of her hur. band, whom he had difhonoured; and that by the perfuafion of this minion fhe liad refured the crown-matrimonial to the king, had engaged to re-efablifh the ancient religion, had refolved to punifl the earl of Murray and his friends, and had entrufted her confidence to Bothwel and Huntley, who were traitors. The king, taking the part of Ruthyen, remonftrated againit her proceedings, and complained that from the time of her familiarity with Rizzio, fhe had neither regarded, nor entertained, nor trufted him. His fufpicions and ingratitude fhocked and tortured her. His connection with the confpirators gave her an ominous anxiety. Apprehenfions of outrages ftill more atrocious invaded her. In thefe agitated and miferable moments the did not lofe herfelf in the helpleffnefs of forrow. The loftinefs of her fpirit communicated relief to her; and wiping away her tears, fhe exclaimed, that it was not now a feafon for lamentation, but for revenge.
The earls of Huntley, Bothwel, and Athol, the lotds Fleming and Levington, and Sir James Balfour, who were obnoxious to the confpirators, and at this time in the palace, found all refiftance to be vain. Some of them eluding the vigilance of Morton, made their efcape; and others were allowed to retire. The provoft and magiftrates of Edinburgh getting intelligence of the tumult, ordered the alarm bell to be rung. The citizens, apprehenfive and anxious, approached in The queen: crowds to inquire into the welfare of their fovereign ; confined. but fhe was not permitted to addrefs herielf to them. and threatThe confpirators told her, that if the prefumed to make ${ }^{\text {ened. }}$ any harangue, they would "cut her in pieces, and caft her over the walls." 'I he king called to the people that fhe was well, and commanded them to difperfe. The queen was fhut up in her chamber, uncertain of her fate, and without the confolation or attendance of her women.
In the morning a proclamation was iffued by the king, without the knowledge of his queen, prohibiting the meeting of the parliament, and ordering the members to retire from the city. . She rebellious lords now returned
intitled, "Le Livre de la Morte de Ia Reyne d'Ecoffe," and printed in the year 1587 , he is faid to be " difgracić de corps." Canfin, ap. Jebb, p. 37. This work, too, while it records the unkindnefs of nature to his perfon, has obferved, that he was in his old age when he made a figure in the court of Mary. "Elle traittoit ordinairement avec David Riccio fon fecretaire, homme aagé et prudent, qui poffeduit fon oreille." Ibid. And other authors give their teftimonies to the fame purpofe.

It is probable that the panegyrifts of Mary exaggerate fomewhat the imperfections as well as the good qualities of Rizzio. But there feems in general to be no reafon to doubt his fidelity and talents, any more than his uglinefs and fenility. He had therefore a better title to be her fecretary than her lover. It is an abfurdity to think that a queen fo young and beautiful would yield herfelf to deformity and old age. A common proftitute muft be brought to endure this misfortune. The capacity of the man was a recommendation to him ; and as he nwed every thing to her bounty, and was a ftranger, fhe had the greateft reafon to rely upon his faithfulnefs. The perfidioufnefs and duplicity of her courtiers drew clofer the tie of their connection; and as Rizzio was ftu. tious to make himfelf agreeable, and was fkilful in games of hazard, he was always ready to be a party with her in thofe innocent amulements which fill up the liftefs intervals of life. Keith. Append. p. 124,

650 She endeavours in vain to gain the earl of Murray.

651
But pre-
ary now began to perceive the full extent of her vails on the wretchednefs; and thcrefore, as her laft r ffource, apking to abandon th caufe of the con. Spirators. plied to the king, whom fhe treated with all thofe blandiffments ufually employed by the fair fex when they want to gain the afcendency over the other. ihe king, who, with all his faults, had a natural facility of temper, was eafily gained over. The confpirators were alarmed at his coldnefs, and endeavoured to fill his mind with fears concerning the duplicity of his wife; but, finding they could not gain their point, they at laft began to treat of an accommodation. I he king brought them a meffage, importing, that Mary was difpofed to bury in oblivion all memory of their tranfgreffions; and he offered to conduct them into her prefence. The earls of Murray and Morton, with the lord. Ruthven, attended him into her prefence; and, falling on their knees before the qucen, made their apologies and fubmiffions, She commanded them to rife; and having defired them to recollect her abhorrence of cruelty and rapacioufnefs, the affured them with a gracious air, that inftead of defigning to forfeit their lives, and poffefs herfelf of their eftates, the was inclined to receive them into favour, and to give a full pardon, not only to the nobles who had come from England, but to thofe who had affaffinated David Rizzio. They were accordingly ordered to prepare the bonds for their fecurity and forgivenefs, which the queen promifed to take the earlieft opportunity of fubferibing; but in the mean time the king obferved, that the confpirators ought to remove the guards which they had placed around the queen, that all fufpicion of Andefcapes reftraint might be taken away. 'This meafure could from them. not with any propriety be oppofed, and the guards were therefore difmiffed; upon which the queen, that very night, left her palace at midnight, and took the road to Dunbar, accompanied by the king and a few attendants.

The news of the queen's efcape threw the confpirators into the utmoff confternation; as the immediately iffued proclamations for her fubjects to attend her in arms, and was powerfully fupported. They fent there-

## $54]$ <br> S C O

fore the lord Senipic, requefting, with the utmof hu- Scotlan mility, her fuofeription to their deeds of pardon and fecurity ; but to this meffage fhe returned an unfavour. able anfwer, and advanced towards Edinburgh with an army of 8000 men. The confpirators now fled with the utmoft precipitation. Even John Knox retired to Kyle till the ftorm fhould blow over. On the queen's arrival at Edinburgh, a privy council was inftantly called, in which the confpirators were charged to appear as guilty of murder and treafon; their places of ftrength ${ }^{\text {raitors. }}$ were ordered to be rendered up to the officers of the crown ; and their eftates and poffeffions were made liable to confifcation and forfeiture.

But while the queen was thus eager to punifh the confpirators, fhe was fenfible that fo many of the nobility, by uniting in a commor caufe, might raife a powerful party in oppofition to her ; for which reafon the endeavoured to detach. the earl of Murray from the refl, by making him offers of pardon. Sir James Melvil accordingly pledged himfelf to produce his pardon and that of his adlerents, if he would feparate from Morton and the confpirators. He accordingly became cold and diftant to them, and exclaimed apainft the murder as a moft execrable action ; but notwithftanding his affected anger, when the confpirators fled to England, he furnihed them with letters of recommendation to the earl of Bedford. After the flight of the confpirators, the king thought it neceffary for him to deny his having any hare in the action. He therefore em-tion of braced an opportunity of declaring to the privy council king. his total ignorance of the coufpiracy againft Rizzio; and not fatisfied with this, he, by public proclamations at the market-place of his capital, and over the whole kingdom, protefted to the people at large that he had never beftowed upon it, in any degree, the fanction of his command, confent, affiftance, or approbation.

In the mean time the queen granted a full and ample pardon to the earls ot Murray, Argyle, Glencairn, and fome and Rothes, and their adherents; but towards the con- others of fpirators fhe remained inexorable. This lenity, to Mur ${ }^{\text {the }}$ are pardo ray efpecially, proved a fource of the greateft inquietude ed. to the queen; for this mobleman, blind to every motive of action diftinct from his own ambition, began to contrive new plots, which, though difappointed for a time, foon opcrated to the deftruction of the queen, and almoft to the ruin of the nation.
In 1566, the queen was delivered of a prince, who received the name of Fames. This happy event, how- James V ever, did not extinguifh the quarrel betwixt her and the king. His defire to intrude simfelf into her authority, and to fix a ftain upon her honour, his fhare in the murder of Rizzio, and his extreme meannefs in publicly denying it aftersards, could not fail to imprefs her with the fitrongeft fentiments of deteftation and contempt. Unable, however, totally to diveft herfelf of regard for him, her behaviour, though cold and diftant, was yet decent and refpectful. Caftelnau, at this time ambaffador extraordinary from France, conceived that a reconciliation might be effected, and employed himfelf ome time in thi fres ion hevours altogether ineffectual. The king and queen fpent $t$ tine and two nights together; and proceeded, in company with queen. each other, to Meggatland in Tweeddale in order to en joy the diverfion of the chace, attended by the carls of Huntley, Bothwel, Murray, and other nobles. From

## S C O

 getted to him a defign of going abroad. To Monfieur du Croc, the French relident, who had attended Mary at Stirling, he ventured to communicate his chimerical project. This ftatefman reprefented to him its wildnefs and inefficacy; and could hardly believe that he was ferious. To his father the earl of Lenox, who paid him a vifit at this place immediately upon Mary's departure from it, he likewife communicated his intention ; and all the intreaties, arguments, and remonitrances of this nobleman to make him drop his defign, were without fuccefs. He provided a veffel, and kept it in readinefs to carry him from his dominions. The earl of Lenox, after returning to Glafgow, where he ufually refided, gave way to his paternal anxieties, and folicited the queen by letter to interfere with her authority and perfuations; and upon the evening of the day in which fhe received this difpatch, the king alighted at Holyroodhoufe. But the names of the nobles who were with the queen being annouriced to him, he objected to three of them, and infifted that they fhould be ordered to depart, before he would enter within the gates of the palace. The queen, alarmed with a demeanour fo rude and fo unwarrantable, condefcended to leave her company and her palace to meet him ; and it was with geeat difficulty that fhe was able to entice him into her own apartment. There he remained with her during the night. She communicated to him his father's letter, and employed every art and blandifhment to engage him to explain his perverfe defign. But he gave her no return or fatisfaction. He was unmoved with her kindnefs; and his filence, dejection, and peevifhnefs, augmented her diftrefs. In the morning, the called her privy council to affemble in the palace, and invited to her Monfieur du Croc the French envoy. By the bifhop of Rofs fhe explained the intention of the king, and made known the difpatch of the earl of Lenox. The privy council were urgent to know the rea. foris of a voyage that appeared to them fo inexplicable; and earneftly preffed the king to unbofom himfelf. If his refolution proceeded from difcontent, and if there were perfons in the kingdom who had given him caufes of offence, they affured him, that they were ready, upon his information, to take the neceflary fleps to make him eafy and happy. No quality or rank fhould exempt thofe from inquiry and punifment who had committed mifdemeanors againft him. This, they faid, confiited with his honour, with the honour of the queen, and with their own. If, however, he had received no fufficient provocation to juftify his behaviour, and if he had no title to complain of actual injuries, they adinonifhed him to remember, that his flight from a queen fo beautiful, and from a kingdom fo ancient and noble, would expofe him to the greateft ridicule and difgrace. They pointed out the happinefs of his fortune, and counfelled him not to part lightly with all its flattering advantages. The queen herfelf, taking his hand into hier's, and preffing it with affection, befought him to fay by what act or deed fhe had unfortunately induced him to conceive fo fatal a purpofe. Her memory did
## 55 ] S C O

not reproach her with any crime or indifcretion which Scotland. affected his hoonur or her integrity : yet if, without any def:gn upon her part, fle had incurred his difpleafure, fhe was difpofed to atone for it; and fhe begged him to fpeak with entire freedom, and not in any degree to fpare her. Monfieur du Croc then addreffed him, and employed his intereft and perfuations to make him reveal his inquietudes. But all this refpectful attention and ceremonious, duty were ineffectual. Obttinately froward, he refufed to confefs that he intended any voyage, and made no mention of any reafons of difcontent. He yet acknowledged with readinefs, that he could not with juftice accufe the queen of any injury or offence. Oppreffed with uneafinefs and perturbation, he prepared to retire; and, turning to her, faid, "Adieu, Madam !’ you fhall not fee me for a long time." He then bowed to the French envoy, and to the lords of the privy council.
He haftened back to Stirling, leaving the queen and her council in furprife and aflonifhment. They refolved to watch his motions with anxiety, and could not conjecture what ftep he would take. Mary, to prevent the effect of rumours to her difadvantage, difpatched a courier to advertife the king of France and the queenmother of his conduct. It was not poffible that a prince fo meanly endowed with ability could make any impreffion upon her allies. Nor did it appear to be in his power to excite any domeftic infurrection or difturbance. He was univerfally odious; and, at this time, the queen was in the higheft eftimation with the great body of her fubjects. After paffing fome days at Stirling, he addreffed a letter to the queen, in which, after hinting at his defign of going abroad, he infinuated his reafons of complaint. He was not trulted by her with authority, and fle was no longer fludious to advance him to honour. He was without attendants; arld the nobility had deferted him. Her anfwer was fenfible and? temperate. She called to his remembrance the diftinctions fhe had conferred upon him, the ufes to which he. had put the credit and reputation accruing from them, and the heinous offences he had encouraged in her fubjects. Though the plotters againit Rizzio had reprefented him as the leader of their enterprize, fhe had yet abftained from any accufation of him, and had even belaved as if fhe believed not his participation in the guilt of that project. As to the defects of his retinue, The had uniformly offered him the attendance of her own fervants. As to the nobility, they were the fupports of the throne, and independent of it. Their countenance was not to be commanded, but won. He : Irad difcovered too much ftatelinefs to them; and they were the proper judges of the deportment that became them. If he wifhed for confequence, it was his duty to pay them court and attention; and whenever he. Thould procure and conciliate their regard and commendation, fhe would be happy to give him all the importance that belonged to him.

In the mean time, the earls of Murray and Bothwel were induftrioufly friving to widen the breach between the king and queen, and at the fame time to fo- ment the divifion between the king and his nobles, The earl of Morton excited difturbances on the bor-. ders ; and as no fettled peace had taken place there fince Mary's marriage, there was the greateitt reafon to believe that he would fucceed in his attempts. Pro-i clamationsio
*icstand.
clamations were therefore iffued by the queen to call her fubjects to arms ; and fhe proceeded to Jedburgh, to hold juftice-courts, and to Ppuifh traitors and diforderly perfons. In the courfe of this journey the was taken dangeroufly ill; infomuch that, believing her death to be at hand, the called for the bifhop of Rofs, telling him to bear witnefs, that fhe had perfevered in that religion in which the had been nourifhed and brought up; taking the promife of her nobles, that after her death they would open her laft will and teftament, and pay the refpect to it that confited with the laws; recommending to them the rights of her infant fon, and the charge of tducating him in fuch a manner as might enable him to rule the kingdom of his ancettors with honour ; and intreating them to abflain from all cruelty and perfecution of her Roman Catholic fubjects. Notwithtanding her apprekenfions, however, and the extreme violence of her diftemper, the queen at laft recovered perfect health. As foon as fhe was able to travel, The vifited Kelfo, Werk cafle, Hume, Langton, and IVedderburn. The licentious borderers, on the firft news of her recovery, laid down their arms. Being defrous to take a view of Berwick, the queen advanced to it with an attendance of 1000 horfe. Sir John Forfier, the deputy warden of the Englifh marches, came forth with a numerous retinue, and conducted her to the moft proper ftation for furveying it, and paid her all the honours in his power, by a full difeharge of the artillery, and other demonftrations of joy. Continuing her journey, fhe paffed to Eymouth, Dunbar, and Tantallon; procceding thence to Craigmillar caftle, where fhe propofed to remain till the time of the baptifm of the prince, which was foon to be celebrated at Stirling.

## of the ling.

During the fevere ficknefs of the queen, her hufband kept himfelf at a diftance: but when fhe was fo far recovered as to be out of danger, he made his appearance; and being received with fome coldnefs and formality, he retired fuddenly to Stirling. This cruel negleet was a moft fenfible mortification to her; and while the fuffered from his ingratitude and haughtinefs, fhe was not withont fufpicions that he was attempting to difturb the tranquillity of her government. She was feized with a fettled melancholy; and, in her anguifh, ofter wifhed for death to put a period to her exitence. Her nobles, who were caballing againft her, remarked her condition, and took advantage of it. Bothwel, who had already recommended himfelf by his fervices, redoubled his efforts to heighten the favour which thefe fervices had induced her to conceive for him. At this time, it is probable, he fought to gain the affection of the queen, with a view to marry her himfelf, providing a divorce from her hufband could be obtained, which was now become the fubject of confultation by Murray and his affociates. After much deliberation, the queen herfelf was acquainted with this project ; and it was told her, that provided She would pardon the earl of Morton and his affociates, the ineans thould be found of effectuating the divorce. This was urged as a matter of ftate by the earls of Murray, Lethington, Argyle, and Huntley; and the queen was invited to comfider it as an affair which might be managed witheut any interference on her jort. 'The queen replied, that the would liften to them, upon condition that the divorce could be ob-
tained according to the laws, and that it Thould mot be. any way prejudicial to her fon: but if they meant to operate their purpofe by a difrcgard to thefe points, they mult not think any morc of it; for rather than confent to their views, fhe would endure all the torments, and abide by all the perils, to which her fituaqtion expofed her.

Lethington upon this, in the name of the reft, engaged to make her quit of her hurband, without prejudice to her fon; worls which could not be underftood otherwife than as pointing at murder. Lord Murray (added he), who is here prefent, fcruputous as he is, will connive; and behold our proccerlins without opening his lips. The queen immediately made anfwer "I defire that you will do nothing from which any fain may be fixed upon my honour or confcience ; and I therefore require the matter to relt as it is, till God of his goodnefs fend relief: What you think to be of fervice to me may turn out to my difpleature and harm."

It appears, howcver, that from this moment a plot was formed by Murray, Bothwel, and Lethington, againt the life of Darnley, and by fome of them probably againft the queen herfelf; and that Morton, who with the other confpirators againft Rizzio had received a pardon, was clofely affociated with them in their nefari* ous defigns. That proflizate peer was, in his way to Scotland, met at Whittingham by Bothwel and the fecretary. They propofed to him the murder of the king, and required his affiftance, alleging that the queen herfelf confented to the deed; to which Morton by his own account replied, that he was difpofed to concur, provided he were fure of acting under any authority from her; hut Bothwel and Lethington having returned to Edinburgh, on purpofe to obtain fech an authority, fent him back a meffage, That the queen vould not permit any converfation upon that matter.

In the mean time, preparations were made for the baptifm of the young prince; to affift at which the queen left Craigmillar and went to Stirling. The ceremony was performed on the 17 th of December $1 \varsigma 66$. After the baptifmal rites were performed, the name and titles of the prince were three times proclaimed by the heralds to the found of trumpets. He was called and deligned, Charles James, James Charles, prince and Steward of Scotland, duke of Rothefay, eand of Carrick, lord of the Ifles, and baron of Rell frew. Amidft the fcenes of joy difplayed on this occafion, the king fhowed his folly more than he had done before. As Elizabeth did not mean to acknowledge him in his fovereign capacity, it was neither con- haviour of fitent with the dignity of the queen, nor his own, that the king. he fhould be prefent at the baptifm. He did not indeed prefent himfelf either at the ceremony or the entertainments and mafquerades with which it was accompanied. At this juncture, however, though he had often bept at a greater diftance before, he took up his refidence at Stirling, as if he had meant to offend the queen, and to expofe their quarrels to the world. Du Croc, who was inclined to be favourable to him, was fo ftruck with the impropriety of his behaviour, that he affected to have inftructions from France to avoid all intercourfe with him: and when the king propofed to pay him a vilit, he took the liberty to inform him, that there were two paffages in his chamber ; and that if his

## $\begin{array}{llll}\mathrm{S} C O & {[57} & 1 & \mathrm{~S} C \quad 0\end{array}$

Hand. ed jeity thoald enter by the one, ed to go out by the other.

While he refided at Stirling, the king chiefly confuned himfelf to his chamber. Hiọ flange behaviour to the queen did not give the public any favourable idea of him ; and as the earl of Murray and his faction took care to augment the general odium, no court was paid to him by foreign ambaffadors. His fituation, therefore, was exceedingly unconfortable; but though he mut have been confcious of his imprudence and folly, he did not alter his conduct. In a fullen humour he left Stirling, and proceeded to Clafgow. Here he fell fick, with fuch fymptoms as feemed to indicate poifon. He was tormented with violent pains, and his body was all covered over with puftules of a bluifh colour ; fo that his death was daily expected. Mary did not repay his coldnefs to her by negligence. She fet out immediately for Glafgow, and waited on him with all the affiduity of an affectionate wife, until he recovered: after which the returned with him to Edinburgh ; and as the low fituation of the palace of Holyroodhoufe was thought to render it unhealthy, the king was lodged in a houfe which had been appointed for the fuperior of the church, called St Mary's in the Fields. 'I'his houfe ftood upon an bigh ground, and in a falubrious air ; and here fhe ftaid with him fome days. Here the confpirators thought proper to finifh their plot in the moft execrable manner. On the roth of Febriary 1567 , about two o'clock in the morning, the houfe where the king refided was blown up by gunpowdir. The explofion alarming the inhabitants, excited a genefal curiofity, and brought multitudes to the place from whence it proceeded. The king was found dead and naked in an adjoining field, with a fervant who ufed to fleep in the fame apartment with him. On neither was there any mark of fire or other external injury.

The queen was in the palace of Holyroodhoufe, taking the diverfion of a malked ball, which was given to honour the marriage of a favourite domeftic, when the news of the king's death was brought to her. She mowed the utmoft grief, and appeared exafperated to the laft degree againft the perpetrators of a deed at once fo fhocking and barbarous. The moft exprefs and peremptory orders were given to inquire after the perpetrators by every poffible method. A proclamation was iffued by the privy-council, affuring the people, that the queen and nobility would leave nothing undone to difcover the murderers of the king. It offered the fum of 2000 l . and an annuity for life, to any perfon who Thould give information of the devifers, counfellors, and perpetrators of the murder ; and it held out this reward, and the promife of a full pardon, to the confinirator who fhould make a free confeffion of his own guilt, and that of the confederates. On the fourth day after this proclamation was publifhed, a placard was affixed to the gate of the city-prifon, affirming, that the earl of Bothwel, James Balfour, Dawid Chalmers, and black John Spence, were the murderers, No name, however, was fubferibed to this in*elligence, nor was any demand made for the proffered reward; fo that it was difficult to know whether this adverrifement had been dictated by a fpirit of calumny or the love of juftice.

In the mean time, the earl of Murray conducted Vol. XVII. Part. I.
himelf with his ufual circumfpection and artifice. Upon a pretence that his wife was dangeroufly fick at his cattle in Fife, he, the day before the murder, ob-stron 666 tained the queen's permiffion to pay a vifit to her. By fumpirin this means he propofed to prevent all fufpicion what of the guile ever of his guilt. He was fo full, however, of the in- of the earl tended project, that while he was proceeding on his journey, he obferved to the perfon who accompanied him, "This night, before morning, the lord Darnley fhall lofe his life." When the blow was ftruck, he returned to Edinburgh to carry on his practices. Among foreign nations, the domeftic difputes of the queen and her hufband being fully known, it w'as with the greater eafe that reports could be propagated to $66 \%$ her diladvantage. To France letters were difpatched, It accules expreffing, in fervent terms, her participation in thic the quesi. murder. In England, the minifters and courtiers of Elizabetli could not fatter that princefs more agree. ably, than by induftrioufly detracting from the honour and the virtue of the Scottifh queen. Within her own dominions a fimilar $\overline{\text { fpirit }}$ of ontrage exerted itfelf, and not without fuccefs. As her reconciliation with lee: huband could not be unknown to her owa fubjects, it was interpreted to be diffimulation and treachery. The Proteftant clergy, who were her molt determined enemies, poffeffed a leading direction among the populace; and they were the friends and the partizans of the earl of Murzay. Open declamations from the pulpit were made againf Bothwel, and ftrong infinnations and biting furmifes were thrown out againft the queen. $\mathrm{Pa}-$ pers were difperfed, making her a party with Bothwel in the murder. Every art was employed to provoke the frenzy of the people. Voices, interrupting the filence of the night, proclaimed the infamy of Bothwel; and portraits of the regicides were circulated over the kingdom.

The queen's determination, however, to fcrutinize into the matter was unabated; and to the earl of Lennox, the king's father, fhe paid an attention which he to find out could only have expected from her upon an emergency and punifh of this kind. Having preffed her by letter to the mot derers. diligent inquiry after the regicides, fhe returned an an. fwer fo completely to his wifhes, that he was fully convinced of the fincerity and rigour with which the intended to proceed againft them : and he urged her to affemble the three citates, that their advice might direct the order and manner of their trial. She wrote to him, that an affembly of the eflates was already proclaimed ; and that it was her ea:nelt and determined will and purpofe, that no ftep fhould be neglected that could conduce to the advancement and execution of juftice. Yielding to his anxieties, he addreffed her anew, intreating that the trial might not be delayed; obferving, that it was not a matter of parliamentary inquiry ; advifing, that it would be more proper to proceed to it with the greatelt expedition; and urging her to commit to prifon all the perfons who had been named and defcribed in the papers and placards which had been fet up in the public places of the city. 'The queen informed him, that although the had thought it expedient to call a meeting of the parliament at this juncture, it was not her meaning that the proceedings againft the regicides fould be delayed till it was actually affembled. As to the placards and papers to which he alluded, they were fo numerous and contradiciory, H
that

669
Lenoxac-
cufes feveral perfons,
that fhe could not well determine upon which to act: but if he would condefcend to mention the names which, in his opinion, were moft fufpicious, the would inftantly command that thofe fteps fhould be taken which the laws directed and authorifed. He in return named the earl of Bothwel, James Balfour, David Chalmers, black John Spence, Francis Sebaftian, John de Burdeaux, and Jofeph the brother of David Rizzio ; and affured her majefty, that his fufpicions of thefe perfons were weighty and ftrong. In reply to his information, Mary gave him her folemn promife, that the perfons he had pointed out fhould abide and undergo their trial in conformity to the laws, and that they fhould be punifhed according to the meafure of their guilt: and fhe invited him to leave immediately his retirement, and to meet her-at her court, that he might witnefs the proceedings againtt them, and the zeal with which fhe was animated to perform the part that became her.

While-the queen carried on this correfpondence with the earl of Lenox, fhe refided partly at the palace of the lord Seton, at the diftance of a few miles from her capital, and partly at Holyroodhoufe. By the time that fle fent her invitation to him, fhe was refiding in her capital. She delayed not to confer with her counfellors, and to lay before them the letters of the earl of Lenox. Bothwel was earneft in his proteftations of innocence; and he even expreffed his wifh for a trial, that he might eftablifh his integrity. No facts pointed to his guilt; there had appeared no accufer but the earl of Lenox ; and no witneffes had been found who could eftablifh his criminality. Her privy-council feemed to her to be firmly perfuaded that he was fuffering under the malice of defamation. Murray, Morton, and Lethington, whatever might be their private machinations, were publicly his moft ftrenuous defenders ; and they explained the behaviour of the earl of Lenox to be the effect of hatred and jealoufy againft a nobleman who had outrun him fo far in the career of ambition. But though all the arts of Murray and Bothwel, Morton and Lethington, were exerted to their utmoft extent to millead the queen, they were not able to withhold her from adopting the ftrain of conduct which was the moft proper and the moft honourable to her. It was her own ardent defire that the regicides fhould be punifhed; the had given her folemn promife to the earl of Lenox, that the perfons whom he fufpected fhould be profecuted; and amidft all the appearances in favour of Bothwel, and all the influence employed to ferve him, it is to be regarded as a ftriking proof of her honour, vigour, and ability, that fhe could accomplifh this meafure. An order, accordingly, of the privy-council was made, which directed, that the earl of Bothwel, and all the perfons named by Lenox, fhould be brought to trial for the murder of the king, and that the laws of the land fhould be car-

870
And is invited to
frove his
3scufations ried into full execution. The I2th of April was appointed for the trial. A general invitation was given to all perfons whatfoever to prefer their accufations. The earl of Lenox was formally cited to do himfelf juftice, by appearing in the high court of jufticiary, and by coming forward to make known the guilt of the culprits.

In the mean time, it was proper to reprefs that fpirit of outrage that had manifefted itfelf againt the

## 58 <br> S C O

queen. No difcoveries, however, were made, except againf James Murray, brother to Sir William Murray of Tullibardin, who at different times had publifhed placards injurious to her. He was charged to appear before the privy-council: but refufing to obey its citation, it was made a capital offence for any com. mander of a veffel to convey him out of the kingdom; and the refolution was taken to punifh him with an exemplary feverity. Effecting, however, his efcape, he avoided the punifhment due to his repeated and deteftable acts of calumny and treafon.

The day for the trial of Bothwel approached. The confpirators, notwithftanding their power, were not without apprehenfions. Their preparations, however, for their fafety had been anxious; and, among other practices, they neglected not to attempt to throw a panic into the earl of Lenox. They were favoured tie is in by his confcioufnefs of his unpopularity, and his want midated of ftrength, by his tinidity and his fpirit of jealoufy. Sufpicions of the queen's guilt were infinuated into him; and the dangers to which he might be expofed by infilting on the trial were fet before him in the ftrongeft colours. He was fenfible of her averfion to him; and his weaknefs and the fovereign autlority were contrafted. His friends concurred with his enemies to intimidate him, from the fpirit of flattery, or from a real belief that his fituation was critical. By the time he had reached Stirling, in his way to Edinburgh, his fears predominated. He made a full ftop. He was no longer in hafte to proceed againft the regicides. He addreffed a letter to the queen, in which to defer he faid he had fallen into fuch ficknefs, that he could trial: not travel; and he affirmed, that he had not time to prepare for the trial and to affemble his friends. He complained, too, that Bothwel and his accomplices had not been committed to cuftody; he infifted, that this ftep fhould be taken ; and he requefted, that a day at a greater diftance might be appointed for the trial. After the lengths to which matters had gone, this conduct was moft improper ; and it is only to be accounted for from terror or capricioufnefs, His indifpofition was affected; he had been invited by Mary to wait upon her at Edinburgh at an early period, to concert his meafures ; and the delay he afked was in ftrong contradiction to his former intreaties. After the invitation fent to him, he might have relied with fafety upon the protection of the queen, without any gathering of his friends; from the time of her private intimation to him, and of the legal citations of her officers, there had paffed a period more than fufficient for the purpofe of calling them together; and indeed to fuppole that there was any neceffity for their affiftance, was an infult to government, and a matter of high indecency. There was more juftice in the complaint, that the earl of Bothwel and his accomplices had not been taken into cuftody; and yet even in this peculiarity, he was himfelf to blame in a great degree. For he had not obferved the precaution of that previous difplay of evidence, known in the Scottifh law under the term of a precognition, which is common in all the groffer offences, and which the weighty circumis ftances of the prefent cafe rendered fo neceffary as a foundation for the confinement and conviction of the criminals

## $5 \mathrm{C} O$

An application for the delay of a trial fo inportant, for it, and reciting reafons of no conclufive force, could not with propriety be attended to. The privy-council refufed the demand of the earl of Lenox. The court of jufticiary was affembled. The earl of Argyle acted in his charater of lord high jufticiar ; and was aided by four affeffors, Robert Pitcairn, commendator of Dunfermline, and the lord Lindfay, with Mr James Macgill and Mr Henry Balnaves, two lords of the feffion. 'The indictment was read, and the earls of Bothwel and Lennox were called upon ; the one as the defender, the other as the accufer. Bothwel, who had come to the court with an attendance of his vaffilals, and a band of mercenary foldiers, did not fail to prefent himfelf: but Lenox appeared only by his fervant Robert Cunnyngham; who, after apologizing for his abfence, from the fhortnefs of the time, and the want of the prefence of his friends, defired that a new day fhould be appointed for the trial; and protefted, that if the jury fhould now enter upon the bufinefs, they fhould incur the guilt of a wilful error, and their verdict be of no force or authority.

This remonftrance and proteftation appeared not to the court of fufficient importance to interrupt the trial. They paid a greater refpect to the letters of the earl of Lenox to the queen infifting upon an immediate profecution, and to the order of the privy-council confequent upon them. The jury, who confifted of men of rank and condition, after confidering and reafoning up. on the indietment for a confiderable time, were unanimous in acquitting Bothwel of all fhare and knowledge of the king's murder. The machinations however of Morton, which we have mentioned in the life of MA. RY, were fo apparent, that the earl of Caithnefs, the chancellor of the affize, made a declaration in their name and his own, that no wilful error ought to be imputed to them for their verdict ; no proof, vouchers, or evidence, to confirm or fupport the criminal charge having been fubmitted to thein. At the fame time, he offered a proteflation for himfelf, that there was a miftake in the indictment, the gth day of February inAtead of the roth being expreffed in it as the date of the murder. It is not to be doubted, but that this flaw in the indietment was a matter of defign, and with a view to the advantage of Bothwel, if the earl of Lenox had made his appeatance againft him. And it has been remarked as moft indecent and fufpicious, that foldiers in arms fhould have accompanied him to the court of juftice; that during the trial, the earl of Morton ftood by his fide to give him countenance and to affifl him ; and that the four affeflors to the chief jufticiar were warm and ftrenuous friends to the earl of Murray.

Immediately after his trial, Bothwel fet up in a con. fpicuous place a writing, fubferibed by him, challenging to fingle combat, any perfon of equal rank with himieff, who fhould dare to affirm that he was guilty of the king's murder. To this challenge an aufwer was publifhed, in which the defiance was accepted, up. on the condition that fecurity fhould be given for a fair and equal conflict : but no name' being fubfrribed to this paper, it was not underfood to correfpond with the law of arms; and of confequence no ftep was

## $59]$ <br> S C O

taken for the fighting of the duel. Two days after scotland. the parliament met, and there the party of Bothwel appeared equally formidable. The verdit in his favour was allowed to be true and juft. He was continued in his high offices; and obtained a parliamentary ratification of the place of keeper of Dunbar caftle, with the eftates in connection with it ; and other favours were conferred upon Murray, with the reft of the nobles fufpected as accomplices in the murder.

A very fhort time after the final acquitment of Both- He afpires wel, he began to give a greater loofe to his ambition, at a marand conceived hopes of gaining the queen in marriage. riage with It has been already remarked, that he had infidioufly endeavoured to gain her affection during the lifetime of her hufband; but though he might have fucceeded in this, the recent death of the king in fuch a fhocking manner, and the ftrong fufpicions which muft neceffarily fill reft upon him, notwithftanding the trial he had undergone, neceffarily prevented him from making his addreffes openly to hei. He therefore endeavoured to is recomgain the nobility over to his fide; which having done mended by one by one, by means of great promifes, he invited the nobility them to an entertainment, where they agreed to ratify as a proper a deed pointing him out to the queen as a perfon wor- hrbaldfor thy of her hand, and expreffing their refolute determination to fupport him in his pretenfions. This extra- $67 y$ ordinary bond was accordingly executed; and Murray's Schemes of name was the firft in the lift of fubfcribers, in order to the earl of decoy others to fign after him; but that he might ap- Murray to pear innocent of what he knew was to follow, he had, hurt the before any ufe was made of the bond, afked and obtained the queen's permifion to go to France. In his way thither he vifited the court of Elizabeth, where he did not fail to confirm all the reports which had arifen to the difadvantage of Mary; and he now circulated the intelligence that the was foon to be married to Bothwel. Her partizans in England were exceedingly alarmed; and even queen Elizabeth herfelf addreffed a letter to her, in which the cautioned her not to afford fuch a mifchievous handle to the malice of her enemies.

Mary, upon the diffolution of the parliament, had Buthwel gone to Stirling to vifit the young prince. Bothwel, carries her armed with the bond of the nobles, affembled 1000 off to Dun horfe, under the pretence of protecting the borders, of bar. which he was the warden; and meeting her upon her return to her capital, difmiffed her attendants, and carried her to his caftle of Dunbar. The arts which he ufed there to effect the accomplifhment of his wifhes we have mentioned under another article, (fee Mary). But having veen married only fix months before to Lady Jane Gordon; fifter to the earl of Huntley, it was neceffary to procure a divorce before he could marry the queen. This was eafily ubtained. The parties were coufins within the prohibited degrees, and had not obtained a difpenfation from Rome. Their marriage, therefore, in the opinion of the queen and her Roman Catholic fubjects, was illicit, and a profane mockery ofthe facrament of the church. The hurband had alfo been unfaithful ; fo that two actions of divorce were in- 679 ftituted. The lady commenced a fuit againft him in Is divorced the court of the commiffaries, charging him as guilty fr m his of adultery with one of her maids. The earl himfelf wife. brought a fuit againft his wife before the court of the archbifhop of St Andrew's, upon the plea of coufan-
guinity.

## $\mathrm{S} \mathrm{C} O$

scotland.
 guinity. By both courts their marriage was decided to be void; and thus two fentences of divorce were pronounced.

Bothwel now conducted the queen from Dunbar to her capital. But initead of attending her to her palace of Holyrood houfe, his jealoufy and apprehenfions induced him to lodge her in the cafle of Edinburgh, where he could hold her in fecurity againft any attempt of his enemies. To give fatisfaction, however, to her people, and to convince them that the was no longer a prifoner, a public declatation upon her part appeared to be a meafure of expediency. She prefented herfelf, therefore, in the court of feffion; the lords chancellor and prefident, the judges, and other perfons of diftinction, being prefent. After oblerving that fome ftop had been put to the adminiftration of juftice upen account of her being detained at Dunbar againft her will by the lord Bothwel, the declared, that though the had been highly ofiended with the outrage offered to her, fhe was yet inclined to forget it. His courteoufnefs, the fenfe the entertained of his paft fervices to the ftate, and the hope with which fhe was impreffed of his zeal and activity for the future, compelled her to give him and his accomplices in her imprifonment a full and complete pardon. She at the fame time defired them to take notice, that the was now at her freedom and liberty; and that the propofed, in confideration of his merits, to take an early opportunity of promoting him to new and diftinguifhed honours.

It was underflood that the queen was immediately to advance him to be her huband. The order was given for the proclamation of the banns; and Mr John Craig, one of tlie minifters of Edinburgh, was defired to perform this bufinefs. But though the order was fubfribed by the queen, he refufed abfolutely his compliance without the authority of the church. The bretheen, after long reafoninge, granted him permifion to difcharge this duty. His feruples, notwithltanding, and delicacy, were not yet removed. He protefted, that, in obeying their defire, he thould be allowed to fpeak lis own fentiments concerning the marriage, and that his publifhing the banns fhould in 「er no obligation in him to officiate in the folemnity. In his congregation, accordingly, before a crowded audience, and in the prefence of feveral noblemen and privy counfellors, he declared that the marriage of the queen and the earl of Bothwel was unlawful, and that he was prepared to give his reafons for this opinion to the parties themfellies. He added, that if leave to do this was denied him, he would either abftain altogether from proclaiming the banns, or talke the liberty, after proclaiming them, to inform his people of the caufes of his difapprobation of the marriage. He was carried before the lords of the privy-council; and the earl of Bothwel ealled upon liim to explain his behaviour. He anfwer$\mathrm{ed}_{2}$, that the church had prohibited the marriage of per-
ons feparated for adultery; and that the divoree between him and his wife muft have been owing to collufion; fince the fentence had been given with precipitation, and fince his new contract was fo fudden; and he objected to him the abduction and raviflmment of the queen, and the fufpicion of his guilt in the king's murder. This bold language drew no reply from Bothwel that was fatisfactory to Mr Craig, or that could intimidate him. He proclaimed in his church the banns of the marriage; but he told the congregation, that he difcharged the fuggeftions of his confcience in pronouncing it to be a deteftable and fcandalous engagement. He expreffed the forrow he felt for the conduct of the nobility, who feemed to approve it from their flattery or filence; and addreffing himfelf to the faithful, he befought them to pray to the Almighty that he would turn a refolution intended againft law, reafon, and religion, into a comfort and benefit to the church and the kingdom. Thefe freedoms were too great to pala unnoticed. Mr Craig was ordered anew to attend the privy-council ; and he was reprimanded with fevenity for exceeding the bounds of his commiffion. He had the courage to defend himfelf. His commifion, he faid, was founded in the word of God, pofitive law, and natural reafon; and upon the foundation of thefe topics he was about to prove that the marriage muft be univerfally foul and odious, when the earl of Bothwel commanded him to be filent. The privy-council, ftruck with the virgour of the man; and apprehenfive of the public difcontents, did not dare to inflict any punifhment upon him; and this victory over Bothwel, while it heightened all the fufpicions againtt him, ferved to encourage the enemies of the queen, and to undermine the refpect of her fubjects:

Mary, before the rendered her hand to Bothwel, created him duke of Orkney. The ceremony was per-riage cel formed in a private manner, after the rules of the Po, hrated. pifh church; but, to gratify the pecple, it was like; wife folemnized publicly according to the Proteftant rites by Adam Bothwel bifhop of. Orkney, an ecclefiafi tic who had renounced the Epifeopal order. for the reformation. It was celebrated with little pomp and fef? tivity. Many of the nobles had retired to their feats in the country; and thofe who attended were thoughtful and fad. Du Croc, the French ambaffador, fenfible that the match would be cifplealing to his court, re fuled to give his countenance to the folemnity. There were no acclamations of the common people. Mary herfele was not inconfcious of the imprudence of the choice the had made, and looked back with furprife and forrow to the train of circumftances which had conducted her to this fatal event. Forfaken by her nobles, and imprifoned at. Dunbar, fhe was in fo perilous a fituation that no remedy could fave her honour but death: Her marriage was the immediate and neceffary confequence of that fituation (s). It was the
(s) " The queen (fays Mitvil) coult not but marry him; feeing he hach ravifted her and lain with her againft her will:" Memoirs, p. i59. In the following paffage, from a writer of great authority, in our hiflory, this topic is touched with no.lefs exachnefs, but with greater celicacy. After Mary had remained a fortnight undere the power of a daring profigate adventurer, fays Lord Hailes, few foreign princes would have folicited her
hand.

## S C O

point for which her enemies had laboured with a wicked and relentless policy.

Mary was unfortunate in her fecond marriage, but mruch more fo in her third. Bothwel had neither talents for bufinefa nor affection for his wife. Ambitious and jealous to the laft degree, he fought only to eftablifh hinfelf in power, while his fears and jealoufies made him take the molt improper means. The marriage had already thrown the nation into a ferment; and the lealt improper exercife of power, or indeed an appearance of it, even on the part of the queen, would be fufficient to ruin them both for ever. Perlaps the only thing which at this juncture could have pacified the people, would have been the total abolition of Popery, which they had often required. But this was not thought of. Inftead of taking any ftep to pleafe the people, Bothwel endeavoured to force the earl of Marre to deliver up the young prince to his cuftody.'This was fufficient to make the flame, which had hitherto been fmothered, break out with all its violence. It was univerfally believed that Bothwel, who had been the murderer of the father, defigned to take away the life of the fon alfo, and the queen was thought to participate in all his crimes. The earl of Murray now took advantage of the queen's unfortunate fituation to vifited the Englifh court, he proceeded to France, where he affiduounly diffeminated all the reports againft
the queen which were injurious to her reputation; and where, without being expofed to fufpicion, he was able to maintain a clofe correfpondence with his friends Morton and Lethington, and to infpirit their machinations. His affociates, true to his ambition and their own, had promoted all the fchemes of Bothwel upon the queen with a power and influence which had infured their fuccefs. In confederacy with the earl of Murray himfelf, they had confpired with him to murder the king. A flifted with the weight of the earl of Murray, they had managed his trial, and operated the verdict which acquitted him. By thie fame arts, and with the fame views, they had joined with him to procure the bond of thie nobles recommending him to the queen as a hufband, dfferting his integrity and innocence, recounting his noble qualities, expreffing an unalterable refolution to fupport the marriage againt every oppofer and adverlary, and recording a wifh that' a defection from its objects and purpofes ffiould be branded with cverlafting ignominy, and' held' out as a moft faithlefs and perjured treachery. When the end, however, was accomplifhed for which they had been fo zealous, and when the marriage of the queen was actually celebrated, they laid afide the pretence of friendfhip, and were in hafte to entitle themfelves to the ignominy which they had irvited to fall upon them. The murder of the king, the guilt of Bothwel; his acquittal, his divorce, and his marriage, hecame the topics of their complaints and declamation. Upon the foundation of this hated
marriage, they even ventured privately to infer the pri- Scotland vity of the queen to all his iniquity and tranfactions; and this ftep feemed doubtlefs, to the mafs of her own fubjects and to more diftant obfervers, a ftrong confirm* ation of all the former fufpicions to her fhame which had been circulated with fo much artifice. Their imm putations and devices excited againft her, both at home and abroad, the moft indignant and humiliating odium. A midat the ruins of her fame, they thought to bury for ever her tranquillity and peace; and in the convulfions they had meditated, they already were anticipating the downfal of Bothwel, and fnateling at the crown that tottered on her head.

But while this cabal were profecuting, their private ends, feveral noblemen not. lefs remarkable for their a confege. end leveral noblemen, not lefs remarkable for their racy formed virtue than their rank, were eager to vindicate the na-againft tional integrity and honour. '1'he earl of Athol, upon Buthwel, the king's murder, had retired from the court, and was waiting for a proper feafon to take revenge upon the regicides. The earl of Marre, unealy under the charge of the young prince, was folicitous to make himfelf ftrong, that he might guard him from injury. Motives fo patriotic and honourable drew applaufe and partizans. It was fufficient to mention them. By private conference and debate, an affociation was infenfibly formed to punifh the murderers of the king, and to protect the perfon of the prince. Morton and Lethington encouraged and promoted a combination from whicte théy might derive fo much advantage. A convention accordingly was appointed at Stirling, for the purpofe. of confulting upon the meafures which it was moft expedient to purfue. They agreed to take an early opportunity to appear in the field; and when they feparated, it was to collect their retainers, and to infpirit their paffions.

Of this confederacy, the leading men were the earls: of Argyle, Athol, Morton, Marre, and Glencairn; the lords Hume, Semple, and Lindfay; the barons Kirkaldy of Grange, Murray of Tullibardin, and Maitland of Lethington. The earl of Bothwel was fentible, that if he was to fit upgn a throne, he mult wade to it through blood. By his advice, two proclamations were iffued in the name of the queen, under the pretence of fuppreffing infurcections and depredations upon the prepares borders. By the former, the called together in arms; upon an early day, the earls, barons, and frecholders of the diftriets of Forfar and Perth, Strathern and Menteith, Clackmannan; Kinrofs, and Fife. By the latter the charged the greater and leffer baromage, with all the inferior proprietors of the flires of Linlithgow and Edinburgh, and the conftabulary of Haddington and Berwick, to prepare immediately for war, and to keep. themfelves in readineis to march upon her order: Thele military preparations admoniflied thre affociation to be firm and active, and added to the public. inquietudes. and difcontents. 'Ithe rumotirs againit the queen were: moft violent and loud. It was faid, that fhe meant to,
orer.
hant. Some of lier fubjects might fill have fought that honour ; but her compliance woult have been humili-ating beyond meafure. It would have left her at the mercy of a capricious hufband; it wonid have expofed her: to the difgrace of being reproached, in fome fullen hour, for the adventure at Dunbar. Mary was fo fituated, at this critical period, that flhe was reduced to this horrid alternative, either to remain in a friendtefs and hat-" zardous ceilibacy, or to yield her hand to. BothweL." Remarks on the Hittory of Scotlend, po-204,-

## S C O

Scotland, to overturn the confitution and the laws; that the had been carelefs of the health of her fon, and was altogether indifferent about his prefervation ; that fhe had feparated herfelf from the councils and affiftance of her nobles; and that fhe wifhed to make her whim or difcretion the only rule of her government. Agitated with the hazardous flate of her affairs, fhe publifhed a new proclamation, in which fhe employed herfelf to refute thefe acccufations; and in which the took the opportunity to exprefs,' in a very forcible manner, not only her attachment to her people and the laws, but the fond affection that the bore to the prince, whom fhe confidered as the chief joy of her life, and without whom all her days would be comfortlefs.
The declarations of the queen were treated with fcorn. The nobles, abounding in vaffals, and having the hearts of the people, were foon in a fituation to take the field. T'hey were advancing to the capital. The royal army was not yet affembled; and the queen and Bothwel fufpected that the cafle of Edinburgh would fhut its gates upon them. The fidelity of Sir Jannes Balfour the deputy-governor had been flaggered by the practices of the eari of Marre and Sir James Melvil. Mary left her palace of Holyroodhoufe, and was conducted to Borthwick caftle. The affociated

$\stackrel{\text { to }}{\text { to }}$ kar. lords, informed of her flight, took the road to this fortrefs with 2000 horfe. The lord Hume, by a rapid march, prefented himelf before it with the divifion under his command: but being unable to guard all itz avenues, the queen and Bothwel effected their efcape. to Dunbar; where the frength of the fortifications gave them a full fecurity againft a furprife.

Upon this fecond difappointment, the nobles refolved to enter Edinburgh, and to augment their ftrength by new partizans. The earl of Huntley and the lord Boyd were here on the fide of the queen, with the archbihop of St Andrew's, the bifhop of Rofs, and the abbot of Kilwisning. They endeavoured to animate the inhabitants to defend their town and the caufe of their fovereign. But the tide of popularity was favourable to the confederated lords. The magiftrates .ordered the gates of the city to be fhut; but no farther refiftance was intended. The lords, forcing St Mary's port, found an eafy admittance, and took poffefion of the capital. The earl of Huntley and the queen's friends fled to the caltle, to Sir James Balfour, who had been the confident of Bothwel, and who agreed to protect them, although he was now concluding a treaty with the infurgents.

The affociated lords now formed themfelves into a council, and circulated a proclamation. By this paper they declared, that the queen being detained in capti--vity, was neither able to govern her realm, nor to command a proper trial to be taken of the king's nuurder. $I_{\mathrm{n}}$ an emergency fo preffing, they had not defpaired of their country; but were determined to deliver the queen from bondage, to protect the perfon of the prince, to revenge the murder of the king, and to vindicate the nation from the infamy it had hitherto fuffered through the impunity of the regicides. They therefore commanded in general all the fubjects of Scotland whatfoever, and the burgeffes and infabitants of Edinburgh in particular, to take a part with them, and to join in the advancement of purpofes fo beneficial and falutary. The day after they had publifhed this proclamation,

## $62 \mathrm{~S} \quad \mathrm{~S}$ C O

they iffued another in terms that were ffronger and Scotlay more refolute. They definitively expreffed their per- fuafion of Dothwel's guilt in the rape and feduction of the queen, and in his perpetration of the king's murder. in order to accomplifh his marriage. They inculcated it.as their firm opinion, that Bothwel was now inftigated with a defign to murder the young prince, and that he was collecting troops with this view. Addreffing themfelves, therefore, to all the fubjects of the realm, whether they refided in counties or in boroughs, they invited them to come forward to their flandard; and defired them to remember, that all perfons who fhould prefurne to difobey them fhould be treated as enemies and traitors.

Bothwel, in the mean time, was not inactive; and the proclamations of the queen had brought many of her vaffals 'to her affiftance. Four thouland combatants ranged themfelves on her fide. This force might augment as the approached to her capital; and Bothwel was impatient to put his fortunes to the iffue of a battle. He left the ftrong caftle of Dunbar, where the nobles were not prepared to affail him, and where he might have remained in fafety till they difperfed themfelves. For their proclamations were not fo fuccefsful as they had expected; their provifions and flores were fcanty; and the zeal of the common people, unfupported by profperity, would foon have abated. Imprudent precipitation ferved them in a moft effectual manner. When the queen had reached Gladfinuir, fhe ordered a manifefto to be read to her army, and to be circulated among her fubjects. By this paper, fhe replied to the proclamations of the confederated nobles, by the and charged them with treachery and rebellion. She queen. treated their reafons of hoitility as mere pretences, and as inventions which could nut bear to be examined. As to the king's murder, fhe protefted, that the herfelf was fully determined to revenge it, if fhe could be fo fortunate as to difcover its perpetrators. With regard to the bondage from which they were fo defirous to relieve her, fhe obferved, that it was a faliehood fo notorious, that the fimpleft of her fubjects could confute it; for her marriage had bien celebrated in a public manser, and the nobles could hardly have forgotten that they had fubfcribed a bond recommending Bothwel to be her hufbaand. With regard to the indultrious defamations of this nobleman, it was urged, that he had difcovered the utmoft folicitude to eftablifh his innocence. He had invited a ferutiny into his guilt ; the juftice of his country had abfolved him ; the three eftates affembled in parliament were fatisfied with the proceedings of his judges and jury ; and he had offered to maintain his quarrel againt any perfon whatfoever who was equal to him in rank and of an honeft reputation. The nobles, fhe faid, to give a fair appearance to their treafon, pretended, that Bothwel had fchemed the deftruction of the prince, and that they were in arms to protect him. The prince, however, was actually in their own cuiftody ; the uie they made of him was that of a fkreen to their perfidioufnefs; and the real purpofes with which they were animated, were the overthrow of her greatnefs, the ruin of her pofterity, and the ufurpation of the royal authority. Slie therefore intreated the aid of her faithful fubjects; and as the prize of their valorous fervice, fhe held out to them the eftates and yoflcions of the rebels.

## S C O $\quad\left[\begin{array}{ll}63\end{array}\right] \quad$ S C O

otland. The affociated nobles, pleafed at the approach of the queen, put themfelves in motion. In the city of Edinburgh they had gathered an addition to their force; and it happened that the Scottifh officer who commanded the companies, which, in this period, the king of Denmark was permitted to enlift in Scotland, had been gained to affift them. He had juit completed his levies; and he turned them avainft the queen. The nobles, after advancing to Muffelburgh, refrefhed their troops. Intelligence was brought that the queen was upon her march. The two armies were nearly equal in numbers ; but the preference, in point of valour and difcipline, belonged decifively to the foldiers of the nobles. The queen pofled herfelf on the top of Carberry hill. The lords, taking a circuit to humour the ground, feemed to be rětreating to Dalkeith; but wheeling about, they approached to give her battle. They were ranged in two divifions. The one was commanded by the earl of Morton and the lord Hume. The other was directed by the earls of Athol, Marre, and Glencairn, with the lords Lindfay, Ruthven, Sempil, and Sanquhar. Bothwel was the leader of the royal forces; and there ferved under him the lords Seton, Yefter, and Borthwick.

It was not without apprehenfions that Mary furveyed the formidable appearance of her enemies. Du Croc, the French ambaffador, haftened to interpofe his good offices, and to attempt an accommodation. He affured the nobles of the peaceful inclinations of the queen ; and that the generofity of her nature difpofed lier not only to forgive their prefent infurrection, but to forget all their former tranfgreffions. The earl of Morton informed him, that they had not armed themfelves againft the queen, but againtt the murderer of the late king; and that if fhe would furrender him up to them, or command him to leave her, they would confent to return to their duty. The earl of Glencairn defired him to obferye, that the extremity to which they had proceeded might have inftructed him that they meant not to afk pardon for any offences they had committed, but that they were refolved to take cognizance of injuries which had provoked their difpleafure. This afpiring language confounded Du Croc, who had been accuftomed to the worfhipful fubmiffions that are paid to a defpot. He conceived that all negociation was fruitlefs, and withdrew from the field in the expectation that the fword would immediately give its law and determine every difference.

Mary was full of perturbation and diftrefs. The fate into which fhe had been brought by Bothwel did not fail to engage her ferious reflection. It was with infinite regret that the confidered the confequences of her fituation at Dunbar. Nor had his behaviour fince her marriage contributed to allay her inquietndes. The violence of his paffions, his fufpicions, and his guilt, had induced him to furround her with his creatures, and to treat her with infult and indignity. She had been almoft conftantly in tears. His demeanor, which was generally rude and indecent, was often favage and brutal. At different times his provecations were fo infulting, that fie had even attempted to arm her hand againft her life, and was defirous to relieve her wretchednefs by fpilling her blood. Upon his account, fhe was now encompaffed with dangers. Her crown was in hazard. Under unhappy agitations, fhe rode through the ranks
of her army, and found her foldiers difpirited. What- Scotlanct ever refpect they might entertain for her, they had none for her hußband. His own retainers and dependents 692 only were willing to fight for him. He endeavoured Bothwel to awaken the royal army to valour, by throwing down challenged the gauntlet of defiance againtt any of his. adverfaries to fingle who thould dare to encounter him. His challenge was ${ }^{\text {combat. }}$ inftantly accepted by Kirkaldy of Grange, and by Murray of Tullibardin. He objected that they were not peers. The lord Lindfay difcovered the greateft impatience to engage him, and his offer was admitted; but the queen interpofing her prerogative, prohibited the combat. All the pride and hopes of Bothwel funk within him. His foldiers in fmall parties were fecretly abandoning their ftandards. It was equally perilous to the queen to fight or to fly. - The moft pru: dent expedient for her was to capitulate. She defired ta confer with Kirkaldy of Grange, who remonftrated to her againt the guilt and wickednefs of Bothwel, and counfelled her to abandon him. She expreffed her willingnefs to difmifs him upon the condition that the lords would acknowledge their allegiance and continue in it. Kirkaldy paffed to the nobles, and received their authority to aflure her that they would honour, ferve, and obey her as their princefs and fovereign. He 693 communicated this intelligence to her. She advifed He is obliBothwel to provide for his fafcty by fight; and Kirk-ged to fly. aldy admonifhed him not to neglect this opportunity of effceting his efcape. Overwhelmed with fhame, difappointment, terror, remorfe, and defpair, this miferable victin of ambition and guilt turncd his eyes to her for the laft time. To Kirkaldy of Grange fie ftretched out her hand: he kiffed it; and taking the bridle of her horfe, conducted her towards the nobles: They were approaching her with becoming reverence. She faid to them, "I am come, my lords, to exprefs my Mary fur. refpect, and to conclude our agreement; I am-ready renders to be influcted by the wifdom of your counfels; and I am confident that your will treat me as ${ }^{\wedge}$ your fovereign." The earl of Morton, in the name of the confederacy, ratified their promifes, and addreffed her in thefe worts: "Madam, you are here among us in your proper place; and we will pay to you as much honour, fervice, and obedience, as ever in any former period was offered by the nobility to the princes your predeceffors."
This gleam of funfhine was foon overcaft: She res By whom mained not many hours in the camp, till the common fhe is cruede foldiers, inftigated by her enemies, prefamed to infult ${ }^{l y}$ ufed. her with the moft unfeemly reproaches. They exclaimed indignantly againit her as the murderer of her hufband. They reviled her as a lewd adulterefs, in the moft open manner, and in a language the moft cóarfe and the moft opprobrious. The nobility forgot their promifes, and feemed to have neither honour nor humanity. She had changed one miferable feene for a diftrefs that was deeper and more hopelefs. 'They furrounded her with guards, and conducted her to her capital. She was carried along its ftreets, and fhown to her people in captivity and fadnefs. She cried out to them to commiferate and protect her. They withheld their pity, and afforded her no protection. Even new infults were offered to her. The lowelt of the popis lace, whom the declamations of the clergy had driven into rage and madnefs, vied with the foldiery in the i-

## s Co

Bcatland. ecntious outrage of invective and execration. She befought Maitland to folicit the lords to reprefs the infupportable atrocity of her treatment. She conjured him to let them kuow, that fhe would fubmit herfelf implicitly to the determination of the parliament. Her intreaties and her fufferings made no impreflion upon the nobles. They continued the favage cruelty of their demeanour. She implored, as the latt requelt the would prefer to them, that they would lead her to her palace. This confolation, too, was refufed to her. They wifhad to accuftom her fubjects to behold her in difgrace, and to teach them to triumph over her misfortunes. In the moft mortifying and afticting hour fhe had ever experienced, oppreffed with fatigue, and disfigured with dult and forrow, they flut her up in the houfe of the lord provoft: leaving her to revelve in her anxious and agitated mind the indignities fhe had already endured, and to fuffer in anticipation the calamities they inight yet inflict upon her.

The malice of Morton and his adherents was ftill far from being gratified. In the morning, when the queen looked from the window of the apartment to which fhe had been confined, the perceived a white banner difplayed in fuch a manner as to fix her attention. There was delineated upon it the body of the late king fretched at the foot of a tree, and the prince apon his knees before it, with a label from his mouth, containing this prayer, "Judge and revenge my caufe, 0
696 Lord!" This abominable banner revived all the bitThe com. ternefs of her aflictions. The curiofity of the people smon people drew them to a fcene fo new and fo affecting. She take her part;
exclaimed againft the treachery of her nobles; and the begged the fpectators to relieve her from their tyranny. The eventful ftory of the preceding day had thrown her capital into a ferment. The citizens of a better condition crowded to behold the degraded majefty of their fovereign. Her ftate of humiliation, fo oppofite to the grandeur from which the had fallen, moved them with compaffion and fympathy. 'They heard her tale, and were filled with indignation. Her lamentations, her diforder, her beauty, all ftimulated their ardour for her deliverance. It was announced to the nobles, that the tide of popular favour had turned towards the queen. They haftened to appear before her, and to affure her, with fmiles and courtefy, that they were immediately to conduct her to her palace, and to reinftate sier in her royalty. Impofing upon her credulous na-
ture, and that beautiful humanity which eharacterized luer cyen in the mof melancholy fituations of ber life, they prevailed with her to inform the pergle, that the was pacificd, and that the withed thern to difperfe themfelves. They feparated in obedience to her defire. The nobles now conveyed her to Holyroodhoufe. But nothing could be farther from their intentions than her re- fes thea eftablifment in liberty and grauteur. They hald a council, in which they deliberated concerning the manner in which they ought to difpofe of her. It was refolved, that the thould be confined during her life in the fortrefs of Loch leven; and they fubfrribed an order for her commitment.

A refolution fo fudden, fo perfidious, and fo tyrannical, filled Mary with the utmoft aftonifhment, and drew from her the moft bitter complaints and exclamations. Kirkaldy of Grange, perceiving with furprife the lengths to which the nobles had proceeded, felt his honour take the alarm for the part he had acted at their defire. He expoftulated with them upon their breach of truft, and cenfured the extreme rigour of the queen's treatment. They counfelled him to rely upon the in tegrity of their motives ; fpoke of her paffion for Bothwel as moft vehement, and infifted on the danger of intrulting her with power. He was not convinced by their fpeeches; and earueftly recommended lenient and moderate meafures. Difcreet admonitions, he faid, could not fail of impreffing her with a full fenfe of the hazards and inconveniences of an improper paffion, and a little time would cure her of it. They affured him, that when it appeared that fhe detefted Bothwel, and had utterly abandoned his interefts, they would think of kindnefs and moderation. But this, they ur:sed; could But he hardly be expected; for they had recently intercepted filenced a letter from her to this nobleman, in which the ex- a forger preffed, in the flrongeft terms, the warmth of her love, of thes and her fixed purpofe never to forfake him (r). Kirkaldy was defired to perufe this letter; and he preffed them no longer with his remonftrances. The queen, in the mean time, fent a meffage to this generous fol dier, conplaining of the cruelty of her nobles, and reminding him that they liad violated their engagements. He inftantly addreffed an anfwer to it, recounting the reproaches he had made to them; ftating his advice; defcribing the furprife with which he lad read her intercepted letter; and conjuring her to renounce and forget a moft wicked and flagitious man, and, by this victory over herfelf, to regain the love and refpect of

## S C O $\left[\begin{array}{lll}65\end{array}\right] \quad \mathrm{S} C 0$

her fubjects. The device of a letter from her to Bothwel completed the amazement" of the queen. So unprincipled a contempt of every thing that is moft facred, fo barbarous a perfeverance in perfidioufnefs and injuftice, extinguifhed every fentiment of hope in her bofom. She conceived that the was doomed to inevitable deftruction, and funk under a pang of unutterable anguifh.

The Lords Ruthven and Lindfay arrived in this paroxyfm of her diftrefs, to inform her, that they were commanded to put in execution the order for her commitment. They charged her women to take from her all her ornaments and her royal attire. A mean drefs was put upon her; and in this difguife they conveyed her with precipitation to the prifon appointed for her. The Lords Seton, Yefter, and Borthwick, endeavoured to refcue her, but failed in the attempt. She was delivered over to William Douglas the governor of the caftle of Lochleven, who had married the mother of the earl of Murray, and was himfelf nearly related to the earl of Morton. See Mary.
Upon the fame day on which the nobles fubfcribed the order for the imprifonment of the queen, they entered into a bond of concurrence or confederacy. By this deed they bound and cemented themfelves into a body for the ftrenuous profecution of their quarrel ; and it detailed the purpofes which they were to forward and purfue. They propofed to punifh the murderers of the king, to examine into the queen's rape, to diffolve her marriage, to preferve her from the bondage of Bothwel, to protect the perfon of the prince, and to reftore juftice to the realm. The fanction of a moft folemn oath confirmed their reliance upon one another; and in advancing their meafures, they engaged to expofe and employ their lives, kindred, and fortunes.

It is eafy to fee, notwithftanding all the pretended patriotifm of the rebels, that nothing was farther from their intentions than to profecute Bothwel and reftore the queen to her dignity. They had already treated her in the vileft manner, and allowed Bothwel to efcape when they might eafily have apprehended and brought him to any trial they thought proper. 'lo exalt themfelves was their only aim. Eleven days after the capitulation at Carberry hill, they held a convention, in which they very properly affumed the name of lords of the fecret council, and iffued a proclamation for apprehending Bothwel as the murderer of the king ; offering a reward of 1000 crowns to any perfon who fhould bring him to Edinburgl. A fearch had been made for the murderers of the king that very night in which the queen was confined in Lochleven cafle. Ore Sebaftian a Frenchman, and captain Blackader, were then appre--hended; and foon after James Edmondfoue, John Blackader, and Mynart Frafer, were taken up and imprifoned. The people expected full and fatisfactory proofs of the guilt of Bothwel, but were difappointed. The affirmation of the nobles, that they were poffeffed of evidence which could condemn him, appeared to be no better than a pretence or artifice. Sebaftian found means to efcape ; the other perfons were put to the torture, and fuftained it without making any confeffion that the nobles could publifh. They were condemned, how. ever, and executed, as being concerned in the murder. In the:- dying moments they protefted their innocence.
Vow. XVIL, Part 2.

A fangrine hope was entertained that captain Blacka- Scotlando der would reveal the whole fecret at the place of execution, and a valt multitude of fpectators were prefent. No information, however, could be derived from what he faid with regard to the regicides; but while he fo- But they 703 lemnly protefted that his life was unjuftly taken away, confeflion. he averred it as his belief that the earls of Murray and Morton were the contrivers of the king's murder.

The lords of the fecret council now proceeded to the greateft enormities. They robbed the palace of Holy- Robberies roodhoufe of its furniture and decorations; converted and outthe queen's plate into coin; and poffeffed themfelves of rages of the her jewels, which were of great value ; and while the confederafaction at large committed thefe acts of robbery, the earl of Glencairn with folemn hypocrify demolifhed the altar in the queen's chapel, and defaced and deftroyed all its pictures and ornaments. Thefe exceffive outrages, however, loft them the favour of the people, and an affociation wis formed in favour of the queen. - The court of France, as foon as the news of Mary's imprifonment arrived, difpatched M. de Villeroy to condole with her upon her misfortunes: but the lords of the fecret council would not admit him to fee her, upon which he immediately returned to his own country. The earl of Murray, however, was at this time in France; and to the promifes of this ambitious and treacherous wretch the king trufted, imagining him to be a fteady friend to the unfortunate queen. Elizabeth alfo pretended friendfhip, and threatened the affociated lords; but as they had every reafon to doubt her fincerity, they paid no regard to her threats, and even refufed to admit her ambaffador to Mary's prefence.

From all thefe appearances of friendihip Mary nei. Mary come ther did nor could derive any real affitance. On the pelled to 24 th of July 1567 , the lord Lindfay, whofe imperious fign a rebehaviour, fays Dr Stuart, approached to infanity, was fignation ordered by the lords to wait upon the queen at Loch- crown. leven. He carried with him three deeds or inftruments, and was inftructed not to be fparing in rudenefs and menaces in order to compel her to fubferibe them. By the firt, the was to refign her crown to her infant-fon; by the fecond, fhe appointed the earl of Murray regent of Scotland ; and by the third, fhe conftituted a council to direct the prince till this nobleman fhould arrive in Scotland, or in the event of his death or refufal of the office. On the part of the queen all refiftance was vain. Sir Robert Melvil affured her, that her beft friends were of opinion, that what the did by compulfion, and in a prifon, could have no power to bind her ; and of this fhe was alfo affured by Throgmorton, the Englifh ambaffador, in a letter which Sir Robert Melvil brought in the fcabbard of his fword. Mary therefore, forlorn and helplefs, could not refift the barbarous rudenefs with which Lindfay preffed the fubfeription of the papers, though fhe would not read them. Five . 706 days after, the lords of the feeret council met at Stir- Coronation ling, for the coronation of the young prince, and con- of James fidered themfelves as reprefenting the three eftates of $V$ fidered themfelves as reprefenting the three eftates of the kinydom. A proteftation was made in the name of the duke of Chatelherault, that this folemnity fhould neither prejudge his rights of fucceffion nor thofe of the other princes of the blood. The young prince being prefented to them, the lords Lindfay and Ruthven appeared, and in the name of the queen renounced in. his favour her right and title to the crown, gave up the
papers
papers the had fubfribed; and furrendered the fword, fceptre, and royal crown. After the papers were read, the earls. of Morton, Athol, Glencairn, Marre, and Menteith, with the mafter of Graham, the lord Hume, and Bothwel bilhop of Orkney, received the queen's refignation in favour of her fon in the name of the three effates. After this formality, the earl of Morton, toending his body, and laying his hand upon the Scripfures, took the coronation oath for the prince, engaging that he fhould rule according to the laws, and root Qut all heretics and enemies to the,word of God. Adam liothwel then anointed the prince king of Scotland ; a ceremony with which John Knox was difpleafed, as believing it to be of Jewihh invention. This prelate next delivered to him the fword and the fceptre, and finally put the crown upon his head. In the proceffion to the caftle from the church, where the inauguration was performed, and where John Knox preached the inauguration fermon, the earl of Athol carried the crown, Morton the fceptre, Glencairn the fword, and the earl of Marre carried the prince in his arms. Thefe folemnities received no countenance from Elizabeth; and 'Shrogmorton, by her exprefs command, was not prefent at them.
Soou after this ceremony, the earl of Murray returned from France ; and his prefence gave fuch a ttrength and firmnefs to his faction, that very little oppofition could be given by the partifans of Mary, who were un. fettled aṇd defponding for want of a leader. A little time after his arrival, this monftrous hypocrite and trai; tor waited upon his diftreffed and infulted fovereign at Lochleven. His defign was to get her to defire him to accept of the regency, which he otherwife pretended to decine. The quecn, unfufpicious of the deepnefs of, his arts, confcious of the gratitude he owed to her, and trulting to his natural affection, and their tie of a common father, received him with a tender welcome. She was in hafte to pour forth. her foul to him ; and with tears and lamentations related her condition and her fuf. ferings. He heard her with attention :- and turned occafionally his difcourfe to the topics which might lead her to open to him her mind without difguife in thofe fituations in which he was moft anxious to obferve it. His eye and his penetration were fully employed; but her diftrefs awakened not lis tendernefs. He feemed to be in fufpenfe; and from the guardednefs of his converfation fhe could gather neither hope nor fear. She begged him to be free with her, as he was her only friend. He yielded to her, intreaties as if with pain and reluctance; and taking a comprehenfive furvey of her condnex, defcribed it with all the feverity that could affeet her moft. He could difcover no apology for her miifgovern!nent and diforders; and; with a mortifying plainnefs, he preffed upon her confcience and her honour. At times fhe wept, bitterly. Some errors fhe confeffed ; and againft, calumnies fhe warmly, vindicated herfelf. But all fhe could urge in her behalf, made no impreffion upon him; and he fpoke to her of the mercy of God as her chief refuge. She was torn with apprehenfions, and nearly, diftracted with defpair. He dropped fome words of confolation; and after expreffing an attachment. to her interefts, gave lier his promile to employ all his confequence to fecure her. Life. As to her liberty, he told her, that to, atchieve it was: begond all his efforts; and that it was not good for her
are it. Starting from her feat, fre took him in
Scotlans her arms, and kiffing him as her deliverer from the fcaffold, folicited his immodiate acceptance of the regency. He declared he had many reafons to refule and in the regency. She inplored and conjured him not toduces her abandon her in the extremity of her wretchednefs. to prefs There was no other method, fhe faid, by which fhe him to ac herfelf could be faved, her fon protected, azd her realri repe of the rightly governed. He gave way to her anxiety and folicitations. She befought him to make the moft unbounded ufe of her name and authority, defired him to keep for her the jewels that yet remained nith her, and recommended it to him to get an early poffeffion of all the forts of her kingdom. He now took his leave of her, and embracing anew this pions traitor, fhe fent hen blefling witl hin to the prince her fon.

In the incan time the wretched earl of Bothwel was.milcral ftruggling with the greateft difficulties. Sir William fate of Murray and Kirkaldy of Grange had put to fea in, Buthwel fearch of him. He had been obliged to exercife pi-. racy in order to fubfirt himfelf and his followers. His, purfuers came upon him unexpectediy at the Orkney iflands, and took threc of his fhips ; but he himfelf made his cfcape. Soon after, laving feized a Turkifth, trader on the coaft of Norway, twe hips of war belonging to the king of Denmark gave chace to him as a pirate. An engagement enfued, in, which Bothwes was taken. His officers and mariners were hanged in Denmark ; but Bothwel himfelf, being known by fome Scottifh merchants, had his life fyared. He was thrown, however, into a dungeon, where be remained ten years; and at laft died melancholy and diftracted. The regent fent commifioners to the king of Denmark to demand him as a prifoner; but that prince, confidering him as a traitor and ufurper, totally difregarded his requeft.

The dreadful fate of Bothwel did not make any al. $\frac{7 \mathrm{e} \text { eters }}{722}$ teration in the fituation of the queen. Fier enemies, firge: bent on calumniating her, produced letters, which they, between faid were written and fent by her to that licentious no. Mary an Bothwel bleman during the life of the king. Thefe letters are now. univerfally admitted to have been forged by the rebels themfelves, who practifed likewife upon fome fervants of Bothwel to accufe the queen of the murder of her hulband. The letters for fome time gained credit; the
 vour. When on the fcaffold, they addreffed themelves exxcoted, to the people; and after having folemnly declared the who decla innocence of the queen, they protefted before God: and cence of in his. angels, that the earl of Bothwel, had informed themqueta. that the earls of Murray and Morton were the contrivers of the king's murder.

It was impoffible that fuch tranfactions as. thefe could advance the popularity of the regent. His unbounded ambition and cruelty to his fovereign began at laft toopen the eyes of the nation; and a party was. forming itfelf in favour of the queen. She leerfelf, had been often meditating her efeape from her prifon; and fhe 1 t laft effected it by means of a young genteman Gearge. The qui Douglas, brother to her keeper, who had, fallen in love efcapes. with her. On the, $2 d$ day of May 1568 , about feyenfroan prio'clock in the evening, when her keeper was at fupperfon. with his fanily, George Douglas, poffeffing himfelf of, the keys of the cafte, haftened to her apartment, and conducted her out of prifop. Having: locked the gatea.

## $S$ G O

otiand. of the cafte, they immediately entered a boat which waited for them; and being rowed acrofs the lake, the lord Seton received the queen with a chofen band of horfemen in complete armonr. 'That night he conveyed her to his houfe of Niddrie in Weft Lothian ; where having refted a few hours, the fet out for Hamilton.

The efcape of the queen threw her enemies into the greateft confternation. Many forfook the regent openly; and ftill more made their fubmiffions privately, or concealed themfelves. He did not, however, defpond; but refolved to defend himfelf by force of arms. The queen foon found herfelf at the head of 6000 men, and the regent oppofed her with 4000 . Mary, however, did not think it proper to rifk a battle; knowing the capacity of the regent as a general, and that his officers were all men of approved valour and experience. But in this prudent refolution fhe was over-ruled by the impetuofity of her troops. A battle was fought on the 13th of May 1568, at Langfide near Glafgow; in which Mary's army was defeated, and her laft hopes blafted. The unfortunate queen fled towards Kirkcudbright ; where finding a place of fafety, fhe deliberated on the plan fhe fhould afterwards follow. The refult of her deliberations, as frequently happens in cafes of perplexity, led her to take the worf ftep poffible. Notwithfanding, all the perfidy which fhe had found in E. lizabeth, Mary could not think that the would now refule to afford her a refuge in her dominions; and therefore determined to retire into England. To this fhe had been folicited by Elizabeth herfelf during herconfinement in Lochleven caftle ; and the now refolved, in oppofition to the advice of her moft faithful counfellors, to make the fatal experiment.

In obedience to her order, the lord Herries addreffed a letter to Mr Lauder, the deputy-commander at Carlife; and after detailing her defeat at Langfide, defired to know if the might truft herfelf upon Englifh ground. This officer wrote inftantly an anfwer, in which he faid, that the lord Scroop the warden of the frontiers being abfent, he could not of his private authority give a formal affurance in a matter which conicerned the ftate of a queen: but that he would fend by polt to his court to know the pleafure of his fovereign; and that if in the mean time any neceffity hould force Mary to Carlife, he would receive ler with joy, and protect her againit her enemies. Mary, however, before the meffenger conld return, had embarked in a fifhing boat with fixteen attendants. In a few hours the landed at Wirkington in Cumberland ; and from thence the proceeded to Cockermouth, where fie continued till Mr Lauder, having affembled the gentlemen of the country, conducted her with the greateft refpect to the caftle of Carlifle.

To Elizabeth fhe announced her arrival in a difpatch, which defcribed her late misfortunes in general and pathetic terms, and in which the expreffed an earneft folicitude to pay her a vifit at heir conrt, and the deep fenfe fle entertained of her friesidflip and generofity. The queen of England, by obliging and polite letters, condoled with her upon her fituation, and gave her affurances of all the favour and protection that were due to the juftice of her caufe. But as they were not accompanied with an invitation to London, Mary took the alarnt. She thought it expedient to inftruet lord

Fleming to repair to France; and he intrufted lord Scotland. Herries with a moft preffing remonftrance to Elizadbetl. Her anxiety for an interview in order to vin 740 dicate her conduct, her ability to do fo in the mof fa- And preffe tisfactory manner, and her power to explain the ingra-interview. titude, the crimes, and the perfidy of her enemies, were urged to this princefs. A delay in the fate of her affairs was reprefented as nearly equivalent to abfolute deftruction. An immediate proof was therefore requefted from Elizabeth of the fincerity of her profef fions. If the was unwilling to admit into her prefence a queen, a relation, and a friend, the was remindéd, that as Mary's entrance into her dominions had been voluntary, her departure ought to be equally free and unreftrained. She valued the protection of the queen of England above that of èvery other poténtate lipon earth; but if it could not be granted, the would folicit the amity, and implore the aid, of powers who would commiferate her affictions, and be forward to relieve them. Amidit remonftrances, however, which were fo juft and fo natural, Mary failed not to give thanks to Elizabeth for the courtefy with which fhe had hitherto been treated in the caftle of Carlifte. She took the opportunity alfo to beg of this princefs to avert the cruelty of the regent from her adherents, and to engage him not to wafte her kingdom with hoftility and ravages; and fhe had the prudence to pay her compliments in an affectionate letter to fecretary Cecil, and to court his kind offices in extricating her from her difficulties and tronbles.

But the queen of England was not to be moved by remonftrances. The voluitary offer of Mary to plead her caufe in the prefence of Elizabeth, atid to fatisfý Delibera. all her fcruples, was rejected. Her difafters were ra-tions of ther'a matter of exultation than of pity. The deli- Elizabeth berations of the Englifh queen, and thofe of her ftatef- fatefmen men, were not directed by maxims of equity, of com- concerning paffion, or of generofity. They confidered the fliglit Mary. of Mary into England as an incident that was fortu: nate and favourable to them; and they were folicitous to adopt thofe meafures which would enable them to draw from it the greatelt profit and advantage. If the queen of Scots were allowed to return to her own dominions, it was probable that the would foon be in a condition to deftroy the earl of Murray and his faction, who were the friends of England. The houfe of Hamilton, who were now zealous in the interefts of France, would rife into confideration and poiver. England wonld be kept in perpetual turmoils nipon the frontiers; Ireland would receive moleftation from the Scots, and its diffurbances grow important and dangerous. Mary would renèw with redoubled ardour her défigns againit the Proteftant religion; and a French army would again be istroduced into Scotland. For thefe reafons, Elizabeth and her minifters determining not to reftore the queen of Scots to her throné, confidered what would be the probable confequences of permitting her to remain at liberty in England. In this fituation, fhe would augment the number of her partizans, fend to every quarter her emiffaries, and inculcate her title to the crown. Foreign ainbaffadors would afford her aid, and take a flaiae in her intrigués; and Scotland, where there was fo high an object to be gained, would enter with cordiality into her views. This plan being alfo hazardous, it wâs deliberated whether thé

behaviour of Murray
queen of Scots might not be allowed to take a voyage into France. But all the pretenfions which had hitherto threatened the crown of Elizabeth would in this cafe be revived. A ftrong refentment to her would even urge Mary and Charles IX. to the boldeft and molt defperate enterprifes. The party of the queen of Scots in England, ftrong from motives of religion and affection, and from difcontents and the love of change, would ftimulate their anger and ambition. England had now no territories in France. A war with that country and with Scotland would involve the greatelt dangers. Upon revolving thefe meafures and topics, Elizabeth and her counfellors were induced to conclude, that it was by far the wifet expedient to keep the queen of Scots in confinement, to invent methods to augment her diftrefs, to give countenance to the regent, and to hold her kingdom in dependence and fubjection.

In confequence of this cruel and unjult refolution, Mary was acquainted, that the could not be admitted into Elizabeth's prefence till fhe had cleared herfelf of the crimes imputed to her; The was warned not to think of introducing French troops into Scotland; and it was hinted, that for the more fecurity fhe ought to be removed farther from the frontier. This meffage at once fhowed Mary the imprudence of her conduct in trufting herfelf to Elizabeth. But the error could. not now be remedied. She was watched to prevent her efcape; and all her remonftrances were vain. The earl of Murray had offered to accufe her; and it was at laft concluded that Elizabeth could not, confiftently with her own honour and the tranquillity of her go. vernment, fuffer the queen of Scots to come into hen prefence, to depart out of England, or to be reftored to her dignity, till her caufe fhould be tried and decided. An order was given to remove her from Carlifle caftle to a place of ftrength at a greater diftance from the borders, to confine her more clofely, and to guard againft all poffibility of an efcape.

In confequence of thefe extraordinary tranfactions, a trial took place, perhaps the moft remarkable for its injuftice and partiality of any recorded in hiltory. Mary, confined and apprehenfive, fubmitted to be tried as they thought proper. The regent, who was to be the accufer, was fummoned into England, and commiffigners were appointed on both fides. On the 4 th of October, the commiffioners met at York; and four days after, the deputies of the queen of Scots were called to make known their complaints. They related the moft material circumftances of the cruel ufage fhe had received. Their accufations were an alarming' introduction to the bufinefs in which the regent had em. barked; and notwithftanding the encouragement fhown to him by Elizabeth, he was affaulted by apprehenlions. The artifices of Maitland added to his alarms. Inthead of proceeding inftantly to defend himfelf, or to accufe the queen, he fought permiffion to relate his doubts and fcruples to the Englifh commiffioners. In his own name, and with the concurrence of his affociates, he demanded to know whether they had fufficient authority from Elizabeth to pronounce, in the cafe of the murder, Guilty or not guilty, according to the evidence that hould be laid before them; whether they would actually exercife this power; whether, in the event of her criminality, their fovereign fhould be deli-
vered to him and his friends, or detained in England in fuch a way as that no danger thould enfue from her activity; and whether, upon her conviction, the queen of England would allow his proccedings, and thofe of his party, to be proper, maintaín the government of the young king, and fupport him in the regency in the terms of the act of parliament which had confirmed him in that office: 'T'o thefe requifitions, it was anfwered, upon the part of the Englifh deputies, that their commiffion was fo ample, that they could enter into and procced with the controverfy; and that they had liberty to declare, that their fovereign would not reftore the queen of Scots to her crown, if fatisfactory proofs of her crime fhould be produced; but that they knew not, and were not inftructed to fay, in what man. ner ifie would finally conduct herfelf as to her perfon and punifhment. With regard to the fovereignty of the prince, and the regency of the earl of Murray, they were points, they obferved, which might be canvaffed in a futurer period. Thefe replies did not pleafe the regent and his affociatics ; and they requefted the Englifh commiffioners to tranfmit their doubts and feruples to be examined and anfwered by Elizabeth.

But while the regent difcovered in this manner his, apprehenfions, he yet affirmed that he was able to anfwer the charges imputed to him and his faction; and this being in a great meafure a diftinct matser from the controverfy of the murder, he was defired to proceed in it. It was contended, that Bothwel, who had the chief concern in the murder of lord Darnley, poffeffed tion aga fuch credit with. the queen, that within three months Mary, after that horrible event, he feized her perfon and led her captive to Dunbar, obtained a divorce from his wife, and married her : rhat the nobility, bcing moved with his crimes, did confederate to punifh him; to relieve her from the tyranny of a man who had ravifhed her, and who could not be her hufband; and to preferve the life of the prince: that having taken arms for thefe purpofes, the earl marched againft them ; but that, propoling to decide the quarrel by fingle combat, his challenge was accepted: that he declined, notwithftanding, to enter the lifts, and fled : that the queen, preferring his impunity to her own honour, favoured his efcape by going over to the nobility : that they conducted her to Edinburgh, where they informed her of the motives of their proceedings, requelted her to take the proper fteps againft him and the other regicides, and intreated her to diffolve her pretended marriage, to take care of her fon, and to confult the tran. quillity of her realm : that this treatment being offenfive to her, fhe menaced them with vengeance, and offered to furrender her crown if they would permit her to poffefs the murderer of her hufband: that her inflexible mind, and the neceffities of the fate, compelled. them to keep her at a diftance from him, and out of the way of. a communication with his adherents : that during her confinement, finding herfelf fatigued with the troubles of royalty, and unfit for them from vexation of Spirit and the weaknefs of her body and intellect, fhe freely and of her, own will refigned her crown to her fon, and conflituted the earl of Murray to the regency; that the king accordingly had been crowned, and Murray admitted to the regency ; $^{2}$ that the fanction of the three eftates affembled in parliament having confirmed thefe appointments, an uni-

## S C O [ 69 ] S C O

notand. verfal obedienee of the people had enfued, and a fteady adminiftration of juftice had taken place : , that certain perfons, however, envious of the public order and peace, had brought her out of prifon, and had engaged to fubvert the government ; that they had been difappointed in their wicked attempts; and that it was moft juft and equitable, that the king and the regent flould be fupported in power, in oppofition to a rebellions and turbulent faction.
This apology,-fo imperfect, fo impudent, and fo irreconcileable with hiftory, received a complete confutation from the deputies of the queen of Scots. To take arms againft her becaufe Bothwel had her favour, was, they faid, a lame juftification of the earl of Murray and his friends; fince it had never been properly manifefted to her that he was the murderer of her hufband. He had indeed been furpected of this crime ; but had been tried by his peers, and acquitted. His acquittal had been ratified in parliament, and had obtained the exprefs approbation of the party who were now fo loud in accufing him, and who had confpired againft her authority. Thefe rebels had even urged her to accomplifh her marriage with him, had recommended him as the fitteft perfon to govern the realm, and had fubfribed a bond afferting his innocence, and binding themfelves to challenge and punifh all his adverfaries and opponents. 'They had never, either before or after the marriage, like true-fubjects, advertifed the queen of his guilt, till, having experience of their ftrength, they fecretly took arms, and invefted her in Borthwick caftle. The firt mark of their difpleafure was the found of a trumpet: in hoftility, and the difplay of warlike banners. She made her efcape to Dunbar ; and they returning to Ediaburgh, levied troops, iffued proclanations, took the field againft her, under the pretence of delivering her from his tyranny, and got poffeffion of her perion. She was willing to prevent the effufion of blond, and was very far from preferring his impunity to her honour. Kirkaldy of Grange, in obedience to inftructions from them, defired her to caufe him to retire, and invited her to pals to them under the promife of being ferved and obeyed as their fovereign. She confented, ana Kirkaldy taking Bothwel by the hand, recommended it to him to depart, and affired him that no man would purfue him. It was by their own contrivance that he fled; and it was in their power to have taken him ; but they fhowed not the fmalleft defire to make him their prifoner. He remained, too, for fome time in the king. dom, and was unmolefted by them; and it was not till he was upon the feas that they affected to go in fearch of him. When fhe furrendered herfelf in the fight of their army, the earl of Morton ratified the ftipulations of Kirkaldy, made obeifance to her in their names, and promifed her all the fervice and honour which had ever been paid to any of her predeceffors. They were not flaves, however, to their engagements. They carried her to Edinburgh, but did not lodge her in her palace. She was committed to the houfe of a burgefs, and treated with the vileft indignities. She indeed broke out into menaces, and threatened them ; nor was. this a matter either of blame or of wonder. But it was utterly falfe that fhe had ever made any offer to give away lier crown, if fhe might poffefs Bothwel. In the midit of her fufferings, fhe had even required them by
fecretary Maitland to fpecify their complaints, and befought them to allow her to appcar in parliament, and to join and affift in feeking a remedy to them from the wifdom of the three eftates. This overture, however, fo falutary and fubmiffive they abfolutely rejected. They were animated by purpoles of ambition, and had not in view a relief from grievances. They forced her from her capital in the night, and imprifoned her in Lochleven; and there, they affirm, being exhautted. with the toils of government and the languors of ficknefs, the, without conftraint or folicitation, refigned her crown to her fon, and appointed the earl of Murray to be-regent during his minority. This indeed was to affume an unlimited power over facts; but the truth could neither be concealed, nor overturned, nor palliated. She was in the vigour of youth, unaffailed by mam ladies, and without any infirmity that could induce her to furrender the government of her kingdom. Nor was. it unknown to them that the carl of Athol and the barons Tullibardin and Lethington, principal men of theircouncil, difpatched Sir Robert Melvil to her with a ring and prefents, with a recommendation to fubferibe whatever papers fhould be laid before her, as the only means in her power ta fave her life, and with an affurance that what fhe did under captivity could not operate any injury to her. Melvil, too, communicated to her an intimation in writing from Sir Nicholas Throgmorton, which gave her the fame advice and the fame affurance. To Sir Nicholas 'Throgmorton fhe fent an anfwer, informing him that the would follow his counfel ; and enjoining him to declare to his miftrefs her haplefs ftate, and that her refignation of her crown was conftrained. Nor did this ambaffador neglect her commiffion ; and it was a popular perfuafion that Elizabeth would have marched an army to her relief, if the had not been intimidated by the threat of the rebels, that the blood of the queen of Scots would be the wages of her foldiers It , was allo not to be contradicted, that when the lord Lindfay prefented to his fovereign the inftruments of refignation, he menaced her with a clofer prifon and a fpeedy death if the fhould refufe to fubfcribe them. It was under an extreme terror, and with many tears, that me put her name to them. She did not confider them as her deeds; did not read them; and protefted, that when the was at liberty, fhe would difavow fubfcriptions which had been extorted from her. Even Douglas, the keeper of Lochleven, could not endure to be a witnefs. of the violence employed againft her. He departed out of her prefence, that he might not fee her furrender her rights againft her will; and he fought and obtained from her a certificate, that he was not acceffory to this compulfion and outrage. Nor did it confift with the nighteft probability or reafon, that fhe would, of her own will and accord, execute a refignation of her royal eftate, and retain no provifion for her future maintenance. Yet by thefe extraordinary deeds, the condition to which fhe was reduced was moft miferable and wretched. For no portion whatever of her revenurewas referved to her, and no fecurity of any kind was granted either for ber liberty or her life. As to the coronation of the prince, it could have no validity, as: being founded in a pretended and forced refignation. It was alfo defective in its form ; for there were in Scotland more than an hundred earls, bifhops, and lords; and of thefe the whole, or at leaft the major part, ought

## s C O

Fectland. ro coneur in matters of importance. Now there did not affift in it more than four earls, fix lords, one biflop, and two or three abbots. Proteftations, too, were openly made, that nothing tranfacted at that period fhould be any prejudice to the queen, her eftate, and the blood-royal of Scotland. Neither could it be rightly conceived, that if the queen had willingly furtendered her diguities, fhe would have named the earl of Murray to the regency in preference to the duke of Chatelherault, who had a natural and proper claim to it, and who had deferved well of her country by difcharging that high office during her minority. As to the ratification of the invefliture of the young prince, and the regency of the earl of Murray by the eftates, it was obfervable, that this was done in an illegal parliament. It was an invalid confirmation of deeds which in themfelves had no inkerent power or efficacy. The principal nobility, too, objected in this parliament to this ratification. Proteflations were made before the lords of the articles, as well as before the three eftates, to interrupt and defeat tranfactions which were in a wild hoftility to the conftitution and the laws. Neither was it true that the goverament of the king and the regent was univerfally obeyed, and adminiftered with equity and approbation: for a great divifion of the nobility never acknowledged any authority but that of the queen, and never held any courts but in her name; and it was notorious, that the adminitration of the ufurpers had been marked and diftinguificed by enormous cruelties and oppreffions. Many honourable families and loyal fubjects had been perfecuted to ruin, and plundered of their wealth, to gratify' the retainers and foldiers who upheld this infolent domination; and murder and bloodifhed, theft and rapine, were prevalent to a degree unheard of for many ages. Upor all thefe zccounts, it was inferred, that Elizabeth ought to fupport the queen of Scots, to reftore her to her crown, and to overthrow the power of a moft unnatural and rebellious faction.

729
he regen The rsgent reply.

To thefe facts the regent did not pretend to make any objection; and though required by the Englifh conmififioners to produce founder and better reafons for his treatinent of the queen, he did not advance any thing in his own behalf. He even allowed the charges of treafon and ufurpation to be preffed again!t hin, without prefuming to anfwer. This furprifing behaviour, which might readily have been conftrued into an acknowledyment of his suilt, it feems, proceeded from fome conferences which he had with the duke of Norfolk. This nubleman was a zealous partizan for the fucceflion of Mary to the Englifh crown. He was Atrongly poffefed with the opinion, that his miftrefs, white the was difpofed to gratify her animofity and jealoufies again? the queen of Scots, was fecretly refolved, by fixing a ftain upon her, to exclude her altogether from the fucceffion, and to involve her for in her difgrace. He was eager to defeat a purpofe, which he conceived to be not only unjut in itfdf, but highly detrimental to his country. It was in his power to act with this view; and he obferved with pleature, that Maitland of Lethington was favourable to Mary. To this flatefman, accordingly, he ventured to exprefs his furpuife, that the regent could be allured to think of an attempt fo blameable as that of criminating his fovereign. If Mary had really given offence by mifcar-
riage and miftakes, it yet was not the bufinefs of a good Scotlan fubjeet induftrioully to hold her out to fcorn. Anxious and repeated conferences were held by them; and at length it was formally agreed, that the regent fhould not accufe the queen of Scots; and that the dake in return fhould prote民t him in the faveur of Elizabeth, and fecure him in the poffefion of his regency.
But while the regent engaged himfelf in this in His extrigue with the duke of Norfolk, he was defirous not- treme in withttanding of gratifying the refentments of Eliza dioufnefs beth, and of advancing his own interefts by undermi- crify ning fecretly the fame and reputation of lis fovereign. He inftructed Maitland, George Buchanan, James Macgill, and John Wood, to go to the duke of Norfolk, the earl of Suffex, and Sir Ralph Sadler, and to communicate to them as private perfons, and not in their character of commiffioners, the letters to Bethwel, and the other proofs upon which le affirmed the guilt of the queen of Scots. It was his defire that they would examine thefe papers, give their opinion of them to Elizabeth, and inform him whether fhe judyed them furficient evidences of Mary's concern in the murder of her hufband. If this fhould be her opinion, he teftified his own readinefs, and that of his affociates, to fwear that the papers were genuine, and of the hand-writing of the queen. By this operation, he was folicitous to eftablifh his vouchers as inconteftable, and as teftimonies of record. The commiffioners examined his papers, and heard the comments of Buchanan and his other affiftants; but they do not feem to have beltowed the fulleft credit upon them. They defcribed them, however, to Elizabeth; pointed out the places of them which were ftrongeft againft Mary; and allowed that their force and meaning were very great, if their genuinenefs could be demonftrated. But of their genuinenefs they acknowledged that they had no other evidence than ftout affertions, and the offer of oaths. The earl of Suffex, in a private difpatch to fecretary Cecil, does more than infinuate*, that he thought Mary would be * Roberth able to prove the letters palpable forgeries; and with of Datrefpect to the murder of the king, he declares in plain mean's ${ }^{\text {mor }}$, terms, that from all he could learn, Murray and his fac- boots 4. tion would, upon a judicial trial, be found by " proofs hardly to be denied," more crininal in that charge than the queen herfelf. Elizabeth and her mimifters, upon the receipt of fuch difpatches, did not think it expedient to empower them to adopt a method of proof fo palpably fufpicious, and in which the could not openly concur, without grofsly, violating even the appearance of probity. The regent had before attempted to engage her in a direct affurauce of the validity of his papers, when he fubmitted copies of thein to her infpection by his fecretary Mr Wood. His attempt at this juncture was of a finilar kind; and it could not recommend him to the Englifh commiffioners.

Nor were thefe the only trauractions which took place during the continuance of the commiffioners at York. The inventive and refining genius of Lethington had fuggefted to him a project, whicl he communicated in conlidence to the bihhop of Rofs. It received the warm approbation of this ecclefraftic : and they determined to put it to a triad. While they attended the duke of Norfolk to the diverfion of hawking, they infinuated into him the notion of his allying himfelf with the queen of Scots. Her beauty, her accomplifh.

## S C O

ments, and her kingdom, were high allurements to this nobleman; and as he was the greatef fubject of England, and perhaps of Europe, he feemed not to be unworthy of them. The propofal was very flattering to the admiration he entertained of Mary, to his ambition, and to his patriotifm. The more he thought of it, he was the more convinced of its propriety. His accefs to be informed of the practices of the resent, deftroyed in him the operaiion of thefe flanders by which her enemies were fo active to traduce her. In this ftate of his mind, the lady Scroop, his fitter, who refided at Bolton Caftle with Mary, completely confirmed his refolution. For from her he leaned the orderly carriage and the amiable difpofitions of the queen of Scots. He was: now impatient to have a fit feafon to make her formally the offer of his hand.

Elizabeth in the mean time was thrown into confufion by the refufal of the regent to accufe the queen of Scots. To give a pofitive anfiver to his duubts and fcruph's. was not confitent with her honour ; and yet, without this condefcention, fhe was affured that the Scottifh deputies.would not exhibit their charge or crimination. Having deceived Mary therefore with fair promifes, fhe was active in gaining over the regent to her views; which having done, he confented at laft to prefer his accufation againft Mary before the commiffioners, who now met at Weftminiter by the command of Elizabeth. The charge was expreffed in general and prefumptive terms. It affirmed, that as James earl of Bothwel was the chief. executor of the murder of king Heury, fo the queen was his perfuader and counfel in the device; that fhe was a maintainer and fortifer of this unnatural deed, by fepping the inquifition into it and its punifhnent, and by taking in marriage the principal regicide ; that they had begun to exercife a crucl tyranny in the commonwealth, and had formed a refolution of deftroying the innocent prince, and of tranfferring the crown from the true line of its kings to a bloody murderer and a gedlefs tyrant; and that the eftates of the realm, finding her unworthy to reign, had ordered her to refign the crown, her fon to be crowned, and the earl of Murray to be eftablifhed in the regency. Before this accufation was preferred, the earl of I.enox prefented himfelf before the Enslifh commiffioners; made a lamentable declaration of his griefs, and produced to them the letters which had paffed between him and Mary concening the murder, with a writing which contained a direct affirmation of her guilt.

I'he deputies of Mary, were aftoniffed at this accufation, being a violent infringement of a proteftation which they had lormerly given in, and which had been accepted, namely, that the crown, eftate, perfon, and honour of the queen of Scots, fhould be guarded againft every affault and injury ; yet. in all thele particulars the was touched and affected. It was underftood that no judicial proceeding fhould take place againt her; yet fhe was actually arraigned as a criminal, and her deputies. were called upon to defend her. 'I'hey dificovered not, hawever, any apprehenfion of the validity of the charge; and while they fully explained the motives which aetuated, the earl of Murray. and his faction in their proceedings, they imputed to. perfons among themfelves, the guilt of the king's murder. They affirmed; that: the queen's adver\{aries were the accomplices of Bath.

## 71 ] S C O

wel; that they had fubfcribed a bond confpiring the death of the king; and that their guilt had been at-$\xrightarrow{-}$ tefted in the fight of 10,000 fpectators by thofe of their confederates who had already been executed. They exclaimed againft the enormous ingratitude and the unparalleled audacity of men, who could forget fo completely all the obligations which they owed to their fovereign; and who, not fatisfied with ufurping her power, could even charge her with a murder which they themfelves had committed. They reprefented the ftrong: neceffity which had arifen for the fulleft vindication of their miftrefs; and they faid, that in fo weighty an extremity, they could not poffibly fuppofe that the would be reftrained from appearing in her own defence. They had her inftructions, if her lonour was touched, to make this requiition ; and till it was granted, they infifted, that all proceedings in the conference flould be at an end. A refufal of this liberty, in the fituation to which fhe was driven, would be an infallible proof that no: good was intended to her. It was their wifh to deak with fincerity and uprightnefs; and they were perfuaded, that without a proper freedom of defence, their queen would neceffarily fall a victim to partiality and injutice. 'I'hey therefore carneftly preffed the Englifh commiffioners, that fhe might be permitted to prefent lierfelf before Elizabeth, the nobles of England. and the ambaffadors of foreign nations, in order to manifelt to the world the injuries fhe had fuffered; and her innocence.

After having made thefe fpirited reprefentations to the Englifh commiffioners, the deputies of Mary defired to have access to the queen of England. 'They 733. were admitted accordingly to an audience; and ir They are formal addrefs or petition they detaled wat had in aadmitted to pened, infifted that the liberty of perfonal defence fhould by Eliza* be allowed to their miffrefs, and demanded that the earl beth, of Murray and his affociates flould be taken into cuftody, till they fhould anfwer to fuch charges as fhould be preferred againtt them. She defired to have fome time to turn leer thoughts to matters of fuch high importance; and told them, that they might foom expect. to hear from her.
'The biftop of Rofs, and the other deputies of Mary, And ma in the mean time, ftruck with the perfidious manage propofals of ment of the conference, convinced of the jealoufies and accummopaffions of Elizabeth, fenfible that her power over her datien. commifioners was unlimited, and anxious. for the deliverance of their miftrefs, made an overture for an accommodation to the earl of Leicefter and Sir William: Cecil. 'I hey propofed, that the original meaning of the conference fhould fill be adhered to, notwithfland. ing the accufation which had been prefented by the earl of Murray ; and that Elizabeth, difregarding it-as ${ }^{3}$ an effort of faction, fhould procced to a good agreement between. Mary and her fubjects: For: this fcheme, which is fo expreffive of their fufpicions of Elizabeth and. of her commiffioners, they had no authority from their miftrefs. They acknowledged. accordingly, thati it. was made without her inftruetions, and intimated that. they were moved to it by their anxiety for peace and the re-eftablifment of., the affairs of the Scottifn mation. They were introdinced atiHampton-court-ta lilizabeth; who liftened to their motion, and was: averfe from it. 'They, then repeated the defires of' the petition they had prefented to her; but fhe did not think

## S Co

Scotland, think it right that the queen of Scots fhould yet have the liberty to defend herfelf in perfon, She confeffed, 735 Shameful conduct of Elizabeth. indeed, that it was reafonable that Mary fhould be heard in her own caufe; but the affirmed, that fhe was at a Iofs at what time fhe fhould appear, in what place, and to wham the thould addrefs herfelf. While fhe let fall, however, the hope that Mary might obtain the permiffion fo repeatedly and fo earneftly requefted, the exprefled her refolution that the earl of Murray fhould firt be heard in fupport of his charge, and that fhe thould attend to the proofs which he affirmed himfelf in readinefs to produce. After this bufinefs fhould be tranfacted, fhe told the deputies of Mary that fhe would again cenfer with them. It was to no purpofe that they objected to a procedure fo ftrange and fo im . proper. An accufation, faid they, is given ; the perfon accufed is anxious to defend herfelf; this privilege is denied to her; and yet a demand is to be made for the vouchers of her guilt. What is this but an open violation of juftice? It did not become them to difpute her pleafure in her own dominions: but they would not, they informed her, confent to a meafure which was fo alarming to the interefts of their queen; and if it was adopted, fhe might expect that a proteft againit its validity would be lodged with her commiffioners.

The Englifh commiffioners refumed the conference, and were about to demand from the earl of Murray the proofs with which he could fupport his accufation. The bifhop of Rofs and his affociates being admitted to them, expreffed themfelves in conformity to the converfation they had held with Elizabeth. They declared, that it was unnatural and prepofterous in their fovereign to think of receiving proots of the guilt of the queen of Scots before fhe was heard in her own defence; and they protefted, that in the event of this proceeding, the negociation fhould be diffolved, and Elizabeth be difarmed of all power to do any prejudice to her honour, perfon, crown, and eflate. The commiffioners of the Englifh queen were affected with this proteftation, and felt more for the honour of their miftrefs than for their own. They refufed to receive it, becaufe there were engroffed in it the words of the rc fufal which Elizabeth had given to the petition for Mary. - They did not choofe to authenticate the terms of this refufal by thcir fubferiptions; and were folicitous to fupprefs fo palpable a memorial of her iniquity. They alleged, that the language of her refufal had not been taken down with accuracy; and they preffed Mary's deputies to prefent a limpler form of proteftation. The bifhop of Rofs and his colleagues yielded not, however, immediately to their infidious importunity; but, repeating anew their proteftation as they had at firt planned it, included the exprefs words of Elizabeth ; and, when compelled by the power of the commiffioners to expunge the language of the Englifh queen, they ftill indifted upon their proteftation. An interruption was thus given to the validity of any future proceedings which might affect the reputation of the queen of Scots. The earls of Murray and Morton, with their friends, were very much difappointed. For they had folaced themfelves with the hope of a triumph before there was a victory; and thought of obtaining a decree from Elizabeth, which, while it hould pronounce the queen of Scots to be an
adulteref and a murderer, would exalt then into the flation and character of virtuous men and honourable fubjects.

Though the conference ought naturally to have ter- Elizab minated upon this proteftation of the deputies of Mary deman againft the injuftice of Elizabeth, yet it did not fatisfy vouche coit the latter princefs that the accufation only had been taid to delivered to her commiffioners: The was ferioufly dif-ry's ch pofed to operate a judicial production of its vouchers. The charge would thus have a more regular afpect, and be a founder foundation upon which to build, not only the infamy of the Scottifh queen, but her own jultification for the part the had acted. Her commiffioners accordingly, after the bifhop of Rofs and his colleagues had retired, difregarding their proteftation, called upon the carl of Murray and his affociates to make their appearance. The pretence, however, employed for drawing from lim his papers was fufficiently artful, and bears the marks of that fyftematic duplicity which fo fhamefully characterizes all the tranfactions of Elizabeth at this period. Sir Nicholas Bacon the lord keeper addreffed himfelf to the earl of Murray. He faid, that, in the opinion of the queen of England, it was a matter furprifing and ftrange, that he fhould accufe his fovereign of a crime noft horrible, odious to God and man, againft law and nature ; and which, if proved to be true, would render her infamous in all the kingdoms of the world. But though he had fo widely forgot lis duty, yet had not Elizabeth renounced her love of a good fifter, a good neighbour, and a good friend; and it was her will, that he and his company fhould produce the papers by which they ima. gined they were able to maintain their aecufation. The earl of Murray, in his turn, was not wanting in diffunulation. He expreffed himfelf to be very forry for the high difpleafure he liad given to Elizabeth by his charge againft Mary, and for the obftinacy of the Scottifh queen and her deputies, which made it neceffary for him to vindicate himfelf by difcovering her difhonour. Under the load of this double and affected forrow, he made an actual and formal exhibition of the vouchers by which he pretended to fix and eftablifh her criminality. A particular account and examination of thefe vouchers, the reader will find in our life of $\mathrm{Mary}_{2}$ and in the works to which we have there referred.

T'o enumerate all the Mhifts to which Elizabeth and the adverfaries of Mary were pwt, in order to make the ftrange evidence that was prodnced wear fome degree of plaufibility, would far exceed our bounds. It is fuf-Conelu ficient to fay, that after having wearied themfelves with of Mar prevarication and falfehood ; after having preffed Mary ${ }^{\text {trial }}$ to abdicate her crown, a requifition with which fhe never would comply ; and after having finally refufed to hear her in her own defence; Elizabeth, on the Ioth of January 1569, gave leave to the earl of Murray and his accomplices to depart her dominions; telling them, that fince they came into England, nothing had been objected to them which could hurt their honour as men, or affect their allegiance as fubjects. At the fame time fhe told them, that they had produced no information or evidence by which fhe was entitled to conceive any bad opinion of the queen of Scots. It was therefore her pleafure to allow the affairs of Scotland to continue precifely in the condition in which they were fituated at the beginning of the conference. Three

## S C O

tand. days after this, they formally took their leave of the queen of England. The deputies of Mary remonftrated, protefted, and argued, to no purpofe ; the Englifh privy-council, with the moft provoking indifference, told them, that " the earl of Murray had promifed to their fovereign, for himfelf and his company, to return to England at any time fhe fhould call upon him. But, in the mean time, the queen of Scots could not, for many ftrong reafons, be fuffered to take her departure out of England. As to her deputies, they would move Elizabeth to allow them to return to Scotland; and they believed that fhe would not detain them."
Mary was exceedingly difappointed and chagrined by this fingular iffue of her caufe. Her friends during this period had increafed, and the cruel and injurious treatment the had met with was fo flagrant, that the earl of Murray and his faction were apprehenfive of a fudden reverfe of fortune. The earls of Argyle and Huntley protefted againft the injuitice of their proceedings, at the fame time that they openly accufed the earl of Murray and Maitland of Lethington as the affociates of Bothwel in the murder of the king. This charge, according to the cuftom of the times, they offered to-prove as true and certain by the law of arms; and they protefted, that if their adverfaries fhould delay to anfwer their challenge, they fhould be held as confeffing themfelves gurilty of the nurder. Elizabeth, however, forefeeing fomething of this kind, had difmiffed Murray and his adherents with precipitation, fo that there could now be no formal production of it before the Englifh commiffioners. However, it was known and publifhed in the court of Elizabeth. Murray made an evafive reply, and Lethington made none at all.
This, however, afforded no relief to the unhappy queen of Scotland. Her inveterate and treacherous enemy held her faft, and endeavoured by every method in her power to render her life miferable. Mary, on the other hand, never loft either her fpirit or lier dignity. She attempted to roufe in the minds of her nobles that paffion for liberty which had once fo much diftinguifhed the Scottifh nation, but which now feemed to be exchanged for a fervile fubjection to the queen of England. But fome difpatches which preffed thefe topics being intercepted, Mary was removed from Boltoin to Tutbury caftle, where fhe was intrufted to the earl of Shrewfoury, and committed to clofer confinement than fhe had yet experienced; while Elizabeth difperfed manifeftoes all over the northern counties of England, complaining of reports irjurious to her honour, and difclaiming all hoftile intentions towards the liberties of Scotland.
In the mean time Murray returned to Scotland, where he took every method to eftablifh himfelf in his ill-acquired power. Mary had commanded the duke of Chatellierault to return to Scotland, in order to raife forces for her behoof; but this nobleman had been long detained in Enyland by the artifices of Elizabeth, fo that Murray had arrived there before him. The duke, however, began to raife forces, and might have proved a troublefome antagunift, had not Murray deceived him by a pretended negociation, and got him into his power; iminediately after which he imprifoned him, and forced mooft of the other lords who were on that fide to fubmit.

VoL. XVII. Part I.

## 73 S S C O

When the news of this important event reached the Scotiand, queen of Scots, fhe inftructed the bihhop of Rofs to 742 repair to Elizabeth, and to make remonftrances in their Negociabehalf. By the agency of this ecclefiatic, whom fhe tions in had conflituted her ambaffador, fhe meant to conduct England. her tranfactions with the queen of England; and from the conclufion of the conferences, fhe had been meditating a proper plan upon which to accomplifh her liberty and relforation. The bihop of Rofs, after complaining loudly of the rigorous proceedings of the regent, and intimating the general belief which prevailed that he was fupported by the Englifh court, preffed the propriety of a final fettlement of the affairs of his miltrefs. With this vicw, he was admitted by Elizabeth and her privy-counfellors to frequent conferences; and they even defired him to prefent to them in writing the articles which he was commanded to propofe as the foundation of a treaty. He failed not to comply with this injunction; and it was the import of his fchedule of agreement, that Mary fhould engage never to moleft Elizabeth, and the lawful heirs of her body, refpecting the fucceffion to the crown of England and Ireland, if fhe could obtain fufficient fecurity that upon their demife her rights would be refpected ; that a new treaty of alliance and friendfhip fhould be concluded between the two queens, by the advice of the eftates of both kingdoms; that this league fhould be ratified by their oatlis and feals, and confirmed by parliamentary acts; and, if any farther affurance fhould be deemed neceflary on the part of Mary, that fhe would procure the kings of France and Spain to be the guarantees of her punctuality and concord ; that in com. pliance with the pleafure of Elizabeth, fhe would extend her clemency to all her fubjects who had offended her, under the provifion that they would fubmit to her fovereignty, deliver up the prince her fon, reftore her cattles, give back her jewels, and furrender to her friends and fervants thc eftates and poffefions of which they had been deprived; that the murder of the king fhould be punifhed againft all the actors in it without delay, and according to the laws ; that, to prevent Both. wel from returning to Scotland, and to pleafe thofe who imagined that it was in his power to excite ferments and trouble, fhe would be bound to inllitute a procefs of divorce againft him; and that thcle articles being adjufted, the queen of England fhould allow her to proceed to Scotland, under a fafe and honourable convoy, to be re-eftablifhed by the three eftates in her realm and government, anid to be gratified with the diffolution of all the acts and flatutes which had been paffed to her prejudice.
Thefe heads of alliance were received with a refpect Advances and cordiality which were not ufually paid to the tranf- in the pro actions of Mary in the court of Elizabeth; and the ${ }_{j}$ in thed mare bifhop of Rofs was elated with expectation. Their riage of juftice, however, was not the fole, or even the chief, Mary with caufe of this attention and complaifance. A combina the duke of tion of the Englifh nobles had taken place agaiult Ce- ${ }^{-}$. cil, whofe power and credit were objects of indignation and jealoufy ; and the duke of Norfolk had been active and fuccefstul in promoting the fcheme of his marriage with the queen of Scots. Taking advantage of the condition of parties, he had practifed with the principal nobility to encourage his pretenfions to Mary ; and be fecretly communicated to them the promifes of
fupport

## S C O

Scotland.
fupport he had received from the earl of Murray. By the advice and influence of Sir Nicholas Throgmorton, he engaged in his behalf the earl of Leicetter; and this nobleman imparted the matter to the earls of Pembrake and Arundel. The duke himfelf was able to conciliate the favour of the earls of Derby, Bedford, Shrewbury, Southampton, Northampton, Northumberland, Weftmoreland, and Sufiex. In the mean time, he was eagerly preffing Mary herfelf with his fuit and importunities; and had mutually exchanged the tokens of a conftant and fincere love. It was in this forward fate of the match, that the bifhop of Rofs drew up the fchedule of articles for the accommodation of the rival queens.

At the defire of Elizabeth, her privy-council conferred with the bifhop npon thefe articles at different times; and they expreffed themfelves to be highly pleafed with their general import and meaning. Little doubt was entertained of their fuccefs; and the earl of Leicefter, in order to complete the bufinefs, and to ferve the duke of Norfolk, undertook to give them a more fpecial force, and to improve them. by the introduction of a ftipulation about the marriage of the queen of Scots. According to his fcheme of argeement, it was required of Mary, that fhe fhould be a party to no attempt againft the rights and titles of the queen of England, or her heirs; that fhe fhould conlent to a perpetual league, offenfive and defenfive, between the two kingdoms; that the fhould finally eftablifh the Proteltant religion in Scotland; that the fhould admit to her favour thofe of her fubjects who had appeared againlt her; that if the had made any affignment of her kingdom to the duke of Anjou, in the expectation of a marriage to be contracted between. them, it fhould be diffolved; and that inftead of looking to a foreign prince, whofe alliance would be dangerous, not only to the religion but to the liberty of the two realms, the would agree to marry the duke of Norfolk, the firft peer of England. Thefe articles being communicated to the bifhep of Rofs, he was defired to tranfmit them to Mary ; bint, as they touched upon fome points concerning which he had no inftructions, he declined this office, and recommended the propriety of their employing a fpecial meffenger of their own in a commiffion of fuch high importance. They accordingly appointed Mr Candion to go with them to the queen of Scots, and, in a formal dilpatch, they extolled the merits of the duke of Norfolk; affured her of the general favour and fupport of the Englifh nobility, if fhe fhould approve of his love: and intimated their belief that Elizabeth would not be averfe from a marriage which gave the certain promife of tranquillity and happinefs to the two kingdoms. This difpatch was in the handwriting of Leicefter; and it was fubferibed by this nobleman, and the earls of. Arundel and Pembroke, and the lord Lumley.

Mary, in the folitude of her prifon, received this Mary agrees to the treary propofed to her. application with pleafure. By the lord Boyd the returned a very favourable anfwer to it; but took the li. berty to admonifh them of the neceffity of their fecu- ring the good-will of Elizabeth, left her dinlike of the treaty of the marriage fhould excite new difafters and misfortunes, and involve the duke of Norfolk in inconveniency and danger. This advice, the fuggeftion of ber delicacy and prudence, [did not draw fufficiently
their attention. The duke of Norfolk was now impa- Scotha tient to conclude this great tranfaction, in which he -r had engaged himfelf; and admitted into his councils many nobles whom he had hitherto neglected to court; and many gentlemen who were confiderable from their diftinction and fortunes. The countenance and confent of the kings of France and Spain were thought neceffary to the meafures in agitation, and were fulicited and obtained. In the univerfality of the applaufe with which they were honoured, it was fuppofed that Elizabeth would be allured into a cordial acknowledgment of their propriety, or be compelled to afford them a re. luctant approbation ; and fo ardent a belief prevailed of their fortunate termination, that the marriage-contract was actually intrufted to the keeping of M. Fenelon the French ambaffador.

The activity of the duke of Norfolk with the Englifh nobles did not fo much engrofs his attention as to make him forget the regent. He kept up with him a clofe correfpondence in confequence of the concert into which they had entered, and received the moft ample affurances of his fidelity and fervice. The mot fanguine and feducing hopes elated him. The regent, while lee ftipulated for terms of favour and fecurity to himfelf and his faction, appeared to be full of the marriage, as a mealure from which the greateft advantages would arife to the two kingdoms, to the two queens, and to the true religion. The match, in the meanwhile, was anxioully concealed from Elizabeth; but the was zealoully preffed to conclude an accommodation with Mary, on the foundation of the fchedule of agreement prefented by the bifhop of Rofs. After having had many conferences with her privy-council, fhe feemed inclined to treat definitively for the reftoration of the queen of Scots, and actually agreed to open the tranfaction to the regent. The lord Boyd was fent iuto Scotland upon this bufinefs; and while he carried her letters, he was intrufted with difpatches from Mary, the duke of Norfolk, and Sir Nicholas Throgmorton.

As the regent was returning from his northern ex-The pedition, he was faluted at Elgin by the lord Boyd, pofals who immediately laid before him the difpatches and ${ }^{\text {Elizab }}$ inftructions with which he had been charged. The queen of England, in her letters, made three propofitions in behalf of Mary, and intimated a defire that one of them fhould be accepted. The queen of Scots, fhe faid, might be reftored fully and abfolutely to her royal eftate : the might be affociated in the government with her fon, have the title of queen, and, till the prince fhould attain the age of 17 years, the adminiftration might continue in the regent; or fhe might be permitted to return to Scotland in a private ftation, and have an bonourable appointment to maintain her in a fafe and happy obfcurity. The difpatches from The re Mary to the regent defired, that judges might imme-quetts diately be allowed to inquire into the legality of her marriage with Bothwel : and that, if it was found to have been concluded in oppolition to the laws, it fhould be declared void, and that the liberty be granted to her of entering anew into a matrimonial engagement. The duke of Norfolk expreffed to the regent the gra-Impor titude he felt for his friendfhip; promifed him the nitues command of the fulleft exertions of his confequence Nurfo and power; intreated him to proceed expeditiouly in

## S C O $\left[\begin{array}{lll}75 & \mathrm{~S} \text { C O }\end{array}\right.$

promoting the butineis of the marriage, and referred him to the inflructions of lord Boyd for a fatisfactory anfwer to any doubts which might give him difgult or uneafinefs. By the letters of Throgmorton, the regent was advertifed that the marriage of the queen of Scots with the duke of Norfolk was a certain and decided point; and he was counfelled to concur heartily and expeditioufly in this tranfaction, that his confent might not feem to have been extorted. Maitland of Lethington was recommended to him by this fatefman, as the perfon whom he fhould choofe to reprefent him in the Englifh court, as he could negociate beft the terms and mode of his fecurity and of that of his party. In fine, Throgmorton intreated him not to be troubled with any precife fcruples or objections, for that his overthrow, if he refifted, would be inevitable; and, in the view of his fervices and cordiality, he affured him, that no man's friendflip would be accepted with greater affection, and no man's eftimation be higher or more fortunate. The zeal of Throgmorton induced him alfo, upon this occation, to addrefs to Maitland a difpatch, in which he was infinitely importunate to haften his expedition to England, in the character to which he recommended him. He complimented him as the fitteft perfon to open the match to the Englifh queen, on the part of the regent and the Scottilh nobility; and he reprefented the fuccels of the fcheme to be infallible, as Elizabeth would never be fo unwife as to put her own fafety, the peace of her kingdom, and the prefervation of her people, in competition with the partial devices that might proceed from the vanity and the paffions of any perfon whatfoever. He enumerated the names of the Englifh nobility who had confederated to promote the marriage. He enlarged upon it as an expedient full of wifdom, and as advantageous in the highreft degree to religion and the ftate. He pointed out the lafting and infeparable connection of England and Scotland, as its happy and undoubted confequence. For, if James VI. Thould die, the fceptres of the two kingdoms might devolve to an Englifh prince; and if he fhould attain to manhood, he might marry the daughter of the duke of Norfolk, and unite, in his perfon, the two crowns.

Thefe weighty difpatches employed fully the thoughts of the regent. The calls of juftice and humanity were loud in the behalf of Mary ; his engagements to Norfolk were precife and definitive; and the commiffion of Elizabeth afforded him the command of the molt important fervices. But, on the other hand, the reftoration of Mary, and her marriage, would put an end for ever to his greatnefs; and, amidft all the fipulations which could be made for his protection, the enor. mity of his guilt was Itill haunting him with fufpicions and terror. His ambition and his felfifh fenfibilities were an overmatch for his virtue. He practifed with his partifans to throw obftacles in the way of the treaty and the marriage ; and, on the pretence of deliberating concerning the reftoration of Mary, and on her divorce from Bothwel, a convention of the eftates was fummoned by hin to affemble at Perth. To this affembly the letters of Elizabeth were recited; and her propefitions were confidered in their order. The full reftoration of Mary to her dignity was accounted injurious to the authority of the king, and her affociation with her fon in the government was judged improper
and dangerous ; but it was thought that her deliverance Scetards from prifon, and her reduction to a private fation, were reafonable expedients. No definitive decree, how. ever, was pronounced. The letters of Mary were then communicated to this council, and gave tife to vehement debates. She had written and fubferibed then in her character of queen of Scotland. 'T his carriage was termed infolent and imperious by the friends of the regent. They alfo held it unfafe to examine her requefts, till they fhould be communicated to Elizabeth; and they infinuated, that fome inclement and partial device was concealed under the purpofe of her divorce from the earl of Bothwel. The favourers of Mary endeaveured to apologize for the form of the letters, by throwing the blame upon her fecretaries; and engaged, that while the commiffaries, or judges, were proceeding in the bufinefs of the divorce, new difo patches in the proper method fould be applied for and procured. They were heard with evident fymptome of difpleafure ; and exclaimed, "r that it was wonderful to them, that thofe very perfons who lately had been fo violent for the feparation of the queen and Bothwel fhould now be fo averfe from it." The partifans of the regent replied, "that if the queen was fo eagerly folicitous to procure the divorce, the might apply to the king of Denmark to execute Bothwel as the murderer of her hufband; and that then fhe might marry the perlon who was moft agreeable to her." The paffions of the two factions were inflamed to a moft indecent extremity, and the convention broke up with ftrong and unequivocal marks of hottility and anger.
Notwithftanding the caution with which Mary and Norfolk carried on their intrigues, intimations of them had come to Elizabeth. Norfolk himfelf, by the advice of the earl of Pembroke, had ventured to difclofe Mary vice of the earl of Pembroke, had ventured to difclofe and Nor. his fecret to Sir William Cecil, who affected to be fulls. friendly to him. The regent, in anfwer to her letters, tranfmitted to her the proceedings of the convention at Perth. The application of Mary for a divorce was a key to the ambitious hopes of the duke of Norfolk. She commanded Sir William Cecil to apply himfelf to difcover the confpiracy. 'This ftatefman betrayed the confidence with which he had been entrufted; and Elizabeth, while the duke was attending her at Farnham, difcovering a mixture of pleafantry and paffion, admonifhed him to be careful or what pillow he repofed his head. The earl of Leicefter, alarmed by his fears; revealed to her at Titchfield the whole proceedings of the duke of Norfolk and his friends. Her fury was ungovernable; and at different times fhe loaded Norfolk with the fevereft reproaches and contumely, for prefuming to think of a marriage with the queen of Scots without the fanction of her concurrence. Infulted with her difcourfe and her looks, abandoned by Leicefter, and avoided by other nobles in whom he had confided, he felt his courage to forlake him. He left the court at Southampton without taking his leave, and went to London to the earl of Pembroke. New intimations of her difpleafure were announced to lim, and he retired to his feat at Kinninghall in Norfolk. His friends preffed him to take the field, and to commit his fafety to the fword; but having no inclination to involve his country in the miferies of war, he rejected their advice; and addreffing an apology to E.

## S Co

Seotland. lizabeth, protefted that he never meant to depart from the fidelity which he owed to her; and that it was his fixed refolution to have applied for her confent to his marriage with the queen of Scots. In return, the or dered him to repair to her court at Windfor; and, as he appeared to be irrefolute, a meffenger was difpatched to take him into cuftody. He was firt confined to the houfe of Paul Wentworth, at Burnham, in the neighbourhood of Windfor, and then committed to the Tower. The earls of Pembroke and Arundel, the lord Lumley, Sir Nicholas Throgmorton, and the bifhop of Rofs, were allo apprehended and confined.

Elizabeth, amidft the ferment of her inquietudes, forgot not to gratify her revenge by infulting the queen of Scots. The name of Mary was fufficient to convulfe her with anger. The earl of Huntingdon, who affected to have pretenfions to the crown of England that were preferable to thofe of the Scottifh princefs, was joined with the earl of Shrewfbury in the office of guarding her. His inftructions were rigorous, and he was difpofed to exceed them. The earl of Shrewtbury confidered it as an indignity to have an affociate who was a declared enemy to his charge, who had an intereft in her death, and who was remarkable for a natural ferocity of difpofition. Mary exclaimed againft the indelicacy and rudenefs of Elizabeth, and protefted that all her intentions were commendable and innocent. Huntingdon took a delight in her fufferings. He ranfacked her coffers with a view of making difcoveries; but her prudence had induced her to deftroy all the evidences of her tranfactions with the duke of Norfolk; and the officious affiduity of this jailor was only rewarded with two cyphers which he could not comprehend. The domeftics whom the favoured were fufpected and difmifled. Her train of attendants was diminifhed. An unrelenting watch was kept upon her. No couriers were allowed to carry her difpatches. No meffengers were admitted to her pre. fence; and all the letters from her friends were ordered to be intercepted, and to be conveyed to the queen of England.
The proceedings of the convention at Perth were afflicting to Elizabeth, to Mary, and to the duke of Norfolk. In the former they created fufpicions of the regent; and they were a certain annunciation to the latter, that he was refolved to fupport himfelf in the government of Scotland. Uncertain rumours had reached Elizabeth of the interviews he had held with Nor. folk in the bufinefs of the marriage. Her furprife and indignation were infinite. Mr Wood, who brought from the regent his anfwer to her letter, was treated with difrefpect. Secretary Cecil difpatched inftructions to the lord Hunfdon, the governor of Berwick, to watch his operations with a jealous eye. Elizabeth, by a fpecial envoy, required frem him an explanation of his ambiguous' carriage. 'The regent, true to his interefts, apologized to her for his connections with the duke of Norfolk, by laying open the defign of that nobleman to cut lim off, in his way to Scotland, by a full communication of whatever had paffed between them in relation to Mary, and by offers of an unlimited fubmiffion and obedience.

While the duke of Norfolk was carrying on his intrigues with Mary, the fcheme of an infurrection for her deliverance was advancing under the direction of
the earls of Northumberiand and Weftmoreland. Motives of religion were the chief foundation of this con. fpiracy; and the more zealous Catholics over England were concerned in it. Mary, however, by the advice of the duke of Norfolk, who was afraid of her match. ing with a foreign prince, did not enter into it with cordiality. It advanced notwithftanding; and the agents of the pope were lavifh of exhortations and donatives. The duke of Alva, by the order of his mafter the king of Spain, encouraged the confpirators with the offer of 20,000 men from the Netherlands; and, under the pretence of adjufting commercial dif. putes, he fent into England Chiapini Vitelli marquis of Celona, an officer of ability, that he might be at hand, and prepare to take the command of them.The report of an infurrection was univerfal. Elizabeth kept an army of 15,000 men near her perfon. The queen of Scots was removed to Coventry, a place of great ftrength; and if a fuperior and commanding forcc fhould appear before it, her ferocious keeper, it is faid, had orders to affaffinate her. Repeated commands were fent to the earls of Northumberland and Weftmoreland, to repair to court. But the imprifonment of the duke of Norfolk and his friends had ftruck a panic into them. They conceived that their confpiracy was difcovered; and putting themfelves at the head of their followers, they iffued their manifcto. The reftoration of Popery, the eftablifhment of the titles of Mary to the Englifh crown, and the reformation of abufes in the commonwealth, were the avowed objects of their enterprife. But they had embarked in a bufinefs for which they were altogether unequal. Their efforts were feeble and defultory. The duke of Alva forgot his promifes. Wherever the peace was difturbed by infurgents, there were troops to oppofe them. The vigilance of Elizabeth difconcerted with eafe the operations of men whom no refources or popularity could have conducted to greatncfs, and who could neither conquer nor die. The earl of Weftmoreland, after concealing himfelf for fome time in Scotland, effected an efcape into Flanders, where he paffed. a miferable and ufelefs exittence; and the earl of Northumberland being taken by the regent, was imprifoned in the cafle of Lochleven.

As the fury of Elizabeth abated; her refentment to 7754 the duke of Norfolk loft its power; and fhe failed not liberate to diftinguifh between the intrigues of an honourable Norfolk ambition, and the practices of an obftinate fuperftition. and his It was the refult of the examination of this nobleman, and of the confeffions of the other prifoners, that Lethingron had fchemed the bufinefs of the marriage, and: that the earl of Murray had encouraged it ; that her confent was underftood to be neceflary to its completion; and that Mary herfelf had warmly recommended. the expedient of confulting her pleafure. Upon receiving proper admonitions, the earls of Pembroke, A. rundel, the lord Lumley, Sir Nicholas Throgmorton, and the bifhop of Rofs, were releafed from confinement ; and, after a more tedious imprifonment, the duke of Norfolk himfelf was admitted to his liberty. This favour, however, was not extended to him till he had not only fubmiffively acknowledged his prefumption in the bufinefs of the marriage; but had fully revealed whatever had paffed between Mary and him, and folemnly engaged himfelf never more to think of this al-

## S.C O

thand. lianee, and never more to take any concern whatfoeve in her affairs.

The regent, in the meanwhile, was very anxious to accufed menter the good opinion of Elizabeth. Her treatMood, and her difcovery of his practices, had excited his apprehenfions. He therefore affembled at Stirling a convention of the eftates; and taking her letters a fecond time into confideration, returned her a reply to them by Robert Pitcairn abbot of Dunfermline, in a ftyle fuited to her temper and jealoufies, and from which fhe could decifively infer, that no favour of any kind would be fhown to the queen of Scots. But this bafe condefcenfion, though affilted by his treachery to the duke of Norfolk, not being fufficient, in his opinion, to draw completely to him the cordiality of the queen of England, he was preparing to gratify her with another facrifice. The partiality of Maitland to Mary, and his intrigues with Norfolk and the Englifh malcontents, had rendered him uncommonly obnoxious to Elizabeth and her miniftry. The late commotions had been chiefly afcribed to his arts; and it was natural to dread new calamities and tumults from the fruitful fpring of his invention. Under the pretence of employing his fervice in difpatches to England, the regent invited him to Stirling. He was then with the earl of Athol at Perth; and fufpecting fome improper device, he obeyed the fummons with reluctance. When he took his place in the privy-council, Captain Crawford, the minion of the earl of Lenox, who had diftinguifhed himfelf in the trial of Mary, accufed him, in direct terms, of being a party in the murder of the late king. The regent affected aftonifhment, but permitted him to be taken into cuftody. He was foon after fent to Edinburgh under a guard, and admonifhed to prepare for his trial. Upon fimilar charges, the lord Seton and Sir James Balfour were feized upon and impiifoned.

Kirkaldy of Grange, the governor of the caftle of Edinburgh, who was warmly attached to Maitland, after having remonftrated in vain with the regent on the violence of his conduct, employed addrefs and ftratagem in the fervice of his friend. Under the cover of night, he went with a guard of foldiers to the lodgeing where Maitland was confined ; and Chowing a forged warrant for taking his perfon into keeping, got poffeffion of him. Kirkaldy had now in his caltle the duke of Chatelherault, the lord Herries, and Maitland. The regent fent for him to a conference ; but he refufed to obey his meflage. He put himelf and his fortrefs under the direction of his prifoners. The regent, condefcending to pay him a vifit, was more lavifh than ufual of his promifes and kindnefs. His arts, however, only excited the difdain of this geneyous foldier. Since he could not lead out Maitland to the block, he inftituted a procefs of treafon againft him, in order to forfeit his eftates. Kirkaldy, by the mouth of a trumpeter, defired him to commence fimilar actions agaiuft the earl of Morton and Mr Archibald Douglas, as it was notorious that they were parties to the king's murder. This meffenger was likewife charged with delivering a challenge from him to Mr Archibald Douglas, and another from the lord Herries to the earl of Morton. This difappointment, and thefe indignities, made a deep impreffion upon the regent; and, in a thoughtful diffatisfied humour, a-
bout this time, he mate a fhort progrefs towards the Seotiant. Englifh border, courting popularity, and deferving it, by an attention to order and juftice.

Elizabeth, flattered by his fubmiffive advances, and E!izabe.h pleafed with his ambition, was now difpofed to gratify deliver up his fulleft wifhes; and fhe perceived, that by delivering Mary to to him the queen of Scots, the would effectually relieve the regent. herfelf of a prifoner whofe vigour and intrigues were a conftant interruption to her repofe. A treaty for this purpole was entered into and concluded. The regent was to march an army to the Englifh frontiers, and toreceive from her his fovereign into her own dominions, the victim of his power, and the fport of his paffions. No hoftages and no iecurity were ftipulated for her en. tertainment and good ufage. His authority over her was to be without any limits. Upon his part, he was to deliver to Elizabeth the young prince, to put her in poffeffion of the principal forts of Scotland, and to affilt her with troops in the event of a war with France. This treaty, fo fatal to Mary, and fo ruinous to the independence of Scotland, efcaped not the vigilance of the bifhop of Rofs. He complained of it in the ftrongeft terms to Elizabeth; and declared it to be equivalent to a fentence of death againft his mittrefs. The ambaffadors of France and Spain were alfo ftrenuous in their remonftrances to her upon this fubject. All refiftance, however, was unavailing ; and the execution of the treaty feemed inevitable. Yet how vain are the. loftieft fchemes of human pride! The career of the regent was haftening to its termination ; and the hand of an affaffin put a period to his dream of royalty. Scotland did not lofe its liberties ; but Mary continued to be unfortunate.

James Hamilton of Bothwelhaugh, who had been Death of taken a prifoner at the battle of Langfide, obtained the regento his liberty and life; but his eftates were forfeited. His wife, the heirefs of Woodhounlie, retired upon this emergency to her paternal inheritance, in the hope that it might efcape the rapacity of the regent. He had, however, given it away in a gift to one of his. favourites, Sir James Ballenden; and the inftruments. of his power having the inhumanity to ftrip her of her garments, and to turn her naked out of her houfe, in. a cold and dark night, fhe became diftracted before the morning. Hamilton vowed revenge; and the regent made a mockery of his threats. This contempt infpirited his paffions ; and the humiliation of the houfe of Hamilton, to which he was nearly allied, fottered the eagernefs of his difcontents. The madnefs of party fermented is him with the atrocioufnefs of rage. His mind reconciled itielf to affaffination. After watching for fome time a proper opportunity to commit his, horrible purpofe, he found it at Linlithgow. The regent was to pafs through this town in his way from Stirling to Edinburgh. Intimations reached him thatHamilton was now to perpetrate his defign : and heunaccountably neglected them. 'The affaffin, in a houfe that belonged to the archbifhop of St Andrew's, waited deliberately his approach; and firing his mufket from a window, fhot him through the body. The wound, when examined, was not judged to be mortal ; but the regent finding its pain to increafe, prepared himelf for death; and in a few hours after he expired. A fleet horfe of the abbot of Arbroath's carried the affaflin to the palace of Hamilton; and:

## S C O [ $7^{8}$ ] S C O

Scot'and, from thence be foon after effected firs efcape into Frarce.

The death of the earl of Murray made no favourable alteration in the affairs of Mary. Confufion and diforder prevailed thronghout the kingdom ; and thought
759 Lenox chofen to fucceed bim. the friends of the queen were promifed affitance from France, nothing effectual was done for them. At latt the regency was conferred upon the earl of Lenox ; an enemy to his queen, and who treated her friends with the utinoft rigonr. At the fame time Elizabeth continued to amule with negociations her unhappy rival. She granted liberty to the bifhop of Rofs to repair to the queen of Scots, who had been removed to Chatfworth, and to confer with her on the fubject of the intended accord and treaty. Mary, conforming to the advances of Elizabeth, authorifed the lord Levingfton to pafs to her dominions, and to defire her friends to appoint a deputation of their number to give their affrftance in promoting the falstary purpofe of eftablifhing the tranquillity of their country : and after meeting with fome interruptions upon the Englifh borders from the earl of Suffex, this noblenan executed fuccefsfully his commiffion. The queen's lords gave powers to ten nobles to act in a body, or by two of their number, in the intended negociation : and a fafe-conduct fiom Elizabeth allowed them to enter the Englifh realm, and to remain in it during the fpace of fix months.

While the lord Levington was confulting the interefts of Mary with her friends in Scotland, the bifhop of Rofs was making earneft fuit with Elizabeth to proceed in the projected negociation. His folicitations were not ineffectual ; and Sir William Cecil and Sir Walter Mildmay received the inftructions of their mi\&frels to wait upon the queen of Scots at Chatfworth. The heads of accommodation which they propofed were explicit and particular; and the rigour they difcovered towards the Scottifh princefs feemed to vouch their fincerity. It was propofed, that a perfect amity fhould take place between the two queens; that all the treaties which had formerly been concluded by the two nations fhould receive an ample confirmation; that the queen of Scots fhould ratify the treaty of Edinburgh, and forbear from advancing any title or claim to the crown of England during the life of Elizabeth, or to the prejudice of the heirs of her body; that in cafe of foreign invafions, the two realms fhould mutually affift each other; that all foreign foldiers fhould be ordered to depart out of Scotland; that in the future, ftrangers of the profeffion of arms fhould be prohibited from repairing to it, and from taking up their refidence in any of its cafles or houfes of ftrength; that Mary fhould hold no correfpondence, directly or indirectly, with any fubject of England, without the permiffion of the Englifh queen ; that the earl of Northumberland, and the Englifh rebels in Scotland, thould be delivered up to Elizabeth; that redrefs fhould be given to the fub. jects of England for the fpoils committed upon them by the Scottifh borderers ; that the murderers of the lord Darnley and the earl of Murray fhould be duly and effectually punifhed; that before the queen of Scots fhould be fet at liberty, the young prince her fon fhould be brought into England, and that he Thould continue in the keeping of Elizabeth till the death of his mo. ther, or till her refignation to him of ker crown on at-
taining his majority; that the queen of Scots flould Scotla not enter ints a negociation for her marriage without the knowledse of the queen of England, nor conclude it without her approbation, or that of the greateft part of the Scottifh nobility; that none of the fubjects of Scotland fhould be fuffered to go to Ireland without the fafe-conduct of Elizabeth; and that Mary fhould deliver to her fifter all the teftimonies and writings which had been fent from France, renouncing and dif. avowing the pretended marriage between her and the duke of Anjou. Befides thefe articles of agreement, it was propofed by another treaty to adjuft the differences of the queen of Scots and her fubjects; and Sir William Cecil and Sir Walter Mildmay embraced the prefent opportunity of conferring with her upon this bufinefs, under the pretence of facilitating its management in the future ftages of its progrefs.

During their ftay at Chatfworth, thefe ftatefmen were Mary i completely fatisfied with the behaviour of the queen of firous Scots. The candour, fincerity, and moderation, which negocia fhe difplayed, were full affurances to them that upon her part there was no occafion to apprehend any improper policy or art; and the calamities of her condition were a ftill fecurer pledge of her compliance. Elizabeth, upon hearing their report, affected to be highly pleafed with her fifter, and fent a meffage to the earl of Lenox, inftructing him in the conditions which had been fubmitted to Mary ; and defiring him to difpatch commiffioners into England to deliberate in the treaty, and to confult his intereft and that of his faction. Nor did Mary neglect to tranfinit to her friends in Scotland the propoied terms of agreement ; and the bifhop of Rofs, who had affifted her in the conferences with Sir William Cecil and Sir Walter Mildmay, conveyed intimations of them to the pope, the king of France, and the duke of Alva; befought their advice, and informed thefe princes, that unlefs an effectual relief could be expected from their favour, the neceffities of her condition would compel her to fubfrribe to the hard and humiliating distates of the queen of England.

But while Mary and her friends were indulging the The infi hope of a termination to her troubles, Elizabeth was cerity of fecretly giving comfort to her adverfaries, and encouraging them to throw obftacles in the way of the treaty. Sir William Cecil wrote to the regent, exprefsing his difapprobation of the negociations at Chatrworth; defiring him not to be apprehenfive of the boaftings of the adherents of the queen of Scots; and advifing him to make choice of commiffioners, in the name of the king, in whofe conftancy and fortitude he could rely, and whom no addrefs could allure from his intereft, or from the common caufe in which he and his friends were embarked. The earl of Suffex alfo fent him difpatches, in which he admonifhed him to turn his anxious attention to the approaching negociation, and to infift on fecure ftipulations for the prefervation of the prince, for his own fafety, and for a general indemnity to the nobles and their adherents, whofe party he had efpoufed. In every event, he reprefented it as proper for him to pay the greateft refpect to Elizabeth; and, if no treaty fhould be concluded, he advifed him to be prepared for reducing the friends of Mary to obedience, and for defending himfelf agraint invafions from abroad. By thefe artifices, the regent and his faction

## $\$$ C 0

land. faction were inclined to intimate to Elizabeth their warm diefatisfaction with the terms of agreement which fhe had propoled to Mary; and Pitcaira abbot of Dunfermline, who had been appointed fecretary of flate in the room of Maitland of Lethington, was deputed to her upon this bufinefs. He exclaimed againft the treaty as wild and impolitic ; and contended, that no ftipulations could bind Mary, whofe religion taught her to keep no faith with heretics; that her claims to the Englifh crown, and her refentment againft the queen of England, as well as her own fubjects, would immediately upon her reftoration, involve the two kingdonss in blood; and that no peace or quiet could be expected or enjoyed, but by adhering to the falutary maxim of detaining her in a fure and clofe captivity. Elizabeth did not difcourage thele inclement fentiments; and Pitcairn was affured by her, that from her natural love to the king, and her regard to the nobles who upheld his authority, fhe would faithfully provide for their fecurity ; and that if juftice fould appear decifively upon their fide, fhe would even ftrenuoully maintain their quarrel and their confequence.

Mary had been carried to Sheffield, and was recovering from a feverifi indifpofition. To this place the bifhop of Galloway and the lord Levingiton, who had been felected by her friends to be her acting deputies in. England, repaired in order to impart to her the: ftate of affairs in Scotland, and to receive lier com: mands. After repeated conferences on the fubject of the approaching treaty, the gave them her commiffion and inftructions, and joining them to the bifhop of Rofs, fent them to Elizabeth. They claimed an audience of this princefs, and were admitted to it at Hamptoncourt. Having prefented their credentials, they informed her, that they were ready to conclude a treaty of concord and agreement, upon principles the moft extenfive and liberal'; and, reprefenting to her the impoverifhed and tumultuous ftate of their country; they begged her to proceed in the bufinefs with expedition. The orders, they faid, which they had received, and their own inclinations, difpofed them to follow her advice and counfel in all points which were honourable and confiftent with reafon ; and as her protection was the only refuge of the adverfaries of their queen, they took the liberty to obferve, that it was completely in her power to put a period to all difturbances and ani. mofity, and to accomplifh an accord, which wontd not only confer upon her the higheft reputation, but be of the moft fignal utility to the two kingdoms. Elizaberh declared, that it would pleate and flatter her in no common degree to advance in the negociation; and that it was a pain to her that the regent, by his delay in fending commiffioners, fhould difcover any averfion from it. This anfwer was deemed very favourable by the bifhop of Rofs and his affociates; and they obtained her authority to difpatch a meffenger to the regent to haften his operations.

In the mean time, Mary received difpatches from the pope, the king of France, and the duke of Alva; and they concurred in recommending it to her to accept of the articles of accommodation which were offered by Elizabeth. 'The Turk was giving employment to the pope and the king of Spain: Charles IX. already enfeebled by the obitinate valour of the Huguenots, was bufy in deceiving them with appearances of peace, and
in plotting their overthrow; and the duke of Alva felt himfelf infecure in his government of the Netherlands. But while they ftrongly advifed Mary to conclude an agreement with the queen of England, they were yet lavift to her of their expreffions of a conftant amity ; and if the treaty fhould mifcarry, they promifed to make the mof ftrenuous exertions in her behalf, and to affift her adherents with money, ammunition, and troops.

The earl of Morton, the abbot of Dunfermline, and The regent Mr James Macgill, had been appointed by the regent and his faeand his faction to be their comniffioners in the name of tion atthe king; and at length their arrival was announced jumpt to the to Elizabeth. Conforming to the fpirit of their party, depolition the earl of Morton and his colleagues took an early op- of Mary. portunity to jultify to her the depofition of the queen of Scots, and by this means to interrupt the progrefs of the treaty. In an elaborate memorial, they affected to confider Mary as unworthy to reign, and afferted the conftitutional power of the people to curb her ambition, and to throw her down fron royalty. They endeavoured to intrench themfelves within the authority of laws, civil, canon, and municipal; and they recited opinions to her prejudice by many pious divines. But though the general pofition, that the people have a title to refift the domination of the fovereign is clear and undubitable; yet their application of it to the queen of Scots was wildly precarious and improper. To. fpeak of her tyraniy, and her violation of the rights of her people; was even a wanton mockery of truth and jutice; for inftead of having affumed an illegal exorbitancy of power, the had fuffered in her own perfon and rights, and had been treated by her fubjectis with the moft cruel and tyrannical infolence. Elizabeth, who was : unwilling and afraid to enter anew into the conduct of Mary, who was fully fenfible of the infolence of her adverfaries, and who did not approve of any maxims that preffed againtt the majefty of princes, received their memorial with furprife and indignation. She perceived not, the told them, any reafon that could vindicate the feverity which had been fhown to the queen of Scotsby her enemies; and advifed them to confider, that in the prefent negociation it was their proper buff nefs to confult the fecurity of the king and of their faction.

966
Upon the part of Elizabeth, the commifioners were Elizabeth* the lord keeper Bacon, the earls of Suffex and Leicef- comminfter, the lord Clynton, the lord chamberlain, Sir Wil. fioners hold liam Cecil, who about this time was created lord Bur- with tholes. leigh, Sir Francis Knollys, Sir James Croft, Sir Walter of the Mildmay, and Sir Thomas Smith. The deputies of queen of Mary were invited to meet with the Englifh commif- ${ }^{\text {Scots, }}$ fioners in the houfe of the lord keeper ; and after he had ftated the general purpofes of the treaty, he intimated to them, that there were two points which required a particular difcuffion. A proper fecurity, he faid, ought to be given by the queen of Scots for her due performance of the flipulations of the agreement with Elizabeth; and it was expedient to concert the mode of the pardon and indemuity which fhe was to extend to the fubjects of Scotland who had offended her. As an affurance of the accommodation with his miftrefs, lie demanded, that the duke of Chatelherault, the earls of Huntley and Argyle, the lords Hume and Herries, with another perfon of high rank, fhould be furrendered to
her.

## $S$ C O $\left[\begin{array}{lll}80\end{array}\right] \quad$ S C O

$\underbrace{\text { Scurtand. her, and remain in England for three years; that the }}$ cattes of Dumbarton and Hume fhould be in her poffeffion during the fame period; and as to the article concerning the delivery of the prince into her cuftody, he obferved, that it would be required from the regent, the queen of Scots not having the power of its performance. The deputies of Mary, furprifed with this language, intreated the Englifh delegates to reflect, that their queen, if deprived of the molt faithful of her nobles, and of her Atrongelt forts, could have little defire or ambition to return to her own kingdom; for the would thus be unable to protect herfelf againft the turbulence of her fubjects, and be a fovereign without friends, and without ftrength. They were inclined, they faid, to put their commiffion and powers to the fulleft ftretch, in order to gratify Elizabeth; and they would agree, that two earls and two barons fhould be furrendered for two years, as hoftages of the fidelity of their fove. reign; under the reftriction, that they might be exchanged every fix months for perfons of an equal condition, if they fhould be defirous of returning to their own country. As to the giving up of any forts or caftles, they would not agree to it, becaufe among the other inconveniences of this meafure, fimilar claims would be competent to the king of France, by the fpirit of the treaty of Edinburgh, which ftipulated, that no French or Englifh troops fhould be admitted into Scotland. The lord keeper Bacon, refuming his difcourfe, told them, that the whole realn of Scotland, its prince, no. bles, and cattles, were an inadequate pledge to the queen of England; and that, if his advice would be followed, the queen of Scots fhould not obtain her liberty upon any kind of fecurity which could be granted by the Scottifh nation. In all public treaties, faid the delegates of Mary, no further affurance can be required from a fovereign than what confifts with his fafety; and when exactions are preffed from a contracting party in a league which are ruinous and impoffible, it is underftood that a foundation is fought to break off the negociation. The Englifh commiffioners, now interfering in a body, declared upon their honour, that it was the meaning of Elizabeth to agree to the reftoration of the queen of Scots to her crown and realm upon receiving fufficient affurances for the articles of the accommodation; that the fecurity offered for her ac. ceptance, fhould be fubmitted to her deliberation; and that they would immediately proceed to confer with the deputies for the king of Scots.
new conference, it was communicated by them to the deputies of Mary. The bifhop of Rofs and his affociates were difgufted with this formal impertinence. They did not hefitate to pronounce the plea of an in futficient commiffion from the king to his delegates to be an unworthy and moft frivolous fubterfuge. The authors, they faid, of the depofition of their fovereign did not need any authority but their own to fet her at liberty ; the prince was not yet five years of age, and could give them no inftructions: and the regent was wholly dependent upon the will and pleafure of the queen of England. It was reprefented in return by the Englifh delegates, that the commiffion of king James to his deputies, having been perufed by Elizabeth, was accounted by her to be infufficient; and that it was her opinion, that the earl of Morton fhould return to Scotland to hold a parliament for obtaining new powers. The bifhop of Rofs exclaimed, that the queen of Scots had been amufed with deceitful promifes, that the prudence of Elizabeth had been corrupted by partial counfels, and that the allegations and pretences held out for interrupting the negociation were affected and unreal. The inftructions, he faid, from his fovereign to her commiffioners, were to negociate and to conclude, and not to trifle; and they would not by any means confent to protract, by artificial delays, a treaty which the queen of England, if her intentions were fincere and right, could immediately terminate upon reafonable and honourable terms. His fpeech and his demeanour he acknowledged to be free and open; and he befought them to excufe him, fince, having been made an inftrument to abufe his miftrefs with falfe hopes, he could not but refent the indignity, and exprefs what he knew and what he felt. The Englifh deputies, addreffing him and his colleagues, obferved, that as the friends of Mary, and thofe of the king her fon, could not come to an agreement, and as their queen was refufed the affurance fhe expected, they held their commiffion to be at an end, and were no longer at liberty to negociate.

The infincerity of Elizabeth, and the failure of the The innerity of Elizabeth, and the failure of the Thita league or agreement, filled Mary with refentment and ted cord:complaints. Her animofities, and thofe of Elizabeth, tion of thy were increafed and fortified. She was in hafte to com-two queen municate to her allies the unworthy treatment fhe had received; and fhe fent her commands to her adherents in Scotland to rife up in arms, to repofe no truft in truces which were prejudicial and treacherous, and to employ all their refources and ftrength in the humiliation of the regent and his faction. Elizabeth, who by this time apprehended no enterprife or danger from Charles IX. or the duke of Alva, refolved, on the other hand, to give a ftrong and effectual fupport to the king's friends, and to difunite by ftratagem, and opprefs by power, the partizans of the Scottif princefs. The zeal of the bithop of Rofs having raifed her anger, the commanded him to depart from London; and Mary, in contempt of her mandate, ordered him to remain there under the privilege of her ambaffador. The high and unbroken fpirit of the Scottift queen, in the midtt of her misfortunes, never once awakened the generous admiration of Elizabeth. While it uniformly inflamed her rage, it feems alfo to have excited her terror. With a puillanimous meannefs, fhe fent a difpatch to the ear! of Shrewbury, infructing him to keep his ch rge in the

## S C O 0 [. 81$] \quad$ s C 0

clupelf confipement, and to be inceffatiy on his guard to prevent her efcape. He obeyed, and regretted her feverity. The expence, retinue, and domellics, of the gueen of Scots, were diminifhed and reduced, and every probable means by which the might eadeavour to obtain her liherty were removed from her. 'I'he rigours, however, that invaded her perfon could not reach her mind; and the pitied the tyrant that could add contumely to oppreflion, and deny her cyen the comforts of a prifon.

All this time scotland was involved in the miferies of civil war. The friends of Mary were everywheve pur nifhed with fines and forfeiture. Private fainilies took the opportunity of the public confufion to revenge their quarrels againft each other. Individnals of every denomination ranged themfelves on the fide cither of the regent or of the queen, and took a fhare in the hotitiLies of their country. Fathers divided againft fons, and fons againtt their fathers. Acts of outrage and viokuce were conmitted in every quarter, while, amidft the general confufion, religion was made the pretence by both parties.

In the mean time, though many encounters took place between the two factions, jet neither party feems to have been conducted by leaders of any ability or Akill in military affairs. 'This year, in one of thefe fkirmifhes, the regent limfelf was taken priloner by a party of the queen's faction, and put to death. But this event made little alteration in the affairs of the nation. 'The carl of Marre, another of the queen's enemies, was chofen to the regency : hut though he propofed to act araind her party with rigour, he was baffled before E dinburgh cafte, which was fill held by her friends; and fome bloody fkirmifhes were fought in the north, where victory declaret in favour of the queen. Thefe advantarges, however, were more than compenfated to the other party by the following event.

While the negociations with Elizabeth for Mary's reftoration were depending, the fcheme of a confpiracy for her deliverance was communicated to her by Robert Ridolohi a Florentine, who lived in London many years as a merchant, and who was fecretly an agent for the court of Rome. But to his letters, while the fate of the treaty was uncertain, fhe returned no reply. Its mifcarriage, through the daplicity of Elizabeth, recalled them forcibly to her attenium, and fimulated her to feek the accomplifhment of her liberty by meafures bolder and more arduous than any which had been hitherto employed by her. She drew up in cipher an ample difcourfe of his comsunications and of her fituation, and difpatched it to the bifhop of Rofs, together with letters for the duke of Norfolk. Her inffructions to this ecclefiaftic were oo convey the difcourfe and letters expeditioully to Norfolk, and to concert an interview between that nobleman and Ridolphi. The coufidential fervants by whom she duke acted with the bilhop of Rofs were Banniter and Jarker; and having received from them the dif. courfe and the letters, they were deciphered by Hickford his feeretary. Having confidered them maturely, he delivered them to Hickford, with orders. to commit shem to the flames. His orders, however, were difobeyed; and Hickford depofited them, with other papers of confequence, under: the mats of the duke's bedchamber. The contents of the difcourfe and the let-

Vol, XVII. Part I.
ters awakening the loope and ambition of Norfolk, he was impatient to fee Ridolphi ; and the bifhop of Rofs foon brought them together. Ridolphi, whofe ability was irfpirited by motives of reliziom and intereit, exerted .ll his eloquence and addrefs to eingage the duke to put himfelf at the head of a rebellion againft his fovereign. He reprefented to him, that there could not be a feafon more proper than the prefent for atchieving the overthrow of Elizabeth. Many perfons who had enjoyed authority and credit under her predeceffor were much difgufted ; the Roman Catholics were numerons and incenfed ; the younger fons of the gentry were languifhing in poverty and inaction in every quarter of the kingdom ; and there were multitudes difpofed to infurrection frons reftlefnnefs, the love of change, and the ardour of enterprife. He infinuated to him, that his rank, popularity, and fortune, enabled him to take the command of fuch perfous with infinite advantage. He infifted upon his inprifonment and the outrages he had futtained from Elizabeth ; reprefented the contempt to which he would expofe himlelf by a tame fubmiffion to wrongs; extolled the propriety with which he night give way to his indignation and revenge; and painted out the glory he might purchafe by the humiliation o his enemies, and by the full accomplifhment of his marriage with the queen of Scots. 'T'o oive a ftrength and confirmation to thefe topics, he produced a long litt of the names of noblemen and gentlemen with whom he had practifed, and whom he affirmed to be ready to ha$z$ ard their lives and riches for a revolution in the flate, if the duke would enter into it with cordiality. To fix decifively the duke, he now opened to him the expectations with which he might flatter himfelf from abroad. The pope, he affured him, had already provided 100,000 crowns for the enterprife; and if Popery foould be advanced in England, he would cheerfully detray the whole charges of the war. 'The king of Spain would fupply 4000 horfe and 6000 foot, which might be landed at Harwich. Charles IX. was devotedly attached to the queen of Scots, notwithttanding the treaty which had been entered upon with Elizabeth for her marriage with his brother the duke of Anjou: and when he fhould difcover that; on the part of the Englifh prin. cefs, this matrimonial fcheme was no better than a device or a mockery, he would renounce the appearance of friendfhip he had affuned, and return to his natural fentiments of diflain and hatred with redoubled vio-lence- In fine, he urged, that while he might depend on the affiftance and arms of the greateft princes of Chriftendom, he would intitle himfelf to the admiration of all of them by his magnanimous efferts and generous gallantry in the caufe of a queen fo beautiful and fo unfortunate.

47
The duke of Norfolk, altured by appearances foliforvered plaufible and flattering, did not fcruple to forget the by the miduties of a fubject, and the fubmiffive obligation in Einters of which he had bound himfelf to Elizabeth never more to Elizabeth. interfere in the affairs of the Scottifh princels. Ri dolphi, in this forward fate of the buinefs, advifed him to addrefs letters to the Pope, the king of Spain, and the duke of Alva, expreffive of his concurrence in the defign, and infpiriting their activity and refolations. He even produced difpatches framed for this purpofe; and white he intreated the duke to fubferibe them, he offered to canry them himfelf to Flanders,

Rome,

## S Co [ 82 i S C o

sentland. Rome, and Spain. The duke of Norfolk, who was apprehendef. The rack extorted from them what foever ambitious and timid, difpofed to treafon, and unfit for it, hefitated whether he fould fubicribe the letters; and at length refufed to proceed to that extremity. He yet allowed the bifhop of Rofs, and Barker his fervant, to go to the Spanifh ambaffacor to exprefs his approbation of the meafures of Ridolphi, to acknowledge that the letters were according to his mind, and to empower this ftatefman to certify their authenticity to his court. Ridolphi, full of hopes, fet out to execute his commiffion. He pafled firft to the duke of Alva, to whom he communicated the tranfactions in which he had been eugaged, and with whom he held many conference There was at this time at Bruxelles Charles Bailly, a fervant of the queen of Scots; and Ridolphi, after dif clofing to him his proceedings with Alva, entrutted him with letters to her to the duke of Norfolk, the Spanifh ambaffador, and the bihop of Rofs. When this meffenger reached Calais, a letter was delivered to him from the bifhop of Rofs, defiringhim toleave hisdifpatches with the governor of that place. From inexperience and vanity he neglected this notice; and being fearched at Dover, his letters, books, and clothes were feized, and he himfelf was fent to London, and imprifoned in the Marfhalfea. The bifhop of Rofs, full of apprehenfions, applied to lord Cobham, the warden of the cinque ports, who was friendly to the duke of Norfolk; and obtaining by his means the packet of difpatches from Ridolphi, he fubfituted another in its place, which contained letters of no danger or ufefulnefs. He had alfo the dexterity to convey intelligence of this trick to Bailly, and to admonifh him to preferve a profound filence, and not to be afraid. This fimple and unpractifed agent had, however, excited fufpicions by the fymptoms of terror he had exhibited upon being taken, and by exclaiming, that the difpatches he brought would involve his own deftruction and that of others. At his firf examination he confeffed nothing : but being fent to the tower, and put upon the rack, he revealed his converfations with Ridolphi, and declared, that the difpatches which he had brought had been delivered to the bifhop of Rofs. An order was granted for taking the bifhop into cuftody. Having been aware, however, of his perilous fituation, his houfe was fearched in vain for treafonable papers; and he thought to fcreen himfelf from anfwering any interrogatories under the fanctity of his character as the ambaffador of an independent princefs.
he duke's An unexpected incident excited, in the meanwhile, frienus and new fufpicions and alarms. Mary being defirous of fervants tranfmitting 2000 crowns to the lord Herries to adgive evi- vance her interefts in Scotland, the duke of Norfolk deace againfthim. undertook to convey it to him with fafety. He intrufted it to the charge of his confidents Hickford and Barker, who putting it into a bag with difpatches from their mafter to lord Herries, ordered a fervant called Brown to carry it to Bannifter; who, being at this time on the border, could forward it to Scotland. Brown, fufpicious or corrupted, inftead of proceeding on his errand, carried the bag and its contents to Sir William Cecil, now lord Burleigh. The privy-council, deeming it treafon to fend money out of the realm for the ufe of the friends of Mary, whom they affected to confider as enemits, ordered Hickford and Barker to be
they knew to the prejudice of their mafter. Hickford gave intelligence of the fatal difcourfe and the letters from Mary, which he had preferved in oppofition to the orders given to him. All the proceedings between the queen of Scots, the duke of Norfolk, the bifhop of Rofs, and Ridolphi, were brought to light. A guard was placed upon the houfe of the duke of Norfolk, in order to prevent his efcape. Sir Ralph Sadler, Sir Thomas Smith, Sir Henry Nevil, and Dr Wilfon, were commiffioned to examine him ; and being impreffed with the belief that the difcourfe and the letters had been deftroyed, he pofitively denied that he had any concern in the affairs of the queen of Scots, or any knowledge of them whatfoever. He was cornmitted to the tower a clofe prifoner. Bannifter by this time was taken ; and he confirmed the relations of Hickford and Barker. In the courfe of their difcoveries, there appeared reafons of fufpicion againft many perfons of yan's and diftinction. The earls of Arundel and Southampton, the lord Cobham, Mr Thomas Cobham his brother, Sir 'Thomas Stanley, Sir Henry Percy, and other gentlemen who were friendly to the queen of Scots and the duke of Norfolk, were ordered to be lodged in different prifons; and the rack, and the expectation of a pardon, drew from them the fulleit confeffions. The duke was altogether unable to defend himfelf. The concurring teftimonies of his friends and fervants, with the difcourfe and the letters, which he fondly imagined had been committed to the flames, were communicated to him. He was overwhelmed with amazement and diftrefs; and exclaimed, that he had been betrayed and undone. He made ample acknowledgments of his guilt, and had no foundation of hope but in the mercy of his fovereign.

By the confeffion of the duke himfelf, and from all the inquiries which had been made by the minitters of Elizabeth, it appeared obvious beyond a doubt, that the bifhop of Rofs had been the principal contriver of the confpiracy. Ridolphi had acted under his direc- Dange tion, and he had infpirited the duke of Norfolk. He had and pers even proceeded to the extremity of advifing that noble-plexing man to put himfelf at the head of a felect band of ad. of hifin herents, and to feize boldly the perfon of Elizabeth. Leflyo In his examinations he was treated with great rigour and infult. But he made an able defence, and peremptorily refufed to make any anfwer to interrogatories. The counfellors of Elizabeth were difturbed with his obftinacy; and having certified him, that the rack would foon render him more pliant, he was ordered into clafe keeping in a dark apartment of the tower. When he had remained a few days in this melan. choly fituation, four privy-counfellors, the lord ad miral, the lord Burleigh, Sir Francis Knollys, and Sir Thomas Smith, went to the tower, and caufed him to be brought to them to the lieutenant's lodging. After having affured him that he was charged by all the prifoners as the principal contriver of the conlpiracy, they infifted, in the name of their fovereign, that he fhould explain fully the part he had acted. The confeffions of the duke of Norfolk and his. fervants, of the lord Lumley, Sir Thomas•Stanley, and other gentlemen, with the difcourfe and difpatches of the queen of Scots, were fet before him. 'They now protefted

## S C O

mies, and affured her that if they fhould poffefs them- Scotland.
upon their honour, that if he would make a free and open declaration of his proceedings, it fhould neither be employed againft himfelf, nor againft any other perfon; but that if he fhould continue to be refolute in refufing to give this fatisfaction to their queen, who was anxious to fearch the matter to the bottom, they were inftructed to let him know, that fhe would abfolutely confider him as a private perfon, and order him to be tried and executed as a traitor. In this extremity he accepted the conditions held out to him, and difcloled minutely all the tranfactions of the principal parties in the confpiracy. But while he defcribed the offences of his miftrefs, the duke of Norfolk, and himfelf, he could not avoid to detract from their blame by apologies. It was natural, he faid, for the queen of Scots to exert the moft flrenuous endeavours in her power to recover her freedom and crown; and the methods he adopted to obtain her purpofes ought to be confidered in connection with the arts of Elizabeth, who pertinacioully denied her accefs to her prefence, who kept her a clofe prifoner in contempt of all the principles of humanity and juftice, and who afforded an open and powerful affiftance to her enemies. The duke of Norfolk he was earneft to excufe on the foundation of the advances which had been made in his marriage with the queen of Scots. Their plighted love, and their engagements, did not allow him to forlake her. As for himfelf, he was her ambaffador and her fervant ; and being highly indebted to her enerofity and kindnefs, he could not abandon her in captivity and diftrefs without incurring the guilt of the moft finful treachery and ingratitude. The daring propofal he had made to feize the perfon of Elizabeth was the point, he obferved, which feemed to prefs upon him the moft feverely; and he intreated them to believe, that he had moved it only with the view of trying the courage of the duke of Norfolk. The privy-counfellors of Elizabeth were now in poffer. fion of all the evidence they could expect in this im. portant bufinefs. Norfolk was admonifhed to prepare for his trial; and bifhop Lefly perceived, that thongh he might efcape with his life, he would never more be permitted to refide in England, and to act there as the ambaffador, the minifter, and the friend of the queen of Scots. a blow to Mary which fhe could never recover. Her molt faithful friends were languifhing in prifons upon her account ; fhe had no longer the counfels of the bifhop of Rofs; and the Spanifh ambaffador, who had entered into her concerns with an unfcrupulous cordiality, had been ordered to withdraw from England. The trial and condemnation of Norfolk foon followed, and plunged her into the moft calamitous diftrefs.
The maffacre of the Proteftants at Paris in 1572 proved alio extremely detrimental to her. It was inhad had been formed at Bayonne for the extermination of the reformed. The Proteftants were everywhere tranfported with rage againit the Papifts. Elizabeth prepared herfelf againft an attack from the Roman CathoIic powers; and was haunted with the notion that they meant to invade her kingdom, and to give it to the queen of Scots. Her ambaffador at Paris, Sir Francis Walfingham, augmented her apprehenfions and terror. He compared her weaknels with the frength of her ene-
felves of Scotland, fhe would foon ceafe to be a 778 . queen. He reprefented Mary as the great caufe Walfing. of the perils that threatened her perfonal fafety and ham coum. the tränquillity of her kingdom ; and as violent difeafes lels Elizarequired violent remedies, he ferupled not to counfel heth to put her to unite Scotland to her dominions, and to put Mary to to death a rival whofe life was inconfiftent with her fecurity. The more bigotted Proteftants of Scotland differed not very widely in their fentiments from Sir Francis Walfingham; while thofe of them who were more moderate were ftill more attached to their religion than to Mary ; and amidft the indignation and horror into which the fubjects of Scotland were thrown by the fanguinary outrages of Charles IX. and Catharine de Medicis, they furveyed the fufferings of their fovereign with a diminifhed fympathy.
This year the regent, finding himelf befet with dif. The : 978 ficulties which he could not overcome, and the affairs $\mathrm{g}: \mathrm{n}$ : dief, of the nation involved in confufion from which he could nd is not extricate them, died of melancholy, and was fuc- Morton, ceeded by the earl of Morton.

During the regency of the earl of Marre, a remarkable innovation took place in the church, which deferves to be particularly explained, being no lefs than the introduction of Epifcopacy inftead of the Prebyterian form of worthip. While the earl of Lenox was 780 regent, the archiop. S A becaufe he was ftrongly fufpected to have had a concern in?o scotin the death of the earl of Murray ; after which the land. earl of Morton procured a grant of the temporalities of that fee. Out of thefe he allotted a ftipend to Mr John Douglas, a Proteftant clergyman, who took upon him the tide of arclibifhop. I his violence excited cenfure and murmurs. In the language of the times, it was pronounced to be a profanation of the kirk, and a high contempt of God ; and it underwent the fcrutiny of the miniftry in applications and complaints to the regent. 'The matter was doubtlefs of too much importance to be overlooked; and a commiffion of privy-counfellors and clergymen was appointed in the name of the king to inquire into it, and to reform and improve the policy of the church. This commiffon, upon the part of the privy-council, confifted of the earl of Morton, the lord Ruthven, Robert abbot of Dinfermline, Mr James Macgill, Sir John Ballenden, and Colin Campbell of Glenorchie ; and upon the part of the church the were named John Erfkine of Dun, and Mr John Winram, Mr Hay, Mr Lindfay, Mr Pont, and Mr John Craig. The confultations and debates were long ; and the influence and management of the earl of Morton directed their deterninations. It was refolved, that till the majority of the king, or till the wifdom of the three eftates fhould be confulted, the titles of archbihop and bihop fhould continue as in the times which preceded the reformation; and that a chap. ter of learned minifters fhould be annexed to every metropolitan or cathedral feat. It was determined that the fees, as they became vacant, fhould be given to thofe of the Proteflant miniftry who were moft eminent for their qualifications; that the archbifbops and bifhops fhould exercife no higher jurifdiction than what was per mitfed to fuperintendants; and that they hould be fubject to the controul of the general affemblies of the church. It was agreed, that all abbots, priors, and

## $\mathrm{s} C \mathrm{O}$

 examined by the bifhop or fuperintendant of the diocefe or precinct where the preferment was fituated; and that their fitnefs to reprefent the church in parliament fhould be duly inquired into. It was judged that the king and the regent fhould recommend qualified perfons to vacant bifhoprics, and that the clections of them fhould be made by the chapters of the refpective cathedrals. It was ordered that all benefices with cure under prelacies fhould only be difpofed of to officiating minifters; that every minifter fhould receive ordination from the bifhop of the diocefe, or the fuperintendant of the province; and that the bifhops and fuperintendants, upon the ordination of minifters, fhould exact an oath from them to recognize the authority of the king, and to pay canonical obedience to their ordinary in all things that were lawful.$13 y$ thefe artful regulations the earl of Morton did not mean folely to confult his own rapacity or that of the nobles. 'The exaltation of the Proteftant church to be one of the three eftates was a confequence of them; and the clergy being the ftrenuous enemies of Mary, lie might by their means fecure a decided influence in parliament. The earl of Marre, as regent, giving his fanction to the proceedings of the commifition; they were carried into pracice. The delulive expectation of wealth, which this revival of Epifopacy held out to the miniftry, was flattering to them; and they bore with tolerable patience this fevere blow that was ftruck againft the religious policy of Geneva. Mr John Douglas was defired to give a fecimen of his gifts in preaching; and his election took effect, notwithitanding the oppofition that was made to it by John Knox and other ecclefiaftics, who fond up for the rules and forms which had been eftablifhed at the reformation. He wàs inaugurated in his office by the bifhop of Caithnefs, Mr John Spotfwood fuperintendant of Lothian, and Mr David Lindfay, who violating the book of difcipline, communicated to him his character and admiffion by the impofition of hands. This was a fingular triumph to Epifcopacy; and the exaltation of Douglas included other peculiarities remarkable and offenfive. He denied that he had made any fimoniacal agreement with the earl of Morton; yet it was known that the revenues of the archbifhopric were almolt wholly ingrofed by that nobleman. He had promifed to refign, upon his inftalment, the office of rector which he held in the univerfity of St Andrew's: yet he refufed to execute this engagement. He was in a very advanced age; and his mental qualifications, which had never been eminent, were in a ftate of decay.

A general affembly, which was holden at St Andrew's, confidering the high moment of the new regulations introduced into the church, appointed commiffioners to go to John Knox, who was at this time indifpofed, and to confult with him deliberately in his houfe, whether they were agreeable to the word of God. But from the arts of the nobles, or from the ficknefs of Jnox, it happened that this conference was not carsied into execution. In a general affembly, however, which met at Perth, the new polity was reported and examined. The names of archbifhop, dean, arch-deacon, chauctllor, and chapter, were excepted againft as Popifh diftinctions, and as flanderous to the ears of pious Chritians. A wilh was expreffed that they might
$31 \quad 5 \quad C \quad 0$
be exchangeed for tities lefs profane and fuperfitions; sentla and an unanimous proteftation was made, that the new polity was mercly a temporary expedient, and fould only continue and prevail till a nore perfect order flould be obtained from the king, the regent, and the nobility: This tolerating refolution left the new polity in its full force; and a colourable foundation was now eftablifhed for the laity to partake in the profits of bifhoprics. The timoniacal paction of Morton and Douglas was not long a matter of lincrularity. M. James Boyd was appointed to the archbifhopric of Glar. gow, Mr James Paton to the bifhopric of Dunkeld, and Mr Andrew Graharn to the fee of Dumblain ; and thefe compromifirg ecclefiatics, uyon being allowed competencies to themfelves, gratitied their noble friends with the greateft proportion of their revenues. The virtue of the common people approved not this fpirit of traffic; and the bifhops of the new polity were treated openly with reproach or with ridicule.

I he year 1572 is alfo remarkable for the death of Death John Knox, whofe miftaken zeal had contributed not a John K little to briug upon the queen thofe misfortunes with which the was now oppreffed. Neither by his death, however, nor by the change of the regency, could the now be relieved. The earl of Morton was fo much devoted to Elizabeth, that he received particular inflructions from her how to guide the young king. His elevation, indeed, gave the finifhing ftroke to the queen's affairs. Ie employed himfelf with facefs in dividing Elizabe her party among themfelves, and by his means the refoived duke of Chatelherault and the earl of Huntley were induced to forfake her. As for Elizabeth, fie was bent on putting Mary to death; but as no crime cuuld be alleged againft her in England, Ge thought it proper that fhe thould be carried back to fuffer death in her own dominions. This propofal, however, was rejected; and the friends who remained true to Mary once more began to indulge themfelves in hopes of fuccours from France. New misfortunes, however, awaited them.The càtle of Ediaburgh, which had hitherto been held for the queen by Kirkaldy of Grange, was obliged to furrender to an Englifh army commanded by Sir Wil- bureht liam Drury. Kirkaldy was folemnly affured by the ken by Engliih commander of lis life and liberty; but Eliza- Englifh beth violated this capitulation, ard commanded him to ${ }^{\text {larty. }}$ be delivered up to the regent. An hundred of his relations offered to become vaflals to Morton, and to pay him 3000 merks yearly, if he would fpare his life; but in vain: Kirkaldy and his brother Sir James were hanged at Edinburgh. Maitland of Lethington, who was taken at the fame time, was poifoned in the prifon houie of Leith.

The jealoufy of Elizabeth cid not diminifh with the ${ }^{984} 4$ decline of Mary's caufe. She now treated her withed with more rigour than ever, and patronifed Morton in all the greater enormities which he committed againft her friends. 5our th Lefly bifhop of Rofs had been long imprifoned in England, on account of his concern in the duke of Norfolk's confpiracy. Morton earneftly folicited the queen to deliver him up, and would undoubtedly have put him to death ; but as he had acted in the charakter of ambaffador from Mary, this was judged impolitic, and tire prelate was fuffered to depart for France. When he arrived there, he endeavoured in vain to ftir up the em. peror, the pope, and the duke of Alva, to exert themfelves

## $S$ C O $\quad[8 j$ J S C O

felves in behalf of the queen of Scotland : and, in 1574, the misfortunes of his royal miftrefs were farther aggravated by the dcath of Charles IX. of France, and her uncle the cardinal of Lorraine. The regent, in the mean time, ruled with the moft defpotic fway. He twice coined bafe money in the name of his fovereign ; and after putting it into circulation the fecond time, he iffined orders for its paffing only for its intrinfic value. The duke of Chatelherault happening to die this year, the rerent took evcry method of ruining all thofe of his name and family. He committed to prifon all the Hamiltons, and every perion of diftinction who had fought for the queen at the battle of Langfide, and compelled them to buy their liberty at an exorbitant price. He initigated Douglas of Lochleven to affaffinate lord Arbroath, and it was with difficulty that the latter efcaped the ambufh that was laid for him. Reid, the bifhop of Crkney, having left his eftate to pious and charitable ufes, the regent prohibited the execution of the will, and took upon himfelf the adminiftration. To be rich was a fufficient crime to excite his vengeance. He entered the warehoufes of merchants, and confifcated their pioperty; and if he wated a pretence to juftify his conduct, the judges and lawyers were rcady at his call.

In this difaftrous period the clergy augmented the general confufion. Mr Andrew Melvil had lately seturned from Geneva; and the difcipline of its affernbly being confidered by him as the molt perfect model of ecclefiattical policy, he was infinitely offended with the introduction of Epifcopacy into Scotland. His learning was confiderable, and his fkill in languages was profound. He was fond of difputation, hot, violent, and pertinacious. The Scottifh clergy were in a humour to attend to him ; and his merit was fufficient to excite their admitation. Infligated by his practices, John Drury, one of the minitters of Edinburgh, called in queftion, in a general affembly, the lawfulnefs of the bifhops, and the authority of chapters in electing them. Melvil, after commending his zeal and his motion, declaimed concerning the flourifhing ftate of the eftabliftment of Geneva; and having recited the opinions of Calvin and Beza upon ecclefiafical government, maintained, that there fhould be no of we-bearers in the church whofe titles were not feen in the book of God. He affirmed, that the term bifoop was nowhere to be found in it in the fenfe in which it was commonly underftood, as Chrift allowed not any fuperiority amonig minitters. He contended that Chrift was the only lord of his church, and that the minifters of the word were ail equal in degree and power. Hie urged, that the eltate of the bifhops, befide being unlawful, had grown unfeemly with corruptions; and that if they were not removed out of the church, it would fall into decay, and cridanger the interefts of religion. His fentiments were reeeived with flattering approbation; and though the archbifhop of Glafgow, with the bifhops of Dunkeld, Galloway, Brechin, Dumblain, and the Ines, were prefent in this affembly, they ventured not to detend their vocation. It was refolved, that the name of
bifkop conierred no ditinction or rank; that the office sentiand. was not more honourable than that of the other minifters; and that by the word of God their functions confifted in preaching, in adminifering the facraments, and in exercifing eccleliaftical difcipline with the confent of the elders. The Epifcopal eftate, in the meanwhile, was watched with anxious obfervation; and the faults and demerits of every kind, which were found in iudividuals, were charged upon the order with rudenefs and afperity. In a new affembly this fubject was again canvaffed. It was moved, whether bifhops, as comftituted in Scotland, had any authority for their fimetions from the Scripturcs? After long debates, it was thought prudent to avoid an explicit determination of this important queftion. But a confirmation was befowed upon the refolution of the former affembly ; and it was eflablifhed as a rule, that every bifhop fhould make choice of a particular church within his dioceff, and fhould actually difcharge the duties of a minitter.

The regent, difturbed with thefe proceedings of the brethren, was difpofed to ambe and to deceive them. He fent a ineffenger to advife them not to infringe and distigure the eftablifhed forms; and to admonith them, that if their averfion from Epifcopacy was infurmountable, it would become them to think of fome mode of ecclefiafticai government to which they could adhere with conitancy. The affembly taking the advantage of this meflage, made a formal intimation to him, that they would diligently frame a lafting platform of polity, and fubmit it to the privy-council. They appointed, accordingly, a committee of the brethren for this purpofe. The bufinefs was too agrceable to be neglected; and in a fhort time Mr David Lindfay, Mr Ja:nes Lawfon, and Mr Robert Pont, were deputed to wait upon the regent with a new fcheme of ecclefiattical government. After reminding him, that he had been a notable inftriment in purging the realmof Popery, and begging that he would confult with them upon any of its articles which he thought improper or incomplete, they informed him, that they did not account it to be a perfect work to which nothing could be added, or from vihich nothing could be taken away; for that they would alter and improve it, as the A1mighty God might farther reveal his will unto them. The regent, taking from them their fchedule, replied, that he would appoint certain perfons of the privy-council to confer with themi. A conference was even begutn upou the fubject of their new eftablifhment; but from his arts, or from the troubles of the times, no advances were made in it.

788
'This year the earl of Bothwel died in Denmark; Death o and in his laft moments, being ftung with remorie, he Bothwela confeffed that he had been guilty of the king's murder, revealed the names of the perfons who were his accoinplices, and with the moft folemn proteftations declared the honour and innocence of the queen. His confeffion was tranfmitted to Elizabeth by the king of Denmark; but was fuppreffed by her with an anxious folicitude.

office of t ©
(u) Jebb, Vol. II. p. $22 \%$. It has never been publifhed. Keith and other hiforians have preferved what they gent. call the earl of Bothruel's declaration at bis death, and account it to be genuine. Their partiality for Mary induced them the more eafily to fall into this miftake. The paper they give is demonftratively a forgery; and the warat of the real confeffion of Bothwel is ftill a deficiency in our hiftory.

## S C O

rendered himfelf obnoxious to the beit part of the nobility, he was, in 1577, compelled to refign his office into the laands of James VI. ; but as his majefty was then only twelve years of age, a general council of twelve peers was appointed to affift him in the adminiftration. Next year, however, the earl of Morton having found means to gain the favour of the young king, procured the diffolution of this council; and thus being left the fole advifer of the king, he hoped once more to be raifed to his former greatnefs. This could not be done, however, without keeping the king in a kind of captivity, fo that nobody could have accefs to him but himfelf. The king, fenfible of his fituation, fent a difpatch to the earls of Argyle and Athole, intreating them to relieve him. An army for this purpofe was foon raifed; and Morton's partifans were in danger of being defeated, had not the oppofite party dreaded the vengeance of Elizabeth, who was refolved to fupport the earl of Morton. In confequence of this a nezociation was entered into, by which it was agreed, that the earl of Argyle, with fome others, fhould be admitted into the king's council; and that four noblemen fhould be chofen by each party to confider of fome proper method of preferving tranquillity in the nation.

790
He poifons
the earl of

This pacifcation did not greatly diminifh the power of Morton. He foon got rid of one of his principal antagonits, the earl of Athole, by poifoning him at an entertainment ; after which he again gave a loofe rein to his refentments againft the houfe of Hamilton, whom he perfecuted in the moft cruel manner. By thefe means, however, he drew upon himfelf a general hatred; and he was fupplanted in the king's favour by the lord d'Aubigney, who came from France in the year 1579, and was created earl of Lenox. The next year Morton was fufpected of an intention to deliver up the king to Elizabeth, and a guard was appointed to prevent any attempts of this kind. The queen of England endeavoured to fupport her zealous partifan; but without effect. He was tried, condemned, and executed, as being concerned in the murder of Darnley. At the place of execution, it is faid that he confeffed his guilt; but of this the evidence is not quite fatisfactory. "It is however certain that lie acknowledged himfelf privy to the plot formed againft the life of the king; and when one of the clergymen attending him before his execution obferved, that by his own confeffion he merited death in foreknowing and concealing the murder, he replied "Ay but, Sir, had I been as innocent as St Stephen, or as guilty as Judas, I mult have come to the fcaffold. Pray, what ought I to have done in this matter? You knew not the king's weaknefs, Sir. If I had informed him of the plot againt his life, he wonld have revealed it even to his enemies and thofe concerned in the defign; and I would, it may be, have loft my own life, for endeavouring to preferve his to no purof Morton, produced no beneficial confequences to the unfortunate Mary. In the year 158\%, fhe addreffed a letter to Caftelnau the French ambaffador, in which fhe complained that her body was fo weak, and her limbs fo feeble, that fhe was unable to walk. Caftelnau therefore intreated Elizabeth to mitigate a little the rigours of Mary's confinement ; which being refufed, the latter had thoughts of refigning her claims to
the crown both of England and Scotland into the Scotlal hands of her fon, and even of advifing him to ufe every effort in his power to eftablifh his claim to the Englifh crown as preferable to that of Elizabeth. But being apprehenfive of danger from this violent method, fhe again contented herfelf with fending to the court of England ineffectual memorials and remonftrances. Elizabeth, inftead of taking compaffion on her miferable fituation, affiduounty eneouraged every kind of diforder in the kingdom, on purpofe to have the queen more and more in her power. Thus the Scottifh malcon. The kin 193 ents finding themfelves always fupported, a confpiracy taken
was at laft entered into, the defign of which was toloner, hold James in captivity, and to overthrow the authority of Arran and Lenox, who were now the principal perfons in the kingdom. The chief actors in this confpiracy were the earls of Gowrie, Marre, and Glencairn, the lords Lindfay and Boyd, with the mafters of Glammis and Oliphant. By reafon of the youth and imbecillity of the king, they eafily accomplifhed their purpofe; and having got him in their power, they promifed him his liberty, provided he would command Lenox to depart the kingdom. This was accordingly done; but the king found himfelf as much a prifoner as before. The more effectually to detain him in cuftody, the rebels conftrained him to iffue a proclamation, wherein he declared himifelf to be-at perfect liberty. Lenox was preparing to advance to the king's relief with a confiderable body of forces, when he was dif. concerted by the king's peremptory command to leave Scotland; upon which he retired to Dumbarton, in order to wait for a more favourable opportunity. The earl of Arran, being more forward, was committed to clofe cultody for fome time, but afterwards confined only in his houfe of Kinneil. The rebels took upon them the title of " lords for the refurmation of the ftate."

The clergy, who had all this time been exceedingly which averfe to Epifopacy, now gave open countenance to approved the lords of the reformation. On the 13 th of Octo- of by the ber 1582 , they made a folemn act, by which the raid clergy. of Ruthven, as the capture of the king was called, was deemed a fervice moft acceptable to all who feared God, refpected the tris religion, and were anxious for the prefervation of the king and ftate; and every minifter was commanded to declaim from his pulpit upon the expediency of this meafure, and to exhort the people to concur with the lords in profecuting the full deliverance of the church, and the perfect reformation of the commonwealth. Not fatisfied with this approbation of the clergy, the confpirators got their proceedings approved by the ftates of Scotland, as "a good, a thankful, and a neceffary fervice to the king." At the fame time it was enacted, that no fuit civil or criminal of any kind fhould ever be inftituted againft the perfons concerned in it. Soon after this, Lenox took his leave of Seotland, and failed for France, where he died.

The unfortunate Mary was driven to defpair when the Masy heard that her fon was taken prifoner by rebels who writes to had been inftigated by Elizabeth. In this diftrefs, fhe addreffed a moft firited letter to Elizabeth, in which fhe at once afferted her own innocence, and fet forth the conduct of Elizabeth lierfelf in fuch language as muft have put the moft impudent of her adverfaries to

## $5 \mathrm{C} O$

in a correfpondence with fome of the fugitive lords, Scotland,
the blufh. Elizabeth could not reply, and therefore had recourfe to her ufual arts of treacherous negocia. tion. New terms were propofed to Mary, who would gladly have fubmitted almoft to any thing, provided the could procure her freedom. It was propofed, as had often been done before, to affociate the queen of Scots with her fon in the government; but as this was to be referred to the king, who was in the hands of Elizabeth's friends, and to the parliament, who were under the power of the fame faction; it is eafy to fee that 110 fuch affociation ever could take place, or indeed was ever intended.

A fter the death of Lenox, the confpirators appre-ant- hended no further danger, little fuppofing that a prince fo young and unexperienced could deliver himfelf from captivity. This, however, in the year 1583 , he effected in the following manner. A convention of the eftates had been fummoned to meet at St Andrew's. James, whom the earl of Arran, notwithftanding his confinement at Kinneil, had found means to inftruct and advife, pretended a defire of vifiting his grand-uncle the earl of March, who refided at St Andrew's, and was for that purpofe permitted to repair thither a few days before the convention. The better to deceive the earls of Gowrie, Angus, and Marre, who attended him, he took up his lodgings in an old inn, which was quite open and defencelefs. But having expreffed a defire to fee the caftle of St Andrew's, he was admitted into it ; and colonel Stuart, who commanded the cafte, after admitting a few of his retinue, ordered the gates to be fhut. The earls of Argyle, Mariichal,' Montrofe, and Rothes, who were in concert with the king, hattened to make him an offer of their fwords. The oppofite faction, being unprepared for hoftilities, were filled with confternation. Of all the confpirators, the earl of Gowrie alone was admitted into the king's prefence, by the favour of colonel Stuart, and received his pardon. The earls of March, Argyle, Gowrie, Mariichal, and Rethes, were appointed to be a council for affifting the king in the management of his affairs; and foon after this James fet out for Edinburgl. The king no fooner found himfelf at liberty, than, by the advice of his privy council, he iffued a proclamation of mercy to the confpirators ; but they, flattering themfelves with the hopes of fupport from Elizabeth, obftinately refufed to accept of his pardon. In confequence of this, they were denounced rebels. Elizabeth failed not to give them underhand all the encouragement fhe could, and the clergy uttered the mof feditious difcourfes againit the king and government ; and while they railed againft Popery, they themfelves maintained openly the very characteriftic and dinftinguifhing mark of Popery, namely, that the clerical was entirely independent of the civil power.

At laft the rebels broke forth into open hoftilities; but by the vigilance of Arran, the earl of Gowrie, who hiad again begun his treafonable practices, was committed to cuftody; while the reft, unable to oppofe the king, who appeared againt them with a formidable army, were obliged to fly into England, where Elizabeth, with her ufual treachery, protected them.

The earl of Gowrie fuffered as a traitor ; but the feverity exercifed againf him did not intimidate the clergy. They fill continued their rebellious practices, until the king being informed that they were engaged
citations were given to their leaders to appear before the privy-council. The clersymen, not daring to ap- 880 pear, fled to England; and on the 20th of May 1584, ings again! the king fummoned a convention of the eftates, on pur-the clergyo pofe to lumble the pride of the church in an effectual manner. In this affembly the raid of Ruthven was declared to be rebellion, according to a declaration which had formerly been made by the king. And, as it had grown into a cuftom with the promoters of fedition and the enemies of order, to decline the judgment of the king and the council, when called before them to anfwer for rebellious or contumelious \{peeches, uttered from the pulpit or in public places, an ordination was made, afferting that they had complete powers to judge concerning perfons of every degree and function; and declaring, that every act of oppofition to their jurifdiction fhould be accounted to be treafon. It was enacted, that the authority of the parliament, as. conftituted by the free votes of the three eftates, was full and fupreme; and that every attempt to diminifh, alter, or infringe, its power, dignity, and jurifdiction, fhould be held and punifhed as treafon. All jurifdictions and judgments, all affemblies and conventions, not approved of by the king and the three eftates, were condemned as unlawful, and prohibited. It was ordained, that the king might appoint commiffioners, with powers to examine into the delinquencies of clergymen, and, if proper, to deprive them of their benefices. It was commanded, that clergymen fhould not for the future be admitted to the diznity of lords of the feffion, or to the adminitration of any judicature civil or criminal. An ordination was made, which fubjected to capital punifhment all : perfons who fhould inquire into the affairs of ftate with a malicious curiofity, or who fhould utter falfe and flanderous fpeeches in fermons, declamations, or familiar difcourfe, to the reproach and contempt of the king, his parents, and progenitors. It was ordered that a guard, confifting of 40 gentlemen, with a yearly allowance to each of 2001 . Should continually attend upen the king. This parliament, which was full of zeal for the crown, 80 : ** did not overlook the hiftory of Buchanan, which about to fempts this time was exciting a very general attention. It Buchanan's commanded, that all perfons who were poffeffed of copies hitory. of his chronicle, and of his treatife on the Scottifh government, fhould furrender them within 40 days, under the penalty of 2001 . in order that they might be purged of the offenfive and extraordinary matters they contained. This ftroke of tyranny was furious and ineffectual. Foreign nations, as well as his own countrymen, were filled with the higheft admiration of the genius of Buchanan. It was not permitted that his writings fhould fuffer mutilation; they were multiplied in every quarter ; and the feverity exercifed againt them only ferved the more to excite curiofity, and to diffufe his reputation.

While the parliamentary acts; which Atruck againt the importance of the church, were in agitation, the minifters deputed Mr David Lindfay to folicit the kin endeavour miniters deputed Mr David Lindray to folicit the king of fupport fiaftical eftablifhment, without the confultation of the againß the general affembly. But the earl of Arran having intelligence of this commiffion, defeated it, by committing Mr Lindfay to prifon as a fpy for the difcontented nobles. Upon the publication, however, of thefe acts

## $5 \quad \mathrm{C} 0$

fectiand by the hexvilds, Mr Robert Pont minitter of St Cuthbert's, and one of the fenators of the court of feffion, with Mr Walter Balcanqual, protefted formally in the name of the church, that it diffented from them, and that they were confequentiy invalid. Having made this proteftation, they inftantly fled, and were pros claimed traitors. By letters and pamphlets, which were artfully foread among the people, their paffions were rouzed againt the king and his council. The minilers of Edinburgh took the refolution to forfake their focks, and to retire to England. And in ar an pology circulated by their management, they anxioufo ly endeavoured to awaken commileration and pity. They masnified the dangers which threatened them ; and they held out, in vindication of their conduct, the example of the prophets, the apofles, the martyra, and of Chrift himfelf, who all concurred, they faid, in opyofing the ordinations of men, when contradictory to the will of heaven, and in declining the rage of the enemies of God. The king appointed his own chaplaing end the archbinop of St Andrew's to perform the miniterial functions in his capial. The clergy over Scotland were commanded to fubicribe a declaration, which imperted the fupremacy of the king over the shurch, and their fubmiffion to the authority of the bifoopa. The national ferments still increafed in violence. Many miniters refufed to fubferibe this declaration, and were deprived of their livings. It was contended, that to make the king fupreme over the church was no better than to fet up a new pope, and to commit trea. fon againit Jefus Chrift. It was urged, that to overthrow affemblies and prebyteries, and to give dominion to bifhops, was not only to overfet the eftablifhed polity of the church, but to deftroy religion itfelf, For the bifhops were the flaves of the court, were fchifinasical in their opinions, and depraved in their lives. It was affirmed, that herefy, atheiim, and popery, would frike a deep roat, and grow into trength. And the people were taught to believe, that the bifhops would corrupt the nation into a refemblance sith themfelves: and that there everywhere prevailed diffimulation and blafphemy, perfecution and obfcenity, the profanation of the Scriptures, and the breach of taith, covetoufnefs, perjury, and facrilege. It was reported abroad, that The mininters alone were entrufted with ecciefiaftical functions, and with the fword of the word ; and that it was moft wicked and profane to imagine, that Jefus Chrift had ever committed the keys of the kingdom of heaven to civil magiftrates and their fervants or deputies.

While the clergy were thus impotently venting their wrath, Elizabeth, alarmed beyond meafure at this fudden revolution, and terrified by a confeffion extorted by the rack from one Francis 'Thregmorton, concerning a combination of the Catbolic princes to invade England, began to treat with Mary in a more fucere manner than ulual; but having gained over to her fide the earl of Arran, the oniy man of activity in Scotland, the refolved to proceed to extremities with the queen of Scots. 'ithe Roman Catholick, both at home and abroad, were inflamed ageint her with a boundefs and implacable rage. There prevailed many rumours of plots and conspiracies againit her kingdom and her life. Books were publifhed, which detailed her cruel. sies and injutice to Mary in the mont indignant lan-
guage of reproxeh, and which recompended her tflate acepla fination as a moft meritorious act. The eanl of Arran had explained to her the practices of the queen of Scote with her fon, and had difcovered the intrigues of the Catholic princes to gain haim to their views, While inemat
 to her, circumfances happened which conirmet them difope in their tlrength, and provoked her to give the fulleft fcope to the malignity of her pafiong. Crichton, a Scottifl Jefuit, pafinge into his own country, was taken by Netherland pirates; and fome papers which he had torn in pieces and thrown into the fea being recovered, were tranfmitted to Enghand, Shir William Wade put them together with dexterity; and they denionferated beyond a doubt, that the invation of England was concerted by the Pope, the king of Spain, and the duke of Guife. About this time, ton, a remarkable letter was Remar intercepted from Mary to Sir Francis Enyicfitd, Sha able ict complained in it that fore conld have no reliance upon, terone the integrity of Elizabeth, and that foe expected no by Eiiz bappy iffue to any treaty which might be opened forbeth. her reftoration and liberty. She urged the advance. ment of the " great plot:" the intimated, that the prince her fon was tavourable to the "defigmment," and difpofed to be directed by her ativice: the intreat. ed, that every delicacy with regard to her own flate and condition thould be laid afide without foruple; and the affured him, that fie would moft willingly fuf. fer perils and dangers, and even death itfelf, to give re. lief th the oppreffed children of the church. Thefe difcoveries, fo exalperating to the inquietudes and di. ftreffer of Elizabeth, were followed by a deep and ge. neral conflemation. The terror of an invafion fpread itfelf with rapidity nver England ; and the Proteltants, while they trembled for the life of their champion, wera ftill more alarmed with the dangern which threatened their religion.

In this thate of perplexity and difraction, the courn fellors of Elizabeth did not forget that they had heen her infruments in perfecuting the queen of Scots, and of the feverities with which the had treated the Roman Catholics. They were fully fenfible, that her greato nefs and fafety were intimately connected with their own; and they concurred in indulging her fears, jealouties, and refentment. It was refolved that Mary fhould perith. An aflociation was furmed, to which perfons of every condition and degree were invited, The prooon. teffed bufinefo of this affociation or fociety was the pre. fervation of the life of Elizabeth, which it was affirined was in danger, from a confpiracy to udvance fome pretended title to the crown ; and ite members vowed and protefled, by the majefty of God, to employ their whole power, their budies, lives, and goots, in her fervice; to withtand, as welf by force of arms as by other methods of revenge, all perfons, of whatoever nation or rank, who foonld atternpt in any form to invade and injure her fatety or her life, and never to defift from the forcible purfuit of them till they thould be completely exterminated. 'I hey alfos vowed and protefted, in the prefence of the eternal Goci, to profecute to dettruc. tion any pretended fucceffor by whom, or for whon, the deteftable deed of the aflafination of Elizabeth fould be attempted or committed. The earl of Lei cefter was in a particular manner the patron of this alSociation; and the whole infuence of Elizabeth and her

## S C O [ 89 ] S C o

解 bond or league which was to preparé the way, and to be a foundacion for accomplifhing the full deftruction and ruin of the Scottifh queen.

A combination fo refolute and fo fierce, which point. cd the death of Mary, which threatened her titles to the crown of England, and which might defeat the fucceffion of her fon, could not fail to excite in her bofom the bittereft anxieties and perturbation. Weary of her fad and long captivity, broken down with calamities, dreading affictions ftill more cruel, and willing to take away from Elizabeth every poffible pretence of feverity, fhe now framed a fcheme of accommodation, to which no decent or reafonable objection could be made. By Naw, her fecretary, fhe prefented it to Elizabeth and her privy-council. She protefted in it, that if her liberty fhould be granted to her, the would enter into the clofeft amity with Elizabeth, and pay an obfervance to her above every other prince of Chritendom; that fhe would forget all the injuries with which the had been loaded, acknowledge Elizabeth to be the rightful queen of England, abftain from any claim to her crown during her life, renounce the title and arms of England, which the had ufurped by the command of her huband the king of France, and reprobate the bull from Rome which had depofed the Englifh queen. She likewife protefted, that fhe would enter into the affociation which had been formed for the fecurity of Elizabeth; and that fhe would conclude a defenfive league with her, provided that it fhould not be prejudicial to the ancient alliance between Scotland and France; and that nothing flould be done during the life of the Englifh queen, or after her death, which fhould invalidate her titles to the crown of England, or thofe of her fon. As a confirmation of thefe articles, fhe profeffed that the would confent to ftay in England for fome time as an hoftage; and that if fhe was permitted to retire from the dominions of Elizabeth, fhe would furrender proper and acceptable perfons as fureties. She alfo protefted, that the would make no alterations in Scotlarid; and that, upon the repeal of what had been enacted there to her difgrace, fhe wonld bury in oblivion all the injuries fhe had received from her fubjects : that fhe would recommend to the king her fon thofe counfellors who were moft attached to England, and that the would employ herfelf to reconcile him to the fugitive nobles: that fhe would take no fteps about his marriage without acquainting the queen of England; and that, to give the greater firmnefs to the propofed accommodation, it was her delire that he fhould be called as a party to it : and, in fine, fhe affirmed, that fhe would procure the king of France and the princes of Lorraine to be guarantees for the performance of her engagements. Elizabeth, who was fkilful in hypocrify, difcovered the moft decifive fympVoc. XVII. Part I.
toms of fatisfaction and joy when thefe overtures were communicated to her. She made no advances, however, to conclude an accommodation with Mary; and her minifters and courtiers exclaimed againft lenient and pacific meafures. It was loudly infifted, that the liberty of Mary would be the death of Elizabeth ; that her affociation with her fon would be the ruin both of England and Scotland; and that her elevation to power would extend the empire of Popery, and give a deadly blow to the doctrines of the reformation.

In the mean time, an act of attainder had paffed againft the fugitive nobles, and their eftates and honours were forfeited to the king; who, not fatistied with this, fent Patrick mafter of Gray to demand a furrender of their perfons from the queen of Enoland. As this ambaffador had refided fome time in France, and been intimate with the duke of Guife, he was re cominended to Mary : but being a man of no principles, he eafily fuffered himfelf to be corrupted by Elizabeth ; and while he pretended friendfhip to the unfortunate queen, he difcovered all that he knew of the intentions of her and her fon. The moft fcandalous Falfe re falfehoods were forged againft Mary ; and the lefs fhe poitsraifed was apparently able to execute, the more the was faid aganft the to defign. That an unhappy woman, confined and fiects of guarded with the utmoft vigilance, who had not for many years fufficient intereft to procure a decent treatment for herfelf, fhould be able to carry on fuch clofe and powerful negociations with different princes as were imputed to her, is an abfurdity which it mult for ever be impoffible to reconcile. That the had an amour with her keeper the earl of Shrewfury, as was now reported, might be; though of this there is no proof. This, however, could fcarce be treafon againft Elizabeth ( x ) : yet, on account of this, Mary was committed to the charge of Sir Amias Paulet and Sir Drue Drury, zealous puritans, and who, it was hoped, would treat her with fuch feverity as mizht drive her to defpair, and induce her to commit forme rafly action. The earl of Leicefter, faid to be Elizabeth's paramour even ventured to fend affaffins, on purpofe, by the mur der of Mary, at once to deliver his miftrefs from her fent to fears. But the new keepers of the caftle, though re- her. ligious bigots, were men of ftrict probity, and rejected with fcorn fuch an infamous tranfaction. In $15^{8} 5^{,}$ Mary began to feel all the rigours of a fevere imprifonment. She had been removed from Sheffield to the ca:tle of Tutbury ; and under her new keepers fhe experienced a treatment which was in the higheft degree unjuft, difrefpectful, and acrimonious. Two apart- She is ments or chambers only were allotted to her, and they fhe is cond were fmall and incoly were fmall and inconvenient, meanly furnifhed, and fo cruelly full of apertures and chinks, that they could not protect her againft the inclemencies of the weather. The liberty of going abroad for pleafure or exercife was de-
(x) Amidft the infamous calumnies which this princefs was folicitous to fix upon the queen of Scots, it muft excite the higheft indignation to confider her own contempt of chaftity, and the unprincipled licentioufnefs of her private life. See Haynes's Collect. of State Papers, p. 99, \&c. -E Even when palfied with age, ihe was yet burning with unquenchable defires; and vain of her haggard and cadaverous form, fought to allure to her many lovers. See Murdin, P. 558, 560, 657, 718, 719. and the difcoveries of a writer, whofe pen, elegant, poignant, inquifitive, and polite, improves and embellifhes every topic that it canvaffes; Walpole, Catalogue of royal and woble Authors, vol. i. p. 12.6. ## S C O [ 90

nied to her. She was affailed by rheumatifms and other maladies ; and her phylician would not undertake to effect a cure, or even to procure her any eafe, unlefs fhe fhould be removed to a more commodious dwelling. Applications for this purpofe were frequently made, and uniformly rejected. Here, however, her own afflictions did not extinguith in her mind her fenfibility for the misfortunes of others; and the often indulged berfelf in the fatisfaction of employing a fervant to go through the village of Tutbury in fearch of objects of diftrefs, to whom fhe might deal out her charity. But her inhuman keepers, envying her this pleafure, commanded her to abftain from it. Imputing their rigpur to a fufpicious fidelity, fhe defired that her fervant might, on thefe occafions, be accompanied by one of the foldiers of their guard, or by the conftable of the village. But they would not alter their prohibition. They refufed to her the exercife of the Chrifian duty of difpenfing an alms; and they would not allow her the foft confolation of moiftening her eye with forrows not her own. To infult her the more, the caftle of Tutbury was converted into a common jail. A young man, whofe crime was the profeffion of the Romifh religion, was committed to a chamber which was oppofite to her window, in order that he might be perfecuted in her fight with a peltilent cruelty. Notwithftanding his cries and refiftance, he was dragged every morning to hear prayers, and to join in the Proteftant worfhip; and after enduring feveral weeks this extraordinary violence to his confcience, he was unmercifully ftrangled without any form of law or juftice. Mary remonftrated with warmth to Elizabeth againft indignities fo thocking and fo horrible ; but inftead of obtaining confolation or relief, the was involved more deeply in wo, and expofed to ftill harder inventions of malice and of anger.

In the midft of her misfortunes, Mary had fill folaced herfelf with hope; and from the exertions of her fon the naturally expected a fuperlative advantage. He had hitherto behaved with a becoming cordiality; and in the negociation which the had opened with him for her affociation in the government, he had been ftudious to pleafe and flatter her. He had informed her by a particular difpatch, that he found the greateft comfort in her maternal tendernefs, and that he would accomplifh her commands with humility and expedition; that he would not fail to ratify her union and aflociation with him in the government ; that it would be his molt earneft endeavour to reconcile their common fubjects to that meafure ; and that fhe might expect from him, during his life, every fatisfaction and duty which a good mother could promife to herfelf from an affectionate and obedient fon. But thefe fair, bloffoms of kindnefs and love were all blaited by the treacherous arts of Elizabeth. By the mafter of Gray, who had obtained an afcendant over James, fhe turned from Mary his affections. He delayed to ratify her affociation in the government ; and he even appeared to be unwilling to prefs Elizabeth on the fubject of her liberty. The mafter of Gray had convinced him, that if any favour was fhown to Mary by the queen of England, it would terminate in his humiliation. He uffured him, that if his wother were again to mount the Scottilh throne, her zeal for Popery would induce ser to feek a hufband in the houfe of Auftria; that
the would diffulve his affociation with her in the go- Scotlay vernment, on the pretence of his attachment to the reformed doenrines; and that he would not only lofe the glory of his prefent power, but endanger his profpects of fucceffion. Mary expoftulated with him by letter upon the timidity and coldnefs of his behaviour; and he returned her an anfwer full of difrefpect, in which he intimated his refolution to confider her in 110 other character than as queen-mother. Her amazement, indignation, and grief, were infinite. She wrote to Cafeelnau the French ambaffador to inform him of her inquietudes and anguifh. "My fon (faid the) is ungrateful ; and I defire that the king your mafter fhall confider him no longer as a fovereign. In your future difpatches, abftain from giving him the title of king. I am his queen and his fovereign; and while I live, and continue at variance with him, he can at the beft be bnt an ufurper. From him I derive no luttre ; and without me he could only have been lord Darnley or the earl of Lenox; for I raifed his father from being my fubject to be my hufband. I afk from him nothin's that is his; what I claim is my own; and if he perffts in his courfe of impiety and ingratitude, I will beftow upon him my malediction, and deprive him not only of all right to Scotland, but of all the ciignity and grandeur to which he may fucceed through me. My enemies fhall not enjoy the advantages they expect from him. For to the king of Spain I will convey, in the ampleft form, my clains, titles, and greatnefs."
Elizabeth having thus found means to fow diffenfion between the queen of Scots and her fon, did not fail to make the beft ufe fhe could of the quarrel for her own advantage. The Pope, the duke of Guife, and the kiug of Spain, had concluded an alliance, call-the Po ed the boly league, for the extirpation of the Proteftant powers religion all over Europe. Elizabeth was thrown into $z_{3}$ beth the greatelt confternation on this account ; and the idea of a counter affociation among the Proteftant princes of Europe immediately fuggefted itfelf. Sir Edward Wotton was deputed to Scotland; and fo completely gained upon the imbecility of James, that he concluded a firm alliance with Elizabeth, without making any ftipulation in favour of his mother. Nay, fo Mean far was he the dupe of this ambaffador and his mittrefs, , hamef that he allowed himfelf to be perfuaded to take into of Jam his favour Mr Archibald Douglas, one of the murderers of Lord Darnley ; and, as if all this had not been fufficient, he appointed this affaffin to be his ambaffador for England.

Mary, thus abandoned by all the world, in the hands of her moft inveterate and cruel enemy, fell a victim to her refentment and treachery in the year 1587. A Acce plot of affaffination had been formed in the fpring of Bahing the year 1586 againft the Englifh queen ; partly with ton's ci a view to refcue the Scottifh princefs; but chiefly from gaind a motive to ferve the interefts of the Roman Catholic zabeth religion. This confpiracy, which originated with Roman Catholic priefts and perfons of little note, was foon imparted to Mr Babington, a perfon of great fortune, of many accomplifmments, and who had before that time difcovered himfelf to be a zealous friend of queen Mary. That fhe had correfponded with Ba bington there is no doubt; but it was fome years previous to the formation of the plot. A long filence had taken place between them; and Morgan,

## S C O [ 9r ] S C O

tland. one of the Englifh fugitives in France, and awarm friend of Mary's, in the month of May 1586, wrote a letter to her, repeatedly and in the moft prefing manner recommending a revival of that correfpondence. In confequence of which, in her anfwer to Morgan, dated the 27 th day of July, fhe informed him, that fhe had made all apologies in her power to Babington, for not having written to him for fo long a fpace; that he had generounly offered himfelf and all his fortune in her caufe; and that, agreeably to Morgan's advice, the would do her beft to retain him in her interefts; but fhe throws out no hint of her knowledge of the intended affaffination. On the very fame day the wrote likewife to Paget, another of her n:oft confidential friends; but not a word in it with refpect to Babington's fcheme of cutting off the Englifh queen. To Morgan and to Paget fhe certainly would have communicated her mind, more readily and more particularly than to Babington, and have confulted them about the plot, had fhe been acceffory to it. Indeed it feems to have been part of the policy of Mary's friends to keep her a ftranger to all clandeftine and hazardous undertakings in her favour. 'To be convinced of this, we have only to recollect, that Morgan, in a letter of the fourth of July, exprefsly, and in the ftrongeft terms, recommended to have no intelligence at lall with Ballard *, who was one of the original contrivers of the plot, and who was the very perfon who communicated it to Babington. The queen, in confequence of this, fhut the door againft all correfpondence, if it fhould be offered, with that perfon $\dagger$. At the fame time, Morgan affigned no particular reafons for that advice; fo cautious was he about giving the queen any information upon the fubject: What he faid was generally and ftudioufly obfcure: "Ballard (faid he, only) is intent on fome matters of confequence, the iffue of which is uncertain." He even went farther, and charged Ballard himfelf to abftain in anywife from opening his views to the queen of Scots.

The confpiracy which goes under the name of $B a$ bington was completely detected by the court in the month of June: The names, proceedings, and refidences, of thofe engaged in it were then known: The blow might be foon ftruck : The life of Elizabeth was in imminent hazard. The confpirators, however, were not apprehended ; they were permitted to enjoy complete liberty ; treated as if there were not the leatt furpicion againft them; and in this free and quict ftate, were they fuffered to continue till the beginning of Auguft, for a period it fhould feem of near two months. What could be the reafons for fuch a conduct? From what caufes did the council of England fufpend the
juft vengeance of the laws, and leave their queen"s life Scotiand. Atill in jeopardy? Was it on purpofe to procure more confpirators, and involve others in the crime?

Mary queen of Scots continued ftill detached from Babington and his affociates. Their deftruction was a fmall matter compared with her's. Could the be decoyed into the plot, things would put on a very new face: Babington's confpiracy, which in reality occafioned little dread, as it was early found out, and weil guarded againft, would prove one of the moft grateful incidents in queen Elizabeth's reign. Elizabeth's minifters, too, knew how much they had rendered them. felves juftly obnoxious to the Scottifh princefs: Should The come to mount the throne of England, their downfall was inevitable; from which, it fhould feem, is to be explained, why they were even more zealous than their miftrefs to accomplifh her ruin.

Of thefe, Sir Francis Walfingham fecretary of fate Art and appears to have taken upon himfelf the chief manage- treachery ment in concerting a plan of operations againft the of Elizaqueen of Scots; and as a model, he feems to have had heth and in his eye that which was purfued upon a former occa- fterso fion by the earl of Murray. His fpies having early got into the confidence of the lower fort of the confpirators, he now employed the very agency of the latter for his purpofes. Learning that a packet from France was intended to be conveyed by them to queen Mary, and by the hands of one Gilbert Gifford a prieft, whom he had fecretly gained over from their affociation, he wrote a letter to Sir Amias Paulet, who had now the cuftody of the Scottifk queen, requefting that one of his domeftics might be permitted to take a bribe for conveying that packet to the captive princefs. This was on purpofe to communicate to her a letter forged in the name of Babington, in which that confpirator was made to impart to the Scottifh queen his fcheme of affaffination, and to claim rewards to the perpetrators of the deed. Paulet, however, to his honour, refufed to comply with the requeft of Walfingham; upon which Gifford corrupted a brewer in the neighbourhood, who put his letters to Mary in a hole in the caftle-wall. By the fame conveyance it was thought that Mary would anfwer the letters ; but it appears that the never faw them, and that of courfe no return was made ( y ). It was then contrived that anfwers, in the name of the queen of Scots to Gifford, fhould be found in the hole of the wall. Walfingham, to whom thefe letters were carried, proceeded formally to decipher them by the help of one Thomas Philips, a perfon fkilled in thefe matters; and after exact copies were taken of them, it is faid that they were all artully fealed and fent off to the perfons to whom they were
$\mathrm{M}_{2}$
dirested.
(y) Dr Robertfon of Dalmeny, who, in his Hiftnry of Mary queen of Scots, has thrown much light uponi thofe dark tranfactions of Elizabeth's nefarious minifters, thinks it not improbable that an anfwer to Babington's letter was written by the Scottifh queen's fecretaries. Although they could not communicate that letter to herfelf, on account of her known abhorrence of affaffination, they perhaps wrote a difpatch in her name, ap. proving of it ; tempted by the profpect of efcaping from imprifarment, and of their mittrefs being feated on the throne of England. This difpatch being conveyed through the fame chink of the wall, was carried by Gifford to Wallingham; opened; deciphered, and copied by him; and then fent to Babington. Camden informs us, that Walfingham artfully forged a poffeript in the fame cipher to this difpatch; in which queen Mary was made to requeft of Babington to inform her particularly of the nanes of his accomplices, and of others whe were friends to the caufe.

## S C O

Scotland. directed. It appears, however, that only the letters directed to Babington were fent to him ; and the anfwers which he made to the queen's fuppofed letters were carried directly to Wallingham. A foundation for criminating Mary being thus laid, the confpirators were quickly difcovered, as being already known, and fuffered the death of traitors. 'I'he unhappy princefs, eagerly watched by Paulet, and unacquainted with the late occurrences, received a vifit from Sir Thomas Gorges. 'This envoy, as inftructed by Elizabeth, furprifed her when The had mounted her horfe to take the pleafure of the chace. His falutation was abrupt and unceremonions; and after informing her of the difcovery and circumitances of the confpiracy of Babington, he rudely charged her with a concern in it. Her aftonifhment was great, and fhe defired to return to her chamber : but this favour was refufed to her ; and after being carried from one houfe to another, in an anxious and perplexing uncertainty, fhe was committed to Fotheringay caftle in Northamptonfhire. Naw and Curl, her two fecretaries, the former a Frenchman, the latter a native of Scotland, were taken into cuftody. Paulet breaking open the doors of her private elofet, poffeffed himfelf of her money, which amounted not to more than 7000 crowns. Her cabinets were carefully fealed up; and beirg fent to London, were examined in the prefence of Elizabeth. They contained many difpatches from perfons beyond the fea, copies of letters which had been dictated by her, and about 60 tables of cipheis and characters. There were alfo difcovered in them many difpatches to her from Englifh noblemen, which were full of admiration and refpect. Thefe Elizabeth concealed; but their authors fufpecting that they were known, fought to purchafe her forgivenefs by the moft abject proteftations of an attachment to her perfon, and by the exercife of the moft inveterate enmity to the queen of Scots. Naw and Curl declared, that the copies of her letters were in their handwriting. They had been dictated by her in the French language to Naw, tranflated into Englifh by Curl, and then put into cipher. They contained not, however, any matters with which fhe could be reproached or criminated. It was upon the foundation of the letters which Gifford had communicated to Wallingham that her guilt was to be inferred; and with copies of thefe, and with an attefted account of the confpiracy of Ba bington and his affociates, Sir Edward Wotton was now difpatched into Frarce to accufe her to Henry III. and to explain to him the dangers to which Elizabeth was expofed from the machinations and practices of the Englih exiles.

The privy counfellors of Elizabeth deliberated upon ions on the the moft proper method of proceeding againft Mary. method of To fome it appeared, that as fhe was only acceffory to Iroceeding the plot, and not the defigner of it, the moft eligible againf her. feverity to be exercifed agaiaft her was a clofer and more rigorous confinement; and they endeavoured to fortify this opinion, by obferving, that the was fickly, and could not. live long. By others who were haunted by the terrors of Popery, it was urged, that fhe ought to be put inftantly to death by the formalities of the law. The earl of Leicefter recommended it as moft prudent to difpatch her fecretly by poifon. But this counfel was rejected as mean, difgraceful, and violent. The Lawyers were of opinion, that fhe might be tried upon

## 92 S C O

the ftatute of Edward III. ; by which it was enacted Scotli to be treafon to imagine the deftruction of the fovereign, to make war againft his kingdom, or to adhere to his enemies. Elizabeth, however, and her miniters had provided a more plaufible foundation for her trial. This was a parliamentary ftatute approving the act of affociation. As it had been paffed while Mary was in England, it was argued, that fhe was bound by it in a local allegiance to Elizabeth. The next point of debate was the defignation under which it was moft advifable to arraign her. To employ a foreign name and title as directly defcriptive of her, was not judged to be confiftent with the law of England. It was therefore refolved to defign her " Mary, daughter and heir of James V. king of Scotland, and commonly called queen of Scots, and dowager of France."

This refolution being once taken, Elizabeth next ap-Comm pointed above 40 peers or privy-counfellors, and five fioners judges, beftowing upon them in a body, or upon the poiute greater part of them, abfolute power and authority to inquire into the matters compaffed and imagined againft her by the Scottifh princefs, and to pafs fentence according to the fpirit and tenor of the act which had been paffed. Of thefe commiffioners a great majority proceeded to the caftle of Fotheringay; and the day after their arrival, they deputed to Mary, Sir Walter Mildmay, Sir Amias Paulet, and Edward Barker a public notary, to deliver to her a letter from Elizabeth. In this letter the Englifh queen gratified her unhappy paffions, and atter reproaching Mary with her crimes, informed her that commiffioners were appointed to take cornizance of them. 'The Scottifh princefs, though aftonifhed with the project of being brought to a public trial, was able to preferve her dignity, and addrefled them with a compofed manner and air. "It is a mat-she ob ter (faid fhe) altogether uncommon and ftrange, that to thei Elizabeth fhould command me to fubmit to a trial, as rifdicai if I were her fubject. I am an independent fovereign; and will not tarnifh by any meannefs my high birth, the princes my predeceffors, and my fon. Misfortunes and mifery have not yet fo involved me in dejection, as that I am to faint and fink under this new calamity and infult. I defire that you will remember what I formesly pro. telled to Bromley, who is now loid-chancellor, and to the lord La War. To fpeak to me of commiffioners, is a vain mockery of my rank. Kings alone can be my peers. The laws of England are maknown to me; and I have no counfellors to whofe wifdom I can apply for inftruction. My papers and commentaries have been taken from me; and no perfon can have the perilous courage to appear as my advocate. I have indeed recommended my felf and iny condition to foreign princess but I am clear of the. guilt of having confpired the deftruction of Elizabeth, or of having incited any perfon. whatfoever to deftroy her. It is only by my own words. and writings that an imputation of this kind can be. fupported; and $I$ am confcious beyond the poffibility of a doubt, that thefe evidences. cannot be employed againt me." The day after fhe had in this manner refufed to allow the jurifdiction of the commiffioners, Paulet and Barker returned to her, and informed her that they had put her fpeech.into writing, and defired to know if the would abide by it. She heard it read diftinctly, acknowledged it to be rightly taken, and avowed her readinefs to perfift in the fentiments fhe had delivered.

## S C O

d. delivered. But he added, there was a circumftance to whicl the had omitted to fpeak. "Your queen (faid fhe) affects in her letter to obferve, that I am fubject to the laws of England, becaufe I have lived under their protection. This fentiment and mode of thinking are very furprifing to me. I came into England to crave her affiftance and aid; and, ever fince, I have been confined to a prifon. The miferies of captivity cannot be called a protection, and the treatment I have fuffered is a violation of all law."
'This afflicted but undaunted princefs, after having thus fcorned the competency and repelled the pretexts of the commiffioners, was induced at laft, by arguments under the infidious mafk of candour and friendfhip, to depart from the proper and dignified ground which fhe had taken, and confent to that mode of the trial which had been propofed. It was reprefented to her by Hatton the vice-chamberlain, that by rejecting a trial, fhe injured her own reputation and interefts, and deprived herfelf of the only opportunity of fetting her innocence in a clear light to the prefent and to future times. Impofed upon by this artifice, the confented to make her appearance before the judges; at the fame time, however, fhe ftill protefted againt the juriddiction of the court, and the validity of all their proctedings.

After various formalities, the lord-cliancellor opened the cafe ; and was followed by Serjeant Gawdry, who proceeded to explain the above fatute, and endeavoured to demonftrate that fhe had offended againft it. He then entered into a detail of Babington's confpiracy; and concluded with effirming, "That Mary knew it, had approved it, lad promifed her affiftance, and had pointed out the means to effect it." Proofs of this charge were exhibited againft her, and difplayed with great art. The letters were read which Sir Francis Walfingham had forged, in concert with Gifford, \&c. and her fecretaries Naw and Curl. The three fpies had afforded all the neceffary intelligence about the confpiracy, upon which to frame a correfpondence between Mary and Babington, and upon which difpatches might be fabricated in her name to her foreign friends; and the ciphers were furnifhed by lier two fecretaries. But befide thefe pretended letters, another fpecies of evidence was held out againlt her. Babington, proud of the difpatch fent to him in her name by Wallingham and Gifford, returned an anfwer to it; and a reply from her by the fame agency was tranfmitted to him. Deluded, and in toils, he communicated thefe marks of her attention to Savage and Ballard, the moft confidential of his affociates. His confeffion and the irs became thus of importance. Nor were her letters and the confeffions of thefe confpirators deemed fufficient vouchers of her guilt. Her two fecretaries, therefore, who had lately. forfaken her, were engaged to fubforibe a declaration, that the difpatches in her name were written by them at her command, and according to her inftructions. Thefe branches of evidence, put together with Rkill, and heightened with all the impoling colours of eloquence, were preffed upon Mary. 'Though the had been long accuftomed to the perfidious inhumanity of her enemies, her amazement was infinite. She loft not, however, her counage; and her defence was alike expreflive of her penetration and magnanimity.

## 93

"The accuifation preferred to my prejudice is a mof del detetable calumny. I was not engaged with Babing- 821 ton in his confpiracy ; and I am altogether, innocent of Mary's dehaving plotted the death of Elizabeth. The copies of fence.
Babington's letters which have been produced, may indeed be taken from originals which are genuine ; but it is impoffible to prove that I ever received them. Nor did he receive from me the difpatches addreffed to him in my name. His confeffion, and thofe of his affociates, which have been urged to eftablifh the authority of my letters to him, are imperfect and vain. If thefe confpirators could have teftified ally circumftances to my hurt, they would not fo foon have been deprived of their lives. Tortures, or the fear of the rack, extorted improper confeffions from them; and then they were executed. I'heir mouths were opened to utter falfe criminations; and were immediately fhut for ever, that the truth might be buried in their graves. It was no difficult matter to obtain ciphers which I had employed; and my adverfaries are known to be fuperior to fcruples. I am informed, that Sir Francis Wallingham has been earneit to recommend himfelf to his fovereign by practices both againft my life and that of my fon; and the fabrication of papers, by which to effectuate my ruin, is a bufinefs not unworthy of his ambition. An evidence, the moft clear and inconteftable, is neceffary to overthrow my integrity; but proofs, the moft feeble and fufpicious, are held out againft me. Let one letter be exhibited, written in my hand, or that bears my fuperfcription, and I will inftantly acknowledge that the charge againft me is fufficiently fupported. The declaration of my fecretaries is the effect of rewards or of terror. They are ftrangers ; and to overcome their virtue was an ealy atchievement to a queen whofe power is abfolute, whofe riches are immenfe, and whofe minitters are profound and daring in intrigues and treachery. I have often had occafion to fufpect the integrity of Naw; and Curl, whofe capacity is more limited, was always moft oblequious to him. They may have written many letters in my name without my knowledge or participation; and it is not fit that I fhould bear the blame of their inconfio derate boldnefs. They may have put many things into: difpatches which are prejudicial to Elizabeth ; and they may even have fubfcribed their declaration to my prejudice, under the prepoffeffion that the guilt which would utterly overwhelm them might be pardoned in : me. I have never dictated any letter to there which can be made to correfpond with their teftimony. And what, let me afk, would become of the grandeur, the virtue, and the fafety of princes, if they depended upon the writings and declarations of fecretaries? Nor let it be forgotten, that by acting in hoftility to the duty aid allegiance which they folemuly fiwore to obferve to $\mathrm{me}_{9}$. they have utterly incapacitated themfelves from obtaining any credit. The violation of their oath of f:delity is an open perjury ; and of fuch men the proteftations are nothing. but, if they are yet in life, let them be brought before me. The matters they declare are fo important as to require that they fhould be examined in my prefence. It argues not the fairnefs of the proceedings againft me, that this formality is neglected. I am allo without the affiftance of an advocate; and, that I might be defencelefs and weak in the great. eft degree, I have been robbed of my papers and com.
mentaries. As to the copies of the difpatclies which are faid to have been written by my direction to Mendoza, the dord Paget, Chanles Paget, the archbifhop of Glafgow, and Sir Francis Inglefield, they are moft unprofitable forgeries. For they tend only to fhow that I was employed in encouraging my friends to invade England. Now, if I fhould allow that thefe difpatches ivere genuine, it could not be inferred from them that I had confpired the death of Elizabeth. I will even confefs, that $T$ have yielded to the frong impulfes of nature; and that, like a human creature, encompaffed with dangers and infulted with wrongs, I have exerted myfulf to recover my grcatnefs and my liberty. The efforts I have made can excite no blufhes in me; for the voice of mankind mut applaud them. Religion, in her fterneft moments of feverity, cannot look to them with reproach; and to confider them as crimes, is to defpife the fanctimonious reverence of humanity, and to give way to the fufpicious wretchednefs of defpotifm. I have fought by every art of conceffion and friendihip to engage my fifter to put a period to my fufferings. Invited by her fmiles, I ventured into her kingdom, in the pride and gaiety of my youth; and, under her anger and the miferies of captivity, I have grown into age. During a calamitous confinement of 20 years, my youth, my health, my happinets, are for ever gone. 'To her tendernefs and generofity I have been indebted as little as to her juftice : and, oppreffed and agonizing with unmerited afllictions and hardfhips, I fcrupled not to befeech the princes my allies to employ their armies to relieve me. Nor will I deny, that 1 have endeavoured to promote the advantage and intereft of the perfecuted Catholics of England. My intreaties in their behalf have been even offored with earneftnefs to queen Elizabeth herfelf. But the attainment of my kingdom, the recovery of my liberty, and the advancement of that religion which I love, could not induce me to ftain myfelf with the crimes that are objected to me. I would difdain to purchafe a crown by the affaffination of the meaneft of the human race. To accufe me of fcheming the death of the queen my fifter, is to brand me with the infamy which I abhor moft. It is my nature to employ the devotions of Etther, and not the fword of Judith. Elizabeth herfelf will atteft; that I have often admonifhed her not to draw upon her head the refentment of my friends by the enormity of her cruelties to me. My innocence cannot fincerely be doubted; and it is knowin to the Almighty God, that I could not poffibly think to forego his mercy, and to ruin my foul, in order to compafs a tranfgrefion fo horrible as that of her murder. But amidft the inclement and unprincipled pretences which my adverfaries are pleafed to invent to overwhelm me with calamities and anguifh, I can trace and difcover with eafe the real caufes of their hoftility and provocation. My crimes are, my birth, the injuries $I$ have been compelled to endure, and my religion. I ain proud of the firit; I can forgive the fecond; and the third is a furrce to me of fuch comfurt and hope, that for its glory I will be contented that my blood fhall flow upon the fraffold."
To the defence of Mary, no returns were made befide fout and unfupported affirmations of the truth of the evidence produced to her prejudice. In the courfe of the trial, however, there occurred fome incidents which deferve to be related. My lord Burleigh, who
was willing to difcompofe her, charged her with a fixed. refolution of conveying her claims and titles to England to the king of Spain. But though, in a difcontented humour with her fon, fhe had threatened to difinherit him, and had even correfponded on the fubject with her felect friends, it appears that this project is to be confidered as only a tranfient effect of reíentment and paffion. She indeed acknowledged, that the Spaniard profeffed to have pretenfions to the kingdom of England, and that a book in juftification of them had been communicated to her. She declared, however, that the had incurred the difpleafure of many by difapproving of this book ; and that no conveyance of her titles to the Spaniard had been ever executed.

The trial continued during the fpace of two days; but the commiffioners avoided to deliver their opinions. My lord Burleigh, in whofe management Elizabeth chiefly confided, and whom the Scottifh queen difcompofed in no common degree by her ability and vigour, being eager to conclude the bufinefs, demanded to know if fhe had any thing to add to what fhe had urged in her defence. She informed him, that the She ${ }^{8}$ would be infinitely pleafed and gratifed, if it fhould be to be permitted to her to be heard in her juflification before be a full meeting of the parliament, or before the queen or p and her privy-council. This intimation was unexpec- the ted ; and the requeft implied in it was rejected. The court, in confequence of previous inftructions from Elizabeth, adjourned to a farther day, and appointed that the place of its convention fhould be the far-chamber at Weftminfter. It accordingly affembled there; and Naw and Curl, who had not been pioduced at Fotheringaycaftle, were now called before the commiffioners. An oath to declare the truth was put to them; and they definitely affirmed and protefted that the declaration they had fubferibed was in every refpect juft and faithful. Nothing farther remained but to pronounce fentence againft Mary. The commiffioners unanimounly Jud, concurred in delivering it as their verdict or judgment, that fhe "was a party to the confpiracy of Babington; ;a and that the had compaffed and imagined matters within the realm of Eugland tending to the hurt, death, and deftruction, of the royal perfon of Elizabeth, in oppofition to the flatute framed for her protection." Upon the fame day in which this extraordinary fentence was given, the commiffioners and the judges of England iffued a declaration, which imported, that it was not to derogate in any degree from the titles and honour of the king of Scots.

The fentence againf Mary was very foon afterwards T ratified by the Englifh parliament. King James was ftruck with horror at hearing of the execution of his mother ; but that firitlefs prince could fhow his refeutment no farther than by unavailing enibaffies and remonftrances. Fraice interpofed in the fame ineffectual manuer ; and on the 6 th of December 1586, Elizabeth caufed the fentence of the commiffioners againft her to be proclaimed. After this the was made acquainted with her fate, and received the news with the greatelt compofure, and even apparent fatisfaction. Her keepers now refufed to treat her with any reverence or refpect. They entered her apartment with their heads covered, and made no obeifance to her. They took down her canopy of fate, and deprived her of all the badges of royalty. By thefe infulting mortifications

## $\mathrm{S} C \mathrm{O}$

they meant to inform her, that fhe had funk from the dignity of a princefs to the abject flate of a criminal. Slie fmiled, and faid, "In defpite of your fovereign and her fubfervient judges, I will live and die a queen. My royal character is indelible; and I will furrender it with my firit to the Almighty God, from whom I received it, and to whom my honour and my innocence are fully known." In this melancholy fituation Mary addreffed a magnanimous letter to Elizabeth, in which, without making the lealt folicitation for her life, fhe only requefted that her body might be carried to France; that fhe might be publicly executed ; that her fervants miglit be permitted to depart out of England unmoIefted, and enjoy the legacies which fhe bequeathed them. But to this letter no anfwer was given.

In the mean time James, who had neither addrefs nor courare to attempt any thing in behalf of his mother, announced her fituation to his bigotted fubjects, and ordered prayers to be faid for her in all the churches. Thre form of the petition he prefcribed was framed with delicacy and caution, that the clergy might have no objection to it. He emjoined them to pray, "that it might pleafe God to enlighten Mary with the light of his truth, and to protect her from the danger which was hanging over her." His own chaplains, and Mr David Lindfay minifter of Leith, obferved his command. But all the other clergy refufed to proflitute their pulpits by preferring any petitions to the Almighty for a Papit. James, fhocked with their fpirit of intolerance and fedition, appointed a new day for prayers to be faid for Mary, and iffned a ftricter injunction to the clergy to obey him ; and that he might be free himfelf from any infult, he commanded the archbifhop of St Andrew's to preach before him. The ecclefiaftics, difgufted with his injunction, perfuaded Mr John Cowper, a probationer in divinity, to occupy the pulpit defigned for the archbifhop. When the king entered the church, he teftified his furprife, but told Cowper, that if he would obey his injunction, he might proceed to officiate. Cowper replied, "that he would do as the firit of God would direct him." The king commanded him to retire, and the captain of his guard advanced to compel him to obedience. The enraged probationer exclaimed, that this violence " would witnefs againf the king in the great day of the Lord;" and denounced a curfe againft the fpectators for not exerting themfelves in his defence. The archbifhop now afcending the pulpit, performed with propriety the function to which he had been called, and took the opportunity to recommend moderation and charity to the audience. In the afternoon Cowper was cited before the privy-council; and was accompanied there by Mr Walter Balcanqual and Mr William Watfon, two minifters remarkable for their zeal. As a punifhment for his audacious petulance, he was committed to the caftle of Blacknefs; and his attendants having diftinguifhed themfelves by an impudent vindication of him, were prohibited from preaching during the pleafure of the king.

Elizabeth, in the meanwhile, felt the torment and difquiet of unhappy and miferable paffions. At times fhe courted the fadnefs of folitude, and refufed to be confoled or to fpeak. In other feafons her fighs were frequent, and fhe broke out into loud and wild exclamations expreffive of the flate of her mind. Her fubjects waited the determination of her will under a dif.

## 951 S C O

tracting agitation and uncertainty. Her minifters, who Scotland. knew that it is the nature of fear to exclude pity, were Stuart. induftrious in inventing terrifying intelligence, and in circulating it through the kingdom. There were rumours that the Spanifh fleet had arrived at Milford-haven; that a formidable army of Scottifh combatants was advancing to the capital ; that the duke of Guife had difembarked many troops of veteran foldiers in Suffex ; that Mary had efcaped out of prifon, and was collecting the Englifh Catholics ; that the northern counties had thrown afide their allegiance; and that there was a nerv plot to kill Flizabeth,' and to reduce L.ondon to afhes. An actual confpiracy was even malicioufly charged upon L'Aubefpine the French refident; and he was forced to withdraw from England in dif. grace. From the panic terrors which the minitters of Elizabeth were fo ftudious to excite, they fcrupled not loudly and invariably to infer, that the peace and tranquillity of the kingdom could alone be reeeftabliihed by the fpeedy execution of the Scottifh queen.

While the nation was thus artfully prepared for the But figns: deftruction of Mary, Elizabeth ordered. fecretary Da- the warvidfon to bring to her the warrant for her death. Ha- Mary's ving perufed it with deliberation, fhe obferved that it deach. was extended in proper terms, and gave it the authority of her fubfription. She was in a humour fomewhat gay, and demanded of him if he was not forry for what the had done. He replied, that it was afficting to him to think of the flate of public affairs; but that he greatly preferred her life to that of the Scottifh princefs. She enjoined him to be fecret, and defired, that before he fhould deliver the warrant to the chancellor, he fhould carry it to Walingham.- "I fear much (faid fhe, in a merry tone), that the grief of it will kill him."

This levity was momentary; and fears and anxieties fucceeded it. Though fhe earnefly defired the death of Mary, fhe was yet terrified to encounter its infamy. She was folicitous to accomplifh this bafe tranfaction by fome method which would conceal her confent to it. After intimating to Mr Davidfon an anxious wih that 828 its blame fhould be removed from her, fhe counfelled have her him to in Withal letter to murdered Sir Amias Paulet and Sir Drue Drury,-recommending it to them to manifeft their love to her by fhedding privately the blood of her adverfary. The unlawfulnefs of this deed affected Davidfon, and he objected to it. She repeated refolutely her injunctions, and he departed to execute them. A letter under his name and that of Walfingham was difpatched to Mary's keepers, communicating to them her purpofe. Corrupted by her paffions, and loft to the fenfibilities of virtue, Elizabeth had now reached the laft extremity of human wickednefs. Though a fovereign princefs, and entrufted with the cares of a great nation, fhe blufhed not to give it in charge to her minitters to enjoin a murder; and this murder was connected with every circumitance that could make it moft frightful and horrid. The victim for whofe blood fhe thirfted was a woman, a queen, a relation, who was fplendid with beauty, eminent in abilities, magnanimous under misfortunes, and fmiling with innocence. Sir Amias Paulet and Sir Drue Drury, tho' which hea the ीlaves of religious prejucices, felt an elevation of keepers rco . mind which reflected the greateft difgrace upon the ${ }^{\text {fufe. }}$ fovereign. They confidered themfelves as grofsly in-
culted

## 5. C O

Scotland. fulted by the purpofe propofed to them; and in the reStuart. turn they made to Walfingham, they affured him, that

830
the queen might command their lives and their property, but that they would never confent to part with their honour, and to ftain themfelves and their pofterity with the guilt of an affaffination. When Davidfon carried their difpatch to her, fhe broke out into anger. Their fcrupulons delicacy, the faid, was a dainty infringement of their oath of affociation; and they were nice, precife, and perjured traitors, who could give great promifes in words, and atchieve nothing. She told him, that the bufinefs could be performed without them; and recommended one Wingfield to his notice, who would not hefitate to ftrike the blow. The aftonifhed fecretary exclaimed with warmth againft a mode of proceeding fo dangerous and unwarrantable. He protefted, that if the Mould take upon herfelf the blame of this deed, it would pollute her with the blackeft difhonour ; and that, if fhe fhould difavow it, fhe wonld overthrow for ever the reputation, the eftates, and the children, of the perfons who fhould affift in it. She heard him with pain, and withdrew from him with precipitation.

The warrant, after having been communicated to Walfingham, was carried to the chancellor, who put the great feal to it. This formality was hardly concluded, when a meffage from Elizabeth prohibited Davidfon from waiting upon the chancellor till he fhould receive farther inftructions. Within an hour after, he reccived a fecond meffage to the fame purpofe. He haftened to court ; and Elizabeth aflied eagerly, if he had feen the chancellor. He anfwered in the affirmative; and the exclaimed with bitternefs againft his hafte. He faid, that he had acted exactly as fhe had directed him. She continued to exprefs warmly her difpleafure ; but gave no command to ftop the operation of the warrant. In a ftate of uneafinefs and apprehenfion, he communicated her behaviour to the chancellor and the privy-council. Thefe courtiers, however, who were well acquainted with the arts of their miftrefs, and who knew how to flatter her, paid no attention to him. They perceived, or were fecretly informed, that fhe defired to have a pretence upon which to complain of the fecretary, and to deny that he had obeyed her inftructions. They obferved to him, that by fubferibing the warrant, fhe had performed whatever the law required of lier ; and that it was not proper to delay the execution any longer. While they were anxious to pleafe Elizabeth, they were confcious of their own cruelty to Mary, and did not imagine they could be in perfect fecurity while fhe lived. They difpatched the warrant to the carls of Shrewfoury and Kent, with inftructions to them to fulfil its purpofe.

When the two earls and their retinue reached Fo-theringay-caftle, they found that Mary was fick, and repofing upon her bed. They infifted, notwithitanding, to be introduced to her. Being informed by her fervants that the meffage they brought was important and preffing, the prepared to receive them. They were conducted into her prefence by Sir Amias Paulet and Sir Drue Drury ; and with little formality they told her, that Elizabeth had confented to her death, and that .he was to fuffer the next morning at eight o'clock. Then Beale, one of the clerks of the privy-council, who accompanied them, read over the warrant, which the heard with pious compofure and unfhaken fortitude.

They then affected to juftify their miftrefs by entering Scot into details concerning the confpiracy of Babington. She put her hand upon the Scriptures, which lay upon a table near her, and fwore in the moft folemn manner, that fhe never devifed, confented to, or purfued the death of Elizabeth in any flape whatfoever. The earl of Kent, unwifely zealous for the Proteftant religion, excepted againft her oath, as being made upon a Popifh Bible. She replied to him mildly, "It is for this very reafon, my lord, to be relied upon with the greater fecurity; for I efteem the Popifh verfion of the Scriptures to be the moft authentic." Indulging his purio tanical fervour, he declaimed againft popery, counfelled her to renounce its errors, and recommended to her attention Dr Fletcher dean of Peterborough. She heard him with fome impatience; and difcovered no anxiety to be converted by this ecclefialtic, whom he reprefented as a moft learned divine. Rifing into paffion, he ex. claimed, that "her life would be the death of their religion, and that her death would be its life." After informing him that fhe was unalterably fixed in her religious fentiments, fie defired that her confeffor might have the literty to repair to her. 'The two earls concurred in obferving, that their confciences did not allow them to grant this requeft. She intimated to them the favours for which fhe had applied by her letter to Elizabeth, and expreffed a wifh to know if her fifter had attended to them. They anfwered, that thefe were points upon which they had received no inftructions. She made inquiries concerning her fecretaries Naw and Curl ; and afked, whether it had ever been heard of, in the wickedeft times of the moft unprincipled nation, that the fervants of a fovereign princefs had been fuborned for the purpofe of deftroying her. They looked to one another, and were filent. Bourgoin her phyfician, who with her other domeftics was prefent at this interview, feeing the two earls ready to depart, befought them with an emphatic earneltnefs to reflect nipon the fhort and inadequate portion of time that they had allotted to his miftrefs to prepare herfelf for death. He infilted, that a refpect for her high rank, and the multiplicity and importance of her concerns, required at leaft a period of fome days. They pretended, however, not to underftand the propriety of his petition, and refufed it.

Upon the departure of the two earls, her domeftics She gave a full vent to their aflictions; and while fhe ex-pare perienced a melancholy pleafure in their tears, lamen- deat tations, and kindnefs, fhe endeavoured to confole them. Their grief, fhe faid, was altogether unavailing, and could neither better her condition nor their own. Her caufe had every thing about it that was mult honourable ; and the miferies from which fhe was to be relieved were the moft hopelefs and the moft afflicting. Inftead of dejection and fadnefs, fhe therefore enjoined them to be contented and happy. That the might have the more leifure to fettle her affairs, fhe fupped early, and, according to her ufual cuftom, fhe eat little. While at table, the remarked to Bourgoin her phyfician, that the force of truth was infurmountable; for that the earl of Kent, notwithftanding the pretence of her having confpired againft Elizabeth, had plainly informed her, that her death would be the fecurity of their religion. When fupper was over, the ordered all her fervants to appear before her, and treated them with

## S C O

ma. the kindnefs which we have mentioned in her life. Ha ving fettled thefe attentions, the entered her bedchamber with her women; and, according to her uniform practice, employed herfelf in religious duties, and in reading in the Lives of the Saints. At her accuftomed time fhe went to fleep; and after enjoying fome hours of found reft, the awaked. She then indulged in pious meditation, and partook of the facrament by the means of a confecrated hoft, which a melancholy prefentiment of her calamities had induced her to obtain from Pius V.

At the break of day the arrayed herfelf in rich, but becoming apparel ; and calling together her fervants, fhe ordered her will to be read, and apologifed for the fmallnefs of her legacies from her inability to be more generous. Following the arrangement the had previonfly made, the then dealt out to them her goods, wardrobe, and jewels. To Bourgoin her phyfician fhe committed the care of her will, with a charge that he would deliver it to her principal executor the duke of Guife. She alio entrufted him with tokens of her affection for the king of France, the queen-mother, and her relations of the houfe of Lorraine. Bidding now an adieu to all worldly concerns, the retired to her oratory, where fhe was feen fometimes kneeling at the altar, and fometimes ftanding motionlefs with her hands joined, and her eyes directed to the heavens. In thefe tender and agitated moments, fhe was dwelling upon the memory of her fufferings and her virtues, repofing her weakneffes in the bofom of her God, and lifting and folacing her fpirit in the contemplation of his perfections and his mercy. While the was thus engaged, Thomas Andrews, the high fheriff of the county, announced to her, that the hour for her execution was arrived. She came forth dreffed in a gown of black filk ; her petticoat was bordered with crimfon-velvet ; a veil of lawn bowed out with wire, and edged with bone-lace, was faftened to her caul, and hung down to the ground: an Agnus Dei was fnfpended from her neck by a pomander chain; her beads were fixed to her girdle; and the bore in her hand a crucifix of ivory. Amidt the fcreams and lamentations of her women fhe defcended the ttairs; and in the porch fhe was received by the earls of Kent and Shrewfloury with their attendants. Here, too, fhe met Sir Andrew Melvil the mafter of her houfchold, whom her keepers had debarred from her prefence during many days. Throwing himfelf at her feet, and weeping aloud, he deplored his fad deftiny, and the forrowful tidings he was to carry into Scotland.

After fhe had fyoken to Melvil, fhe befought the two earls that ler fervants might be treated with civility, that they might enjoy the prefents fhe had beftowed upon them, and that they might receive a fafe con duct to depart out of the dominions of Elizabeth. Thefe flight favours were readily granted to hèr. She then begged that they might be permitted to attend her to the fcaffold, in order that they might be witneffes of her behaviour at her death. 'To this requeft the earl of Kent difcovered a ftrong reluctance. He faid that they would behave with an intemperate paffion ; and that they would practife fuperftitious formalities, and dip tleeir handkerchiefs in her blood. She replied, that the was fure that none of their actions would be blameable;

Vol. XVII. Part I.

## $97]$ <br> s C o

and that it was but decent that fome of her women theuld be abont her. The earl ftill hefitating, the was affected with the infolent and ftupid indignity of his malice, and exclaimed, "I am coufin to your miftrefs, and defcended from Henry VII. I am a dowager of France, and the anointed queen of Scotland." The earl of Shrewfbury interpofing, it was agreed that the fhould felect two of her women who might affilt he: in her laft moments, and a few of her men-fervants, who might behold her demeanour, and report it.

She entered the hall where fhe was to fuffer, and advanced with an air of grace and majefty to the fenfo fold, which was built at its fartheft extremity. The fpectators were numerous. Her magnanimons carriage, her beauty, of which the luitre was yet dazzling, and her matchlefs misfortunes, affected them. They gave way to contending emotions of awe, admiration, and pity. She afcended the fcaffold with a firm ftep and a ferene afpect, and turned her eye to the block, the axe, and the executioners. The fpectators were diffolved in tears. A chair was placed for her, in which the feated herfelf. Silence was commanded ; and Beale read aloud the warrant for her death. She heard it attentively, yet with a manner from which it might be gathered that her thoughts were employed upon a fubject more important. Dr Fletcher dean of Peterborough taking his ftation oppolite to her without the rails of the fcaffold, began a difcourfe upon her life, palt, prefent, and to come. He affected to enumerate her trefpaffes againft Elizabeth, and to deferibe the love and tendernefs which that princefs had thown to her. He counfelled her to repent of her crimes; and while he inveighed againft her attachment to Popery, he threatened her with everlafting fire if the fhould delay to renounce its errors His behaviour was indecent and coarfe in the greatef degree ; and while he meant to infult her, he infulted ftill more the religion which he profeffed, and the fotereign whom he flattered. Twice fhe interrupted hiin with great gentlenefs. But he pertinacioufly continued his exhortations. Raifing her voice, the commanded him with a refolute tone to with-hold his indignities and menaces, and not to trouble her any more about her faith. "I was born (faid The) in the Roman Catholic religion; I have experienced its comforts during my life, in the trying feafons of ficknefs, calanity, and for row ; and I am refolved to die in it." The two earls, alhamed of the favage obftinacy of his deportment, admonifhed him to defift from his fpeeches, and to content himfelf with praying for her converfion. He ent tered upon a long prayer ; and Mary falling upon het knees, and difregarding him altogether, employed herfelf in devotions from the office of the Virgin.

After having performed all her devotions, her wo men affifted her to difrobe ; and the executioners offering their aid, the repreffed their forwardnefs by obferving, that fhe was not accuftomed to be attended by fuch fervants, nor to be undreffed before fo large an al. fembly. Her upper garments being laid afide, the drew upon her arms a pair of filk gloves. Her women and men fervants burft out into loud lamentations. She put her finger to her mouth to admonilh then to be filent, and then bade them a final adieu with a fmile that feemed to confole, buit that plunged them into deeper wo. She kneeled refolutely before the block, N

Stuart.
sicoitland and faid, "In thee, $O$ Lord ! do I truft, let me never be confounded." She eovered lier eyes with a linen handkerchief in which the eucharit had been inclofed; and ftretching forth her body with great tranquillity, and fitting her neck for the fatal ftroke, the called out, " Into thy hands, O God! I commit my 'pirit." 'The executioner, from defign, from unkilfulnefs, or from inquietude, ftruck three blows before he feparated her head from her body. He held it up mangled with wounds, and fleaming with blood; and her hair being difcompofed, was difcovered to be already grey with affictions and anxieties. The dean of Peterborough alone cried out, "So let the enemies of Elizabeth perif." 'The earl of Kent alone, in a low woice, anfwered, "Amen." All the other fpectators were melted into the tendereft fympathy and forrow.

Her women haltened to protect her dead body from the curiofity of the fpectators; and folaced themferves with the thonghts of mourning over it undifurbed when they fhould retire, and of laying it out in its funeral arb. But the two earls prohibited them from difcharging thefe melancholy yet pleafing offices to their departed miftrefo, and drove them from the hall with indignity. Bourgoin her phyfician applied to them that he might be permitted to take out her heart for the purpofe of preferving it, and of carrying it with him to Erance. But they refufed his intreaty with difdain and anyer. Fer remains were touched by the rude hands of the executioners, who carried them into an adjoining apartment; and who, tearing a cloth from an old billiard-table, covered that form, once fo beautiful. The block, the cufhion, the fcaffold, and the garments, which were ftained with her blood, were confumed with fire. Her body, after being embalmed and committed to a leaden coffin, was buried with royal fplendour and pomp in the cathedral of Peterborough. Elizabeth, who had treated her like a criminal while the lived, feemed difpofed to acknowled, when the was dead.

On the death of his mother, the full government of the kingdom devolved on James her fon. Elizabeth, apprehenfive of his refentment for ler treatment of his mother, wrote him a letter, in which fhe difclaimed all knowledge of the fact. James had received intelligence of the murder before the arrival of this letter, which was fent by one Cary. The meffenger was ftopped at Berwick by an order from the king, telling him, that, if Mary had been executed, he fhould proceed at his peril. James thut himfelf up in Dalkeith caftle, in order to indulge himfelf in grief; but the natural levity and imbecility of his mind prevented him from acting in any degree as became him. Inftead of refolutely adhering to his firft determination of not allowing Cary to fet foot in Scotland, he in a few days fave his confent that he fhould be admitted to an audience of certain members of his privy-council, who took a journey to the borders on purpofe to wait upon him. In this conference, Cary demanded that the league of amity between. the two kingdoms thould be inviolably obferved. He faid that his niftrefs was grieved at the death of Mary, which had happene ${ }^{1}$ without her confent ; an ${ }^{+}$, in Elizaberh's name, offered any fatisfaction that James could demand. The Scots commiffioners treated Cary's fpeech and propofal with becoming difdain. They ob,
ferved, that they amounted to no more than to know Scirell whether James was difpofed to fell his mother's blood; adding, that the Scottifn nobility and people were determined to revenge it, and to intereft in their quarrel the other princes of Europe. Upon this Cary delivere 1 to them the letter from Elizabeth, together with a declaration of his own concerning the murder of the queen; and it does not appear that he proceeded farther.

This reception of her ambaffador threw. Elizabeth into the utmolt conflemation. She was apprehenfive that James would join his force to that of Spain, and entirely overwhelin her; and had the refentment or the fpirit of the king been equal to that of the nation, it is probable that the laughty. Englil? princefs would have been made feverely to repent her perfidy and cruelty. It doth not, however, appear, that James had any ferious intention of calling Elizabeth to an account for the murder of his mother; for which, perhaps, his natural. imbecility may be urged as an excufe, though it is more probable that his own neceffity for money had fwallowed up every other confideration. By the league formerly concluded with England, it had been agreed that Elizabeth fhould pay an annual penfion to the king of Scotland. James had neither economy to make his own revenue anfwer his purpofes, nor addrefs to get it increafed. He was thereforc always in want ; and as Elizabeth had plenty to fpare, her friendfhip became a valuable acquifition. Tro this confideration, joined to his view of afcending the Englifh throne, muft chiefly be afcribed the little refentment fown by him to the atrocious conduct of Elizabeth.

Elizabeth was not wanting in the arts of diffimula-secret 83 tion and treachery now more than formerly. She pro-Liadfa fecuted and fined fecretary Davidfon and lord Bur- and led leigh for the active part they had taken in Mary's Burleif death. Their punillment was indeed much lefs than they deferved, but they certainly did not merit fuch treatment at her hands. Walfingham, though equally guilty, yet efcaped by pretending indifpofition, or perhaps efcaped becaufe the queen had now occation for his fervices. By her command he drew up a long letter addreffed to lord Thirlfton, king James's prime miniiter: in which he fhowed the neceflity of putting Mary todeath, and the folly of attempting to revenge it. He boafted of the fuperior force of England to that of Scotland ; Mewed James that he would for ever ruin his pretenfions to the Englifh crown, by involving the two nations in a war ; that he ought not to trult to foreign alliances ; that the Roman Catholic party were fo divided among themfelves, that he could receive little or no affiftance from them, even fuppofing him fo ill advifed as to change his own religion for Popery, and that they. would not truft his fincerity. Lafly, he attempted to fhow, that James had already difcharged all the duty towards his mother and his owil reputation that could be expected from an affectionate fon and a wife king; that his interceding. for her with a concern fo becoming uature, had endeared him to the kingdom of England; but that it would be madnefs to puin his refentment farther.

This letter had all the effect that could be defired. James gave an audience to the Engli h ambaffador ; and being affured that his blood was not tainted by the execution of his mother for treafon againft Elizabeth, but

## s c o [ 99 I s C o

thand that he was itill capable of fucceeding to the crown of England, he confented to make up matters, and to addrels the murderer of his mother by the title of loving and affectionate fifter.

The reign of James, till his acceffion to the crown of Eggland by Elizabeth's death in 1603 , affords little matter of moment. His fcandalous conceffions to Eli. zabeth, and his conftant applications to her for money, filled up the meafure of Scottifh meannefs. Ever fince the expulfion of Mary, the country had in fact been reduced to the condition of an Englifh province. The fovereign had been tried by the queen of England, and executed for treafon; a crime, in the very nature of the thing impoffible, had not Scotland been in fubjection to England ; and to complete all, the contemptible fuccef. for of Mary thought himfelf well off that he was not a traitor too, to his fovereign the queen of England we muft fuppofe, for the cafe will admit of no other fuppofition.

During the reign of James, the religious difturbances which began at the reformation, and that violent ftruggle of the clergy for power which never ceafed till the revolution in 1688 , went on with great violence. Continual clamours were raifed againt Popery, at the fame time that the very fundamental principles of Popery were held, nay urged in the moft infolent manner, as the effects of immediate infpiration. Thefe were the total independence of the clergy on every earthly power, at the fame time that all earthly powers were to be fubject to them. Their fantaftic decrees were fuppofed to be binding in heaven; and they took care that they fhould be binding on earth, for whoever had offended fo far as to fall under a lentence of excommunication was declared an outlaw.

It is eafy to fee that this circumftance mut have contributed to difturb the public tranquillity in a great degree. But befides this, the weaknefs of James's government was fuch, that, under the name of peace, the whole kingdom was involved in the miferies of civil war; the feudal animofities revived, and naughter and murder prevailed all over the country. James, fitted only for pedantry, difputed, argued, modelled, and re-modelled, the conftitution to no purpofe. . The clergy continued their infolence, and the laity their violences upon one another; at thie fane time that the king, by his unhap-
py cresulity in the operation of demons and witches, Scotland. declared a moft inhuman and bloody war againft the poor old women, many of whom were burnt for the imaginary crime of converfing with the devil.

In autumn 1600 happencd a remarkable confpiracy againft the liberty, if not the life, of the king. The attainder and execution of the earl of Gowrie for the part he acted in the raid of Ruthverr and for fubfequent practices of treafon have been already mentioned. His fon, however, had been reftored to his paternal dignity and eftates, and had in confequence profeffed gratitude and attachment to the king. But the Prebyterian clergy continued to exprefs their approbation of the raid of Ruthven, and to declare on every occafion that in their opinion the earl of Gowrie had fuffered by an unjuft fentence. One of the moft eminent and popular of that order of men was preceptor to the younger Gowrie and his brothers, who, from their frequent converfations with him, muft have been deeply impreffed with the belief that their father was murdered. The paffion of revenge took poffeffion of their breafts; and having invited the king from Falkland to the earl of Gowrie's houfe at Perth, under the pretence of fhowing him a fecret treafure of foreign gold, which he midht lawfully appropriate to his own ufe, an attempt was made to' keep him a clofe prifoner, with threats of putting him to inffant death if he fhould make any attempt to regain kis liberty.

The reality of this confpiracy has been queftioned by many writers, for no other reafon, as it would appear, but becaufe they could net affign a rational motive for -Gowrie's engaging in fo hazardous an enterprife ; and fome have even infinuated that the confiracy was entered into by the king againft Gowrie in order to get poffeffion of his large eftates. It has been fhown however by Arnot, in his Criminal Trials, with a force of evidence which leaves no room for doubt, that the confpiracy was the earl's, who feems to have intended that the king fhould be cut off by the hand of an affaffin; and the fame acute and difcriminating writer has made it appear lighly probable, that he entertained hopes, in the then diftracted fate of the nation not ill founded, of being able to mount the throne of his murdered fovereign( z ). From this imminent danger James was refcued by his attendents the duke of Lenox, the earl of
(z) The family of Ruthven had long been looked upon as the head of that party which was attached to England and the reformation; and the accomplifhments of the latter Gowrie qualified him to be the leader of an enterprifing faction. "The importance he derived from arifocratic influence over his extenfive domains," and from the attachment of a powerful party in church and ftate, was embellifhed with the luftre of a regal defcent. Thus ambition, as well as revenge, might fimulate him to his daring enterprife. Indeed, if his attempt was: to be directed againft the life of the king, it could no longer be fafe for him to remain in the condition of a fubject: and the indecent and malicious imputation of baftardy, with which the fanatics reproached king James, might afford a plaufible pretext for fecluding the royal offspring. The family of Hamilton, next heir to the crown, had long loft its popularity, and the earl of Arran, its head, had loft his judgment; and, though there undoubtedfuly were feveral families interpofed between Gowrie and the crown in the ftrict line of fucceffion, none of them probably poffeffed power and popularity to fupport their right. But if Gowrie and his brother were really endowed with thofe perfonal accomplifhments which have been fo highly extollcd, and which made their countrymen conceive the moft fanguine hopes of their early virtues; it is abfurd to fuppofe lord Gowrie to have flattered himfelf, that in a country where the church was in danger, where the trumpet of fedition was founded by the minitters, who fortified the chief block-houfe of the Lord's Ferufalem, his piety, popularity, and bravery, fhould fupply the defect in title, and make him be called, while there were nearer heirs to the crown; as has since happened in the fame country, on a fimilar occafion.
scotland. Marre, Sir Thomas Erikine afterwards earl of Kellie, and Sir John Ramfey who was likewife ennobled ; and though Gowrie and his brother fell in the fruggle, they were attainted by an act of parliament, which decerned their name, memory, and dignity, to be extinguifhed; their arms to be cancelled; their whole eftates to be forfeited and annexed to the crown; the name of Ruthven to be abolithed; and their pofterity and furviving brethren to be incapable of fucceeding to, or of hulding, any: offices, honoure, or poffeffions. and mott memorable tranfaction of James's. reign, weftern in anders. weftern inanders. For this purpole, he inflituted a company of gentlemen adventurers, to whom he gave large privileges for reforming thein. The method he propofed was to tranfport numbers of them to his low countries in Scotland, and to give their illaads, which were very iirproveable, in fee to his lowland fubjects riwo fhould choofe to refide in the iflands. The experintan was to be made upon the Lewes, a long range of the Ebiake; from whence the adventurers expellicd Murdoch Macleoc, the tyrant of the inhabitants. Macleod, however, kept the fea; and intercepting a fhip which carried one of the chief adventurers, he fent him prifoner to Orkney, atter putting the crew to the fword. Macleod was foon after betrayed by his own brother, and hanged at St Andrew's, The hiftory of this new undertaking is rather dark; and the fettlers themfelves feem to have been defective in the arts of civilization. The arrangemeats they made were confidered by the inhabitants as very oppreffive; and one Norman, of the Macleod family, attacked and fubdued them fo effectually, that they not only confented to yield the property of the inands to him, but engaged to obtain the king's

General defcription of sicotland. pardon for what he lad done.
In t ©O3 James was called to the throne of England by the death of Elizabeth, and the fame year took a. final leave of Scotland (A). From this period the hiflory of Scotland, being blended with that of England, is included in the article Britain ; to which therefore we refer the reader, and fhall proceed to give a general. account of the country.

The firft and great divifion of Scotland is into the Ifighlands and Lowlands. The former engrofs more than one half of Scutland ; extending from Dumbartonfhire to the moft northern part of the ifland, a fpace of 200 miles in length, and in breadth from 50 to roo . This tract, however, includes feveral extenfive diffricts of low, fruitful ground, inhabited by people who are in all refpects different from the mountaineers. Nothing can be more favage and tiemendous to the eye of a Atranger, than the appearance of the Highlands, com. pofed of blue rocks and dulky mountains heaped upon one another even above the clouds, their interftices rendered impaffable by bogs, their fides embrowned with heath, and their fummits covered with fnow, which lies all the year unthawed, pouring from their jagged fides a thoufand torrents and roaring cataracts
that fall into gloomy vales or glens below, fome of them Sco fo narrow, deep, and difmal, as to be altogether impenetrable by the rays of the fun; yet even thefe mountains are in fome places floped into agreeable green hills fit for pafture, and fikirted or interfperfed with pleafant ftraths or valleys capable of cultivation. It may be unneceffary to obferve, that the Lowlanders of Scotland fpeak an ancient dialect of the Englifh language, intere larded with many terms and idioms which they borrow ed immediately from France, in a long courfe of cor refpondence with that kingdom: they likewife copy, their fouthern neighbours in their houles, equipage, labit, induftry, and application to commercu. As to the inhabitants of the mountains, fee the article Hrgha landers. They are, all, however, comprehended under the name of Scots governed by the fame laws, and tried by the fame judges; and, whatever may be theis differfions at home, they always, when abroad, acknowletlye and affit one anôther as friends and countrymen. Some authors have divided Scotland into that part which lies to the fouthward of the Frith, and thatwhich lies to the northward; but the true divifion is, like that of England, into nhires, comnties, ftewart-, ries or bailiwicks, of which there are above 40 within the kingdom of Scotland.

The face of this conutry exhibits a very mountain-Princi ${ }^{848}$ ous appearance, efpecially to the weft and northward; mount but, at the fame time, it difplays many large and long \&c. tracts of plain ground fit for all the purpofes of agriculture. It is divided from eaft to weft by a chain of huge mountains, known by the name of Gront's bnin or the Grampian hilis. There is another chain called the Pentland bills, which run through Lothian, and join the mountains of Tweeddale; a third, called Lam-mer-muir, rifing near the eaftern coaft, rups weftward through the Merfe: but befides thefe, there is a valt number of detached hills and mountains, remarkable for their ftupendous hei ght and fleepnefs, There is no country in the world better fupplie? than Scotland with rivers, lakes, rivulets, and fountains. Over and above the principal rivers of Tweed, Forth, Clyde, Tay, and Spey, there is an infinity of conaller ftreans that contribute to the beauty, convenience, and advantage of the kingdom. Tweed takes its ife from the borders of $A$ nnandale; ferves as a boundary between Scotland and England; and, after a long ferpentine courfe, difcharges itfelf into the fea at berwick. Forth rifes in Monteith near Callendar, paffes by Stirling, and after a courfe of 25 leagues, runs inta the arm of the fea called the Frith of Forth, which divides the coatt of Lothian from Fife. Clyde takes its rife from Errick hill, in the fhire of Lanerk; traverfes the Shire of Clydefdale, to which it gives name; wafhes the city of Glafgow, widens in its paflage to the caftle of Dumbarton, and forms the frith of Clyde adjoining to the Irifla fea. Tay, the largeft river in Scotland, derives its f fource from Loch-Tay in. Breadatbane; and, atter a fouth-ealt courfe ${ }_{2}$ difcharges itfelf
(A) In 1589 James was married to Anne princefs of Denmark, for whom he made a voyage on purpofe to that country. This princefs feems to have intermeddled very little with ftate-affairs, fince we find her fcarce ever mentioned either by Scots or Englifh hiftorians. In her private conduct fhe is faid to have been unprincipled vindictive, and unfaithful to her hufband.

## S C O [ 101$] \quad$ S C O

Land into the fea below Dundee. Spay, or Spey, iffues from a lake of the fame name in Badenoch; and, running a north-eafterly courfe, falls into the German ocean, at Speymouth. Some of the frêh-water lakes are beautiful pieces of water, incredibly deep, and furprifingly extended. There are feveral large forefts of fir in Scotland, and a great number of woods; which, bowever, produce very lithle timber of any coufequence: but the country, in general, is rather hare of trees; and in many places neither tree, fhrub, nor any kind of plantation, is to be feen. The cafe has been otherwife of uge trunks of trees are often dug from un-

* $\quad 1$ in almof every part of the kingdom.
north of Scotland, the day at midfummer is 1 out to 18 hours and 5 minutes; fo that It night does not exceed 5 hours and 55 the uight and day, in winter, are in the fame 1. The air of this kingdom is generally moift' trate, except upon the tops of high moun. red with etemal fnow, where it is cold, keen, ercing In other parts it is tempered by warm Irs from the fea, which environs it on three fides, a far up into the land ty friths, inlets, and in. s. This neigbbourlood of the fea, and the of hills and mountains, produce a conftant $n$ in the air, and many hard gales, that puclimate, which is for the mott part agreeable hy. Scotland affords a great varicty of foil int parts of the country, which, bein ${ }_{5}$ hilly, eral well adapted to pafturage : not but that vands are as fertile, and, when properly in fad manured, yield as good crops of wheat as any grounds in the ifland of Great Britain. The water in scotland is remarkably pure, light, and a rreeable to the fomach : but, over and above that which is ufed for the ordinary purpofes of life, here are many medicinal fprings of great note.

Scotland abounds with quarries of free-ftone cafly worked, which enable the people to build elegant houfes, both in town and country, at a finall expence, efpecially as they lave plenty of lime-fone, and labour very cheap. The eaft, weft, and northern parts of the country produce excellent coal ; and where this is wanting, the natives burn turf and peat for fuel. Cryftals, variegated pebbles, and precious fornes, are fonnd in many parts of Scotland ; talc, flint, and fea fhells, fruiler's earth, putter's clay, and metals in great plenty. The country produces iron and copper ore, a prodigions quantity of lead, mixed with a large proportion of filver; and in frme places little bits of folid gold are gathered in brooks immediately after torrents.

The Lowlands of Scotland, as has been obferved when dely cultivated, yield rich harvefts of wheat ; and indeed it muft be owned that many parts of this kingdom rival the beft fpots of England in agriculture: but thefe improvements have not yet advanced into the weftern and northern extremities of the ifland, where we fee nothing but fcanty harveft of oats, rye, and harley. The Highlands are fo defective even in thefe, that it is neceffary to import fupplies of oatmeal from Ireland and Liverpool. This fcarcity, however, we muft not impute to the barrennefs of the foil, fo much as to the floth and poverty of the tenants, oppreffed by rapacious landlords, who refufe to grant fuch leafes as would encourage the hubandman to improve his farm
and make bimfelf better acquainted with the feience of Scottand agriculture. This is perfectly well underfood in the Lothiane, where we fee fubftantial inclofures, plantations, meadows for hayand pafture, wide extended fields of wheat, the fruits of fkill and induftry, and meet with farmers who rent lands to the amount of 4001 . or 500 1. a.year. Of plants this country produces an immenfe variety, growing wild, exclufive of thofe that are raifed by the harids of the hufbaudman and gardener. Their farm-grounds are well flucked with wheat, rye, barley, oats, hemp, and flax : their gardens produce great plenty of kitchen-roots, falads, and greens; among which latt we reckon the colewort, known by the name of Siotch kail: their orchards bear a variety of apples, pears, cherries, plums, ftrawberries, goofeberries, rafpberries, and currants : here alfo apricots, nectarines. peaches, and fometimes grapes, are brought to maturity. In a word, there is nothing, whether fhrub, fruit, or Rower, that grows in any part of South Britain, which may not, with a little pains, be brought to the fame perfection in the middle of Scotland. Among the trees and fhrubs which are the national growth of this conutr:, we may reckon the oak, the fir, the birch; the poplar, the alder, willow, elder, hazle, mountain-afh, crab-tree, and juniper; which laft abounds to fuch a degree in fome parts of the Highlands, that in the fpace of a few miles many tons of the herries might be rcarly gathered: befides thefe, we find the hawthorn, the flue, the do s-role, furze, broom, fern, and whole tracts of land and mountains covered with ftrong heath. This affords fhelter for the myrtillis, the fruit of which, callcd billerries, is here found in great abundance, as well: as the bramheberry, cranberry, and wild ftrawberry. The afh, the elm, the fycamore, lime and walnut-tree, are chiefly planted about the houfes of gentlemen; but even the inclofures of cquickfet appear naked for want of fuch hedge-rows 2s adorn the country of England. Indeed, great part of this kingdom lies naked and expofed like a common; and other parts have no other inclofure than a paltry wall hudeded up of loofe fones, which yichls a bleak and mean profpect, and ferves no other purpofe than that of keeping out the cattle. All the fea-conalt is covered with alga marina, dulfe, and other marine plants.

The Highlands are well flocked with red deer, and the fmaller fpecies called the roe-buck, as well as withe hares, rabbits, foxes, wild cats, and Badpers; and they abound with all forts of pame. The rivers and lakes pour fortlı a profution of falmon, trout, jack, and eels; the fea-coall, fwarms with all the productions of the ocean. The hills and mountains are covered with fheep: and black cattle for exportation, as well as domeftic ufe. Thefe are of fmall fize, as are alfo the horfes bred ins the Highlands; but the Lowlanders ufe the large breeds which came originally from England.

New Scotland. See Nova Scogha.
SCOTOMIA, in medicine, a vertigo accompanied with dimnefs of light, frequently the forerunner of an apoplexy.

SCOTT (John), an eminent Englifh divine, was born in 1638 , and became minitter of $S t$ 'Ihomas's in Southwark. In 1684 he was collated to a prebend in the cathedral of St Paul's. Ir Hickes tells us; that, after the revolution, "he firlt refufed the bifhopric of Chefter, becaufe he would not take the oath of ho-

## S C O [102 1 S CO

 of Worchefter, and a prebend of the clurch of Windfor, becaufe they were all places of deprived men." He publifhed feveral excellent works, particularly Thc Chriflian Life, \&c. and died in 1695 . He was eniiment for his humanity, affability, fincerity, and rcadinefs to do grood; and his talent for preaching was extraordinary.SCOTUS (Duns). See Duns.
Scotus (John). See Erigena.
SCOUGAL (Henry), fecond fon of Patrick Scougal bifhop of Aberdeen, was born, June 1650 , at Salton in Ealt Lothian, where his father, the immediate predeceffor of Bifhop Burnet, was rector. His father, defigning him for the facred miniftry, watched over his infant mind wîth peculiar care; nor was lis care beftowed in vain. He had foon the fatisfaction of perceiving the moft amiable difpofitions unfold themfelves, and his underftandiny rife at once into the vigour of manhood. Relinquifhing the amufements of youth, young Scougal applied to his ftudics with ardour ; and, agreeable to his father's wifh, at an early period he dirccted his thoughts to facred literature. He perufed the hiftorical parts of the bible with peculiar pleafure, and then began to examine its contents with the eye of a philofopher. He was ftruck with the pecularities of the Jewifh difpenfation, and felt an anxiety to underfland the reafon why its rites and ceremonies were abolinhed. The nature and evidences of the Chriftian religion alfo occupied his mind. He perufed fermons with pleafure, committed to writing thofe paffages which moft affected him, and could comprehend and remomber their whole foope. Nor was he inattentive to polite literature. He read the Roman claffics, and made confiderable proficicncy in the Greek, in the Hebrew, and other oriental languages. He was alfo well verfed in hiftory and mathematics. His diverfons were of a manly kind. After becoming acquainted with the Ro, man hiftory, in concert with fome of his companions he formed a little fenate where orations of their own compofition were deliwered.

At the age of fifteen he entered the univerfity, where the behaved with great modcfty, fobriety, and diligence. He diniked the philofophy then taught, and applied himfelf to the ftudy of natural philofophy; that philofophy which has now happily got fuch footing in the world, and tends to enlarge the faculties. In confequence of this, we may here obferve, that when he was yet about eighteen years of age, he wrote the reflections and fhort effays fince publifhed; which tho' written in his youth, and fome of them left unfinifhed, breathe forth fo much devotion, and fuch an exalted foul, as mult couvince us his converfation was in heaven.

In all the pub.ic mcetings of the fludents he was unanimoufly chofen prefident, and had a fingular deference paid to his judginent. No fooncr had he finifhed his courfes, but he was promoted to a profefforfhip in the univerfity of Aberdeen, where he confcientioufly performed his duty in training up the youth under his care in fuch principles of learning and virtue as might render them ornaments to church and ftate. When any divifions and animofities happened in the fociety, he was very inftrumental in reconciling and bringing them to a good undertanding. He maintain-
ed his authority among the fludents in fuch a way to keep them in awe, and at the fame time to gain their love and efteem. Sunday evenings were fpent with his fcholars in difcourfing againft vice and impiety of all kinds, and encouraging religion in principle and practice. He allotted a confiderable part of his yearly income for the poor; and many indigent families, of diffcrent perfuafions, were relieved in their ftraits by his bounty ; though fo fecretly that they knew not whence their fupply came.

Having bcen a profeffor of philofophy for four years, he was at the age of twenty-three ordained a minitter, and fettlcd at Auchterlefs, a fmall village about twenty miles from Aberdeen. Here his zeal and ability for his great Mater's fervice were cminently difplayed. He catechifed with great plainnefs and affection, and ufed the moft endearing methods to recommend religion to his hearers. He endeavoured to bring them to a clofe attendance on public worhip, and joined with them himfelf at the beginning of it. He rcvived the ufe of lcctures, looking on it as very edifying to comment upon and expound large portions of fcripture. And though he endured feveral outward inconveniencies, yet he bore them with patience and mecknefs. But as God liad defigned him for an cminent fation, where he could be of more univerfal ufe in his church, he was removed from his private charge to that of training up youth for the holy miniftry and the care of fouls. In the twenty-fifth year of his age he was admitted profeffor of divinity in the king's college, Aberdeen; and though he was unanimounly chofen, yct he declined a ftation of fuch importance, from a modeft fenfe of his. unfitnefs for it: And as he had been an ornament to his other ftations of life, fo in a particular manner he applied himfelf to the exercife of this office. After he had guarded his ftudents agrainft the common artifices of the Romifh miffionaries in making profelytes, he propofed two fubjects for public exercifes; the one, of the paftoral care ; the other, of cafuiftical divinity : but there were no debates he was more cautious to meddle with than the decrees of God; fenfible that fecret. things belong to God; and to us things revealed.

The inward difpofitions of this excellent man are beft feen in his writings; and the whole of his outward behaviour and converfation was the conftant practice of what he preached; as we are affured by the concurring teftimony of feveral refpectable perfons who knew him. How unfuitable then would panegyric be, where the fubject was full of humility ? and therefore let it fuffice to fay, that after he began to appear publicly, you fee lim as a profeffor, earneft at once to improve his fcholars in human and facred learning; as a paftor, he ceafed not to preach the word, to exhort, to reprove, and to rebuke with all authority: and as a profeffor of divinity, he beftowed the utmoft pains to convince the candidates for the miniftry of the weight and importance of that high office; that it was not to be followed for lucre, but purely to promote the worflip of God and the falvation of men. Again, if we confider his private life, how meck, how charitable, and how felf-denied! how difinterefted in all things, how refigned to the divine will! and above all, how refined his fentiments with regard to the love of God! How amiable muft he then appear! How worthy

## $S \mathrm{C} R$

wiothy of imitation, and of the univerfal regret at his death! In this light we fee clearly that the memory of the juift is bleffed.

At length his health bergan to be impaired by inceffant Itudy, and about the twenty-feventh year of his are he fell into a confumption, which walted him by flow decrees. Put during the whole time of his ficknefs he behaved with the utmoft refignation, nor did he ever fhow the leaf impatience.

When his friends came to vifit him, he would fay, "he had reafon to blefs God it was no worfe with him than it was. And (fays he) when you have the charity to remember me in your prayers, do not think me a better man than I am ; but look on me, as indeed I am, a miferable fininer." Upon the twentieth day of June 1678 he died, in the greateft calmnef, in the twenty-eighth year of his age, and was buried in the King's College Church in Old Aberdeen. The principal work of Scougal is a finall treatife intitled, The Life of God in the Soul of Man. This book is not only valuable for the fublime fpirit of piety which it breathes, but for the purity and elegance of its ftyle; qualities for which few Englifh writers were diftinguifhed before the Revolution.

SCOUTS, in a military fenfe, are generally horfemen fent out before, and on the wings of an army, at the diftance of a mile or two, to difcover the enemy, and give the general an account of what they fee.

SCRATCH-pans, in the Englifh falt-works, a name given to certain leaden pans, which are ufually made about a foot and an half long, a foot broad, and three inches deep, with a bow or circular handle of iron, by which they may be drawn out with a hook when the liquor in the pan is boiling. Their ufe is to receive a felenitic matter, known by the name of fof foratch, which falls during the evaporation of the falt-water. See the article Sea Salt.

SCRA'CHES, in farriery. See there, $\S$ xxxvii.
SCREED, with plafterers, is the floated work behind a cornice, and is only neceffary when a cornice is to be executed without bracketing.

SCREW, one of the fix mechanical powers. A fcrew is a cylinder cut into feveral concave furfaces, or rather a channel or groove made in a cylinder, by carrying on two fpiral planes the whole length of the ferew, in fuch a manner that they may be always equally inclined to the axis of the cylinder in their whole progrefs, and alfo inclined to the bafe of it in the fame angle. See Mechanics, n 30
No I. To confruct a common, or one-threaded Screw. - Make a parallelogram of paper equal in length to the cylinder which is to be ferewed, and equal in breadth to the circumference of that cylinder. Divide the fide of the parallelogram, which is equal to the circumference of the cylinder, into two equal parts. Divide the other fide of the parallelogram, which is equal in length to the cylinder, into as many parts as the thicknefs or breadth of the intended thread will run over. Then join the fecond point on the circumference fide to the fecond point on the length-fide of the parallelogram, and fo join all the fucceeding points as you fee in the figure.
$\mathrm{N}^{0}$ 2. To make a four-tbreaded Screw, or that which is commonly ufed for the letter-pre/s.-Make a parallel.

## $03]$ <br> $S \subset R$

ogram, as deforibed before; divide that fide which is equal to the circumference of the cylinder dinto eight equal parts, or twice the number of threads. Divide the other fide into as many parts as the diftance between two threads will run over, then join the points as in $n^{\circ} \mathrm{I}$. (fig. I).

Screw, Scribe.

Corollary. To make a left-banded forew.-Make eccexsuasso the parallels to the right inftead of the left, as expreffed by the figures, $\mathrm{n}^{\circ} 3$.

This is the true and only practicable way of making. all kinds of fcrews that are cut on a cylinder.

Archimedes's Screw. See Hydrostatics, n 40.
Encllefs or Pertetual Screw, one fo fitted in a contpound machine as to turn a dented wheel ; fo called, becaufe it may be turned for ever without coming to an end.

If in the endlefs or perpetual fcrew, $\mathrm{AB}\left(\mathrm{n}^{\circ} 4.\right)$, whofe threads take the teeth of the wheel CD, you take the diftance of two threads, according to the lenoth of the axis $A \cdot B$; or the diftance of two teeth in the wheel CD , in the direction of the circumference; and if a weight $W$ act at the circumference of the wheel : then, if the power D be to the weight W , as that diftance of the teeth or threads, to the length deferibed by the power $P$ in one revolntion, the power and weighr. will be in equilibrio ; becaufe in one revolution of P , the wheel D.C, with the weight $W$, has moved only the diftance of one tooth.

SCRIBE, in Hebrew 7 DOpher, is very common in. feripture, and has feveral fignifications. It fignifes,

1. A clerk, writer, or fecretary. This was a very confiderable employment in the court of the kings of Judah, in which the fcripture often mentions the fecretaries as the firlt officers of the crown. Seraiah was feribe or fecretary to king David (2 Sam. viii. 17). Shevah and Shemaiah exercifed the fame office under the fame prince ( $2 \mathrm{Sam} . \mathrm{xx} .25$ ). In Solomon's time we find Elihoreph and Ahiah fecretaries to that prince, (1 Kings iv. 4). Shebna under Hezekiah (2 Kings xix. 2). And Shaphan under Jofiah ( 2 Kinges xxii. 8). As there were but few in thole times that could write well, the employment of a feribe or writer was very confiderable.
2. A fcribe is put for a commiffary or mufter-mafter of an army, who makes the review of the troops, keeps: the lift or roll, and calls them over. Under the reign of Uzziah king of Judah, there is found Jeil the fcribe who had under his hand the king's armies (2 Chr. xxvi. It). And at the time of the captivity, it is faid. the captain of the guard, among other confiderable perfons, took the principal fcribe of the hoft, or fecretary at war, which muftered the people of the land ( 2 Kings. xxv. 19).
3. Scribe is put for an able and fikiful man, a doctor of the law, a man of learning that underftands affairs. Jonathan, David's uncle by the father's. fide, was a counflllor, a wife man, and a fcribe (r Chr. xxvii. 32). Baruch, the difciple and fecretary to Jeremiah, is called a firibe (Jer. xxxvi. 26). And Ezra is celebrated as a kilful feribe in the law of his God (Ezra vii. 6). The fcribes of the people, who are frequently mentioned in the Gofpel, were public writers and profeffed doctors of the law, which they read and explained: to the people. Some place the original of fribes un*

## S C R <br> 1041 S.CR

not appear till under juges. It is faid, that in the wars of Barak againft Sifera, "out of Machir came down governors, and out of Zebulun they that handle the pen of the writer." (Judges v. 14). Others think that David firft inftituted them, when he eftablifhed the feveral claffes of the priefts and Levites. The lecribes were of the tribe of Levi; and at the time that David is faid to have made the regulations in that tribe, we read that 6000 men of them were conftitated officer3 and judges ( 1 Chr. xxiii. 4.) ; among whom it is reafonable to think the fcribes were included. For in 2 Chr. xxir. 6. we read of Shemaiah the fcribe, one of the Levites; and in 2 Chr. xxxiv. ${ }^{13}$. we find it written, "Of the Levites that were fcribes and officers."

The fcribes and doctors of the law, in the fcripture phrafe, mean the fane thing; and he that in Mat. xxii. 35. is called a dactor of the law, or a lawyer, in Mark xii. 28. is named a foribe, or one of the fcriles. And as the whole religion of the Jews at that time chiefly confifted in pharifaical traditions, and in the ufe that was made of them to explain the fcripture; the greateft number of the coctors of the law, or of the fcribes, were pharifees; and we almcit always find them joined together in fcripture. Each of them valued themfelves upon their knowledge of the law, upon their Atudying and teaching it (Mat. xxii. 52.) : they had the key of knowledge, and fat in Mofes's chair (Mat. xxiii. 2). Epiphanius, and the author of the Recognitions imputed to St Clement, reckon the feribes among the fects of the Jews; but it is certain they made no fect by themfelves; they were only diftinguifhed by their ftudy of the law.

SCRIBONIUS (Largus), an ancient phyfician in the reign of Auguftus or Tiberius, was the auther of feveral works ; the bett cdition of which is that of John Rlıodius.
SCRIMZEOR or Scrimgeour (Henry), an eminent reforer of learning, was born at Dundee in the year 1506 . He traced his defcent from the aucient family of the Scrimzeours of Didupe, who obtained the - fiice of hereditary ftandard-bearers to the kings of Scotland in $1057^{\circ}$

At the grammar fchool of Dundee our author ac- Serima quired the Greek and Latin languages to an uncommon degree of perfection, and that in a horter fpace of time than many fcholars before him. At the univerfity of St Andrew's his fuccefsful application to philofophy gained him great applaufe. The next fcene of his ftudies was the univerfity of Paris, and their more particular object the civil law. Two of the mot famous civilians of that age, Eguinard Baron and Francis Duaren (A), were then giving their lectures to crowded circles at Bourges. The fame of thefe profeftors occafioned his removal from Paris; and for a confiderable time he profecuted his ftudies under their direction.

At Bourges he lad an opportunity of becoming acquainted with the celebrated James Amiot, Greek profeffor in that city, well known in the learned world by his tranflation of Plutarch's Lives, and difinguithed afterwards by his advancement to great honours in the church, and finally to the rank of cardinal.

Through the recommendation of this eminent pers fon, Mr Scrimzeor engaged in the education of two young gentlemen of the name of Bucherel, whom he in. ftructed in the belles lettres, and other branches of lim terature, calculated to accomplifh them for their flation in life.
'This connection introduced him to Bernard Bornetel bifhop of Rennes, a perfon famed in the political world for havirg ferved the ftate in many honourable cmbaffies. Accepting an invitation from this prelate to accompany him to Italy, Mr Scrimzeor greatly en* larged the fphere of his literary acquaintance, by his converfation and connection with moft of the diftinguifhed fcholars of that country. The death of Francis Spira (в) happened during his vifit at Padua ; and as the character and conduct of this remarkable perfon at that time engaged the attention of the world, Mr Scrimzeor is faid to have collected memoirs of him in a publication entitled, "The Life of Francis Spira, by Herry of Scotland." This performance, however, doets not appear in the catalogue of his works.

After he had fored his mind with the biterature of foreign countrics, and fatisfied his curiolity as a travel-
(1) "Jrancis Duaren was the firt of the French civilians who purged the chair in the civil law fchools from the barbarifms of the Gloffaries, in order to introduce the pure fources of the arcient jurifprtudence. As he did not defire to thare that glory with any one, he lonked with an envious eye on the reputation of his colleague Eguinard Baron, who allo nixed good literature with the knowledge of the law. This jealsufy put him npon compofing a work, wherein be endeavoured to leffen the efleem that people had for his colleague The maxim, - Pafcitur in vivis liver; fofl fata quiefit,' was verified remarkably in him ; for after the death of Baron, he fhowed himfelf mofl zealous to eternize his memory, and was at the expence of a monument to the honour of the deceafed." From the Tranflation of Bayle's Dict. of 1710 , p. 1143.4 .
(B) Francis Spira was a lawyer of great reputation at Cintadella in the Venetian ftate, at the beginning of the Iúth century. He had imbibed the principles of the Reformation, and was accufed before John de la Cafa, archbihop of Benevento, the pope's nuncio at Venice. He made fome conceffions, and afked pardon of the papal minifter for his errors. But the nuncio infited upon a public recantation. Spira was exceedingly averfe to this meafure; but at the prefing inftances of his wife and his friends, who reprefented to him that he mut lofe his practice and ruin his affairs by perfiting againft it, he at laft complied. shortly after he fell into a deep melancholy, loft his health, and was removed to Pactua for the advice of phyticians and divines; but his diforders augmented. The recantation, which he faid he had made from cowardice and intereft, filled his mind with continual horror and remorfe ; infomuch that he fometimes imagined that he felt the torments of the damned. No means being found to reftore either his health or his peace of mind, in 1548 he fell a victim to his miferable fituation. See Collyer's Diet.-Spira.

## $\mathrm{S} C \mathrm{R}$

weor. ler, it was his intention to have revifited Scotland. He might without vanity have entertained hopes, that the various knowledge which he had treafured would have won him a partial reception among his countrymen. An ambition of being ufefully diftinguifhed among them as a man of letters is juftly fuppofed the principal motive of his defire to return : but the moft fanguine projects of life are often ftrangely diverted by accident, or rather perhaps are invifibly turned by Providence, from their purpoféd courfe. Mr Scrimzeor, on his journey homewards, was to pafs through Geneva. His fame had long forerun his footfteps. The fyndics and other magiftrates, upon his arrival, requefted him to fet up the profeffion of philofophy in that city ; promifing a compenfation fuitable to the exertion of his talents. He accepted the propofal, and eftablifhed the philofophical chair.

After he had taught for fome time at Geneva, a fire broke out in his neighbourhood, by which his houfe wras confumed, and he himfelf reduced to great diftrefs. His late pupils, the Bucherels, had not forgotten their obligations to him, and fent a corfiderable fum of mouey to his relief.

At this time flourifhed at Augfourg that famous mercantile family (c), the Fuggers. Ulric Fugger was then its reprefentative ; a man poffeffed of prodigious wealth, paffionately fond of literature, a great collector of books and manufcripts, and a munificent patron of learned men. Being informed by means of his literary correfpondence of the misfortune which had befallen Mr Scrimzeor in the burning of his houfe, he immediately fent him a preffing invitation to accept an afylum beneath his roof till his affairs could be re-eftablifhed. Mr Scrimzeor, gladly availing himfelf of fuch a hofpitable kindnefs, loft no time in going to Germany.

Whillt refiding at Augiburg with Mr Fugger, he was much employed in augmenting his patron's library by valt collections, purchafed from every corner of Europe. Manufcripts of the Greek and Latin authors were then of ineftimable value, and feem to have been more particularly the object of Mr Scrimzeor's refearches.

He did not lead a life of yawning indolence amidft thefe treafures, and, like a mere unféeling collector, leave them unenjoyed. As librarian, he was not contented to act the part of a black eunuch to his literary feraglio. He feems to lave forgotten that he was not its Grand Sultan, and accordingly ranged at will among furrounding beauties. He compofed many works of great learning and ingenuity, whilft he continued in a fituation fo peculiarly agreeable to the views and habits of a fcholar.

When his manufcripts were ready for the prefs, he was defirous of returning to Geneva to print them. His patron, Fugger, recommended him for this purpofe to the very learned Henry Stephens, one of his penfioners, and at that time one of the moft celebrated printers in Europe.

Vol. XVII. Part I.
$105] \quad \mathrm{S}$ G R
Tmmediately on his arrival at Geneva, 1563, he was Scrimzeof: earneftly folicited by the magiftrates to refume the chair of philofophy. Notwithftanding his compliance, and in confequence of it the dedication of much $f$ his time to the ftudy of phyfics, he, two years afterwards, inftituted a courfe of lectures in the civil law, and had the honour of being its firft founder and profeffor at Geneva.

As foon as he was fettled again in this city, he hoped, amidft his other occupations, to profecute the great object of his literary fame, the printing of his various works. But a fufpicion which Heary Stephens entertained, that it was his intention to fet up a rival prefs at Geneva, occafioned great diffenfions between them. The refult of the quarrel was, that the -republic of letters, during Mr Scrimzeor's life, was deprived of his valuable productions. They fell moft of them at his death into the hands of Ifaac Cafaubon, who has been accufed of publifhing confiderable portions of them as his own.

Some account of Mr Scrimzeor's Several performances will give an idea of his extenfive erudition.

He wrote critical and explanatory notes upon Athenæus's (D) Deipnofophi/fs, or 'Table-converfations of Philofophers and Learned Men of Antiquity ; having frit collated feveral manufcripts of his author. This work Cafaubon publifhed at Leyden in 1600 ; but without diftinguifhing his own notes from thofe of Scrimzeor.

A Commentary and Emendations of the Geography of Strabo were among our author's literary remains. Thefe were publifhed in Cafaubon's Parifian edition of Strabo, 1620 . Henry Stephens, from an idea of juftice due to Scrimzeor's literary fame, notwithftanding the violent animofity which had fubfifted betwixt them; reproaches Cafaubon for adopting our Scottifh critic's lucubrations on Strabo without acknowledgment.Demptter affures us, that Scrimzeor, in his manufcript letters, mentions his defign of publifhing this perform. ance; whence, it is probable, that his work appeared to himfelf of confiderable confequence, and had taken up much of his attention. Although Cafaubon, in his ample notes exhibited at the foot of Strabo's text, makes no confeflion of having derived any thing from Scrimzeor, it muft not be concealed, that in an epifle to Sir Peter Young, our critic's nephew, through whom the Commentary and Emendations of Strabo came into his hands, Cafaubon acknowledges how very ufeful to him they might be made; for fpeaking there of his in tended edition of Strabo, he fays, "It cannot be expreffed how much affiftance I may obtain from your notes of Scrimzeor."

Edward Herrilon, a Scottiff author, in his Commen. tary on Plutarch's Book concerning the Inconfiftencies of the Stoics, informs us, that Scrimzeor collated different manufcripts of all the works of Plutarch. This undertaking appears fufficient to have occupied half the life of an ordinary critic. Every one knows how voluminous an author was the philofopher, the hiftorian, and orator of Chæronea. Whether our learned
(c) They were ennobled by the emperor in 15 Io, under the title of Barons of Kirkberg and Weiffenborn.
(D) Atheræus was a grammarian of Naucrates in Egypt, and lived in the fecond century. His Deipnofophift $x$ is a very curious and learned work, in 15 books. It is full of interefting anecdotes and defcriptions of ancient manners, and has preferved many relics of Grecian poetry not to be found elfewhere.

## S C R [ 106 ] S C R

sfeximazeor. critic had meant to publifh an edition of Plutarch's works is not known ; but fuch an intention fhould feem highly probable from thic laborious enterprife of collating them.

The ro books of Diogencs Laertius on the Lives, Opinions, and Apophthegms of the Philofophers, were cellated from variqus manufcripts by Scrimzeor. His corrected text of this author, with notes full of erucition, came alfo into Cafaubon's peffecfion, and is fuppofed to have contributed much to the value of his ecti= tion of the Grecian Biographer, printed at Paris in 1593.

The works of Phornutus and Palæphatus were alfo among the collations of Mr Scrimzeor. To the latter of thefe authors he made fuch confiderable additions, that the work became partly his own. Thefe were two ancient authors who explain the fables of the heathen deities. The former wrote De Natura Deorum, Seu de Fabularum Poeticarum Allegoriis Speculatio, "On the Nature of the Gods, or the Allegorical Fictions of the Foets." The latter entitled his book anisx, Sive de falfis Narrationibus, "Things incredible, or concerning falfe Relations." Thefe works were printed at Bafilt, 3570 ; whether in Greek or Latin is uncertain. They lave been publifhed fince in both languages.
The manufripts of them were for fome time preferved in the library of Sir Peter Young, after that of his uncle Scrimzeor, which was brought into Scotland in 1573 , had been added to it. What became of this valuable bequeft at the death of the former, is uncertain.

Our learned pliilologer left alfo behind him in manu:fcript the orations of Demofthenes, Eefchines, and Ciecro, and the Ecclefiaftical Hittory of Eufebius, all care ${ }_{-}$ fully collated.

Among his literary remains was a collection of his, Latin epifles. The men of Ietters in the 15 th and 16 th centuries feem to have kept their republic, as it is called, more united and compact than it is at prefent, by an epiftolary intercourfe in the Latin language, then the univerfal medium of literature and feience. This general firit of communication could not but contribute greatly to the advancement of learning, as well as to the pleafure, and, we may add, to the importance, of thofe who were engaged in its purfuit. The intercourfe and union of enlightened men, able and difpofed to promote the happinefs of their fellow-creatures, cannot be too clofe. From fuch intellectual combination alone it is, that uniformity of religious, moral, and political principles, to its greateft attainable degree, can ever be expected; or, in other words, the greateft poffible benefit derived from the cultivation of letters.

Of the many performances which had exercifed his pen, it does not appear that any were immediately publifhed by himfelf but his Tranfation of Juftinian's Novels into Greek. This was printed at Paris in 1558 , and again with Holoander's Latin verfion at Antwerp in 1575. This work has been lighly extolled, both for the purity of its language and the accuracy of its execution, and is likely, according to fome refpectable opinions, to hold its eftimation as long as any ufe or memory of the civil law fhall exift.

A Latin trannation of the Bafilica, or Bafilics, as they are called by our civilians, is the laf we have to
mention of this author's perfornances. This is a col:- Scrimz lection of Roman Laws, which the eaftern emperors Bafil and Leo, who reigned in the fifth centurys commanded to be tranfated into Greek, and which preferved their authority till the diffilution of the caltern empire. The Bafilics comprehend the infitutes, digefls, code, and novels, and fome of the edits of Juftinian and other emperors. Of 60 original books, 4 I only remain. Mr Scrimzeor collated them with various manuifcripts, probably before he commenced his. tranfation.

From the foregoing recital of the learned labours of this profound fcholar and critic, it will be cencluded, that almoft the whole of his life, although long, was fpent in his library, and that the biographer, having now terminated the catalogue of his writings, is proba. bly not diftant from the conclufion of his life. Different years have been affigned for the time of his death; but it appears moft likely, from a comparifon of the different accounts of this event, that it happened very near the expiration of 1571 , or at the beginning of the fucceeding year, about the 65 th year of his age. He died in the city of Geneva.

The characteriftic features of Scrimzeor are few, but they are prominent and ftriking, and remote pofterity: may regard him with no inferior degree of refpect. His induftry and perfeverance in the purfuit of knowledge and erudition were equalled orly by the exquilite judgement which he difplayed in his critical annotations and commentaries on the errors and obfcurities of ancient books and manufcripts.

His acquifitions in the Greek, Latin, and oriental languages, were reckoned much beyond thofe of moft of the profeffed linguifts of his time. The great $\mathrm{Cu}-$ jacius ufed to fay, "Thas he never quitted Mr Scrimzeor's converfation without having learned fomething new." But that which lent peculiar grace to fuch fuperiority, was the amiable modefty which upon all oc* cafions was obferved to accompany it. From the commendation given him by the illuftrious civilian jutt mentioned, it will be concluded, that he did not brood, witha jealous referve, over unlocked treafures of erudition ; but that, confcious of poffeffing fores too ample to befoon exhaufted, at the fame time that he avoided an oftentatious profufion of them, he obliged and delighted his friends by a liberal communication. From the period at which he lived, confidered with the nature and extent of his fludies, and his abilities in profecuting thera, he may defervedly be ranked among thofe eminent characters who have moft fuccefsfully contributed their exertions to the revival of letters in Europe.
SCRIPTURE is a word derived from the Latin Scripte fcriptura, and in its original fenfe is of the fame import sf the with writing, fignifying "any thing written." It is, Tand N however, commonly ufed to denote the writings of the mentaOld and New. Teftaments; which are called fometimes the Scriptures, fometimes the facred or boly Scriptures, and fometimes canonical Scripture. Thefe books are called the Scriptures by way of eminence, as they are the moft important of all writings; they are faid to be boly or facred on account of the facred dectrines which they teach; and they are termed canonical, becaufe when their number and authenticity were afcertained, their names were inferted in ecclefiatical canons, to diltin-

## S C R

guifh them from other books; which, being of no authority, were kept as it were out of fight, and therefore ftyled apocryploal (A).

The authenticity of the Old Teftanent may be proved from the character of the Jews, from internal evidence, and from teftimony.

1. The charaker of the Jews affords a frong prefumptive evidence that they have not forged or corrupted the Old Teftament. Were a perfon brought before , a court of juftice on a fufpicion of forgery, and yet no prefumption or pofitive evidence of his guilt could be produced, it would कe allowed by all that he ought to be acquitted. Bur farther, if the forgery alleged were inconfiftent with the character of the acculed; if it tended to expofe to difgrace and reproach his general principles and conduct ; or if we were affured that he confidered forgery as an impious and abominable crime-it would require very ftrong teftimony to eftaBlifh his guilt. The cafe now mentioned correfponds exactly with the character and fituation of the Jews. If a Jew had forged any book of the Old Teftament, he muft have been impelled to fo bold and dangerais an enterprife by fome very powerful motive. It could not be national pride, for there is fcarcely one of theie books which does not feverely cenfure the national manners. It could not be the love of fame; for that paffion would have taught him to flatter and extol the national character; and the punifhment, if detected, would have been infamy and death. The love of wealth could not produce fuch a forgery; for no wealth was to be gained.
'The Jews were felected from the other nations of the world, and preferved a dittinct people from the time of their emigration from Egypt to the Baby lonifh captivity, a period of 892 years. The principal purpofes for which they were felected was to preferve in a world running headlong into idolat y the knowledge and worthip of the one true God, and to be the guardians of thofe facred books that contained the prophecies which were to prove to future ages the divine miffion of the Redeemer of mankind. To fit them for thefe important trufts, the fpirit of their laws and the rites of their religion had the ftrongeft tendency. Miracles were openly performed, to convince them that the God of Ifrael was the God of all the earth, and that he alone was to be worhhipped. Public calamities always befel them when they became apoftates to their God; yet .they continued violently attached to idolatry till their captivity in Babylon made them for ever renounce it.
'The Jews then had two oppofite characters at different periods of their hiftory: At firft they were addicted to idolatry; afterwards they acquired a ftrong antipathy againft it.

Had any books of the Old Teflament been forged before the Babylonifls captivity, when the Jews were devoted to idolatry, is it to be conceived that the impoftor would have inveighed fo ttrongly againft this vice, and fo often imputed to it the calamities of the fate; fince by fuch conduct he knew that he would render himfelf obnoxious to the people and to thofe idolatrous monarchs who perfecuted the prophets?

## 107 ] S C R

But it may next be fuppofed, that "the facred book's Scripture, were forged after the Babylonifh captivity, when the principles of the Jews would lead them to inveigh againft the worlhip of idols. But thefe principles would furely never lead them to expofe the character of their anceftors, and to detail their follies and their crimes. Never had any people more national pride, or a higher veneration for their anceftors, than the Jews. Miracles and prophecies ceafed foon after their return to Jerufalem; and from that period their refpect for the facred books approached to fuperfition. They preferved them with pious care, they read them often in their fyna. gogues, and they confidered every attempt to alter the text as an act of facrilege. Is it pofible that fuch men could be guilty of forgery, or could falfe writings be eafily impofed on them?
2. There is an internal evidence in the books of the Old From inTeftament that proves them to have been written by dence, and different perfons, and at diltant periods; and enables us with precifion to afcertain a time at or before which they muft have been compofed. It is an undeniable fact that Hebrew ceafed to be the living language of the Jews during the Babylonif captivity, and that the Jewifh productions after that period were in general written either in Chaldee or in Greek, Whe Jews of Paleftine, fome ages before the coming, of our Saviour, Paleftine, fome ages before the coming, of our Saviour, ticity of the phrafe, to underfand the Hebrew original. It necef-Mofis. farily follows, therefore, that every book which is written in pure Hebrew was compofed either before or about the time of the Babylonifh captivity. This being admitted, we may advance a ftep farther, and contend that the period which elapfed between the comp)fition of the moft ancient and the moft modern book of the Old Teftament was very confiderable; or, in other words, that the moft ancient books of the Old Teftament were written many ages before the Babylonif captivity.

No language continues flationary ; and the Hebrew, like other tongues, paffed through the feveral ftages of infancy, youth, manhood, and old age. If therefore, on comparifon, the feveral parts of the Hebrew Bible are found to differ not only in regard to fyle, but alfo in regard to character and cultivation, we have ftrong internal manks that they were compofed at different and diftant periods. No claffical fcholar would believe, independent of the Grecian hiftory, that the poems afcribed to Homer were written in the age of Demof. thenes, the Orations of Demofthenes in the time of Origen, or the Commentaries of Origen in the time of Lafcaris and Chryfoloras. For the very fame reafon, it is certain that the five books which arc afcribed to Mofes were not written in the time of David, the Plalins of David in the age of lfaiah, nor the prophccies of Ifaiah in the time of Malachi ; and fince the Hebrew lecame a dead langruage about the time of the Wabylonifh captivity, the bouk of Malachi could not lave been written much later. Before that period therefore were written the prophecies of Ifaiah, ftill earlier the Pfalons of David, and much earlier than thefe the books which are aferibed to Mofes.

§ xlix. 10.

3. Let us now confider the evidence of teftimony for the authenticity of the Old 'reftament. As the Jews were a more ancient people than the Greeks or Ro. mans, and for many ages totally unconnected with them, it is not to be expected that we fhould derive much evidence from the hiforians of thofe nations: it is to the Jews alone we muft look for information. But it has unfortunately happened that few of their works except the Scriptures themfelves have been preferved to polterity. Jofephus is the moft ancient of the Jewvifh hiftorians to whom we can appeal. He informs us, that the Old T'eftament was divided into three parts, the Law, the Prophets, and the Hagiographa or poetical books. No man, fays he, hath ever dared to add or take away from them. He tells us alfo, that other books were written after the time of Artaxerxes; but as tl ey were not compofed by prophets, they were not reckoned worthy of the fame credit.

Since the promulgation of the Chriftian religion, it is impoffible that any material alterations or corruptions could have taken place in the books of the Old 「eftament ; for they have been in the hands both of Jews and Chritians from that period. Had the Jews attempted to make any alterations, the Chrittians would have detected and expofed them; nor would the Jews have been lefs fevere againft the Chriftians if they had corrupted the facred text. But the copies in the hands of Jews and Chrittians agree ; and therefore we juftly conclude, that the Old Teftament is ftill pure and uncorrupted.

The divifion mentioned by our Saviour into the Law, the Prophets, and the Pfalms, correfponds with that of Jofephus. We have therefore fufficient evidence, it is hoped, to convince even a deift, that the Old Teftament exifted at that time. And if the deift will only allow, that Jefus Chrift was a perfonage of a virtuous and irreproachable character, he will acknowledge that we draw a fair conclufion when we affert that the Scriptures were not corrupted in his time: for when he accufed the Pharifees of making the law of no effeet by their traditions, and when he injoined his hearers to fearch the Scriptures, he could not have failed to mention the corruptions or forgeries of Scripture, if any in that age had exifted. But we are affured, by very refpectable authority, that the canon of the Old Teftament was fixed fome centuries before the birth of Jefus Chritt. Jefus the fon of Sirach, the author of Ecclefrafticus, makes evident references to the prophecies of Ifaiah *, Jeremiah $\dagger$, and Ezekiel $\ddagger$, and mentions thefe prophets by name. He fpeaks alfo of the twelve minor prophets of. It appears alfo from the prologue, that the law and the prophets, and other ancient books, exifted at the fame period. The book of Ecclefiafticus, according to the calculations of the beft chronologers, was written in Syriac about A. M. 3772, that is, 232 years before the Chriftian era, and was tranfated into Greek in the next century by the grandfon of the au. thor. The prologue was added by the tranlator: but this circumftance does not diminifh the evidence for the antiquity of Scripture; for he informs us, that the law and the prophets, and the other books of their fathers, were ftudied by his grandfather : a fufficient proof that they exifted in his time. As no authentic books of a more ancient date, except the facred writings them-
felves, have reached our time, we can afcend no higher Script in fearch of teftimony.
There is, however, one remarkable hiforical fact, which proves the exiftence of the law of Mofes at the difolution of the kingdom of Ifrael, when the ten tribes were carried captive to Affyria by-Shalnnanefer, and difperfed among the provinccs of that extenfive empire; that is, about 741 years before Chritt. It was abourt that time the Samaritans were tranfported from Anfria to repeople the country, which the ten captive tribes of Ifrael had formerly inlabited. The pofterity of the Samaritans ftill iuhabit the land of their fathers, and have preferved copies of the Pentateuch, two or three of which were brought to this country in the laft century. The Samaritan Pentateuch is written in old Hebrew characters (fee Philology, $\mathrm{n}^{\circ}$ 28). and therefore mult have exifted before the time of Ezra. But fo violent were the animofities which fubfifted between the Jews and Samaritans, that in no period of their hittory would the one nation have received any books from the other. - They mult therefore have received them at their firt fettlement in Samaria from the captive prieft whom the Affyrian monarch fent to teach them how they fhould fear the Lord ( 2 Kings xvii )

The canon of the Old Teitament, as both Jewifh rhe of and Chriftian writers agree, was completed by Ezra of the and fome of his immediate fucceffors (fee BIBLE). In reftlan our copies the facred books are divided into 39. The Jews reckoned only 22, correfponding to the number of letters in the Hebrew alphabet. They united the books of Judges and Ruth; they joined the two books of Samuel ; the books of Kings and Chronicles were reckoned one ; Ezra and Nehemiah one; the Prophecies and Lamentations of Jeremiah were taken under the fame head; and the 12 minor prophets were confidered as one book-fo that the whole number of books in the Jewifh canon amounted to 22 .

The Pentateuch confifts of the five books Genefis, The Exodus, Leviticus, Numbers, and Deuteronomy. Se- tatcu veral obfervations have been already made refpecting the writte authenticity of thefe under the article Pentateuch; but feveral additional remarks have occurred, which may not improperly be given in this place. For many of thefe we acknowledge ourfelves indebted to a fermon publifhed by the reverend Mr Marfh, whofe refearch and learning and critical accuracy will be acknowledged by every reader of difcernment.

One of the ftrongeft arguments that have occurred to us in fupport of the authenticity of the Pentateuch, and the infpiration of the writer, has already been given under the article Religion, $\mathrm{n}^{0}$ 14, \&c. which fee: But we fhall in this place prefent two arguments of a different kind, which would be fufficient to prove at leaft the former of thefe conclufions. We argue from the language and contents of the Mofaic writings, and from the teftimony of the other books of Scripture.

From the contents and language of the Pentateuch Pror there arifes a very ftrong prefumption that Mofes was its author. The very mode of writing in the four laft books difcovers an author contemporary with the events which he relates; every defcription, both religious and political, is a proof that the writer was prefent at each refpective fcene; and the legiflative and hiftorical parts

## S C R 「 109 J C R

fure, are fo interwoven with each other, that neither of them could have been written by a man who lived in a later age. The account which is given in the book of Ex. odus of the conduct of Pharaoh towards the children of Ifrael, is fuch as might be expected from a writer who was not only acquainted with the country at large, but had frequent accefs to the court of its fovereigin: and the minute geographical defcription of the paffage thro' Arabia is fuch, as could have been given only by a man like Mofes, who had fpent 40 years in the land of Midian. The language itfelf is a proof of its high antiquity, which appears partly from the great fimplicity of the Atyle, and partly from the ufe of archaifins or antiquated expreffions, which in the days even of David and Solomon were obfolete (в). But the frongeft argument that can be produced to fhow that the len. tateuch was writren by a man born and educated in Egypt, is the ufe of Egyptian words; words which never were, or ever could have been, ufed by a native of Paleftine : and it is a remarkable circumftance, that the very fame thing which Moles had expreffed by a word that is pure Egyptian, Ifaiah, as might be expecied from his birth and education, has expreffed by a word that is purely Hebrew (c).

That Mofes was the author of the Pentateuch is proved alfo from the evidence of teftimony. We do not here quote the authority of Diodorus Siculus, of Longinus, or Strabo, becaufe their information muft have been derived from the Jews. We fhall feek no authority but that of the fucceeding facred books themfelves, which bear internal evidence that they were written in different ages, and therefore could not be forged unlefs we were to adopt the abfurd opinion that there was a fucceffion of impoftors among the Jews who united together in the fame fraud. The Jews were certainly beft qualified to judge of the authenticity of their own books. They could judge of the truth of the facts recorded, and they could have no intereft in adopting a forgery. Indeed, to fuppofe a whole nation combined in committing a forgery, and that this combination fhould continue for many hundred years, would be the moft chimerical fuppofition that ever entered into the mind of man. Yet we muft make this fuppofition, if we reject the hiftorical facts of the Old Teftament. No one will deny that the Pentateuch exifted in the time of Chrift and his apofles; for they not only mention it, but quote it. "This we admit," reply the advocates for the hypothefis which we are now combating ; "but you cannot therefore conclude that Mofes was the author ; for there is reafon to believe it was compofed by Ezra." But unfortunately for men of this opinion, both Erra and Nehemiah afcribe the book of the law to Mofes t. 2. The Pentateuch was in the poffeffion of the Samaritans before the time of Ezra. 3. It exifted in the reign of Amaziah king of Judah, A. C. 839
years $\dagger$. 4. It was in public ufe in the reign of Jehn. Scripture. faphat, A. C. 912; for that virtuous prince appointed ${ }_{2}$ Chron. Levites and priefts who taught in Judah, and had the $\mathrm{xxv}_{4} \mathrm{H}_{4}$ book of the law of the Lord with them, and went 2 Kings about throughout all the cities of Judah and taught xiv. 6. the people $\ddagger$. 5. It is referred to by David in his dying $\$ 2$ Chron. admonitions to Solomon $\$$. The fame royal bard makes xvii. 8, 9 many allufions to it in the book of Pfalms, and fome- ${ }^{1} 12$ Kings times quotes it *. There remains therefore only one ${ }^{\text {ii. } 3 \text {. }}$ refource to thofe who contend that Mofes was not the "Comp. author, viz. that it was written in the period which ${ }_{7}, 8$. with elapfed between the age of Jofhua and that of David. Exod. Bur the whole hiftory of the Jews from their fettle- xxxiv. 6 . ment in Canaan to the building of the temple prefup. in the ori pofes that the book of the law was written by Mofes, where the 6. We have fatisfactory evidence that it exifted in the words are time of Jofhua. One paffage may be quoted where this the very fact is ftated. The Divine Being makes ufe of thefe ${ }^{\text {fame. }}$ words to Jofhua: "Only be thou drong, and very courageous, that thou mayeft obferve to do all according to the law which Mofes my fervant commanded thee : turn not from it to the right hand or to the left, that thou mayeft profper whitherfoever thou goeft. This book of the law fhall not depart out of thy mouth; but thou fhalt meditate therein day and night, that thou mayeft obferve to do according to all that is written therein + ."

To the foregoing demontration objections may i. 7 , 8. viliz. ftated. "We will admit the force of your arguments. and grant that Mofes actually wrote a work called the Genera book of the law ; but how can we be certain that it objections was the very work which is now current under his anfwered name? And unlefs you can fhow this to be at leaft probable, your whole evidence is of no value.' To il. luftrate the force or weaknefs of this objection, let us apply it to fome ancient Greek author, and fee whether a claffical fcholar would allow it to be of weight. "It is true that the Greek writers fpeak of Homer as an ancient and celebrated poet; it is true alfo that they have quoted from the works which they afcribe to him various paffages that we find at prefent in the Iliad and Odyffey : yet flill there is a poffibility that the poems. which were written by Homer, and thofe which we call the Iliad and Odyfey, were totally diftinct productions." Now an advocate for Greek literature would reply to this objection, not with a ferious anfwer, but with a finile of contempt; and he would think it beneath his dignity to filence an opponent who appeared to be deaf to the cleareft conviction. But ftill more may be faid in defence of Mofes than in defence of Homer; for the writings of the latter were not depofited in any temple or facred archive, in order to fecure them from the de vaftations of time; whereas the copy of the book of the law, as written by Mofes, was intrufted to the priefts and the elders, preferved in the ark of the covenant
(в) For inftance, ${ }^{\text {( }}$ ille, and 72 puer, which are ufed in both genders by no other writer than Mofes. See Gen. xxiv. 14. 16. 28. 55. 5\%. xxxviii. 2 1. 25.
(c) For inftance, ${ }^{1}$ (perhaps written originally $n \times$, and the lengthened into $\boldsymbol{i}$ by miftake), written by the

The fame thing which Mofes expreffes by $7 \pi$, Gen. xli, 2. Ifaiah xix. 7. expreffes by nmy, for the Seventy have tranflated both of thefe words by $\propto x^{*}$.

## S C R [ I10 1 S C R

and read to the people every feventh year ( D$)$. Sufficient care therefore was taken not only for the prefervation of the original record, but that $n o$ fpurious prodnction fhould be fubftituted in its ftead. And that no fpurious production ever lias been fubflituted in the ftead of the original compofition of Mufes, appears from the evidence botl of the Greek and the Sanaritan Pentateuch. For as thefe agree with the Hebrew, except in fome trifling variations ( $\varepsilon$ ), to which every work is expofed by length of time, it is abfolutely certain that the five books which we now afcribe to Mofes are one and the \{ame work with that which was tranflated into Greet in the tinte of the Ptolemies, and, what is of ftill great er importance, with that which exifted in the time of Solomon. And as the Jews could have had no motive whatfoever, during that period which elapfed be tween the age of Jo!hua and that of Solomon, for fub ftituting a fpurious production inftead of the original as written by Mofes, and, even had they been inclined to attempt the impofture, would have been prevented by the care which had been taken by their lawgiver, we muft conclude that our prefent Pentateuch is the very identical work that was delivered by Mofes.

The pofitive evidence being now produced, we thall endcavour to anfwer fome particular objections that have been urged. But as moft of thefe occur in the book of Genefis, we fhall referve them for feparate examination, and fhall here only confider the objections peculiar to the four latt books. They may be comprifed under one head, viz. expreflions and paffages in thefe books which could not have been written by Mofes. I. The account of the death of Mofes, in the laft chapter of Deuteronomy, we allow muft have been added by fome fucceeding writer; but this can never prove that the book of Deuteronomy is fpurious. What is more common among ourfelves than to fee an account of the life and death of an author fubjoined to lis works, without informing us by whom the narrative was written? 2. It has been objected, that Mofes always fpeaks of himfelf in the third perfon. This is the objection of foolifh ignorance, and therefore fcarcely deferves an aniwer. We fufpect that fuch perfons have never read the claffics, particularly Cæfar's Commentaries, where the author uniformly fpeaks of hinfelf in the third perfon, as every writer of correct tafte will do who reffects on the abfurdity of employing the pronoun of the firtt perfon
in a work intended to be read long after his death. (See Scrip Grammar, $n^{2} 33$.) 3. As to the objection, that in fome places the text is defective, as in Exodus xv. 8. it is not directed againft the author, but againft fome tranferiber ; for what is wanting in the Hebrew is inferted in the Samaritan. 4. The only other objection that deferres notice is made from two paffages. It is faid in one place that the bed of Og is at Kamah to this day; and in another (Deut. iii. 14.), "Jair the fon of Manaffeh took all the country of Argob unto the coats of Gefhuri and Maacathi, and called them after his own name, Bahan-havoth.jair, unto this day." The laft claufe in both thefe paffages could not have been writ ten by Mofes, but it was probably placed in the margin by fome tranferiber by way of explanation, and was afterwards by miftake inferted in the text. Whoever doubts the truth of this affertion may have recourfe to the manufcripts of the Greek Teftament, and he will find that the fpurious additions in the texts of fome manufcripts are actually written in the margin of others ( F )
"I'hat the Pentateuch, therefore, at leaft the four laft books of it, was written by Mofes, we have very fatisfactory evidence ; which, indeed, at the diftance of 3000 years is wonderful, and which cannot be affirmed of any profane liftory written at a much later period.
The book of Genefis was evidently not written by a Authe perfon who was contemporary with the facts which he city of records ; for it contains the hiftory of 2369 years, period comprehending almoft twice as many years as all the reft of the hiftorical books of the Old Teftament put together. Mofes has been acknowledged as the author of this book by all the ancient Jews and Chriftians; but it has been a matter of difpute from what fource he derived his materials; fome affirming that all the facts were revealed by infpiration, and others maintaining that he procured them from tradition.

Some who have looked upon themfelves as profound philofophers, have rejected many parts of the book of Genefis as fabulous and abfurd: but it cannot be the wifdom of philofophy, but the vanity of ig11orance, that could lead to fuch an opinion. In fact, the book of Genefis affords a key to inany difficulties in philofophy which cannot otherwife be explained. It has been fuppofed that the diverfities among mankind prove that they are not defcended from one pair; but it has been fully
(D) "And Mofes wrote this law, and delivered it unto the priefts the fons of Levi, which bare the ark of the covenant of the Lord, and unto all the elders of Ifrael. And Mofes commanded them, fayine, At the end of every feven years, in the folemnity of the year of releafe, in the feaft of tabernacles, when all Ifrael is come to appear betore the Lord thy God, in the place which he thall choofe, thou fhalt read this law before all Ifrael ia their hearing. And it came to pals, when Mofes had made an end of writing the words of this law in a book until they were finifhed, that Mofes commanded the Levites, which bare the ark of the covenant of the Lord, faying, "lake this book of the law, and put it in the fide of the ark of the covenant of the Lord your God." Deut. sxxi. 9-11.24-26. There is a paffage to the fame purpofe in Jofephus: ©nistab dia twv avaxitueviviov

(e) See the collation of the Hebrew and Samaritan Pentateuch, in the 6th vol. of the London Polyglot. p. Ig. of the Animadverfiones Samaritica.
( F ) To mention only two examples. I. The common reading, I Cor, xvi. 2. is $\mu \alpha \nu \sigma \alpha \beta \beta \alpha \tau \omega v$; but the Codex Pitavian 3. has rnv xupraxny in the margin; and in one of the manufcripts which. Beza ufed, this marginal addition has been obtruded in the text. See his note on this paffage. 2. Another inftance is, I John ii. 27 . where the genuine reading is $\chi p \sigma \sigma \alpha \alpha$; but Wetfein quotes two manufcripte, in which $\pi v s u \mu \alpha$ is written in the margin ; and this marginal reading has found its way not only into the Codex Covelliz 2, but $\mathrm{in}^{\mathrm{n}}$ to the Coptic and Ethiopic verlions.

## S C R [ III ] S C R

fully thewn that all thefe diverfities may be accounted for by natural caufes. It has been reckoned a great difficulty to explain how foffil thells were introduced into the bowels of the earth ; but the deluge explains this fact better than all the romantic theories of philofophere. It is impoflible to account for the origin of fuch a variety of languages in a more fatisfactory manner than is done in the account of the confution of tongues which took place at Babel. It would be no ealy mazter to thew why the fea of Sodom is fo different from every other fea on the globe which has yet been explored, if we had not poffeffed the fcriptural account of the miraculous deftruction of Sodom and Gomorrah. It is faturated with bitumen and falt, and contains no fifies. Thefe are very fingular facts, which have been fally eftablifhed by late travellers. 'The book of Genefis, too, has been treated with contempt, becaufe it makes the world lefs ancient than is neceffary to fupport the theories of modern philofophers, and becaufe it is difficult to reconcile the chronologies of feveral nations with the opinion that the world is not above 6000 or 7000 years old. The Chaldeans, in the time of Cicero, reckoned up 470,000 years. The Egyptians pretend that they have records extending 50,000 jears back; and the Hindoos go beyond all bounds of probability, carrying back their chronology, according to Fielhed, more than $7,000,000$ of years.

An attempt has been made by M. Bailly, lately logy mayor of Paris, to reconcile thefe mannified calculated. tions with the chronology of the Septuagint, which is juftly preferred to the Hebrew. (See Septuagint.) He informs us, that the Hindoos, as well as the Chaldeans and Egyptians, had years of arbitrary determination. They had months of 15 days, and years of 60 days, or two months. A month is a night and day of the patriarchs; a year is a night and day of the gods; four thoufand years of the gods are as many hundred years of men. By attention to fucl modes of computation, the age of the world will be found very nearly the fame in the writings of Mofes, and in the calculations and traditions of the Bramins. With thefe alfo we have a remarkable coincidence with the Perfian chronology. Bailly has eftablithed thefe remarkable epoclias from the Creation to the Deluge.

| The Septuagint gives |  |  | 2256 years. |
| :--- | :--- | :--- | :--- |
| The Chaldcans |  |  | 2222 |
| The Egyptians |  |  |  |
| The Perfians |  | 2340 |  |
| The Hindoos |  |  | 2000 |
| The Chinefe |  |  | 2000 |
| The |  | 2300 |  |

The fame author has alfo flewn the fingular coincidence of the age of the world as given by four diftinct and diftantly fituated people.

The ancient Egyptians, - 5544 years.
The Hindons, - 5502
The Perfians - - 5501
The Jews, according to Jofephus, - 5555
Having made thefe few renarks, to fhew that the facts recorded in Genefis are not inconfiftent with truth, we fhall now, by a few obfervations, confirm the evidence, from teftimony, that Mofes was the author, and anfiver the objections that feem ftrongeft.

There arifes a great probability, from the book of Genefis itfelf, that the author lived near the time of Jofeph; for as we advance towards the end of that boois,
the facts gradually become more minute. The materials setipture of the antediluvian hiftory are very feanty. The ac count of Abrahan is more complete; but the hiftory of Jacob and his fanily is fill more fully detailed. 'Ihis is indeed the cafe with every hiftory. In the early part, the relation is very fhort and general ; b:at when the hiforian approaches his own time, his materials accumulate. It is certain, too, that the book of Genefis muft have been written before the reit of the Pentateuch; for the allufions in the laft four books to the hiftory of Abraham, of Ifaac, and Jacob, are very frequent. "1he fimplicity of the ftyle fhows it to be one of the moft ancient of the facred books; and perhaps its fimilarity to the flyle of Mofes would determine a critic to afcribe it to him. It will be allowed, that no man was better qualified than Mofes to compofe the hitory of his anceftors. He was learned in all the wifdom of the Egyptians, the moft enlightened nation of his time, and he had the beft opportunities of obtaining accurate information. The fhort account of the antediluvian world could eafly be remembered by Abraham, who might obtain it from Shem, who was his contemporary. To Shem it might be conveyed by Methufelah, who was 340 years old when Adam died. From Abraham to Moies, the interval was lefs than 400 years. The fplendid promifes made to that patriarch would certainly be carefully communicated to each generation, with the conconitant facts : and thus the hitory might be conveyed to Mofes by the moft diftinguifhed perfons. The accounts refpecting Jacob and his fon Jofeph might be given to Mofes by his grandfather Kohath, who muft have been born long before the defcent to Egypt ; and Kohath might have heard all the facts refpecting Abra* ham and Ifaac from Jacob himfelf. Thus we can eafily point out how Mofes might derive the materials of the book of Genefis, and efpecially of the lat 38 chapters, from the moft authentic fource.

It will now be neceflary to confider very fhortly the Objections objections that have been fuppofed to prove that Gene- to the aufis could not have been written by Mufes. 1. It is ot-of the book jected, that the author of the firft chapters of Genefis of Genefis muft have lived in Mefopotania, as he difcovers a ${ }^{\text {obviated }}$ knowledge of the rivers that watered Paradife, of the cities Babylon, Erech Refen, and Caineh ; of the gold of Pifon; of the bdellium and onyzars. Wut if he could not derive this knowledge fron: the wifdom of the Egyptians, whicly is far from being improbable, he night furely obtain it by tradition from Abraham, who was born and brought up beyond the Euphrates. z. In Genefis xiv. 14. it is faid, Abraham pmifued the four confederate kings to Dan, yet that name was not given till after the conquelt of Paleftine *. We anfwer, this ${ }^{*}$ chadges might be inferted by a tranfcriber. But fuch a fuppofi-chap. xwilis tion is not neceffary; for though we are toid in the book of Judger that a city originally called Laifh received then the name of Dan, this does 1 tt prove that Laif was the fame city with the Dan which is mentioned in Genefis. The fame anfwer may be given to the objection which is brought from Genefis xxxv. 21 . where the tower of Edar is mentioned, which. the objectors fay was the name of a tower over one of the gates of Jerua falem. But the tower of Edar fignifies the tower of the flocks, which in the paftoral country of Canaan might be a very common name. 3. The moft formidable objection is derived from thefe two paffages, Gen. xii. 6.

## S C R

Scriprure, "And the Canaanite was then in the land." Gen.xxxvi. 31. "Thefe are the kings that reigned over the land of Edom, before there reigned any king over the children of Ifrael." Now, it is certain that neither of thefe paffages could be written by Mofes. We allow they ware added by a later writer ; but this circumftance cannot invalidate the evidence which has been already produced. It does not prove that Mofes was not the author of the book of Genefis; but only that the book of Genefis has received two alterations fince his death.

According to Rivet, our Saviour and his Apoftles have cited 27 paffages verbatim from the book of Ge nefis, and have made 38 allufions to the fenfe.

The book of Exodus contains the hiftory of the Ifraelites for about 145 years. It gives an account of the navery of the Ifraelites in Egypt; of the miracles by which they were delivered; of their paffage through the Red Sea, and journey through the wildernefs; of the folemn promulgation of the Decalogue on Mount Sinai, and of the building and furniture of the Tabernacle. This book is cited by David, by Daniel, and other facred writers. Twenty-five paffages are quoted by our Saviour and his apoftles in exprefs words, and they make 19 allufions to the fenfe.

The book of Leviticus contains the hiftory of the Ifraelites for one month. It confifts chiefly of laws. Indeed, properly fpeaking, it is the code of the Jewifh ceremonial and political laws. It defcribes the confecration of Aaron and his fons, the daring impiety and exemplary punifhment of Nadab and Abihu. It reveals alfo fome predictions refpecting the punifhment of the Ifraelites in cafe of apoftacy; and contains an affurance that every fixth year fhould produce abundance to fupport them during the feventh or fabbatical year. This book is quoted as the production of Mofes in feveral books of fcripture *.
The book of Numbers comprehends the hiftory of the Ifraelites for a period of about $3^{8}$ years, reckoning from the firft day of the fecond month after their departure from Egypt. It contains an account of two numberings of the people ; the firlt in the beginning of the fecond year of their emigration, the fecond in the plains of Moab towards the conclufion of their journey in the wildernefs $\dagger$. It defcribes the ceremonies cm ployed at the confecration of the tabernacle, gives an exact journal of the marches and encampments of the Ifraelites, relates the appointment of the 70 elders, the miraculous cure performed by the brazen ferpent, and the mifconduct of Mofes when he was commanded to bring water from the rock. There is alfo added an account of the death of Aaron, of the conqueft of Silion and Og , and the ftory of Balaam, with his celebrated prophecy concerning the Meffiah $\oint$.
'The book of Numbers is quoted as the work of Mofes in feveral parts of Scripture *.

The book of Deuteronomy comprehends a period of nearly two months. It confifts of an interefting addrefs to the Ifraclites, in which Mofes recals to their remembrance the many inftances of divine favour which they had experienced, and reproaches them for their ingratitude. He lays, before them, in a compendious form, the laws which he had formerly delivered, and makes fome explanatory additions. This was the more neceffary, becaufe the Ifraelites, to whom they had been originally promulgatcd, and who had feen the miracles in Egypt, at the Red Sea, and Mount Sinai, had died in
the wildernefs. The divine origin of thefe laws, and the Scripturg miracles by which they were fanctioned, muft already have been well known to them; yet a folemn recapitulation of thefe by the man who had miraculoully fed the prefent generation from their infancy, who by the lifting up of his hands had procured them victory in the day of battle, and who was going to leave the world to give an account of his conduct to the God of Ifrael, could not but make a deep and lafting impreffion on the minds of all who heard him. He inculcates thefe laws by the moft powerful motives. He prefents before them the molt animating rewards, and denounces the fevereft punifhments to the rebellious. The prophecies of Mofes towards the end of this book, concerning the fate of the Jews, their difperfions and calamities, the conqueft of Jerufalem by the Romans, the miferies of the befieged, and the prefent ftate of the Jewin nation, cannot be read without aftonifment. They are perfpicuous and minute, and have been literally accomplifhed.

This book is cited as the production of Mofes by Chrift and his apoftles *.
4. The hiftorical books are 12 in number, Jofhua, Judges, Ruth, Samuel I. and II. Kings I. and II. Chronicles, John i. 4 Ezra, Nehemiah, Efther. Thefe, if confidered diftinctly Gal. iii. 13 from the Pentateuch, and the writings more properly Atyled piophetical, contain a compendium of the Jewifh hiftory from the death of Mores, A. M. 2552, to the The hinoreformation eftablifhed by Nehemiah after the return from the captivity, A. M. 3595 , comprehending a period of 1043 years.

To enable us to difcover the authors of thefe books, we have no guide to conduct us but conjecture, internal evidence, or the authority of the modern Jews. From the frequent references in Scripture, and from the teftimony of Jofephus, it appears that the Jews were in poffeffion of many hiftorical records which might have thrown much light upon this fubject if they had fill been preferved. But during the calamities which befel that infatuated nation in their wars with the Ro-
mans, and the difperfion which followed, thefe writings have perifhed. But though we can produce no teftimony more ancient than the age of our Saviour to authenticate the hiftorical books, yet there are fome facts refpecting the mode of their prefervation which entitle them to credit. The very circumftance itfelf, that the Jews have preferved them in the facred volume to this day, while their other ancient books have been loft, is a proof that they confidered them as the genuine re-
cords of their nation. Jofephus $t$, whofe authority is cords of their nation. Jofephus $\dagger$, whofe authority is + Contre of great importance, informs us, that it was the pecu- Apion, liar province of the prophets and priefts to commit to ${ }^{\mathrm{lib} . \mathrm{I}_{0}}$ liar province of the prophets and priefts to commit to ${ }^{1 i b}$. I.
writing the annals of the nation, and to preferve them to polterity. That thefe might be faithfully preferved, the facerdotal function was made hereditary, and the greateft care was obferved to prevent intermarriages either with foreigners or with the other tribes. No man could officiate as a prieft who could not prove his defcent in a right line by unqueftionable evidence $\ddagger$. Re- $\ddagger$ Ezra $\hat{i}$, fcent in a right line by unqueftionable evidence $\ddagger$. Re- $\ddagger$ Ezra
gifters were kept in Jerufalem, which at the end of eve 61,62 . ry war were regularly revifed by the furviving priefts;
and new ones were then compofed. and new ones were then compofed. As a proof that this has been faithfully performed, Jofephus adds, that the names of all the Jewifh priefts, in an uninterrupted fucceffion from father to fon, had been regiftered for $20 c 0$ years; that is, from the time of Aaron to the age
of Jofephus. of Jofephus.

scripturo $-\mathrm{r}$
is to fuppofe one of the greatef abfurdities in the Serfpture. -world: it is to fuppofe that a whole nation could ace contrary to all thofe principles which have always predominated in the human mind, and which mult always predominate till luman nature undergo a total revolution.

The book which inmediately follows the Penta-Jofhua, teuch has been generally afcribed to Johua the fuc. ceffor of Mofes. It contains, however, fome things which muft have been inferted after the death of Jofhua. It is neceffary to remark, that there is fome accidental derangement in the order of the chapters of this book, wich was probably occafioned by the ancient mode of fixing together a number of rolls. If chronologically placed, they fould be read thus, ift chapter to the roth verfe, then the $2 d$ chapter; then from the icth verfe to the end of the ift chapter; afterwards fhould follow the vi. vii. viii. ix x. and xi. chapters; then the xxii. ; and lattly the xii. and xiii. chapters to the 24 th verfe of the latter.
'The facts mentioned in this book are referred to by many of the facred writers $\oint$. In the book of Kings of Chrona xvi. 34. the words of Jofhua are faid to be the words of in ${ }_{15}$; Pfaliaz God. See Joshua,
cxiv 3 .:
By whom the book of Judges was written is uncer-Ifa. xxviii. tain ; but as it contains the hiftory of the Jewifh repub- 2I.; Acts lic for 317 years, the materials mult have, been furnih- He. vii, 45.; ed by different perfons. The book, however, feems to 3 r.-xiii. so be the compofition of one individual ( c ), who lived at- Janes ii. ter the regal government was eftablifhed $\ddagger$, but before the 25.25, ; acceflion of David: for it is faid in the 2 If verfe of Ecclus. xlvic
 lein; who, we know, were difpoffefled of that city ear- ${ }_{2,3}$ ly in the reign of David ef. We have reafon, therefore, Judges. to afcribe this book to Samuel.
$\ddagger$ Jud, xix, $\mathrm{I}_{3}$
The hittory of this book may be divided into two parts; ${ }_{1}{ }_{2}{ }_{2}$ Sann $^{25}$ the firf contains an account of the Judges from Othniel v.6. 8. to Sainfon, ending at the 16 th chap. The fecond part relates feveral remarkable tranfactions which occurred foon after the death of Jofhua; but are thrown to the end of the book, that they might not interrupt the courfe of the hiftory. See Judges.

The book of Ruth is a kind of fupplement to the Ruth. book of Judges, and an introduction to the hiftory of David, as it is related in the books of Samuel. Since the genealogy which it contains defcends to David, it muft have been written after the birth of that prince, but not at any confiderable time ater it; for the hifory of Boaz and Ruth, the great-grandfather and great-grandmother of David, could not be remembered above two or three generations. As the elder brothers of David and their fons are omitted, and none of his own children are mentioned in the genealogy, it is evident that the book was compofed in honour of the Hebrew monarch, after he was anointed kiny by Samuel, and before any of his children were born ; and confequently in the reign of Saul. The Jews afcribe it to Samuel ; and indeed there is no perfon of that age to whom it may be attributed with more propriety. We are informed (1 Sam. x. 25.) that Samuel was a writer,

I and

It is of no real confequence, therefore, whether we can afcertain the authors of the different books or not. From Jofephus we know that they exifted in his time; and from his account of the manner in which they were preferved we are affured they were not in danger of being corrupted. They exifted alfo when the Septuagint tranflation was made. Frequent references are made to them in the writings of the later prophets.; fometimes the fame facts are related in detail. In flort, there is fuch a coincidence between the hittorical books and the writings of thofe prophets who werc contenporary, that it is impoffible to fuppofe the latter true without receiving the former.

Indeed, to fuppofe that the Jews could have received and preferved with fuch care for fo many hundred years falfe records, which it muft have been in the power of every perfon to difprove, and which at the fame time do fo little credit to the characier of their nation,

Vol. XVII. Part I.
(G) In fupport of this opinion, it may be obferved, that the author, chap. ii. Ic, \&c. lays before us the conents of the book.

The two
bock of
Samuel.
§ 1 Chron
xxix, 29.

26
0 King.
and are affured that no perfon in the reign of Saul was fo well aequainted with the fplendid profpects of David as the prophet Samuel.

The Greeks denominate the books of Samuel, which follow next in order, The Books of Kingdoms; and the Latins, The Books of Kings I. ant II. Anciently there were but two books of Kings; the firft was the two books of Samuel, and the fecond was what we now call the two books of Kings. According to the prefent divifion, thefe two books are four, viz. the firt and fecond books of Samuel, and the firt and fecond books of Kings.

Concerning the author of the two $b(x) k s$ of Samuel there are different opinioris. Some think that Samuel wrote only twenty or tiventy-four chapters of the firft book, and that the hitory was continued by Nathan and Gad. This opinion they ground on the following paffage in Chronicles $\delta$, "Now the acts of David the king, firft and laft, behold they are written in the book of Samul the feer, and in the book of Nathan the pro\$het, and Gad the feer." Others think they were compiled by Ezra from ancient records; but it is evident that the books of Samuel were written before the books of Kings and Chronicles; for on eomparifon it will be found, that in the laft mentioned bonks many cireumftanecs are taken from the former. The firlt book earries down the hiftory of the Ifraelites from the birth of Samuel to the fatal battle of Gilboa, comprehending a period of about 80 years. The fecond relates the hiftory of David from his fuceeffion to the throne of Ifrael till within a year or two of his death, containing 40 years. There are two beautiful paffages in thefe books which every man of fentiment and talte muft feel and admire, the lamentation or elegy on Saul and Jonathan, and the parable of Nathan. The impartiality of the hiftorian is fully attefted by the candour and freedom with which the actions of Saul and David are related. There are fome remarks interfperfed which were probably added by Ezra.

When the two books of Kings were written, or by whom they were compiled, is uncertain. Some have fuppofed that David, Solomon, and Heztkiah, wrote the hiftory of their own times. Others have been of opirion that the prophets, viz. Ifaiah, Feremiah, Gad, and Nathan, each of them wrote the hiftory of the reign in which he lived. But it is generally believed that Ezra wrote thefe two books, and publifhed them in the form in which we have them at prefent. There can be no doubt but the prophets drew up the lives of the kings who reigned in their times; for the names and writings of thofe prophets are frequently mentioned, and cited. Still, however, it is evident that the two books of Kings are but an abridgment of a larger work, the fubitance of which is contained in the books before us. In fupport of the opinion that Ezra is the author of thefe books, it is raid, That in the time of the peuman, the ten tribes were captives in Affyria, whither they had been carried as a punifhment for their fine : That in the fecond of thefe books the author makes fome reflections on the calamities of Ifrael and Judah, which demonflrate that he lived after that event. But to this it is objected, That the author of thefe books expreffes himfelf throughout as a contemporary, and as one would have done who had been an eye and ear witnefs of what he related. To this objection it is anfwered,

That Ezra compiled thefe books from the prophetic Scripture writings whiel he had in his poffeffion; that he eopied them exactly, narrating the facts in order as they hap. pened, and interfperfed in his hiftory fome reflections and remarks arifing from the fubjects whieh he handled.

The firft book eomprifes a period of 126 years, from the death of David to that of Jehofhaphat. The feeond book reeords the tranfactions of many kings of Judah and Ifrael for the fpace of about 300 years, from the death of Jehofhaphat to the deftruction of Jerufalem and the temple, A. M. 3416 . A. C. 583.

The Hebrews ftyle the two books of Chronicles Deberi Imim §, i. e. Words of days, journals or diaries, in allufion to thofe aneient journals which appear to have been kept among the Jews. The Greeks call them Paralipomenz 4I, which fignifies things onitted; as if thefe two books were a kind of fupplement to inform $\pi \alpha \rho \pi \lambda t$ us what had been omitted or too mueh abridged in the books of Kings. The two books of Chronieles contain indeed feveral particulars which are not to be met with in the other books of feripture : but it is not therefore to be fuppofed that they are the records of the kings of Judah and Ifrael, fo often referred to in the books of Kings. Thofe ancient regifters were apparently much more copious than the books before us; and the compiler of the books of Chronielcs often refers to them, and makes long extracts from them.

Some fuppofe that the author of thefe two books was the fame with that of the two books of Kings. The Jews fay that they were written by Ezra, after the return from the captivity, affifted by Zechariah and Haggai, who were then alive. But events are mentioned in them of fo late a date as to fhow that he could not have written them in their prefent form; and there is another objection to his being their author, which is little lefs forcible: between the books of Kings and Cbronicles there is a great number of variations both in dates and facts, which could not have happened if Ezra had been the author of them, or indeed if they had been the work of any one perfon.

The books of Chronicles are not to be confidered merely as an abridgment of former hiftories with fome ufeful additions, but as books written with a partieular view; which feems to have been to furnifh a genealogical regifter of the twelve tribes, deduced from the carliett times, in order to point out thofe diftinctions which were neceffary to diferiminate the mixed multitude that returned from Babylon; to afcertain the lineage of Judah; and to re-eftablifh on their ancient footing the pretenfions and functions of eaeh individual tribe.

The book of Ezra, and alfo that of Nehemiah, are, attributed by the ancients to the former of thefe The book prophets; and they called them the 1ft and 2 d books of Erdras; whieh title is ftill kept up by the Latin chureh. It is indeed highly probable that the former of thefe books, whieh comprifes the hiftory of the Jews from the time that Cyrus made the decree for their return until the twentieth year of Artaxerxes Longimanus (whieh was about 100 years, or as others think 79 years), was all eompofed by Ezra, except the firf fix chapters, which contain an account of the firft return of the Jews upon the deeree of Cyrus; whereas Ezra did not return till the time of. Artaxeryes. It is of this fecond return therefore that he writes the account; and
adding

## S C R [ irs] S G R

adding it to the other, which he found ready compofed to his hand, he made it a complete hiftory of the Jewifh reftoration.

This book is written in Chaldee from chap. iv. 8. to chap. vii. 27 . As this part of the work chiefly contains letters, converfations, and decrees expreffed in that language, the fidelity of the hiftorian has probably induced him to take down the very words which were ufed. The people, too, had been accuftomed to the Chaidee during the captivity, and probably underftood it better than Hebrew; for it appears from Nehemiah's account, chap. viii. 2, 8. that all could not underftand the law.

The book of Nehemiah, as has been already obferved, bears, in the Latin bibles, the title of the fecond book of E/dras; the ancient canons likewife give it the fame name, becaufe, perhaps, it was confidered as a fequel to the book of Ezra. In the Hebrew bibles it has the name of Nehemiah prefixed to it ; which name is retained in the Englifh bible. But though that chief is by the writer of the fecond book of Maccabees affirmed to have been the author of it, there cannot, we think, be a doubt but that either it was written at a later period, or had additions made to it after Nehemiali's death.

With the book of Nehemiah the hiftory of the Old Teftament concludes. This is fuppofed to have taken place about A. M. 3574. A. C. 434. But Prideaux with more probablity has fixed it at A. M. 3595. See Nehemiah.

It is uncertain who was the author of the book of Efther. Clement of Alexandria, and many commentators, have afcribed it to Mordecai ; and the book itfelf feems to favour this opinion; for we are told in chap. ix. 20. that "Mordecai wrote the fe things." Others have fuppofed that Ezra was the author ; but the more
probable opinion of the Talmudits is, that the great Scripture. fynagogue (fee Synagogue), to perpetuate the memory of the deliverance of the Jews from the confpiracy of Haman, and to account for the origin of the feaft of Purim, ordered this book to be compofed, very likely of materials left by Mordecai, and afterwards approved and admitted it into the facred canon. The time when the events which it relates happened, is fuppofed by fome to have been in the reign of Artaxerxes Longimanus, and by others in that of Darius the fon of Hyftalpes, called by the facred penman Abafuerus.

Concerning the author of the book of Job there are of Job. many different opinions. Some have fuppofed that Job himfelf wrote it in Syriac or Arabic, and that it was afterwards tranflated by Mofes. Others have thought that Eiibu wrote it ; and by others it is alcribed to Mofes, to Solomon, to Ifaiah, and to Ezra. 'To give evell an abridgment of the arguments brought in fupport of thefe various opinions would fill a volume, and at lat leave the reader in his prefent uncertainty. He who has leifure and inclination to weigh them may ftudy the fecond fection of the fixth book of Warburton's Divine Legation of Mofes, together with the feveral works there referred to ; but the queition at iflue is of very little importance to us. The book of Job, by whomfoever it was written, and whether it be a real hiftory, or a dramatical poem founded on hiltory, has been always efteemed a portion of canonical fcripture and is one of the mof fublime compofitions in the lacred volume.
The book of Job appears to ftand fingle and unparalleled in the facred volume. It feems to have little connection with the other writings of the Hebrews, and no relation whatever to the affairs of the Ifraelites. The fcene is laid in Idumæa ( H ) ; the hiftory of an inhabitant of that country is the balis of the narrative;
(н) "The information which the learned have endeavoured to collect from the writings and geograplyy of the Greeks concerning the country and refidence of Job and his friends, appears to me (lays Dr Lowth) fo very inconclufive, that I am inclined to take a quite different method for the folution of this queftion, by applying folely to the Sacred Writings: the hints with which they have furnifhed me towards the illuftration of this fubject, I thall explain as briefly as poffible.
"'The land of $U z$, or Gnutz, is evidently Idumaa, as appears from Lam. iv. 21. $U_{z}$ was the grandion of Seir the Horite, Gen. xxxvi. $20,21,28$. I. Chron. i. 38, 42. Seir inhabited that mountainous tract which was called by his name antecedent to the time of Abraham; but his potterity being expelled, it was occupied by the Idumæans: Gen. xiv. 6. Deut. ii. 12. .Two other men are mentioned of the name $U_{z}$; one the grandion of Shem, the other the fon of Nachor, the brother of Abraham; but whether any diftrict was called after their name is not clear. Idumæa is a part of Arabia Petræa, fituated on the fouthern extremity of the tribe of Judah: Numb. xxxiv. 3. Jofh. xv. 1, 21. The land of Uz therefore appears to have been between Egypt and Philiftia, Jer. xxv. 20. where the order of the places feems to have been accurately obferved in reviewing the different nations from Egypt to Babylon; and the fame people feem again to be defcribed in exactly the lame fituations, Jer. xlvi-1.
"Children of the Eaft, or Eoftern people, feems to have been the general appellation for that mingled race of people (as they are calleci, Jer. xxv. 20.) who inhabited between Egypt and the Euphrates, bordering upon Judea from the fouth to the caft; the Idumseans, the Amalekites, the Midianites, the Moabites, the Ammonites. See Judges vi. 3. and Ifa. xi. I4. Of thefe the Idumæans and Amalekites ceitainly poffeffed the fouthern parts. See Numb. xxxiv. 3, xiii. 29. I Sam. xxvii. 8, 10. 'This appears to be the true ftate of the cate: The whole region between Egypt and Euphrates was called the Eaft, at tult in refpect to Egypt (where the learned Jof. Mede thinks the Ifraflites acquired this mode of feaking. Mede's Works, p. 580.), and atterwards abfolutely and without any relation to fituation or circumftances. Abraham is faid to have fent the fons of his concubines, Hagar and Ketural,, "eaftward, to the country which is commonly called the Eaft." Gen. xxv. 6. where the name of the region feems to have been derived from the fame fituation. Solomon is reported "to have excelled in wifdom all the Eaftern people, and all Egypt," I Kings iv. $3 c$. ; that is, all the neighbouring people on that quarter: for

## S G R

Seri; ture, the characters who \{peak are Idumæans, or at leaft Arabians of the adjacent country, all originally of the race of Abraham. The language is pure Hebrew, although the author appears to be an Idumxan ; for it is not improbable that all the pofenity of Abraham, Ifraelites, Idumæans, and Arabians, whether of the fumily of Keturah or Ifhmael, fpoke for a confiderable length of time one common langrage. That the Idumaans, however, and the Temanites in particular, were eminent for the reputation of wifdom, appears by the teftimony of the prophets Jeremiah and Obadiah II: Baruch alfo partipounders) of fables, and fearcliers out of underftand-
ing §."
The principal perfonage in this poem is Job; and in his character is meant to be exhibited (as far as is confiftent with human infirmity) an example of perfect virtue. This is intimated in the argument or intro. duction, but is ftill more eminently difplayed by his

## S C R

own aetions and fentiments. He is holy, devout, and molt pioufly and reverently inpreffed with the facred awe of his divine Creator ; he is allo upright, and confeious of his own integrity; he is patient of evil, and yet very remote from that infenfibility or rather ftupidity to which the Stoic fchool pretended. Oppreffed therefore with unparalleled misfortunes, he laments his mifery, and even wifhes a releafe by death; in other words, he obeys, and gives place to the dictates of nature. Irritated, however, by the unjuft infinuations and the fevere reproaches of his pretended friends, he is more vehemently exafperated, and the too great confidence in his own righteoufnefs leads him to expoftulate with God in terms fcarcely confiftent with piety and Atrift decorum.

It muft be obferved, that the firft fpeech of Job, though it burfts forth with all the vehemence of paffion, confifts wholly of complaint, " the words and fentiments of a delpairing perfon, empty as the wind **;" $J$
there were people beyond the boundaries of Egypt, and bordering on the fouth of Judea, who were famous for wifdom, namely, the Idumæans (fee Jer. xlix. $7 . \mathrm{Ob}$. 8.), to whom we may well believe this paffage might have fome relation. Thus Jehovah addrefles the Babylonians; "A fife, afcend unto Kedar, and lay wafte the children of the Eaft," (Jer. xlix. 28). notwithftanding thefe were really fituated to the weft of Babylon. Although Iob, therefore, be accounted one of the orientals, it by no mealls follows that his refidence muft be in Arabia Deferta.
"Eliphaz the Temanite was the fon of Efau, and Teman the fon of Eliphaz, (Gen. xxxvi. ro, II.), The Eliphaz of Job was without a doubt of this race. Teman is certainly a city of Idumæa, (Jer. xlix. 7, 20. Ezek. xxv. 13. Amos i. 11, 12. Ob. 8, 9.).
"Bildad the Sbubite: Shuab was one of the fons of Abraham by Ketural,, whofe pofterity were numbered among the people of the Eaft, and his fituation was probably contiguons to that of his brother Midians, and of his nephews Shebah and Dedan, (fee Gen. xxv. 2, and 3.) Dedan is a city of Idumrea (Jer. xlix. 8.), and fecms to have been fituated on the ealtern fide, as Teman was on the weft, (Ezek. xxv. 13.). From Sheba originated the Sabrans in the paffage from Arabia Felix to the Red Sea: Sheba is.united to Midian (Ifa. Ix. 6.) ; it is in the fame region however with Midian, and not far from Mount Horeb, (Exod. ii. 15. iii. I.)
"Zophar the Naamatbite: among the cities which by lot fell to the tribe of Judah, in the neighbourhood of Idumæa, Naama is enumerated, (Jofh. xv. 21, 41.) Nor does this name elfewhere occur ; this probably was the country of Zophar.
"Filibu the Buzite: T3uz occurs but once as the name of a place or country (Jer. xxv. 23.), where it is mentioned along with Dedan and Thema: Dedan, as was juft now demontrated, is a city of Idumæa; Thema belonged to the children of Iflmacl, who are faid to have inhabited from Havilah, even to Shur, which is in the diftrict of Egypt, (Gen. xxv. 15.18.) Saul, however, is faid to have fmitten the Amalekites from Havilah even to Shar, which is in the diftrict of Egypt, ( $\mathrm{Sam} . \mathrm{xv} .7$.) Havilah cannot, therefore, be very far from the boundaries of the Amalekites; but the Amalekites never exceeded the boundaries of A rabia Petræa. 4 (See Reland Palx!tin. lib. i. c. xiv.) 'Thema, therefore, lay fomewhere between Havilah and the defert of Shur, to the fouthward of Judea. Thema is alfo mentioned in connection with Sheba, (Job vi. 19.)
" Upon a fair review of thefe facts, I think we may venture to conclude, ftill with that modefty which fuch a queftion demands, that Job was an inhabitant of Arabia Petrea, as well as his friends, or at leaft of that neighbourhood. To tlis folution one objection may be raifed: it may be afked, How the Chaldeans, who lived on the borders of the Euphrates, could make depredations on the camels of Job, who lived in Idumiaa at fo great a diftance? This too is thought a fufficient caufe for affigning Job a fituation in Arabia Deferta, and not far from the Euphrates. But what fhould prevent the Chaldeans, as well as the Sabrans, a people addicted to rapine, and roving about at immenfe diftances for the fake of plunder, from wandering through thefe defencelefs regions, which were divided into tribes and families rather than into nations, and pervading from Euphrates even to Egypt? Further, I would alk on the other hand, whether it be probable that all the friends of Job who lived in Idumæa and its neighbourhood, fhould inftantly be informed of all that could happen to Job in the defert of Arabia and on the confines of Chaldea, and immediately repair thither? Or whether it be reafonable to think, that, fome of them being inhabitants of Arabia Deferta, it fhould be concerted among them to meet at the refidence of J b ; ; fince it is evident, that Eliphaz lived at Theman, in the extreme parts of Idumæa? With refpect to the Aifitas of Ptolemy (for fo it is written, and not Auftas) it has no agreement, not fo much as in a fingle letter with the Hebrew Ginutz The LXX irdeed call that country by the name Aufitida, but they defcribe it as fituated in Idumxa; and they account Job himfelf an Idumxan, and a defcendant of Efau." See the Appendix of the 1.XX to the book of Job, and Hyde Not. in Peritzol. chap. xi. Lowwih on Hebrew Poetry.

May mine enemy be as the impious man,

Nay, as the Almighty liveth, who hath embittered my foul ;
Verily as long as I have life in me,
And the breath of God is in my noftrils;
My lips fhall not fpeak perverfity,
Neither fhall my tongue whifper prevarication.
God forbid that I fhould declare you righteous !
Irill I expire I will not remove my integrity from me.
I have fortified myfelf in my richtcoufnefs;
And I will not give up my ftation :
My heart fhall not upbraid me as long as I live.

## S C R

Indignation is, however, inflantly predominant :
But a few words who can forbear?
The fecond flames forth at once:

The lenity and moderation of Elihu ferves as a beautiful contraft to the intemperance and afperity of the other three. He is pious, mild, and equitable; equally free from adulation and feverity ; and endued with fingular wifdom, which he attributes entirely to the infpiration of God: and his modefty, moderation, and wif. dom, are the more entitled to commendation when we confider his unripe youth. As the characters of his detractors were in all refpects calculated to inftame the mind of Job, that of this arbitrator is admirably adapted to footh and compofe it : to this point the whole drift of the aryument tends, and on this the very purport of it feems to depend.

Another circumitance deferving particular attention in a poem of this kind, is the fentiment; which mult be agreeable to the fubject, and embellighed with proper expreffion. It is by Ariftotle enumerated among the effentials of a drematic poërn; not indeed as peculiar to that fpecies of poetry alone, but as common, and of the greateft importance, to all. Manners or character are effential only to that poetry in which living perfons are introduced; and all fuch poems mutt afford an exact reprefentation of human manners: but fentiment is effential to every poem, indeed to every compofition whatever. It refpects both perfons and thing3. As far as it regards perfons, it is particularly concerned in the delineation of the manners and paffions: and thofe inflances to which we have juift been adverting are fentiments expreffive of manners. Thofe which relate to the delineation of the paffions, and to the defcription of other objects, yet remain unnoticed.

The poem of Job abounds chiefly in the more vehecont citement of terror; and, as the fpecimens already quoted will fufficiently prove, is univerfally animated with the true fpirit of fublimity. It is however not wanting in the gentler 'affections. The following complaints, for inftance, are replete with an affecting fpirit of melan. choly :
Man, the offspring of a woman,
Is of few days, and full of inquietude ;
He fringeth up, and is cut off like a flower;
He fleeteth like a fhadow, and doth not abide :
Upon fuch a creature doft thou open thine eyes?
And wilt thou bring even me into judgment with thee?
Turn thy look fiom him, that he may have fome refite,
Chap.
xiv. 1,2 ,

3,6:
How long wilt thou trifie in this mannet?
How long fhall the words of thy mouth be as a mighty wind \| ?
But remark the third:
Shall not the mafter of words be anfwered ? Or fhall a man be acquitted for his fine fpeeches ? Shall thy prevarications make men filent?
Shalt thou even fcoff, and there be no one to make thee afhamed *?

## 

Hereagernefs and fury he devoureth the very ground : He believeth it not when he lieareth the trumpet.
When the trumpet foundeth, he faith, ahah!
Yea he fcenteth the battle from afar,
The thunder of the chieftains and their fhouts I.
The following fublime defeription of the creation is xxxix, 24
dmirable: admirable:
Where waft thou when I laid the foundations of the earth ?
If thou knoweft, declare.
Say, who fixed the proportions of it, for furely thou knoweft ?
Or who ftrétched out the line upon it?
Upon what were its foundations fixed?
Or who laid the corner-Atone thereof?
When the morning-ftars fung together,
And all the fons of God fhouted for joy ;
When the fea was fhut up with doors ;
When it burft forth as an infant that cometh out of the womb;
When I placed the cloud for its robe,
And thick darknefs for its fwadling-band;
When I fixed my boundary againft it,
When I placed a bar and gates;
When I faid, Thus far fhalt thou come, and not advance,
And here fhall a ftop be put to the pride of thy waves $\ddagger$. tJob $\times \times x$
Let it fuffice to fay, that the dignity of the ftyle is anfwerable to that of the fubject; its force and energy; to the greatriefs of thofe palfions which it defcribes : and as this production excels all the other remains of the Hebrew poetry in economy and arrangement, fo it yields to none in fublimity of ftyle and in every grace and excellence of compolition. Among the principal of ,thefe may be accounted the accurate and perfectly poetical conformation of the fentences, which is indeed generally moft obfervable in the moft ancient of the poeti.. cal compofitions of the Hebrews. Here, however, as is natural and proper in a poem of fo great length and fublimity, the writer's fkill is difplayed in the proper adjuitment of the period, and in the accurate diftribution of the members, rather than in the antithefis of words, or in any laboured adaptation of the parallelifms.

The word Pfalms is a Greek term, and fignijifes Songs. The book
The Hebrews call it Seper Tebellim; f, that is, "the Boo of Pfalms The Hebrews call it Seper Tebellin; $\delta$, that is, "the Book of Pralms
 Pfalms. Great veneration has always been paid to this collection

## $S \subset R$

collection of divine fongs. The Chriftian churcl lias from the beginning made them a principal part of her holy fervices; and in the primitive times it was almoft a general rule that every bifhop, prieft, and religious perfon, fhould have the pfalter by heart.
Many learned fathers, and not a few of the moderns, have maintained that David was the author of them all. Several are of a different opinion, and infift that David wrote only 72 of them ; and that thofe without titles are to be afcribed to the authors of the preceding pfalnıs, whofe names are affixed to them. Thofe who fuppofe that David alone was the author, contend, that in the New Teftament, and in the language of the church univerfal, they are exprefsly called the Pfalns of David. That David was the principal author of thefe hymns is univerfally acknowledged, and therefore the whole collection may properly enough go under his name; but that he wrote them all, is a palpable mittake. Nothing certain can be gathered from the titles of the pfalins; for although unqueftionably very ancient, yet authors are not agreed as to their authority, and they differ as much about their fignification. The Hebrew doctors generally agree that the 92 d pfalm was compofed by Adam; an opinion which for many reafons we are not
inclined to adopt. There feems, however, to be no doubt but that fome of them were written by Mofes; that Solomon was the author of the 49th; and that others were occafioned by events long pofterior to the flourifhing era of the kingdom of Judah. The 137th particularly is one of thofe which mentions the captivity of Babylon.

The following arrangement of the Pfalms, after a careful and judicious examination, has been adopted by Calmet.

ग. Eiglt Pfalms of which the date is uncertain, viz. I, 4, 19, $8 \mathrm{I}, 9 \mathrm{I}, 110,139,145$. The firt of there was compofed by David or Ezra, and was fung in the temple at the feaft of trumpets hicld in the beginning of the year and at the feaft of tabernacles. The 8IIt is attributed to Afaph, and I Ioth to David. The authors of the reft are unknown.
2. The Pfalins compofed by David during the perfecution of Saul. Thefe are feventeen, 11, 31, 34, $56,16,54,52,109,17,22,35,57,58,14^{2}, 140$, 341, 7 .
3. 'the Pfalms compofed by David at the beginning of his reign, and after the death of Saul. Thele are fisteen, $2,9,24,63$, 101, $29,20,21,28,39,40,41$, 6, 51, $3^{2}, 33$.
4. The Pfalms written by David during the rebellion of Abfalom are eight in number; $3,4,55,62,70,71$, 143, 144.
5. The Pfalms written between the death of Abfa. lom and the captivity, which are ten, $18,30,72,45$, $78,82,83,76,74,79$ : of thefe David wrote only three; 18,30 , and 72 .
6. The Pfalms compofed during the captivity, which amount to forty. Thefe were chiefly compofed by the deffendants of Afaph and Korah : they are, $10,12,13$, 14, $53,15,25,26,27,28,36,37,42,43,44,49$,
$119 \quad \mathrm{~S}$ C R
$50,60,64,69,73,75,77,80,84,86,88,89,90$, Scripture. $92,93,94,95,99,120,121,123,130,131,132$.

Laftly, Thofe hymas of joy and thankfgiving, written upon the releafe from the Babylonifh captivity, and at the building and dedication of the temple. Thefe are, $122,61,63,124,23,87,85,46,47,49$, from 95 to 117 inclufive, 126,133 to 137 inclufive, 149 , $150,146,147,148,59,65,66,67,118,125$, $127,128,129,138$. - According to this dillribution, only 45 are pofitively affirned to David.

Jofephus, and molt of the ancient writers, affert, that the Pfalms were compofed in numbers : little, however, refpecting the nature and principles of the Hebrew verfification is known.
There exited a certain kind of poetry among the obferva 40 Hebrews, principally intended, it foould feem, for the tions on the affifance of the memory ; in which, when there was Hebrew. little connection between the fentiments, a fort of or- poetry. der or method was preferved, by the initial letters of each line or ftanza following the order of the alphabet. Of this there are feveral examples extant among the facred poems (1); and in thefe examples the verfes are fo exactly marked and defined, that it is impoffible to miftake them for profe; and particularly if we attentively confider the verfes, and compare them with one another, fince they are in general fo regularly accommodated, that word anfwers to word, and almoft fyllable to fyllable. This being the cafe, though an appeal can fcarcely be made to the ear on this occafion, the eye itfelf will diftinguifh the poetic divifion and arrangement, and alfo that fome labour and accuracy has been employed in adlapting the words to the meafure.

The Hebrew poetry has likewife another property altogether peculiar to metrical compofition. It admits foreign words and certain particles, which feldom occur in profe compofition, and thus forms a diftinct poetical dia. lect. One or two of the peculiarities allo of the Hebrew verfification it may be proper to remark, which as they are very obfervable in thofe poems in which the verfes are defined by the initial lettero, may at leaft be reafonably conjectured of the reft. The firft of thefe is, that the verfes are very unequal in length; the fhorteft confifting of fix or feven fyllables; the longeft extending to about twice that number: the fame porem is, however, generally continued throughout in verfes not very unequal to each other. It muft allo be oblerved, that the clofe of the verfe generally falls where the members of the fentences are divided.

But although nothing certain can be defined concerning the metre of the particular verfes, there is yet another artifice of poctry to be remarked of them when in a collective ftate, when feveral of them are taken together. In the Hebrew poetry, as is before remarked, there may be obferved a certain conformation of the fentences; the nature of which is, that a complete fenfe is almoft equally infufed into every component part, and that every member conftitutes an entire verfe. So that as the poems divide themfelves in a manner fpontaneoufly into periods, for the moft part equal ; fo the periods themfelves are divided into verfes, moft common-
(1) Pfalms xxy. xxxiv. xxxvii. cxi. cxii. cxix. cxlv. Prov. xxxi. from the Ioth verfe to the end. The whole: of the Lamentations of Jeremiah except the laft chapter.

## S C R

Deripture. ly couplets, though frequently of greater length. This is chiefly obfervable in thofe paffares which frequently occur in the Hebrew poetry, in which they treat one frbject in many different ways, and dwell upon the fame fentiment; when they exprefs the fame thing in different words, or different things in a fimilar form of words; when equals refer to equals, and oppofites to oppofites : and fince this artifice of compolition feldom dails to produce even in profe an agreeable and meafured cadence - we can fcarcely doubt that it nuft have imparted to their poetry, were we nafters of the verfffication, an exquifite degree of beauty and grace.

The clegant and ingenious Dr Lowth has with great acutenefs examined the pectliarities of Hebrew poetry, and has arranged them under general divifions. The
correfpondence of one verfe or line with another he calls paralitlifm. When a propofition is delivered, and a fecond is fubjoinied to it, equivalent or contraifed with it in fenfe, or fimilar to it in the form of grammatical conftruction, thefe he calls parallel lines; and the words or phrafes anfwering one to another in the correfponding lines, parallel terms. Parallel lines he reduces to three forts; parallels fynonymous, parallels antithetic, and parallels fynthetic. Of each of thefe we fhall prefent a few examples.

Finf, of parallel lines fynonymous, which correfpond one to another by exprefing the fame fenfe in different but equivalent terms.
O. Jehovah, in-thy-ftrength the-king fhall-rejoice; And-in-thy-falvation how greatly fhall-he-exult! The-defire of-his-heart thou-haft-granted unto-him ; And-the-requelt of-his-lips thou-haft-not denied.

Pf. xxi. I. 2.
Becaufe I-called, and-ye-refufed;
I-ftretched-out my-hand, and-no-one regarded:
But-ye-have-defeated all my-counfel;
And-would-not incline to-my-reproof:
I alfo will-laugh at-your-calamity;
T-will-mock, when-what-yon-feared cometh ;
When-what-you-feared cometh like-a-devaftation;

- And-your-calamity advanceth like-a-tempeft;

When diftrefs and-anguifh come upon-you:
Then fhall they-call-upon-me, but-I-will-not anfwer ; They-fhall-feek-me-early, but-they-fhall-not find-me: Becaufe they-hated knowledge;
And-did-not choofe the-fear of-Jehovah;
Did-not incline to-my-counfel ;
Contemptuoully-rejected all iny-reproof;
Therefore-fhall-they-eat of-the-fruit of-their-ways; And-fhall-be-fatiated with-their-own-derices.
For the-defection of-the-himple flall-ीlay-them ;
And-the-fecurity of-fools fhall-deftroy them.
Prov. i. 24-32.
Seek-ye Jehovah, while-hc-may-be-found;
Call-ye-upon him, while-he-is near:
Liet-the-wicked forfake his-way ;
And-the-untighteous man his-thoughts:
And-let-him-return to Jehovah, and-he-will-compaftion-ate-him;
Aud unto our-God, for he-aboundeth in forgivenefs ( k ).
Ifaiah lv. 6. 7.
'Thefe fynonymous parallels fometimes confift of two,

## 1207 <br> S C R

of three, or more fynonymous terms. Sonctimes they Ser? are formed by a repetition of past of the firf fentence:

## As,

What fhall I do unto thee, O Ephraim !
What fhall I do unto thee, O Judah!
For your goodnefs is as the morning cloud,
And as the early dow it paffeth away.
Hofea vi. 4.
'the following is a beautiful inftance of a paralle? triplet, when three lines correfpond and form a kind of ftanza, of which two only are fynonymous.
That day, let it become darknefs;
Let not God from above inquire after it ;
Nor let the flowing light radiate upon it.
That night, let utter darknefs feize it :
Let it not be united with the days of the year ;
Let it not conse into the number of the months.
Let the fars of its twilight be darkened :
Let it look for light, and may there be none ;
And let it not behold the eyelids of the morning.
Job iii. 4, 6, 9.
The fecond fort of parallels are the antithetic, when two lines correfpond with one another by an oppolition of terms and fentiments ; when the fecond is contrafted with the firlt, fometimes in expreflions, fometimes in fenfe only. Accordingly the degrees of antithelis are varions : from an exact contrapolition of word to word through the whole fentence, down to a general difparity, with fomething of a contrariety, in the two propofitions. Thus in the following examples :
A wife fon rejoiceth his father ;
Lut a foolifh fon is the grief of his mother.
Pror. x. I.
Where every word hath its oppofite: for the terms fatber and mother are, as the logicians fay, relatively oppofite.
The memory of the juft is a bleffing ;
But the name of the wicked fhall rot.
Prov. x. 7.
Here there are only two antithetic terms: for memory and name are fynonymous.
There is that fcattereth, and fill increafeth;
And that is unreafonably fparing, yet groweth poor.
Prov. xi. 24.
Here there is a kind of double antithefis; one between the two lines themfelves; and likewife a fubordinate oppofition between the two parts of each.
Thefe in chariots, and thofe in horfes;
But we in the name of Jehovah our Crod will be ftrong.
'They are bowed down, and fallen;
But we are rifen, and maintain ourfelves firm.
PC. xx. 7, 8 .
For his wrath is but for a moment, his favour for life; Sorrow may lodge for the evening, but in the morninis gladnefs.

Pf. xxx. 5 .
Yet a little while, and the wicked fhall be no more;
Thou fhalt look at his place, and he fhall not be found:
But the meek fhall inherit the fand;
And delight themfelves in abundant profperity.
Pf. xxxvii. Io, If,
(x) All the words bound together by hyphens anfwer to fingle words in Hiebrew.

## S C R [ $1211 \quad \mathrm{~S}$ C R

In the laft example the oppofition lies between the two parts of a ftanza of four lines, the latter diftich being oppofed to the former. So likewife the following :
For the mountains thall be removed;
And the hills fhall be overthrown:
But my kindnefs from thee fhall not be removed;
And the covenant of my peace thall not be overthrown. Ifaiah liv. 10.
Ifaiah by means of the antithetic parallelifm, without departing from his ufual dignity, adds greatly to the fweetnefs of his compofition in the following inftances:
In a little arger have I forfaken thee;
But with great mercies will I receive thee again:
In a fhort wrath I hid my face for a moment from thee;
But with everlafting kindnefs will I have mercy on thee.
Ifaiah liv. $7,8$.
Behold my fervants fhall eat, but ye fhall be famifhed;
Beliold my fervants fhall drink, but ye fhall be thirfty;
Behold my fervants fhall rejoice, but ye fhall be confounded;
Behold my fervants thall fing aloud, for gladnefs of heart,
But ye fhall cry aloud for grief of heart ;
And in the anguifh of a broken fpirit fhall ye howl.
Ifaiah Ixv. 13, 14.
Frequently one line or member contains two fentiments:
The nations raged; the kingdoms were moved;
He uttered a voice ; the earth was diffolved:
Be ftill, and know that I am God:
I will be exalted in the nations, I will be exalted in the eartlı.

Pf. xlvi. 6. 10. When thou paffeft through waters $I$ am with thee; And through rivers, they fhall not overwhelm thee: When thou walkeft in the fire thou fhalt not be foorched; And the flame fhall not cleave to thee.

## Ifaiah xliii. 2.

The third fort of parallels is the fynthetic or conItructive : where the parallelifm confifts only in the fimilar form of conftruction; in which word does not anfwer to word, and fentence to fentence, as equivalent or oppofite ; but there is a correfpondence and equality between different propofitions, in refpect of the fhape and turn of the whole fentence, and of the conftructive parts; fuch as noun anfwering to noun, verb to verb, member to member, negative to negative, interrogative to interrogative.
Lo! he withholdeth the waters, and they are dried up: And he fendeth them forth, and they overturn the earth. With him is ftrength, and perfect exiftence;
The deceived, and the deceiver, are his.

$$
{ }_{3}^{\mathrm{J}} \mathrm{Job} \text { xii. } 3-16 \text {. }
$$

Is fuch then the faft which I choofe?
That a man fhould afflict his foul for a day ?
Is it, that he fhould bow down his head like a bulrufh, And fpread fackcloth and alhes for his couch?
Shall this be called a faft,
And a day acceptable to Jehovah?
Is not this the faft that I choofe?
To diffolve the bands of wickednefs ;
To loofen the oppreffive burthens ;
To deliver thofe that are crufhed by violence;
Vo\%. XVII. Part I.

And that ye thould break afunder every yoke?
Is it not to diftribute thy bread to the hungry ; And to bring the wandering poor into thy houfe? When thou feeft the naked, that thou clothe him; And that thou hide not thyfelf from thine own flefl ? Then fhall thy light break forth like the morning; And thy wounds fhall fpeedily be healed over: And thy righteoufnefs fhall go before thee; And the glory of Jehovah fhall bring up thy rear." Ifaialı lviii. 5-8.
We frall produce another example of this fpecies of parallelifm from Pf. xix. 8-II. from Dr Lowth:
The law of Jehovah is perfect, reftoring the foul;
The teftimony of Jehovah is fure, making wife the fimple:
The precepts of Jehoval are right, rejoicing the heart $;$
The commandment of Jehovah is clear, enlightening the eyes :
The fear of Jehovah is pure, enduring for ever;
The judgments of Jehovah are truth, they are juft alto. gether.
More defirable than gold, or than much fine gold ;
And fweeter than honey, or the dropping of honeycombs.

Synonymous parallels have the appearance of art and concinnity, and a fludied elegance; they prevail chiefly in fhorter poems; in many of the Pfalms; in Balaam's prophécies; frequertly in thofe of Ifaiah, which are molt of them diftinct poems of no great length. The antithetic parallelifm gives an acutenefs and force to adages and moral fentences; and therefore abounds in Solomon's Proverbs, and elfewhere is not often to be met with. The poem of Job, being on a large plan, and in a high tragic ftyle, thougll very exact in the divifion of the lines and in the parallelifm, and affording many fine examples of the fynonymous kind, yet confifts chiefly of the conftructive. A happy mixture of the feveral forts gives an agreeable variety: and they ferve mutually to recommend and fet off one another.

The reader will perceive that we have derived every thing we have faid relating to Hebrew poetry from the elegant Lectures of $\mathrm{D}_{\mathrm{r}}$ Lowth, which are beautifully tranflated by Mr Gregory, a diftinguifhed author as well as tranflator.

The book of Proverbs has always been accounted ca. The book nonical. The Hebrew title of it is Mij/2/i*, which fig- of Fronifies " fimilitudes." It has always been afcribed to So. verbs. lomon, whofe name it bears, tlough fome have doubted whether he rcally was the author of every one of the maxims which it contains. Thofe in chap. xxx. are indeed called the zvords of Agur the fon of $\mathcal{F}_{\text {akeh, }}$, and the title of the 3 I't or laft chapter is the words of King Lemuel. It feems certain that the collection called the Proverbs of Solomon was digefted in the order in which we now have it by different hands; but it is not, therefore, to be concluded that they are not the work of Solomon. Several perfons might have made collections of them: Hezekiah, among others, as mentioned chapter xxv. Agur and Ezra might have done the fame. From thefe feveral collections the work was compiled which we have now in our hands.

The book of Proverbs may be confidered under five divifions. I. The firt, which is a kind of preface, ex-

Scripture. tends to the 10 th chapter. This contains general cautions and exhortations for a teacher to his pupil, expreffed in elegant language, duly connected in its parts, illuftrated with beautiful defcription, and well contrived so engage and intereft the attention.
2. The fecond part extends from the beginning of chap. $x$. to chap. xxii. 17. and confifts of what may ftrictly and properly be called proverbs, viz. unconnected featences, expreffed with much neatnefs and fimplicity. They are truly, to ufe the language of their fage author, "apples of gold in pictures of filver."
3. In the third part, which is included between chapter xxii. 16. and chapter xxv. the tutor drops the fententious fyle, addreffes his pupil as prefent, and delivers his advices in a connected manner.
4. The proverbs which are iucluded between chapter $x \times v$. and chapter xxx. are fuppofed to have been felected by the men of Hezekiab from fome larger collection of Solomon, that is, by the prophets whom he employed to reftore the fervice and writings of the church. Some of the proverbs which Solomon had introduced into the former part of the book are here repeated.
5. The prudent admonitions which Agur delivered to his pupils Ithiel and Ucal are contained in the 30 th chapter, and in the 3 Ift are recorded the precepts which the mother of Lemuel delivered to her fon.

Several references are evidently made to the book of - Rom. xii. Proverbs by the writers of the New Teftament *.

I6, 20 .
1 Pet. iv.
8. v. 5 : James iv. 6.

- Proverbs axvii. 6, 7. riii. 7 . xxvii1. II 43 Ecclefiattes.

The Proverbs of Solomon afford fpecimens of the didactic poetry of the Hebrews. They abound with antithetic parallels; for this form is peculiarly adapted to that kind of writing, to adages, aphorifms, and detached fentences. Indeed, the elegance, acutenefs, and force of a great number of Solomon's wife fayings arife in a great meafure from the antithetic form, the oppofition of diction and fentiment. Take the following examples:
The blows of a friend are faithful ;
But the kiffes of an enemy are treacherous.
The cloyed will trample upon an honeycomb;
But to the huigry every bitter thing is fivect.
'There is who maketh limfelf rich, and wanteth all things ;
Who maketh himfelf poor, yet hath much wealth.
The rich man is wife in his own eyes,
But the poor man that hath difcernment to trace him
out will defpife him*.
The Hebrew title of the book which we call Ecclefiaftes is Keleth, that is, the Gatherer or Collecior ; and it is fo called, either becaufe the work itfelf is a collection of maxims, or becaufe it was delivered to an affembly gathered together to hear them. The Greek term Ecclefiafles is of the fame import, fignifying one wha gathers together a congregation, or who difcourfes or preaches to an affembly convened. That Solomon was the author of this book is beyond all doubt; the beautiful defcription of the phenomena in the natural world, and their caufes; of the circulation of the

* See Hor Mey's Sermon befare the Hunane Society.
map frame, fhews it to be the work of a philofopher. At what period of his life it was written may be eafily found out. 'The affecting account of the infirmities of old age which it contains, is a ftrong indication that the author knew by experience what they were; and his
complete conviction of the vanity of all earthly enjoy. ments proves it to have been the work of a penitent. Some paffages in it feem, indeed, to exprefs an Epicurean notion of Providence. But it is to be obferved, that the author, in an academic way, difputes on both fides of the quettion ; and at laft concludes properly, that to "fear God and keep his commandments is the whole duty of man ; for God (fays he) will bring every work to judgment, and every fecret thing, whether it be good, or whether it be evil."

The general tenor and ftyle of Ecclefiaftes is very different from the book of Proverbs, though there are many detached fentiments and proverbs interfperfed. For the whole work is uniform, and confined to one fubject, namely, the vanity of the world exemplified by the experience of Solomon, who is introduced in the character of a perfon inveltigating a very difficult queftion, examining the arguments on either fide, and at length difengaging himfelf from an anxious and doubtful difputation. It would be very difficult to diftinguifh the parts and arrangement of this production ; the order of the fubject, and the connection of the arguments, are involved in fo much obfcurity, that fcarcely any two commentators have agreed concerning the plan of the work, and the accurate divifion of it into parts or fections. The truth is, the laws of methodical compofition and arrangement were neither known by the Hebrews nor regarded in their didactic writings. They uniformly retained the old fententious manner, nor did they fubmit to method, even where the occafion appeared to demand it. The fyle of this work is, however, fingular ; the lancruage is generally low; it is frequently loofe, unconnected, approaching to the incorrectnefs of comverfation; and poffeffes very little of the poetical character, even in the compofition and ftrueture of the periods: which peculiarity may poffrbly be accounted for from the nature of the fubject. Contrary to the opinion of the Rabbies, Ecclefiattes has been claffed among the poetical books; though, if their authority and opinions were of ally weight or importance, they mi,ght perhaps on this occafion deferve fome attention.

The Song of Solomon, in the opinion of Dr Lowth, Song ${ }^{44}$ is an epithalamium or nuptial dialogue, in which the Solomons principal characters are Solomon, his bride, and a chorus of virgins. Some are of opinion that it is to be taken altogether in a literal fenfe; but the generality of Jews and Chriftians have efteemed it wholly allegorical, expreffing the union of Jefus Chrift and the church. Dr Lowth has fupported the common opinion, by fhowing that the facred writers often apply metaphors to God and his people derived from the conjugal ftate. Our Saviour is ityled a bridegroom by John the Baptift (John iii.), and is reprefented in the fame character in the parable of the ten virgins. Michaelis, on the other hand, rejects the argument drawn from analogy as inconclufive, and the opinion of Jews and Chriftians as of no greater authority than the opis nion of the moderns.

The fecond of thofe great divifions under which the Jews claffed the books of the Old Teftament was that of the Prophets, which formerly comprehended 16 books.

The Prophets were 16 in number: Ifaiah, Jeremial ${ }_{2}$; Ezekiel, Daniel, Hofea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah,
chariah, Malachi. The four firt are called the greater prophets; the other twelve are denominated the minor prophets.
The writings of the Prophets are to Chriftians the moft interefting part of the Old 'Teftament; for they afford one of the moft powerful argunents for the divine origin of the Chriftian religion. If we could only prove, therefore, that thefe prophecies were uttered a fingle century before the events took place to which they relate, their claim to infpiration would be unqueftionable. But we can prove that the interval between their enunciation and accomplifhment extended much farther, even to 500 and 1000 years, and in fome cafes much more.

The books of the prophets are mentioned by Jofephus, and therefore furely exifted in his time ; they are alio quoted by our Saviour, under the general denomination of the Propheis. We are informed by Tacitus and Suetonius, that about 60 years before the birth of our Saviour there was an univerfal expectation in the eaft of a great perfonage who was to arife; and the fource of this expectation is traced by the fame writers to the facred books of the Jews. They exifted alfo in the time of Amtiochus Epiphanes, A. C. 166; for when that tyrant prohibited the reading of the law, the books of the Prophets were fubftituted in its place, and were continued as a part of the daily fervice after the interdict againft the law of Mofes was taken off. We formerly remarked, that references are made by the author of Ecclefiaficus, A. C. 200, to the writings of Ifaiah, Jeremiah, and Ezekiel, and that he mentions the 12 Prophets. We can afcend ftill higher, and affert from the language of the Prophets, that all their writings muft have been compofed before the Babylonifh captivity, or within a century after it ; for all of them, except Daniel and Ezra, are compofed in Hebrew, and even in them long paffages are found in that language: but it is a well known fact, that all the books written by Jews about two centuries after that era are compofed in the Syriac, or Chaldaic, or Greek language. *ك Let any man (fays Michaelis) compare what was written in Hebrew after the Babylonifh exile, and, I apprehend, he will perceive no lefs evident marks of decay than in the Latin language." Even in the time of Ezra, the common people, from their long refidence in Babylonia, had forgotten the Hebrew, and it was neceffary for the learned to interpret the law of Mofes to them. We can therefore afcertain with very confiderable precifion the date of the prophetic writings; which indeed is the only important point to be determined : For whether we can difcover the authors or not, if we can only eftablifh their ancient date, we fhall be fully entitled to draw this conclufion, that the predictions of the Prophets are infpired.

Much has been written to explain the nature of in. fpiration, and to fhow by what methods God imparted to the prophets that divine knowledge which they were commanded to publifh to their countrymen. Attempts have been made to difclofe the nature of dreams and vifions, and to defcribe the ecflacy or rapture to which the prophets were fuppofed to be raifed while they uttered their predictions. Not to mention the degrading and indecent comparifon which this laft circumftance fuggetts, we fhall only inform thofe who expect here an explanation of the prophetic dreams and
vifions, that we flall not attempt to be wife above what is Sctipurt written. The manner in which the allwife and unfeen God may think proper to operate upon the minds of his creatures, we might expect $\grave{a}$ priori to be mylterious and inexplicabls. Indeed fuch an inquiry, though it were fuccefsful, would only gratify curiolity, without being in the leaft degree conducive to ufeful know. ledge.

The bufinefs of philofophy is not to inquire low almighty power produced the frame of nature, and befowed upon it that beauty and grandeur which is everywhere confpicuous, but to difcover thofe marks of intelligence and defign, and the various purpofes to which the works of nature are fublervient. Philofophy has of late been directed to theology and the ftudy of the Scriptures with the happieft effect 3 ; but it is not permitted to enter within the vail which the Lord of Na ture has thrown over his councils. Its province, which is fufficiently extenfive, is to examine the language of the prophecies, and to difcover their application.
The character of the prophetic fyle varies accord- Character ing to the genius, the education, and mode of li- of their ving of the relpective authors; but there are fome pe- fote fymculiarities which run through the whole prophetic books. A plain unadorned ftyle would not have fuited thofe men who were to wrap the myfteries of futurity in a veil, which was not to be penetrated till the events themfelves fhould be accomplifhed. For it was never the intention of prophecy to unfold futurity to our view, as many of the rain interpreters of prophecy fondly imagine ; for this would be inconfiftent with the free agency of man. It was therefore agreeable to the wifdom of God that prophecies fhould be couched in a language which would render them unintelligible till the period of their completion; yet fuch a language as is diftinct, regular, and would be eafily explained when the events themfelves fhould have taken place. 'I his is precifely the character of the prophetic lariguage. It is partly derived from the hieroglyphical fymbols of Egypt, to which the Ifraelites during their fervitude were familiarized, and partly from that ana$\operatorname{logy}$ which fubfifts between natural objects and thofe which are moral and political.

The prophets borrowed their imagery from the moft Burrowed fplendid and fublime natural objects, from the hof of from anas heaven, from feas and mountains, from ftorms and logy, earthquakes, and from the moft ftriking revolutions in nature. The celefial bodies they ufed as fymbols to exprefs thrones and dignities, and thofe who enjoyed them. Earth was the fymbol for men of low eftate. Hades reprefents the miferable. Afcending to beaven, and defcending to earth, are phrafes which exprefs riling to power, or falling from it. Great earthquakes, the Saking of beaven and earth, denote the commotions and overthrow of kingdoms. 'The fun reprefents the whule race of kings mining with regal power and glory. The moon is the fymbol of the common people. 'i hefars are fubordinate princes and great men. Light denotes gloy, truth, or knowledge. Darknefs expreffes obfcurity of condition, error, and ignorance. The darkening of the fun, the turning of the moon into blood, and the fall. ing of the flars, figuify the deftuction or defolation of a kingdom. Nerv moons, the returning of a nation from a difperfed ftate. Conflagration of the earth, is the fym.

## S C•R

scripture. bol for deftruction by war. The afcent of froke from 1 kingdoms or political communities correfponding to their refpective characters. When a man or bealt is any thing burning for ever, denotes the continuance of a people under flavery. Riding in the clouds, fignifies yeigning over many fubjects. Tempefuous winds, or motion of the clouds, denote wars. T.hunder denotes the noife of multitudes. Fountains of zuaters exprcfs cities. Mountains and i/lands, cities with the territories belonging to them. Houfes and foips ftand for families, affemblies, and towns. A foreft is put for a kingdom. A willdernefs for a nation much diminifhed in its numbers.

Animals, as a lion, bear, leopard, goat, are put for heir refpective characters. Whien a man or beal is put for a kingdom, the head reprefents thofe who gavern; the tail thofe who are governed; the horns denote the number of military powers or flates that rife note the number of military powers or flates that rife
from the head. Seeing fignifies undertanding; eyes men of undertanding; the mouth denotes a lawgiver; the
arm of a man is put for power, or for the people by of undertanding; the mouth denotes a lawgiver; the
arm of a man is put for power, or for the people by whofe ftrength his power is exercifed; feet reprefent the loweft of the people.

Such is the precifion and regularity of the prophetic language, which we learn to interpret by comparing prophecies which are accomplifhed with the facts to which they correfpond. So far is the ftudy of it carried already, that a dictionary has been compofed to explain it ; and it is probable, that in a fhort time it may be fo fully underftood, that we fhall find little diffculty in explaining any prophecy. But let us not from this expect, that the prophecies will enable us to penetrate the dark clouds off futurity : No! The difficulty of applying. proplecies. to their correfponding events, before completion, will ftill remain unfurmountable. Thofe men, therefore, however pious and wellmeaning they may be, who attempt to explain and apply prophecies which are not yet accomplifhed, and who delude the credulaus multitude by their own romantic conjectures, caunot be acquitted of rafhuefs and prefumption.
The predictions of the prophets, according to the opinion of Dr Lowth, are written in a poetic ftyle. They poffefs indeed all the characterifics of Hebrew poetry, with the fingle exception, that none of them are alphabetical or acrofic, which is an artificial ar-
rangement utterly reppugnant to the nature of pro. Scriputu phecy.

The other arguments, however; ought to be particularly adverted to upon this fubject : the poetic dialeet, for inftance, the diction fo. totally different from the language of common life, and other fimilar circumftances, which an attentive reader will eafily difcover, but which cannot be explained by a few examples ; for circumftances which, taken feparately, appear but of fmall account, are in a united view frequently of the greateft importance. To thefe we may add the artifcial conformation of the fentences; which are a neceffary concomitant of metrical compofition, the only one indeed which is now apparent, as it has always appeared to us.

The order in which the books of the minor prophets are placed is not the fame in the Septuagint as in the Hebrew *. According to the latter, they ftand as in *Cbron our tranflation; but in the Greek, the feries is altered gy of tbl as to the fix firft, to the following arrangement : Hofea, Amos, Micah, Joel, Obadiah, Jonah. This change, however, is of no confequence, fince neither in the original; nor in the Septuagint, are they placed with exact regard to the time in which their facred authors respectively flourified.

The order in which they flould ftand, if chronologio cally arranged, is by Blair and others fuppofed to be as follows: Jonah, Ames, Hofea, Micah, Nahum, Joel, Zephaniah, Habbakuk, Obadiah, Haggai, Zechariah, Malachi. And this order will be found to be generally confiftent with the periods to which the Prophets will be refpectively affigned in the following pages, except in the inflance of Joel, who probably flourifhed rather earlier than he is placed by thefe chronologers. The precife perind of this prophet, however, cannot be afcertained ; and fome difputes might be maintained concerning the priority of others alfo, when they were nearly contemporaries, as Amos and Hofea; and when the firt prophecies of a later prophet were delivered at the fame time with, or previous to, thofe of a prophct who was called earlier to the facred office. The following fcheme, however, in which alfo the greater pro. phets will be introduced, may enable the reader more accurately to comprehend the actual and relative periods: in which they feverally prophefied.

The Rrozhets in their fuppofed Ordér of Time, arranged according to Blair's Tables * with but little Variation.

|  | Before Chritt. | Kings of Judah. | Kings of Ifrael. |
| :---: | :---: | :---: | :---: |
| Jonah ${ }_{\text {, }}$ | Between 856 and 784. |  | Jehu, and Jehoahaz, accord= ing to Lloyd; but Joafh and Jeroboam the Second according to Blair. |
| Amos, | Between 810 and 785 . | Uzziah, ch. i. 1. | Jeroboam the Second, chap. i. I. |
| Hofea, | $\begin{gathered} \text { Between } 810 \\ \text { and } 725 . \\ \hline \end{gathered}$ | Uzziah, Jothann, Ahaz, the thiird year of Hezekiah. | Jeroboam the Second, chap. i. I. |

|  | Before Chrit. | Kings of Judah. | Kings of lfrael. |
| :---: | :---: | :---: | :---: |
| Ifaiah, | Between 810 and 698. | Uzziah, Jotham, Ahaz, and Hezekiah, chap. i. I. and perhaps Manaffeh. |  |
| Joel, | Between 810 and 660 , or later. | Uzziah, or poffibly Manaffeh. |  |
| Micah, | $\begin{aligned} & \text { Between } 758 \\ & \text { and } 690 . \end{aligned}$ | Jotham, Ahaz, and Hezekiah, chap. i. I. | Pekah and Hofea. |
| Nahum, | Between 720 and 698. | Probably towards the clofe of Hezekiah's reign. |  |
| Zephaniah, | Between 640 and 609 . | In the reign of Jofiah, chap. i. I. |  |
| Jeremiah, | Between 628 and 586. | In the thirteenth year of Jofiah. |  |
| Habakkuk, | $\begin{gathered} \text { Between 612 } \\ \text { and } 59^{8} \text {. } \end{gathered}$ | Probably in the reign of Jehoiakim. |  |
| Daniel, | $\begin{aligned} & \text { Between } 606 \\ & \text { and } 534 . \end{aligned}$ | During all the Captivity. |  |
| Obadiah, | Between 588 and 583. | Between the taking of Jerufalem by Nebuchadnezzar and the deltruction of the Edomites by him. |  |
| Ezekiel, | Between 595 and 536 . | During part of the Captivity. |  |
| Haggai, | $\begin{aligned} & \text { About } 520 \\ & \text { to } 518 \text {. } \end{aligned}$ | After the return from Babylon. |  |
| Zechariah, | From 520 to 518 , or longer. |  |  |
| Malachi, | Between $43^{6}$ and 397.. |  |  |

he may be properly faid to afford the moft perfect mo. del of the prophetic poetry. He is at once elegant and fublime, forcible and ornamented; he unites energy with copioufnefs, and dignity with variety. In his fen- Lorwtb $^{\prime}{ }^{\circ}{ }^{\circ}$ timents there is uncommon elevation and majefty; in $I J a i u \delta_{0}{ }^{5}$. his imagery the utmoft propriety, elegance, dignity, and diverfity; in his language uncommon beauty and energy ; and, notwithftanding the obfcurity of his fubjects, a furprifing degree of clearnefs and fimplicity. Tö thefe we may add, there is fuch fweetnefs in the poetical compofition of his fentences, whether it proceed from art or genius, that if the Hebrew poetry at prefent is poffeffed of any remains of its native grace and harmony, we fhall chiefly find them in the writings of Ifaiah: fo that the faying of Ezekiel may moft juftly be applied to this prophet:

Thou art the confirmed exemplar of meafures,
Full of wifdom, and perfect in beauty .*。

Ifaiah

## $S$ C R

Ifaiah greatly excels too in all the graces of method, order, connection, and arrangement : though in afferting this we muft not forget the nature of the prophetic impulfe, which bears away the mind with irrefifible violence, and frequently in rapid tranfitions from near to remote objects, from human to divine ; we muft alfo be careful in remarking the limits of particular predictions, fince, as they are now extant, they are often improperly connected, without any marks of difcrinination ; which injudicious arrangement, on fome occafions, creates almoft infuperable difficulties. It is, in fact, a body or collection of different prophecies, nearly allied to each other as to the fubject, which, for that reafon, having a fert of connection, are not to be feparated but with the utmof difficulty. 'The general fubject is the reftoration of the church. Its deliverance from captivity; the deftruction of idolatry; the vindication of the divine power and truth; the confolation of the Ifraelites, the divine invitation which is extended to them, their incredulity, impiety, and rejection ; the calling in of the Gentiles; the reftoration of the chofen people; the glory and felicity of the church in its perfect ftate; and the ultimate deftruction of the wicked-are all fet forth with a fufficient refpect to order and method. If we read thefe paffages with attention, and duly regard the nature and genius of the myltical allegory, at the fame time remembering that all thefe points have been frequently touched upon in other prophecies promulged at different times, we thall neither find any irregularity in the arrangement of the whole, nor any want of order and connection as to matter or fentiment in the different parts. Dr Lowth efteems the whole book of Ifaiah to be poetical, a few paffages excepted, which, if brought together, would not at muit exceed 54 the bulk of five or fix chapters.
Unparallel- The 14th chapter of Tfaiah is one of the moft fued fubli- blime odes in the Scripture, and contains one of the xith of the pobleft perfonifications to be found in the records of ter. poetry.

The prophet, after predicting the liberation of the Jews from their levere captivity in Babylon, and their reftoration to their own country, introduces them as reciting a kind of triumplal fong upon the fall of the Babylonifh monarch, replete with imagery, and with the moft elegant and animated perfonifications. A fudden exclanation, expreffive of their joy and admiration on the unexpected revolution in their affairs, and the deftruction of their tyrants, forms the exordium of the poem. The earth itfelf tiiumphs with the inhabitants thereof; the fir-trees and the cedars of Lebanon (under which images the parabolic ftyle frequently delineates the kings and princes of the Gentiles) exult with joy, and perfecute with contemptuous reproaches the humbled power of a ferocious enemy :
The whole earth is at reft, is quiet ; they burft forth into a joyful fhout:
Even the fir-trees rejoice over thee, the cedars of Leebanon:
Since thou art fallen, no feller hath come up againft us,
This is followed by a bold and animated perfonification of Hades, or the infernal regions :
Hades from beneatli is moved becaufe of thee, to meet thee at thy coming:

He roufeth for thee the mighty dead, all the great Scrirti chiefs of the earth ;
He maketly to rife.up from their thrones all the kings of the nations.
Hades excites lis inhabitants, the ghofts of princes, and the departed fpirits of kings : they rife immediately from their leats, and proceed to meet the monarch of Babylon; they infult and deride him, and comfort themfelves with the view of his calamity :
Art thou, even thon too, become weak as we? art thou made like unto us?
Is then thy pride brought down to the grave; the found of thy fprightly inftruments?
Is the vermin become thy couch, and the earthworm thy covering?
Again, the Jewifh people are the fpeakers, in an excla. mation after the manner of a funeral lamentation, which indeed the whole form of this compofition exactly imitates. The remarkable fall of this powerful monarch is thus beautifully illuftrated:
How art thon fallen from heaven, $O$ Lucifer, fon of the morning!
Art cut down from earth, thou that didft fubdue the nations!
Yet thou didft fay in thy heart, I will afcend the heavens;
Above the ftars of God I will exalt my throne;
And I will fit upon the mount of the divine prefence, on the fides of the north :
I will afcend above the heights of the clouds; I will be like the moft High.
But thou fhalt be brought down to the grave, to the fides of the pit.
He himfelf is at length brought upon the ftage, boafting in the mof pompous terms of his own power ; which furnifhes the poet with an excellent opportunity of difplaying the unparalleled mifery of his downfal. Some perfons are introduced, who find the dead carcafe of the king of Babylon caft out and expofed ; they at.tentively contemplate it, and at laft fcarcely know it to be his:
Is this the man that made the earth to tremble, that fhook the kingdoms?
That made the world like a defert, that deftroyed the citics?
That never difmiffed his captives to their own home?
All the kings of the nations, all of them,
Lie down in glory, each in his own Fepulchre :
But thou art caft out of the grave, as the tree abomis nated;
Clothed with the flain, with the pierced by the fword,
With them that go down to the fones of the pit ; as a trodden carcafe.
Thou fhalt not be joined unto them in burial ;
Becaufe thou halt deftroyed thy country, thou haft flain thy people:
The feed of evil doers thall mever be renowned.
They reproach him with being denied the common rites of fepulture, on account of the cruelty and atrocity of his conduct; they execrate his name, his offspring, and their pofterity. A folemn addrefs, as of the Deity himi2

## S C R $\quad 127$ S C R

pture. felf, clofes the fcene, and he denounces againft the king of Babylon, his pofterity, and even againft the city which was the feat of their cruelty, perpetual deftruction, and confirms the immutability of his own counfels by the folemnity of an oath.

How forcible is this imagery, how diverfified, how fublume! how elevated the diction, the figures, the fen-timents!-'The Jewifh nation, the cedars of Lebanon, the ghofts of departed kings, the Babylonifh monarch, the travellers who find his corpfe; and laft of all Jehovah himfelf, are the characters which fupport this beautiful lyric drama. One continued action is kept up, or rather a feries of interefting actions are connected together in an incomparable whole. This, indeed, is the principal and diftinguifhed excellence of the fublimer ode, and is difplayed in its utmoft perfection in this poem of Ifaiah, which may be confidered as one of the moft ancient, and certainly the moft finifhed, fpecimen of that fpecies of compofition which has been tranfmitted to us. The perfonifications here are frequent, yet not confufed; bold, yet not improbable : a free, eleyated, and truly divine fpirit, pervades the whole; nor is there any thing wanting in this ode to defeat its claim to the character of perfect beauty and fublimity. "If (fays 1)r Lowth) I may be indulged in the free declaration of my own fentiments on this occafion, I do not know a fingle inftance in the whole compafs of Greek and Roman poetry, which, in every excellence of compofition, can be faid to equal, or even approach it."

Jeremiah was called to the prophetic office in the 13th year of the reirn of Jofiah the fon of Amon, A. M. 3376 , A. C. 628 , and continued to prophecy upwards of 40 years, during the reigns of the degenerate princes of Judah, to whom he boldly threatened thofe marks of the divine vengeance which their rebellious conduct drew on themfelves and their country. After the deftruction of Jerufalem by the Chaldeans, he was fuffered by Nebuchadnezzar to remain in the defoIate land of Judea to lament the calamities of his infatuated countrymen. He was afterwards, as he himfelf informs us, carried with his difciple Baruch into Egypt, by Johanan the fon of Kareah.

It appears from feveral paffages that Jeremiah committed his prophecies to writing. In the 36 th chapter we are informed, that the prophet was commanded to write upon a roll all the prophecies which he had uttered; and when the roll was deftroyed by Jehoiakim the king, Jeremiah dictated the fame prophecies to Baruch, who wrote them together with many additional circumftances. The works of Jeremiah extend to the laft verfe of the 51ft chapter ; in which we have the fe words, "Thus far are the wrords of Jeremiah." The 52 d chapter was therefore added by fome other writer. It is, however, a very important fupplement, as it illuftrates the accomplifhment of Jeremiah's prophecies refpecting the fate of Zedekiah.

The prophecies of Jeremiah are not arranged in the chronological order in which they were delivered.

What has occafioned this tranfpofition cannot now be Scripture. determined. It is generally maintained, that if we confult their dates, they ought to be thus placed:

In the reign of Jofiah the firft 12 chapters.
In the reign of Jehoiakim, chapters xiii. xx. xxi. v. 11, 14. ; xxii. xxiii, xxv. xxvi. xxxv. xxxvi. xlv.--xlix..I $-33$.

In the reign of Zedekiah, chap. xxi. I-I®. xxiv, xxvii. xxxiv sxxvii. xxxix. xlix. 34-39. 1. and li.

Under the government of Gedaliah, chapters xl. xliv. The prophecies which related to the Gentiles were contained in the 46 th and five following chapters, being placed at the end, as in fome meafure unconnected with the reft. But in fome copies of the Septuagint thefe fix chapters follow immediately after the $13^{\text {th }}$ verfe of the 25 th chapter.

Jeremiah, though deficient neither in elegance nor fublimity, muit give place in both to Ifaiah. Jerome feems to object againtt him a fort of rufticity of language, no veftige of which Dr Lowth was able to difcover. His fentiments, it is true, are not always the moft elevated, nor are his periods always neat and compact; but thefe are faults common to thofe writers. whofe principal aim is to excite the gentler affections, and to call forth the tear of fympathy or forrow. This obfervation is very ftrongly exemplified in the Lamentations, where thefe are the prevailing paffions ; it is, however, frequently inftanced in the prophecies of this author, and moft of all in the beginning of the book ( L ), which is chiefly poetical. The middle of it is almoft entirely hiftorical. The latter part, again, confifting of the fix laft chapters, is altogether poetical ( M ) ; it contains feveral different predictions, which are diftinctly marked; and in thefe the prophet approaches very near the fublinity of Ifaiah. On the whole, however, not above half the book of Jeremiah is poetical:

The book of Lamentations, as we are informed in sy the title, was compofed by Jeremiah. We fhall prefent of Lamenoto our reader an account of this elegiac porm from the ${ }^{\text {tations, }}$ elegant pen of Dr Lowth.

The Lamentations of Jeremiah (fer the title is properly and fignificantly plural) confift of a number of plaintive effufions, compofed upon the plan of the funeral dirges, all upon the fame fubject; and uttered without connection as they rofe in the mind, in a long courfe of feparate ftanzas. Thefe have afterwards been put. together, and formed into a collection or correfpondent whole. If any reader, however, fhould expect to find in them an artificial and methodical arrangement of the general fubject, a regular difpefition of the parts, a perfect connection and orderly fucceffion in the matter, and with all this an uninterrupted feries of elegance and correctnefs, he will. really expect what was forcign to the prophet's defign. In the character of a mourner, he celebrates in plaintive Atrains the obfequies of his ruined country: whatever prefented itfelf to his mind in the midtt of defolation and mifery, whatever ftruck him as particularly wretched and calamitous, whatever the inftant fentiment of forrow dictated, he pours forth:
(L) See the whole of chap. ix. chap. xiv. 17, 8cc. xx. 14-18.
(m): Chap. xlvi.-li, to ver. 59. Chap. lii. properly belongs to the Lamentations, to which it ferves as an exordium.

## $\mathrm{S} C \mathrm{R}$ <br> $\left[\begin{array}{ll}128\end{array}\right]$ <br> $S$ G R

sierip'ure, in a kind of fpontancous effufion. He frequently paufes, and, as it were, ruminates upon the fame object; frequently varies and illuftrates the fame thought with different imagery, and a different choice of language; fo that the whole bears rather the appearance of an accumulation of correfponding fentiments, than an accurate and connceted feries of different ideas, arranged in the form of a regular treatife. There is, however, no wild incoherency in the poem; the tranflations are ealy

The work is divided into five parts; in the firt, fe cond, and fourth chapters, the prophet addreffes the people in his own perfon, or introduces Jerufalem as fpeaking. In the third chapter a chorus of the Jews is reprefented. In the fifth the whole captive Jews pour forth their united complaints to Almighty God. Each of thefe five parts is diftributed into 22 ftanzas, according to the number of the letters of the alphabet. In the three firft clapters thefe ftanzas confift of three lines. In the four firft chapters the initial letter of each period follows the order of the alphabet; and in the third clapter each verfe of the fame ftanza begins with the fame letter. In the fourth chapter all the flanzas are evidently diftichs, as alfo in the fifth, which is not acroftic. The intention of the acroftic was to affitt the memory to retain fentences not much connected. It deferves to be remarked, that the verfes of the firft four chapters are longer by almoft one half than Hebrew verfes generally are: The leng th of them feems to be on an averare about 12 fyllables. The prophet appears to have chofen this meafure as being folemn and melancholy.

Lowtb. beauty of it.

## * Fofepbus,

Herome,
VIfrius, Bic.
"That the fubject of the Lamentations is the deftruction of the holy city and temple, the overthrow of the ftate, the extermination of the people; and that thefe events are defcribed as actually accomplifhed, and not in the ftyle of prediction merely, mult be evident to every reader ; though fome authors of confiderable reputation* have imagined this poem to have been compofed on the death of king Jofiah. The prophet, indeed, has fo copiounly, fo tenderly, and poetically, bewailed the misfortunes of his country, that le feems completely to have fulfilled the office and duty of a mourner. In my opinion, there is not extant any poem which difplays fuch a happy and fplendid felection of imagery in fo concentrated a ftate. What can be more elegant and poetical, than the defcription of that once flourifhing city, lately chief among the nations, fitting in the character of a female folitary, aflicted, in a ftate of widowhood, deferted by her friends, betrayed by her deareft connections, imploring relief, and feeking confolation in vain? What a beautiful perfonification is that of "the ways of Sion mourning becaufe none are come to her folemn feafts?" How tender and pathetic are the following complaints ?

Chap: i. E2, 36 。

But to detail its beauties would be to tranferibe the Serff entire poem.'"

Ezekiel was carried to Babylon as a captive, and received the firt revelations from heaven, in the fifth year of Jchoiakim's captivity, A. C. 595. The book of Ezckiel is fometimes diftributed under different heads. In the three firft chapters the commiffion of the prophet is defcribed. From the fourth to the thirty-fecond chapter inclufive, the calamities that befel the enemies of the Jews are predicted, viz. the Ammonites, the Moabites, and Philittines. The ruin of Tyre and of Sidon, and the fall of Egypt, are particularly foretold; prophecies which have been futhlled in the moft literal and af: tonifhing manner, as we have been often affured by the relation of hiftorians and travellers. From the 32 d chapter to the 40 th he inveighs againft the hypocrify and murmuring fpirit of his countrymen, admonifhing them to refignation by promifes of deliverance. In the 38 th and 39 th chapters he undoubtedly predicts the final return of the Jews from their difperfion in the latter days, but in a language fo obfcure that it cannot be undertood till the event take place. The nine laft chapters of this book furnifh the defcription of a very remarkable vifion of a new temple and city, of a new religion and polity.
"Ezekiel is much inferior to Jeremiah in elegance ; in Charas fublimity he is not even excelled by Ifaiah : but his as a fablimity is of a totally different kind. He is deep, vehement, tragical ; the only fenfation he affects to excite is the terrible : his fentiments are elevated, fervid, full of fire, indignant ; his imagery is crouded, magnificent, terrific, fometimes almoft to difgult: his language is pompous, folemn, auftere, rough, and at times unpolifhed: he employs frequent repeticions, not for the fake of grace or elegance, but from the vehemence of paffion and indignation. Whatever fubject he treats of, that he feduloufly purfues, from that he rarely departs, but cleaves as it were to it ; whence the connection is in general evident and well preferved. In many refpects he is perhaps excelled by the other prophets; but in that fpecies of compofition to which he feems by nature adapted, the forcible, the impetuous, the great and folemn, not one of the facred writers is fuperior to him. His diction is fufficiently perfpicuous; all his obfcurity confifts in the nature of the fubject. Vifions (as for inftance, among others, thofe of Hofea, Amos, and Jeremiah) are neceffarily dark and confufed. The greater part of Ezekiel, towards the middle of the book efpecially, is poetical, whether we regard the matter or the diction. His periods, however, are frequently fo rude and incompact, that I am often at a lofs how to pronounce concerning his performance in this refpect.
"Ifaiah, Jeremiah, and Ezekiel, as far as relates to ftyle, may be faid to hold the fame rank among the Hebrews, as Homer, Simonides, and Æfchylus among the Greeks."

So full an account of Daniel and his writings has been already given under the article $\mathrm{Daniel}^{\text {and }}$ that little remains to be faid on that fubject. Daniel flourifhed during the fucceffive reigns of feveral Babylonifh and Median kings to the conqueft of Babylon by Cyrus. The events recorded in the 6th chapter were contemporary with Darius the Mede; but in the 7 th and 8 th chapters Daniel returns to an earlier period, to relate

1

## 6 C R

## 8 CR

pture. the vifions which he beheld in, the three firt years of Babylonifi captivity. Part of it is pure Hebrew ; a scripture Belfhazzar"s reign ; and thofe which follow in the four laft chapters were revcaled to him in the reign of Darius. The fix laft chapters are compofed of prophecies delivered at different times; all of which are in fume degree connected as parts of one great fcheme. They extend through many ages, and furnifh the moft friking defrription of the fall of fucceffive kingdoms, which were to be introductory to the eftablifment of the Meffiah's reign. They characterize in defcriptive terms the four great monarchies of the world to be fucceeded by "that kingdom which fhould not be deftroyed."

The whole book of Daniel being no more than a plain relation of facts, partly paft and partly future, mult be excluded the clafs of poetical prophecy. Much indeed of the parabolic imagery is introduced in that book; but the author introduces it as a prophet only; as vifionary and allegorical fymbols of objects and events, totally untinctured with the true poetical colouring. The Jews, indeed, would refufe to Daniel even the character of a prophet: but the arguments under which they fhelter this opinion are very futile; for thofe points which they maintain concerning the conditions on which the gift of prophecy is imparted, the different gradations, and the difcrimination between the true propliecy and mere infpiration, are all trifling and abfurd, without any foundation in the uature of things, and totally deftitute of friptural authority. They add, that Daniel was neither originally educated in the prophetic difcipline and precepts, nor afterwares lived confornably to the manner of the prophets. It is not, however, eafy to comprehend how this can diminifh his claim to a divine miffion and infpiration ; it may poffibly enable us, indeed, to affign a reafon for the difit milarity between the fyle of 1 aniel and that of the other prophets, and for its poffefing fo little of the diction and claracter of poetry, which the reft feem to lave inbibed in common from the fchools and difcipline in which they were educated.

The prophecies of Daniel appear fo plain and intelligible after their accomplifhment, that Porphyry, who wrote in the 3 d century, affirms, that they were written after the events to which they refer took, placc. A little reflection will fhow the abfurdity of this fuppofition. Some of the prophecies of Daniel clearly refer to - Autiochus Epiphanes, with whofe oppreffions the Jews were too well acquainted. Had the book of Daniel not made its appearance till after the death of Epiphanes, every Jew who read it mult have difcovered the forgery. And what motive could induce them to receive it among their facred books? It is impoffible to conceive one. Their character was quite the reverfe: their refpect for the Scriptures had degenerated into fupertition. But we are not left to determine this important point from the character of the Jews; we have accefs to more decifive evidence; we are fure that the book of Danicl contains prophecies, for fome of them have been accomplifhed fince the time of Porphyry; particularly thofe refpecting Antichrift : now, if it contains any prophecies, who will take upon him to affirm that the divine Spirit, which dietated thefe many cesturies before they were fulfilled, could not allo have delivered prophecies concerning Antiochus Epiphanes?

The language in which the book of Daniel is com. pefed proves that it was written about the time of the - VoL. XVII. Part I.
language in which none of the Jewifh books were coms pofed after the age of Epiphanes. Thefe are arguments to a deif. To a Chriftian the internal marks of the book itfelf will fhow the time in which it was writ. ten, and the teftimony of Ezekiel will prove Daniel to be at leaft his contemporary*.

The twelve minor prophets were fo called, not from $14 . \times x$ viii. 3 . any fuppofed inferiority in their writings, but on ac- 65 count of the fmall fize of their woris. Perhaps it was Twiner pro. for this reafon that the Jews joined them together, and phets: coirfidered them as one volume. Thefe 12 prophets prefent in fcattered hints a lively fketch of many particulars relative to the hiftory of Judah and of Ifrael, as Gray's $\mathrm{K}_{6 y}$ well as of other kingdoms : they prophefy with hifta- to the old rical exactnefs the fate of Babylon, of Nineveh, of Tyre, Tefamento of Sidon, and of Damafcus. The three laft prophets efpecially illuffrate many circumftances at a period when the hiftorical pages of Scripture are clofed, and when profane writers are entirely wanting. At firft the Jewifh prophets appeared only as fingle lights, and followed each other in individual fucceffion; but they became more numerous about the time of the captivity. The light of infpiration was collected into one blaze, previous to its fufpenfion; and it ferved to keep alive the expectations of the Jews during the awful interval which prevailed between the expiration of prophecy and its grand completion on the advent of Chrif.

Hofea has been fuppofed the molt ancient of the 12 Prophecie minor prophets. He flourifhed in the reign of Jero of Hofea: boam II. king of Ifrael, and during the fucceffive reigns of Uzziah, Jothan, Ahaz, and Hezekiah, kings of Judah. He was therefore nearly contemporary with I. faiah, Amos, and Jonah. The prophecies of Hofea being. fcattered through the book without date or connection, cannot with any certainty be chronologically arranged.

Hofea is the firt in order of the minor prophets, and Charact is perhaps, Jonah excepted, the moft ancient of them of their all. His fyle exhibits the appearance of very remote flyle. antiquity; it is pointed, energetic, and concife. It bears a diftinguifhed mark of poetical compofition, in that priftine brevity and condenfation which is obfervable in the fentences, and which later writers have in fome meafure neglected. This peculiarity has not efcaped the obfcrvation of Jerome : "He is altogether (fays he, fpeaking of this prophet) laconic and fententious." But this very circuinftance, which anciently was fuppofed no doubt to impart uncommon force and elegance, in the prefent ruinous flate of the Hebrew literature is productive of fo much obfcurity, that although the general fubject of this writer be fufficiently obvious, he is the moft difficult and perplexed of all the prophets. There is, however, another reafon for the obfcurity of his ftyle : Hofea prophefied during the reigns of the four kings of Judah, Uzziah, Jotham, Ahaz, and Hezekiah. 'The duration of his miniftry, therefore, in whatever manner we calculate, muft include a very confiderable fpace of time. We have now only a fmall volume of his remaining; which feems to contain his principal prophecies; and thefe are extant in a continued feries, with no marks of diftinction as to the times in which they were publimed, or the fubjects of which they treat. There is therefore no caufe to wonder if, in perufing the prophecies of Hofea, we fometimes find

## SCRR [ 30 ] S C R

Seriptrre. ourfelves in a fimilar predicament with thofe who confulted the fcattered leaves of the Sibyl.

As a fpecimen of Hofea's ftyle, we felect the following beautiful pathetic paffage:
How hall I refign thee, O Ephraim!
How fhall I deliver thee up, OIfrael!
How fhall I refign thee as Admah !
How thall I make thee as Zeboim!
My heart is changed within me;
I am warmed alio with repentance towards thee.
I will not do according to the fervour of my wrath;
I will not return to deftroy Ephraim :
For I am God, and not man ;
Holy in the mid!t of thee, though I inhabit not thy cities.
68 Concerning the date of the prophecy of Joel there Prophecies are various conjectures. The book itfelf affords nothing of Joel. by which we can difcover when the author lived, or apon what occafion it was written. Joel fpeaks of a great famine, and of mifchiefs that happened in confequence of an inundation of locufts; but nothing can be gathered from fuch general obfervations to enable us to fix the period of his prophecy. St Jerome thinks (and it is the general opinion) that Joel was contemporary with Hofea. This is poffibly true; but the foundation on which the opinion relts is very precarions, viz. That when there is no proof of the time in which a prophet lived, we are to be guided in our conjectures refpecting it by that of the preceding prophet whofe epoch is better known. As this rule is not infallible, it therefore ought not to hinder us from adopting any other opinion that comes recommended by good reafons. Father Calmet places him under the reign of Jofiah, at the fame time with Jeremiah, and thinks it probable that the famine to which Joel alludes, is the fame with that which Jeremiah predicted ch. viii. 13.
69

## Louth

## on $\mathrm{H}^{\prime}$ ebrent

 Poetry, Se e 22.The ftyle of Joel is effentially different from that of Hofea; but the general character of his diction, though of a different kind, is not lefs poetical. He is elegant, perficucus, copious, and fluent; he is alfo fublime, animated, and:energetic. In the firft and fecond chapters he difplays the full force of the prophetic poetry, and .hows how naturally it inclines to the ufe of metaphors, -allegories, and comparifons. Nor is the connection of the matter lefs clear and evident than the complexion of the ftyle: this is exemplified in the difplay of the -impending evils which gave rife to the prophecy.; the exhortation to repentance; the promifes of happinefs and fuccefs both terreftrial and eternal to thofe who become truly penitent; the reftoration of the Ifraelites; and the vengeance to be taken of their adverfarics. But while we allow this juft commendation to his perfpicuity both in language and arrangement, we muft not deny that there is fometimes great obfcurity obfervable in his fubject, and particularly in the latter part of the iprophecy.

The following prophecy of a plague of locufts is defcribed with great fublimity of expreffion:
For a nation hath gone up on my land,
Who are ftrong, and without number :
They have deftroyed my vine, and have made my fig. tree a broken branch.
They have made it quite bare, and caft it away: the \# Joel i. 6, branches thereof are made white.
z, 30, \&cc. The field is laid watte; the ground mourneth**

Amos was contemporary with Hofea. Thes both Serin began to prophecy during the reigns of Uzziah over Judah, and of Jeroboam II. over Ifrael. Amos faw his firt vifinn two years before the earthquake, which of An Zechariah informs us happened in the days of Uzziah. See Amos.

Amos was a herdfman of Tekon, a fmall town in the serritory of Judah, and a gatherer of fycamore fruit. In the fimplicity of former times, and in the hanpy climates of the Eaft, thefe were not confidered as difhonourable occupations. He was no prophet (as he informed Amaziah $\dagger$ ), neither was he a prophet's fon, $\dagger$ Ame that is, he had no regular education in the fchools of 14. the prophets.

The prophecies of Amos confit of feveral diftinct difcourfes, which chiefly refpect the kingdom of Triael; $y$ et fometimes the prophet inveighs again! Judah, and threatens the adjacent nations, the Syrians, Philitines, Tyrians, Edomites, Ammonites, and Moabites.
Jerome calls Amos "rude in Speech, but not in Their knowledge $\ddagger$;" applying to him what St Paul modeftly ! Ircau profeffes of himfelf s. "Many (fays Ir Lowth) have Amme. followed the anthority of Jerome in fpeaking of this $\$ 2$ Coi prophet, as if he were indeed quite rude, incloquent, 0 . and deftitute of all the embellifments of compolition. The matter is, however, far otherwife. Let any perfon who has candour and perfpicacity enough to judge, not from the man but from his writings, open the volume of his predictions, and he will, I think, agree with me, that our hhepherd 'is not a whit behind the very chief of the prophets $\|^{\circ}$. He will agree, that as in fublimity $\|_{2}$ Ce and magnificence he is alinof equal to the greateft, fosin fplendour of diction and elegance of expreffion he is fcarcely inferior to any. The fame celefial Spirit indeed actuated Ifaiah and Daniel in the court and Amos in the fheep-folds; conftantly felecting fach interprete:s of the divine will as were beft adapteed to the occafron, and fometimes 'from the mouth of babes and fucklinys perfecting praife:' occafionally employing the natural eloquence of fome, and occafionally making others eloquent."

Mr Locke has obferved, that the comparifons of this prophet are chiefly drawn trom lions and other animals with which he was molt accuftomed; but the fineft images and allufions are drawn from feenes of nature. There are many beautiful paffages in the writings of: $A$ imos, of which we fhall prefent one fpecimea:

Wo to them that are at eafe in Zion, And truft in the mountains of Samaria;
Who are named chief of the nations,
To whom the houfe of Ifrael came : Pafs ye unto Calneh and fee, And from thence go to Hamath: the Great ; Then go down to Gath of the Philitines; Are they better than thefe ksingdoms? Or their borders greater than their borders? Ye that put far away the evil day, And caufe the feat of violence to come near ? That lie upon beds of ivory,
And fretch yourfelves upon couches;
That eat the lambs out of the flock,
And the calves out of the midft of: the ftall;
That chant to the found of the viol,
And life David devife inftruments of music ;

## S C R

fure. That dink wine in bowls,
And anoint yourfelves with chief ointments ; But are not grieved for the aflilion of $\mathcal{F}$ Jeph If.

The writings of Obadiak, which confift of one chapter, are compofed with much beauty, and unfold a very interefting feene of prophecy. Of this prophet little can be faid, as the fpecimen of his genius is. fo fhort, and the greater part of it included in one of the prophecies of Jeremiah. Compare Ob. 1-9./ with. Jer. wlix. 14, 15,16 . See Obadiah.

Though Jonah be placed the fixth in the order of the minor prophets both in the Hebrew and Septua. gint, he is generally confidered as the moft ancient of all the prophets, not excepting. Hofea. He lived in the kingdom of Ifrael, and prophefied to the ten tribes under the reign of Joafh and Jeroboam. The book of Jonah is chiefly hiftorical, and contains nothing of poetry but the prayer of the prophet. The facred writers, and our Lord himfelf, fpeaks of Jonah as a prophet of confiderable eminence*. See Jonat.

Micah began to prophecy Loon after Ifaiah, Hofea, Joel, and Amos; and he prophefied between A. M. 3246, when Jotham began to reign, and A. M. 3305, when Hezekiah died. One of his predictions is faid $\dagger$ to have faved the life of Jeremiah, who under the reign of Jehoiakim would have been put to death for prophefying the deftruction of the temple, had it not appeared that Micah had foretold the fame thing under Hezekiah above 100 years before $\ddagger$. Micah is mentioned as a prophet in the book of Jeremiah and in the New Teftament 11 . He is imitated by fucseeding prophets ( N ), as he himfelf had borrowed expreffions from his predeceffors $(0)$. Our Saviour himfelf fpoke in the language of this p:ophet ( $p$ ).

The ftyle of Micah is for the moft part clofe, forcible, pointed, and concife; fometimes approaching the obicurity of Hofea; in many parts animated and fublime; and in general truly poetical. In his prophecies there is an elegant poem, which Dr Lowth thinks is a citation from the anfwer of Balaam to the king of the Moabites:

Wherewith fhall I come before Jehovah ? Wherewith thall I bow myfelf unto the High God? Shall I come before him with burut-offerings, With calves of a year old? Will Jehovah be pleafed with thoufands of rams? With ten thoufands of rivers of oil? Shall I give my firft-born for my trangreffion? The fruit of my body for the fin of my foul? He hath thowed thee, O man, what is good: And what doth Jehovalk require of thee, But to do jultice, and to love mercy, Aud to be humble in walking with thy God?

Jofephus afferts, that Nahum lived in the time of Jotham king of Judah; in which cafe he may be fuppofed so have prophefied againin Nineveh when Tiglath-Pilefes

## I $3 T \mathrm{~S}$ S C R

king of Affyria carried captive the natives of Gatilee and Scripture. other parts about A. M. 3264 . It is, however, probable, that his prophecies were deliverted in the reign of Hezekiah ; for he appears to fpeak of the taking of No-Ammon a city of Egypt, and of the infolent meffengers of Sennacherib, as of things paft $s$ and he likewife defcribes the people of Judah as ftill in their own country, and defirous of celebrating their fettivals.
While Jerufalem was threatened by Sennacherit, Nahum promifed deliverance to Hezekiah, and predicted that Judah would foon celebrate her folemn feafts fecure from invafion, as her enemy would no more difturb her peace. In the fecond and third clapters Nahum foretels the downfal of the Affyrian empire and the final deftruction of Nineveh, which was probably accomplifted by the Medes and Babylonians, whofe combined forces overpowered the Affyrians by furprife "while they were folden together as thorns, and while they were drunken as drunkards," when the gates of the river were opened, the palace demolifhed, and an "overrunning fiood" affifted the conquerors in their devaftation; who took an endlefs ftore of fpoil of gold and filver, making an utter end of the place of Nineveh, of that vaft and populous city, whofe walls were 100 feet high, and fo broad that three chariots could pafs abreaft. Yet fo completely was this celebrated city deftroyed, that even in the $2 d$ century the fpot on which it flood could not be afcertained, every veftige of it being gone.

It is impolfible to read of the exact accomplifhment of the prophetic denunciations againft the enemies of the Jews, without reflecting on the aftonifhing proofs which that nation enjoyed of the divine origin of their religion. From the Babylonifl captivity to the time of Chrift they had numberlefs inftances of the fulfilment of their prophecies.

The character of Nahum as a writer is thus defcribed by Dr Lowth: "None of the minor prophets feem to equal Nahum in boldnefs, ardour, and fublimity. His prophecy, too, forms a regular and perfect poem; the exordium is not merely magnificent, it is truly majeftic; the preparation for the deftruction of Nineveh, and the defcription of its downfal and defolation, are expreffed in the moft vivid colours, and are bold and luminous in the higheft degree."

As the prophet Habakkuk makes no mention of the of Hakak. Aftyrians, and fpeaks of the Chaldean invalions as nearkuk. at hand, he probably lived after the deftruction of the Affyrian empire in the fall of Nineveh A. M. 3392, and not long before the devaftation of Judea by Nebuchadnezzar. Habakkuk was then nearly contemporaxy with Jeremiak, and predicted the fame events. A general account of Habakkuk's prophecies have already been given under the word Habakxux, which may be confulted. We would, however, farther oblerve, that the prayer in the third chapter is a moft beautiful and perfect ode, poffeffing all the fire of poetry and the prod found reverence of religion.
(N) Compare Zephan. iii. 19. with Micah iv. 7. and Ezek. xxii. 27. with Micah iii. 11s

## $S$ C R

Scrípture. God came from 'T'eman,
And the Holy One from mount Paran:
His glory covered the heavens, And the earth was full of his praife. His brightnefs was as the light ; Beams of glory iffued from his fide;
And there was the hiding of his power.
Before him went the pettilence;
And burning coals went forth at his feet.
He flood and meafured the earth;
Hé beheld and drove afunder the nations;
The everlafting mountains were fcattered; The perpetual hills did bow.
The prophet illuftrates this fubject throughout with equal fublimity; felecting from fuch an affemblage of miraculous incidents the moft noble and important, difplaying them in the moft fplendid colours, and embellifhing them with the fublimeft imagery, figures, and diction ; the dignity of which is fo heightened and recommended by the fuperior elegance of the conclufion, that were it not for a few fhades which the hand of time has apparently caft over it in two or three paffages, no compofition of the kind would appear more elegant or more perfect than this poem.
Habakkuk is imitated by fucceeding prophets, and
\# Heb. x. 37, 38. Rom. i. 17. Gal. iii. 2. Acts xiii. 41.compar with Hab. i. 5. his words are borrowed by the evangelical writers ||.
Zephaniah, whe was contemporary with Jeremiah, prophefied in the reign of Jofiah king of Judah; and from the idolatry which he defcribes as prevailing at that time, it is probable that his prophecies were delivered before the laft reformation made by that pious prince A. M. $33^{81}$.
The account which Zephaniah and Jeremiah give of the idolatries of their age is fo fimilar, that St Ifiodore afferts, that Zephaniah abridged the defcriptions of Jeremiah. But it is more probable that the prophecies of Zephaniah were written fome years before thofe of his contemporary; for Jeremiah feems to reprefent the abufes as partly removed which Zephaniah defcribes as flagrant and exceffive ( 2 ).
In the firft chapter Zephaniah denounces the wrath of Ged againft the idolaters who worfhipped Baal and the hoft of heaven, and againft the violent and deceitful. In the fecond chapter the prophet threatens deftruction to the Philititines, the Moabites, the Ammonites, and Ethiopians; and defcribes the fate of Nineveh in emphatic terms: "Flocks fhall lie down in the midft of her; all the beafts of the nations, both the cormo. rant and bittern, fhall lodge in her; their voice fhall Ging in the windows ; defolation thall be in the threfh. olds." In the third chapter the prophet inveighs againft the pollutions and oppreffions of the Jews ; and concludes with the promife, "That a remnant would be faved, and that multiplied bleffings would be bettowed upon the penitent." The Ayle of Zephaniah is poetical, but is not diftinguified by any peculiar elegance or beauty, though generally animated and impreffive.

Haggai, the tenth of the minor prophets, was the frft who flourifhed among the Jews after the Babylonifh captivity. He began to prophefy in the fecond

## 132 ] S C R

year of Darius Hyitafpes, about 520 years before Script Chrit.
The intention of the prophefy of Haggai was to encourage the difpirited Jews to proceed with the building of the temple. The only prediction mentioned refers to the Meffiah, whom the prophet affures his coun. trymen would fill the new temple with glory. So well was this prediction underftood by the Jews, that they looked with earneft expectation for the Meffiah's appearing in this temple till it was deftroyed by the $\mathrm{R}_{\mathrm{o}}$ mans. But as the victorious Meffiah, whom they expected, did not then appear, they have fince applied the prophecy to a third temple, which they hope to fee reared in fome future period.
The flyle of Haggai, in the opinion of Dr Lowth, is profaic. Dr Newcome thinks that a great part of it is poetical.

Zechariah was undoubtedly a contemporary of Hag. of ${ }^{180} \mathrm{Zec}_{\text {ec }}$ gai, and began to prophecy two months after him, in riah. the eighth month of the fecond year of Darius Hyftafpes, A. M. 3484, being commiffioned as well as Haggai to exhort the Jews to proceed in the building of the temple after the interruption which the work had fuffered. We are informed by Ezra (vi. 14.), that the Jews profpered through the prophefying of Zechariah and Haggai.
Zechariah begins with general exhortations to his countrymen, exciting them to repent from the evild ways of their fathers, whom the prophets had admonifled in vain. He deferibes angels of the Lord interceding for mercy on Jerufalem and the defolate cities of Judah, which had experienced the indignation of the Moft High for 70 years while the neighbouring nations were at peace. He declares, that the houfe of the Lord fhould be built in Jerufalem, and that Zion fhould be comforted. The prophet then reprefents the increafe and profperity of the Jews under feveral typical figures. He defcribes the ettablifhment of the Jewifh government and the coming of the Mefliah. He admonifhes thofe who obferved folemn fafts without due contrition, to execute juftice, mercy, and compaffion, every man to his brother; not to opprefs the widow nor the fatherlefs, the Atranger nor the poor. He promifes, that God would again fiow favour to Jerufalem; that their mournful fafts fhould be turned into cheerful feafts; and that the church of the Lord fhould be enlarged by the acceffion of many nations.

The 12 th verfe of the 11 th chapter of this book, which exhibits a prophetic defcription of fome circumftances afterwards fulfiled in our Saviour, appears to be cited by St Matthew (xxvii, ,, 10 .) as fpoken by Jeremiah ; and as the 1 th, 12 th, and 13 th chapters. have been thought to contain fome particulars more. fnitable to the age of Jeremiah than to that of Zeclaariah, fome learned. writers are of opinion that they were. written by the former prophet, and have been from fimilarity of fubject joined by mittake to thofe of Ze chariah. But others are of opinion, that St Matthew might allude to fome traditional prophecy of Jeremiah, or, what is more probable, that the name of Jeremiah was fublituted by miftake in place of Zechariah.

## S C R

## 133 ]

S C R
pture. The 12 th, 13 th, and $14^{\text {th }}$ chapters contain prophecies which refer entirely to the Chriftian difpenfation; the circumflances attending which he defribes with a clearnefs which indicated their near approach.
The ftyle of Zechariah is fo fimilar to that of Jeremiaht, that the Jews were accuftomed to remark that the fpirit of Jeremiah had paffed into him. He is generally profaic till towards the conclufion of his work; when he becomes more elevated and poetical. The whole is beautifully connected by eafy tranfitions, and prefent and future fcenes are blended with the greateft delicacy.
Malachi was the laft prophet that flourifhed under the Jewifh difpenfation; but neither the time in which he lived, nor any particulars of his hiftory, can now be afcertained. It is even uncertain whether the word Malachi be a proper name, or denote, as the Septuagint have rendered it, his angel ( R ), that is, "the angel of the Lord." Origen fuppofed, that Malachi was an angel incarnate, and not a man. The ancient Hebrews, the Chaldee paraphraft, and St Jerome, are of opinion he was the fame perfon with Ezra: but if this was the cafe, they ought to have affigned fome reafon for giving two different names to the fame perfon.
As it appears from the concurring teftimony of all the ancient Jewifh and Chriitian writers, that the light of prophecy expired in Malachi, we may fuppofe that the termination of his minittry coincided with the accomplifhment of the frif feven weeks of Daniel's prophecy, whiclı was the period appointed for fealing the vifion and prophecy. This, according to Prideaux's account, took place in A. M. 3595 ; but, according to the calculations of Bifhop Lloyd, to A. M. 3607 , twelve years later. Whatever reckoning we prefer, it muft be allowed that Malachi completed the canon of the Old Teftament about 400 years before the birth of Chrit.

It appears certain that Malachi prophefied under Nehemiah, and after Haggai and Zechariah, at a time when great diforders reigned among the priefts and people of Judah, which are reproved by Malachi. He inveighs againtt the priefts (i. $6, \& c$. ii. I, 2, \&c.) ; he reproaches the people with having taken ftrange wives (ii. 11.) ; he reproves them for their irhumanity towards their brethren (ii. 10. iii. 5.) ; their too frequently divorcing their wives; their neglect of paying their tithes and firt-fruits (Mal. iii. 13.) He feems to allude to the covenant that Nehemiah renewed with the Lord (iii. 10. and ii. 4, $5,8 \mathrm{c}$.), affifted by the priefts and the chief of the nation. He fpeaks of the facrifice of the new law, and of the abolition of thofe of the old, in thefe words (i. 10, $11,12,13$.): "I have no pleafure in you, faith the Lord of hofs, neither will I accept an offering at your hand. For from the rifing of the fun, even unte the going down of the fame, my name fhall be great among the Gentiles, and in every place incenfe fhall be offered unto my name, and a pure offering : for my name fhall be great among the Heathen, faith the Lord of hofts." He declares that the Lord was weary with the impiety of Ifrael; and affures them, that the Lord whom they fought
fould fuddenly come to his temple preceded by the Scripture. meffenger of the covenant, who was to prepare his way; that the Lord when he appeared fhould purify the fons of Levi from their unrigititeoufnefs, and refine them as metal from the drofs; and that then the offering of Judah, the firitual facrifice of the heart, fhould be pleafant to the Lord. The prophet, like one who was delivering a laft meffage, denounces deffruction againtt the impenitent in emplatic and alarming words. He encourages thofe who feared the name of the Lord with the animating pronife, that the "Sun of righteoufnefs, fhould arife with falsation in his rays," and render them. triumphant over the wicked. And now that prophecy was to ceafe, and miracles were no more to be performed till the coming of the Meffialı; now that the Jews; were to be left to the guidance of their own reafon, and the written inffructions of their prophets-Malachi exhorts them to remember the law of Mo.es, which the Lord had revealed from Horeb for the fake of all Ifrael. At length he feals up the prophecies of the Old Teftament, by predicting the commencement of the new difpenfation, which fhould be ufhered in by John the Baptift with the power and firit of Elijah; who fhould turn the hearts of fathers and children to repentance; but if his admonitions fhould be rejected, that. the Lord would fmite the land with a curfe.

The collection of writings compofed after the afcen-New Teso fion of Chrit, and acknowledged by his followers to be ${ }^{\text {TAMEMT }}$ divine, is known in general by the mame of xave drabnn. This title, though neither given by divine command, nor applied to thefe writings by the apofles, was adopted in a very early age, though the precile time of its introduction is uncertain, it being juftified by feveral paffages in Scripture $\dagger$, and warranted by the authori- + Matth. ty of St Paul in particular, who calls the facred books xxvi. 28.0 before the time of Chrift axגaca.diabnxn $\ddagger$. Even long Heb. viii cal. before that period, either the whole of the Old 'Tefta-8. ix. is in ment, or the five books of Mofes, were entitled Bribior 20. .
Siafnxns, or book of the covenant $\delta$. we may tranflate this title either the Nerw Covenant or the Nozw Teflament. The former tranfation mult be adopt* ed, if refpect be had to the texts of Scripture, from which the name is borrowed, fince thofe paffages evidently convey the idea of a covenant ; and, befides, a being incapable of death can neither have made an old nor make a new teffament. It is likewife probable, that the earliett Greek diIciples, who made ufe of this. expreffion, had no other notion in view than that of covenant. We, on the contrary, are accuflomed to give this facred collection the nane of Teflament; and fince it would be not only improper, but even abfurd. to fpeak of the Teftament of God, we commonly underfland the 'Teflament of Chritt; an explanation which removes but half the difficulty, fince the new only, and not the old, had Chrift for its teflator.

In fating the evidence for the truth of Chriftianity, ${ }^{8}{ }^{84}$ there is nothing more worthy of confideration than the of the arguauthenticity of the books of the New Teflament. This ment from is the foundation on which all other arguments reft ; ticity of the and books.

## 

and if it is folid, the Chriftian religion is fully eftablim. ed. The proofs for the authenticity of the New Tc. flament have this peculiar advantage, that thiey are plain and fimple, and involve no metaphyfical fubtilties:Every man who can diftinguifi truth from falfehood muft: fee their force; and if there are any fo blinded by prejudice, or corrupted by licentioufnefs, as to attempt by fophiftry to elude them, their fophiftry will be eafily detected by every man of common underftanding, who has read the hiftorical evidence with candour and attention! Inftead, therefore, of declaiming againft the infidel, we folicit his attention to this fubject, convinced, that where truth refides, it will thine with fo conffant and clear a light, that the combined ingenuity of all the deift fince the beginning of the world will never be able to extinguifh or to obfcure it. If the books of the New Teftament are really genuine, oppofition will incite the Chritian to bring forward the evidence; and thus by the united efforts of the deift and the Chrifian, the arguments will be ftated with all the clearnefs and accuracy of which they are fufceptible in fo remarkable a degree.

It is furprifing that the adverfaries of Chriftianify have not always made their firft attacks in this quarter ; for if they admit that the writings of the New Testament are as ancient as we affirm, and compofed by the perfons to whom they are afcribed, they mult allow, if they reafon fairly, that the Chritian religion is true.

The apofles allude frequently in their epiftles to the gift of miracles, which they lad communicated to the Chriftian converts by the impofition of hands, in confirmation of the doetrine delivered in their fpeeches and writings, and fometimes to miracles which they themfelves had performed. Now if thefe epifles are really

Miebaelis's Entrudution 80 the New Crydorent. genuine, it is hardly poffible to deny thofe miracles to be.true. The cafe is here entirely different from that of an hiftorian, who relates extraordinary events in the courfe of his narrative, fince either credslity or an actual intention to deceive may induce kim to defribe as true a feries of fallehoods refpecting a foreign land or difant period. Even to the Evangelifis might an adverfary of the Chriftian religion make this objection: Sut to write to perfons with whom we fland in the rieareft connection, "I have not only performed mira. cles in your prefence, but have likewife communicated to you the fame extraordinary endowments," to write in this manner, if nothing of the kiid had ever hap. pened, would require fuch an incredible degree of ef. frontery, that he who poffefled it would not only expofe himfelf to the utmoft ridicule, but by giving his adterfaries the faireft opportunity to deted his impoffure, would ruin the caufe which he attempted to fupport.

St Paul's Firf Epiitle to the Theffalonians is addreffed to a community to which he had preached the gofpel only three Sabbath days, when he was forced to quit it by the perfécution of the populace. In this épifle he appeals to the miracles which he had performed; and to the gifts of the Fooly Spirit wliich he had commünfeated. Now, is it pöffible, wittiout forfeiting all pretenfions to common fenfe, that, in writing to a community which he had lately eftablifhed, he could. fpeak of miracles performed, and gifts of the Holy

Ghof communicated; if no member of the fociety had feen the one, or received the other?
T'o fuppofe that an impoftor could write to thie converts or adverfaites of the new religion fuch epifles ad thefe, with a degree of triumph over his opponents, and yet maintain his authority, implies ignoranice and ftupidity hardly to be believed. Credulous as the Chris Rians have been in later ages, and even fos early as the thind century, no leff fevere were they in their inquiries, and guarded againft deception, at the introduction of Chirifianity. This charafter is given them even byi Lucian, a writer of the fecond century, who vented his fatire not only againft ćertain Chriftians *, who "Dem had fupplied Peregrinus witl- the means of fubfitit. Perestria ence, but alro againt heathen oracles and pretended Ed, Re 12,1 wonders. He relates of his impoftor (Pfeudomantis); lom. i that he attempted nothing fuperiatural in' the prefence 334-3 of the Chritians and Epicureans. This Pfeudomantis 341 exclaims before the whole affembly, "A way with the" Chrittians, away with the Epicureans, and let thofe only remain who believe in the Deity!" (orstovres- Top ©t¢) upon which the populace took up fones to drive away the furpicious; while the other philofophers, Py. thagoreans, Platoniffs, and Stoics, as credulous friend's and protectors of the caufe, were permitted to remain $\S$.

It is readily acknowledged, that the argurnents $f$ cu $P$ feu drawn from the authenticity of the New. Teftament mantic only eftablifh' the truth of the miracles perfornied by ${ }^{38}$. $\Gamma^{3}$ the apoflles, and are not applicable to thie miracles of our Saviour ; yct, if we admit the three firt gofpels to be genuine, the truth of the Chriftian religion will be proved from the prophecies of Jefus: For if thefe goSpels were compofed by Matthiew, Mark, and Luke, at the time in which all the primitive Chriltians afirm, that is, previous to the defriction of Jerufalem, they mult be infpired ; for they contain a circumftantial prophecy of the deffruction of Jerufalem; and determine the period at which it was accomplifhed. Now it was impoffible that human fagacity could forefee that event; for when it was predicted nothing was more impro bable. 'The Jews were refolved to avoid an open rebellion, well knowing the greatnefs of their danger, and fabmitted to the oppreffions of their governors in the hope of obtaining redrefs from the court of Rome. 'The circum lance which gave birth to thefe misfortunes is fo trifing in itfelf, that, independent of its confequences, it would not deferve to be recorded. In the narrow entrance to a fynagogue in Cæfarea, fome perfon had made an offering of birds merely with a view to irritate the Jews. The infult excited their indignation, and occafionted the fliedling of blood. Withro out this trifing accident, which no human wildom could forefee even the day before it happericd, it is poffible that the prophecy of Jefus would never have been fulfilled. But Florus, who was then procurator of Jut dea, converted this private quarrel into public hoftilis ties, and compelled the Jewifh nation to rebel contriny to its wifi and refolution, in order to avoid what the Jews had thireatened, an impeachment before the Romian emperor for his exceffive crueities. But event afi ter this rebellion had broken out, the deflruction of the temple was a very improbable event. It was not the practice of the Romans to deftroy the magnificent edificea

## S C R 1351 S C R

thes of the nations which they rubduce; and of all the Roman generals, none was more unlikely to demolifh fo ancient and auguft a btrilding as Titus Vefpafian.

So important then is the que?ion, Whether the books of the New fellament be genuine? that the arguments which prove their authenticity, prave allo the truth of the Chrilian religion. Let us now confider the evidence whith proves the authenticity of the New Te . fament.

We receive the books of the New Tefament as the genuine works of Mathew, Mark, Iuke, John, and ${ }^{\text {Paull, }}$ for the fame reafon that we receive the wititings of Xenophon, of Polybius, of Plutarch, of Cæfar, and of Livy. We have the uninterrupted tettimony of all ages, and we have no reafon to fufpect impofition. This argument is much fronger whem applied to the books of the New Teftament than wher applied to any other writings; for they were addreffed to large focieties, were often read in their preferice, and acknowledged by them to be the writings of the apoftles. Whereas, the moft eminent profane writings which ftill remain were addreffed only to individuals, or to no perfons at all : and -we have no authority to affirm that they were read in public ; on the contrary, we know that a liberal education was uncommon; books were fearce, and the knowledge of them was confined to a few individuals in every nation.

The New Teftament was read over three quarters of the worle, while profane writers were limited to one nation or to one country. An uninterrupted fucceffion of writers from the apoftolic ages to the prefent time quote the facred writings, or make allunons to them: and thefe quotations and allufions are made not only by friends but by enemies. This cannot be afferted of even the beft claffic authors. And it is highly probable, that the tranfations of the New Teltament were made fo early as the fecond century; and in a century or two after, they became very numerous. After this period, it was impoffible to forge new writings, or to corrupt the facred text, unlefs we can fuppofe that men of different nations, of different fentiments and different langruapes, and often exceedingly holkile to one another, fhould all agree in one forgery. 'ithis argument is fo freng, that if we deny the authenticity of the New Teftament, we may with a, thoufand times more propriety reject all the other writings in the world: we may even throw afide human teftimony itfelf. But as this fubjeet is of great importance, we fhall confider it at more length; and to enable our readers: to judge with the greater accuracy, we thall fate, from the valuable work of Michaelis, as tranfated by the judicious and learned Mr.Marfh, the reafons which may induce a critic to fufpeet a work-to be fpurious.

1. When doubts have been made from ito firft appearreaf res ance in the world, whether it proceeded from the au would thor to whom it is afcribed. 2. When the immediate friends of the pretended author, who were able to decide upon the fubject, have denied it to be his produc. tion. 3. When a long feries of years has elapfed after his death, in which the book was unknown, and in which it muft unavoidably have been mentioned and quoted, had it really exifted. 4. When the ftyle is different from that of his other writings, or, in cafe no other remain, different from that which might reafon-
ably be expected. 5. When events arre recorded which happen later than the time of the pretended author. 6. When opinions are advanced which contradiet thofe he is known to maintain in his other writings. Though this latter argument alone leads to no pofitive conclufion, fence every man is liable to change his opinion, or through forgetfulnefs to vary in the circumftances of the fame relation, of which Jofephus, in his Antiquities and War of the Jews, affords a ftriking example.
2. But it cannot be frown that any one doubted of its authenticity in the period in. which it firf-appeared. 2. No ancient accounts are on record whence we may conclude it to be fpurious. 3. No confiderable.period elapfed after the death of the apottles, in which the New Teftament was unknown; but, on the contrary, it is mentioned by their very contemporaries, and the accounts of it in the fecond century are fill more numerous. 4. No argument can be brought in its disfavour from the nature of the ftyle, it being exactly fuch as might be expected from the apofles, not Attic but Jewifh Greek. 5. No facts are recorded which happened after their death. 6. No doctrises are maintained which contradict the known tenets of the authors, fince, befide the New Teftament, no writings of the apofles exift. But, to the honour of the New Teftament be it Spoken, it contains numerous contradictions to the tenets and doctrines of the fathers in the fecond and thirdcentury, whofe morality was different from that of the gofpel, which recommends fortitude and fubmiffion to unavoidable evils, but not that enthufiaftic ardour for martyrdom for which thofe centuries are diftinguifhed; it alludes to ceremonies which in the futlowing ages were either in difufe or totally unknown: all which circumftances infallibly demoniftrate; that the New Teftament is not a production of either of thofe centuries.

We flall now confider the pofitive evidence for the authenticity of the New Teftament. There: may be arranged under the three following heads;

1. The impoffibility of a forgery, arifng from the nature of the thing itfelf, :2 The ancient Chriftian, Jewifh, and Heathen teftimony in its favour. 3. Its own internal evidence.
2. The impoffibility of a forgery arifing from the nature of the thing itfelf is evident. It is impoffible to eftablifh forged writings as authentic in any place where there are perfons ftrongly inclined and well qualified to detect the fraud. Nowi the Jews were the moft violent enemies of. Chriftianity. They put the founder of it to death; they perfecuted his difciples with implacable fury; and they were anxious to dtifie, the new religion in its ibirth. If the writings of the New Teftament had been forged, would not the Jews have detected the impofture? Is there a fingle inftance on record where a few individuals have impored a hiftory upon the world againft the teftimony of a whole nation? Would the inhabitants of Paleftine have received the golpels, if they had not had fufficient evidence that Jefus Chrivt really appeared among them, and performed the miracles afcribed, to him? Or would the churches of Rome or of Corinth have acknowledged the epittes addreffect to them as the genuine works of Paul, if Paul hack never preached among them? We might as well think to prove, that the hiftory of the Reformation is the in-

The den will tha he oppror tunity of examining, feparately, what he will confider as the weakeft parts of the evidence, thofe which are exhibited by the earlieft Chriftian writers, confifting of expreffions, and not quotations, taken from the New Teftament. The Chritian, on the other hand, ought to wifh, that thefe apparently weak parts of the evidence were diftinctly examined, for they will afford an irrefragable proof that the New 'Teftament was not forged : and fhould the deift reject the evidence of thofe early writers, it will be incumbent on him to account for the origin of the Chriftian religion, which he will find more difficult than to admit the common hypothefis.

In the fourth century we could produce the teftimonies of numerous witneffes to prove that the books of the New Teftament exilted at that time ; but it will be fufficient to mention their names, the time in which they wrote, and the fubttance of their evidence. This we fhall prefent in a concife form in the following table, which is taken from Jones's New and Full Me. thod of eftablifing the canon of the New 'Seftament.

2. The fecoind kind of evidence which we produce to prove the authenticity of the New Teftament, is the teftimony of ancient writers, Chritians, Jews, and Heathens.

In reviewing the evidence of teftimony, it will not be expected that we fhould begin at the prefent age, and trace backwards the authors who have written on this fubject to the firf ages of Chriftianity. This indeed, though a laborious tafk, could be performed in the moft complete manner; the whole feries of authors, numerous in every age, who have quoted fron the books of the New Teftament, written commentaries upon them, tranflated them into different languages, or who have drawn up a lift of them, could be exhibited fo as to form fuch a perfect body of evidence, that we imagine even a jury of deffts would find it impoffible, upon a deliberate and candid examination, to reject or difbelieve it. We do not, however, fuppofe that fcepticifm has yet arrived at fo great a height as to render fuch a tedious and circumitantial evidence neceffary. Paffing over the intermediate fpace, therefore, we fhall afcend at once to the fourth century, when the evidence for the authenticity of the New Teftament was fully eftablifhed, and trace it back from that period to the age of the apoftles. We hope that this method of fating the evidence will appear more natural, and will afford more fatisfaction, than that which has been ufually adopted.

It is furely more natural, when we inveftigare the truth of any fact which depends on a feries of teftimony, to begin with thofe witneffes who lived neareft the prefent age, and whofe characters are beft eftablifhed. In this way we fhall learn from themfelves the foundation of their belief, and the characters of thofe from whom they derived it ; and thus we afcend till we arrive at its origin. This mode of inveftigation will give more fatisfaction to the deif than the ufual way ; and we believe no Chriftian, who is confident of the goodnefs of his caufe, will be unwilling to grant any proper conceffions. The deift will thus have an oppor-

91 From tefi mony.

## S C R

pture. We now go back to Eufebius, who wrote about the year 315 , and whofe catalogue of the books of the New Teftament we fhall mention at more length. "Let us obferve (fays he) the writings of the apoftle John, which are uncontradiffed; and, firtt of all, mult be mentioned, as acknowledged of all, the gofpel, according to him, well known to all the churches under heaven." The author then proceeds to relate the occafions of writing the gofpels, and the reafons for placing St E- John's the laft, manifeftly \{peaking of all the four as equal in their anthority, and in the certainty of their original. The fecond paffage is taken from a chapter, the title of which is, "' Of the Scriptures univerfally acknowledged, and of thofe that are not fuch." Eufebius begins his enumeration in the following manner: "In the firft place, are to be ranked the facred four Gofpels, then the book of the Acts of the Apoftes; after that are to be reckoned the Epiftles of Paul: in the next place, that called the firft Epiftle of John and the Epiftle of Peter are to be efteemed authentic: after this is to be placed, if it be thought fit, the Revelation of John; about which we fhall obferve the different opinions at proper feafons. Of the controverted, but yet well known or approved by the mof, are that called the Epitle of James and that of Jude, the fecond of Peter, and the fecond and third of Jolin, whether they were written by the evangelift or by another of the fame name." He then proceeds to reckon up tive others, not in our canon, which he calls in one place fpurious, in another controverted; evidently meaning the fame thing by thefe two words ( s ).
A. D. 290, Victorin bifhop of Pettaw in Germany, in a commentary upon this text of the Revelation, "The firft was like a lion, the fecond was like a calf, the third like a man, and the fourth like a flying eagle," makes out, that by the four creatures are intended the four gofpels; and to fhow the propriety of the fymbols, he recites the fubject with which each evangclift opens his hiftory. The cxplication is fanciful, but the teftimony pofitive. He alfo exprefsly cites thie A.cts of the Apoftles.
A. D. 230, Cyprian bihhop of Carthage gives the following teftimony: "The church (fays this father) is watered like Paradife by four rivers, that is, by four gofpels." The Acts of the Apofles are alfo frequently quoted by Cyprian under that name, and under the name of the Divine Scriptures.". In his various writings are fuch frequent and copions citations of Scripture, as to place this part of the teltimony beyond controverfy. Nor is there, in the works of this eminent African bifhop, one quotation of a fpurious or apocryphal Chriftian writing.
A. D. 210 , Origen is a moft important evidence. Nothing can be more peremptory upon the fubject now under confideration, and, from a writer of his learning and information, nothing more fatisfactory, than the declaration of Origen, preferved in an extract of his works by Eufebius: "That the four gofpels alone are received without difpute by the whole church of God under heaven:" to which declaration is immediately fubjoined
a brief hiftory of the refpective authors, to whom they
were then, as they are now, afcribed. The fentiments were then, as they are now, afcribed. The fentiments Origen which remain, entirely correfpond with the teftimony here cited. His atteftation to the Acts of the Apoftles is no lefs pofitive: "And Luke alfo once more founds the trumpet relating the Acts of the Apofles." That the Scriptures were then univerfally. read, is plainly affirmed by this writer in a paffage in which he is repelling the objections of Celfus, "That it is not in private books, or fuch as are read by few only, and thofe fludious perfons, but in books read by every body, that it is written, the invifible things of God from the creation of the world are clear. ly feen, being underftood by things that are made." It is to no purpofe to fingle out quotations of Scripture from fuch a writer as this. We might as well make a felection of the quotations of Scripture in Dr Clarke's fermons. They are fo thickly fown in the works of Origen, that Dr Mill fays, "If we had all his works remaining, we fhould have before us almoft the whole text of the Bible."
A. D. 194, Tcrtullian exhibits the number of the Of Tertul: gofpels then receivcd, the names of the evangelits, and lian. their proper defignations, in one fhort fentence. "A Among the apoftles, John and Matthew teach us the faith; among apoftolical men, Luke and Mark refrefh it." The next paffage to be taken from Tertullian affords as complete an atteftation to thie authenticity of the gofpels as can be well imagined. After cnumerating the churches which had been founded by Paul at Corinth, in Galatia, at Philippi, Theffalonica, and Ephefus, the church of Rome eftablined by Peter and Paul, and other churches derived from John, he proceeds thus: "I fay then, that with them, but not with them only which are apoftolical, but with all who have fellowfhip with them in the fame faith, is that gofpel of Luke received from its firf publication, which we fo zealouly maintain ;" and prefently afterwards adds, "The fame authority of the apoftolical churches will fupport the other gofpels, which we have from them, and according to them, I mean John's and Matthew's, although that likewife which Mark publifhed may be faid to be Peter's, whofe interpreter Mark was." In another place Tertullian affirms, that the three other gofpels, as well as St Luke's, were in the hands of the churches from the beginning. This noble teflimony proves inconteftably the antiquity of the gofpels, and that they were univerfally received; that they were in the hands of all, and had been fo from the firf. And this evidence appears not more than 150 years after the publication of the books. Dr Larduer obferves, "that there are more and larger quotations of the fmall volume of the New Teftament in this one Chriftian author, than there are of all the works of Ci cero, in writers of all characters, for feveral ages."
A. D. 178 , Irenæus was bifhop of Lyons, and is 098 mentioned by Tertullian, Eufebius, Jerome, and Pho Of Irenæus. tius. In his youth he had been a difciple of Polycarp, who was a difciple of John. Hc afferts of himfelf and his contemporaries, that they were able to recS
(s) That Eufebies could not intend, by the word rendered fourious, what we at prefent mean by it, is evident from a claufe in this very chapter, where, fpeaking of the Gofpels of Peter and Thomas, and Matthias and fome others, he fays, "They are not fo much as to be reckoned among the Jpuricus, but are to be rejected as altogether abfurd and impious." Lard. Cred. vol. viii. p. 98.

## 

Scripture. Ton up in all the principal churches the fucceffion of bithops to their firlt inftitution. His teftimony to the four gofpels and Acts of the Apoofles is exprefs and pofitive. "We have not received," fays Irenæus, "the nnowledre of the way of our falvation by any others than thofe by whom the gofpel has been brought to us. Which gorpel they firft preached, and afterwards, by the will of God, committed to writing, that it might be for time to come the foundation and pillar of our. faith. For after that our Lord rofe from the dead, and they (the apofles) were endowed from above with the power of the Holy Ghoft coming down upon them, they received a perfect knowledge of all things. They then went forth to all the ends of the earth, declaring to men the bleffing of heavenly peace, having all of them, and every one alike, the gofpel of God. Matthew then, among the Jews, wrote a gofpel in their own language, while Petcr and Paul were preaching the gofpel at Rome, and founding a church there. And after their exit, Mark alfo, the difciple and interpreter of Peter, delivered to us in writing the things that had been preached by Peter. And Luke, the companion of Paul, put down in a book the gofpel preached by him (Paul). Afterwards John, the difciple of the Lord, who alfo leaned upon bis breaft, likewife publifhed a gofpel while he diwelt at Eplefus in Afia." Ireneus then relates how Matthew begins his gofpel, how Mark beqins and ends his, and gives the fuppofed reafons for doing fo. He enumerates at length all the paffages of Chrit's hiftory in Luke, which are not found in any of the other cvangelifts. He flates the particular defign with which St John conpofed his gorpel, and accounts for the doctrinal declarations which precede the narrative. If any modern divine thould write a book upon the genuinenefs of the gorpels, he could not affert it more exprcfily, or ftate their original more diftinetly, than Irenrens hath done within. little more than 100 years after they were publifhed.

Refpecting the book of the Acts of the Apofles, and its author, the teftimony of Irenxus is no lefs, explicit. Referring to the account of St Paul's converfion and vocation, in the ninth chapter of that book, "Nor can they (fays he, meaning the parties with whom he argues fhow) that he is not to be credited, who lias related to us the truth with the greatelt exactnefs." In another place, he has actually collected the feveral texts, in which the writer of the hiftory is reprefented as accompanying St Paul, which led hin to exhibit a fummary of almoft the whole of the laft, twelve chapters of the book.

According to Lardner, Irenzus quotes twelve of Paul's epifles, naming their author; allo the firtt epiftle of Peter, the two firt epifles of John, and the Revelation. The epirtles of Paul which he omits are thofe addreffed to Philemon and the Hebrews. Eufehius fays, that he quotes the epifle to the Hebrews, though he does not afcribe it to Paul. The work, how99 ever, is loft.
A. D. 172, Tatian, who is fpoken of by Clemens Alexandininus, Origen, Eufebius, and Jerome, compofed a harmony of the four gofpels, which he called Diateflaron of the four. This title, as well as the work, is remarkable, becaufe it fhows that then as well as now there were four, and only four, gofpels in general ufe among Chritians.
A. D. 170 , the churches of Lyons and Vienne in

France fent an account of the fufferings of their martyrs. Serif to the churches of Afia and Phrygia, which has been preferved entire by Eufebius. And what carries in fome meafure the teftimony of thefe churches to a higher age is, that they had now for their bilhop Por thinus, who was 90 years old, and whofe early life confequently mult have immediately followed the times of the apotles. In this epillle are exact references to the gofpels of Luke and John, and to the Acts of the Apoftles. The form of reference is the fame as in all the preceding articles. That from St John is in thefe words: "Then was fulfilled that which was fpoken by the Lord, that whofoever killeth you, will think that he doth God fervice *."
Diftinct references are alfo made to other books, viz. Acts, Romans, Ephefians, Philippians, I. Timothy, I Peter, y John, Revelation.
A. D. 140, Juftin Martyr compofed feveral books, of juil which are mentioned by his difciple Tatian, by Tertul. lian, Methodius, Eufebins, Jerome, Epiphanius, and Photius. In his. writings between 20 and 30 quotations from the gofpels and Acts of the Apofles are reckoned up, which are clear, diftinct, and copions; if each verfe be counted feparately, a much greater number; if each expreffion, ftill more. Jones, in his book on the Canon of the New Teltament, ventures to affirm that he cites the books of which it confifts, particularly the four gofpels, above 200 times.
We meet with quotations of three of the gofpels within the compals of half a page; " and in other words, he fays, Depart from me into outer darknefs, which the Father hath prepared for Satan and his Angels," (which is from Matthew xxv. 4r.) "A.nd agains he faid in other words, I give unto you power to tread upon ferpents and fcorpions, and venomous beafts, and upon all the power of the enemy." (This from Luke x. 19.) "And, before he was crucified, he faid, The fon of man muft fuffer many things, and be rejected of the Scribes and Pharifees, and be crucified, and rife again the third day ; (this from Mark viii. 31.)

All the references in Juftin are made without mentioning the author; which proves that thefe books were: perfectly well known, and that there were no other accounts of Chrift then extant, or, at leaft, no others fo received and credited as to make it neceffary to add any marks of diftinction. But although. Juftin mentions not the authors names, he calls the books Memoirs compofeld by the Apoflles; Memairs compofed by the Apofles and their Companions; which defcriptions, the latter efpecially, exactly fuit the titles which the Go. fpels and Acts of the Apoftles now bear.

He informs us, in his firt apology, that the memoirs of the Apofles, or the writings of the prophets, are read according as the time allows; and, when the reader has ended, the prefident makes a difcourfe, exhorting to the imitation of fuch excellent things.

A few flhort obfervations will fhow the value of this teftinony. 1. The Memoirs of the Apoflles, Jultin in another place exprefsly tells us are what are called gofpels. And that they were the gorpels which. we now ufe is made certain by Juftin's numerous quotations of them, and his filence abont any others. 2. He deo fcribes the general ufage of the Chriftian church. 3. He does not fpeak of it as recent or newly infituted, but in the terms in which men fpeak of eftablifhed.cultoms*

## S C R [ 139 [ S C. R

pture, Jutin affo makes fuch allufions to the following books as ghows that he had read them: Romans, i Corinthians, Galatians, Ephefians, Philippians, Colofians, 2 Theflalonians, Hebrews, 2 Pcter; and he afcribes the Revelation to John the Apoitle of Chrift.
A. D. 116, Papins, a hearer of John, and companion of Polycarp, as Irenæus attefts, and of the apoftolical age as all agree, in a paffage quoted by Eufebius, from a work now loft, exprefsly afcribes the two firft gofpels to Matthew and Mark; and in a manner which proves that thefe gofpelamult have publicly borne the names of thefe anthors at that time, and probably long before; for Papias does not fay, that one gofpel was written by Matthew, and another by Mark; but, affuming this as perfectly well known, he tells us from what materials Mark collected his account, viz. from Peter's preaching, and in what language Matthew wrote, viz. in Hebrew. Whether Papias was well informed in this ftatement or not, to the point for which this teftimony is produced, namely, that thefe books bore thefe names at this time, his authority is complete.

Papias himfelf declares that he received his accounts of Chritianity from thofe who were acquainted with the apofles, and that thore accounts which he thus received from the older Chrittians, and had committed to memory, he inferted in his books. He farther adds, that he was very folicitous to obtain every poffible information, efpecially to learn what the apoftles faid and preached, valuing fuch information more than what was written in books*.
A. D. 108, Polycarp was the bifhop of Smyrna, and difciple of John the Apoftle. This teftimony concerning Polycarp is given by Irenæus, who in his youth had feen him. "I can tell the place," faith Irenæus, "in which the bleffed Polycarp fat and taught, and his going out and coming in, and the manner of his life, and the form of his perfon, and the difcourfes he made to the people, and how he related his converfation with John and others who had feen the Lord, and how he related their fayings, and what he had heard cencerning the Lord, both concerning his miracles and his doctrine, as he had received them from the eye-witneffes of the word of life; all which Polycarp related agreeable to the fcriptures."

Of Polycarp, whofe proximity to the age and courntry and perfons of the apoftles is thus attefted, we have one undrubted epiftle remaining; which, though a fhort performance, contains nearly 40 clear allufions to the books of the New Teftament. This is ftrong evidence of the refpect which was paid to them by Clırittians of that age. Amonglt thefe, although the writings of St Paul are more frequently ufed by Polycarp than other parts of fcripture, there are copious allufions to the gorpel of St Matthew, fome to paffages found in the gofpels both of Matthew and Luke, and fome which more nearly refemble the words in Luke.

He thus fixes the authority of the 'Lord's Prayer, and the ufe of it among Chrittians. If, therefore, we pray the Lord to forgive us, we ought alfo to forgive. And again, With fupplication befeeching the all-feeing God not to lead us into temptation.

In another place, he quotes the words of our Lord: "But remembering what the Lord faid, teaching, Judre not, that ye be not judged. Forgive, and ye fall be forgiven; be ye merciful, that ye may obtain mercy; with what meafure ye mete, it fhall be meafured
to you again*. Suppofing Polycarp to have had thefe seriptnre. words from the books in which we now find them, it ${ }^{*}$ Matc. is manifeft that thefe books were confidered by kim, viii. x. i. 2. and by his readers, as he thought, as authentic accoments v. 7. of Chrift's difcourfes; and that this point was inconteftable.

He quotes alfo the following books, the firt of which he afcribes to St Paul: I Corinthians, Ephe* fians, Philippians, I and 2 Theffalonians; and makes evident references to others, particularly to Acts, Romans, 2 Corinthians, Galatians, I 'Timothy, 2 Timothy, i Peter, I John.

Ignatius, as it is teftified by ancient Chriftian writers, Of Ignaa became bifhop of Antioch about 37 years after Chrift's ${ }^{\text {cius. }}$ afcenfion; and therefore, from his time, and place, and ftation, it is probable that he had known and converfed with many of the apofles. Epitles of Ignatius are referred to by Polycarp his contemporary. Paffages, found in the epifles now extant under his name, are quoted by. Irenæus, A. D. 178, by Origen, A. D. 230 ; and the eccation of writing them is fully explained by Eufebius and Jerome. What are called the fmaller epiftles of lgnatius are generally reckoned the fame which were read by Irenæus, Origen, and Eufebius.

They are admitted as genuine by Voffus, and have been proved to be fo by bifhop Pearfon with a force of argument which feems to admit of no reply. In thefe epiftles are undoubted allufions to Matt. iii. 15. xi. 16. to John iii. 8. ; and their venerable author, who often \{peaks of St Paul in terms of the higheft refpect, once quotes his epiftle to the Ephefians by name.

Near the conclufion of the epiftle to the Romans, Of Her St Paul, among it others, fends the following falutation: ${ }^{\text {mas. }}$ "S Salute Afyncritus, Phlegon, Hermas, Patrobus, Hermes, and the brethren which are with them." Of Hermas, who appears in this catalogue of Roman Chrifians as contemporary with St Paul, there is a book ftill remaining, the authenticity of which cannot be difputed. It is called the Shepherd, or Pafor of Hermas. Its antiquity is inconteftable, from the quotations of it in Irenæus, A. D. 178, Clement of Alexandria, A. D. 194, Tertullian, A. D. 200, Origen, A. D. 230. The notes of time extant in the epiftle itfelf agree with its title, and with the teftimonies concerning it, which intimate that it was written during the lifetime of Clemerat. In this piece are tacit allufions to St Matthew's, St Luke's, and St John's gofpels; that is to fay, there are applications of thoughts and expreffions found in thefe gofpels, without citing the place or writer from which they were taken. In this form appear in Hermas the confeffing and denying of Chrint $\dagger$; + Matt. $x_{0}$ the parable of the feed fown $\ddagger$; the comparifon of 32,33 . or Chritt's difciples to little children ; the faying, "he Luke xiio that putteth away his wife, and marrieth another, com- $8,9$. mitteth adultery $\& ;$ " the fingular expreffon, " having ${ }_{\text {xiii. }}^{\ddagger}$. os received all power from his Father," is probably an allu-Luke fion to Matthew xxviii. 18. and Chrift being the "gate," viii. 5. or only way of coming "to God," is a plain allufion to \& Luke John xiv. 6. x. 7, 9. There is alfo a probable allution ${ }^{\text {xvi. } 18 .}$ to Acts v. 32 .
The Shepherd of Hermas has been confidered as a fanciful performance. This, however, is of no importance in the prefent cafe. We only adduce it as evidence that the books to which it frequently alludes exifted in the firf century; and for this purpofe it is fatis.

## S C R [ 140 ] S C R

Seripture. factory, as its authenticity has never been queftioned. However abfurd opinions a man may entertain while he retains his underftanding, his teftimony to a matter of fact will Atill be received in any court of juftice.
A. D. 96 , we are in poffeffion of an epiftle written by Clement bifhop of Rome, whom ancient writers,

Chap.
i. 29.
without any doubt or fcruple, affert to have been the Clement whom St Paul mentions Philippians iv. 3. as with Clement alfo, and other my fellow labourers, whofe names are in the book of life." This epiftle is fpoken of by the ancients as an epittle acknowledged by all ; and, as Irenæus well reprefents its value, " written by Clement, who had feen the bleffed apoftles and converfed with them, who had the preaching of the apoftles ftill founding in his ears, and their traditions before his eyes." It is addreffed to the church of Corinth ; and what alone may feem a decifive proof of its authenticity, Dionyfus bifhop of Corinth, about the year 170, i. e. about 80 or 90 years after the epiftle was written, bears witnefs, "that it had been ufually read in that church from ancient times." This epifle affords, amongit others, the following valuable paffages: "Efpecially remembering the words of the Lord Jefus, which he fpake, teaching gentlenefs and long fuffering ; for thus he faid $(\mathrm{r})$, Be ye merciful, that ye may obtain mercy; forgive, that it may be forgiven unto you; as you do, fo fhall ir be done unto you; as you give, fo thall it be given unto you; as ye judge, fo thall ye be judged; as ye fhew kindnefs, fo fhall kind. nefs be fhewn unto you; with what meafure ye mete, with the fame it fhall be meafured to you. By this command, and by thefe rules, let us eftablifh ourfelves, that we may always walk obediently to his holy words."

Again, "Remember the words of the Lord Jefus, for he faid, Wo to that man by whom offences come; it were better for him that he had not been born, than that he fhould offend one of my elect; it were better for him that a millitone fhonld be tied about his neck, and that he fhould be drowned in the fea, than that he should offend one of my little ones $(v)$.'"

He afcribes the firft epifle to the Corinthians to Paul, and makes fuch allufions to the following books as is Iufficient to fhew that he had feen and read them: Acts, Romans, 2. Corinthians, Galatians, Ephefians, Philippians, Coloffians, 1 Theffalonians, $\pm$ 'Timothy, 2 Timothy, Titus, 1 Peter, 2 Peter.

It may be faid, as Clement has not mentioned the books by name from which we affert thefe allufions or references are made, it is uncertain whether he refers to any books, or whether he received thefe expreffions from the difcourfes and converfation of the apofles. Mr Paley has given a very fatisfactory anfwer to this objection: 1 ft , That Clement, in the very fame manner, namely, without any mark of reference, ufes a paffage now found in the epiftle to the Romans*; which paffage, from the peculiarity of the words that compofe it, and from their order, it is manifeft that he muft have taken
from the epiftle. The fame remark may be applied to brews. Secondly, That there are many fentences of St Paul's firft epifle to the Corinthians to be found in Clement's epifte, without any fign of quotation, which yet certainly are quotations; becaufe it appears that Clement had St Paul's epifle before him ; for in one place he mentions it in terms too exprefs to leave us in any doubt. "Take into your hands the epiftle of the bleffed apofle Paul." 'Thirdly, That this method of adopting words of fcripture, without reference or acknowledgment, was a method in general ufe amongit the moft ancient Chriftian writers. Thefe analogies not only repel the objection, but caft the prefumption on the other fide ; and afford a confiderable degree of pofitive proof, that the words in queftion have been borrowed from the places of feripture in which we now find them. But take it, if you will, the other way, that Clement had heard thefe words from the apoftles or firft teachers of Chriftianity; with refpect to the precife point of our argument, viz. that the fcriptures contain what the apofles taught, this fuppofition may ferve almoft as well.

We have now traced the evidence to the times of the apoftles; but we have not been anxious to draw it out to a great length, by introducing every thing. On the contrary, we have been careful to render it as concife as poffible, that its force might be difcerned at a glance, The evidence which has been ftated is of two kinds. Till the time of Juftin Martyr and Irenæus it confifts chiefly of allufions, references, and expreffions, borrowed from the books of the New Teftament, without mentioning them by name. After the time of Irenæus it became ufual to cite the facred books, and mention the authors from whom the citations were taken.

The firft fpecies of evidence will perhaps appear to The all fome exceptionable ; but it muft be remembered that fions an it was ufual among the ancient Chriftians as well as toferenc Jews to adopt the expreffions of Scripture without na- $\omega$ the ming the authors. Why they did fo it is not neceffary by the 1 to inquire. 'I'he only point of importance to be deter-Chrittia mined is, whether thofe references are a fufficient proof writers of the exiftence of the books to which they allude ? it exine te This, we prefume, will not be denied; efpecially in the in their prefent age, when it is fo common to charge an authortime. with plagiarifm if he happen to fall upon the fame train of ideas, or exprefs himfelf in a fimilar manner with authors who have written before him. We may farther affirm, that thefe tacit references afford a complete proof that thofe ancient writers had no intention of impofing a forgery upon the world. They prove the exiftence of the Chriltian religion and of the apoftolical writings, without fhowing any fufpicious earneftnefs that men fhould believe them. Had thefe books been forged, thofe who wihed to pafs them upon the world would have been at more pains than the firf Chriftians were to prove their authenticity. 'They acted the part of honeft
( x ) "Blefled are the merciful, for they fhall obtain mercy," Matt. v. 7. "Forgive, and ye fhall be forgiven ; give, and it fhall be given unto you," Luke vi. 37,38 ." Judge not, that ye be not judged ; for with what judgement ye judge, ye fhall be judged, and with what meafure ye mete, it thall be meafured to you again," Mat. vii. 2.
(U) Matt. xviii. 6. "But whofo fhall offend one of thefe little ones which believe in me, it were better for him: that a millitone were hanged about his neck, and that he were caft into the fea." The latter part of the paffage in Clement agrees more exaclly with Luke xvii. 2. "It were better for him that a millifone were hanged about his neck, and he caft into the fea, than that he fhould offend one of thefe little ones."

## S C R.

[ 14 honet men; they believed them themfelves, and they never imagined that others would fufpect their truth.

It is a confideration of great importance, in reviewing the evidence which has been now ftated, that the witneffes lived in different conntries; Clemens flourifhed at Rome, Polycarp at Smyrna, Juftin Martyr in Sysia, Irenæus in France, Tertullian at Carthage, Origen at Alexandria, and Eufebius at Cæfarea. This proves that the books of the New Teftament were equally well known in diftant countries by men who had no intercourfe with one another.

The fame thing is proved by teftimonies if poffible lefs exceptionable. The ancient heretics, whofe opinions were fometimes groffer and more impious than thofe which any modern feetary has ventured to broach, and whofe zeal in the propagation of them equalled that of the moft flaming enthufiaf of the laft century, never called in queftion the authenticity of the books of the New Teftament. When they met with any paflage in the goipels or epifles which they could not reconcile to their own heretical notions, they either erafed it, or denied that the author was infpired; but they nowhere contend that the book in which it flood was not, written by the apoftle or evangelift whofe name it bore. Eufebius relates, that the Ebionites rejected all the epifles of Paul, and called him an apoflate, becaufe he departed from the Levitical law; and they adopted as their rule of faith the gofpel of St Matthew, though indeed they greatly corrupted it. This proves therefore that the golpel according to Matthew was then publifhed, and that St Paul's epiftles were then known.

Of the heretics who erafed or altered paffages to make the Scriptures agree with their doctrines, we may produce Marcion as an inftance, who lived in the beginning of the 2d century. He lived in an age when he could have eafily difcovered if the writings of the New Teftament had been forged; and as he was much incenfed againft the orthodox party, if fuch a forgery had been committed, unqueftionably he would not have failed to make the difcovery, as it would have afforded the moft ample means of revenge and triumph, and enabled him to eftablifh his own opinions with lefs difficulty. But his whole conduct fiows clearly, that he believed the writings of the New 'Tettament to be authentic. He faid that the golpel according to St Matthew, the epifle to the Hebrews, with thofe of St Pe ter and St James, as well as the Old Teftament in general, were writings not for Chritians but for Jews. He publifhed a new edition of the gofpel according to Luke, and the firft ten epiftles of Paul; in which it has been affirmed by Epiphanius, that he altered every paffage that contradicted his own opinions: but as many of thefe alterations are what modern critics call various rendings, though we receive the teftimony of Epiphanius, we muft not rely upon his opinion (x). Hence it is evident that the books of the New Teftament above-mentioned did then exit, and were acknowledged to be the works of the authors whofe names they bear.

Dr Lardner, in his General Review, fums up this head of evidence in the following words: "Noetus, Paul of Samofata, Sabellius, Marcellus, Photinus, the Novatians, Donatiits, Manicheans(y), Prifcillianifts,

41 S C R
befide Artemon, the Audians, the Ariane, and divers Scriptures others, all received moft or all the fame books of the New Teftament which the Catholics received; and agreed in a like refpect for them as writ by apoftes or their difciples and companions."
 religion, are powerful witneffes for the antiquity of the "ies.of New 'T'eftament. Celfus, who lived towards the end of feathens, the fecond century, not only mentions by name, but quotes paffages from the books of the New 'Teftament : and that the books to which he refers were no other than our prefent gofpels, is evident from the allufions 109 to various paflages ftill found in them. Celfus takes of Celius. notice of the genealogies, which fixes two of thefe gofpels ; of the precepts, Refift not him that injures you, and, If a man frike thee on the one cheek, offer to him the other alfo; of the woes denounced by Chritt; of his predictions; of his faying that it is impoffible to ferve two mafters ; of the purple robe, the crown of thorns, and the reed which was put into the hand of Jefus; of the blood that flowed from his body upon the crofs, a circumflance which is recorded only by John; and (what is inflar omnium for the purpofe for which we produce it) of the difference in the accounts given of the refurrection by the evangelifts, fome mentioning two angels at the fepulchre, others only one.

It is extremely material to remark, that Celfus not only perpetually referred to the accounts of Chrift contained in the four gofpels, but that he referred to no other accounts ; that he founded none of his objections to Chriltianity upon any thing delivered in fpurious gofpels.

The teftimony of Porphyry is fill. more important of forphys. than that of Celfus. He was born in the year 213 , of ${ }^{\text {TY }}$. Tyrian origin. Unfortunately for the prefent age, fays Michaelis, the mittaken zeal of the Chriitian emperors has banifhed his writings from the world; and every real friend of our religion would gladly give the works of one of the pious fathers to refcue thofe of Porphyry from the flames. But Mr Marfh, the learned and judicious tranflator of Michaelis, relates, that, according to the accounts of Ifac Voffius, a manufcript of the works of Porphyry is preferved in the Mcdicean library at Florence, but kept fo fecret that no one is permitted to fee it. It is univerfally allowed, that Porphyry is the moft fenfible; as well as the moft fevere, adverfary of the Chrittian religion that antiquity can produce. He was verfed not only in hiflory, but alfo in philofophy and politics. His acquaintance with the Chritians was not confined to a fingle country; for he had converfed with them in Tyre, in Sicily, and in Rome. Enabled by his birth to ftudy the Syriac as well as the Greek authors, he was of all the adverfaries to the Chriftian religion the bett qualified toinquire into the authenticity of the facred writings. He poffefled therefore every advantage which natural abilities or a fcientific education could afford to difcover whether the New Teftament was a genuine work of the apofles and evangeliits, or whether it was impofed up. on the world after the deceafe of its pretended authors。 But no trace of this fufpicion is anywhere to be found. in his writings. In the fragments which ftill remain,
mentions
(x) Dr Loeffer has written a learned differtation to prove that Marcion did not corrupt the facred writings.
(y) This mult be with an exception, however, of Fauftus, who lived fo late as the year 384.

## S C R [ 142 ] $\quad$ S G R

 and St Ohn, the Acts of the Apoftles, and the epitte ${ }^{*}$ to the Galatians ; and it clearly appears from the very objections of Porphyry, that the books to which he alludes were the fame which we pofiefs at prefent. 'Thus he objects to the repetition of a generation in St Matthew's genealogy ; to Matthew's call; to the quotation of a text from Ifaiah, which is found in a pfalm afcribed to Afaph; to the calling of the lake of Tibexias a fea; to the expreffion in St Matthew, "the abomination of defolation;" to the variation in Matthew and Mark upon the text "the voice of one crying in the wildernefs," Matthew citing it from Ifaias, Mark from the prophets; to John's application of the term Word; to Chrift's clange of intention about going up to the feaft of tabernacles (John vii. 8.) ; to the judgement denounced by St Peter upon Ananias and Sapphira, which he calls an imprecation of death.The inftarices here alleged ferve in fome meafure to Show the nature of Porphyry's objections, and prove that Porphyry had read the gofpels with that fort of attention which a writer would employ who regarded them as the depoftaries of the religion which he attacked. Befide thefe fpecifications, there exits in the writings of ancient Clrittians general evidence, that the places of Scripture, upon which Porphyry had made re-

II
Authenticity of the New Teftament froved from interalal evidence.

112 tyle. marks, were very numerous.

The internal evidence to prove the authenticity of the New 'Teftament confifts of two parts: The nature of the ftyle, and the coiacidence of the New Teftament with the hittory of the times.

The ftyle of the New Teftament is fingular, and differs very widely from the ftyle of claflical authors. It is full of Hebraifms and Syriafms; a circumftance which pious ignorance has confidered as a fault, and which, even fo late as the prefent century, it has attempted to remove; not knowing that thefe very deviations from Grecian purity afford the Arongef prefumption in its favour: for they prove, that the Nerw Teflament was written by men of Hebrew origin, and is therefore a production of the firft century. After the death of the firft Jewifh converts, few of the Jews turned preachers of the gofpel ; the Chrittians were generally ignorant of Hebrew, and confequently could not write in the atyle of the New Teftament. After the deftruction of Jerufalem and the difpertion of the Jews, their language mult have been blended with that of other na. tions, and their vernacular phrafeology almoft entirely loft. The language of the early fathers, though not always the pureft claffic Greek, has no refemblance to that of the New Teftament, not even excepting the works of the few who had a knowledge of the Hebrew; as Origen, Epiphanius, and Juftin Martyr, who being a native of Paleftine, might have written in a fyle fimilar to that of the New Teftament, had fuch a ftyle then prevailed. He that fufpects the New 'Teftament to be the forgery of a more recent period, ought to produce fome perfon who has employed a fimilar diction ; but :thofe who are converfant with caftern writings know well that a foreigner, who has not been enured to eaft.
ern manners and modes of thinking from his infancy; can never imitate with fuecefs the oriental ftyle, much lefs forge a hiftory or an epiftle which contains a thoufand incidental allufions, which nothing but truth could fuggefl. To imitate clofely the tyle of the New Teftament is even more difficult than to imitate that of any other oriental book; for there is not a fingle autbor; even among the Jews themfelves, fince the deftruction of Jerufalem, that has compofed in a ftyle in the leut degree like it ( z ).

But though the books of the New Teftament bear fo clofe a refemblance in idiom, there is a diverfity of Ayle which fhows them to be the work of different perfons. Whoever reads with attertion the epifles of Paul, muft be conviaced that they were all written by the fame auther. An equal degree of fimilarity is to be found between the gofpel and itt epittle of John. The writings of St John and St Paul exhibit marks of an original genius which no imitation can ever attain. The character of Paul as a writer is drawn with great judgement by Michaelis: " His mind overflows with fentiment, yct he never lofes fight of his principal object, but hurried on by the rapidity of thought, difclofes frequently in the middle a conclufion to be made only at the end. To a profound knowledge of the Old 「citament he joins the acutenefs of philofophical wifdom, which he difplays in applying and expounding the facred writings; and his explanations are therefore fome. times fo new and unexpected, that fuperficial obfervers might be tempted to fuppofe them erroneous. The fire of his genius, and his inattention to ftyle, occafion frequently a twofold obfcurity, he being often too concife to be underftood except by thofe to whom he immediately wrote, and not feldom on the other hand fo full of his fubject, as to produce long and difficult parenthefes, and a repetition of the fame word even in different fenfes. With a talent for irony and fatire, he unites the moft refned fenlibility, and tempers the feverity of his cenfures by expreffions of tendernefs and affection; nor does he ever forget in the vehemence of his zeal the rules of modefty and decorum. He is a writer, in fhort, of fo fingular and wonderful a compofition, that it would be difficult to find a rival. That truly fenfible and fagacious philofopher Locke was of the fame opinion, and contended that St Paul was without an equal."

Poems have been forged and afcribed to former ages with fome fuccefs. Philofophical treatifes might be invented which it would be difficult to detect ; but there is not a fingle inftance on record where an attempt has been made to forge a hiftory or a long epiftle, where the fraud has not been either fully proved, or rendered fo fufpicious that few are weak enough to believe it. Whoever attempts to forge a hiftory or an epiftle in the name of an ancient author, will be in great danger of contradicting the liftory or the manners of that age, efpecially if he relate events which are not mentioned in general hiltory, but fuch as refer to a fingle city, fect, religion, or fchool.

The difficulty of forging fuch hiftories as the gofpels,
(z) The ftyle of Clemens Romanus may perhaps be an exception. By many eminent critics it has been thought io like to that of the epitle to the Hebrews, as to give room for the opinion that Clement either was the author of that epifle, or was the perion who tranflated it from the Syro. Chaldaic language, in which it was coriginally compofed.

## $S$ C R

pture. and fuch epifles as thofe of Paul, cannot be overcome by all the genius, learning, and induttry, of any individual or fociety of men that ever lived. They contain a purer fyftem of ethics than all the ancient phifofophers could invent : They difcover a candour and modefty unexampled: They exhibit an originality in the character of Jefus, and yet fuch a confiftency as the imagination of our beft poets has never reached. Now it is a very remarkable circumflance, that hiftories written by four different men fhould preferve fuch dignity and confiftency, though frequently relating different actions of Jefus, and defeending to the moft minate circumfances in his life. 'Ihe fcene of action is too extenfive, and the agreement of facts with the fate of the times as reprefented by other hiftorians is too clofe, to admit the poffibility of forgery.

The fcene of action is not confined to one conntry, it is fucceffively laid in the greateft cities of the Roman empire ; in Rome, in Antioch, in Corinth, in Athens, as well as in Jerufalem and the land of Paleftine. In: mumerable allufions are made to the manners and opinions of the Greeks, the Romans, and the Jews; and refpecting the Jews, they extend even to the trifies and follies of their fehools. Yet after the ftricteft examination, the New Teftament will be found to have a wonderful coincidence and harmony with Jofephus, the principal hiftorian of thefe times, and an enemy of Cliriftianity.

It has been a queftion who the foldiers were who are faid in the gofpel of Luke to have addreffed John the Baptit in thefe words, What jball zve do? An anfwer to this queftion may be found in Jofephus*. Herod the tetrarch of Galilee was engaged in a war with his father-in-law Aretas, a petty king in Arabia Petræa, at the very time that John was preaching in the wildernefs; and the road from Galilee to Arabia running through that wildernefs, the foldiers on their march had this interview with the Baptift. A coincidence like this, which has been overlooked by all the commentators, would not probably be attended to in a forgery.

Another inftance of an agreement no lefs remarkable we fliall quote from the valuable work of Michaelis. It has been a queftion of fome difficulty among the learned, who was the Ananias who commanded St Paul to be frnitten on the mouth when he was making his defence before the council in Jerufalem *. Krets, in his remarks taken from Jofephus, has fhown him to have been the fon of Nebedeni. But if fo, how can it be reconciled with chronology, that Anamias was, at that time, called high prieft, when it is certain from Jofephus that the timre of his holding that office was much carlier ? And how comes it to pafs that St Paul fays, "I wift not, brethren, that he was the high prieft?" The facerdotal garb mult have difcovered who he was: a jeft would have ill-fuited the gravity of a tribunal ; and a falfehood is inconfiftent with the charakter of St Paul.
All thefe difficulties vanifh as foon as we examine the Special hifory of that period: "Ananias the fon of Nebecieni was high prieft at the time that Helena queen of Adiabene fupplied the Jews with corn from Egypt, during the famine which took place in the fourth year of Claudius, mentioned in the eleventh chapter of the Acts. St Paul therefore, who took a jnurney to Jerinfalem at that period, could not have been ignorant of

## 431 S C R

the elevation of Ananias to that dignity. Soon after Scriptures the holding of the firt council, as it is called, at Jerufalem, Ananias was difpoffeffed of his office, in confequence of certain acts of violence between the Samaritans and the Jews, and fent prifoner to Rome; but being afterwards releafed, he returned to Jerufalem. Now from that period he could not be called bigh-priefl in the proper fenfe of the word, though Jofephus has fometimes. given him the title of agxteseus, taken in the more extenfive meaning of a prieft, who had a feat and voice in the Sanhedrim ; and Jonathan, though we are not ac. quainted with the circumftances of his elevation, had been raifed in the mean time to the fupreme dignity in the Jewifh church. Between the death of Jonathan, who was murdered by order of Felix, and the highprielthoor? of 1 fmael, who was invelted with that dignity by Agrippa, elapfed an interval during which the facerdotal office was vacant. Now it happened precifely in this interval that St Paul was apprehended in JerufaIem : and, the Sanhedrim being deftitute of a prefident, he undertook of his own authority the difcharge of that office, which he executed with the greateft tyranny. It is poffible therefore that St Paul, who had been only a few days in Jerufalem, might be ignorant that Ananias, who had been difpoffeffed of the prietthood, had ? taken upon himfelf a truft to which he was not intitled; he might therefore vety naturally exclain'; 'I wift not, brethren, that he-was the high-prief! !' Admitting him on the otker hand to have been acquainted with the fact; the expreffion muft be confidered as an indirect reproof, and a tacit refufal to recognize ufurped au* thority."

Could fuch a correfpondence as this fubfilt between truth and falfehood, between a forgery and all authentic hiftory? or is it credible that thefe events could be related by any perfon but a contemporary?

Impreffed with the love of truth, and feeling con-There at: tempt as well as deteftation at pious frauds, we hefitate alfo appanot to acknovledge, that in fome particular facts there rent inconis a difference either real or apparent between Jofephus fintencies, and the writers of the New Teftament. The objec-promaliy tions arifing from thefe differences are of two kinds: arife frona 1. Sach as would prove a book not to have been writ- - verfight ten hy the authot to whom it is. aferibed. ${ }^{2}$ Sucl as ten hy the author to whom it is afcribed. 2 . Such as phus; would prove that the author was mittaken, and therefore not divinely infpired. T' the following objection: St Paul fays (2 Cor. xi. 32.) that the governor of Damalcus was under. Aretas the king : but if we are to judge from the 18 th book of the Jewifh Antiquities, which correfponds with the period of St Paul's journey to Damafous, this city mufe have belonged at that time to the Romans; and what authority could Aretas, a petty king in Arabia Pctræa, have in fuch a city? In anfwer to this que值ion, J. G. Hyne, in a differtation publifhed in 1755 , has fhown it to be lighly probable that Aretas, againft whom the Romans, not long before the death of Tiberius, made a declaration of war, which they neglected to put in execution, took the opportunity of feizing Damafcus, which had once belonged to his anceftors; an event omitted by Jofephus, as forming no part of the Jewifh hifory, and by the Roman hiforians as being a matter not flattering in itfelf, and belonging only to a diltant province. Secondly, That Aretas was by religion a Jew; a circumilance the more credible, when we refle? that

Judaifa.

## $S$ C R

Judaifm had been widely propagated in that country, and that even kings in Arabia Felix had recognized the law of Mofes. The difficulty then is fo far removed, that it ceafes to create fufpicion againft an epille which has fo many evident marks of authenticity; and it is only to be regretted that, in order to place the fubject in the cleareft point of view, we are not fufficiently acquainted with the particular hiftory of Da. mafcus.

Examples of the fecond kind are fuch as, if allowed their frll force, might indeed prove a writer not divinely infpired, but could afford no reafon to conclude that he was not the author of the writings which bear his name, fince miftakes may be committed by the moft accurate hiftorian. The chief difficulties of this nature are found in the gefpel according to St Luke, and do not apply to the writings of Matthew, John, Paul, and Peter. Laying afide the idea of infpiration altogether, let us inquire whether Luke or Jofephus be moft intitled to credit in thofe paffages where they differ; which of them is moft accurate, and which of them had
the beft opportunities of exploring the truth of the facts which they relate. Now Jofephus relates the fame ftory differently in different parts of his works, and is fometimes equally miftaken in them all. We do not recollect to have feen fuch inconfiftencies in the writings of St Luke. Luke knew the characters, and witneffed many of the facts, of whicl he fpeaks; and he could receive the beft information refpecting thofe facts which were tranfacted in his abfence. Jofephus was born A. D. 37, fome years after our Savieur's afcenfion. Now it is a very important obfervation of Michaelis, that the period of hiftory with which mankind are leaft acquainted is that which includes the time of their childhood and youth, together with the twenty or thirty years immediately preceding their birth. Concerning the affairs tranfacted during that period, we are much more liable to fall into miftakes than concerning thofe of a remoter age. The reafon is, that authentic hiltory never comes down to the period of our birth; our knowledge of the period immediately preceding depends on hearfay ; and the events, which pafs within the firft eighteen or twenty years of our lives, we are too young and heedlefs to obferve with attention. This mutt have been more remarkably the cafe in the time of Jofephus than at prefent, when there were neither daily papers nor periodical journals to fupply the want of regular annals. There was no hiftorian from whom Jofephus could derive any knowledge of the times that immediately preceded his birth. There is a period then of forty or fifty years, in which, even with the moft diligent inquiry, he was expofed to error.

When we find therefore the relations of Luke and Jofephus fo different as not to be reconciled, it would be very unfair to determine without any further inquiry in favour of Jofephus. Let their character, and works, and fituation, be ftrietly examined; let their teftimony be duly weighed and compared; and then let the preference be given to that author who, according to the ftricteft rules of equity and juftice, feems intitled to the higheft degree of credit. The decifion of a jury, we fhall venture to fay, would in every inftance turn out in favour of Luke.

Having thus afcertained the authenticity of the books of the New Teftament, the next thing to be confidered

144 ] S C I
is their infpiration. It is certainly of fome importance Serip to know how far the apoftes and evangelits were guided in their writiags by the immediate influence of the In fpirit of God; though this knowledge, if attainable, is of the not equally important with that of the authenticity of Teftar thefe writings. Michaelis indeed afferts, that the divinity of the New Teftament may be proved whether we can evince it to be written by immediate infpiration or not $\dagger$. "The queftion (fays he), whether the books of $t$ Chat the New Teftamentare infpired? is not fo important as \$ 1 the queftion, whether they are genuine? The truth of our religion depends upon the latter, not abfolutely on the former. Had the Deity infpired not a fingle book of the New Teftament, but left the apoftles and evangelifts without any other aid than that of natural abilities to commit what they knew to writing, admitting their works to be authentic, and poffeffed of a fufficient degree of credibility, the Chriftian religion would ftill be well founded. The miracles by which it is con- Not ne firmed would equally demonftrate ite truth, even if the fary to perfons who attefted them were not infpired, but fimply truth chrifi human witneffes; and their divine authority is never ty acco prefuppofed, when we difcufs the queftion of miracles, ing to but merely their credibility as human evidence. If the opinior miracles are true which the evangelifts relate, the doc- Michai trines of Chrift recorded in the gofpels are proved to be the infallible oracles of God; and, even if we admit the apofles to be mittaken in certain not effential circumftances, yet as the main points of the religion which Chrift commiffioned them to preach are fo frequently repeated, their epiftles would inftruct us as well in the tenets of the Chriftian fyftem, as the works of Maclaurin in the philofophy of Newton. It is poffible therefore to doubt, and even deny, the infpiration of the New Teftament, and yet be fully perfuaded of the truth of the Chriftian religion: and many really entertain thefe fentiments either publicly or in private, to whom we fhould render great injuftice, if we ranked them in the clafs of unbelievers.
"Yet the Chrittian religion would be attended with difficulty, if our principium cognofcendi refted not on firmer ground ; and it might be objected, that fufficient care had not been taken for thofe whofe confciences were tender, and who were anxioufly fearful of miftaking the fmalleft of the divine commands. The chief articles indeed of Chriftianity are fo frequently repeated, both by Chrift and his apofles, that even were the New '「eftament not infpired, we could entertain no doubt of the following doctrines: 'Jefus was the Meffias of the Jews, and an infallible meffenger of God: he died for our iniquity ; and by the fatisfaction made by his death we obtain remiffion of fins, if on our part be faith and amendment of life : the Levitical law is abolifhed, and moral precepts, with the ceremonies of Baptifm and the Supper of the Lord, are appointed in its ftead: after the prefent follows an everlaiting life, in which the virtuous fhall be rewarded and the wicked punifhed, and where Chrift himfelf fhall be the Judge.'
"To the epiltles indeed (fays Michaelis), infpiration is of real confequence; but with refpect to the hiftorical books, viz. the Gofpels and the Acts of the $A=$ poftles, we fhould really be no lofers if we abandoned the fyftem of infpiration, and in fome refpects have a real advantage. We fhould be no lofers, if we confidered the apoftles in hiftorical facts as merely human witneffes,

## $S \quad C R$

pure. as Chriik himfelf has done in faying, 'Ye alfo fhall bear witnefo, becaufe ye have been with me from the beginning *.' And no one that attempts to convince an unbeliever of the truth of Chriftianity, would begin his demonftration by prefuppofing a doetrine which his adverfary denies, but would ground his arguments on the credibility of the evangelifts as human hiftorians, for the truth of the miracles, the death, and the refurrection of Chrift. Even thofe who examine the grounds of their faith for their own private conviction, muft treat the evangelifs as human evidence ; fince it would be arguing in a circle to conclude that the facts recorded in the gofpels are true, becaufe they are infpired, when we conclude the Scriptures to be infpired in confequence of their contents. In thefe cafes, then, we are obliged to confider the evangelifts as human evidence; and it would be no detriment to the Chriftian caufe to confider them at all times as fuch in matters of hiftorical fact. We find it nowhere exprefsly recorded that the public tranfactions which the apoflles knew by their own experience, and of which $S t$ Luke informed limfelf by diligent inquiry, fhould be particular objects of divine infpiration. We thould even be confiderable gainers, in adjuiting the harmony of the gofpels, if we were permitted to fuppofe that fome one of the evangelifts had committed an immaterial error, and that St John has reetified fome trifling mitakes in the preceding gofpels. The molt dangerous objections which can be made to the truth of our religion, and fuch as are moft difficult to anfwer, are thofe drawn from the different relations of the four evangelits."

Before any inquiry is made refpecting the infpiration fof the books of the New Teflament, it is neceffary to determine the meaning of the term; for theologians Have given to it a variety of fignifications. Moft of the German divines make it to confift in an infufion of words as well as ideas. Luther, Beza, and Salmafius, reftrict it to ideas alone. Doddridge underftands by it an intervention of the Deity, by which the natural faculties of the mind were directed to the difcovery of truth. Warburton and Law think it was a negative intervention to preferve the facred writers from effential errors. Some believe every circumftance was dictated by the Holy Gholt; others fuppofe that no fupernatu. ral affiftance was granted except in the epiftolary writings. See Inspiration.

As there is an evident diftinction between infpiration and revelation, and as the origin of the Chriftian religion may be ftill proved divine, even though it were detied that thofe who record its facts and doctrines were infpired in the act of writing, it will be moft judicious and fafe to employ the word infpiration in that fenfe which can be moft eafily defended and fupported. By doing this much may be gained and nothing loft. It is difficult to prove to a deift that the words of Scripture are divine, becaufe he fees that every writer has words and phrafes peculiar to himfelf. It is difficult alfo to prove that the ideas were infufed into the mind of the authors while they were engaged in the act of writing; becaufe concerning facts they appeal not to civine infpiration, but declare what they bave feen and beard. In reafoning they add their own fentiments to what they had received from the Lord, and fubjoin, efpecially in their epifles, things not connected with religion. The definition which Doddridge gives, feems

## Vox. XVII. Part I.

applicable to ordinary gifts or the ufual endowments of scripture. rational creatures, rather than to the extraordinary gifts of the Holy Spirit, which were beftowed on the apoftles. Thofe who maintain that every fact or circun. flance was fuggefted by divine infpiration, will find it no eafy matter to prove their pofition. The opinion of Warburton and Law, with proper explanations, feems moft probable. The opinion of Grotius, that only the epiftles were infpired, may be eafily refuted.

The proof of the authenticity of the New Teftament depends on human teftinony : The proof of its infpiration is derived from the declaration of infpired perfons.

In proving that the New Teffament is infpired, we The ${ }^{119}$ prefuppofe its authenticity that the facred books were of it dewritten by the apoftles whofe names they bear, and pends on that they lave been conveyed to us pure and uncor- the deciararupted. This we have already attempted to prove, and Chrift and we hope with fuccefs. The evidence of infpiration is his athe teftimony of Chriit and his apoflles, which we re-pofles. ceive as credible, becaufe they confirmed their doctrines by miracles. From the important miffion of Chrift and his apofles, we infer that every power was beftowed which divine wifdom thought expedient; and from their conduct we conclude, that it is morally impolfible that they could lay claim to any powers which they did not poffefs. It is proper therefore to inquire into the declarations of Chrift and his apoftles concerning the nature, degree, and extent, of the infpiration bettowed upon the writers of the facred books.

If we confider Chrifts more immediate promifes of ${ }^{120}$ infpiration to the apoftles, we fhall find that he has rations of given them, in the moft proper fenfe of the word, at Chrit. three feveral periods, Ift, When he fent the apofles to preach the gofpel $\dagger$; 2dly, In holling a public difcourfe $\dagger$ Matt. $x$. relating to the gofpel, at which were prefent a confi- ${ }^{19}, 20$. derable multitude; 3 dly, In his prophecy of the deftruction of Jerufalem $\ddagger$. When he fent the apoftles to Mark xiiis preach the gofpel, he thus addreffed them: "When ${ }_{\text {xxi, ; }}^{11}$; Luke 15 . they deliver you up, take no thought how or what ye $x$. 14, 150 thall fpeak, for it flall be given you in that fame hour what ye fhall fpeak; for it is not you that fpeak, but the fpirit of your Father that fpeaketh in you." The fame promife was made almoft in the fame words in the prefence of an immenfe multitude (Luke xii. I1, 12.) From thefe paffages it has been urged; that if the apofles were to be infpired in the prefence of magiftrates in delivering fpeeches, which were foon to be forgotter, it is furely reafonable to conclude that they would be infpired when they were to compofe a ftandard of faith for the ufe of all future generations of Chriflians. If this conclufion be fairly deduced, it would follow that the writings of the New Teftament are the dictates of infpiration, not only in the doctrines and precepts, but in the very words. But it is a conclution to which fincere Chriftians have made objections; for, fay they, though Chrift promifes to afflit his apoftles in cafes of great emergency, where their own prudence and fortitude could not be fufficient, it does not follow that he would dictate to them thofe facts which they knew already, or thofe reafonings which their own calm reflection might fupply. Befides, fay they, if the New Teftament was dictated by the Holy Spirit, and only pen. ned by the apoftles, what reafon can be given for the care with which Chrift inftrueted them boll during his

## $S$ C R [ 146$] \quad$ S C R

## $\underbrace{\text { Scriptu: }}$

12. Proper idea of infie ira. tion.
minitry and after his crucifixion in thofe things pertaining to the kin ydom of God?

In anfwer to this, we may obferve, that though it be difficult to prove that the identical words of the New Teftament were dictated by the Holy Spirit, or the train of ideas infufed into the minds of the facred writers, there is one fpecies of infpiration to which the New Teftament has an undoubted claim. It is this, that the memories of the apoftles were ftrengthened and their underftandings preferved from falling into effential errors. This we prove from thefe words of our Saviour, "and I will pray the Father, and he will give you another comforter, that he may abide with you for ever. He Thall teach you all things, and bring all things to your

- John xir. rememberance whatfoever I have faid unto you *."

36,26 . This promife was furely not reftrained to the day of Pentecolt : it muft have been a permanent gift enabling the apoftles at all times to remember with accuracy the difcourfes of our Saviour. When the apoftles therefore (Matthew and John) relate thofe precepts of Chrift which they themfelves had heard, they write indeed from memory, but under the protection of the fpirit who fecures them from the canser of initake: and we muft of courfe conclude that their gofpels are infpired.

Were we called upon more particularly to declare what parts of the New Teftament we believe to be infpired, we would anfwer, The doctrines, the precepts, and the prophefies, every thing effential to the Chriftian religion. From thefe the idea of infpiration is infeparable. As to the events, the memory of the apoftles was fufficient to retain them. If this opinion be jult, it would enable us to account for the difcrepancies between the facred writers, which are chiefly confined to

## Why the

 greateft fart of it i writ:en in Gicek. the relation of facts and events.All the books of the New Teftament were originally written in Greek, except the gofpel according to Matthew and the epiftle to the Hebrews, which there is reafon to believe were compofed in the Syro-Chaldaic language, which in the New Teftament is called Hebrew.

Various reafons have been affigned why the greateft part of the New Teftament was written in Greek ; but the true reafon is this, It was the language beft under. ftood both by writers and readers. Had St Paul written to a community in the Roman province of Africa, he might have written perhaps in Latin; but epiftles to the irhabitants of Corinth, Galatia, Ephefus, Philippi, and Theffalonica, to Timothy, Titus, and Philemon, from a native of Tarfus, could hardly be expected in any other lanquage than Greek. The fame mav be faid of the epifles of St Peter, which are addreffed to the Chriftians of different countries, who had no other language in common than the Greek; and likewife of the epifles of St James, who wrote to Jews, that lived at a dittance from Paleftine, and were ignorant of Hebrew. The native language of St Luke, as well as of Theophilus, to whom he addreffed his gofpel, and Acts of the apoftles, appears to have been Greek; and that St John wrote his gofpel in that langrage, and not in Hebrew, is by no means a matter of furprife, fince he wrote at Ephefus.
NTick relis,
vol. i. chap. With refpect to the epifle to the Romans, it may 4. feet. I. 1. 101.
which remains to be proved. It is very probable that Sript St Paul was acquainted with the Latin ; but between underfanding a languave, and being able to write it, there is a very material difierence. As St Paul was a native of Tarfus, his native language was Greek; he had travelled during feveral years through countries in which no other language was foken, and when he addreffed the Roman centurion at Jerufalem, he fooke not Latin, but Greek. Is it extraordinary, then, that in writing to the inhabitants of Rome he fhould have ufed a language which was there fo generally underflood? It has bcen long remarked, that Greek was at that time as well known in Rome as French in any court of modern Europe: that according to Juvenal even the female fex made ufe of Greek as the lanouage of familiarity and paffion ; and that in letters of friend. .hip Greek words and phrafes were introduced with greater freedom than French expreffions in German letters, as appears from Cicero's epiftles to Atticus, and from thofe of Auguftus preferved in the works of Suetonius. To this mult be added a material circumflance, that a great part of the Roman Chriftians confifted of native Jews, who were better acquainted with Greek than with Latin, as either they themfelves or their anceftors had come from Greece, Afia Minor, or Egypt, in which Greek was the language of the country. At leaft they read the bible in that language, as no Latin tranflation of the Old Teftament at that time exitted ; and the Chritian church at that period confifting chiely of Jews, the heathen converts in Rome were of courfe under the neceffity of accuftoming themfelves to the Greek language. In thort, St Paul in his epiftle to the Romans made ufe of a language in which alone thofe who were ignorant of Hebrew could read the bible. What has been here advanced refpecting the epifte to the Romans is equally applicable to the Greek of St Mark, on the fuppofition that it was writter at, Rome.

To the above arguments may be added the example of Jofephus, who, as well as the Apoftles, was by birth a Jew. He even lived in Rome, which is more than can be faid of St Paul and St Mark, who refided therć only a certain time: he was likewife younger than either ; he came to Italy at an age which is highly fuitable to the learning of a language, and previous to that period had fpent feveral years in the Roman camp. 'The Jewifh antiquities, the hiftory of the Jewifh war, and the account of his own life, he wrote undoubtedly with a view of their being read by the Romans; and yet he compofed all thefe writings in Greek. He expreffes his motive for writing his Greek account of the Jewifh war in the following terms: "That having written in his native language ( $i$. e. the Hebrew dialect at that time foken) a hiftory of the war, in order that Parthians, Babylonians, Arabians, Adiabenes, and the Jews beyond the Euphrates, might be informed of thofe events, he was now refolved to write for the Greeks and Romans, who had not been engaged in the campaigns, a more certain account than had hitherto been given." The motives which induced Jofephus to write in Greek are fully as applicable to St Paul and St Mark.

Michaelis has thus characterized the fyle of the New Micha Teftament. "The New Teftament (fays he) was chap. it written in a language at that time common among the fecep.

## S C R

Jews, which may be named I Iebraic Greek; the firlt traces of which we find in the tranflation of the LXX.
" Eivery man acquainted with the Greek lanruage, who had never heard of the New Teftarnent, muft immediately perceive, on reading only a few lines, that the ftyle is widely diferent from that of the claffic authors. We find this character in all the books of the New Teftament in a greater or lefs degree, but we muft not therefore conclude that they poffefs an uniformity of tyle. 'The harthe't Hebraifms, which cxtend even to grammatical errors in the government of cafes, are the dilinguithing marks of the book of Revelation; but they are accompanied with tokens of senius and poetical enthufiafm, of which every reader muft be fenfible who has tafte and feeling. There is no tranflation of it which is not read with pleafure even in the days of childhood; and the very faults of gram= mar are fo happily placed as to produce an-agreeable effect. The gofpels of St Matthew and St Mark have ftrong marks of this Hebraic flyle; the former has hatfier Hebraifms. than the latter, the fault of which may be afcribed to the Gieek tranflator, who has made too literal a verfion, and yet the gofpel of St Mark is written in worfe language, and in a manner that is lefs agrecable. The epiftles of St James and St Jude are fomewhat better; but even thefe are full of Hebraifms, and betray in other refpects a certain Hebrew tone. St I uke has in feveral paffages written pure and claffic Greek, of which the four firt verfes of his gofpel may be given as an inftance : in the fequel, where he defcribes the action 3 of Chrift, he has very harth Hebraifms, yet the ftyle is more agreeable than that of St Matthew or S't Mark. In the Acts of the apoftles he is not free from Hebraifms, which he feems to have never ftudioufly avoided; but his periods are more claffically turned, and fometimes poffefs beauty devoid of art. St John has numerous, though not uncouth, Hebraifms both in his gofpel and epiftes; but he has written in a fmooth and flowing language, :nd furpaffes all the Jewifh writers in the excellence of narrative. St Paul again is entirely different from them ayt; his fyle is indeed neglected and full of Hebraifms, but he has avoided the concife and verfe-like conftruction of the Hebrew language, and has upon the whole a confiderable fhare of the roundnefs of Grecian compofition. It is evideut, that he was as perfectly acquainted with the Greek manner of exprefion as with the Hebrew, and he has introduced them alternately, as cither the one or the other fuggefted itfelf the firft, or was the beft approved."

Michaelis has flown that the New Teftament not only contains Hebraifms but Rabbinifms, Syriafms, Chaldaifms, Arabifms, Latinifms, and Perfian words, of which he has exhibited many fpecimens. 'To theologians, whofe duty it certainly is to ftudy the language of the New 'l'eftament with attention, we would ftrenoufly recommend the perufal of this work, which in the Englifh tranflation is one of the moft valuable acceffions to fcriptural criticifm that has yet appeared. We fpeak of the Englifh tranflation, which the large and judicious notes of Mr Marfh has rendered infinitely, fuperior to the origital.

To the obfervations which have been made refpeding the language of the New Teftament, a few remarks may be added concerning the peculiarities of the flyle

## S C R

As to elegance, there is an elegance which refults from the ufe of fuch words as are moft in ufe with thofe who are accounted fine writers, and from fuch arrangements in the words and claufes as have generally obtained their approbation. This is difclaimed by the facred authors.

But there is an elegance of a fuperior order more nearly connected with the fentiment ; and in this fort of elegance they are not deficient. In all the oriental languages great ufe is made of tropes, efpecially metaphors. When the metaphors employed bear a ftrong refemblance, they confer vivacity : if they be borrowed from objects which are uaturally agreeable, beautiful, or attractive, they add alfo elegance. The Evangelifts furnifh us with many examples of this kind of vivacity and elegance. Our Lord borrows tropes from cornfields, vineyards, gardens, \&c.

## Dr Cimp.

 beli's meshor. Prel Dif to the Gofpels.As a valuabbe appendage to this part of our fubject, we flall fubjoin Dr Campbell's method of fudying the books of the New Teftament. This we offer to our readers as a beautiful inflance of the judicious application of philofophy to facred fludies. It is the fame method of difcovering truth by analy fis and induction, which was purfued by Sir Ifrac Newton with fuch aftonifhing fucceff, which fince his time has been uniormly practiried in natural philofophy, and has been alfo applied to chemiftry, to medicine, to natural hiftory, and to the philofophy of mind, by the ingenious Dr Reid. This is the path of found philofoply, which can alone lead to the difcovery of truth. In following ir, our progrefs may be fow, but it will be fure. If all theologians would dteadily adhere to it, we might then entertain the pleafant hope of difcarding for ever thofe abfurd fyptems of religion which are founded on fingle paffages and detached fragments of fcripture, and of ettablifhing opinions and doectrines on a folid foundation.
"1. To get acquainted with each writer's fyle ; to obferve hiis manner of compofition, both in fentences and paragraphs; to remark the words and phrafes peculiar to lim, and the peculiar application that he may fome. times make of ordinary words; for there are few of thofe writers who have not their peculiarities in all the refpects now mentioned. This acquaintance with each can be attained only by the frequent and attentive reading of his works in his own language.
" 2 . To inquire into the charaderer, the fituation, and the office of the writer, the time, the place, and the occafion of his writing, and the people for whofe immediate ufe he originally intended his work. Every one of thefe particulars will fometimes ferve to ellucidate expreflions otherwife obfcure or doubful. This knowledge may in part be learned from a diligent and reiterated perufal of the book itfelf, and in part be gathered from what authentic, or at leaft probable, accounts have been tranfimitted to us concerning the compilement of the canon.
" 3 . The laft general direction is, to confider the principal cope of the book, and the particulars chieffy observable in the method by which the writer has purpofed to executt his defign. This direteion is particularly applicable to the epifolary writings, efpecially thofe of Paul.
"4. If a particular word or phrafe occur, which appears obfcure, perhaps unintelligible, the firft thing we sugglt to do, if fatisfied that the reading is genuine, is

## 148 ] S C R

to confult the context, to attend to the manner where- Scrip in the, term is introduced, whether in a chain of reafon: ing or in a hiftorical narration, in a defcription, or included in an exhortation or command:. As the conclu. fion is inferred from the premiffes, or as from two or more known truths a third unknown or unobferved before may fairly be deduced; fo from fuch attention tothe fentence in connection, the import of an expreffion, in itfelf obfcure or anbiguous, will fametimes with mo. ral certainty be difcovered. This, however, will not. always anfwer.
" 5 . If it do not, let the fecond confideration be, whether the term or phrafe be one of the writer's peculiarities. If fo, it comes naturally to be inquired, what is the acceptation in which he employs it in other places? If the fenfe cannot be precifely the fame in the paffage under review, perhaps, by an eafy and natural metaphor or other trope, the common acceptation may give rife to one which perfectly fuits the paffage in queftion.Recourfe to the other places wherein the word or phrafe occurs in the fame author is of cenfiderable ufe, thoughs the term fhould not be peculiar to him.
" 6. But thirdly, if there fhould be nothing in the. fame writer that can enlighten the place, let recourfe be had to the parallel paffages, if there be any fuch, in the other facred writers. By parallcl paffages, I mean. thofe places, if the difficulty occur in hiftory, wherein the fame or a fimilar flory, miracle, or event, is related; if in teaching or reafoning, thofe parts wherein the fame argument or doctrine is treated, or the fane parable propounded; and in moral leffons, thofe whertin the faine clafs of duties is recommended; or, if the difficulty be found in a quotation from the Old Teflament, let the parallel paffage in the book referred to, both in the original Hebrew, and in the Greek verfion, be con. fulted.
" 7 . But if in thefe there be found nothing that can throw light on the expreffion of which we are in doubt, the fourth recourfe is to all the places wherein the word. or phrafe occurs in the New Teftareent, and in the Septuagint verfion of the Old, adding to thefe the coufideration of the import of the Hebrew or Chaldaic word ${ }_{2}$ whofe place it occupies, and the extent of fignification, of which in different occurrences fuch Hebrew or Chaldaic term is fufceptible.
" 8. Perhaps the term in queftion is one of thofe which very rarely occur in the New Teftament, or thofe called $\alpha \pi \alpha \xi$ дıv $\nu \mu \nu \downarrow$, only once read in Scripture, and not found at all in the tranflation of the Seventy. Several fuch words there are. There is then a neceflity, in the: fifth place, for recurring to the ordinary acceptation of the t erm in claffical authors. This is one of thofe cafes wherein the interpretation given by the earlieft Greek fathers deferves particular notice. In this, however, I limit myfelf to thofe comments wherein they give a literal expofition of the facred text, and do not run into vifion and allegory."
The manufcripts of the New Teftament are the na- Manuf tural fource from which the genuine readings of the of the Greek Teftament are to be drawn. The printed edi-Tefam tions are either copies of more ancient editions, or of manufcripts; and they have no further authority than as they correfpond to the manufcripts from which they were originally taken. By manufcripts of the Ncw Teftament, we mean thofe only which were written before

## S C R [ 149 ] S C R

pure the invention of printing, The moft ancient of thefe are loft, and there is no manufcript now extant older than the fixth century. Few contain the whole New Teftament ; fome contain the four gofpels ; fome the Acts of the Apofles and Epiftes; and others the book of Revelation. The greateft number are thofe which contain the firft part; thofe which have the fecond, or the firt and fecond together, are likewife numerous; but thofe of the third are extremely few. It muft be added alfo, that in many manufcripts thofe epiftles are omitted whole divine authority was formerly doubted.

There are many manufcripts which have been examined only for a fingle text, fuch as : John v. 7 . or at leatt for a very fmall number. Others have been examined from the beginning to the end, but not completely, and in refpect of all the readings. A third clafs confifts of fuch as either have been, or are faid to have been, completely and accurately collated. But this requires fuch phlegmatic patience, that we can hardly expect to find in critical catalogues all the various readings which have been only once collated. Wetftein, in collating many manufcripts ancw, made difcoveries which had entirely efcaped the notice of his predeceffors. The fourth clafs confifts of fuch as have been completely and accurately collated more than once; but here allo we are in danger of being led into error.When various readings are transferred from one critical edition to another, as from that of Gregory to Mill's edition, and from the latter to thofe of Bengel and Wettein, the manufcripts mult fometimes be falfely named, and various readings mult frequently be omitted. And as Wetttein has marked by ciphers manufcripts that in former editions had been denoted by their initial letters, he could hardly avoid fubftituting, in fome cafes, one figure inftead of another. The fifth clafs, which is by far the moft valuable, confifts of fuch as have been printed word for word, and therefore form an original edition of the Greek Teftament. We can boaft but of a very few manufcripts of this kind. Hearne printed at Oxford, in 1715 , the Acts of the Apoftles in Greek and Latin from the Codex Laudianus 3. ; Knittel has annexed to his edition of Ulphilas, p. 53-118, a copy of two very ancient fragments preferved in the library of Wolfembuttle; the one of the four Gofpels in general, the other of St Luke and St John. Woide printed in 1786 the Codex Alexandrinus, a manufcript of great antiquity, which thall afterwards be more fully defcribed; and the Univerfity of Cambridge has refolved to publifh, in a fimilar manner, the Cod. Cant. I. or, as it is fometimes called, the Codex Bezæ, the care of which is intrufted to. Dr Kipling, a publication which will be thankfully received by every friend to facred criticifm. It was the intention of the Abbé Spoletti, a few years ago, to publifh the whole of the celebrated Codex Vaticanus; which would likewife have been a moft valuable acceffion, fince a more important manufcript is hardly to be found in all Europe. He delivered for this purpofe a memorial to the Pope; but the defign was not put into execution, either becaufe the Pope refufed his affent, or the Abbé abandoned it himfelf. See the Oriental Bible, vol. $x \times i i . n^{8} 333$. and vol. xxiii. $n^{9} 348$.
"A very valuable library," fays Michaelis, " might be compoled of the impreffions of ancient manufcripts,
which, though too expenfive for a private perfon, fhould Scripture. be admitted into every univerfity collection, efpecially $I_{30}$ the Alexandrine and Cambridge manufcripts, to which Michaelis's I would add, if it were now poffiblè to procure it, propofal Hearne's edition of the Codex Laudianus 3. A plan faking an of this fort conld be executed only in England, by a of ancicnt private fubfcription, where a zeal is frequently difplay- mancued in literary undertakings that is unknown in otherferi; ts, countries; and it were to be wifhed that the project Vol. ii. were begun before length of time has rendered the ma. P. 182. nufcripts illegible, and the attempt therefore fruitlefs. .'Ien thoufand pounds would go a great way toward the fulfilling of this requeft, if the learned themfelves did not augment the difficulty of the undertaking, by adding their own critical remarks, and endeavouring thereby to recommend their publications, rather than by prefenting to the public a faithful copy of the original. Should pofterity be put in poffeffion of faithful impref. fions of important manufcripts, an acquifition which would render the highelt fervice to facred criticifin, all thefe editions of the New. Teftament fhould be regulated on the fame plan as Hearne's edition of the Acts of the Apofles." It muft be highly flattering to the patriotic fpirit of an Englifhman to hear the encomiunswhich learned foreigners have fo profufely beftowed on our liberality in fupporting works of genius and learning and public utility. - The plan which Michaelis propofes to us, in preference to all the other nations in Europe, is noble and magnificent, and would certainly confer immortality on thofe men who would give it their patronage and affiftance.

There are many ancient manufcripts, efpecially in Italy, which have never been collated, but lie Itill unexplored. Here is a field where much remains to be donc. See Marfh's Notes to Michaelis, vol ii. p. 643.

Michaelis has given a catalogue of ancient manufcripts, amounting in number to 292 , to which he has added a fhort account of each. In this place we fhall confine our obfervations to the moft celebrated, the Alexandrian and Vatican manufcripts, which we have chiefly extracted from Michaelis.
The Alexandrine muanufcript confifts of four vo- Account of lumes; the three firit of which contain the Old Tefta- the A'exazament, the fourth the New 'Ceftament, together with the firt Epiftle of Clement to the Corinthians, and a fragment of the fecond. In the New. ' $e f t a m e n t$, which alone is the object of our prefent inquiry, is wanting the beginning as far as Matthew xxv. 6. ovo $\mu q n s$ n $\rho x^{-6}$ rat, likewife from John vi. 50. to viii. 52. and from 2 Cor. iv. 13. to xii. 7. It muft likewife be obferved, that the Pfalms are preceded by the epiftle of Athanafus to Marcellinus, and followed by a catalogue, containing thofe which are to be ufed in prayer for each hour, both of the day and of the night; alfo by 14 hymus, partly apocryphal, partly biblical, the 11 th of which is an hymn in praife of the Virgin Mary, entit-
 Eufebii are annexed to the Pfalms, and his Canones to the Gofpels. It is true, that this has no immediate reference to the New 'Ieftament, but may have influence in determining the antiquity of the manufcript it. felf.

It has rieither accents nor marks of afpiration; it is written with capital, or, as they are called, uncial letters,

## $\mathrm{S} C \mathrm{R}$

Scripture. and has very few abbreviations. There are no intervals between the words; but the fenfe of a paffage is fometimes terminated by a point, and fometimes by a vacant fpace. Here arifes a fufpicion that the copyite did not underftand Greek, becaufe thefe marks are fometimes found even in the middle of a word, for in. ftance Levit. v. f. avorus $n$ for av ouron, and Numb. xiii. 29. $\mu \omega$ rans.

This manufcript was prefented to Charles I. in 1628, by Cyrillus Lucaris patriarch of Conftantinople. Cyrillus himfelf has given the following account: "We know fo much of this manufcript of the holy writings of the Old and New 'leflament, that 'ihecla an Egyptian lady of diftinction (nobilis famiza Agyptia) wrote it with her own hand 1300 years ago (A). She lived foon after the council of Nicrea. Her name was formerly at the end of the book; but when Chritianity was fubverted in Egypt by the errors of Mahomet, the books of the Chriftians fuffered the fame fate, and the name of Thecla was expunged. But oral tradition of no very ancient date (memoria et traditio recens) has preferved the remembrance of it."

But the reader will fee that this account is merely traditional. Dr Semler very properly obferves, that there is no more reafon to rely on a tradition refpecting the tranferiber of an ancient manufcript, than on a tradition which relates to an ancient relic. The arguments which have been urged by Wetfein, Semler, Oudin, and Woide, to fix the date of this manufcript, are fo many, that it would be tedious to repeat them. But, after all, its antiquity cannot be determined with certainty, though it appears from the formation of the letters, which refemble thofe of the fourth and fifth centuries, and the want of accents, that it was not written fo late as the tenth century. In this century it was placed by Oudin, while Grabe and Schulze have referred it to the fourth, which is the very utmoft period that can be allowed, becaufe it contains the epittles of Athanafius. Wetfein, with more probability, has chofen a mean between thefe two extremes, and referred it to the fifth century : but we are not juftified in drawing this inference from the formation of the letters alone, for it is well known that the fame mode of forming the letters was retained longer in fome countries and in fome monafteries than in others.

We are now in poffeffion of a perfect impreffion of this manufcript, which is accompanied with fo complete and fo critical a collection of various readings, as is hardly to be expected from the edition of any other manulcript. Dr Woide publifhed it in $17-86$, with types cait for that purpofe, line for line, without intervals between the words, as in the manufcript itfelf:

## 150 ] <br> S C IR

the copy is fo perfect a refemblance of the original, that it may fupply its place. Its title is Novum Tefamentum Gracum e codice MS. Alexandrino qui Londini in Bibliotheca Mufei Britannici affervatur defcriptum It is a very fulendid folio ; and the preface of the learned editor contaius an accurate defcription of the manufcript, with an exact lift of all ito various readings, that takes up no lefs than 89 pages ; and each reading is accompanied with a remark, in which is given an account of what his predeceffors Juninus, Walton, Fell, Mill, Grabe, and Wet\{ein, had performed or neglected.

The Vatican manuficipt contained orisinally the whole Greek Bible, including both the Old and New 'Ieftament; and in this refpect, as well as in regard to tican n its antiquity, it refembles none fo much as the Codex Alcxandrinus, but no two manuferipts are more diffi. milar in their readings, in the New Teftament as well as in the Old. After the Gofpels, which are placed in the ufual order, come the Acts of the Apoftles, which are immediately followed by the feven catholic epiftes. This muft be particularly noted, becaufe fome have con. tended that the fecond Epille of St Peter, with the fecond and third of St John, wete wanting. Profeffor Hwiid, in a letter dated Rome, April 12.178 r , affured Michaelis that he had feen them with his own eyes, that the fecond Epiftle of St Peter is placed folio' 1434, the fecond of St John fol. 1442, the third folio 1443: then follow the Epifles of St Paul, but not in the ufual order; for the Epiftle to the Hebrews is pla. ced immediately after thofe to the Theffaloniaus: and it is not improbable, that in the more ancient mant. fcript, from which the Codex Vaticnnus was copied, this Epittle was even placed before that to the Ephefians, and immediately after the Epiftle to the Galatians ( B ) : for the Epittles of St Paul are divided into 93 fections by figures written in the margin with ted ink; but the Epiftle to the Galatians ends with 59, and that to the Ephefians begins with 70 ; the Epiftle to the Hebrews, on the contrary, begins with 60, and ends with 69. With the words $x \mu \cdot 4 \mu$, $\tau_{4}$ dir, Heb. ix. I 4. the mannfcript ceafes, the remaining leaves being loft. There is wanting, therefore, not only the latter part of this Epiftle, but the Epiftes to 'Timothy, Titus, and Philemon, with the Revelation of St John: but this laft book, as well as the latter part of the Epifte to the Hebrews, has been fupplied by a modern liand in the 15 th century. In many places the faded letters have been allo retouched by a modern, but careful hand; and when the perfon who made thefe amendments, who appears to have been a man of learning, found a reading in his own manufcript which differed from that of the Codex Vaticanus, he has noted it in the margin,
and
(1) He wrote this in the year 1628 . According to this account, then, the manufcript muft have been written in 328 ; a date to which fo many weighty objections may be made, that its moft frenuous advocates will hardly undertake to defend it. But this error has furnifhed Oudin with an opportunity of producing many arguments againft the antiquity of the Codex. Alexandrinus, which feem to imply, that Grabe and others, who have referred it to the fourth century, fuppofe it to have been written in the above-mentioned year. Now it is probable, that the inference which has been deduced from the account of Cyrillus is more than he himfelf intended to exprefs, as he relates that 'Thecla lived after the council of Nicra.
(в) Probably becaufe the Epitle to the Hebrews, as well as the Epille to the Galatians, relates to the aboLition of the Mofaic law.

## $S$ C R

peure. and has generally left the text itfeff untouched, though in fome few examples he has ventured to erafe it.

It is certain, that this manufcript is of very high antiquity, though it has been difputed which of the two in this refpect is entitled to the preference, the Vaticanus or Alexandrinus. The editors of the Roman edi. tion of the Septuagint, in $15^{87}$, referred the date of the Vatican manufcript to the fourth century, the period to which the advocates for its great rival refer the Codex Alexandrinus. More moderate, and perhaps more accurate, are the fentiments of that great judge of antiquity Montfaucon, who, in his Bibliotheca Bibliothecarum, p. 3. refers it to the fith or fixth century; and adds, that though he had feen other manufcripts of equal anticquity, he had found none at the fame time fo complete.

The Codex Vaticanus has a great refemblance to the manufcripts noted by Wetfein, C. D. L.. 1. 13. 33. 69. 102. and to the Latin, Coptic, and Ethippic verfions; but it is preferable to molt of them, in being almot entirely free from thofe undeniable interpolations and arbitrary corrections which are very frcquently found in the above-mentioned manufcripts, efpecially in D. 1. and 69. It may be applied, therefore, as a mean not only of confirming their genuine readings, but of detecting and correcting thofe that are fpurious. It is written with great accuracy, and is evidently a faithful copy of the more ancient manufcript from which it was tranfcribed. Peculiar readings, or fuch as are found neither in other manufcripts nor ancient verfions, are feldom difcovered in the Codex Vaticanus; and of the few which have been actually found, the greateft part are of little importance. But in proportion as the number of fuch readings is fmall, the number of thofe is great; in fupport of which few only, thourg ancient authorities, have been hitherto produced. But this manufcript has not throughout the whole New Teftament the fame uniform text.

As we have now a beautiful printed edition of the Alexandrine manufcript by Dr Woide, it is much to be wifhed that we had alfo an exact impreffion of the Vatican manufcript. From the fuperftitious fears and intolerant fpirit of the inquifition at Rome, all accefs to this manufcript was refufed to the Abbe Spoletti, who prefented a memorial for that purpofe. Unlefs the pope interpofe his authority, we mult therefore defpair of having our wifhes gratified; but from the liberality of fentiment which the prefent pontiff has hown on feveral occafions, we hope that the period is not far diftant when the Vatican library will be open to the learned; and when the pope will think it his greateft honour to encourage their refearches.
'The moft valuable editions of the Greek New Teftament are thofe of Mill, Bengel, and Wettein.

The edition of Mill, which was only finifhed 14 days before his death, occupied the attention of the author for 30 years.

The collections of various readings which had been made before the time of Mill, the Velefian, the Barberini, thofe of Stephens, the London Polyglot, and Fell's edition, with thofe which the Bifhop had left in manufcript, and whatever he was able to procure elfewhere, he brought together into one large collection. He made likewife very confiderable additions to it. He
collated feveral original editions more accurately than had been done before : he procured extracts from Creek manufcripts, which had never been collated; and of fuch as had been before collated, but not with fufficient attention, he obtained more complete extracts. It is faid that he has collected from manufcripts, fathers, and verfions, not lefs than 30,000 various readings. This collection, notwithftanding its many imperfections, and the fuperiority of that of Wetfein, is fill abfolutely neceffary to every critic: for Wettein has omitted a great number of readings which are to be found in Mill, efpecially thofe which are either taken from the Vulgate . or confirm its readings. Mill was indeed too much attached to this verfion; yet he carnot be acculed of par* tiality in producing its evidence, becaufe it is the duty of a critic to examine the witneffes on both fides of the queftion: and Wetftein, by too frequently neglecting the evidence in favour of the Vulgate, has rendered his collection lefs perfect than it would otherwife have been. He likewife added, as far as he was able, readings from the ancient verlions; and is much to be commended for the great attention which he paid to the quotations of the fathess; the importance of which he had fagacity enough to difcern.

It cannot, however, be denied, that Mill's Greek Tefament has many imperfections, and fome of real importance. His extracts from manufcripts often are not only incomplete, but erroneous; and it is frequently neceffary to correct his mittakes from the edition of Wet. ftein. His extracts from the oriental verfions are alfo imperfect, becaufe he was unacquainted with thefe languages; and in Celecting readings from the Syriac, the Arabic, and Ethiopic, he was obliged to have recourfeto the Latin tranfations, which are annexed to thofe verfions in the London Polyglot.

The great diligence which Mill had fhown in collecting fo many various readings, alarmed the clergy as if the Chriftian religion had been in danger of fubverfion. It gave occalion for a time to the triumphs of the deif, and expofed the author to many attacks. But it is now univerfally known, that not a fingle article of the Chrittian religion would be altered though a deit were allowed to felect out of Mill's 30,000 readings whatever he fhould think moft inimical to the Chriftian caufe.

In $\mathbf{1}^{734}$, Bengel abbot of Alpirfoach, in the duchy os ${ }^{1}$ of Wurtemburg, publiflted a new edition of the Greek Teitament. The fears which Mill had excited began to fubfide upon this new publication; for Bengel was univerfally efteemed a man of piety. Bengel was not only diligent in the examination of various readings, but in the ftricteft fenfe of the word confcientious; for he confidered it as an offence againft the Deity, if, through his own fault, that is, through levity or careleffnefs, he introduced a falfe reading into the facred text. His object was not merely to make a collection of readings, and leave the choice of them to the judge= ment of the reader, but to examine the evidence on both fides, and draw the inference : yet he has not given his own opinion fo frequently as Mill, whom he refembled in his reverence for the Latin verfion, and in the preference which he gave to hat $\hat{h}$ and difficult reading $s_{\text {, }}$. before thofe which were fmooth and flowing. It may be obferved in general, that he was a man of profound learning:

## $S$ C R [ 152$] \quad S \quad C R$

Scripture, learning, and had a cool and found judgment, though it did not prevent him from thinking too himhly of the Latin readings, and of the Codex Alexandrinus, with other Latinizing manufcripts.

The imperfections of Bengel's edition arife chielly from his diffidence and caution. He did not venture to infert into the text any reading which had not already appeared in fome printed edition, even though he believed it to be the genuine reading. In the book of Revelation indeed he took the liberty to infert readings which had never been printed; becaufe few manuferipts had been ufed in the printing of that book.

The celebrated edition of John James Wetftein, which is the meft important of all, and the moft neceffary to thofe engaged in facred criticifm, was publifhed at Amfterdam in 1751 and 1752 , in two volumes folio. No man will deny that Wetftein's Prolegomena difcover profound erudition, critical penetration, and an intimate acquaintance with the Greek manufcripts. It is a work which in many refpects has given a new turn to facred criticifm, and no man engaged in that ftudy can difpenfe with it. Wherever Wetfein has delivered his fentiments refpecting a Greek manufcript, which he has done lefs frequently than Mill, and indeed lefs frequently than we could have wifhed, he flows himfelf an experienced and fagacious critic. He is likewife more concife than Mill in delivering his opinion, and does not fupport it by producirg fo great a number of readings from the manufcript in queftion. This concifenefs is the confequence of that warmth and hafte which were peculiar to Wettein's character, and which have fometimes given birth to miftakes. The fire of his difpofition was likewife the caufe of his advancing conjectures, in regard to the hiftory of his manuferipts, which exceed the bounds of probability. But the critical rules which he has delivered are perfeclly juft; and in this refpect there is a remarkable agreement between lim and his eminent predeceffors Mill and Bengel. In regard to the Latin verfion alone they appear to differ: in Mill and Bengel it has powerful, and perhaps partial, advocates; but in Wettein a fevere and fagacious judge, who fometimes condemns it without a caufe. The Greek manufcripts which confirm the readings of the Vulgate, and which he fuppofed had been corrupted from it, he of courfe condemned with equal feverity : and fome collections of various readings which had been made by Catholics, he made no fcruple to pronounce a forgery, faying, "Timeo Danaos, et dona ferentes." But in confequence of his antipathy to the Vulgate, his collection of various readings is lefs perfect than it might have been.

It has been afked, 1 . Whether he has quoted his manufcripts either falfely or imperfectly, in order to eftablifh his own religious opinions? or, 2. Whether his diligence and accuracy has been fuch that we may at all times depend upon them? 'To the firft of thefe queflions there can be no other anfwer, than that Wetitein, in his character of a critic, is perfectly honeft. With refpect to the fecond, his diligence and accuracy, Michaelis thinks there is lefs reafon to pronounce him Saultefs. But Mr Marth has examined the examples on which Michaelis founds his affertion, and declares that Michaelis is miftaken in every one of them.

The diligence of Wettein can fcarcely be queftioned
by any who are acquainted with his hiftory, He travelled into different countries, and examined with his own eyes a much greater number of manufcripts than any of his predeceffors. His collection of various readings amount to above a million; and he has not only produced a much greater quantity of natter tlian his predeceffors, but has likewife corrected their miftakes. The extracts from manuferipts, verfions, and printed editions of the Greek Teftament, which had been quoted by Mill, are generally quoted by Wet?ein. Whenever Wetitein had no new extracts from the manufcripts quoted by Mill, or had no opportunity of examining them limfelf, he copied literally from Mill; but wherever Mill has quoted from printed editions, as from the margin of Robert Stephens's for inftance, or from the London Polyglot, Wettein did not copy from Mill, but went to the original fource, as appears from his having corrected many mittakes in Mill's quo. tations. $L^{-}$

In the opinion of Michaelis, there are many defects in the edition of Wetfein, which require to be frupplied, and many errors to be corrected. Yet itill it muft be allowed to be a work of immenfe labour, and moft valuable to thofe engaged in facred criticifm; and it is furpriing, when we confider the difficulties and labour which Wettein had to encounter, that his errors and imperfections are fo few.

The propofal of Michaelis, however, of a new col. lation of manuferipts, in order to form a conaplete collection of various readings, is worthy the attention of the learned. In mentioning this propofal, Michaelis turns a wifhful eye towards Britain, the only country, he fays, which poffeffes the will and the means to execute the tafk. Should a refolution, he adds, be formed in this ifland, fo happily fituated for promoting the purpofes of general knowledge, to make the underta. king a public concern, to enter into a fubfeription, and to employ men of abilities in collating manufcripts both at home and abroad, they would be able to do more in ten years than could otherwife be done in a century. And could this nation direct its attention to any object more glorious or more ufeful than in afcertaining the text of the facred Sciptures, and giving to pofterity an accurate edition?

As the fenfe of Scriptare, as well as all other books, I is affected by the punctuation, it is of importance to determine whether the flops or points which we fund in the facred books were ufed by the facred writers, or have been inferted by modern tranfcribers.

We are told by Montfaucen, in his Paleographia Greca, p. $3^{1}$. that the perfon who firft diftinguifhed the feveral parts of a period in Greek writing, by the introduction of a point, was Arittophanes of Byzan. tium, who liverl under Ptolemæus Epiphanes, in the 145th Olympiad. But though points were not wfed in books before this period, they were employed in infriptions above 400 years before the birth of Chrit. See Mont. Pal. Grac. p. 135.

Under the article Punctuation we mentioned, on authority which we reckoned unqueftionable, that the ancient manufcripts were written without any points. We have now, however, difcovered, from Woide's edition of the Codex Alexandrinus, that points are ufed in that manufcript, though omitted in the fac fimile given

## S C R

peture，by Montfancon．That they are found too in the Co． $d_{e x}$ Vaticanus，though not frequently，is related by Birch in his Prolegomena，p．I4．
As the fact has not been generally known，that the ancients pointed their manufcripts，and as it is an im－ portant and interefting fact，we fhall prefent our read－ ers with the firt fix lines of St John＇s Gofpel，as they are pointed in the Alexandrine manufript ：

> ENAPXHUNOAOTOEKAIOAOLOEHN
> חPOETON ©N KAIEइHNOAOFO乏.
> OTTOEHNENAPXHMPOETON $\overline{\Theta N}$ IIANTAAIATTOTETENETO-KAIXSPEIS゙ィTTOTETENETOOTAEEN• OFEIONENENATTתZתHHN.

Whether any points for marking the fenfe were ufed by the apoftles，cannot be determined；but the points now in ule have been invented fince．
1 n the fourth century，Jerome began to add the com－ ma and colon to the Latin verfion；and they were then inferted in many more ancient manufcripts．In the Sifth century，Euthalius a deacon of Alexandria divided the New Teftament into lines．This divifion was re－ gulated by the fenfe，fo that each line ended where fome paufe was to be made in fpeaking．And when a co－ pyift was difpofed to contract his fpace，and therefore crowded the lines into each other，he then placed a point where Euthalius had terminated the line．In the eighth century，the ftroke was invented which we call a comma．In the Latin manufripts，Jerome＇s points were introduced by Paul Warnfried and Alcuin， at the command of Charlemagne．In the nintli cen－ tury，the Greek note of interrogation（：）was firlt ufed． At the invention of printing the editors placed the points arbitrarily，probably without beflowing the ne－ ceffary attention ；and Stephens，in particular，varied his points in every edition（ D ）．
The meaning of many paffages in the Scripture has been altered by falfe pointing．We fhall produce one inflance of this：Mat．v．34．is commonly pointed in
 and confequently，tranflated，＂But I fay unto you， fwear not at all．＂，But if，inftead of the colon placed after onos，we fubflitute a comma，the tranflation will be，＂But I fay to you that you ought by no means to fwear，either by heaven，for it is his throne，or by earth，for it is his footfool．＂The command of Chrift therefore applies particularly to the abufe of oaths a－ mong the Pharifees，who on every trivial occafion fwore by the heaven，the earth，the temple，the head， \＆c．but it implies no prohibition to take an oath in the name of the Deity on folemn and important occa－ fions．

The ancients divided the New Teftament into two kinds of chapters，fome longer and fome fhorter．This method appears to be more ancient than St Jerome，for he expunged a paffage from the New Teftament which makes an entire chapter．The longer kind of chap－ ters were called breves，the fhorter capitula．St Mat－
VoL．XVII．Part I．
thew contained，according to Jerome， 68 breves ；Mark
contained 48 ；Luke 83 ；and John 18．All the evan－ gelifts together confifted of 217 breves and 1126 capi－ tula．The inventor of our modern divifion into chap－ ters was Hugo de S．Caro，a French Dominican friar who lived in the 13 th century．

The ancients had two kinds of verfes，one of which they called stxot，and the other pnuara．The remata were lines which contained a certain number of letters， like our printed books，and thercfore often broke off in the middle of a word．Jofephus＇s 20 books of Antiqui－ ties contained 60,000 of them，though in Ittiquis＇s edition there are only 40,000 broken lines．
Stichi were lines meafured by the fenfe：according to an ancient written lift mentioned by Father Simin，there were in the New Teftanient 18,612 of thefe．
The verfes into which the New Teftament is now Divifion divided are more modern，and an imitation of the di－into ver－ vifion of the Old Teftament．Robert Stephens，the fos． firft inventor，introduced them in lis edition in the year 1551．He made this divifion on a journey from Ly－ ons to Paris ；and，as his fon Henry，tells us in the pre－ face to the Concordance of the New Teftament，he made it inter equitandum．TYhis phrafe probably means， that when he was weary of riding，he amufed himfelf
with this work at his with this work at his inn．
This invention of the learned printer was foon intro－Its difiad－ duced into all the editions of the New Teftament；and vanta geso it muft be confeffed，that in confulting and quoting the Scriptures，and in framing concordauces for them，a fub－ divifion into minute parts is of the greateft utility．But all the purpofes of utility could furrely have beien gain－ ed，without adopting the hafty and indigefted divifion of Stephens，which often breaks the fenfe in pieces， renders plain paffages obfcure，and difficult paffages un－ intelligible．To the injudicious divifion of Stephens we may afcribe a great part of the difficulties which at－ tend the interpretation of the New Teftament，and a great many of thofe abfurd opinions which have dif－ graced the ages of the Reformation．For as feparate verfes appear to the eyes of the learned，and to the minds of the unlearned，as fo many detached fentences， they have been fuppofed to contain complete fenfe，and they have accördingly been explained without any re－ gard to the context，and often in direet oppofition to it．Were any modern hiftory or continued difcourfe divided into fragments with as little regard to the fenfe， we fhould foon find，that as many oppofite meanings could be forced upon them as have been forced upon the books of the New Teftament．The divifion into verfes has been fill more injurious to the Epiftles than to the Gofpels，for there is a clofe connection between the different parts of the Epiftles，which the verfes en－ tirely diffolve．It is therefore to be wifhed that，this divifion into verfes were laid afide．The Scriptures ought to be divided into paragraphs，according to the fenfe ；and the figures ought to be thrown into the mar－ gin．In this way，the figures will retain their utility without
（D）The reader will perceive that the account of the origin of points is different from that given under Punc－ TVATION．But the beft authors differ upon this fubject．We fhall perhaps reconcile the difference，by fuppo－ fing that points were invented at the time here mentioned，but were not in general ufe till the time mentioncd under the artiele Punctuation．

## $S$ C R

Scripture: without their difadvantages. Dr Campbell, in his $\xrightarrow{\sim}$
beautiful tranflation of the Gofpels, has adopted this method with great judgment and fuccels; and he who will read that tranfation, will perceive that this fingle alteration renders the Gofpels much more intelligible, and, we may add, more entertaining ( E ).

The word exartenion fignifies any joyful tidings, and exactly correfponds to our Englifh word Gospex. In the New Teftatnent this term is confined to "The. glad tidings of the coming of the Meffiah." Thus, in Mat. xi. 5. our Lord fays, "The poor have the Go. -fpel preached;" that is, The coming of the Meffiah is preached to the poor. Hence the name of Gofpei was given to the hiftories of Chrift, in which the good news of the coming of the Meffiah, with all its joyful circumflances, are recorded.
That the Gofpel according to Matthew was compofed, fays Dr Campbell, by one born a Jew, familiarly acquainted with the opinions, ceremonies, and cuttoms of his countrymen; that it was compofed by one con- verfant in the facred writings, and habituated to their idiom; a man of plain fenfe, but of little or no learning, except what he derived from the Scriptures of the Old Teftament ; and fually, that it was the production of a man who wrote from conviction, and had attended clofely to the facts and fpeeches which he related, but who in writing entertained not the moft diffant view of fetting off himfelf-we have as ftrong internal evidence as the nature of the thing will admit, and much fronger than that wherein the mind ninety-nine cales out of $a$ hundred acquiefces.

## 547 <br> $S C R$

That the author of this hiftory of our bleffed Savi- Scriput our was Matthew, appears from the teftimony of the 342 early Chriftians. It is attefted by Jerome, Auguftin; Its auth Epiphanius, and Chryfoftom, and in fuch a manner as icity. fhews that they knew the fact to be uncontroverted, and judged it to be incontrovertible. Origen, who flourihed in the former part of the 3d century, is alfo refpectable authority. He is quoted by Eufebius in a chapter* wherein he fpecially treats of Origen's account* Hif? of the facred canon. "As I have learned (fays Ori lib. b. . gen) by tradition concerning the four golpels, which ${ }^{25}$. alone are received without difpute by the whole church of God under heaven ; the firt was written by Matthew, ence a publican, afterwards an apoflle of Jefus Chrift, who delivered it to the Fevuifb believers, compofed in the Hebrew language." In another place he fays, " Matthew writing for the Hebrews who expected him who was to defcend from Abraham and David, fays the lineage of Jefus Chrit, fon of David, fon of Abraham." It mult be obferved, that the Greek word rapasoris does not exactly correfpond to the Englifh word iradition, which fignifies any thing delivered orally from age to age. Mapasoors properly implies any thing tranfmitted from former ages, whether by oral or written teftimony. In this acceptation we find it ufed in fcripture $\dagger$ : "Hold the traditions (ras $\pi$ afafootis) which $\dagger$ TheII ye have been taught, whether by word or cur epijlle." 15 . The next authority to which we fhall have recourfe is that of Irenæus bifhop of Lyons, who had been a difciple of Polycarp. He fays in the only book of his extant, that " Matthew, among the Hebrews, wrote a Euffb $^{\text {b }}$ gofped Eccl. Jib
(E) We fhall here fubjoin, as a curiofity, what the anonymous author terms the Old and Nerv Teflament differed. It contains an enumeration of all the books, chapters, verfes, words, and letters, which occur in the Englifh Bible and A pocrypha. It is faid to have occupied three years' of the author's. life, and is a fingular inftance of the trifling employments to which fupertition has led mankind.

golpel in their own language, whilt Peter and Paul were preaching the gofpel at Rome and founding the church there."
To the teftimony of thefe writers it may be objected, that, except Irenxus, they all lived in the third and fourth centuries, and confequently their evidence is of little importance. But there is fuch unanimity in the teftimony, that it muft have been derived from fome authentic fource. And is it fair to queftion the veracity of refpectable men merely becaufe we knew not from what writings they received their information? Many books which were then extant are now loft ; and how do we know but thefe might have contained fufficient evidence? Irenæus at leaft had the beft opportunities of information, having been well acquainted in his youth with Polycarp, the difciple of John; no objection can therefore be made to his evidence. But we can quote an authority fill nearer the times of the apoftles. Papias bifhop of Hierapolis, in Cæfarea, who flourifhed about A. D. in 6 , affirms that Matthew wrote his gofpel in the Hebrew tongue, which every one interpreted as he was able §. Papias was the companion of Polycarp, and befices muft have been acquainted with many perfors who lived in the time of the apoftles. The fact therefore is fully eftablifhed, that Matthew, the apoftle of our Saviour, was the author of that gofpel which is placed firt in our editions of the New Teftament.

The next fubject of inquiry refpects the language in which it was written. This we are affured by Papias, by Irenæus, and Origen, was the Hebrew; but the truth of this fact has been difputed by Erafmus, Whitby, and others. Whitby urges the improbability that Providence would have fuffered the original of this gofpel to be loft, and nothing to remain but a tranflation. This is an argument of no force againft written teftimony ; indeed we are always in danger of drawing falfe conclufions when we argue from our own opinions of the conduct of Providence. For His ways are not as our ways, nor His thoughts as our thoughts. But though we are forced to acknowledge that the gofpel according to Mattlew which we poffefs is a tranflation, it is evidently a clofe one; and the very circumftance that it has fuperfeded the original, is a clear proof that it was thought equally valuable by the ancient Chriftians. It is neceffary to remark, that the language in which the gofpel according to Matthew was originally compofed, and which is called Hebrew by Papias, Irenæus, and Origen, is not the fame with the Hebrew of the Old Teftament : it was what Jerome very properly terms Syro.Chaldaic, having an affinity to both languages, but much nore to the Cbaldean than to the Syriah.

The time when this gofpel was compored has not been preciftly afcertained by the learned. Irenæus fays that "Matthew publifhed his goipel when Peter and Paul were preaching at Rome." Now Paul arrived at Rome A. D. 60 or 61 , and it is very probable fuffered martyrdom in A. D. 65. This may be juftly concluded from comparing the relation of Tacitus with that of O . rofius, a writer of the fifth century. Orofus having given an account of Nero's perfecution of the Chriftians, and of the death of the two apoftles in it, adds, that it was followed by a pettilence in the city, and other difafters. And "acitus relates that a peftilence prevailed
in the city, and viokent forms took place in Itaify, in the Scripture. year of Chritt $\sigma_{j}$. Matthew's gofpe! was therefore writ ten between the year 60 and 65 .
That this hiftory was primarily intended for the ufe And defig!a of the Jews, we have, befides hittorical evidence, very ${ }^{\text {of } i t .}$ ftrong prefumptions from the book itfelf. Every cir: Dr $\operatorname{Camp-}$ cumftance is carefully pointed out which might conciliate ${ }_{f r c e}$ bell's $P_{r e}$ the faith of that nation; every unneceffary expreffion Matthezu's is avoided, which might in any way ferve to obftruct it. Gofpel. To come to particulars, there was no fentiment relating to the Meffiah with which the Jews were more ftrongly poffeffed, than that he muft be of the race of Abraham, and of the family of David. Matthew, therefore, with great propriety, begins his narrative with the genealozy of Jefus. That he thould be born at Bethlehem in Judea, is another circumitance in which the learned among the Jews were univerfally agreed. "His birth in that city, with fome very memurable circumitances that attended it, this hiftorian has alfo taken the firlt opportunity to mention. Thofe paffages in the prophets, or other facred books, which either foretel any thing that fhould happen to him, or admit an allufive appellation, or were in that age generally undertood to be applicable to events which refpect the Meffah, are never paffed over in filence by this Evangelit. The futhlment of prophecy was always to the Jews, who were convinced of the infpiration of their facred writings, ffrong evidence. Accordingly none of the Evangelits has been more careful than Matthew, that nothing of this kind fhould be overlooked.
'That which chiefly diftinguifhes Matthew's writings Diftin- ${ }^{146}$ from thofe of the other Evangelifts, is the minute and guifing diftinct manner in which he has related many of our charader. Lord's difcourfes and moral inftructions. Of thefe his fermon on the mount, his charge to the apoftles, his illuftrations of the nature of his kingdom, and his prophecy on mount Olivet, are examples. He has alfo wonderfully united fimplicity and energy in relating the replies of his mafter to the cavils of his adverfaries. Being early called to the apoftlehip, he was an eye and ear witnefs of molt of the things which he relates. And there are circumblances which incline Dr Campbell to think that Matthew lias approached as near the precife order of time in which the events happened as any of the Evangelitts.

Concerning the life of the apolle Matthew we have nothing to add, as the principal circumftances in his life have already been mentioned. See Matthew.

The Gofpel according to Matthew is cited feven times in the epittle of Barnabas, twice in the firt epiftle of Clemens Romanus to the Corinthians, eight times in the Shepherd of Hermas, fix times in Polycarp's fnall epiftle to the Philippians, and feven times in the fmaller epiftes of Ignatius. Thefe citations may be feen at full length in 'fomes's Nerv and Full Metbod of feitling the Canom, with the parallel paffages in the gofpel according to Mathew.

That Mark was the author of the gofpel which bears Gofpel achis name, and that it was the fecond in the order of corcting to time, is proved by the unanimous telitimony of the an- St Mark. cient Chriltians. Many authorities are therefore un- ${ }^{1} 4^{8}$ neceffary ; we thall only mention thofe of Papias and tot authenIree Irenæus. Eufebius has preferved the following paffage of Papias: "This is what was related by the elder (that Hif. E.col. is; John, not the apolle, but a difciple of Jefus) ; Mark lib. 3. cap.
being ${ }^{39}$.

## S C R

Scripture. being Peter's interpreter wrote exactly whatever he remembered, not indeed in the order wherein things were fpoken and done by the Lord; for he was not himfelf a hearer or follower of our Lord; but he afterwards, as I faid, followed Peter who gave inftructions as fuited the occafions, but not as a regular hittory of our Lord's teaching. Mark, however, committed no mittake in writing fuch things as occurred to his memory : for of this one thing he was careful, to omit nothing which he had heard, and to infert no falifehood into his narrative." Such is the teftimony of Papias, which is the more to be regarded as he afigns his authority. He fpake not from hearlay, but from the information which he had received from a molt credible witnefs, John the elder, or prefhyter, a difciple of Jefus,
549 and a companion of the apofiles.
Irenæus, after telling us that Matthew publifhed his gofpel whillt Peter and Paul were preaching at Rome,

Adv. Haer lib. 3 cap. \#.

Preface to Mark. adds: "After their departure ( $\left(5 \xi_{0} \rho_{0}\right)$ ), Mark alfo, the difciple and interpreter of Peter, delivered to us in writing the things which had been preached by Peter." The Greek ‘Goons, like the Englifh word departure, may either denote death, which is a departure out of the world, or mean a departure out of the city. It is probably in the former of thefe ferlfes it is liere ufed. Yet by the accounts given by fome others, Mark's gofpel was publifhed in Peter's lifetime, and had his approbation. The gofpel of Mark is fuppofed to be but two years pofterior in date to that of Mathew. The precife year, however, cannot be determined with certainty ; and it is a matter of no importance, fince we have afcertained the author and the tine in which he lived.

Mark has genctally been fuppofed to be the fame perfon who is mentioned in the acts and fome of Paul's epiftles, who is called John, and was the nephew of Barnabas. . But as this perion was the attendant of Paul and Barnabas, and is nowhere in fcripture faid to have accompanied Peter in his apoffolical milfion, which ancient writers inform us the author of the gofpel did, Dr Campbell has juflly concluded that thefe were different perfons. The author of the gofpel is certainly meant by Peter when he fays Marcus my fon faluteth you II.
That Mark wrote his gofpel in Crreek, is as evidently conformable to the teflimony of antiquity, as that Matthew wrote his in Hebrew or Syro. Chaldaic. The language in which the vulgate was written, have maintained that this Evangelift publifhed his work in Latin. THe only appearance of teftimony which has been produced in fupport of this opinion is the infcription fubjoined to this gofpel in Syriac, and in fome other oriental verions. But thefe poffecripts are not the teftimenies of the tranflators: they proceed from the conjecture of fome tranferiber; but when written, or by whom, is equally uuknown. Againtt pofitive teftimony therefore they are entitled to no credit.
From the Hebraifms in the fyle, we fhould readily conclude that the author was by bith and education a Jew. There are alfo expreflions which flow that he had lived for fome time among the Latins, as xuirupprav, "centurion," and $\sigma \pi \pi \& \times \lambda a \tau 0 \rho$, "s fentinel;" words which do not occur in the other gofpels. There are other internal evidences that this gofgel was written be-
yond the confines of Judea. The firlt time the Jorn dan is mentioned, $\pi \tau \tau \alpha \mu / 0$, "river," is added to the name for explanation; for though no perfon in Judea ${ }_{b}$ necded to be informed that Jordan wasea river, the cafe $f_{f}$ was different in diftant countries. The word Gebenna, Mark' which is tranflated Hell in the New Teftament, origi- Gopel nally fignified the, Valley of Hinnom, where infants had been facrificed by fire to Moloch, and where a continual fire was afterwards kept up to confume the filth of Jerufalem. As this word could not lave been underftood by a foreigner, the Evangelift adds, by way of explanation, rop ro $\alpha \sigma \beta_{5} 50$, " the unquenchable fre." Inttead of the word Mammon, he ufes the common term $\chi_{\text {ғпnцата " riches." When he employs the oriental }}$
 that is, "a gift." Thefe peculiarities will corroborate the hiftorical evidence that has been already mentioned, that Mark intended his gofpel for the ufe of the Gentiles.
It has been affirmed that this evangelif is the abridger Mark of Matthew. It is true that Mark fometimes copies the abr the expreffions ufed by Matthew ; but he is not to be Matthe confidered as a mere abridger, for he omits altogether feveral things related by Matthew, viz. our Lord's pedigree, his birth, the vifit of the Magians, Jofeph's flight into Egypt, and the cruelty of Herod. Dr Lardner has given a lift of thirty-three paffages, wherein circumftances are related which are omitted by the other evangelifts. There is one parable, and an account of two miracles peculiar to Mark. The parable or fimilitude is mentioned in chap. iv. 26 . One of thefe miracles was the curing of a deaf and dumb man, chap. vii. 31,37 . The other was the giving fight to a blind man at Bethfaida, chap. viii. 22, 26. The ftyle of Mark, inftead of being more concife than that of Matthew, is more diffufe. That he had read Mathew's gofpel cannot be doobted, but that he abridged it, is a mittake.

According to the teftimony which has been already b produced, Mark derived his information from the a-ved his poftle Peter. It would be improper, therefore, not to re format mark, that this evangelift has omitted many things from tending to Peter's honour, which are related in the other gofpels, and has given the moft particular account of Peter's fall. 'I'his gofpel is feven times cited by Irenæus, and nine times by Tertullian.
That the author of the gofpel which is the third in Gofiel order was Luke, the companion of the apoftle Paul, is cordin cvident from the teflimonies of Irenæus, Clemens of Alexandria, Origen, Tertullian, and many fucceeding writers. But it has been difputed whether he was a Jew or a Gentile. 'Ihat Luke was a Jew by birth, or at leatt by religion, may be argued from his being. a conflaint companion of Paul. If he had. been an uncircumcifed Gentile, exceptions would have been made to him, efpecially at Jerutakm ; but nothing of that kind appears. It is alfo rendered hizhly probable, from his mode of computing time by the Jewifh feltivals, and from his frequent ufe of the Hebrew idiom. It has been fuppofed that Luke was one of the 70 difciples; but he does not pretend to have been a witnefs of our Lurd's miracles and teaching ; on the contrary, be tells us in $h$ 's introduction, that he received his information from others.
The defign of Luke in writing his gofpel was to fu-Defigs perfecteit.

## S C R [ 157 [ S C R

ipture. perfede fome imperfect and inaccurate hiftories of our Saviour, which had then been publighed. What thele were, it is impoffible now to determine, as they are not mentioned by any contemporary writer, and probably did not furvive the age in which they were com. pofed.

It has been fuppofed that Luke chiefly derived his information from the apoftle Paul, whom he faithfully attended in his travels; but, from Luke's own words, we are led to conclude, that the principal fource of his intelligence, as to the facts related in the gofpel, was from thofe who had been eye and ear witneffes of what our Lord both did and taught. Now Paul evidently was not of this number. It was from converfing with fome of the twelve apofles or difciples of our Lord, who heard his dilcourfes and faw his miracles, that he obtained his information.

As to the time when this gofpel was written, we have hardly any thing but conjecture to guide us. But as Orizen, Eufebius, and Jerome, have ranged it after thofe of Matthew and Mark, we have no reafon to doubt but they were written in the fame order.

The gofpel by Luke has fupplied us with many interefting particulars which had been omitted both by Matthew and Mark. It has given a diftinet narration of the circumftances attending the birth of John the - Baptift and the nativity of our Saviour. It has given an account of feveral memorable incidents and cures which had been overlooked by the reft; the converfion of Zaccheus the publican; the cure of the woman who had been bowed down for 18 years; the cure of the dropfical man; the cleanfing of the ten lepers; the inhofpitable treatment of our Saviour by the Sanaritans, and the inftructive rebuke which he gave on that occafion to two of his difciples for their intemperate zeal ; alfo the affecting interview which he had after his refurrection with two of his difciples. Luke has alfo added many edifying parables to thofe which the other evangelifts had recorded. Moft of thefe are fpecified by lrenæus as particularly belonging to this gofpel, and has thereby flown to us, without intending it, that the gofpel of Luke was the fame in his time that it is at prefent.

The ftyle of this evangelift abounds as much with Hebraifme as any of the facred writings, but it contains more of the Grecian idiom than any of them. It is alfo diftinguifhed by greater variety and copioufnefs; qualities which may be juftly afcribed to the fuperior learving of the author. His occupation as a phyfician would naturally induce him to employ fome time in reading, and give him eafier accefs to the company of the great than any of the other evangelifts. As an inftance of Luke's copioufnefs, Dr Campbell has remarked that each of the evangelifts has a number of words which are ufed by none of the reft ; but in Luke's gofpel the number of fuch peculiarities or words, ufed in none of the other gofpels, is greater than that of the peculiar words found in all the three other gofpels pat together; and that the terms peculiar to Luke are for the moft part long and compound words. The fame judicious writer has alfo obferved, that there is more of compofition in Luke's fentences than is found in the other three, and confequently lefs fimplicity. Of this the very finft fentence is an example, which occupies. no lefs than four verfes.. Luke, too, has a greater re-
femblance to other hiftorians, in giving what may be Seripture, called his own verdict in the narrative part of this work; a freedom which the other evangelifts have feldom or never ventured to ufe. He calls the Pharifees lovers Chap. xvirof money: in diftinguifhing Judas Ifcariot from the ${ }^{14}$. other Judas, he ufes the phrafe, be who proved a traitor, (is xassyev: To $\pi p o \delta o r n s$ ). Matthew and Mark exprefs the fame fentiment in milder language, "he who delivered him up." In recording the moral inftructions of our Lord, efpecially his parables, this evangelitt has united an affecting fweetnefs of manner with genuine fimplicity.

This gofpel is frequently cited by Clemens Romanus, cited ${ }^{57}$ the contemporary of the Apolles, by Ignatius, andancient Juftin Martyr. Irenæus has made above a hundred Chriftian citations from it. In his lib. 3. adv. Haref. c. 14. he authors. vindicates the authority and perfection of Luke's gofpel, and has produced a collection of thofe facts which are only recorded by this evangeliit.
160.

That the gofpel which is placed laft in our editions Gofpel ace: of the New Teftament was written by John, one of cording to our Saviour's apofles, is confirmed by the unanimous John. teftimony of the ancient Chriftians. He was the fon of Zebedee, a fifherman of Bethfaida in Galilee, by his wife Salome, and the brother of James, furnamed the elder or greater. He was the beloved difciple of our Saviour, and was honoured, along with Peter and James, with many marks of diftinction which were not conferred on the other difciples. He poffeffed a high degree of intrepidity and zeal, a warm and affectionate heart, and was ttrongly attached to his matter. His. brother James and he were honoured with the title of Boanerges, or Sons of Tbunder. He was anxious to reftrain whatever he confidered as a mark of difrefpect againft his mafter, and to punifh his enemies with feverity.. He was incenfed againft fome perfons for attempting to caft out demons in the name of Jefus; and required them to defit becaufe they were not his difciples. James and he propofed to our Saviour to call down fire from heaven to punifh the inhofpitable Samaritans. Nor was the courage of John lefs ardent thanhis zeal. When Peter had difowned his Lord, and all the other difciples had fled, John continued to attend his mafter. He was prefent at his trial, and followed him to the crofs, where he was a fpectator of his fufferings and death. The interview between Jefus and this difciple at Calvary, though concifely related, is ane event which will ftrongly affect every man of feeling, while it convinces him of the unalterable affection of Jefus to his beloved difciple, as well as difcovers his refpectful tendernefs for his mother. See Jонn..
 which induced John to write his gofpel : the one, that for wrishe might refute the herefies of Cerinthus:and the Nico-ting it. laitans, who had attempted to corrupt the Chriftian doctrine ; the other motive was, that he might: fupply thofe important events in the life of our Saviour which the other evangelifs had omitted. Of the former of thefe motives Lrenæus gives us the following account : " John, defirous to extirpate the errors fown in the minds of men by Cerinthus, and fome time be ore by thofe called. Nicolaitans, publifhed his grofpel ; wherein ${ }^{3}$ he acquaints us that there is one God, who made all things by his word, and not, as they fay, one who is: the Creater of the world, and another who is the father

## S C R $\quad\left[\begin{array}{ll}158\end{array}\right] \quad$ S C R

seripture of the Lord; one the fon of the Creator, and another the Chrit, from the fuperceleftial abodes who defcended upon Jefus, the fon of the Creator, but remained impaffible, and afterwards fled back into his own plesoma or fulnefs." As Irenxus is the moft ancient author who has written upon this fubject, many appeals have been made to his authority. The authority of Irenæus is certainly refpectable, and we have often referred to his teftimony with confidence ; but we think it neceffary to make a diftinction between receiving his teftimony to a matter of fact, and implicitly adopting his opinion. He does not tell us, that he derived his information from any preceding writer, or indeed from any perfon at all. Nay, he feems to have believed that John wrote againft thefe herefies by a prophetic fpirit; for lie fays in another place, chap. xx. 30. "As John the difciple of our Lord affures us, faying, But thefe are written, that ye might believe that Jefus is the Chrit, the Son of God, and that believing ye might have life through his name; foresreing thefe blafphemous notions that divide the Lord, fo far as it is in their porver."

Indeed it feems very improbable that an apofte Thould write a hiftory of our Lord on purpole to confute the wild opinions of Cerinthus or any other heretic. Had John confidered fuch a confutation neceffary, it is more likely that he would introduce it into an epiftle than blend it with the actions of his venerable Mafter. But were the opinion of Irenæus wellfounded, we fhould furely difcover fome traces of it in the gofpel of John; yet except in the introduction, there is nothing that can with the leaft fhadow of probability be applied to the opinions of Cerinthus; and few, we prefume, will affirm, that the gofpel of John was compofed merely for the fake of the firft eighteen verfes.
But to prove that Jerus was the Mefinah the sion of God.

The intention of John in writing his gofpel was far more extenfive and important than to refute the opinions of a few men who were to fink into oblivion in the courfe of a few centuries. It was evidently (according to the opinion of Clemens of Alexandria) to fupply the omiffions of the other evangelifts: It was to exhibit the evidences of the Chriftian religion in a diftinct and perspicuous manner: It was, as he himfelf in the conclufion of his goipel affures us, to convince his readers, that Jefus is the Meflah, the Son of God, and that be-
4. The Jewifh Scriptures. Indeed the conclufion that Jefus was the Meffiah the Son of God, naturally arifes from almoft every miracle which our Saviour is faid to have performed and from every difcourfe that he delivered. This declaration is very often made by our Saviour himfelf; particularly to the woman of Samaria, to Nicodemus, and to the blind man whom he had cured.

It muft be evident to every reader, that John fludi- is a fury ounly paffes over thole paffages in our Lord's hiftory ment to and teaching which had been treated at large by the other evangelifts, or if he mentions them at all he mentions them nightly. This confirms the teftimony of ancient writers, that the firft three gofpels were written and publifhed before John compofed his gofpel: Except the relation of our Saviour's trial, death, and refurrection, almoft every thing which occurs in this book is new. The account of our Saviour's nativity, Dr Cam of his baptifm, and of his temptation in the wildernefs, bell's $p_{7}$ is omitted; nor is any notice taken of the calling of face to the twelve apoflles, or of their miffion during our $\mathrm{Sa}-\mathrm{Fobn}$ 's viour's life. It is remarkable, too, that not one paw rable is mentioned, nor any of the predictions relating to the deftruction of Jerufalem. All the miracles re: corded by the other evangelifts are paffed over, except the miraculous fupply of provifion, by which five thoufand were fed: and it is probable that this miracle was related for the fake of the difcourfe to which it gave birth. The other miracles which are mentioned are few in number, but in general they are minutely detailed. They confit of thefe : the turning of water into wine at Cana; the cure of the difeafed man at the pool of Bethefda; the cure of the man that had been blind from his birth; the reftoring of Lazarus to life; and the healing of the fervant's ear which Peter had cut off. But valuable would this gofpel be, though it had only recorded the confolation of Jefus to his difciples previous to his departure; which exhibits a moft admirable view of our Saviour's character, of his care and tender regard for his difciples. Having opened every fource of comfort to their defponding minds; exhorted them to mutual love, and to the obedience of his Father's precepts; having warned them of the impending dangers and forrows-our Saviour concludes with a prayer, in the true fpirit of piety and benevolence; ardent without enthufiafm, fober and rational without lukewarmnefs.
The time in which this gofpel was written has not will appear to any perfon who reads this gofpel with attention, that he lias executed his plan with aftonihing ability, and has given the moft circumflantial and fatisfactory evidence that Jefus was the Meffiah the Son of God. After declaring the pre-exittence of Jefus, he proceeds to deliver the teftimony of John the Baptift, and felcets fome of the greatent miracles of Jefus to prove his divine miffion. In the fifth chapter he prefents us with a difcourfe which our Saviour delivered in the temple in the prefence of the Jews, wherein he flates in a very diftinet manner the proofs of his miffion from, r. The teftimony of John; 2. His own miracles; 3. The declaration of the Father at his baptifm;
been fixed with any precifion. Irenæus informs us, that which it it was written at Ephefus, but leaves us to conjecture was wri whether it was written before or after John's return ${ }^{\text {ten }}$ from Patmos. He was banifhed to Patmos by Domitian, who reigned 15 years, and according to the beft computation died A. D. 96. The perfecution which occafionted the exilc of John commenced in the 14 th year of Domitian's reign. If John wrote his 'gofpel after his return to Ephefus, which is affirmed by Epiphanius to have been the cafe, we may fix the date of it about the year 97( F ).
This gofpel is evidently the production of an illite-styie of rate
( F ) It has been argued from a paffage in this gofpel, that it muft have been written before the deftruction of Terufalem. In fpeaking of the pool of Bethfaida; John ufes the prefent tenfe: His words are, "There is at

## $S C R$

pture.

- Barnabas three times, by Ignatius five times, by Juftin Martyr fix times, by Irenæus, and above forty times by Clemens Alexandrinus.
connects the gofpels and the epitles. It is evidentles continuation of Luke's gof which appears both a the introduction and from the atteftations of ancient Chri fians. Both are dedicated to Theophilus; and in the begirining of the Acts a reference is made to his gofpel, which he calls a former treatife, recording the actions and difcourfes of Jefus till his afcenfion to heaven. Luke is mentioned as the author of the Acts of the Apoflles by Irenæus, by Tertullian, by Origen, and Eufebius.

From the frequent ufe of the firt perfon plaral, it. is manifeft that Luke the author was prefent at many of the tranfactions which he relates. He appears to have accompanied Paul from Troas to Philippi. He attended him alfo to Jerufalem, and afterwards to Rome, where he remained for two years. He is mentioned by Paul in feveral of thofe epiftles which were written from Rome, particularly in the 2d epiftle to Timothy, and in the epiftle to Philemon.
This book contains the hiftory of the Chriftian church for the fpace of about 28 or 30 years, from the time of our Saviour's afcenfion to Paul's arrival at Rome in the year 60 or 61. As it informs us that Paul refided two years in Rome, it muft have been written after the year 63 ; and as the death of Paul is not mentioned, it is probable it was compofed before that event, which happened A. D. 65.

The Acts of the Apoftes may be divided into feven parts. 1. The account of our Saviour's afcenfion, and of the occurrences which happened on the firf Pentecoft after that event, contained in chap. i. ii. 2. The tranfactions of the Chriftians of the circumcifion at Jerufalem, in Judea, and Samaria, chap. iii.-ix. xi: 1-21. xii. 3. Tranfactions in Cxfarea, and the admif. fion of the Gentiles, chap. x. 4. The firft circuit of Barnabas and Paul among the Gentiles, chap. xi. 22. xiii. xiv. 5. Embafly to Jerufalem, and the firf council held in that city, chap. xv. 6. Paul's fecond journey, chap. xvi.-xxi. 7. His arreftment, trial, appeal to Cæfar, and journey to Rome, chap. xxi. to the end of the book.
To cited The Acts of the Apoftles are cited by Clemens Ro he ear-manus, by Polycarp, by Juftin Martyr, thirty times by hrifti- Irenzus, and feven times by Clemens Alexandrinus.

All the effential doctrines and precepts of the Chri: fian religion were certainly taught by our Saviour him. felf, and are contained in the gofpels. The epiftes may be confidered as commentaries on the doctrines of the gofpel, addreffed to particular focieties, accommodated to their refpective fituations; intended to refute the

## 159 ] <br> $S C R$

errors and faie notions which prevailed among them; Scripture: and to inculcate thofe virtues in which they were moft deficient.
The plan on which thefe Letters are written is, General frft, to decide the controverfy, or refute the erroneous plan of refute the erroneous them. notions which had arifen in the fociety to which the epifle was addreffed: And, fecondly, to recommend thofe duties which their falfe doetrines might induce them to negleet ; at the fame time inculcating in general exhortations the mott important precepts of Chrifian morality.

A Table of the Caqholic Epistles and the Retelagion; according to Dr Lardner.

It is more difficult to underfand the epifolary wri-Caufen of tings than the gofpels ; the caufe of which is evident. their obrcus Many things are omitted in a letter, or flightly mentioned rity. becaufe fuppofed to be known by the perfon to whom it is addreffed. To a ftranger this will create much difficulty.

Jerufalem." Now if thefe words had been written after the defruction of Jerufalem, it is urged the paft tenfewould have been ufed, and not the prefent. This argument is more fpecious than forcible. Though Jerufalem: was demolifhed, does it follow that the pool of Bethlaida was dried up?

## 

Gcripture, difficulty. The bufinefs about which St Paul wrote was certainly well known to his correfpondents ; but at this diftance of time we can obtain no information concerning the occcafion of his writing, of the character and circumfances of thofe perfons for whom his letters were intended, except what can be gleaned from the writings themfelves. It is no wonder, therefore, tho' many allufions fhould be obfcure. Befides, it is evident from many paffages that he andwers letters and queftions which his correfpondents had fent him. If thefe had been preferved, they would have thrown more light upon many things than all the notes and conjectures of the commentators.

The caules of obfcurity which have been now mentioned are common to all the writers of the epifthos; but there are fome peculiar to St Paul. 1. As he had an acute and fertile mind, he feems to lave written with great rapidity, and without attending much to the common rules of method and arrangement. To this caufe we may afcribe his numerous and long parenthefes. In the heat of argument he fometimes breaks off abruptly to follow out fome new thouglit; and when he lias exhaufted it, he returns from his digreffion without informing his readers; fo that it requires great atteution to retain the connection. 2. His frequent change of perfon, too, creates ambiguity : by the pronoun $I$ he fometimes means himfelf; fometimes any Chriftian; fometimes a Jew, and fometimes any man. In ufing the pronoun WE he fometimes intends himfelf, fometimes comprehends his companions', fometimes the apof. tles; at one time he alludes to the converted Jews, at another time to the converted Gentiles. 3. There is a third caufe of obfcurity; he frequently propofes objections, and anfwers them without giving any formal intimation. There are other difficulties, which arife from our uncertainty who are the perfons he is addreffing, and what are the particular opinions and practices to which he refers. To thefe we may add two external caufes, which have increafed the difficulty of underftanding the epifles. I. The dividing them into chapters and verfes, which diffolves the connection of the parts, and breaks them into fragments. If Cicero's epiftles had been fo disjointed, the reading of them would be attended with lefs pleafure and advantage, and with a great deal more labour. 2. We are accuftomed to the phrafeology of the epiltles from our infancy; but we have either no idea at all when we ufe it, or our idea of it is derived from the articles or fyftem which we have efpoufed. But as different feets have arbitrary definitions for St Paul's phrafes, we fhall neser by following them difeover the meaning of St Paul, who certainly did not adjuft lis phrafeology to any man's fyitem.

The beft plan of ftudying the epiftles is that which was propofed and executed by Mr Locke. This we fhall prefent to our readers in the words of that acute
176 and judicious author.
Mr Locke's "After I had found by long experience, that the plan of nu- reading of the text and comments in the ordinary way dying the epiftes. proved not fo fuccefsful as I wihhed to the end propofed, I began to fufpect that in reading a chapter as was ufual, and thereupon fometimes confulting expofitors upon fome kard places of it, which at that time moft affected me, as relating to points then under confiderafion in my own mind, or in debate amongft others, was
not a right method to get into the true fenfe of thefe serjpt epittles. I faw plainly, after I began once to reflect on it, that if any one fhould write me a letter as long as St Paul's to the Romans, concerning fuch a matter as that is, in a ftyle as foreign; and expreffions as dubious as his feem to be, if I fhould divide it into fifteen or fixteen chapters, and read one of them to-day, and another to-morrow, \&c. it is ten to one I fhould never come to a full and clear comprehenfion of it. The way to underftand the mind of him that writ it, every one would agree, was to read the whole letter through from one end to the other all at once, to fee what was the main fubject and tendency of it : or if it had feveral views and purpofes in it, not dependent one of another, nor in a fubordination to one chief aim and end, to difcover what thofe different matters were, and where the author concluded one, and began another; and if there were any neceffity of dividing the epitle into parts, to make the boundaries of them.
"In the profecution of this thought, I coneluded it neceffary, for the underftanding of any one of St Paul's epitles, to read it all thro' at one fitting, and to obferve as well as I could the drift and defign of his writing it. If the firft reading gave me fome light, the fecond gave me more ; and fo I perfifted on reading conftantly the whole epiftle over at once till I came to have a good general view of the apoftle's main purpofe in writing the epitle, the chief branches of his difcourfe wherein he profecuted it, the arguments he ufed, and the difpofition of the whole.
"This, I confefs, is not to be obtained by one or two hafty readings; it mutt be repeated again and again with a clofe attention to the tenor of the difcourfe, and a perfect neglect of the divifions into chapters and verfes. On the contrary, the fafelt way is to fuppofe that the epiftle has but one bufinefs and one aim, till by a frequent perufal of it you are forced to fee there are diftinct independent matters in it, which will forwardly enough fhow themfelves.
"It requires fo much more pains, judgment, and application, to find the coherence of obfcure and abftrufe writings, and makes them fo much the more unfit to forve prejudice and preoccupation when found ; that it is not to be wondered that St Paul's epitlles have with many paffed rather for disjointed, loofe, pious difcourfes, full of warmth and zeal, and overfows of light, rather than for calm, ftrong, coherent reafonings, that carried a thread of argument and confiftency all through them."

Mr Locke tells us he continued to read the fame epifle over and over again till he difcovered the fope of the whole, and the different fteps and arguments by which the writer accomplifhes his purpofe. For he, was convinced before reading his epiftles, that Paul was a man of learning, of found fenfe, and knew all the doctrines of the gofpel by revelation. The fpeeches recorded in the Acts of the Apoftles convinced this judicious critic that Paul was a clofe and accurate reafoner: and therefore he concluded that his epifles would not be written in a loofe, confufed, incoherent tyle. Mr Locke accordinglylfollowed the chain of the apoftle's difcourfe, obferved his inferences, and carefully examined from what premifes they were drawn, till he obtained a general outline of any particular epiftle. If every divine would follow this method, he would foon acquire fuch a know-

## $\mathrm{S} C \mathrm{R} \quad\left[\begin{array}{ll}16 \mathrm{i}\end{array}\right] \quad \mathrm{S} C \quad \mathrm{R}$

ture. ledge of Paul's fylc and manner, that he would perufe his other Epifles with much greater cafe.
'That the Epiltle to the Romans was written at Corinth by St Paul, is afcertained by the teftimony of the ancient Chriftians. It was compofed in the year 58 , in the 24th year after Paul's converfion, and is the feventh epiftle which he wrote. From the Acts of the A poltles we learn that it mult have been written within the fpace of three months; for that was the whole period of Paul's refidence in Greece, (Acts xx. 1, 2, 3.)

The following analyfis of this epifle we have taken from a valuable little treatife, intitled A Key to the New 'Teftament, which was written by Dr Percy bifhop of Dromore. It exhibits the intention of the apoftle, and the arguments which he ufes to prove his different propofitions, in the moft concife, diftinct, and connected manner, and affords the belt view of this Epifle that we have ever feen.
"The Chriftian church at Rome appears not to 1 de- have been planted by any apoftle; wherefore St Paul, left it fhould be corrupted by the Jews, who then fwarmed in Rome, and of whom many were converted to Chriftianity, fends them an abftract of the principal truths of the gofpel, and endeavours to guard them againft thofe erroneous notions which the Jews had of juitification, and of the election of their own nation.
"Now the Jews affigned three grounds for juftification. Firf, 'The extraordinary piety and merits of their anceftors, and the covenant made by God with thefe holy men.' 'They thought God could not hate the children of fuch meritorious parents : and as he had made a covenant with the patriarchs to blefs their pofterity, he was obliged thereby to pardon their fins. Secondly, 'A perfect knowledge and diligent fudy of the law of Mofes.' 'They made this a plea for the remiffion of all their fins and vices. Thirdly, "The works of the I.evitical law,' which were to expiate fin, efpecially cincumcifion and facrifices. Hence they inferred that the Gentiles mult receive the whole law of Mofes, in order to be juftified and faved.

- "The doctrine of the Jews concerning election ras, - That as God had promifed to Abraham to blefs his feed, to give him not only fpiritual bleffings, but alfo the land of Canaan, to fuffer him to dwell there in prolperity, and to confider him as his church upon earth :' That therefore this bleffirg extended to their whole nation, and that God was bound to fulil thefe pronifes to them, whether they were righteous or wicked, faithful or unbelieving. They even believed that a prophet ought not to pronounce againft their nation the prophecies with which he was infpired; but was rather to beg of God to expunge his name out of the book of the living.
"Thefe previous remarks will ferve as a key to unlock this-difficult Epiftle, of which we fhall now give a fhort analylis. See Michaelis's Ledures on the Neru Teftament.
"I. The Epifle begins with the ufual falutation with which the Greeks began their letters, (chap. i. 1-7.)
"II. St Paul profeffes his joy at the flourifhing ftate of the church at Rome, and his defire to come and preach the gofpel (ver. 8-19.) : then he infenfibly introduces the capital point he intended to prove, viz.
" 11 . The fubject of the goipel (ver. 16, 17.), that it reveals a righteoufnefs unknown before, which is deVol. XVII. Part 1.
rived folely from faith, and to which Jews and Gentiles Scripture. have an equal claim.
"IV. In order to prove this, he fhows (chap. i. 18.iii. 20.) that both Jews and Gentiles are "under' fin," i. e. that God will impute their fins to Jews as well as to Gentiles.
"His arguments may be reduced to thefe fyllogifms (ch. ii. 1. 17-24.) I. 'The wrath of God is reveal. ed againft thofe who hold the truth in unrighteoufnefs; i. e. who acknowledge the trith, and yet fin againft it. 2. The Gentiles acknowledged truths: but, partly by their idolatry, and partly by their other deteftable vices, they finned againtt the truth they acknowledged. 3. Therefore the wrath of God is revealed againft the Gentiles, and punifheth them. 4. The Jews have acknowledged more truths than the Gentiles, and yet they fin. 5. Confequently the Jewifh finners are yet more expofed to the wrath of God (ch. ii. 1-12.) Having thus proved his point, he anfwers certain objections to it. Obj. 1. "The Jews were well grounded in their knowledge, and ftudied the law.' He anfwers, If the knowledge of the law, without obferving it, could juftify them, then God could not have condemned the Gentiles, who knew the law by nature, (ch. ii. 13-16.) Obj. 2. 'The Jews were circumcifed.' Anf. 'That is, ye are admitted by an outward fign into the covenant with God. This fign will not a vail you when ye violate that covenant (ch. ii. 25. to the end). Obj. 3. 'According to this doctrine of St Paul; the Jews have no advantage before others.' Anf. Yes, they ftill have advantages; for unto them are committed the oracles of God. But their privileges do not extend to this, that God Mould overlook their fins, which, on the contrary, Scripture condemns even in the Jews (ch. iii. I-19.) Obj. 4. "They had the Le. vitical law and facrifices.' Anf. From hence is no remiffion, but only the knowledge of fin, (ch. iii. 20.)
"V. From all this St Paul concludes, that Jews and Gentiles may be juftified by the fame means, namely, without the Levitical law, through faith in Chrift: And in oppofition to the imaginary advantages of the Jewe, he flates the declaration of Zechariah, that God is the God of the Grentiles as well as of the Jews, (ch. iii. 21: to the end.)
"VI. As the wholc bleffing was promifed to the faithful defcendants of A braham, whom both Scripture and the Jews call his children, he proves his former afo fertion from the example of Abraham; who was an idulater before his call, but was declared juit by God, on account of his faith, long before his circumcifion. Hence he takes occafion to explain the nature and fruits of faith, (ch. iv. I. v. II.)
"VII. He goes on to prove from God's juftice, that the Jews had no advantages over the Gentiles with refpect to juftification. Both Jews and Gentiles had forfeited life and immortality, by the means of one common father of their race, whom they themfelves had not chofen. Now as God was willing to refore immortality by a new fpiritual head of a covenant, viz. Chrift, it was jult that both Jews and Gentiles hould Share in this new reprefentative of the whole race (ch.v. 12. to the end).-Chap. v. ver. 15, 16. amounts to this negative queftion, 'Is it not fitting' that the free gift fhould extend as far as the offence?"

X
VIII.

## $S C R$

" XVII. He exhorts the Jews and Gentiles in the Seri)

Seripturf. "VIII. He fhows that the doctrine of juftification, as flated by him, lays us under the ftrongeft obligations of holinefs, (ch. vi. r. to the end.)

- "IX. He fhows that the law of Mofes no longer concernṣ us at all; for our juflification arifes from our appearing in God's fight, as if actually dead with Chritt on account of our fins ; but the law of Mofes was not given to the dead. On this occafion he proves at large, that the eternal power of God over us is not affected by this; and that whilft we are under the law of Mofes we perpetually become fubject to death, even by fins of iriadvertency, (ch. vii. I. to the end.)
" X . Hence he concludes, that all thofe, and thofe only, who are united with Chrift, and for the fake of his union, do not live according to the flefh, are free from all condennation of the law, and have an undoubted fhare in eterual life, (ch. viii. 1-17.)
"XI. Having defrribed their bleffednefs, he is aware that the Jews, who expected a temporal happinefs, fhould object to him, that Chriftians notwithftanding endure much fuffering in this world. He anfwers this objection at large, (ch. viii. 18. to the end )
"XII. He flows that God is not the lefs true and faithful, becaufe he doth not juftify, but rather rejects and punifhes, thofe Jews who would not believe the Mefliah, (ch. ix. x. xi.) In difcuffing this point, we may obferve the cautious manner in which, on account of the Jewifh prejudices, he introduces it (ch. ix. 1-5.), as well as in the difcuffion itfelf.
"He fhows that the promifes of God were never made to all the pofterity of Abraham, and that God always referved to himfelf the power of choofing thofe fous of Abraham whom, for Abraham's fake, he intended to blefs, and of punifhing the wicked fons of Abraham; and that with refpect to temporal happinefs or mifery, he was not even determined in his choice by their works. Thus he rejected Inmael, Efan, the If. raelites in the defert in the time of Mofes, and the greater part of that people in the time of Ifaiah, making them a facrifice to his juftice, (ch. ix. 6-29.)
"He then proceeds to fhow that God had reafon to reject molt of the Jews then living, becaufe they would not believe in the Meffalh, though the gofpel had been preached to them plainly enough, (ch. ix. 30 . x. to the end). However, that God had not rejected all his people, but was fill fulfilling his promife upon many thoufand natural defcendants of A braham, who believed in the Meffiah, and would in a finture period fulfil them upon more ; for that all Ifrael would be converted, (ch. xi. 1-32.) And he concludes with admiring the wife counfels of God, (ver. 33. to the end.)
" XIIII. From the doctrine hitherto laid down, and particularly from this, that God has in mercy accepted the Gentiles; he argues, that the Romans fhould confecrate and offer themfelves up wholly to God. This leads him to mention in particular fome Chriftian duties, (ch. xii.), viz.
"XIV. He exhorts them to be fubject to magiArates (ch. xiii. 1-7.) ; the Jews at that time being given to fedition.
" XV. To love one another heartily (ver. 2-10.) And,
" XVI. To abflain from thofe vices which were confidered as things indifferent among the Gentile, (ver. 11. to the end.)

Ciriftian church to brotherly unity, (ch. xiv. 2. xv. 13.)
"XVIII. He concludes his Epiftle with an excufe for having ventured to admonifh the Romans, whom he had not con erted; with an account of his journey to Jerufalem; and with fome falutations to thofe perfons whom he meant to recommend to the church at Rome." See Michaelis's Leedures on the Nerw Teflament.

Corinth was a wealthy and luxurious city, built upon Fir $\mathrm{R}_{\mathrm{E}}$ the ithmus which joins the Merea to the northernto the parts of Greece. In this city Paul had fpent two rinthi years founding a Chriftian church, which confifted of a mixture of Jews and Gentiles, but the greater part Gentiles.

About three years after the apofle had left Corinth, tis he wrote this Epiftle from Ephelius in the year 56 or 57, and in the beginning of Nero's reign. That it was written from Ephefus, appears from the falutation with which the Epittle clofes, (chap. xvi. 19.) "The churches of Afia falute you. Aquila and Prifcilla falute you much in the Lord." From thefe words it. is evident, in the ift place, that the Epittle was written in Afia. 2 dly, It appears from Acts xviii. 18, 19 : that Aquila and Prifcilla accompanied Paul from Corinth to Ephefils, where they feem to have continued till Paul's departure.

St Paul had certainly kept up a conftant intercourfe with tlie churches which he had founded; for he was evidently acquainted with all their revolutions. They feem to have applied to him for advice in thofe difficult cafes which their own underflanding could not folve; and he was ready on all occafions to correct their miftakes.

This Epitle confifts of two parts. I. A reproof Gene for thofe vices to which they were moft propeufe; fign 2. An anfwer to fome queries which they had propofed to him.

The Corinthians, like the other Greeks, had been accuftomed to fee their philofophers divide themfelves into different fects; and as they brought along with them into the Chriltian church their former opinions and cuftoms, they wifhed, as before, to arrange themfelves under different leaders. In this Epittle Paul condemns thefe divifions as inconfitent with the fpirit The of Chriftianity, which inculcates benevolence and una-tle re nimity, and as oppofite to the conduct of Chrittian teach- the ers, who did not, like the philofophers, afpire after the the this praife of eloquence and wifdon. They laid no claim to thefe nor to any honour that cometh from men. The apoftle declares, that the Chriftian truths were revealed from heaven; that they were taught with great plainnefs and fimplicity, and proved by the evidence of miracles, (chap. i. 1). He diffuades them from their divifions and animofities, by reminding them of the great trial which every man's work muft undergo; of the guilt they incurred by polluting the temple or church of God ; of the vanity of human wifoom; and of glorying in men. He admonifhes them to efteem the teachers of the gofpel only as the fervants of Chritt ; and to remember that every fuperior advantage which they enjoyed was to be afcribed to the goodnefs of God, (chap. iii. 4).
2. In the fifth chapter the apofle confiders the cafe of a notorious offender, who hall married his ftepmathes:

## S C R [ 163 ] S C R

, ther; and tells them, that he ought to be excommunicated. He alfo exhorts the Chriftians not to affociate with any perfon who led fuch an openly profane life,
3. He cenfures the Corinthians for their litigious difpofition, which caufed them to profecute their Chriftian brethren before the Heathen courts. He expreffes much warmth and furprife that they did not refer their differences to their brethren ; and concludes his exhortations on this fubject, by affuring them that they ought rather to allow themfelves to be defrauded than to feek redrefs from Heathens (chap. v. 1-9).
4. He inveighs againft thofe vices to which the Corinthians had been addicted before their converfion, and efpecially againft fornication, the criminality of which they did not fully perceive, as this vice was generally overlooked in the fyftems of the philofophers, (ch. vi. 10. to the end).

Having thus pointed out the priblic irregularities with which they were chargeable, he next replies to certain queftions which the Corinthians had propofed to him by letter. He, I. Determines fome queftions relating to the mariage fate; as, 1 ft , Whether it was good to marry under the exifting circumfances of the churclı? And, 2 d , Whether they fhould withdraw from their partners if they continued unbelievers? (ch. vii).
2. He initructs them how to act with refpect to idol offerings. It conld not be unlawful in itfelf to eat the food which had been offered to idols ; for the confecration of flefh or wine to an idol did not make it the property of the idol, an idol being nothing, and therefore incapable of property. But fome Corinthians thought it lawful to go to a feaft in the idol temples, which at the fame time were places of refort for lewdnefs, and to eat the facrifices whillt praifes were fung to the idol. This was publicly joining in the idolatry. He even advifes to abftain from fuch participation as was lawful, rather than give offence to a weak brother; which he enforces by his own example, who had abftained from many lawful things, rather than prove a fcandal to the gofpel, (chap. viii. ix. x.)

3: He anfurers a third query concerning the manner in which women thould deliver any thing in public, when called to it by a divine impulfe. And here he cenfures the unufual drefs of both fexes in prophefying, which expofed them to the contempt of the Greeks, among whom the men ufually went uncovered and the women veiled.
leing tbus led to the confideration of the abufes that prevailed in their public worfhip, he goes on to cenfure the irregularities which were committed at their bove-feafts, or, as we term them, the Lord's Supper. It was a common practice with the Grecks at their focial fuppers for every man to bring his own provifions along with him, not, however, to fhare them with the company, but to feaft upon them in a folitary manner. Thus the rich ate and drank to excefs, while the poor were totally neglected. The Corinthians introduced the fame practice in the celebration of the Lord's Supper, thus confounding it with their ordinary meals, and without ever examining into the end of the inflitution. It was this grofs abufe that Paul reproves in the IIth chapter. He alfo cenfures their conduct in the exercife of the extraordinary gifts of the Holy Ghoft; he fhows them they all procceded from the fame fpirit, and
were irtended for the inftruction of Chrifian focieties; Scri; turer that all Chrifians ought to be united in mutual love; and that tendernefs ought to be fhown to the moft inconfiderable member, as every one is fubfervient to the good of the whole (chap. xii). In the 13 th chapter he gives a beautiful defcription of benevolence, which has been much and juftly admired. He reprefents it as fnperior to the fupernatural gifts of the fpirit, to the moft exalted genius, to univerfal knowledge, and even to faith. In the $14^{\text {th }}$ chapter he cautions the Corin. thians againf oltentation in the exercife of the gift of languages, and gives them proper advices.
4. He afferts the refurrection of the dead, in oppofition to fome of the Corinthians who denied it, founding it upon the refurrection of Jefus Chrift, which he confiders as one of the moft effential doctrines of Chrifianity. He then anfwers fome objections to the re. furrection, drawn from our not being capable of underfanding how it will be accomplifhed, (chap. xv.) He then concludes with fome directions to the Corinthian church concerning the manner of collecting alms ; promifes them a vifit, and falutes fome of the members.

The fecond Epiftle to the Corinthians was witten The fecond from Macedonia in the year 57, about a year afcer the Epinle to former. See 2 Cor. ix. $1-5$. viii. and xiii. I.
the Corin-
St Paul's firf Epille had wrought different effects thians. among the Corinthians: many of them examined their State of the condict; they excommunicated the inceftuous man ; Corinthiaus requefted St Paul's return with tears; and vindicated church. him and his office againft the falfe teacher and his adhe. rents. Others of them fill adhered to that adverfary of St Paul, exprefsly denied his apoltolic office, and even furnifhed themfelves with pretended arguments from that Epiltle. He had formerly promifed to take a journey from Ephefus to Corinth, thence to vifit the Macedonians, and return from them to Corinth ( 2 Cor. i. 15, 16). But the unhappy ftate of the Corinthian church made him alter his intention (verfe 23.), fince he found he muft have treated them with feverity. Hence his adverfaries partly argued, i. I'hat St Paul was irrefolute and unfteady, and therefore could not be a prophet: 2. The improbability of his ever coming to Corinth again, fince he was afraid of them. Such was the flate of the Corinthian church when St Paul, after his departure from Ephefus, laving vifited Macedonia, (Acts xx. 1.) received an account of the above particulars from Titus ( 2 Cor. vii. 5, 6.) , and therefore wrote them his fecond Epiftle about the end of the fame year, or the beginning of 58 .

But to rive a more diltinct view of the contents of 188 this Epifle:
the contents 1. The apoftle, after a general falutation, expreffes his of this En . grateful fenfe of the divine goodnefs; profeffing his conti- piltle. dence in God, fupported by a fenfe of his own integrity ; makes an apology for not having vifited the Corin. thians as he had intended, and vindicates himfelf from the charge of ficklenefs, (chap. i).
2. He forgives the inceftuous man, whofe conduct had made fo deep an impreffion on the apoftle's minc, that one reafon why he had deferred his journey to Co. rinth was, that he might not meet them in grief, nor till he had received advice of the effect of his apottolical admonitions. He mentions his anxiety to meet 'Tritus at Troas, in oxder to hear of their welfare ; cxpreffes

## $\mathrm{S} C \mathrm{R}$

## $\mathrm{S} C \mathrm{R}$

Scripture. his thankfulnefs to God for the fuccefs attending his minitiry, and fpeaks of the Corinthians as his credentials, written by the finger of God, (chap ii. iii. 1-6.)
3. He treats of the office committed to him of preaching the redemption ; and highly prefers it to preaching the law : to which probably his adverfaries had made great pretences. They had ridiculed his fufferings; which he fhows to be no difgrace to the gofpel or its minifters; and here he gives a fhort abitract of the dotriue he preaches, (chap, iii. 6. v. to the end).

He expatiates with great copioufncfs on the temper with which, in the midit of afflitions and perfecutions, he and his brethren executed their important embaffy; and with great affection, and tendernefs he exhorts them to avoid the pollution of idolatry, (chap. vi). He endeavours to win their confidence, by telling them how much he rejoiced in their amendment and welfare, and how forry he had been for the diftrefs which his neceffary reproofs had occafioned, (chap. vii). He then ex. horts them to make liberal contributions for the Chriftians in Judra. He recommends to them the ex. ample of the Macedonians, and reminds them of the benevolence of the Lord Jefus. He expreffes his joy for the readinefs of Titus to affift in making the collection; and makes allo honourable mention of other Chriftian brethren, whom he had joined with Titus in the fame commiffion, (chap. viii). He then, with admirable addrefs, urges a liberal contribution, and recommends them to the divine bleffing, (chap. ix).
4. Next he obviates fome reflections which had been thrown upon him for the mildnefs of his conduct, as if it had proceeded from fear. He afferts his apoo..olical power and authority, cautioning lis opponents againft urging him to give too fenfible demonftrations of it, (chap. x). He vindicates himfelf againft the infinuations of fome of the Corinthians, particularly for having declined pecuniary fupport from the church; an action which had been ungeneroufly turned to his difadvantage. To fhow his fuperiority over thofe defigning men who had oppofed his preaching, he enumerates his fufferings ; gives a detail of fome extraordinary revelations which he had received; and vindicates himfelf from the charge of boatting, by declaring that he had been forced to it by the defire of fupporting his apoftolical character, (chap xi. xii.) He clofes the Epiftle, by affuring them with great tendernefs how much it would grieve him to demonftrate his divine commiffion by feverer methods.

The Galatians were defcended from thofe Gauls who $\mathrm{E}_{\text {pinte to }}$ the Galahad formerly invaded Greece, and afterwards fettled in Lower Afra. St Paul had preached the gofpel among them in the year 5 , foon after the council held at Jerufalen, (Acts xvi. 6). Afia fwarmed at that time with zealots for the law of Mofes, who wanted to impofe it upon the Gentiles, (ACt xv. I). Soon after St Paul had left the Galatians, thefe falle teachers had got among them, and wanted them to be circumcifed, \&c. This occafioned the following Epifte, which Michaelis
that of the Epifle to the Romans; only this quetion Ser is more fully confidered here, "Whether circunciion, and an obfervance of the Levitical law, be neceffary to the falvation of a Chriftian convert?" It appears, te thefe Judaizing Chriftians, whofe indirect views St Paul expofes (Acts xv. I. Gal.' v. 3, 9.), at firf only reprefented circumeifion as neceffary to falvation ; bu: af. terwards they infifted upon the Chriftians rectiving the Jewinh feftivals, (Gal.iv. Io).

As St Pail had fornded the churches of Gahtia, and inftructed them in the Chriftian religion, he does not fet before them its principal doctrines, as he had done in the Epiftle to the Romans; but referring them to what he had already taught (chap. i. 8, 9.), he proceeds at once to the fubject of the Epifte.
As it appears from feveral paffages of this Epifte, particularly chap. i. 7, 8, 10. and chap. v. II. that the Judaizing Chriftians liad endeavoured to perfade the Galatians that Paul himfelf had changed his opinion, and now preached up the Levitical law ; he denies that charge, and affirms that the doctrines which he had taught were true, for he had received them from God by immediate revelation. He relates his miraculous converfion ; afferts his apoftolical authority, which had been acknowledged by the difciples of Jefus; and, as a proof that he had never inculcated a compliance with the Mofaic law, he declares that he had oppofed Peter at Antioch for yielding to the prejudices of the Jews.

Having now vindicated his character from the fulpicion of ficklenefs, and fhown that his cominiffion was divine, he argues that the Galatians ought not to fubmit to the law of Mofes: 1. Becaufe they had rectived the Holy Gholt and the gifts of miracles, not by the law, but by the gofpel, (chap. iii. 1-5). 2. Becaufe the promifes which God made to Abraham were not reftricted to his circumcifed defcendants, but extended to all who are his clildren by faith, (chap. iii. 6-18). In anfwer to the objection, To zubat then ferveth the laww? he replies, That it was given becaule of tranfgreffion; that is, to preferve them from idolatry till the Meffiah himfelf fhould come. 3. Becaufe all men, whether $x$ Jews or Gentiles, are made the children of God by faith, $f$ or by receiving the Chriftian religion, and therefore do not ftand in need of circumcifion, (ch. iii. $26-29$.) From the ift verfe of chapter iv. to the inth, he argues that the law was temporary, being only fitted for a ftate of infancy ; but that the world, having attained a Itate of manhood under the Meffiah, the law was of no farther ufe. In the remaining part of ehap. iv. he reminds them of their former affection to him, and affures them that he was ftill their fincere friend. He exhorts them to fland faft in the liberty with which Chrift had made them free; for the fons of Agar, that is, thofe under the law given at Mount Sinai, are in bondage, and to be caft out ; the inheritance being defigned for thole only who are the free-born fons of God under the fpiritual covenant of the gofpel.

The apoftle next confintes the fallie report which had been fpread abroad among the Galatians, that Paul himfelf preached up circumcifion. He had already indirectly refuted this calumny by the particular account c which he gave of his life; but he now directly and openly contradicts it in the following manner :

## S C R [ 165 ] S C R

1. By affuring them, that all who thought circumcifion ncceffary to falvation conld reccive no benefit from the Chrittian religion, (chap. v. 2-4).
2. By declaring, that he expected juftification only by faith, (ver. 5, 6).
3. By teflifying, that they had once received the truth, and had never been taught fuch falfe doctrines by him, (ver. 7, 8).
4. By infinuating that they fhould pafs fome cenfure on thofe who mifled them (ver. 9,10 .), by declaring that he was perfecuted for oppofing the circumcifion of the Chriftians, (ver. 11).
5. Fy expreffing a wifh that thofe perfons fhould be cut off who troubled then with his doctrine.
'This Epiftle affords a fine inftance of Paul's fkill in managing an argument. The chief objection which the advocates for the Mofaic law had urged againft him was, that he himfelf preached circumcifion. In the beginning of the Epifle he overturns this flander by a flatement of facts, without taking any exprefs notice of it ; but at the end fully refutes it, that it might leave a ftrong and latting impreflion upon their minds.

He next cautions them againft an idea which his arguments for Chriftian liberty might excite, that ic confilted in licentioufnefs. He fhows them it does not contift in gratifying vicious defires; for none are under ftronger obligations to moral duties thian the Chriftian. He recommends gentlenefs and meeknefs to the weak (chap. vi $1-5$ ), and exhorts them to be liberal to th is teachers, and unto all men (ver, 6-10). He concludes with expofing the falfe pretences of the Judaizing teachers, and afferting the integrity of his own conduct.
Ephefus was the chief city of all Afia on this fide fi- Mount Traurus. St Paul had paffed through it in the year 54, hut without making any flay, (ACAs xviii. 1921). The following year he returned to Ephefus again, and ftaid there three years, (chap. xix.) During his abode there he completed a very fourihing clurch of Chritians, the firlt foundations of which had been laid by fome inferior teachers. As Ephefus was frequented by perfons of diftinction from all parts of Afia Minor, St Paul took the opportunity of preaching in the ancient countries (ver. 10.); and the other churches of $A$ fia were confidered as the daughters of the church of Ephefins; fo that an Epiâle to the Ephefians was, in effect, an epiftle to the other churches of A fia at the fame time.
Dr Lardner hhows it to be highly probahle that this Epifle was written in the year 61, foon after Paul's arrival at Rome.
As Paul was in a peculiar manner the apofle of the Gentiles, and was now a prifoner at Rome in confequence of having provokcd the Jews, by afferting that an obfervance of the Mofaic law was not neceffary to obtain the favour of God, he was afraid left an advantage fhould be taken of his confinement to unfettle the minds of thofe whom he had converted. Hearing that the Ephefians flood firm in the faith of Chrift, without fubmitting to the law of Mofes, he writes this Epirtle to give them more exalted views of the love of God, and of the excellence and dignity of Chrift. This Epifle is pot compofed in an argumentative or didactic flyle : The firt three chapters confift almoft entirely of thanks-
givinys and prayers, or glowing defcriptions of the Scripture. bleffings of the Chriftian religion. This circumftance renders them a little obfcure ; but by the affiftance of the two following epifles, which were written on the fame occafion, and with the fame defign, the meaning of the apoftle may be eafily difcovered. The laft three chapters contain practical exhortations. He firt inculcates unity, love, and concord, from the confideration that all Chriftians are merabers of the fame body, of which Chrift is the head. He then advifes them to forfake the viccs to which they had been addicted while they remained heathens. He recommends juftice and charity ; ftrenuounly condemns lewdnefs, obfcenity, and intemperance, vices which feem to have been too common among the Epehfians. In the 6th chapter he points out the duties which arife from the relations of hufbands and wives, parents and children, mafters and fervants; and concludes with ftrong exliortations to fortitude, which he defcribes in an allegorical manner.

The church at Philippi had been founded hy Paul, Epiftle to Silas, and Timothy (Acts xvi.), in the year $\$ 1$, and had the Philipcontinmed to thow a ftrong and manly attachment to pians. the Chriftian religion, and a tender affection for the apofle. Hearing of lis imprifonment at Rome, they fent Epaphroditus, one of their paftors, to fupply him with money. It appears from this Epiftle that he was in great want of neceffaries before this contribution ara rived ; for as he had not converted the Romans, lie did not confider himfelf as intitled to receive fupplies from them. Being a prifoner, he could not work as formerly; and it was a maxim of his never to accept any pecuniary affiftance from thofe churches where a faction had been raifed againft him. Fron the Philippians he was not averfe to receive a prefent in the time of want, becaule he confidered it as a mark of their affection, and becaufe he was affured that they had conducted themfelves as fincere Chriftians.

It appears from the apofle's own words, that this The date letter was written while he was a prifoner at Rome, (chap i. 7, 13.iv. 22.); and from the expectation which he difcovers (chap. ii. 24.) of being foon releafed and reftored to them, compared with Philemon v. 22. and Heb. xiii. 13. where he expreffes a like expectation in ftronger terms, it is probable that this Epiftle was written towards the end of his firft imprifonment in the year 62.

The apoftle's defign in this Epiftle, which is quite And defigo of the practical kind, feems to be, " to comfort the of it. Philippians under the concern they had expreffed at the news of his imprifonment ; to check a party-fpirit that appears to have broke out among them, and to promote, on the contrary, an entire union and harmony of affection; to guard them againft being feduced from the purity of the Chriftian faith by Jndaizing teachers; to fupport them under the trials with which they ftrug. gled; and, above all, to infpire them with a concern to adorn their profeffion by the moft eminent attainments in the divine life." After fome particular admonitions in the beginning of the $4^{\text {th }}$ chapter, he proceeds in the 8 th verfe to recommend virtue in the moft extenfive fenfe, mentioning all the different foundations in which it had been placed by the Grecian philofophers. J'owards the clofe of the Epifle, he makes his acknowledgments to the Philippians for the feafonable and libe.

The arga. ments which the apoftle em ploys.
ral fiupply which they had fent him, as it was fo convincing a proof of their affiction for him, and their concern for the fupport of tl - gofpel, which he prefereed far above any private fecular intereft of his own; exprefsly difclaiming all felfifh, mercenary views, and affuring them with a noble fimplicity, that he was able upon all occalions to accommodate his temper to his circounftances; and had learned, under the teachings of Di vine grace, in whatever ftathon Providence might fee fit to place him, therewith to be content. After which, the apoftle, having encouraged them to expect a rich fupply of all their wants from their God and Father, to whom he devoutly afcribes the honour of all, concludes with falutations from himfelf and his friends at Rome to the whole church, and a folemn benediction, (verfe 10 . to the end) ; and declares, that he rejoiced in their liberality chiefly on their own account.

The Epittle to the Coloffians was written while Paul was in prifon (chap. iv. 3. ), and was therefore probably compofed in the year 62. The intention of the apoftle, as far ns can be gathered from the Epiftle itfelf, was to fecure the Coloffians from the influence of fome doctrines that were fubverfive of Chriftianity, and to excite them to a temper and behaviour worthy of their facred character. A new fect had arifen, which had blended the oriental philofoply with the fupertitious opinions of the Jews.

They held, I. That God was furrounded by demons or angels, who were mediators with God, and therefore to be worhipped. 2. That the foul is defiled by the body ; that all bodily enjoyments hurt the foul, which they believed to be immortal, though they feem to have denied the refurrection of the body, as it would only render the foul finful by being reunited to it. 3. That there was a great myfery in numbers, particularly in the number feven; they therefore attributed a natural holinefs to the feventh or Sabbath day, which they obferved more ftrictly than the other Jews. They fpent their time moftly in contemplation ; abftained from marriage, and every gratification of the fenfes; ufed wafhings, and thought it finful to touch certain things; regarded wine as poifon, \&c.
The arguments againit thefe doctrines are managed with great $\mathrm{Ikill}_{\text {and }}$ addrefs. He begius with exprefling great joy for the favourable character which he had heard of them, and affures them that he daily prayed for their farther improvement. Then he makes a fhort digreffion, in order to defcribe the dignity of Jefus Chrift; declares that he had created all things, whether thrones or dominions, principalities and powers; that he alone was the head of the church, and had reconciled men to the Father. The inference from this defcription is evident, that Jefus was fuperior to angels; that they were created beings, and ought not to be worfhipped. Thus he indirectly confutes one doctrine before he formally oppofes it. Paul now returns from his digreffion in the 21 ft verfe to the fentiments with which he had introduced it in the $13^{\text {th }}$ and 14 th verfes, and again expreffes his joy that the Philippians remained attached to the gofpel, which was to be preached to the Gentiles, without the rettraints of the ceremonial law. Here again he ftates a general doctrine, which was inconfiftent with the opinions of thofe who were zealous for the law of Mofes; but he leaves the Coloffians to draw the inference, (chap. i.).

Having agrain affured them of his tender concern for set their welfare, for their advancement in virtue, and that they niight acknowledge the myftery of God, that is, that the gofpel was to fuperfede the law of Mofes, he proceeds directly to caution them againft the philofophy of the new teachers, and their fupertitions adherence to the law; Shows the fuperiority of Chrift to the an gels, and warns Chriftians againft worhipping them. He cenfures the obfervation of Sabbaths, and rebukes thofe who required abitinence from certain kinds of food, and cautions them againft perfons who affume a great appearance of wifdom and virtue, (chap. ii.)

In the 3 d chapter he exhorts them, that, inftead of Exh being occupied about exteınal ceremonies, they ought to tion cultivate pure morality. He particularly guards them againft impurity, to which they had before their converfion been much addicted.. He admonifhes them againft indulging the irafcible paffions, and againit committing falfelood. He exhorts them to cultivate the benevolent affections, and humility, and patience. He recommends alfo the relative duties between hufbands and wives, parents and children, mafters and fervauts. He enjoins the duties of prayer and thanklyiving (ch. iv. 2.), and requefts them to remember him in their petitions. He enjoins affability and mild behaviour to the unconverted heathens (verfe 6th) ; and concludes the Epitle with matters which are all of a private nature, except the directions for reading this Epiftle in the church of Laodicea, as well as in the church of Coloffe.

This Epifte is addreffed to the inhabitants of Theffa- Fir ${ }^{2}$ lonica, the capital of Macedonia, a large and populous to th city. It appears from the Acts, chapter xvii. 1. that ${ }^{\text {falos }}$ the Chritian religion zas intıoduced into this city by Paul and Silas, foon atter they had left Philippi. At firlt they made many converts; but at length the Jews, ever jealous of the admiffion of the Gentiles to the fame privileges with themfelves, ftirred up the rabble, which affaulted the houfe where the apoftle and his friends lodged; fo that Paul and Silas were obliged to flee to Bered, where their fuccefs was foon interrupted by the fame reftlefs and implacable enemies. The apotlle then withdrew to Athens; and Timothy, at his defire, returned to Theffalonica (I Theff. iii. 2.) to fee what were the fentiments and behaviour of the inhabitants after the perfecution of the Jews. From Athens Paul went to Corinth, where he ftayed a year and fix months; during which, Timothy returned with the joyful tidings, that the 'Iheffalonians remained ftedfat' to the faith, and firmly attached to the apoltle, notwithitanding his flight. Upon this he fent them this Epifle, A. D. 52, Th in the r2th year of Claudius.

This is generally reckoned the firt Epittle which Panl wrote; and we find he was anxious that it fhould be read to all the Chrifians. In chap. v. 27 . he ufes thefe words; "I adjure you by the Lord, that this Epifte be read unto all the holy brethren." This direction is very properly inferted in his firft Epittle.

The intention of Paul in writing this Epiftle was evi- An ${ }^{2}$ dently to encourage the Iheffalonians to adhere to the of it Chriftian religion. This church being fill in its infancy, and oppreffed by the powerful Jews, required to be eftablifhed in the faith. St Paul, therefore, in the three firt chapters, endeavours to convince the Theffalonians of the truth and divinity of his gofpel, both by

## 

the miraculous gifte of the Holy Ghat which had been imparted, and by lis own conduct when among them.
While he appeals, in the firlt chapter, to the miraculous gifts of the Holy Spirit, he is very liberal in his commendations. He vindicates himfelf from the charge of timidity, probably to prevent the Theeffalonians from forming an unfayourable opinion of his fortitude, which his flight might have excited. He afferts, that he was not influenced by felfifh or difhonour. able motives, but that he was anxious to pleafe God and not man. He expreffes a ftrong affection for them, and how anxious he was to impart the bleffings of the gofpel. He congratulates himelelf upon his fuccefs; mentions it to their honour that they received the gofpel as the word of God and not of man, and therefore did not renounce it when perfecution was raifed by the Jews. He expreffes a ftrong defire to vilit the Theffalonians; and affures them he had been litherto retained agaiuft his will.

As a farther proof of his regard, the apofle informs them, that when he came to Athens, he was fo much concerned, lett, being difcouraged by his fufferings, they fhould be tempted to caft off their profeffion, that he could not forbear fending Timothy to comfort and flrengthen them : and expreffes, in very ftrong terms, the fenfibie pleafure he felt, in the midit of all his afflictions, from the favourable account he received of their faith and love ; to which he adds, that he was continually praying for their farther ettabiifhment in religion, and for an opportunity of making them another vifit, in order to promote their edification, which lay fo near his heart, (chap. iii., throughout.)

Having now fhown his paternal affection for them, with great addrefs he improves all that influence which lis zcal and fidelity in their fervice muft naturally have given him to inculcate upon them the precepts of the gofpel. He recommends chattity, in oppofition to the prevailing practice of the heathens ; juftice, in oppofition to fraud. He praifes their benevolence, and encourages them to cultirate higher degrees of it. He recommends induftry and prudent behaviour to their heathen neighbours. In order to comfort them under the lofs of their friends, he affures them that thofe who were fallen afleep in Jefus fhould be raifed again at the laft day, and fould, together with thofe who remained alive, be caught up to meet their Lord, and fhare his triumph, (chap. iv.) He admonifhes them to prepare for this folemn event, that it might not come upon them unawares; and then concludes the Epifle with various exhortations.

The fecond Epifle to the Theffalonians appears to he have been written foon after the firft, and from the fame - place ; for Silvanus or Silas, and Timothy, are joined together with the apoflle in the infcriptions of this Epifte, as well as of the former.
The apoftle begins with commending the faith and charity of the Theflalonians, of which he had heard a favourable report. He exprefles great joy on account of the patience with which they fupported perfecution ; and obferves that their perfecution was a proof of a
righteous judgment to come, where their perfecutors Sceipture, would meet with their proper recompenfe, and the righteous be delivered out of all their afflictions. He alfures them of his conttant prayers for their farther im. provement, in order to attain the felicity that was promiled, (chap. i.)

From mifunderfanding a paffage in his former letter, it appears that the Theffalonians believed the day of judgment was at hand. To rectify this miitake, he informs them that the day of the Lord will not come till a great apoftacy has overfpread the Chriftian world, the nature of which he defribes ( G ). Symptoms of this myltery of iniquity had then appeared ; but the apoftle expreffes his thankfulnefs to God that the Theffilonians had efcaped this corruption. He exhorts them to tledfa nefs, and prays that God would comfort and Hrengthen them, (chap. ii.)
He requetts the prayers of the Theffalonians for him and his two affiltants, at the fame time expreffing his confidence that they would pay due regard to the inAructions which he had given them. He then proceeds to correct fome irregularities. Many of the Theffalonians feem to have led an idle diforderly life; thefe he feverely reproves, and commands the faithful to fhun their company if they fill remained incorrigible.

When the firtt Epifle to Timothy was written, it is Firt Epinte difficult to afce:tain. Lardner dates it in 56; Mill, to fimothy, Whitby, and Macknight, place it in 64 : but the ar- when writguments on which each party founds their opinion are too long to infert here.

Timothy was the intinate friend and companion of $\begin{gathered}210 \\ \text { Intention }\end{gathered}$ Paul, and is always mentioned by that apoftle with and conmuch affection and elteem. Having appointed him to tents of it. fuperintend the church of Ephefus during a journey which he made to Macedonia, he wrote this letter, in order to direct hin how to difcharge the important truft which was committed to him. This was the more neceffary, as Timothy was young and unexperienced, ( I Tim. iv. 12.) In the beginning of the Epifle he reminds him of the charge with which he had intrufted him, to wit, to preferve the purity of the gofpel againft the pernicious doctrines of the Judaizing teachers, whofe opinions led to frivolous controverfies, and not to a good life. He fhows the ufe of the law of Mofes, of which thefe teachers were ignorant. This account of the law, he affures 'Timothy, was agreeable to the reprefentation of it in the gofpel, with the preaching of which he was intrufted. He then makes a digreffion, in the fulnefs of his heart, to exprefs the fenfe which he felt of the goodnefs of God towards him.

In the fecond chapter the apofle prefcribes the manner in which the workhip of God was to be performed in the church of Ephefus; and in the third ex. plains the qualifications of the perfons whom he was to ordain as bifhops and deacons. . In the fourth chapter he foretels the great corruptions of the church which were to prevail in future times, and inftructs him how to fupport the facred character. In the fifth chapter
(G) For an explanation of this prophecy, Dr Hurd's Sermons may be confulted. He applies it to the papal power, to which it correfponds with aftonifhing exactnefs.

## S C R <br> [ 168 ] <br> S C R

Scriprure, he teaches Timothy how to admonifh the old and young of both fexes; mentions the age and character of fuch widows as were to be employed by the fociety in fome peculiar office; and fubjoins fome things concerning the refpect due to elders. In the fixth chapter he deferibes the duties which Timothy was to inculcate on flaves; condemns triffing controverfies and pernicious difputes; cenfures the exceffive love of money, and charges the

218 the frequent mention in it of perfons refiding at Ephe. cond fus. The apoftle feems to have intended to prepare Ti contents of mothy for thofe fufferings which he forefaw he would
it. it. rich to be rich in good works.
That the fecond Epiftle to Timothy was written from Rome is univerfally agreed; but whether it was during his firft or fecond imprifonment has been much difputed That Timothy was at Ephefus or in Afia Minor when this Epiftle was fent to hinn, appeass from be expofed to. He exhorts him to conflancy and perfeverance, and to perform with a good confcience the duties of the facred function.

The falle teachers, who had before thrown this church into confufion, grew every day worfe : infomuch that not only Hymenæus, but Philetus, another Ephefian heretic, now denied the refurrection of the dead. They were led into this error by a difpute about words. At firt they only annexed various improper fignifications to the word refurrection, but at laft they denied it altogether ( H ) ; pretending that the refurrection of the dead was only a refurrection from the death of fin, and fo was already paft. This error was probably derived from the eaftern philofophy, which placed the origin of fin in the body, (chapter ii.) He then forewarns him of the fatal apoftacy and declenfion that was beginning to appear in the church; and at the fame time animates him, from his own example and the great motives of Chriftianity, to the moft vigorous and refolute difcharge of every part of the minifterial office.

This Epifle is addreffed to Titus, whom Paul had appointed to prefide over the church of Crete. It is difficult to determine either its date or the place from which it was fent. The apoftle begins with remiading Titus of the reafons for which he had left him at

214 Defign and contents of it. Crete; and directs him on what principles he was to aft in ordaining Chriftian paftors: the qualifications of whom he particularly defcribes. To fhow hin how cautious he ought to be in felecting men for the facred office, he reminds him of the arts of the Judaizing teachers, and the bad character of the Cretans, (chapter i).

He advifes him to accommodate his exhortations to the refpective ages, fexes, and circumftances, of thofe whom it was his duty to inftruct: and to give the greater weight to his inftructions, he admonifhes him to be an example of what he taught, (chap. ii). He exhorts him alfo to teach obedience to the civil magiftrate, becaufe the Judaizing Chriftians affirmed that no obedience was due from the worfhippers of the true God to magiftrates who were idolaters. He cautions
againlt cenforioufnefs and contention, and recommends meeknefs; for even the beft Chriftians had formerly been wicked, and all the bleffings whicl they enjoyed they derived from the goodnefs of God He then enjoins Titus ftrenuoufly to inculcate good works, and to avoid ufelefs controverfies; and concludes with directing him how to proceed with thofe heretics who attempted to fow diffenfion in the church.

The Epiftle to Philemon was written from Rome at Epi ${ }^{2}$ the fame time with the Epiftles to the Coloffians and Phit Philippians, about A.D. 62 or $6_{3}$. The occafion of -D the letter was this: Onefimus, Philemon's flave, had robbed his mafter and fled to Rome; where, happily for him, he met with the apofle, who was at that time a prifoner at large, and by lis inftructions and admonitions was converted to Chriftianity, and reclaimed to a fenfe of his duty. St Paul feems to have kept him for fome confiderable time under his eye, that he might be fatisfied of the reality of the change; and, when he had $p$ made a fufficient trial of him, and found that his behaviour was entirely agreeable to his profeffion, he would not detain him any longer for his own private convenience, though in a fituation that rendered fuch an affiltant peculiarly defirable (compare ver. 13, 14.), but fent him back to his mafter; and, as a mark of his efteem, entrufted him, together with Tychicus, with the charge of delivering his Epifle to the church at Coloffe, and giving them a particular account of the ftate of things at Rome, recommending him to them, at the fame time, as a faithful and beloved brother, (Col. iv. 9). And as Philemon might well be fuppofed to be ftrongly prejudiced againft one who had left his fervice in fo infamous a manner, he fends him this letter, in which he employs all his influence to remove his fufpicions, and reconcile him to the thoughts of taking Onefimus into his family again. And whereas St Paul might have exerted that authority which his characier as an apo le, and the relation in which he food to Philemon as a fpiritual father, would natura'ly give him, he choofes to intreat him as a friend; and with the foftet and molt infinnating addrefs urges his fuit, conjuring him by all the tics of Chrilian fiendfhip that he would not deny him his requelt: and the more effectually to prevail upon him, he reprefents his own peace and happinefs as deeply intereited in the event ; and fpeaks of O . nefimus in fuch terms as were beft adapted to foften his prejudices, and difpofe him to receive one who was fo dear to himifelf, not merely as a fervant, but as a fellow Chrittian and a friend.
It is impoffible to read over this admirable Epifle, without being touched with the delicacy of fentiment, and the mafterly addrefs that appear in every part of it. We fee here, in a moft ftriking light, how perfectly confintent true politenefs is, not only with all the warmth and fincerity of the friend, but even with the dignity of the Chrittian and the apoftle. And if this letter were to be confidered in no other view than as a mere human compofition, it muft be allowed a mafter-piece in its kind. As an illuftration of this remark, it may not be
improper
(н) This is by no means uncommon amongt men; to begin to difpute about the fignification of words, and to be led gradually to deny the thing fignified. This appears to have been the caufe of moft difputes, and the general beginnings of fcepticifm and infidelity.

## $S \mathrm{C} R \quad\left[\begin{array}{lll}169\end{array}\right] \quad \mathrm{S} C \mathrm{R}$

are. improper to compare it with an epifte of Pliny, that feems to have been written upon a firnilar occafion, (lib. ix. let. 21.); which, though penned by one that was reckoned to excel in the epiftolary ftyle, and though it has undoubtedly many beauties, yet mult be acknowledged, by every impartial reader, vally inferior to this animated compofition of the apoftle.

The Epiltle to the Hebrews has been generally afcribed to Paul ; but the truth of this opinion has been fufpected by others, for three reafons: 1. The name of the writer is nowhere mentioned, neither in the beginning nor in any other part of the Epifte. 2. The fyle is faid to be more elegant than Paul's. 3. There are expreffions in the Epittle which have been thought unfuitable to an apofle's character. 1. In anfwer to the firf objection, Clemens Alexandrinus has affigned a very good reafon:"Writing to the Hebrews (fays he), who had conceived a prejudice againft him, and were fufpicious of him, he wifely declined fetting his name at the beginning, left he fhonld offend them." 2. Origen and Jerome admired the elegance of the ftyle, and reckosed it fuperior to that which Paul has exhibited in his Epiftles: but as ancient teftimony had affigned it to Paul, they endeavoured to anfwer the objection, by fuppofing that the fentiments were the apoftle's, but the language and compofition the work of fome other perfor. If the Epiftle, however, be a tranflation, which we believe it to be, the elegance of the language may belong to the tranflator. As to the compofition and arrangement, it cannot be denied that there are many fpecimens in the writings of this apoftle not inferior in thefe qualities to the Epifle to the Hebrews. 3. It is objected, that in Heb. ii. 3. the writer of this Epifle joins himfelf with thofe who had received the gofpel from Chrift's apoftles. Now Paul had it from Chritt himfelf. But Paul often appeals to the ieftimony of the apoftles in fupport of thofe truths which he had received from Revelation: We may inftance I Cor. xv. 5, 6, 7, 8. ; 2 Tim. ii. 2.

This Epifte is not quoted till the end of the fecond century, and even then does not feem to have been uni. verfally received. This filence might be owing to the Hebrews themfelves, who fuppofing this letter had no relation to the Gentiles, might be at no pains to diffufe copies of it. The authors, however, on whofe teftimony we receive it as authentic, are entitled to credit; for they lived fo near the age of the apofles, that they were in no danger of being impofed on; and from the numerous lift of books which they rejected as fpurious, we are affured that they were very careful to guard againit impofition. It is often quoted as Paul's by Clemens Alexandrinus, about the year 194. It is received and quoted as Paul's by Origen, about 230 ; by Dionyfius bifhop of Alexandria in 247 ; and by a numerous lift of fucceeding writers,
The Epifle to the Hebrews was originally written in Hebrew, or rather Syro-Chaldaic; a fact which we believe on the tellimony of Clemens Alexandrinus, Jerome, and Eufebius To this it has been objected, that as thefe writers have not referred to any authority, we ought to confider what they fay on this fubjeet merely as an opinion. But as they ftate no reafons for adopting this opinion, but only mention as a fact that Paul wrote to the Hebrews in their native language, we muft allow that it is their teltimony which they

Vou. XVII. Part I.
produce, and not their opinion. Eufebius informs us, scriptares that fome fuppofed Luke the Evangelift, and others Clemens Romanus, to have been the tranflator.

According to the opinion of ancient writers, particularly Clemens Alexandrinus, Jerome, and Euthalius, this Epiftle was addreffed to the Jews in Paleftine. The fcope of the Epifle confirms this opinion.

Having now given fufficient evidence that this E-Date of ito pifle was written by Paul, the time when it was written may be eafily determined: For the falutation from the faints of Italy (chap. iv. 24.), together with the apoftle's promife to fee the Hebrews (ver. 23.), plainly intimate, that his confinement was then either ended or on the eve of being ended. It mult therefore have been written foon after the Epiftles to the Coloflians, Ephefians, and Philemon, and not long before Paul left Italy, that is, in the year 61 or 62 ,

As the zealous defenders of the Mofaic law would Peray's $K_{C y}$ naturally infilt on the divine authority of Mofes, on the to the New majefty and glory attending its promulgation by the Tefament. miniftry of angels, and the great privileges it afforded thofe who adhered to it ; the apoftle fhows,
I. That in all thefe feveral articles Chriftianity had an infinite fuperiority to the law.

224
This topic he purfues from chap. i. to xi. wherein Defign of he reminds the believing Hebrews of the extraordinary it to prove favour fhown them by God, in fending them a revela-the truth tion by his own fon, whofe glory was far fuperior to of the that of angels (chap. i. throughout); very naturally Chriftian inferring from hence the danger of defpifing Chrit on religion, account of his humiliation, which, in perfect confift- periority ence with his dominion over the world to come, was ro the law voluntarily fubmitted to by him for wife and important of Mofes; reafons ; particulayly to deliver us from the fear of death, and to encourage the freedom of our accefs to God (chap. ii. throughout). With the fame view he magnities Chrift as fuperior to Mofes, their great legiflator; and from the punifhment inflicted on thofe who rebelled againft the anthority of Mofes, infers the danger of contemning the promifes of the gofpel (chap. iii. 2-13). And as it was an eafy tranfition to call to mind on this occafion that relt in Canaan to which the authority invefted in Mofes was intended to lead them; the apoftle hence cautions them againt unbelief, as what would prevent their entering into a fuperior fate of reft to what the Jews ever enjoyed (cliap. iii. 14. iv. 1r). This caution is ftill farther enforced by awful views of God's omnifcience, and a lively reprefentation of the high.priefthood of Chrilt (chap. iv. to the end; and Chap. v. throughout). In the next place, he intimates the very hopelefs fituation of thofe who apoAatile from Chriftianity (chap. vi. $1-9$. ) ; and then, for the comfort and confirmation of fincere believers, difplays to them the goodnefs of God, and his faithful adherence to his holy engagements; the performance of which is fealed by the entrance of Chrift into leeaven as our forerunner (chap. vi. 9. to the end). Still farther to illuftrate the character of our Lord, he entere into a parallel between him and Melchizedec as to their title and defcent ; and, from inftances wherein the priefthood of Melchizedec excelled the Levitical, infers, that the glory of the priefthood of Chrift furpaffed that under the law (chap. vii. $1-17$ ). From thefe premifes the apollle argues, that the Aaronical priefthood was not only excelled, but confummated by that of Chrif,

Y

## Scripture.

223
The feven Catholic epiftles.
to which it was only introductory and fubfervient ; and of courfe, that the obligation of the law was henceforth diffolved (chap. vii. 18, to the end). Then recapitulating what he had already demonftrated concerning the fuperior dignity of Chrift's prieithood, he thence illuftrates the diftinguifhed excellence of the new covenant, as not only foretold by Jeremiah, but evidently enriched with much better promifes than the old (ch. viii. throughout) : Explaining farther the doctrine of the priefthood and interceffion of Chrift, by comparing it with what the Jewifh high-priefts did on the great day of atonement (chap. ix. 1-14) Afterwards he enlarges on the neceffity of fleddiny Chrit's blood, and the fufficitncy of the atonement made by it (chap ix. 15. to the end); and proves that the legal ceremonies conld not by any means purify the confcience: whence he infers the infufficiency of the Mofaic law, and the neceflity of looking beyond it chap. x. I-15.) He then urges the Hebrews to improve the privileges which fuch an high.prieft and covenant conferred on them, to the purpofes of approaching God with confidence, to a conftant attendance on his worfhip, and molt benevolent regards to each other (chap x $15-25$ ).
'Ihe apotlle having thus obviated the infinuations and objections of the Jews, for the fatisfaction and ellablifhment of the believing Hebrews, proceeds,
II. To prepare and fortify their minds againtt the ftorm of perfecution which in part had already befallen them, which was likely to continue and be often renewed, he reminds them of thofe extremities they had endured, and of the fatal effects which would attend their apoftacy (chap x. 26. to the end) ; calling to their remembrance the eminent examples of faith and fortitude exhibited by holy men, and recorded in the Old Teftament (chap. xi. $1-29$ ). He concludes his difcourfe with glancing at many other illuftrious worthies; and, befides thofe recorded in Scripture, refers to the cafe of feveral who fuffered under the perfecution of Antiochus Epiphanes ( 2 Maccab. chap. viii. \&c. chap. xi. 30 . xii. 2).

Having thus finifhed the argumentative part of the Epiftle, the apoftle proceeds to a general application; in which he exhorts the Hebrew Chriftians to patience, peace, and holinefs (Chap. xii. 3-14.) : cautions them againft fecular views and fenfual gratifications, by laying before them the incomparable excellence of the bleffings introduced by the gofpel, which even the Jewif economy, glorious and maguificent as it was, did by no means equal; exhorts them to brotherly affection, purity, compaffion, dependence on the divine care, ftedfaftnefs in the profeffion of truth, a life of thankfulnefs to God, and benevolence to man: and concludes the whole with recommending their pious minifters to their particular regaid, intreating their prayers, faluting and granting them his ufual benediction.

The feven following Epifles, one of James, two of Peter, three of John, and one of Jude, have been diftinguifhed by the appellation of catholic or general epiftles, becaufe moft of them are infcribed, not to particular churches or perfons, but to the body of Jewifh or Gentile converts over the world. The authenticity of fome of thefe has been frequently queftioned, viz. the Epiftle of James, the fecond of Peter, the Epiftle of Jude, and the fecond and third of John. The ancient

Chriftians were very cautious in admitting any books $\operatorname{ser}$ into their canon whofe authenticity they had any reson to fufpect. They rejected all the writings forged by Mac heretics in the name of the apofles, and certainly, there- on th fore, would not receive any without firft fubjecting them to a fevere fcratiny: Now, though thefe five epitles were not iminediately acknowledged as the writings of the apoftles, this only fhows that the perfons who doubted had not received complete and inconteftable evidence of their authenticity. But as they were afterwards univerfally received, we have every reafon to conclude, that upon a ftrict examination they were found to be the genuine productions of the apoftles. The truth is, fo good an opportunity had the ancient Chritians of examining this matter, fo careful were they to guard againft impofition, and. fo well founded was their judgment concerning the books of the New Teftament, that, as Dr Lardner obferves, no writing which they pronounced genuine has yet been proved fpurious, nor have we at this day the leaft reafon to believe any book genuine which they rejected.
That the Epiftle of James was written in the apofto- Epin lical age is proved by the quotations of ancient authors. Jame Lef. Clemens Romanus and Ignatius feem to have made references to it. Origen quotes it once or twice. There are feveral reafons why it was not more generally quoted by the firt Chriftian writers. Being written to correct the errors and vices which prevailed among the Jews, the Gentiles might think it of lefs importance to: them, and therefore take no pains to procure copies of it. As the author was fometimes denominated James the Juft, and often called bifhop of Jerualem, it might be doubted whether he was one of the apoftles. But its authenticity does not feem to have been fufpected on account of the doctrines which it contains. In modern times, indeed, Luther called it a ftrawy epiftle (epifola Araminea), and excluded it from the facred writings, on account of its apparent oppofition to the apoftle Paul concerning juftification by faith.

This Epiftle could not be written by James the Elder, the fon of Zebedee, and brother of John, who was beheaded by Herod in the year 44, for it contains paffages which refer to a later period. It mu:t, therefore, have been the compofition of James the Lefs, the fon of Alpheus, who was called the Lord's brother, becaufe he was the fon of Mary, the fifter of our Lord's mo, ther. As to the date of this Epittle, Lardner fixes it The in the year 6I or 62.
James the Lefs flatedly refided at Jerufalem, whence he hath been ftyled by fome ancient fathers bifhop of that city, though without fufficient foundation. Now Dodd James being one of the apoftles of the circumcifion, Fami while he confined his perfonal labours to the inhabitants pofito of Judea, it was very natural for him to endeavour by his writings to extend his fervices to the Jewifh Chriftians who were difperfed abroad in more diftant regions. For this purpofe, there are two points which the apoftle feems to lave principally aimed at, though of it. he hath not purfued them in an orderly and logical method, but in the free epiftolary manner, handling them jointly or diftinctly as occafions naturally offered. And thefe were, " to correct thofe errors both in doctrine and practice into which the Jewifh Chriftians had fallen, which might otherwife have produced fatal confequen

## 

ure. ces; and then to eftablifh the faith and animate the hope of fincere believers, both under their prefent and their approaching fufferings."

The opinions which he is moft anxious to refute are thefe, that God is the author of fin, (ch. i. 13.); that the belief of the doctrines of the gofpel was fufficient to procure the favour of God for them, however deficient they were in good works, (ch. ii.) He diffuades the Jews from afpiring to the office of teachers in the third chapter, becaufe their prejudices in favour of the law of Mofes might induce them to pervert the doctrines of the gofpel. He therefore guards them againft the fins of the tongue, by reprefenting their pernicious effects; and as they thought themfelves wife and intelligent, and were ambitious of becoming teachers, he advifes them to make good their pretenfions, by fhowing themfelves poffeffed of that wifdom which is from above, (ch. iii.)

The deftruction of Jerufalem was now approaching ; the Jews were fplit into factions, and often flaughtered one another; the apoflle, therefore, in the fourth chapter;' admonifhes them to purify themfelves from thofe vices which produced tumults and bloodfhed. To roufe them to repentance, he foretels the miferies that were coming upon them. Laftly, he checks an irreligious fpirit that feems to have prevailed, and concludes the Epifle with feveral exhortations.

The authenticity of the firf Epifle of Peter has never been denied. It is referred to by Clemens Romanus, by Polycarp, and is quoted by Papias, Ire. næus, Clemens Alexandrinus, and Tertullian. It is addreffed to the ftrangers fcattered through Pontus, \&c. who are evidently Chriftians in general, as appears from chap. ii. 10. "In time paft they were not a people, but are now the people of God." From Peter's fending the falutation of the church at Babylon to the Chriftians in Pontus, \&c. it is generally believed that he wrote it in Babylon. There was a Babylon in Egypt and another in Affyria. It could not be the former, for it was an obfcure place, which feems to have had no church for the four firft centuries. We have no authority to affirm that Peter ever was in Af. fyria. The moft probable opinion is that of Grotius, Whitby, Lardner, as well as of Eufebius, Jerome, and others, that by Babylon Peter figuratively means Rome. Lardner dates it in 63 or 64 , or at the lateft 65 .
St Peter's chief defign is to confirm the doctrine of St Paul, which the falfe teachers pretended he was oppofing; and to affure the profelytes that they ftood in the true grace of God, (ch. v. I2.) With this view he calls them elect; and mentions, that they had been declared fuch by the effufion of the Holy Gholt upon them, (ch. i. 1, 2.). He affures them that they were regenerate without circumcifion, merely through the gofpel and refurrection of Chrift, (ver. 3, 4. 2 I-25.); and that their fufferings were no argument of their being under the difpleafure of God, as the Jews imagined, (ver. 6-12.) He recommends it to them to lope for grace to the end, (ver. I3.) He teflifies, that they were not redeemed by the Pafchal lamb, but through Chrift, whom God had preordained for this paipofe before the foundation of the world, (ver. 18-20.)

The fecond Epifle of Peter is not mentioned by any ancient writer extant till the fourth century, from which
time it has been received by all Chriftians except the Syrians. Jerome acquaints us, that its authenticity was difputed, on account of a remarkable difference be-

## Scripture,

 ween the fyle of it and the former EpiAl But Second tween the ftyle of it and the former Epiftle. But this Epiftle of remarkable difference in ftyle is confined to the 2 d chap- Peter. The ter of the 2d Epiftle. No objection,' however, can be authenticidrawn from this circumftance; for the fubject of that proved chapter is different from the reft of Peter's writings proved and nothing is fo well known than that different fubjects. fuggeft different fyles. Peter, in defcribing the character of fome flagitious impoftors, feels an indignation which he cannot fupprefs: it breaks out, therefore, in the bold and animated figures of an oriental writer. Such a diverfity of ftyle is not uncommon in the beft writers, efpecially when warmed with their fubject.This objection being removed, we contend that this From in= Epiftle was written by Peter, from the infcription, Si- ternal erimon Peter, a Serviant and an apofile of Fefus Chrifl. It dence. appears from chap. i. $16,17,18$, that the writer was one of the difciples who faw the transfiguration of our Saviour. Since it has never been afcribed to James or John, it muft therefore have been Peter. It is evident, from chap. iii. I. that the author liad written an Epiftle before to the fame perfons, which is another circum. ftance that proves Peter to be the author.

It is acknowledged, however, that all this evidence is merely internal ; for we have not been able to find any external evidence upon the fubject. If, therefore, the credit which we give to any fact is to be in proportion to the degree of evidence with which it is accompanied, we fhall allow more authority due to the gofpels than to the epiftles ; more to thofe epifles which have been generally acknowledged than to thofe which have been controverted ; and therefore no doctrine of Chriftianity ought to be founded folely upon them. It may alfo be added, that perbaps the beft way of determining what are the effential doctrines of Chriftianity would be to examine what are the doctrines which occur ofteneft in the gofpels; for the gofpels are the plaineft parts of the New Teflament; and their authenticity is moft completely proved. They are therefore beft fitted for common readers. Nor will it be denied, we prefume, that our Saviour taught all the doctrines of the Chriftian religion himfelf; that he repeated them on different occafions, and inculcated them with an earneftnefs proportionable to their importance. The Epifles are to be confidered as a cominentary on the effential doctrines of the gofpel, adapted to the fituation and circumftances of particular churches, and perhaps fometimes explaining doctrines of inferior importance. 1. The effential doctrines are therefore firft to be fought for in the gofpels, and to be determined by the number of times they occur. 2. They are to be fought for, in the next place, in the uncontroverted Epiftles, in the fame manner. 3. No effential doctrine ought to be founded on a fingle paffage, nor on the authority of a controverted Epiftle.

That Peter was old, and near his end, when he wrote this Epiftle, may be inferred from chap. i. 14. "Knowing that fhortly I muft put off this tabernacle, even as our Lord Jefus has fhewn me." Lardner thinks it was written foon after the former. Others, perhaps with more accuracy, date it in 67 .

The general defign of this Epiftle is, to confirm the Defign of doctrines and inftructions delivered in the former; " to it, excite the Chriftian converts to adorn, and ftedfaftly ad-

Seripture. here to their holy religion, as a religion proceeding from God, notwithftanding the artifices of falfe teachers, whofe character is at large defcribed; or the perfecution of their bitter and inveterate enemies."

Firtt ${ }^{233}$ Epi-
thle of John. Its authenticity and Atyle.

The firf Epifle of John is afcribed by the unanimous fuffrage of the ancients to the beloved difciple of our Lord. It is referred to by Polycarp, is quoted by Papias, by Irenæus, and was received as genuine by Clemens Alexandrinus, by Dionyfius of Alexandria, by Cyprian, by Origen, and Eufebius. There is fuch a refemblance between the ftyle and fentiments of this Epitle and thofe of the gofpel according to John, as to afford the higheft degree of internal evidence that they are the compofition of the fame author. In the fyle of this apoftle there is a remarkable peculiarity, and efpecially in this Epifte. His fentences, confidered feparately, are exceeding clear and intelligible; but when we fearch for their connection, we frequently meet with greater difficulties than we do even in the Epiftles of St Paul. The principal fignature and characterittic of his manner is an artlefs and amiable fimplicity, and a fingular modefty and candour, in conjunction with a wonderful fublimity of fentiment. His conceptions are apparently delivered to us in the order in which they arole to his own mind, and are not the product of artificial reafoning or laboured inveftigation.

It is impoflible to fix with any precifion the date of this Epiftle, nor can we determine to what perfons it was addrefled.
The leading defign of the apoftle is to thow the infufficiency of faith, and the external profeffion of religion, feparate from morality ; to guard the Chriftians to whom the writes againft the delufive arts of the corrupters of Chriftianity, whom he calls Antichrift; and to inculcate umiverfal benevolence. His admonitions concerning the neceffity of good morals, and the inefficacy of external profeffions, are fcattered over the Epiftle, bit are moft frequent in the $1 \mathrm{ft}, 2 \mathrm{~d}$, and 3 d chapters. The enemies or corrupters of Chriftianity, againft whom he contends, feem to have denied that Jefus was the Meffiah, the Son of God (chap. ii. 22. v. 1.), and had actually come into the world in a human form, (chap. iv. 2, 3.) The earneftnefs and frequency with which this apotle recommends the duty of benevolence is renarkable. He makes it the diftinguihing characteriftic of the difciples of Jefus, the only fure pledge of our love to God, and the only affurance of eternal life, (chap. iii. 14, 15.) Benevolence was hisfavourite theme, which he affectionately preffed upon others, and conftantly practifed himfelf. It was confpicuous in his conduet to his great Mafter, and in the reciprocal affection which it infpired in his facred breaft. He continued to recommend it in hislaft words. When his extreme age and infirmities had fo wafted his ftrength that he was incapable to exercife the duties of his office, the venerable old marr, anxious to exert in the fervice of his Mafter the little ftrength which ftill remained, caufed himfelf to be carried to church, and, in the midft of the congregation, he repeated thefe words, " Little children, love one another."

It has been obferved by Dr Mill that the fecond and third Epiftles of John are fo fhort, and refemble the firt fo much in fentiment and ftyle, that it is not worth while te contend about them. The fecond Epifle con-
firts only of 13 verfes; and of thefe eight may be found in the if Epittle, in which the fenfe or language is prew cifely the fame.

The fecond Epittle is quoted by Irenseus, and was received by Clemens Alexandrinus, Both were adi mitted by Athanafus, by Cyril of Jerufalem, and by Jerome. The fecond is addreffed to a woman of diftinction whofe name is by fome fuppofed to be Cyria (taking xupia for a proper name), by others E'clegu. The third is infcribed to Gaius, or Caius according to the Latin orthography, who, in the opinion of Lardner, was an eminent Chrittian, that lived in fome city of Afia not far from Ephefus, where St Jolan chiefly refided after his leaving Judea. The time of writing thefe two Epiftes cannot be determined with any certainty. They are fo fhort that an analyfis of them is not neceffary.

The Epittle of Jude is cited by no ancient Chritian Epii writer extant before Clemens Alexandrinus about the Jud year 194 ; but this author has tranferibed eight or ten auth verfes in his Stromata and Pedagogue. It is quoted ${ }^{\text {cit }}$ once by Tertullian about the year 200; by Origen free. quently about 230 . It was not however received by many of the ancient Chriftians, on account of a fuppofed quotation from a book of Enoch. But it is not certain that Jude quotes any book. He only fays that Enoch prophefied, faying, The Lord cometh with ten thoufand of bis faints. Thefe might be words of a prophecy preferved by tradition, and inferted occafionally in different writings. Nor is there any evidence that there was fuch a book as Enoch's prophefies in the time of Jude, though a book of that name was extant in the fecond and third centuries. As to the date of this Epifle nothing beyond conjecture can be produced.

The defign of it is, by defcribing the character of An ${ }^{2}$ the falle teachers, and the punifhments to which they lign were liable, to caution Clmiftians againft liftening to their fuggeftions, and being thereby perverted from the faith and purity of the gofpel.

The Apocalypfe or Revelation has not always been The unanimoully received as the genuine production of the cal apoftle Johu. Its authenticity is proved, however, by the teftimony of many refpectable authors of the firl centuries. It is referred to by the martyrs of Lyons : it was admitted by Juftin Martyr as the work of the apofle John. It is often quoted by Irenæus, by Theophilus bifhop of Antioch, by Clement of Alexandria, by Tertullian, by Origen, and by Cyprian of Carthage. It was alfo received by Heretics, by Novatus and his followers, by the Donatifts, and by the A rians. For the firft two centuries no part of the New Teftament was more univerfally acknowledged, or mentioned with higher refpect. But a difpute having arifen about the millennium, Caius with fome others, about the year 212, to end the controverfy as fpeedily and effectually as poffible, ventured to deny the authority of the book which had given occafion to it.
'The book of Revelation, as we learn from Rev. i. 9. Th was written in the inte of Patmos. According to the of $i$ general teftimony of ancient authors, John was banifned into Patmos in the reign of Domitian, and reftored by his fucceffor Nerva. But the book could not be ple. blifhed till after John's releafe, when he returned to E. phefus. As Domitian died in $g \delta$, and his perfecution

## S C R [ 173 ] $\quad$ S C.R

did not commence till near the end of his reign, the Revelation might therefore be publifhed in 96 or 97 .

Here we fhould conclude; but as the curious reader Key may defire to be informed how the predictions revealed in this book of St John have ufually been interpreted and applied, we thall confiltently with our fubject fubjoin a key to the prophecies contained in the Revelation. This is extracted from the learned differtations of Dr Newton, bifhop of Brifol (1) : to which the reader is referred for a mole full illuftration of the feveral parts, as the concifenefs of our plan only admits a fhort analyfis or abridgment of them.

Nothing of a prophetical : nature occurs in the firft three chapters, except, I. What is faid concerning the of church of Ephefus, that her "candleftick Thall be removed: out of its place," which is now verified, not ve only in this, but in all the other Afiatic churches which exifted at that time ; the light of the gofpel having been taken from them, not only by their herefies and divifions from within, but by the arms of the Saracens from without: And, 2. Coneerning the church of Smyrna, that the fhall: "have tribulation ten days;" that is, in prophetic language, "ten years;" referring to the perfecution of Diocletian, which alone of. all the. general perfecutions lafted fo long.

The next five capters relate to the opening of the Seven Seals ; and by thefe feals are intimated fo many different periods of the prophecy. Sixs of thefe feals are opened in the fixth and feventh chapters.

The firf $\int$ feal or period is memorable for conquefts. It commences with Vefpafian, and terminates in Nerva; and during this time Judea was fubjugated. - The fecond feal is noted for war and flaughter. It commences with Trajan, and continues through his reign, and that of his fucceffors. In this period, the Jews were entirely routed and difperfed; and great was the flaughter and devaftation occafioned by the contending parties. 'The third /eal is characterifed by a rigorous execution of jutice, and an abundant provition of corn, wine, and sil. It commences with Septimius Severus. He and Alexander Severus were juft and fevere emperors; and at the fame time highly celebrated for the regard they paid to the felicity of their people, by procuring them plenty of every thing, and particularly corn, wine, and oil. This period latted during the reigns of the Septimian family. The fourth feal is diftinguifhed by a concurrence of evils, fuch as war, famine, peftilence, and wild beafts; by all which the Roman empire was remarkably infelted from the reign of. Maximin to that of Dioclefian. The fifth feal begins at Dioclefian, and. is fignalized by the great perfecution, from whence arofe that memorable era, the Era of Martyrs. With Conftantine begins the fixth Seal, a period of revolutions, pictured forth by great cominotions in earth and in heaven, alluding to the fubverfion of Paganifm and the eltablifhment of Chrittianity. This period lafted from the reign of Conftantine the Great to that of Theodofius the firt. The feventh feal includes under it the remaining parts of the prophecy, and com-
prehends feven periods diftinguifhed by the founding of Scripture. feven trumpets.

As the feals foretold the fate of the Roman empire before and till it became Chritian, fo the trumpets forefhow the fate of it afterwards; each trumpet being analarm to one nation or other, roufing them up. to overthrow that empire.

Four of thefe trumpets are founded in the eighth chapter.

At the founding of the firft, Alaric and his Goths invade the Roman empire, befiege Rome twice, and fetit on fire in feveral places. At the founding of the fecond, Attila and his Huns wafte the Roman provincess. and compel the caftern emperor Theodofius the fecond, and the weftern emperor Valentinian the third, to fubmit to fhameful terms. At the founding of the third. Genferic and his Vandals arrive from Africa; ppoil and plunder Rome, and fet fail again with immenfe wealth and innumerable captives. At the founding of the fourth, Odoacer and the Heruli put an end to the very name of the weftern empire; "Theodoric founds the kingdom of the Oftrogoths in Italy; and at laft Italy: becomes a province of the eaftern empire, Rome being governed by: a duke under the exarch of Ravenna. As the foregoing trumpets relate chiefly to the downfal of the weftern empire, fo do the two following te * that of the ealtern. They are founded in the ninth, tenth, and part of the eleventh chapters. At the founding of the fifth trumpet, Mahomet, that blazing far, appears, opens the bottomlefs pit, and with his locufts the Arabians darkens the fun and air. And at the fornding . of the fixth, a period not yet finifhed, the four angels, that is, the four fultanes, or leaders of the Turks and Othmans, are loofed from the river Euphrates. The Greek or Eaftern empire was cruelly " hurt and tormented" under the fifth trumpet ; but under the fixth, it was." flain," and utterly deftroyed.

The Latin or. Weftern Church not being reclaim. ed by the ruin of the Greek or Eaftern, but ftill perfilting in cheir idolatry and wickednefs; at the be-. ginning of the tenth chapter, and under the found of this fixth trumpet, is introduced a vifion preparative to * the prophecies refpecting the Wettern Church, wherein an angel is reprefented, having in his hand a little book, or codicil, defcribing the calamities that fhould overtake that church. The meafuring of the temple fhows, that during all this period there will be fome true Chriftians, who will conform themfelves to the rule of God's word, even whilit the outer court, that is, the external and t more extenfive part of this temple or church, is trodden . under foot by Gentiles, i. e. fuch Chriftians as, in their idolatrous worffip and perfecuting practice, refemble. and outdo the Gentiles themfelves. Yet againft thefe corrupters of religion there will always be fome true witneffes to protelt, who, however they may be overborne at times, and in appearance reduced to death, yet will arife again from time to time, till at laft they tri.. umph and glorioully afcend. The eleventh chapter concludes with the founding of the feventh trumpet.

(1) Differtations on the prophecies which have remarkably been fulfilled, and at this time are fulfilling, in the : world, vol. iii. 8ro.

## $\mathrm{S} C \quad \mathrm{R} \quad\left[\begin{array}{lll}174 & \mathrm{~S} & \mathrm{C} \\ \hline\end{array}\right.$

Sceipture, In the twelfth chapter, by the woman bearing a manSorivener, child is to be underftood the Chriftian church; by the great red dragon, the heathen Roman empire ; by the nan-child whom the woman borc, Conftantine the Great ; and by the war in heaven, the contefts between the Chriftian and Heathen religions.
In the thirteenth chapter, by the beaft with feven heads and ten horns, unto whom the dragon gave his power, feat, and great authority, is to be underftood, net Pagan but Chritian, not imperial but papal Rome; in fubmitting to whofe religion, the world did in effect fubmit again to the religion of the dragon. The tenhorned beaft therefore reprefents the Rominh church and ftate in general: but the bealt with two horns like a lamb is the Roman clergy; and that image of the ten-horned beaft, which the two-horned beaft caufed to be made, and infpired with life, is the pope; whofe number is 666, according to the numerical powers of the letters conflituting the Roman name $\Lambda a$ ítivos, Latinus, or, its equivalent in Hebrezu, רומשיח Romiith.

Chapter xiv. By the lamb on mount Sion is meant Jefus; by the hundred forty and four thoufand, his church and followers ; by the angel preaching the everlafting gofpel, the firft principal effort made towards a reformation by that public oppofition formed againft the worfhip of faints and images by emperors and bifhops in the eighth and ninth centuries; by the angel crying, " Babylon is fallen," the Waldenfes and Albigenfes, who pronounced the church of Rome to be the Apocalyptic Babylon, and denounced her deftruction; and by the third angel, Martin Luther and his fellow reformers, who protefted againft all the corruptions of the church of Rome, as deftructive to falvation. For an account of the doctrines and precepts contained in the Scriptures, fee Theology. For proofs of their divine origin, fee Religion, Prophecy, and M1racles.

SCRIVENER, one who draws contracts, or whofe bufinefs it is to place money at intereft. If a fcrivener is entrufted with a bond, he may receive the intereft; and if he fails, the obligee fhall bear the lofs: and fo it is if he receive the principal and deliver up the bond; for being entrufted with the fecurity itfelf, it muft be prefumed that he is trufted with power to receive intereft or principal ; and the giving up the bond on payment of the money fhall be a difcharge thereof. But if a ferivener fhall be entrufted with a mortgage-deed, he hath only authority to receive the intereft, not the principal; the giving up the deed in this cafe not being fufficient to reltore the eflate, but there mult be a reconveyance, \&c. It is held, where a fcrivener puts out his client's money on a bad fecurity, which upon inquiry might have been eafily fourd fo, yet he cannot in equity be charged to anfwer for the money; for it is
here faid, no one would venture to put out money of Scro another upon a fecurity, if he were obliged to warrant and make it good in cafe a lofs fhould happen, without any fraud in him.

SCROBICULUS cordis, the fame as AnticarDIUM.

SCROFANELLO, in ichthyology, a name by which fome have called a fmall fifh of the Mediterranean, more ufually known by the name of the for pana.
SCROLL, in Heraldry. See that article, chap. iv. fect. 9. When the morto relates to the creft, the fcroll is properly placed above the atchievement; otherwife it fhould be annexed to the efcutcheon. Thofe of the order of knighthood are generally placed round fhields.

SCROPHULA, the king's evil. See Medicine, $n^{\circ} 349$.

SCROPHULARIA, Figwort, in botany: A genus of the angiofpermia order, belonging to the didynamia clafs of plants ; and in the natural method ranking under the 40th oider, Perfonate. The calyx is quinquefid ; the corolla almoft globofe, and refupinated; the capfule bilocular. There are feveral fpecies, of which the moft remarkable are, i. Nodofa, or the common figwort, which grows in woods and hedges. The root is tuberous; the ftalks are four or five feet high, and branched towards the top; the leaves are heartfhaped, ferrated, and acute. The flowers are of a dark red colour, fhaped like a cap or helmet ; the lower lip greenifh : they grow in loofe dichotomous fikes or ra. cemi at the top of the branches. The leaves have a fetid fmell and bitter tafte. A decoction of them is faid to cure hogs of the meafles. An ointment made of the root was formerly ufed to cure the piles and fcrophulous fores, but is at prefent out of practice. 2. Aquatica, water-figwort, or betony. The root is fibrous; ftem erect, fquare, about four feet high. The leaves are oppofite, elliptical, pointed, nlightly fcalloped, on decurrent footttalks. Flowers purple, in loofe naked fpikes. It grows on the fides of rivulets and other wet places, and has a fetid fmell, though not fo ftrong as the preceding. The leaves are ufed in medicine as a corrector of fena, and in powder to promote freezing. 3. Scorodonia, or balm-leaved figwort. The ftem is erect, fquare, about two feet high. The leaves are oppolite, doubly ferrated. The flowers are dunky purple, in compofite bunches. It grows on the banks of rivulets, \&c. in Cornwall. 4. Vernalis, or yellow figwort. The ftalks are \{quare, hairy, brown, about two feet high. The leaves are heart-fhaped, roundifh, hairy, indented, oppofite. The flowers are yellow, on fingle forked footftalks from the alæ of the leaves. It grows in hedges in Surry.

SCROTUM. See Anatomy, no 107.
SCRUPI, in natural hiftory, the name of a clafs of foffils, formed in detached maffes, without any crufts; of no determinate figure or regular ftructure ; and compofed of a cryftalline or fparry matter, debafed by an admixture of earth in various proportions. Under this clafs are comprehended, 1. The telaugia. 2. The petridia. 3. The lithozugia. 4. The jajpides or ja\{pers.

SCRUPLE, Scrupulus, or Scrupulum, the leaft of the weights ufed by the ancients, which amongft the Romans was the 24 th part of an ounce, or the 3 d part of a dram. The fcruple is ftill a weight among

## S C K

us, containing the 3 d part of a dram, or 20 grains. Among goldfmiths it is 24 grains.

Scruple, in Chaldean chronolo y, is 〒 $\frac{1}{\delta}$ Bo part of an hour, called by the Hebrews belakin. Thcfe fcruples are much ufed by the Jews, Arabs, and other eaftern people, in computations of time.

Scruples of balf Duration, an arch of the moon's orbit, which the moon's centre defcribes from the begin. ning of an eclipfe to its middle.

Scruples of Immerfion or Incidence, an arch of the moon's orbit, which her centre defcribes from the beginning of the eclipfe to the time when its centre falls into the fiadow.

Scruples of Emerfion, an arch of the moon's orbit, which her centre defcribes in the time from the firlt emerfion of the moon's limb to the end of the eclipfe.

SCRUTINY, (Scrutinium), in the primitive church; an examination or probation practifed in the laft week of Lent, on the catechumens, who were to receive baptifm on the Eafter-day. The fcrutiny was performed with a great many ceremonies. Exarcifms and prayers were made over the heads of the catechumens; and on Palm Sunday, the Lord's Prayer and Creed were given them, which they were afterwards made to rehearfe. This cuftom was more in ufe in the church of Rome than anywhere elfe; though it appears, by fome miffals, to have been likewife ufed, though much later, in the Gallican church. It is fuppofed to have ceafed about the year 860. Some traces of this practice ftill remain at Vienne, in Dauphiné, and at Liege.
Scrutiny is alfo ufed, in the canon law, for a tick: et or little paper billet, wherein at elections the electors write their votes privately, fo as it may not be known for whom they vote. Among us the term forutiny is chiefly ufed for a ftrict perufal and examination of the feveral votes haftily taken at an election; in order to find out any irregularities committed therein, by unqualified voters, \&c.

## 1751 <br> $S$ C U

SCRUTORE, or SCRUTOIR (from the Frenci ef Scrutore critoire), a kind of cabinet, with a door or lid opening downwards, for conveniency of writing on, \&c.

Sulponex.
SCRY, in falconry, denotes a large flock of fowl.
SCUDDING, the movement by which a fhip is car: ried precipitately before a tempeft. As a fhip flies with amazing rapidity through the water whenever this expedient is put in practice, it is never attempted in a contrary wind, unlefs when her condition renders her incapable of fuftaining the mutual effort of the wind and waves any longer on her fide, without being e\%pofed to the molt imminent danger of being overfet.

A hip either fcuds with a fail extended on her foremaft, or, if the form is exceffive, without any fail: which, in the fea-phrafe, is called foudding under bare poles. In floops and fchooners, and other fmall veffels; the fail employed for this purpofe is called the fquare fail. In large fhips, it is either the forcfail at large, reefed, or with its goofe-wings extended, according to the degree of the tempeft ; or it is the fore-top fail, clofe reefed, and lowered on the cap; which laft is particularly ufed when the fea runs fo high as to becalm the forefail occafionally, a circumfance which expofes the fhip to the danger of broaching-to. The principal hazards incident to fcudding are generally, a pooping fea; the difficulty of fteering, which expofes the veffel perpetually to the rifk of broaching-to; and the want of fufficient fea-room. A fea Atriking the fhip violently on the ftern may dahh it inwards, by which fhe mult inevitably founder. In broaching-to (that is, inclining fuddenly to windward), fhe is threatened with being inmediately overturned; and, for want of fearoom, fhe is endangered by hipwreck on a lee-fhore, a circumftance too dreadful to require explanation.

SCULPONE $\mathbb{E}$, ${ }^{4}$ among the Romans, a kind of fhoes worn by flaves of both fexes. Thefe fhoes were only blocks of wood made hollow, like the French fabots.

## S C U L P T U R E,

I$S$ the art of carving wood or hewing ftone into images. It is an art of the moft remote antiquity, being practifed, as there is reafon to believe, before the general deluge. We are induced to affign to it this early origin, by confidering the expedients by which, in the firft ftages of fociety, men have everywhere fup. plied the place of alphabetic characters. Thefe, it is univerfally known, have been picture-writing, fuch as that of the Mexicans, which, in the progrefs of refinement and knowledge, was gradually improved into the hieroglyphics of the Egyptians and other ancient nations. See Hieroglyphics.

That mankind fhould have lived near 1700 years, from the creation of the world to the flood of Noah; without falling upon any method to make their conceptions permanent, or to communicate them to a diftance, is extremely improbable; efpecially when we call to mind that fuch methods of writing have been found, in modern times, among people much lefs enlightened than thofe muft have been who were capable of building
fuch a veffel as the ark. But if the antediluviars were acquainted with any kind of writing, there can be little doubt of its being hieroglyphical writing. Mr Bryant has proved that the Chaldeans were poffeffed of that art before the Egyptians; and Berofus* informs us, that * Apud a delineation of all the monftrous forms which inhabit. Syncellum, ed the chaos, when this ealth was in that ftate, was to P. 37. be feen in the temple of Belus in Babylon. This delineation, as he defcribes it, muft have been a hiltory in hieroglyphical characters ; for it confifted of human tigures with wings, with two heads, and fome with the horns and legs of goats. This is exactly fimilar to the hieroglyphical, writing of the Egyptians; and it was preferved, our author fays, both in drawings and engravings in the temple of the god of Babylon. As Chaldee was the firlt peopled region of the earth afier the flood, and as it appears from Plinyt, as well as from + Hijf. Berofus, that the art of engraving upon bricks baked Nat. itib. 7 . in the fun was there carried to a confiderable degree of cap. 56. perfection at a very early period, the probability cer-

## S C U I P T U R E.

tainly is, that the Chaldeans derived the art of hierogly- to prefent the fubfance of his fcattered hints in one phical writing, and confequently the rudiments of the art of fculpture, from their antediluvian anceftors.

It is generally thought that fculpture had its origin - from idolatry, as it was found neceffiary to place before the people the inages of their gods to enliven the fervour of their devotion : but this is probably a miftake. The worfhip of the heavenly bodies, as the only gods of the heatlien nations, prevailed fo long before the deification of dead men was thought of (fee Polytreism), that we cannot fuppofe mankind to have been, during all that time, ignorant of the art of hieroglyphical writing. But the deification of departed heroes undoubtedly gave rife to the almoft univerfal practice of reprefenting the gods by images of a human form; and therefore we mult conclude, that the elements of fculpture were known before that art was employed to enliven the devotion of idolatrous worfhippers. The pyramids and obelinks of Egypt, which were probably temples, or xather altars, dedicated to the fun (fee Pra AMID), were covered from top to bottom with hieroglyphical emblems of men, beafts, birds, fifhes, and reptiles, at a period prior to that in which there is any un. exceptionable evidence that mere fatue-wormip prevailed even in that nurfery of idolatry.

Though it protably contributed to car ry the art so perfecation.

But though it appears thus evident that picturewriting was the firt employment of the fculptor, we are far from imagining that idolatrous worfhip did not contribute to carry his art to that perfection which it attained in fome of the nations of antiquity. Even in the dark ages of Europe, when the other fine arts were ; almort extinguifhed, the mummery of the church of Rome, and the veneration which the taught for her faints and martyrs, preferved anong the Italians fome veltiges of the fifter-arts of fculpture and painting ; and therefore, as human nature is everywhere the fame, it is reafonable to believe that a fimilar veneration for heroes and demigods would, among the ancient nations, have a fimilar effect. But if this be fo, the prefumption is, that the Chaldeans were the firit who invented the art of hewing blocks of wood and ftone into the figures of men and other animals; for the Chaldeans were unqueftionably the firf idolaters, and their early progrefs in fculpture is confirmed by the united teftimonies of Berofus, Alexander Polyhiftor, Apollodorus, and Pliny; not to mention the eaftern tradition, that the father of Abraham was a fatuary.

Againft this conclufion Mr Bromley, in his late Hiftory of the Fine Arts, has urged fome plaufible arguments. In ftating thefe he profeffes not to be original, or to derive his information from the fountain-head of antiquity. He adopts, as he teils us, the theory of a French writer, who maintains, that in the year of the world 1949 , about 300 years after the deluge, the Scythians under Brouma, a defeendant of Magoz the fon of Japhet, extended their conquelts over the greater part of difa. According to this fyltem, Brouma was not only the civilizer of India, and the author of the braminical doetrines, but alfo diffuled the principles of the Scythian mythology over Egypt, Phcenicia, Greece, and the continent of Alia.

Of thefe principles Mr Bromley has given us no diAtinct enumeration: the account which he gives of them is not to be found in one place, but to be collected from a variety of diftant paffages. In attempting therefore
view, we will not be confident that we have omitted none of them. The ox, fays he, was the Scythian emblem of the generator of animal life, and hence it became the principal divinity of the Arabians. The ferpent was the fymbol of the fource of intelligent nature. Thefe were the common points of union in all the firft religions of the earth. From Egypt the Ifraelites carried with them a religious veneration for the ox and the ferpent. Their veneration for the ox appeared foon after they marched into the wildernefs, when in the abfence of Mofes they called upon Aaron to make them gods which fhould go before them. The ridea of having an idol to go before them, fays our author, was completely Scythian; for fo the Scythians acted in alt their progrefs through Afia, with this difference, that their idol was a living animal. The Ifraelites having gained their favourite god, which was an ox (not a calf as it is rendered in the book of Exodus), next proceeded to hold a feftival, which was to be accompa. nied with dancing; a-fpecies of gaiety common in the feftivals which were held in adoration of the emblematic Urotal or ox in that very part of Arabia near Mount Sinai where this event took place. It is mentioned too as a curious and important fact, that the ox which was revered in Arabia was called Adonai. Accordingly Aaron announcing the feaft to the ox or golden calf, fpeaks thus, to-morrow is a feaft to Adonai, which is in our tranflation rendered to the Lord. In the time of Jeroboam we read of the golden calves fet up as objects of wormip at Bethel and Dan. Nor was the reverence paid to the ox confined to Scythia, to Egypt, and to Afia; it extended much farther. The ancient Cimbri, as the Scythians did, carried an ox of bronze before them on all their expeditions. Mr Bromley alfo informs us, that as great refpect was paid to the living ox among the Greeks as was offered to its fymbol among other nations.

The emblem of the ferpent, continues Mr Bromley, was marked yet more decidedly by the exprefs direction of the Almighty. That animal had ever been confidered as emblematic of the fupreme generating power of intelligent life: And was that idea, fays he, difcouraged, fo far as it went to be a fign or fymbol of life, when God faid to Mofes, "Make thee a brazen ferpent, and fet it upon a pole, and it fhall come to pafs that every one who is bitten, when he looketh upon ir, Thall live." In Egypt the ferpent furrounded their Ifis and Oliris, the diadems of their princes, and the bonnets of their priefts. The ferpent made a diftinguifhed figure in Grecian fculpture. The fable of Echidne, the mother of the Scythians, gave her figure terminating as a ferpent to all the founders of ftates in Greece; from which their earlieft feulptors reprefented in that form the 'litan princes, Cecrops, Draco, and even Ericthonius. Befides the fpear of the image of Minerva, which Phidias made for the citadel of Athens, he placed a ferpent, which was fuppofed to guard that goddefs.

The ferpent was combined with many other figures. It fometimes was coiled round an egy as an emblem of the creation; fometimes round a trident, to fhow its power over the fea; fometines it encircled a flambeau, to reprefent life and death.

In Egypt, as well as in Scythia and India, the divinity

## S C U L P T U IT E.

whity was reprefented on the leaves of the tamara or lotus. Pan was worfhipped as a god in that country, as well as over the eaft. Their fphinxes, and all their combined figures of animal creation, took their origin from the mother of the Scythians, who brought forth an offspring that was half a woman and half a ferpent. Their pyramids and obelifks arofe from the idea of flame ; the firfe emblem of the fupreme principle, introduced by the Scythians, and which even the influence of Zoreafter and the Magi could not remove.
We are told that the Bacchus of the Greeks is derived from the Brouma of the Indians; that both are reprefented as feated on a fwan fwimming over the waves, to indicate that each was the god of humid nature, not the god of wine, but the ged of waters. The mitre of Bacchus was flaped like half an egg; an emblem taken from this circumftance, that at the creation the egg from which all things fprung was divided in the middle. Pan alfo was revered among the Scythians; and from that people were derived all the emblems by which the Greeks reprefented this divinity.

It would be tedious to follow our author through the whole of this fubject; and were we to fubmit to the labour of collefting and arranging his fcattered materials, we fhould till view his fyftem with fome degree of fufpicion. It is drawn, as he informs us, from the work of M. D'Ancarville, intitled, Recherches fur l'Origine, l' E/prit, et les Progres, des Arts de la Grece.

To form conclufions concerning the origin of nations, the rife and progrefs of the arts and fciences, without the aid of hiflorical evidence, by analogies which are fometimes accidental, and often fanciful, is a mode of reafoning which cannot readily be admitted. There may indeed, we acknowledge, be rffemblances in the religion, language, manners, and cultoms, of different na. tions, fo ftriking and fo numerous, that to doubt of their being defeended from the fame fock would favour of fcepticifm. But hiftorical theories muft not be adopted rafly. We mult be certain that the evidence is credible and fatisfactory before we proceed to deduce any conclufions. We mult firt know whether the Scythian hiftory itfelf be authentic, before we make any comparifon witl the hiftory of other nations. But what is called the Scythian hiftory, every man of learning knows to be a collection of fables. Herodotus and Juttin are the two ancient writers from whom we have the fulleft account of that warlike nation; but thefe two hiftorians contradict each other, ànd both write what cannot be believed of the fame people at the fame period of their progrefs. Juftin tells us, that there was a long and violent conteft between the Scythians and Egyptians about the antiquity of their refpective nations; and after ftating the arguments on each fide of the queftion, which, as he gives them*, are nothing to the purpofe, he decides in favour of the clain of the Scythians. Herodotus was too partial to the Egyptians, not to give them the palm of antiquity: and he was probably in the right ; for Juftin deferibes his moit ancient of nations, even in the time of Darius Hyftafpes, as ignorant of all the arts of civil life. "They occupied their land in common (fays he), and cultivated none of it. They had no houfes nor fettled habitations, but wandered with their cattle from defert to defert. In thefe ranibles they carried their wives and children in tumbrels covered with the fkins of beafts,
Vol. XVII. Part I.
which ferved as houfes to proteet them from the forms of winter. T'hey were without laws, governed by the ditzates of natural equity. They coveted not gold or filver like the reft of mankind, and lived upon milk and honey. Though they were expofed to extreme cold, and had abundance of flocks, they knew not how to make garments of wool, but clothed themfelves in the fkins of wild beafts $\ddagger$." This is the moft favouralle $\ddagger$ Lib. 2. account which any ancient writer gives of the Scythi- cap. 2. aris. By Straio \& and Herodotus || they are reprefented \$ Lib. $\%^{\circ}$ as the moft favage of mortals, delighting in war and \| Lib. 40 bloodfhed, cutting the throats of all frangers who came cap. 62. among them, eating their flefh, and making cups and pots of their flkulls. Is it conceivable that fuch favages could be fculptors; or that, even fuppofing their manners to have been fuch as Jutin reprefents them, a people fo fimple and ignorant could have impofed their mythology upon the Chaldeans, Phenicians, and Egyptians, whom we know by the mof incontrovertible evidence to have been great and polifhed nations fo early as in the days of Abraham? No!. We could as foon admit other novelties of more importance, with which the French of the prefent age pretend to enlighten the world, as this origin afiigned by Mr Bromley to the art of fculpture, unlefs fupported by better authority than that of D'Ancarville.

The inference of our author from the name of the facred ox in Arabia, and from the dancing and gaiety which were common in the religious feftivals of the Arabians, appears to us to be very haftily drawn. At the early period of the departure of the Ifraelites froms Egypt, the language of the Hebrews, Egyptians, and Arabians, differed not more from each other than do the different dialects of the Greck tongue which are found in the poems of Homer (fee Philology, Sect. 1II.) ; and it is certain, that for many years after the formation of the golden-calf, the Hebrews were ftran. gers to every fpecies of idolatry but that which they had brought with them from their houfe of bondage. See Remphan.

Taking for granted therefore that the Scythians did not impofe their mythology upon the eaftern nations, and that the art of fculpture, as well as hieroglyphic writing and idolatrous worlhip, prevailed firt among the Chaldeans, we fhall endeavour to trace the progrefs of this art through fome other nations of autiquity, till we bring it to Greece, where it was carried to the higheft perfection to which it has yet attained.

The firt intimation that we have of the art of fculpture is in the book of Genefis, where we are informed, that when Jacob, by the divine command, was returning to Canaan, his wife Rachel carried along with her the teraphim or idols of her father. 'Thefe we are affured were fmall, fince Rachel found it fo eafy to conceal them from her father, notwithflanding his anxious fearch. We are ignorant, however, how thefe images were made, or of what materials they were compofed. The firft perfon mentioned as an artift of eminence is Bezaleel, who formed the cherubims which covered the mercy-feat.
'I he Egyptians alfo cultivated the art of fculpture ; but there were two circumflances that obftructed its Egyptian procefs, The perfons of the Eyptians were not fulptures progrefs, 1. The perfons of the Egyptians were not pofleffed of the graces of form, of elegance, or of fymmetry; and of confequence they had no perfect ftandard

## $S \quad C \quad$ U P T U R E.

to model their tafte. They refembled the Chinefe in the caft of their face, in their great bellies, and in the clumfy rounding of their contours. 2. They were refrained by their laws to the principles and practices of their ancefors, and were not permitted to introduce any innovations. Their ftatues were always formed in the fame itiff attitude, with the arms hanging perpendicularly down the fides. What perfection were they capable of who knew 10 other attitude than that of chairmen? So far were they from attempting any improvernents, that in the time of Adrian the art continued in the fame rude fate as at firft ; and when their flavifh adulation for that emperor induced them to place the ftatue of his favourite Antinons among the objects of their worhip, the fame inanimate fiffnefs in the attitude of the body and pofition of the arms was obferved. We believe it will fcarcely be neceffary to inform our readers that the Egyptian flatue juft now mentioned is very different from the celebrated fatue of Antinous, of which fo many moulds have been taken that imitations of it are now to be met with almoft in every cabinet in Europe.

Notwithfanding the attachment of the Egyptians to ancient ufages, Winkelman thinks he has difcovered two different ityles of fculpture which prevailed at different periods. The firft of thefe ends with the conqueft of Egypt by Cambyfes. The fecond begins at that time,
and extends beyond the reign of Alexander the Great. Ine firft fyle, the lines which form the contour are ftraight and projecting a little; the pofition is ftiff and unnatural: In fitting figures the legs are parallel, the feet fqueezed together, and the arms fixed to the fides; but in the figures of women the left arm is folded acrofs the breaft ; the bones and mufcles are faintly difcernible; the eyes are flat and looking obliquely, and the eyelows funk; features which deftroy entirely the beauty of the head; the cheek-bones are high, the chin fmall and piked; the ears are generally placed higher than in nature, and the feet are too large and flat. In flort, if we are to look for any model in the fatues of Egypt, it is not for the model of beauty but of deformity. The ftatues of men are naked, only they lave a fhort apron, and a few folds of drapery furrounding their waift : The veftments of women are only diftin. guifhable by the border, which rifes a little above the furface of the fatue. In this age it is evident the Egyptians knew little of drapery.

Of the fecond ftyle of fculpture practifed among the Egyptians, Winkelman thinks he has found fpecimens in the two figures of bafaltes in the Capitol, and in another figure at Villa Albani, the head of which has been rencwed. The two firt of thefe, he remarks, bear vifible traces of the former ftyle, which appear efpecially in the form of the mouth and Chortnefs of the chin. The hands poffels more elegance; and the feet are placed at a greater diftance from one another, than was cuitomary in more ancient times. In the firft and third figures the arms hang down clofe to the fides. In the fecond they hang more freely. Winkelman fufpects that thefe three fatues lave been made after the conqueft of Egypt by the Greeks. They are clothed with á tunic, a robe, and a mantle. The tunic, which is puckered into many folds, defcends from the neck to the ground. The robe in the firft and third fatues feems clofe to the body, and is only perceptible by
fome little folds. It is tied under the breaft, and co. vered by the mantle, the two buttons of which are placed under the epaulet.

The Antinous of the Capitol is compofed of two pieces, which are joined under the haunches. But as all the Egyptian ftatues which now remain have been hewn out of one block, we mult believe that Diodorus, in faying the ftone was divided, and each half finifhed by a feparate artizan, fpoke only of a coloffis. The fame author informs us, that the Egyptians divided the human body into $24^{\frac{\pi}{4}}$ parts; but it is to be regretted that he has not given a more minute detail of that divifion.

The Egyptian ftatues were not only formed by the chifel, they were alfo polifhed with great care. Even thofe on the fummit of an obelifk, which could only be viewed at a diftance, were finifhed with as much labour and care as if they had admitted a clofe infpection. As they are generally executed in granite or bafaltes, ftones of a very hard texture, it is impofible not to admire the indefatigable patience of the artifts.

The eye was often of different materials from the reft of the flatue; fometimes it was compofed of a precious ftone or metal. We are affured that the valuable diamond of the emprefs of Ruffia, the largeft and moft beautiful hitherto known, formed one of the eyes of the famous ftatue of Scheringham in the temple of Brama.

Thofe Egyptian ftatues which fill remain are compofed of wood or baked earth: and the ftatues of earth are covered with green enamel.

The Phenicians poffeffed both a character and fitua- Phenicia tion highly favourable to the cultivation of ftatuary. feulpture
They had beautiful models in their own perfons, and their induftrious character qualified them to attain perfection is every art for which they had a tafte. Their fituation raifed a fpirit of comnerce, and commerce induced them to cultivate the arts. Their temples fhone with ftatues and columns of gold, and a profufion of emeralds was everywhere fcattered. All the great works of the Phenicians have been unfortunately deftroyed; but many of the Carthaginian medals are itill preferved, ten of which are depofited in the cabinet of the grand duke of Florence. But though the Carthaginians were a colony of Phenicians, we cannot from their works judge of the merit of their anceftors.

The Perfians made no diftinguifhed figure in the arts This art of defign. They were indeed fenfible to the charms of cultivazec beauty, but they did not fudy to imitate them. Their the Per drefs, which confifted of long flowing robes conceal-fians. ing the whole perfon, prevented them from attending to the beauties of form. Their religion, too, which taught them to worfhip the divinity in the emblem of fire, and that it was impious to reprefent him under a human form, feemed almolt to prohibit the exercife of this art, by taking away thofe metives which alone could give it dignity and value; and as it was not cuftomary among them to raife flatues to great men, it was impoffible that ftatnary could flourifh in Perfia.

The Etrurians or ancient Tufcans, in the opinion of Erurian Winkelman, carried this art to fome degree of perfec-fculpturo tion at an earlier period than the Greeks. It is faid to have been introduced before the fiege of Troy by Dedalus, who, in order to efcape the refentment of Minos king of Crete, took refuge in Sicily, from whence he

## S C U L P T U R $\mathbf{R}$.

palfed into Italy, where he left many monuments of his art. Paufarias and Diodorus Siculus inform us, that fome works afcribed to him were to be feen when they wrote, and that thefe poffeffed that character of majefty which afterwadds diftinguihed the labours of Etruria.

A character ftrongly marked forms the chief diftinction in thofe productions of Etruria which have defcended to us. Their fyle was indced harth and overcharged ; a fault alfo committed by Michael Angelo the celebrated painter of modern Etruria; for it is not to be fuppofed that a people of fuch rude manners as the Etrurians could communicate to their works that vividnefs and beauty which the elegance of Grecian manners infpired. On the other hand, there are many of the Tufcan flatues which bear fo clofe a refemblance to thofe of Greece, that antiquarians have thought it probable that they were conveyed from that country or Magna Grecia into Etruria about the time of the Roman conqueft, when Italy was adorned with the fpoils of Greece.
Among the monuments of Etrurian art two different ftyles have been obferved. In the firt the lines are ftraight, the attitude ftiff, and no idea of beauty appears in the formation of the head. The contour is not well rounded, and the figure is too flender. The head is oval, the chin piked, the eyes flat, and looking afquint.
Thefe are the defects of an art in a fate of iufancy, which an accomplifhed mafter could never fatl into, and are equally confpicuous in Gothic flatues as in the preductions of the ancient natives of Florence. They refemble the Ayle of the Egyptians fo much, that one is almoft induced to fuppofe that there lad once been a communication between thefe two nations; but others think that this fyle was introduced by Dedalus.
Winkelman fuppofes that the fecond epoch of this art commenced in Etruria, about the time at which it had reached its greateft perfection in Greece, in the age of Phidias; but this conjecture is not fupported by: any proofs. To defcribe the fecond ftyle of fculpture among the Etrurians, is almoft the fame as to deficribe the fyle of Michael Angelo and his numerous imitators. The joints are ftrongly marked, the mufcles raifed, the bones dittinguiflable; but the whole mien harfh. In defigning the bone of the leg, and the feparation of the mufcles of the calf, therc is an elevation and ftrength above life. The fatues of the gods are defigned with more delicacy. In forming them, the artifs were anxious to fhow that they could exercile their power without that violent diftenlion of the mufcles which is neceffary in the exertions of beings merely human ; but in general their attitudes are unnatural, and the actions ftrained. If a ftatue, for inftance, hold any thing with its fore-fingers, the reft are ftretched out in a fiff polition,

According to ancient hiftory, the Greeks did not emerge from the favage flate till a long time after the Egyptians, Chaldeans, and Indians, had arrived at a confiderable degree of civilization. The original rude inhabitants of Greece were civilized by colonies which wrrived among them, at different times, from Egypt and Phenicia. Thefe brought along with them the religion, the letters, and the arts of their parent coun.
tries: and if fulpture had its origin from the tworthip of idols, there is reafon to believe that it was one of the arts which were thus imported; for that the gods of Greece were of Egyptian and Pherician extraction is a fact incontrovertible; (fee Mysteries, Mytiology, Philology, fect. 7. Philosophy, $n^{\circ}$ 19, and Titsiv.) The original fatues of the gods, however, were very rude. The earlieit objects of idolatrous worfhip have everywliere been the heavenly bodica. 5 and the fyrmbols confecrated to them were generally piliars of a conical or pyramical figure. It was not till hero-worfhip was engrafted on the planetary, that the feulptor thought of giving to the facred flatue any part of the humại form (fee Polytheism, $\mathrm{n}^{8} 19,23$ ) ; and it appears to have been about the era of their revolution in idolatry that the art of fculpture was introduced ainong the Greeks. The firft reprefentations of their gods were round ftones placed upon cubes or piltars ; and thefe flones they afterwards formed roughly, fo as to give them fomething of the appearance of a head. Agreeable to this deferription was a Jupiter, which Paufanias faw in Tegeum, in Arcadia. Thefe reprefentations were called Hermes; not that they reprefented Mercury, but from the word berma, which fignified a rough ftone. It is the name which Homer gives to the itones which were ufed to fix veffels to the fhore. Paufanias faw at Pheres 30 deities made of unformed blocks or cubical ftones. The Lacedemonians reprefented Caftor and Pollux by two parallel poffs; and a tranfverfe beam was added, to exprefs their mutual affection.

If the Greeks derived from foreign nations the rudiments of the arts, it muft redound much to their honour, that in a few centuries they carried them to fuch wonderful perfection as entirely to eclipfe the fame of their maters. It is by tracing the progrefs of fculpture anong them that we are to fudy the hiftory of this art; and we fhall fee its origin and fucceffive improve: inents correfpond with nature, which always operates flowly and gradually.

## View of Grectan Sculpture.

$\mathrm{T}_{\mathrm{HE}}$ great fupcriority of the Greeks in the art of Callfes $\frac{\mathrm{r}_{4}}{4}$ fculpture may be afcribed to a variety of caufes. The which proinfluence of climate over the human body is fo ftriking, moted the that it muft have fixed the attention of every thinking art of fculfo man who has reffected on the fubject. 'the violent Greece heats of the torrid zone, and the exceffive cold of the polar regions, are unfavourable to beauty. It is only in the mild climates of the temperate regions that it appears in its moft attractive charms. Perhaps no country in the world enjoys a more ferene air, lefs tainted with mifts and vapours, or poffeffes in a higher degree that mild and genial warmth which can unfold and expand the hunan body into all the fymmetry of muf. cular ftrength, and all the delicacies of female beauty in greater perfection, than the happy climate of Greece ; and never was there any people that had a greater tafte. for beauty, or were more anxious to improve it. Of the four wifhes of Simonides, the fecond was to have a handfone figure. The love of beauty was fo great among the Lacedemonian women, that they kept in their chambers the ftatues of Nereus; of Narciffus, of

$$
\text { Z. } 2 \text { Нуa* }
$$

## $S \quad C \quad$ L P T U R E.

Hyacinthus, and of Ca altor and Pollux ; hoping that by often contemplating them they might have beautiful children.

There was a variety of circumftances in the noble and virtuous freedom of the Grecian manners that rendered thefe models of beauty peculiarly fubfervient to the cultivation of the fine arts. There were no tyrannical laws, as among the Egyptians, to check their progrefs. Thry had the beft opportunities to ftudy them in the public places, where the youth, who needed no other vail than chaflity and purity of manners, performed their various exercifes quite naked. They had the ftrongeft motives to cultivate fculpture, for a fatue was the highef houour which public merit could attain. It was an honour ambitiounly fought, and granted only to thofe who had diftinguifhed themfelves in the eyes of their fellow citizens. As the Greeks preferred natural qualities to acquired accomplifiments, they decreed the firft rewards to thofe who excelled in agility and ftrength of body. Statues were often raifed to wreftcrs. Even the moft eminent men of Greece, in their youth, fought renown in gymnaftic exercifes. Chryfippus and Cleanthes diftinguifhed themfelves in the public games before they were known as philofophers. Plato appeared as a wreftler both at the Ifthmian and Pythian games; and Pythagoras carried off the prize at Elis, (fee Pythagoras.) The paffion by which they were infpired was the ambition of having their ftatues erected in the moft facred place of Greece, to be feen and admired by the whole people. The number of flatues erected on different occafions was immenfe; of courfe the number of artifts muft have been great, their emulation ardent, and their progrefs rapid.

As molt of their itatues were decreed for thofe who vanquifhed in the public games, the artifts had the opportunity of feeing excellent models; for thofe who furpaffed in running, boxing, and wreftling, muft in genera! have been well formed, yet would exhibit different kinds of beauty.

The high eftimation in which fculptors were held was very favourable to their art. Socrates declared the artilts the only wife men. An artift could be a legiflator, a commander of armies, and might hope to have his flatue placed befide thofe of Miltiades and Themiftocles, or thofe of the gods themfelves. Befides, the honour and fuccefs of an artift did not depend on the caprice of pride or of iynorance. The productions of art were eftimated and rewarded by the greateft fages in the general affembly of Greece, and the fculptor who had executed his work with ability and tafte was confident of obtaining immortality.

It was the opinion of Winkelman, that liberty was highly favourable to this art; but, though liberty is abfolutely neceflary to the advancement of fcience, it may be doubted whether the fine arts owe their improvement to it. Sculpture flourifhed moft in Greece, when Pericles exercifed the power of a king; and in the reign of Alexander, when Greece was conquered. It attained no perfection in Rome till Auguftus had enflaved the Romans. It revived in Italy under the patronage of the family of Medici, and in France under the defpotic rule of Louis XIV. It is the love of beauty, luxury, wealth, or the patronage of a powerful individual, that promotes the progrefs of this art.

It will now be proper to give a particular account of
the ideas which the Greeks entertained concerning the ftandard of beauty in the different parts of the human Grecian body. And with refpect to the head, the profile ideas of which they chiefly adinired is peculiar to dignified beauty. beauty. It confilts in a line almolt fraight, or marked by fuch fight and gentle inflections as are fcarcely diAtinguifhable from a traight line. In the figures of women and young perfons, the forehead and nofe form a line approaching to a perpendicular.

Ancient writers, as well as artifts, affure us that the Greeks reckoned a fmall forchead a mark of beauty, head. and a high forehead a deformity. From the fame idea, the Circaffians wore their hair hanging down over their foreheads almoft to their eyebrows. To give an oval form to the countenance, it is neceffary that the hair thould cover the forehead, and thus make a curve about the temples; otherwife the face, which terminates in an oval form in the inferior part, will be angular in the higher part, and the proportion will be deftroyed. This rounding of the forehead may be feen in all handfome perfons, in all the heads of ideal beauty in ancient ftatues, and efpecially in thofe of youth. It has been overlooked, however, by modern itatuaries. Bernini, who modelled a ftatue of Louis XIV. in his youth, turned back the hair from the forehead.

It is generally agreed that large eyes are beautiful; The ejes but their fize is of lefs importance in fculpture than their form, and the manner in which they are enchafed. In ideal beauty, the eyes are always funk deeper than they are in nature, and confequently the eyebrows have a greater projection. But in large ftatues, placed at a certain diftance, the eyes, which are of the fame colour with the reft of the head, would have little effect if they were not funk. By decpening the cavity of the eye, the flatuary increafes the light and fhade, and thus gives the head more life and expreffion. The fame practice is ufed in fmall ftatues. 'The eye is a characteriftic feature in the heads of the different deities. In the Atatues of A pollo, Jupiter, and Juno, the eye is large and round. In thofe of Pallas they are alfo large ; but by lowering the eyelids, the virgin air and expreffion of modefty are delicately marked. Venus has fmall eyes, and the lower eyelid being raifed a little, gives them a languifhing look and an enclanting fweetnefs. It is only neceffary to fee the Venus de Medicis to be convinced that large eyes are not efferitial to beauty, efpecially if we compare her fmall eyes with thole which refemble them in nature. The beauty of the eycbrows confifts in the finenefs of the hair, and in the fharpnefs of the bone which covers them; and matters of the art confidered the joining of the eyebrows as a deformity, though it is fometimes to be met with in ancient ftatues.

The beauty of the mouth is peculiarly neceffary to conititute a fine face. The lower lip mult be fuller than the upper, in order to give an elegant rounding to the chin. The teeth feldom appear, except in latgh. ing fatyrs. In human figures the lips are generally clofe, and a little opened in the figures of the gods. The lips of Venus are half open.

In figures of ideal beauty, the Grecian artifts never interrupted the rounding of the chin by introducing a dimple : for this they confidered not as a mark of beauty, and only to be admitted to diftinguifh individuals. Ihe dimple indeed appears in fome ancient fatues, but

## S C U L P T U R E.

antiquaries fufpect it to be the work of a modern hand. It is fufpected alfo, that the dimple which is fometimes found on the cheeks of ancient ftatues is a modern inuovation.

No part of the head was executed by the ancients with more care than the ears, though little attention has been given to them by modern artifts. This character is fo decifive, that if we obferve in any ftatue that the ears are not highly finifhed, but only roughly marked, we may conclude with certainty that we are examining a modern production. The ancients were very attentive to copy the precife form of the ear in taking likeneffes. Thus, where we meet with a head the ears of which have a very large interior opening, we know it to be the head of Marcus Aurelius.

The manner in which the ancient artifts formed the hair alfo enables us to diftinguifh their works from thofe of the moderns. On hard and coarfe ftones the hair was fhort, and appeared as if it had been combed with a wide comb ; for that kind of fone was difficult to work, and could not without immenfe labaur be formed into curled and flowing hair. But the figures executed in marble in the moft flourifting period of the art have the hair curled and flowing; at leat where the head was not intended to be an exact refemblance, for then the artift conformed to his model. In the heads of women, the hair was thrown back, and tied behind in a waving manner, leaving confiderable intervals; which gives the agreeable variety of light and fhade, and produces the effects of the claro-obfcuro. The hair of the Amazons is difpofed in this manner. Apollo and Bacchus have their hair falling down their fhoulders; and young perfons, till they arrived at manhood, wore their hair long. The colour of the hair which was reckoned moft beautiful, was fair ; and this they gave without diftinction to the moft beautiful of their gods, A pollo and Bacchus, and likewife to their moft illuftrious heroes.
Although the ravages of time have preferved but few of the hands or feet of ancient ftatues, it is evident from what remains how anxious the Grecian artifts were to give every perfection to thefe parts. The hawds of young perfons were moderately plump, with little cavities or dimples at the joints of the fingers. The fingers tapered very gently from the root to the point, like well-proportioned columns, and the joints were fcarcely perceptible. The terminating joint was not bent, as it commonly appears in modern ftatues.

In the figures of young men the joints of the knee are faintly marked. The knee unites the leg to the thigh without making any remarkable projections or cavities. The moft beautiful legs and beft-turned knees, according to Winkelman, are preferved in the A pollo Saurocthones, in the Villa Borghefe; in the A pollo which has a fwan at its feet; and in the Bacchus of Villa Medicis. The fame able connoiffeur renarks, it is rare to meet with beautiful knees in young perfons, or in the elegant reprefentations of art. As the ancients did not cover the feet as we do, they gave to them the moft beautiful turning, and ftudied the form of them with the moft fcrupulous attention.

The breafts of men were large and clevated. The breafts of women did not poffefs much amplitude. The figures of the deities have always the breafts of a virgin, the beauty of which the ancients made to confift in a body gentle elevation. So anxious were the women to re femble this ftandard, that they ufed feveral arts to rettrain the growth of their breats. The breafts of the nymphs and goddeffes were never reprelented fwelling, becaufe that is peculiar to thofe women who fuckle. The paps of Venus contract and end in a point, this being confidered as an effential characteritic of perfect beainty. Some of the moderns have tranfgreffed thefe rules, and have fallen into great improprieties.

The lower part of the body in the ftatues of men was formed like that of the living body after a profound gleep and good digeftion. The navel was confiderably funk, efpecially in female fatues.

As beauty never appears in equal perfection in every ldeal beaspart of the fame individual, perfect or ideal beauty can $\%$ only be produced by felecting the mof beautiful parts from different models; but this mult be done with fuck judgment and care, that thefe detached beauties when united may form the mof exact fymmetry. Yet the ancients fometimes confined themfelves to one individual, even in the mof flourifhing age 'I'heodorus, whom Socrates and his difciples vifited, ferved as a model to the artitts of his time. Phryne alfo appears to have been a model to the painters and fculptors But Socrater, in his converfation with Parrhafius, fays, that when a perfect beauty was to be produced, the artilts joined together the moft Ariking beauties which could be collected from the fineft figures. We know that Zeuxis, when he was going to paint Helen, united in one picture all the beauties of the molt handfome women of Crotona.
The Grecian fculptors, whoreprefented with fuch fuccefs the moft perfect beauty of the human form, were not regardlefs of the drapery of their ftatues. 'They clothed their figures in the moft proper ftuff, which they wrought into that fhape which was beft calculated to give effect to their defign.

The veftments of women in Greece generally confifted of linen cloth, or fome other light ituff, and in latter times of filk and fometimes of woollen cloth. They had alfo garments embroidered with gold. In: the works of fculpture, as well as in thofe of painting, one may diftinguifh the linen by its tranfparency and fmall united folds. The other light ftuffs which were worn by the women (A) were generally of cotton produced in the ifle of Cos; and thefe the art of ftatuarywas able to diftinguifh from the linen veftments. Thecotton cloth was fometimes ftriped, and fometimes embellifhed with a profufion of flowers. Silk was alfo employed ; but whether it was known in Greece before the time of the Roman emperors cannot eafily be determined. In paintings, it is diftinguifhable by changing its colour in different lights to red, violet, and fky-blue. There were two forts of purple; that which the Greeks called the colour of the Sea, and Tyrian purple, which refembled lac. Woollen garments are eatily known by
the amplitude of their folds. Befides thefe, cloth of gold formetimes compofed their drapery: but it was not like the moders fabric, confifting of a thread of gold or of filver fpun with a thread of filk ; it was compofed of gold or tilver alone, without any mixture.

The veftments of the Greeks, which deferve particu-

27
The tunic.

28
Trie robe.

29 lar attention, are thie tunic, the robe, and the mantle.
'The tunic was that part of the drefs which was next to the body. It may be feen in fleeping figurres, or in thofe in difhabille; as in the Flora Farnefe, and in the flatues of the Amazons in the Capitol. The youngeft of the daughters 'of Niobe, who throws herfelf at her mother's fide, is clothed only with a tunic. It was of linen, or fome other light fluff, without fleeves, fixed to the fhoulders by a button, fo as to cover the whole breaft. None but the tunics of the goddefs Ceres and comedians have long ftraight fleeves.

The robes of women commonly confifted of two long pieces of woollen cloth, without any paticular form, attached to the fhoulders by a great many buttons, and fometimes by a clafp. They had flraight fleeves which came down to the wrifts. The yourig girls, as well as the women, fatened their robe to their fide by a cincture, in the fame way as the high-prieft of the Jews faftencd his, as it is flill done in many parts of Greece. The cincture formed on the fide a knot of ribbons fometimes refembling a rofe in fhape, which has been. particularly remarked in the two beautiful daughtens of Niobe. In the younger of thefe the cincture is feen paffing over the fhoulders and the back. Venus has two cinctures, the one paffing over the fhoulder, and the other furrounding the waif. The latter is called ceffus by the poets.

The mantle was called peplon by the Greeks, which fignifies properly the mantle of Pallas. The name was afterwards applied to the mantles of the other gods, as well as to thofe of men. This part of the drefs was not fquare, as fome have imagined, but of a roundifh form. 'I he ancients indeed fpeak in general of fquare mantles, but they received this fhape from four taffels which were affixed to them; two of thefe were vifible, and two were concealed under the mantle. The mantle was, brought under the right arm, and over the left moulder; fometimes it was attached to the fhoulder by two buttons, as may be feen in the beautiful fatue of Leucothoe at Villa Albani.
The colour The colour of veftments peculiar to certain ftatues of the vef is too curious to be omitted. To begin with the fi-
gures of the gods. - The drapery of Jupiter was red, that of Neptune is fuppofed by Winkelnan to have been fea-green. The fame colour alfo belonged to the Nereids and Nymphs. The mantle of Apollo was blue or violet. Bacchus was dreffed in white. Martianus Capella affigns green to Cybele. Juno's veftments were fky-blue, but flac fometimes had a white veil. Pallas was robed in a flame-coloured mantle. In a painting of Herculaneum, Venus is in flowing drapery of a golden yellow. Kings were arrayed in purple; prietts in white; and conquerors fometimes in fea-green.

## T U R R.

With refpect to the head, women generally wote no covering but their hair; when they wifhed to cover their head, they ufed the corner of their mantle, Sometimes we meet with veils of a fine tranfparent tex. ture. Old women wore a kind of bounct upon their head, an example of which may be feen in a fratue in the Capitol, called the Praffica; but Winkelman thinks it is a ftatue of Hecuba.

The covering of the feet confifted of fhoes or fan. dals. The fandals were generally an inch thick, and compofed of more than one fole of cork. Thofe of Pallas in Villa Albani has two foles, and other flatues had no lefs than five.

Winkelman has affigned four different fyles to this art. The ancient fiyle, which continued until the time of this of Phidias; the grand ftyle, formed by that celebrated among ftatuary ; the beautiful, introduced by Praxiteles, A. Greeks. pelles, and Lyfippus; and the imitative ftyle, practifed by thofe artifts who copied the works of the ancient mafters.

The moft authentic monuments of the ancient ftyle rhe an are medals, containing - an infeription, which leads us cient $a_{j}$ back to very diftant times. The writing is from right to left in the Hebrew manner; a ufage which was abandoned before the time of Herodotus. The flatue of Agamemnoil at Elis, which was made by Ornatas, has an infcription from right to left. This artifan flourifhed 50 years before Phidias; it is in the intervening period therefore between thefe two artifts, that we are to looks for the ceffation of this practice. The flatues formed in the ancient ftyle were neither diftinguifhed by beauty of fhape nor by proportion, but bore a clofe refemblance to thofe of the Egyptiaus and Etrurians ( B ) ; the yes were long and flat; the fection of the mouth not horizontal ; the chin was pointed; the curls of the hair were ranged in little rings, and refembled grains inclofed in a heap of raifins. What was ftill worfe, it was impoffible by infpecting the head to di-
ntinguinh the fex. Ainguifh the fex.

The characters of this ancient ftylc were thefe: The defigning was energetic, but harf ; it was animated, but without gracefulnefs; and the violence of the expreffion deprived the whole figure of beanty.
The grand ftyle was brought to perfection by Phi- The ${ }^{33}$ dias, Polycletus, Scopas, Alcamenes, Myron, and other fyle, illuftrious artifts. It is probable, from fome paffages of ancient writers, that in this ftyle werc preferved fome characters of the ancient manner, fuch as the ftraight lines, the fquares and angles. The ancient mafters, fuch as Polycletus, being the legiflators of paportions, fays Winkelman, and of confequence thinking they had a right to diftribute the meafures and dimenfions of the parts of the human body, have undoubtedly facrificed fome degree of the form of beauty to a grandeur which is harih, in comparifon of the flowing contours and gaceful forms of their fucceffors.The molt confiderable monuments of the grand fyle are the ftatues of Niobe and her daughters, and a fis gure
(B) This is a proof additional to thofe that will be found in the articles to which we have referred, that the Greeks received the rudiments of the art of fculpture from the nations to which they were confeffedly indebted for the elements of fcience.

## S C U L P T. U R E.

gure of Pallas, to be feen in Villa Albani ; which, however, muft not be confounded with the ftatue which is modelled according to the firf ftyle, and is alfo found in the fame place. The head poffeffes all the characters of dignified beauty, at the fame time exhibiting the rigidnefs of the ancient ftyle. The face is defective in gracefulnefs; yet it is evident how eafy it would have been to give the features more roundnefs and grace. The figures of Niobe and her daughters have not, in the opinion of Winkelman, that aufterity of appearance which marks the age of the fatue of Pallas. They are characterized by grandeur and fimplicity: fo fimple are the forms, that they do not appear to be the tedious productions of art, but to have been created by an inftantaneous effort of nature.

The third fyle was the graceful or beautiful. Lyfip. pus was perhaps the artift who introduced this ftyle. Being more converfant than his predeceffors with the fweet, the pure, the flowing, and the beautiful lines of nature, he avoided the fquare forms which the mafters of the fecond ftyle had too much employed. He was of opinion that the ufe of the art was rather to pleafe than to aftonifh, and that the aim of the artift fhould be to raife admiration by giving delight. 'The artifts who cultivated this ftyle did not, however, neglect to ftudy the fublime works of their predeceffors. They knew that grace is confiftent with the moft dignified beauty, and that it poffefles charms which muif ever pleafe: they knew alfo that thele charms are enlanced by dignity. Grace is infufed into all the movements and attitudes of their ftatues, and it appears in the delicate turns of the hair, and even in the adjufting of the drapery. Every fort of grace was well known to the ancients; and great as the ravages of time have been amongtt the works of art, fpecimens are ftill preferved, in which can be diftinguibed dignified beauty, altradive beauty, and a beauty peculiar to infants. A fpecimen of dignified beauty may be feen in the fatue of one of the mufes in the palace of Barberini at Rome; and in the garden of the pope, on the Quirinal is a ftatue of another mule, which affords a fine inftance of attractive beauty. Winkelman fays that the moft excellent model of infant beauty which antiquity has tranfmitted to us is a fatyr of a year old, which is preferved, though a little mutilated, in Villa Albani.

The great reputation of Praxiteles and Apelles raifed an ardent emulation in their fucceffors, who defpairing to furpafs fuch illuftrious mafters, were fatisfied with imitating their works. But it is well known that a mere initator is always inferior to the mafter whom he attempts to copy. When no original genius appears, the art nutt therefore decline.

Ceay was the firft material which was employed in fatuary. An inftance of this may be feen in a figure of Alcamenes in bas-relief in Villa Albani. The ancients ufed their fingers, and efpecially their nails, to render certain parts moredelicate and lively: hence arofe the phrafe ad unguem factus bomo, "an accomplifhed man." It was the opinion of count Caylus that the ancients did not ufe models in forming their ftatues. But to difprove this, it is only neceffary to mention an engraving on a ftone in the cabinct of Stofch, which reprefents Prometheus engraving the figure of a man, with a plummet in his hand to meafure the proportions of his
model. The ancients as well as the moderns made works in platter; but no fpecimens remain except fome figures in bas-relief, of which the moft beautiful were found at Baia.
$3^{8}$
The works made of ivory and filver were generally Ivory, filv of a fmall fize. Sometimes, however, ftatues of a pro- ver. and. digious fize were formed of frold and ivory. The congold. loffal Minerva of Phidias, which was compofed of thefe materials, was $₹ 6$ cubits high. It is indeed fcarcely poffible to believe that ftatues of fuch a fize could entirely confift of gold and ivory. The quantity of ivory neceffary to a coloffal ftatue is beyond conception. M. de Pauw calculates that the ftatue of Jupiter Olympus, which was 54 feet high, would confume the teeth of 300 elephants.

The Greeks generally hewed their marble ftatues out Marbio of one block, though they after worked the heads feparately, and fometimes the arms. The heads of the fanous group of Niobe and her daughters have been adapted to their bodies after being feparately finined. It is proved by a large figure reprefenting a river, which is preferved in Villa Albani, that the ancients firte hewed their ftatues roughly before they attempted to finifh any part. When the ftatue had received its perfect figure, they next proceeded to polifh it with pumiceftone, and again carefully retouched every part with the chifel.
The ancients, when they employed porphyry, ufually Porghys ${ }^{40}$ made the head and extremities of marble. It is true, that at Venice there are four figures entirely compofed of porphyry; but thefe are the productions of the Greeks of the middle age. 'They alfo made ftatues of bafaltes and alabalter.

Withour expreffion, gefture, and attitude, no fi-Expseffion gure can be beautiful, becaufe in thefe the graces al-and attio ways refide. It was for this realon that the graces are ${ }^{\text {tude. }}$ always reprefented as the companions of Venus.

The expreffion of tranquillity was frequent in Grecian ftatues, becaufe, according to Plato, that was confidered as the middle ftate of the foul between pleafure and pain. Experience too fhows that in general the moft beautiful perfons are endowed with the fweetef and moft engaging manner. Without a fedaté tranquillity dignified beauty could not exift. It is in this tranquillity, therefore, that we muft look for the complete difplay of genius.

The moft elevated fpecies of tranquillity and repofe in the fis. was ftudied in the figures of the gods. The father of tues of the the gods, and even inferior divinities, are reprefentedgods. without emotion or refentment. It is thus that Homer paints Jupiter fhaking Olympus by the motion: of his hair and his eyebrows.

Shakes his ambrofial curls, and gives the nod, The ftamp of fate and fanction of the god.
Jupiter is not always exhibited in this tranquil ftate. In a bas-relief belonging to the Marquis Rondini he appears feated on an arm-chair with a melancholy afpect. The A pollo of the Vatican reprefents the god in a fit of rage againft the ferpent Python, which he kills at a blow. The artif, adopting the opinion of the poets, has made the nofe the feat of anger, and the lips the feat of difdain.

To exprefs the action of a hero, the Grecian fculptors in the of ind 8

## S C U L P T U R E.

delineated the countemance of a noble virtuous character reprefing, his groans, and allowing no expreffion of pain to appear. In defcribing the actions of a hero the poet has much more liberty than the artift. The poet can paint them fuch as they were before men were taught to fubdue their paffions by the reltraints of law; or the refined cuftoms of focial life. But the artift, obliged to felect the mof beautiful forms, is reduced to the neceflity of giving fuch an expreffion of the paffions as may not fhock our feelings and difguft us with his production. The truth of thefe rematks will be acfinowledged by thofe who have feen two of the moft beautiful monuments of antiqnity; one of which reprefents the fear of death, the other the moft violent pains and fufferings. The daughters of Niobe, againft whom Diana has difcharged her fatal arrows, are exhibited in that Itate of fupefaction which we innagine muit take place when the certain profpeet of death deprives the foul of all fenfibility. The fable prefents us an image of that ftupor which Efchylus defcribes as leizing the Niobe when they were transformed into a rock. The other monument referred to is the image of Laocoon, which exhibits the moft agonizing pain that can affect the mufcles, the nerves, and the veins. The fufferings of the body and the elevation of the ioul are expreffed in every member with equal energy, and form the moft fublime contralt imaginable. Laocoon appears to fuffer with fuch fortitude, that, whilit his lamentable fituation pierces the heart, the whole figure fills us with an ambitious defire of imitating his conttancy and magnanimity in the pains and fufferings that may fall to our lot.

Philoctetes is introduced by the poets fhedding tears, uttering complaints, and rending the air with his groans and cries ; but the artift exhibits him filent and bearing his pains with dignity. The Ajax of the celebrated painter Timomachus is not drawn in the act of deftroying the fleep which he took for the Grecian chiefs, but in the moments of reflection which fucceeded that frenzy. So far did the Greeks carry their love of calmnefs and fow movements, that they thought a quick ftep always announced rufticity of manners. Demofthenes reproaches Nicobulus for this very thing; and from the words he makes ufe of, it appears, that to fpeak with infolence and to walk haftily were reckoned fynonymous.

In the figures of women, the artits have conformed to the principle oblerved in all the ancient tragedies, and recommended by Ariftotle, never to make women fhow too nuck intrepidity or exceffive cruelty. Conformable to this maxim, Clytemneftra is reprefented at a little diftance from the fatal P pot, watching the murderer, but without taking any part with him. In a painting of Timomachus réprefenting Medea and her children, when Medea lifts up the dagger they fmile in her face, and her fury is immediately melted into compaffion for the innocent victims. In another reprefentation of the fame fubject, Medea appears hefitating and indecifive. Guided by the fame maxims, the artilts of moft refined tafte were careful to avoid all deformity, choofing rather to recede from truth than from their accutomed refpect for beauty, as may be feen in feveral figures of IHecuba. Sometimes, however, the appears in the decrepitude of ege, her face furrowed with wrinkles, and her breafts thanging down.

Illuftrious men, and thofe invefted with effices of dignity, are reprefented with a noble affurance and firm afpect. The ftatues of the Roman emperors reiemble Roma thofe of heroes, and are far removed from every fpecies puror of flattery, in the gefture, in the attitude, and action. They never appear with hanglity looks, or with the fplendor of royalty; no figure is ever feen prefenting any thing to them with bended knee, except captives; and none addreffes them with aa inclination of the head. In modern wroks too little attention has been paid to the ancient coflume. Winkelman mentions a bas-relief, which was lately executed at Rome for the fountain of Trevi, reprefenting an architect in the act of prefenting the plan of an aqueduct to Marcus Agrippa. The modern fculptor, not content with giving a long beard to that illuftrious Roman, contrary to all the ancient marble ftatues as well as medals which remain, exhibits the architect on his knees.

In general, it was an eftablified principle to banif all violent paffions from public monuments. This will ferve as a decifive mark to diftinguifh the true antique from fuppofititious works. A medal has been found exhibicing two Affyrians, a man and woman tearing their hair, with this infcription, Assyria. et. palaesTINA. IN. POTEST, P. R. REDAC. S. C. The forgery of this medal is manifeft from the word Palaefina, which is not to be found in any ancient Roman medal with a Latin infcription. Befides, the violent action of tearing the hair does not fuit any fymbolical figure. This extravagant ftyle, which was called by the ancients parenthyy $/ i s$, has been imitated by moft of the modern artifts. Their figures refemble comedians on the ancient theatres, who, in order to fuit the diftant fpectators, put on painted mafks, employed exaggerated geftures, and far overleaped the bounds of nature. This ftyle has been reduced into a theory in a treatife on the paffions compofed by Le Brun. The defigns which accompany that work exhibit the paffions in the very ligheft degree, approaching even to frenzy : but thefe are calculated to vitiate the tafte, efpecially of the young; for the ardour of youth prompts them rather to feize the extremity than the middle; and it will be difficult for that artift who has formed his tafte from fuch empaffioned models ever to acquire that noble fimplicity and fedate grandeur"which diftinguifhed the works of ancient tafte.

Proportron is the bafis of beauty, and there can be of pro no beanty without it; on the contrary, proportion maytions. exift where there is little beanty. Experience every day teaches us that knowledge is diftinct from tafte ; and proportion, therefore, which is founded on knowledge, may be ftrictly obferved in any figure, and yet the figure have no pretenfions to beauty. The ancients confidering ideal beauty as the moft perfect, have frequently employed it in preference to the beauty of nature.

The body confifts of three parts as well as the menbers. The three parts of the body are the trunk, the things, and the legs. The inferior part of the body are the thighs, the legs, and the fect. The arms alfo confift of three parts. Thefe three parts mult bear a certain proportion to the whole as well as to one another. In a well formed man the head and hody mult be proportioned to the thighs, the legs, and the feet, in the fame manner as the thighs are proportioned to the lege and the feet, or the arms to the hands. The face

## S C U L P T U R E.

allo confifts of three parts, that is, three times the length of the nofe; but the head is not four times the length of the nofe, as fome writers have afferted. From the place where the hair begins to the crown of the head are only three-fourths of the length of the nofe, or that part is to the nofe as 9 to 12 .

It is probable that the Grecian, as well as Egyptian artifts, have determined the great and fmall proportions by fixed rules; that they have eftablifhed a pofitive meafure for the dimenfions of length, breadth, and circumference. This fuppofition alone can enable us to account for the great conformity which we meet with in ancient fatues. Winkelman thinks that the foot was the meafure which the ancients ufed in all their great dimenfions, and that it was by the length of it that they regulated the meafure of their figures, by giving to them fix times that length. This in fact is the length which Vitruvius affigns, Pes vero altitudinis corporis fexta, 1. 3.cap. I. That celebrated antiquary thinks the foot is a more determinate meafure than the head or the face, the parts from which modern painters and fculptors too often take their proportions. This proportion of the foot to the body, which has appeared ftrange and incomprehenfible to the learned Huetius, and has been entirely rejected by Perrault, is however founded upon experience. After meafuring with great care a valt number of figures, Winkelman found this proportion obferved not only in Egyptian ftatues, but alfo in thofe of Creece. This fact may be determined by an infpection of thofe ftatues the feet of which are perfect. One may be fully convinced of it by examining fome divine figures, in which the artifts have made fome parts beyond their natural dimenfions. In the Apollo Belvidere, which is a little more than feven heads high, the foot is three Roman inches longer than the head. The head of the Venus de Medicis is very fmall, and the height of the fatue is feven heads and a half: the foot is three inches and a half longer than the head, or precifely the fixth part of the length of the whole fatue.

## Practice of Sculpture.

WE have been thus minute in our account of the Grecian fculpture, becaufe it is the opinion of the ableft critics that modern artifts have been more or lefs emi-- nent as they have ftudied with the greater or lefs attention the models left us by that ingenious people: Winkelman goes fo far as to contend that the molt finihhed works of the Grecian mafters ought to be ftudied in preference even to the works of nature. This appears to be paradoxical ; but the reafon affigned by the Abbe for his opinion is, that the faireft lines of beauty are more eafily difcovered, and make a more ftriking and powerful impreffion, by their reunion in thefe fub. lime copies, than when they are fcattered far and wide in the original. Allowing, therefore, the ftudy of nature the high degree of merit it fo juftly claims, it muft neverthelefs be granted, that it leads to true beauty by a much more tedious, laborious, and difficult path, than the ftudy of the antique, which prefents immediately to the artift's view the object of his refearches, and combines in a clear and ttrong point of light the various rays of beauty that are difperfed through the wide domain of naturce.

As foon as the artift has laid this excellent founda. Now. XVII. Part I.
tion, acquired an irtimate degree of familiarity with the beauties of the Grecian ftatues, and formed his tafte after the admirable models they exhibit, he may then proceed with advantage and affurance to the imitation of nature. The ideas he has already formed of the perfection of nature, by obferving her difperfed beauties combined and collected in the compofitions of the an. cient artifts, will enable him to acquire with facility, and to employ with advantage, the detached and partial ideas of beauty which will be exhibited to his view in a furvey of nature in her actual ftate. When he difcovers thefe partial beauties, he will be capable of combining them with thofe perfect forms of beauty with which he is already acquainted. In a word, by having always prefent to his mind the noble models already mentioned, he will be in fome meafure his own oracle, and will draw rules from his own mind.

There are, however, two ways of imitating nature. Tw. ${ }^{48}$ In the one a fingle object occupies the artift, who en-of imitadeavours to reprefent it with precifion and truth; in ting nathe other, certain lines and features are taken from a ${ }^{\text {ture. }}$ variety of objects, and combined and blended into one regular whole. All kinds of copies belong to the firft kind of imitation; and productions of this kind muft be executed neceffarily in the Dutch manner, that is to fay, with high finifhing, and little or no invention. But the fecond kind of imitation leads directly to the inveftigation and difcovery of true beauty, of that beauty whofe idea is connate with the human mind, and is only to be found there in its higheft perfection. 'This is the kind of imitation in which the Greeks excelled, and in which men of genius excite the young artifts to excel after their example, viz. by ftudying nature as they did.

After having ftudied in the productions of the Grecian mafters their choice and expreffion of felect nature, their fublime and graceful contours, their noble draperies, together with that fedate grandeur and admirable fimplicity that conftitute their chief merit, the curious artitts will do well to ftudy the manual and mechanical part of their operations, as this is abfolutely neceffary to the fuccefsful imitation of their excellent manner.
It is certain that the ancients almoft always formed Models of their firft models in wax: to this modern artifts have flatues. fubftituted clay, or fome fuch compofition : they prefer clay before wax in the carnations, on account of the yiclding nature of the latter, and its fticking in fome meafure to every thing it touches. We mult not, however, imagine from hence that the method of forming models of wet clay was either unknown or neglected among the Greeks ; on the contrary, it was in Greece that models of this kind were invented. Their author was Dibutades of Sicyon; and it is well known that Arcefilas, the friend of Lucullus, obtained a higher degree of reputation by his clay models than by all his other productions. Indeed, if clay could be made to preferve its original moifture, it would undoubtedly be the fitteft fubftance for the models of the fculptor; but when it is placed either in the fire or left to dry imperceptibly in the air, its folid parts grow more compact, and the figure lofing thus a part of its dimenfions, is neceffarily reduced to a fmaller volume. This diminution would be of no confequence did it equally affect the whole figure, fo as to preferve its proportions enAa
tire.

## $S \subset$ U L P T U R E:

tire. But this is not the cafe: for the fmaller parts of the figure dry fooner than the larger; and thus lofing more of their dimenfions in the fame fpace of time than the latter do, the fymmetry and proportions of the figure inevitably fuffer. This inconveniency does not take place in thofe models that are made in wax. It is indeed extremely difficult, in the ordinary method of working the wax, to give it that degree of fmoothnefs that is neceffary to reprefent the foftnefs of the carnations or flefhy parts of the body. This inconvenience may, however, be remedied, by forming the model firt in clay, then moulding it in plafter, and lafly cafting it in wax. And, indeed, clay is feldom ufed but as a mould in which to caft a figure of plafter, ftucco, or wax, to ferve henceforth for a model by which the meafures and proportions of the flatue are to be adjufted. In making waxen models, it is commen to put half a pound of colophony to a pound of wax; and fome add turpentine, melting the whole with oil of olives.
So much for the firt or preparatory fteps in this

Method of working
the ma:-
ble, and
procedure. It remains to confider the manner of working the marble after the model fo prepared; and the method here followed by the Greeks feems to have been extremely different from that which is generally obferved by modern artifts. In the ancient ftatues we find the molt Ariking proofs of the freedom and boldnefs that accompanied each Atroke of the chifel, and which refulted from the artit's being perfectly fure of the accuracy of his idea, and the precifion and fieadinefs of his hand: the moft minute parts of the figure carry thefe marks of affurance and freedom; no indication of timoroufnefs or diffidence appear ; nothing that can induce us to fancy that the artift had occafion to correct any of his firokes. It is difficult to find, even in the fecond-rate productions of the Grecian artifts, any mark of a falfe ftroke or a random touch. This firmnefs and precifion of the Grecian chifel were certainly derived from a more determined and perfect fet of rules than thofe which are obferved in modern times.

The method generally obferved by the modern fculptor is as follows : Firt, out of a great block of marble he faws another of the fize required, which is performed with a fmooth fteel faw, without teeth, calling water and fand thereon from time to time; then he fafhions it, by taking off what is fuperfluous with a fteel point and a heavy hammer of foft iron; after this, bringing it near the meafure required, he reduces it till nearer with another finer point; he then ufes a flat cutting inftrument, having notches in its edge; and then a chifel to take off the fcratches which the former has left ; till, at length, taking rafps of different degrees of finenefs, by degrees he brings his work into a condition for polifhing.

After this, having fudied his model with all poffible attention, lie draws upon this model horizental and perpendicular lines which interfect each other at right angles. He afterwards copics thefe lines upon his marble, as the painter makes ufe of fuch tranfverfal lines to copy a picture, or to reduce it to a fmaller fize. Thefe traniverfal lines or fquares, drawn in an equal sumber upon the marble and upon the model, in a mianner proportioned to their refpective dimenfions, exhibit accurate meafures of the furfaces upon which the artift is to work ; but cannot determine, with equal precifion, the depths that are proportioned to thefe furfaces. -

The fculptor, indeed, may determine thefe depths by obferving the relation they bear to his model; but as his eye is the only guide he has to follow in this eftimate, he is always more or lefs expofed to error, or at leaft to doubt. He is never fure that the cavities made by his chifel are cxact; a degree of uncertainty accompanies each ftroke; nor can he be affured that it has carried away neither too much nor too little of his marble. It is equally difficult to determine, by fuch lines as have already been mentioned, the external and internal contours of the figure, or to transfer them from the model to the marble. By the internal contour is underftond that which is defcribed by the parts which approach towards the centre, and which are not marked in a ftriking manner.

It is farther to be noticed, that in a complicated and laborious work, which an artif cannot execute without affiftance, he is often obliged to make ufe of foreign hands, that have not the talents or dexterity that are neceffary to finifh his plan. A fingle ftroke of the chifel that goes too deep is a defect not to be repaired; and fuch a ftroke may eafily happen, where the depths are fo imperfectly determined. Defects of this kind are inevitable, if the fculptor, in chipping his marble, begins by forming the depths that are requifite in the figure he defigns to reprefent. Nothing is more liable to error than this manner of proceeding. The cautious artilt ought, on the contrary, to form thefe depths gradually, by little and little, with the utnoft circumfeetion and care ; and the determining of them with precirion ought to be confidered as the lalt part of his work, and as the finifhing touches of his chifel.

The various inconveniences attending this method of at determined feveral eminent artifts to look out for one ing a that would be liabie to lefs uncertainty, and productive fatu of fewer errors. The French academy of painting at Rome hit upon a method of copying the ancient ftatues, which fome fculptors have employed with fuccefs, even in the figures whicl they finifhed after models in clay or wax. This method is as follows. The ftatue that is to be copied is inclofed in a frame that fits it exactly. The upper part of this frame is divided into a certain number of equal parts, and to each of thefe parts a thread is fixed with a piece of lead at the end of it. Thefe threads, which hang freely, fhow what parts of the ftatue are mof removed from the centre with much more perfpiceity and precifion than the lines whicls are drawn upon its furface, and which pafs equally over the higher and hollow parts of the block : they alfo give the artift a tolerable rule to meafure the more ftriking variations of height and depth, and thus render lim more bold and determined in the execution of his plan.

But even this method is not without its defects: for as it is impoffible, by the means of a ftraight line, to determine with precilion the procedure of a curve, the artitt has, in this method, no certain rule to guide him in his contours; and as often as the line which he is to defribe deviates from the direction of the plumb line, which is his main guide, he muft neceffarily find himfelf at a lofs, and be obliged to lave recourfe to conjecture.

It is alfo evident, that this method affords no certain. rule to determine exactly the proportion which the various parts of the figure ought to bear to each other, confidered in their mutual relation and connections. The artift, indeed, endeavours to dupply this defect by

## $S \quad C \quad U \quad$ L $\quad$ T U R E.

Thterfecing the plumb-lines by horizontal ones. This recourfe has, neverthelefs, its inconveniences, fince the fquares formed by tranfverfal lines, that are at a diftance from the figure (thongh they be exactly equal), yet reprefent the parts of the figure as greater or Imaller, according as they are more or lefs removed from our polition or point of view. But, notwithftanding thefe inconveniences, the method now under confideration is certainly the beft that has hitherto been employed: it is
more practicable and fure than any other we know, though it appears, from the remarks we have now been making, that it does not exhibit a fure and univerfal criterion to a fculptor who executes after a model.

To polifh the flatue, or make the parts of it fmooth of poliinhand fleek, they nfe pumice-flone and fmelt; then tripoli; ing the and when a fill greater luftre is required, they ufe burnt ftraw. For the Cafing of Statues, lee Foundery, and Plaster of Paris.

## S C U

SCUM, properly denotes the impurities which a liquor, by boiling, cafts up to the furface. The term foum is alfo ufed for what is more properly called the fcoria of metals.

SCUPPERS, in a fhip, are certain channels cut through the water-ways and fides of a mip, at proper diftances, and lined with plated lead, in order to carry the water off from the deck into the fea. The fcuppers of the lower deck of a flip of war are ufually furnimed with a leathern pipe, called the foupper-hofe, which hangs downward from the mouth or opening of the fcupper. The intent of this is to prevent the water from entering when the Chip inclines under a weight of fail.

SCURVY, in medicine, fee that article, $\mathrm{n}^{2} 351$, where we have given an account of the fymptoms, caufes, and modes of prevention and cure, according to fome of the moft eminent writers in medicine. We have here only to add, that, in the opinion of Dr Beddoes, the mineral acids, efpecially the nitric and vitrielic, may be employed in the prevention or cure of this dreadful difeafe with as much fuccefs as the vegetable acids. But of all the fubftances that can at once be cheaply procured and long preferved, he thinks the concrete acid of tartar by far the moft promifing. It is very grateful, and comes near to the citric acid. In tropical countries the fcurvy is feldom known.

Scurvr-grafs, in botany. See Cochlearea.
The officinalis, or common officinal fcurvy-grafs, grow's upon rocks on the fea coatt, and on the Highland mountains, abundantly. It has an acrid, bitter, and acid tafte, and is highly recommended for the fcurvy. There are inftances of a whole fhip's crew having been cured of that diftemper by it ; and as it abounds with acid falts, there can be no doubt but that it is a great reffifter of putrefaction. 'The beft way of taking it is raw in a falad. It is alfo diuretic, and ufeful in droplies. 'I he Highlanders efteem it as a good ftomachic.

The coronopus, another fpecies, was fome years ago rendered famous, the afhes of it being an ingredient in Mrs Joanna Stephens's celebrated medicine for the fone and gravel ; but, unfortunately for thofe aflicted with that excruciating complaint, it has not been able to fupport its credit. It is acrid, and taftes like garden crefs.

SCUTAGE (foutagium, Sax. fcildpening), was a tax or contribution raifed by thofe that held lands by knights fervice, towards furnifhing the king's army, at one, two, or three merks for every knight's fee. Henry III. for his voyage to the Holy Land, had a tenth granted by the clergy, and foutage three merks of every
knight's fee by the laity. This was alfo levied by Henry II. Richard I. and King John. See Knight: Service.

SCUTE ( cutum), a French gold coin of 3 s. 4 d . in the reign of king Henry V. Catharine queern of England had an affurance made her of fundry caftes, manors, lands, \&c. valued at the fum of 40,000 foutes, every two whereof were worth a noble. Rot. Parl. I. Her. VI.

SCUTELLARIA, Skull-cap, in botany: A genus of the gymnofpermia order, belonging to the didynamia clafs of plants; and in the natural method ranking under the foth order, Perfortata. The calyx is fhort, tubulated, has the mouth entire, and clofe after flowering. 'There are two fpecies in Britain, the galericulata and minor. I. The Galericulata, Blue Skull-cap, or Hooded Willow-herb. The ftems are weak, branched, and above a foot high ; the leaves are heart-ffaped, narrow-pointed, on fhort foot-ftalks, and fcalloped; the flowers are blue, in pairs, on pedicles from the alx of the leaves, and pendulous. It grows on the banks of rivers and lakes, is bitter, and has a galic fmell. 2. Minor, little red Skull-cap, or IVillozv-bert. The falks are about eight inches high; the leaves are heart-fhaped, oval ; the flowers are purple. It grows in fens, and on the fides of lakes.

SCUTTLES, in a fhip, fquare holes cut in the deck, big enough to let down the body of a man, and which ferve upon fome occafions to let the people down into any room below, or from one deck to another.

SCYLAX, a celebrated mathematician and geographer of Caria, flourifaed under the reign of Darius Hyftalpes, about 558 B . C. Some have attributed to him the invention of geographical tables. We have under his name a geagraphical work publifhed by Hocfchelius; but it is witten by a much later author, and is perhaps only an abridgment of Scylax's Ancient Geography.

SCYLA. A (anc. geog.), a rock in the Fretum Siculum, near the coaft of Italy, dangerous to fhipping, oppofite to Charybdis, a whirlpool on the coaft of Sicily ; both of them famous in mythology.
Scylla and Charybdis have been almoft fubdued by Sutherland's the repeated convulfions of this part of the earth, and Tour up the by the violence of the current, which is continually in- Straits, creafing the breadth of the Straits. If proper allowance be made for thefe circumftances, we fhall acquit the ancients of any exaggeration, notwithftanding the very dreadful colours in which they have painted this paffage. It is formed by a low peninfula, called Cape Pelorus, Aretching to the eaftward on the Sicilian fide,
imme.

## S C Y [ 188 ] S C Y

immediately within which lies the famous whirlpool of Charybdis, and by the rocks of Scylla, which a few miles below on the Calabrian thore project towards the weft. 'The current runs with furprifing force from one to the other alternately in the direction of the tide, and the tides themfelves are very irregular. Thus veffels, by flumning the one, were in the utmoft danger of being fwallowed up by the other.

At prefent, in moderate weather, when the tide is either at ebb or flood, boats pafs all over the whirlpool: but, in general, it is like the meeting of two contending currents, with a number of eddies all around; and, even now, there is fcarcely a winter in which there are not fome wrecks.
"At the time when we paffed the Straits (fays Captain Sutherland, from whom we have obtained this accurate information) the weather was as favourable as we could with ; and yet, in fpite of a trong breeze and the current, which hurried us on with furprifing velocity, the fhip's head was fuddenly whirled round near three points; but the wind blowing frefh, in a few feconds the dafhed through the eddy that had caught her; for, to avoid Scylla, and fecure Meffina, we had kept pretty clofe to Clarybdis."

SCYROS, an ifland in the Ægean fea, at the diftance of about 28 miles north-caft from Eubœa. It is 60 miles in circumference. It was originally in the poffeffion of the Pelafgians and Carians. Achilles retired there to avoid going to the Trojan war, and became father of Neoptolemus by Deidamia the daughter of king Lycomedes. Scyros was conquered by the Athenians under Cimon. It was very rocky and barren. Nuw Sciro. E. Long. 25.0. N. Lat. 38. 15.

SCYTALA laconica, in antiquity, a ftratagem or device of the Lacedemonians, for the fecret writing of letters to their correfpondents, fo that if they flould chance to be intercepted, nobody might be able to read them.--To this end they had two wooden rollers or cylinders, perfectly alike and equal ; one whereof was kept in the city, the other by the perfon to whom the letter was directed. For the letter, a flin of very thin parchment was wrapped round the roller, and thereon was the matter written; which done, it was taken off, and fent away to the party, who, upon putring it in the fame manner upon his roller, found the lines and words in the very fame difpofition as when they were firft written. This expedient they fet a very high value on ; though, in truth, artlefs and grofs enough : the moderns have improved vaftly on this method of writing. See Cipher.

SCYTALIA, in botany: A genus of the monogynia order, belonging to the octandria clafs of plants; and in the natural method ranking with thofe that are doubtful. The calyx is very fhort, monophyllous, and fomewhat quinquedentated; the corolla pentapetalous; the filaments hairy at the bafe; the berry unilocular, with one feed of a foft pulpy confiftence. There is only one fpecies, viz. the Sinenfis, a native of the Eaft Indies.

SCYTHIA, an ancient name for the northern parts of A fia, now known by the name of Tartary; allo for fome of the north-eaftern parts of Europe.

This vaft territory, which extends itfelf from the Ifter or Danube, the boundary of the Celts, that is, from
about the 25 th to almoft the 110 th degrec of eaft lon gitude, was divided into Scythia in Europe and Scy. thia in Afia, including, however, the two Sarmatias; or, as they are called by the Greeks, Sauromatias, now the Circaffian Tartary, which lay between and fevered the two Scythias from each other. Sauromatia was alfo diftinguifhed into European and Afratic ; and was divided from the European Scythia by the river Don or Tanais, which falls into the Palus Meotis; and from the Afiatic by the Rha, now Volga, which empties itfelf into the Cafpian fea.
r. The Afratic Scythia comprehended, in gencral, great Tartary, and Ruffia in Afia; and, in particular, the Scythia beyond or without Imaus, contain. ed the regions of Bogdoi or Oftiacoi, and Tanguti, That within, or on this fide Imaus, had 「urkeftan and Mungal, the Ußeck or Zagatai, Kalmuc and Nagaian Tartars ; befides Siberia, the land of the Samoiedes, and Nova Zembla. Thefe three laft not being fo foon in. habited as the former, as may be reafonably fuppofed, were wholly unknown to the ancients; and the former were peopled by the Bactrians, Sogdians, Gandari, Sacks, and Maffagetes. As for Sarmatia, it contained Albania, Iberia, and Colchis; which makes now the Circaffian Tartary, and the province of Georgia.
2. Scythia in Europe reached (towards the fouthweft) to the Po and the Alps, by which it was divided from Celto-Gallia. It was bounded on the fouth by the Ifter or Danube and the Euxine fea. Its northern limits have been fuppofed to ftretch to the fpring-heads of the Borithenes or Nieper, and the Rha or Volga, and fo to that of the 'Tanais. - The ancients divided this. country into Scythia Arimafpæa, which lay eaftward, joining to Scythia in Afia; and Sarmatia Europeana: on the weft. In Scythia, properly fo called, were the Arimafpæi on the north; the Getæ or Dacians along the Danube, on the fouth; and the Neuri between thefe two. So that it contained the European Ruffia or Mufeovy, and the Leffer Crim Tartary eaftward; and, on the weft, Lithuania, Poland, part of Hungary; Tranfilvania, Walachia, Bulgaria, and Moldavia. Sarmatia is fuppofed to have reached northward to that part of Swedeland called Feningia, now Finland; in which they placed the Oøenes, Panoti, and Hippopodes. This part they divided from irorthern Germany, now the weft part of Sweden and Norway, by the Mare Sarmaticum or Scythicum, which they fuppofed ran up. into the northern ocean, and, dividing Lapland into two parts, formed the weftern part of Sweden, with Norway, into one ifland, and Finland into another : fuppofing this alfo to be cut off from the continent by the gulph of that name.

Although the ancient Scythians were celebrated as a warlike people, yet their hiftory is too uncertain and obfcure to enable us to give any detail which would not prove equally tirefome and uninterefting to the reader. Mr Pinkerton, in a differtation on their origin, endeavour3 to prove that they were the moft ancient of nations: and he affigns for the place of their firt habitation the country known by the name of Perfia. From Perfia, he thinks, they proceeded in numerous hordes weftward, furrounded the Euxine, peopled Germany, Italy, Gaul, the countries bordering on the Baltic, with part of Britain and Ireland. 1 hat the Scythians were of Afi-

## $S$ E A

 improbably peopled at their parent country ; but when our author contends that their empire had fubfithen more than 1500 years before Ninus the founder of the Aflyrian monarchy, and that it extended from Egypt to the Ganges, and from the Perfian gulf and Indian fea to the Cafpian, we cannot help thinking that his prejudices againft the Celts, and his defire to do honour to his favourite Goths, have made him advance a paradox inconfiftent with the moft authentic records of antiquity. His differtation however is ingenious, and replete with a variety of curious learning.Scrthian Lamb, in natural hiltory. See Scythian Lamb.

SCYTHROPS, a generical name given by Mr Latham to a bird of which hitherto but one fpecies has been obferved. It is about the fize of a crow, and two feet three inches in length. The bill is large, convex, furrowed on the fides, and bent at the tip; the noftrils are placed at the bafe of it, ard the tongue is cloven at the end. The general colour of the plumage is a brownifh afh, but the tip of each feather of the back, wings, and tail, is black. The tail has each feather banded with black at the end, and the tip itfelf white ; but the inner webs of the feather are marked with black and white bands. The toes are placed two forwards and two backwards, as in the parrot genus. This curious bind is a native of New Holland, and we believe in that part of the world is not uncommon, but its manners are as yet quite unknown. We are happy in being able to prefent our readers with an engraving of it from an excellent drawing with which we were lately favoured. Sce plate CCCCXLIX.

SEA, in a ftrict fenfe, fignifies a large portion of water almoft furrounded by land, as the Baltic and Mediterranean feas; but it is frequently ufed for that vaft body of water which encompaffes the whole eartb.
What proportion the fuperficies of the fea bears to e that of the land cannot eafily be afcertained. Buffon has fuppofed that the furface of our globe is equally divided between land and water, and has accordingly calculated the fuperficies of the fea to be $85,49 \mathrm{c}, 506$ fquare miles. But it is now well known that the ocean covers much more than the half of the earth's furface. Buffon believed the exiftence of a vaft fouthern continent, which Captain Cook has fhown to be vifionary. It was this circumftance which mifled him. According to the moft accurate obfervations hitherto made, the furface of the fea is to the land as three to one; the ocean therefore extends over $\mathbf{2}^{28,235,759}$ fquare miles, fuppofing the fuperficies of the whole globe to be $17.0,981,012$ fquare miles. To afcertain the depth of the fea is fill more difficult than its fuperficies, both on account of the numerous experiments which it would be neceffary to make, and the want of proper inftruments for that purpofe. Beyond a certain depth the fea has hitherto been found unfathomable; and though feveral methods have been contrived to obviate this difficulty, none of them has completely anfwered the purpofe. We know in general that the depth of the fea increafes gradually as we leave the fhore; but if this continued beyond a certain diftance, the depth in the middle of the ocean would be prodigious. Indeed the numerous infands. everywhere fcattered in the fea demonftrate the con-
trary, by fhowing us that the bottom of the water is unequal like the land, and that fo far from uniformly finking, it fometimes rifes into lofty mountains. If the depth of the fea be in proportion to the elevation of the land, as has generally been fuppofed, its greateft depth will not exceed five or fix miles, for there is no mountain fix miles perpendicular above the level of the fea. The fea has never been actually founded to a greater depth than a mile and 66 feet; every thing beyond that therefore refts entirely upon conjecture and analogical reafoning, which ought never to be admitted to determine a fingle point that can be afcertained by experiment, becaufe, when admitted, they have too often led to falle conclufions. Along the coafts, where the depth of the fea is in general well known, it has always been found proportioned to the height of the fhore: when the coaft is high and mountainous, the fea that wafhes it is deep; when, on the contrary, the coaft is low, the water is fhallow. Whether this analogy holds. at a diftance from the fhore, experiments alone can determine.

To calculate the quantity of water contained in the 3 . fea, while its depth is unknown, is impoflible. But if of water we fuppofe with Buffon that its medium depth is the which it. fourth part of a mile, the ocean, if its fuperficies be containso 128 ,235,75 fque, 128,235,759 fquare miles, will contain $32,058,939 \cdot 75$ cubic miles of water.

Let us now endeavour to compute the quantity of water which is conftantly difcharged into the fea. For this purpofe let us take a river whofe velocity and quan- Buffon's tity of water is known, the Po, for inftance, which ac: ${ }_{\text {Theory }}$ Buf cording to Riccioli is 1000 feet (or 100 perches of the Earth $_{2}$. Boulogne) broad, 10 feet deep, and runs at the rate of art. 10. four miles in an hour; confequently that river dif. charges into the fea 200,060 cubic perches of water in an hour, or $4,800,000$ in a day. A cubic mile con. tains $125,000,000$ cubic perches; the Po therefore will take 26 dats to difcharge a cubic mile of water into the fea. Let us now fuppofe, what is perhaps not very far from the truth, that the quantity of water which the fea receives from the rivers in any country is. proportioned to the extent of that country. The Pofrom its origin to its mouth traverfes a country 380 miles long, and the rivers which fall into it on every fide rife from fources about fixty miles diftant from it. The Po, therefore, and the rivers which it receives, water a country of 45,600 fquare miles. Now fince the whole fuperficiss of the dry land is about $42,745,253$ : fquare miles, it follows, from our fuppofition, that the quantity of water difcharged by all the rivers in the world, in one day, is 36 cubic miles, and in a year 13,140. If therefore the fea contains $32,058,939$ cubic miles of water, it would takc all the rivers in the world 2439 years to difcharge an equal quantity.

It may feem furprifing that the fea, fince it is con- Why it tinually receiving fuch an immenfe fupply of water, does dues not: not vifibly increafe, and at laft cover the whole eartl., increafe. But our furprife will ceafe, if we confider that the rivers themfelves are fupplied from the fea, and that they do nothing more than carry back thofe waters which the ocean is continually lavifhing upon the earth. Dr Halley has demonftrated that the vapours raifed from the fea and tranfported upon land are lufficient to maintain all the rivers in the world 'I he fimplicity of this, great procefs is aftonihing : the fea not only connecto

## S E A <br> $[1907$ <br> S E A

difant countries, and renders it eafy to tranfport the commodities of one nation to another, but its wates rifing in the air defcend in fhowers to fertilife the earth and nourifh the vegetable kingdom, and collecting into rivers flow onwards, bringing fertility and wealth and conmerce along with them, and again return to the fea to repeat the fame round.

The knowledge of this procefs of nature might, one would think, have convinced philofophers that the proportion between fea and land continued always nearly the fame. Philofophers however have formed different theories about this as well as moft other fubjects, maintaining on the one hand that the fea is continually encroaching on the land, and on the other that the land is conftantly gaining on the fea. Both fides have fupported their theories by arguments, demonftrations, and uncontrovertible facts!

The height of the mountains, fay the philofophers who fupport the encroacliments of the fea, is continually diminifhing ; expofed to the violence of every ftorm, down. harcelt rocks mult at laft give way and tumble down. The rivers are continually fweeping along with them particles of earth which they depofite in the bottom of the fea. Both the depth of the ocean then and the height of the dry land mult be always decreafing; the waters therefore muit, unlefs a part of them were amnihilated, fpread over a greater extent of furface in proportion as thefe caufes operate. This reafoning, convincing as it is, might be confirmed by a great number of facts: it will be fufficient however to mention one or two. In the reign of Augutus the ifle of Wight made a part of Britain, fo that the Englifh croffed over to it at low water with cart loads of tin; yet that ifland is at prefent feparated from Britain by a channel half a mile wide. The Godwin fands on the eaftern fhore of England were formerly the fertile eftate of earl Godwin. Nor are the encroachments of the fea confined to Britain. In the bay of Baiæ near Naples there are remains of houfes and ftreets ftill vifible below the prefent level of the fea. The fea therefore is making continued encroachments upon the land; and the time will come, fay they, wherr the waters will again cover the furface of the earth.
Such are the arguments of thofe philofophers who maintain the continual encroachments of the fea. Thofe who maintain the oppofite theory, that the land is gradually gaining on the fea, thongh they pretend not to deny the facts advanced by their opponents, affirm that they are altogether infufficient to eflablin the liypothefis which they were brought forward to fupport. Though the rivers carry down particles of earth into the fea, thefe, fay they, are either accumulated on other thores, or, collecting in the bottom of the ocean, harden into ftone, which being poffeffed of a vegetative power rifes by degrees above the furface of the fea and form rocks, and mountains, and iflands. The vegetative nature of thone incleed is fufficient, of itfelf, to convince us that the quantity of earth muft be datly accumulating, and confequently that the furface of the fea is diminifhing in extent. Celfius, a Swedifh philofopher (for this difpute has been carried on in Sweden with the greateft keennefs), has endeavoured to build this
theory with more folid materials than vegetable ftone. In a curious memoir, publifhed in 1743, he afferts that the Baltic and the Atlantic, at leaft that part of it which wafhes Norway, is conftantly diminifing; and he proves this by the teftimony of a great many aged pilots and fifhermen, who affirmed that the fea was become much fhallower in many places than it had beell during their youth: That rrany rocks formerly covered with water were now feveral feet above the furface of the fea: that loaded veffels ufed formerly to ride in many places where pinnaces and barks could now with difficulty fwin. He produces inftances of ancient fea-port towns now feveral leagues from the fhore, and of anchors and wrecks of veffels found far witlin the country. He mentions a particular rock whiclı 168 years before was at the bottom of the fea, but was then raifed eight feet above its furface. In another place where the water 50 years before had reached to the knee there was then none. Several rocks, too, which during the infancy of fome old pilots had been two feet under water, were then three feet above it. From all thefe obfervations M. Celfius concludes, that the water of the Baltic decreafes in height $4 \frac{\frac{T}{2}}{2}$ lines in a year, 4 inches 5 lines in 18 years, 4 feet 5 inches in a hundred years, and in a thoufand years 45 feet. Confcious, however, that thefe facts, how conclufive foever as far as relates to the Baltic, can never determine the general queftion, M. Celfius advances another argument in fupport of his theory. All that quanfity of moiture, fays he, which is imbibed by plants is loft to the general mafs of water, being converted into earth by the putrefaction of vegetables. 'Ihis notion had been mentioned by Newton, and was adopted by Van Helmont: if granted, it follows as a confequence that the earth is continually increafing and the water diminifhing in a very rapid degree.

Sucl are the argumeats advanced in fupport of both There theories; for it is needlefs to mention a notion of Lin-gume næus that the whole earth was formerly covered with exami water except a fingle mountain. When fairly weighed, they amount to nothing more than this, that the fea has encroached upon the land in fome places, and retired in others; a conclufion which we are very willing to allow. What was advanced by thofe philofophers, who maintain that the fea is continually encroaching on the land, about the deptls of the fea conftantly diminifhing, mult remain a mere affertion till they prove by experiments, either that this is really the cafe, or that nature has no way of reftoring thofe particles of eath which are wafhed down by the rivers. Nor have they any good reafon-to affirm that the height of the monutains is decreafing. Can a fingle uncontrovertible inftance be produced of this? Are the Alps or the A pennines, or Taurus, or Caucafus, lefs lofty now than they were a thoufand years ago ? We mean not to deny that the rain actually wafhes down particles of earth from the mountains, nor to affirm that the hardeft rocks are able to refift continual ftorms, nor that many mountdins have fuffered, and continue to fuffer daily, from a thoufand accidents. But the effecis produced by all thefe caufes are fo trifling as to be altogether imperceptible (A). Nature has affiduouny guarded againft fuch accidents; fhe has formed the mountains of the nott durable

## S E A [ 191] S E A

ble materials; and where they are covered with earth, The has bound it together by a thick and firm matting of grafs, and thus fecured it from the rains; and fhould accident deprive it of this covering, fhe takes care immediately to fupply the defect. Even fhould the earth be fwept away together with its covering, nature has ftill fuch refources left as frequently reftore things to their former flate. Many kinds of mofs, one would betempted to think, have been created for this very purpofe : they take root and flourifh almoft upon the bare rock, and furinifh as they decay a fufficient bed for feveral of the hardy Alpine plants. Thefe perifh in their turn, and othe:s fucceed them. The roots of the plants bind faft the earth as it accumulates, more plants fpring up and fpread wider, till by degrees the whole furface is covered with a firm coat of grafs. Even the rain, which always contains in it a good deal of earth, contributes fomething to halten the procefs.

As the vegetation of fone, an argument advanced by the philofophers who fupport the oppofite theory, is now, we believe, given up by all parties, it is needlefs to take any farther notice of it here, (fee STone). The hypothefis of M . Celfius, that water is coaverted into earth, has alfo fhared the fame fate, becaufe it was unfupported by experiment, and contrary to every thing that we know either about earth or water. It is a little extraordinary that philofophers have been fo lavifh of water as to convert it in this manner into fone and earth, when they had given it, one would think, fufficient employment before in making new worlds and in confuting Mofes.

As the fea covers fo great a portion of the globe, we fhould, no doubt, by exploring its bottom, difcover a valt number of interefting particulars. Unfortunately in the greater part of the ocean this has hitherto been impoffible. Part, however, has been examined; and the difcoveries which this examination has produced may enable us to form fome idea at leaft of the whole. The bottom of the fea, as might have been conjectured indeed beforehand, bears a great refemblance to the furface of the dry land, being, like it, full of plains, rocks, caverns, and mountains; fome of which are abrupt and almoft perpendicular, while others rife with a gentle declivity, and fometimes tower above the water and form iflands. Neither cio the materials differ which compofe the bottom of the fea and the bafis of the dry land. If we dig to a confiderable depth in any part of the earth, we uniformly meet with rock; the fame thing holds in the fea. The frata, too, are of the fame kind, difpofed in the fame manner, and form indeed but one whole. The fame kind of mineral and bituminous fubftances are alfo found interfperfed with thefe ftrata; and it is to them probably that the fea is indebted for its bitter tafte. Over the [e natural and original flrata an artifitcial bed has pretty generally been formed, compofed of different materials in different places. It confifts frequently of muddy tartareous fubltances firmly cenented
together, fometimes of thells, or coral redaced to pow. der, and near the mouths of rivers it is generally compofed of fine fand or gravel. 'The bottom of the fea refembles the land likewife in another particular: many frefh fprings and even rivers rife out of it, which, difplacing the falt water, render the lower part of the fea wherever they abound quite frefh. An inflance of this kind occurs near Goa on the weftern coaft of Indoftan *, and another $\S$ in the Mediterranean fea not far * Boyle de from Marfeilles. Thefe facts occalioned a notion, which Fundo Malater experiments have exploded, that the fea beyond certain depth was always frefh. ${ }_{\text {Hijfaire }}$

Subfances of a very beautiful appearance are fre-Plyyfique dequently brought up by the founding line from the bot- $l a \mathrm{Mer}$,
tom of the fea. The plummet is hollowed below, and this cavity filled with tallow, to which fome of the fubftances adhere which form the bed of the ocean. Thefe are gemerally fand, gravel, or mud; but they are fometimes of the brighteft fcarlet, vermilion, purple, and yellow ; and fomerimes, though lefs frequently, they are blue, green, or white. Thefe colours are owing to a kind of je!ly which envelopes the fubftances, and vanifh entirely as foon as this jelly dries. At times, however, they affume the appearance of tartareous crufts, and are then fo permanent, that they can be received into white wax melted and poured round them, and perhaps by proper care might be converted into valuable paints.

Sea-water is really, as any one may convince himitifby colour of pouring it into a glafs, as clear and tranfparent as river the fea. water. The various appearances therefore which it affumes are owing to accidental caufes; and not to any change in the water itfelf. The depth, or the materials which compofe the bottom of the fea, occafions it to affume different colours in different places." The Arabian gulph, for inftance, is faid to be red from the colour of the fands which form its bed. The appearance of the fea is affected too by the winds and the fun, while the clouds that pafs over it communicate all their various and fleeting colouss. When the fun fhines it is green ; when the fun gleams through a fog it is yellow ; near the north pole it appears black; while in the torrid zone its colour is often brown. Sometimes the fea affumes a luminous appearance. See $\mathrm{L}_{1 \mathrm{GHt}}$, $n^{0} 27$.

The fea contains the greateft quantity of falt in the saltnefs of torrid zone, where otherwife from the exceffive heat the fea. it would be in danger of putrefaction: as we advance northward this quantity diminiffes, till at the pole it nearly vanifhes altogether. Under the line Lucas found that the fea contained a feventh part of folid contents, confifting chiefly of fea-falt. At Harwich he found it yielded $\frac{1}{2}$ th of fea-falt. At Carlfcroon in Siweden it contains $T^{\frac{1}{0}}$ thr part (B), and on the coaft of Greenland a great deal lefs. This deficiency of falt near the poles probably contributes a good deal towards the prodigious quantities of ice which are met with in thefe feas ;

[^7] § Marfor $h_{i}$ partie I .

$\qquad$

$\qquad$
$\qquad$
$\qquad$

[^9]

<br> -

corcing to lis own calculation, it would require a million of years to level thefe mountains with
though they continued to decreafe at the fame rate; and philofophers tell us that this rate is conftantly dio. minifhing!
(В) Ithis gradual diminution of faltnefs from the equator to the pole is not, however, without particular exceptions. The Mediterrancan fea contains $\frac{1}{2} 7$ th of fea-falt, which is lefs than the German fea contains..

## S E A <br> S E A

sea, for falt water requires a much greater degree of cold to freeze it than frefh water. It was this circumftance, probably, together with its conftant motion, which induced the ancients to believe that the fea never froze. Even among the moderns it has been a generally received opinion, that fea-ice is originally formed in rivers. Buffon has made the great quantities of ice with which the South fea abounds an argument for the exiftence of a continent near the Antarctic pole. But it is now well known that great quantities of ice are formed at a diftance from land. Sea-ice is of two kinds; field ice, which extends along the fhore, and is only two or three feet thick ; and mountain ice, which abounds in the middle of the ocean. The fize of thefe mountains is fometimes prodigious. The fea-ice is always frefh, and has been ofterl of great ufe to navigators. The weight of fea-water is to that of river-water as 73 to 70 ; that is, a cubic foot of fea-water weighs 73 lb . while the fame quantity of river-water weighs only 7 olb .; but this proportion varies in different places. It is worthy of our attention, too, that the water at the furface of the fea contains lefs falt than near the bottom; the difference indeed is inconfiderable, but titl it is fomething. The Compte de Marfigli found the fame quantity of water, when taken from the bottom of the Mediterranean, to weigh one ounce three pennyweights $5^{1}$ grains; whereas from the furface it weighed only one ounce three pennyweights 49 grains. He repeated the experiment frequently with nearly the fame refult.

Tenıperaturc of the fea.

Boyle de
Tomperie Regionum Submarina. rum.

The fea, with refpect to temperature, may be divided into two regions: The firt begins at the furface of the water, and defcends as far as the influence of the fun's rays; the fecond reaches from thence to the bottom of the fea. In fummer the lower region is confiderably colder than the upper: but it is probable that during winter the very reverfe takes place; at leaft the Compte de Marfigli found it fo repeatedly in the Mediterranean. This naturally refults from the fituation of the water near the bottom of the fea. Uninfluenced by the changes in the atmofphere, it retains always nearly the fame degree of temperature : and this is confiderably above congelation; for the lower region of the fea, at leaft in the temperate parts of the world, was never known to Pbil. Tranf. freeze. Captain Ellis let down a fea-gage (fee Gage) in latitude $25^{\circ} 13^{\prime}$ north, and longitude $25^{\circ} 12^{\prime}$ weft, to take the degrees of temperature and faltnefs of the fea at different depths. It defcended 5346 feet, which is a mile and eleven fathoms. He found the fea falter and colder in proportion to its depth till the gage had defcended 3900 feet, when the mercary in the thermometer came up at 53 ; but the water never grew colder, though he let down the gage 2446 feet lower. At the furface the thermometer ftood at 84 .

The fea has three kinds of motion: 1. The firft is that undulation which is occafioned by the wind. This motion is entirely confined to the furface; the bottom even during the moft violent forms remains perfectly calm. Mr Boyle has remarked, from the teftimony of feveral divers, that the fea is affected by the winds only to the depth of fix feet. It would follow from this, that the height of the waves above the furface does not exceed fix feet; and that this holds in the Mediterranean at leaft, we are informed by the Compte de Marfigli, though he alfo fometimes obferved them, during a sery violent tempeft, rife two feet higher. It is af-
firmed by Pliny, and feveral other ancient writerrs, that oil calms the waves of the fea; and that divers were ac cultomed to carry fome of it for that purpofe in their mouths. This account was always confidered by the oil. moderns as a fable, and treated with fuch contempt, that they did not even deign to put it to the teft of expeririment, till Dr Franklin accidentally difcovered its truth. Happening in 1757 to be in the middle of a large fleet, he obferved that the water round one or two veffels was quite calm and fmooth, while everywhere elfe it was very much agitated by the winds. He applied to the captain for an explanation of this phenomenon, who replied, that the cooks, he fuppofed, had thrown their greafy water out at the fcupper-holes, and by that means oiled the fides of the veffels in queftion. This anfwer did not fatisfy the Doctor at firf ; but recollecting what Pliny had faid on the fubject, he refolved at leaft to try the experiment. He did fo accordingly in 1762, and found that oil actually calmed the waves of the fea. He repeated the experiment upon lake Clapham : the oil fpread itfelf with great rapidity upon the furface, but did not produce the defired effect, becaufe, having been thrown in upon the fide oppofite to the wind, it was immediately driven to the edge of the water. But upon throwing in a like quan. tity upon the other fide of the lake, it calmed in an inftant feveral yards of the furface; and gradually fpreading, rendered all that part of the lakc, to the extent of at leaft half an acre, as fmooth as glafs. The curious effect produced by this liquid may be accounted for by the repulfion which exifts between oil and water, and between oil and air, which prevents all immediate contact, all rubbing of the one upon the other.
2. The fecond kind of motion is that continual ten- Morior dency which the whole water in the fea has towards the wards weft. It is greater near the equator than about the weft poles; and indeed cannot be faid to take place at all in rents. the northern hemifphere beyond the tropic. It begins on the weft fide of America, where it is moderate: hence that part of the ocean has been called Pacific. As the waters advance weftward their motion is accelerated; fo that, after having traverfed the globe, they ftrike with great violence on the ealtern fhore of America. Being ftopped by that continent, they turn northward, and run with confiderable impetuofity into the gulph of Mexico; from thence they proceed along the coaft of North America, till they come to the fouth fide of the great bank at Newfoundland, when they turn off, and run down through the Weftern Ines. 'I'his current is called the Gulpls Stream. It was firft accurately defcribed by Dr Franklin, who remarked alfo, that the water in it having been originally heated in the torrid zone, cools fo gradually in its paffage northward, that even the latitude might be found in any part of the ftream by means of a thermometer. This motion of the fea weftward has never been explained: it feems to have fome connection with the trade-winds and the diurnal revolution of the earth on its axis.
3. The third and moft remarkable motion of the fea Motion is the tide, which is a regula fwell of the ocean once cafione every 12 hours, owing, as Newton has demonftrated, the tide to the attraction of the moon. In the middle of the fea the tide feldom rifes higher than one or two feet, but on the coaft it frequently reaches the height of 45

## S E A [193

feet, and in fome places even more. The tide gene. rally rifes higher in the evening than in the morning: on the coaft of Britain this holds in winter, but in fummer the morning tides are higheft. In fome feas it is faid that there are no tides. This cannot be owing to their being furrounded by land, becaufe there is a tide in the lakes of North America. For an explanation of thefe and other phenomena we refer to the article Tide.

SEA-Air, that part of the atmofphere which is above the fea.

Sea-air has been found falubrious and remarkably beneficial in fome diftempers. This may be owing to its containing a greater portion of oxigenous gas or vital air, and being lefs impregnated with noxious vapours than the land. Dr Ingenhoufz made feveral experiments to afcertain the falubrity of fea-air. By mixing equal meafures of common air and nitrous air, he found, that at Gravefend, they occupied about ro4, or rone meafure, and $\frac{4}{0} 0$ of a meafure: whereas on fea, about three miles from the mouth of the Thames, two meafures of air (one of common and one of nitrous air) occupied from 0.91 to 0.94 . He attempted a fimilar experiment on the middle of the channel between the Englifh coatt and Oftend; but the motion of the thip rendered it impracticable. He found that in rainy and windy weather the fea-air contained a fmaller quantity of vital air than when the weather was calm. On the fea-fhore at Oftend it occupied from $94 \frac{1}{2}$ to 97 ; at Bruges he found it at 105 ; and at Antwerp $109^{\frac{7}{2}}$. Dr Ingenhourz thus concludes his paper :

It appears, from thefe experiments, that the air at 4. fea and clofe to it is in general purer and fitter for animal life than the air on the land, though it feems to be fubject to the fame inconftancy in its degree of purity with that of the land; fo that we may now with more confidence fend our patients, labouring under confumptive diforders, to the fea, or at leaft to places fituated clofe to the fea, which have no marfhes in their neighbourhood. It feems alfo probable, that the air will be found in general much purer far from the land than near the fhore; the former being never fubject to be mixed with land air.

Dr Damman, an eminent phyfician and profeffor royal of midwifery at Ghent, told. Dr Ingenhoufz, that when he was formerly a practitioner at Oftend, during feven yearf, he found the people there remarkably healthy; that nothing was rarer there than to fee a patient labouring under a confumption or afthma, a malignant, putrid, or fpotted fever $;$ that the difeafe to which they are the moft fubject, is a regular intermittent fever in autumn, when fudden tranfitions from hot to cold weather happen:

People are in general very healthy at Gibraltar, though there are very few trees near that place; which Dr Ingenhourz thinks is owing to the purity of the air, arifing from the neighbourhood of the fea.

Moft fmall iflands are very healthy.
At Malta people are little fubject to difeafesj and live to a very advanced age.

$S_{\text {RA-Dragon, }}$ a monfter of a very fingular nature. In the Gentleman's Magazine for the year 1749, we have the account of a fea-dragon which was faid to be taken between Orford and Southwoild, on the coaft of Suf. folk, and afterwards carried round the country as a curiofity by the fifherman who caught it.
"Its head and tail (fays the writer) refemble thofe of an alligator; it has two large fins, which ferve it both to fwim and to fly; and though they were fo dried that I could not extend them, yet they appear, by the folds, 10 be fhaped like thofe which painters have given to dragons and other winged monfters that ferve as fupporters to coats of arms. Its body is covered with impenetrable fcales; its legs have two joints, and its feet are hoofed like thofe of an als: it has five rows of very white and harp teeth in each jaw, and is in length about four feet, though it was longer when alive, it having fhrunk as it became dry.
"It was caught in a net with mackerel ; and being dragged on fhore, was knocked down with a ftretcher or boat-hook. The net being opened, it fuddenly fprung up, and flew above 50 yards : the man who firft feized it had feveral of his fingers bitten off; and the wound mortifying, he died. It afterwards faftened on the man's arm who Rows it, and lacerated it fo much, that the mufcles are fhrunk, and the hand and finger's diftorted ; the wound is not yet healed, and is thought to be incurable. It is faid by fome to have been defcribed by naturalifts under the name of the Seadragon." See Plate CCCCXLIX.

$\$_{\text {EA- }}$ Plants, are thofe vegetables that grow in falt-water witliin the fhores of the fea;. The old botanifts divided thefe into three claffes. I. The firt clafs, according to their arrangement, contained the Alga, the fuci, the fea-mofles or confervas, and the different fpecies of fponges: 2. The fecond contained fubftances of a hard texture, like fone or horn, which feem to have been of the fame nature with what we call zoophyta, with this difference, that we refer foriges to this clafs and not to the firt. The thind clafs was the fame with our lithophyta, comprehending corals; mandrepora, \&c. It is now well known that the genera belonging to the

B b … . fecond

## S E A [ 194 ] S E A

fecond and third of thefe claffes, and even fome referred to the firf, are not vegetables, but animals, or the productions of animals. See Corallina, Madrepora, Spongia. Sea-plants, then, properly fpeaking, belong to the clafs of cryptogamia, and the order of alga and, according to Bomare, are all comprehended under the genus of fucus. We may alfo add feveral fpecies of the ulva and conferva and the fargazo. The fuci and marine ulvæ are immerfed in the fea, are feffile, and without root. The marine conferve are either feffile or floating. The fargazo grows beyond foundings.

As fome fpecies of the fucus, when dried and preferved, are extermely beautiful, the curious, and efpecially thofe who profecute the ftudy of botany, muft be anxious to know the beft method of preferving them, without deftroying their colour and beanty. The following method is recommended by M. Mauduyt. Take a fheet of paper, or rather of pafteboard, and cover it with varnifh ou both fides; and having rowed in a boat to the rock where the fucus abounds, plunge your varnifhed paper into the water, and, detaching the fucus, receive it upon the paper. Agitate the paper gently in the water, that the plant may be properly fpread over it; and lift them up together foftly out of the water: then fix down with pins the ftrong falks, that they may not be difplaced, and leave the plant lying upon the varnifhed paper to dry in the open air. When it is fully dry, the different parts will retain their pofition, and the plant may be preferved within the leaves of a book. If you wifh to free it from the flime and falt which adheres to it, it may be wafhed gently in frefh water, after being removed from the rock on which it grew.
$S_{E A-S e r p e n t, ~ a ~ m o n f t r o u s ~ c r e a t u r e, ~ f a i d ~ t o ~ i n h a b i t ~ t h e ~}^{\text {a }}$ northern feas about Greenland and the coafts of Norway. The following marvellous account of this monfter is given by Guthrie. "In 1756 , one of them was fhot by a mafter of a fhip: its head refembled that of a horfe; the mouth was large and black, as were the eyes, a white mane hanging from its neck: it floated on the furface of the water, and held its head at leaft two feet out of the fea : between the head and neck were feven or eight folds, which were very thick; and the length of this fnake was more than 100 yards, fome fay fathoms. They have a remarkable averfion to the fmell of caftor; for which reafon, fhip, boat, and bark mafters provide themfelves with quantities of that drug, to prevent being overfet, the ferpent's olfactory nerves being remarkably exquifite. The particularities related of this animal would be incredible, were they not attefted upon oath. Egede, a very reputable author, fays, that on the 6th day of July 1734, a large and frightful fea-mon er raifed itfelf fo high out of the water, that its head reached above the main-top-malt of the fhip; that it
had a long tharp fnout, broad paws, and fpouted water like a whale; that the body feemed to be covered with fcales; the frin was uneven and wrinkled, and the lower part was formed like a fnake. The body of this monfter is faid to be as thick as a hoghead; his fikin is variegated like a tortoife thell; and his excrement, which floats upon the furface of the water, is corrofive." Not. withftanding the belief of Guthrie, and the teaimony which he produces, we cannot help doubting of the exiftence of the fea-ferpent. Its bulk is faid to be fo difproportionate to all the known animals of our globe, that it requires more than ordinary evidence to render it credible; but the evidence which is offered is fo very feeble and unfatisfactory, that no man of found judgement would think it fufficient to eftablifh the truth of an extraordinary fact.

SEA-Sicknefs, a diforder incident to moft perfons on their firt going to fea, occafioned by the agitation of the veffel. In voyages, fea-ficknefs, though it continues in general only for the firt day or two, is extremely haraffing to fome people at intervals, efpecially on any increafed motion of the veffel. Sometimes, by long continuance, it caufes fever, headach, quick pulfe, thirft, white tongue, and a total deprivation of the retention of the ftomach ; evils which are always difficult to remove, and frequently terminate only with the voyage.

This indifpofition is confiderably alleviated by a fmall tea fpoonful of ether, taken now and then in a glafs of water, and applying fome of it to the temples and noftrils. The ancient writers recommend acid fruits, bread and vegetables foaked in vinegar, after the ftomach has been cleanfed by vomiting ; but not to attempt to fupprefs the vomiting until that end was obtained. An old remedy for fea-ficknefs, and a very common one among failors, is a draught or two of fea water; which, though a difgufting medicine at fuch a time, yet where the firft paffages are foul and loaded, generally produces the defired effeet when the perturbation it occafions ceafes.

## Sea.Star. See Asterias.

Ses-Urcbine. See Echinus.
$S_{\text {EA-Water, the falt water of the fea. The principal }}$ falts contained in fea-water are, 1 ft , Common marine or culinary falt, compounded of foffil alkali or foda and marine acid; 2dly, A falt formed by the union of the fame acid with magnefian earth; and, laftly, A fmall. quantity of felenite. 'The quantity of faline matter conitained in a pint of fea-water, in the Britifh feas, is, according to Neumann, about one ounce in each pint (A).

The faltnefs of this water is judged to arife from great multitudes both of mines and mountains of falt difperfed here and there in the depths of the fea. Dr Halley fuppofes that it is probable the greateft part of the fea-falt, and of all falt lakes, as the Cafpian Sea, the Dead Sea, the Lake of Mexico, and the Titicaca
(A) In Sir Torbern Bergman's analyfis of fea-water taken up in the beginning of June 1776 , about the latitude of the Canaries, from the depth of 60 fathoms, the folid contents of a pint of the water were,

## S E A <br> [195] S E A

in Peru, is derived from the water of the rivers which they receive: and fince this fort of lakes has no exit or difcharge but by the exhalation of vapours, and alfo fince thefe vapours are entirely frefh or devoid of fuch particles, it is certain that the faltnefs of the fea and of fuch lakes muft from time to time increafe; and therefore the faltnefs at this time muft be greater than at any time heretofore. He further adds, that if, by experiments made in different ages, we could find the different quantiry of falt which the fame quantity of water (taken up in the fame place, and in all other the fame circumftances) would afford, it would be eafy from thence, by rules of proportion, to find the age of the world very nearly, or the time wherein it has been acquiring its prefent faltnefs.
'This opinion of Dr Halley is fo improbable, that it is furprifing fo acute a philofopher could have adopted it. That frefh water rivers thould in the courfe of many thoufand years produce faltnefs in the fea, is quite incredible. If this were the cafe, every fea or great body of water which receives rivers mult be falt, and mult poffefs a degree of faltnefs in proportion to the quantity of water which the rivers difcharge. But fo far is this from being true, that the Palus Meotis and the great lakes in America do not contain falt but frefh water. It may indeed be objected, that the quantity of falt which the rivers carry along with them and depofit in the fea, muft depend on the nature of the foil through which they flow, which may in fome places contain ho falt at all: and this may be the reafon why the great lakes in America and the Palus Meotis are frefh. But to this opinion, which is merely hypothetical, there are infurmountable objections. It is a curious fact that the faltnefs of the fea is greateft under the line, and diminifhes gradually as we advance to the poles: We mult therefore fuppofe, if Dr Halley's theory be true, that the earth contains more falt in the tropical regions than in the temperate zones, and more in the temperate zones than in the frigid; and confequently that the rivers in thefe different regions contain a quantity of falt proportionable to their diftance from the equator. This, however, mult firt be proved by experiment, and cannot be affumed as an eftablifhed fact. But there is another circumftance that entirely deftroys this theory. If we allow that the fea receives its faltnefs from the rivers, it muft be equally falt or nearly fo in every part of the earth. For, according to a fimple and well known principle in chemiftry, when any $\sqrt{u} b$. fance is difolved in water with the affifance of agitation, at whatever part of the water it is introduced, it zuill be equinly diffufed through the whole liquid. Now though it were true that a greater quantity of falt were introduced into the fea under the line than towards the poles, from the conflant agitation occafioned by the wind and ride, the falt muft foon pervade the whole mafs of water. To fay that the fuperior degree of heat in the tropical regions may diffolve a greater quantity of falt, will not deftroy our argument; for it is an eftablifhed principle in chemiftry, that cold water will diffolve nearly as great a quantity of falt as hot water can diffolve.
The faltuefs of the fea has alfo been afcribed to the folution of fubterraneous mines of falt which is fuppofed to abound in the bottom of the fea and along its thores. But this hypothefis cannot be fupported.

If the fea were conitantly diffolving falt, it woutd foon become faturated; for it cannot be faid that it is deprived of any part of its falt by evaporation, fince rainwater is frefh. If the fea were to become faturated, neither fifhes nor vegetables could live in it. We muft therefore defpair of being able to account for the faltnefs of the fea by fecond caufes; and muft fuppofe that it has been falt from the creation. It is impofible indeed to fuppofe that the waters of the fea were at any period frefh fince the formation of fifhes and fea-plants: for as thefe will not live in water faturated with falt, neither will they live in water that is frefh; we therefore conclude that the faltnefs of the fea has been nearly the fame in all ages. This is the fimpleft hypothefis of the three that has been mentioned. It explains beft the various phenomena, and is involved in feweft difficulties. We fhall, however, allow that there may be fome exceptions; that the faltnefs of fome feas, or of particular parts of the fame fea, may be increafed by mines of rock-falt difperfed near its hoores.

With regard to the ufe of this falt property of fea. water, it is obferved, that the faltnefs of the fea preferves its waters pure and fweet, which otherwife would corrupt and fink like a filthy lake, and coufequently that none of the myriads of creatures which now live therein could then have a being. From thence alfo the fea-water becomes much heavier, and therefore fhips of greater fize and quantity may be ufed thereon. Saltwater allo doth not freeze fo foon as frefh-water, whence the feas are more free for navigation. We have a differtation, by Dr Ruffel, concerning the medical ufes of fea-water in difeafes of the glands, \&c. wherein the author premifes fome obfervations upon the nature of fea. water, confidered as impregnated with particles of all the bodies it paffes over, fuch as fubmarine plants, fifh, falts, minerals, \&c. and faturated with their feveral effluvia, to enrich it and keep it from putrefaction: whence this fluid is fuppofed to contract a foapinefs; and the whole collection, being pervaded by the fulphureous fteams paffing through it, to conftitute what we call fea-water ; the confeffed diftinguifhing characteriftics of which are faltnefs, bitternefs, nitrofity, and unctuofity: whence the author concludes, that it may be juftly expected to contribute fignally to the improvement of phyfic. The cafes in which our author informs us we are to expect advantage from fea-water are, I. In all recent obftructions of the glands of the inteftines and mefentery. 2. All recent obtructions of the pulmo. nary glands, and thofe of the vifcera, which frequently produce confumptions. 3. All recent glandular fwel. lings of the neck, or other parts. 4. Recent tumors of the joints, if they are not fuppurated, or become fchirrous or cancerous, and have not carious bones for their caufe. 5. Recent defluxions upon the glands of the eyelids. 6. All defoedations of the fkin, from an eryfipelas to a lepra. 7. Difeafes of the glands of the nofe, with their ufual companion a thicknefs of the lip. 8. Obftructions of the kidneys, where there is no inflammation, and the ftone not large. 9. In recent obfructions of the liver, this method will be proper, where it prevents conflipations of the belly, and affifts other medicines directed in icterical cafes. The fame remedy is faid to be of fignal fervice in the bronchocele; and is likewife recommended for the prevention of

[^10]

Sea. Hofe bilious colics that fo frequently affect our mariners.

Prefervation of SEA-Water from Putrefadion. As it is fometimes neceffary to preferve fea.water in cafks for bathing and other purpofes, it is of importance to know how to keep it from putrefaction. Many experiments were made to determine this point by Mr Henry, and are recorded in the firt volume of the Memoirs of the Literary and Plilofophical Society of Manchefter. His firf experiment we fhall here prefent to our readers. "To one quart of fea-water were added two fcruples of frefh quicklime; to another, half an ounce of common culinary falt ; and a third was kept as a ftandard without any addition. 'I'he moutlis of the bottles being loofely covered with paper, they were expofed to the action of the fun in fome of the hottelt weather in fummer. In about a week the 甘andard became very offenfive; and the water, with the additional quantity of falt, did not continue fweet many hours longer; whereas that with lime continued many months without ever exhibiting the leaft marks of putridity." When he added a dram more of quicklime, the whole of the magnefia contained in the water was feparated; and when a further addition was made, a lime-water was immediately formed. He therefore concluded, that two fcruples of quicklime are fufficient to preferve a quart of fea-water. The proportions, however, may vary a little, according to the frength of the quick. lime employed.
Different methods ci frefhening Sea-water. Fre/bening of SEA-Water. The method of making fea-water frefh was long a defideratum in navigation. Many methods have been propofed for this purpofe. Mr A ppleby publifhed an account of a procets which he had inftituted in the year 1734. He diftilled fea-water with a quantity of lapis infernalis and calcined bones; but this procefs was foon laid afide, as it was not only difficult in itfelf, but rendered the water unpalatable, Pr Butler propofed foap-leys in place of Mr Appleby's ingredients; but the water was ftill liable to the fame objection. Dr Stephen Hales recommended powdered chalk; but his method was expenlive, and did not improve the tafte of the water. Dr Lind of Portfmouth diftilled fea-water without ayy irgredients; but as the experiment he made wias performed in a veffel containing only two quarts, with a glafs receiver in lis ftudy, nothing conclufive can be drawn from it for the ufe of failors. At length Dr Irying brought the proceis to a very high degree of fimplicity and perfection, by which the water is obtained pure, without much expence of fuel or a complicated apparatus. For this valuable difeovery he received a reward of L.5000. The advantages of his method remain to be ftated, which may be recuced to the follow. ing: 1. The abolifhing all fills, ftill-heads, worm-pipes, and their tubes, which occupy fo much face as to render them totally incompatible with the neceffary bufinefs of the fhip; and ufing in the room of thefe the frip's kettle or boiler, to the top whereof may occafionally be applied a fimple tube, which can be eatily made on board a weffel at fea, of iron plate, fove funnel, or tin fheet; fo that no fituation can prevent a thip from being com: pletely fupplied with the means of diftilling fea-water, 2. In confequence of the principles of difillation being fuily afcertained, the contrivance of the fimpleft means
obtaining the greateft quantity of difilled water, by making the tube fufficiently large to receive the whole column of vapour, and placing it nearly in a horizontal direction, to prevent any compreffion of the fluid, which takes place fo much with the common worm. 3. The adopting of the fimpleft and moft efficacious means of condenfing vapour ; for nothing more is required in the diftillation but keeping the furface of the tube always wet . which is done by having fome fea-water at hand, and a perfon to dip a mop or fwab into this water, and pafs it along the upper furface of the tube. By this operation the vapour contained in the tube will be entirely condenfed with the greateft rapidity imaginable; for by the application of the wet mop thin fheets of water are uniformly fpread, and mechanically preffed upon the furface of the hot tube; which being conveited into vapour make way for a fucceffion of frefh fheets ; and thus, both by the evaporation and clofe contact of the cold water coniftantly repeated, the heat is carried off more effectually than by any other method yet known. 4. The carrying on the diftillation without any addition, a correct chemical analyfis of fea-water having evinced the futility of mixing ingredients with it, either to prevent an acid from rifing with the vapour, or to deftroy any bituminous oil fuppofed to exilt in fea-water and to contaminate the diftilled water, giving it that fiery unpalatable tafte infeparable from the former pro. ceffes. 5. The afcertaining the proper quantity of fea water that ought to be diftilled, whereby the fyefh water is prevented from contracting a noxious impregnation of metallic falts, and the veffel from being corroded and otherwife damaged by the falts caking on the bot* tom of it. 6. The producing a quantity of fweet and wholefome water, perfectly agreeable to the tafte, and fufficient for all the purpofes of thipping. 7. The taking advantage of the dreffing the flip's provifions, fos as to diftil a very confiderable quantity of water from the vapour, which would otherwife be loft, without any addition of fuel. To fum up the merits of this method in. a few words: The ufe of a fimple tube, of the moft eafy conftruction, applicable to any thip's kettle. The rejecting all ingredients; afcertaining the proportion of water to be diftilled, with every advantage of quality. faving of fuel, and prefervation of boilers. The obtaining frefh water, wholefome, palatable, and in fuffis cient quantities. Taking advantage of the vapour which afcends in the kettle while the fhip's. provifions are boiling. All thefe advantages are obtained by the above-mentioned fimple addition to the common flip's. kettles. But Dr Irving propofes to introduce two fur: ther improvements. The firlt is a hearth, or ftove, fo conftructed that the fire which is kept up the whole day for the common bufinefs of the fhip ferves. likewife for diftillation ; whereby a fufficient quantity of water for all the economical purpofes of the fhip may be obtained, with a very incontrderable addition to the expence of fuel. The other improvement is that-of fubftituting, even in the largeft fhips, caft-iron boilers, of a new cone Itruetion, in the place of coppers.

As foon as fea-water is put into the boiler, the tube Dir is to be fitted either into the top or lid, round which, if for peceffary, a bit of wet linen may be applied, to make it ing fit clofe to the mouth of the veffel ; there will be no ter occafion for luting, as the tube acts like a funpel in car-

## S E A $\lceil 197$ 〕 S E A

 sying off the vapour. When the water begins to boil, the vapour thould be allowed to pais freely for a minute, which will effectually clean the tube and upper patt of the boiler. The tube is afterwards to be kept conftantly wet, by paffing a mop or fwab, dipped in fea water, along its upper furface. The wafte water rulsing from the mop may be carried off by means of a board made like a fpout, and placed beneath the tube. The diftillation may be continued till three-fourths of the water be drawn off, and no further. This may be afcertained either by a gauge-rod put into the boiler, or by meafuring the water diftilled. The brine is then to be let out. Water may be diftilled in the fame manner while the provifions are boiling. When the tube is made on fhore, the beit fubitance for the purpofe is thin copper well tinned, this being more durable in long voyages than tin plates. Inftead of mopping, the tube, if required, may lave a cafe made alfo of copper, fo much larger in diameter as to admit a thin fheet of water to circulate between them by means of a fpiral copper thread, with a pipe of an inch diameter at each end of the cafe; the lower for receiving cold water, and the upper for carrying it off when heated.Wheu only a very fmall portion of room can be conveniently allowed for diftillation, the machine ( $\left.n^{\circ} 2.\right)$, which is only 27 inches long, may be fubitituted, as was done in this voyage.' The principal intention of this machine, however, is to dittil rum and other liquors; for which purpofe it has been employed with extraordinary fuccefs, in preventing an empyreuma, or fiery tafte.

Figure 1. reprefents in perfpective a fection of the two boilers taken out of the frame. In the back part at $D, E$, are feen openings for the cocks. On the top is a diftilling tube $\mathrm{A}, \mathrm{B}, \mathrm{C}$, five inches diameter at A , and decreafing in fize to three inches at $C$; the length from $B$ to $C$ is five feet. Near $C$ is a ring to prevent the water which is applied to the furface from mixing with the dililled water. In the infide of the tube, below $B$, is a fmall lip or ledging, to hinder the diftilled water from returning in to the boiler by the rolling of the thip.

In figure 2. A, B, C, D, reprefent a vertical fection of a copper box, 27 inches long, feven iuches wide, and II in height, tinned on the infide. In the bottom F is an aperture about fix inches in diameter, having a ring to fit on the ftill or boiler. The dotted lines which run nearly horizontal, are veffels of thin copper, tinned on the cutfide, two feet long, feven inches wide, and three quarters of an inch deep. At $G$ is a funnel to receive cold water, which is conveyed into the veffels by commanicating pipes, contrived in fuch a manner as to form a complete and quick circulation of the water through their whole extent. When the water is become hot by the action of the fteam, it is difcharged by the horizontal pipe at A. E is a pipe from which the diftilled water or fpirits fun, and is bent in fuch a form that the liquor running from it acts as a valve, and hinders any fteam from efcaping that way. On the top of the box, at $H$, is a fafetyvalve, which prevents any danger from a great accumulation of vapour not condenfed for want of a proper fupply of cold water.

We thall now mention a different method, difcovered by the Chevalier Lorgna, by congelation of fea-water. Sea-water requires a very great degree of cold in order to become ice. Our author found that a freczing mix-
ture, made by mixing three parts of pounded iee withs two parts of common falt, was quite fufficient to freeze it. The cold produced by this mixture is equal to about $4^{\circ}$ below nought of Fahrenheit's thermometer.

A quantity of fea-water is never entirely congealed, a portion of it always remaining fluid ; and, what is very renarkable, this fluid part is incomparably more full of falt and more naufeous than the reft : hence, if this be feparated from the congealed part, the latter on being melted will be found to contain much lefs falt than it did before congelation. This we thall call the water of the firfl purification.

If the water of the firf purification be a cain congealed, a part of it will remain fluid as in the firft operation. This fluid portion will contain a greater proportion of falt than the reft, which is of courfe more pure. and, being melted, forms the water of the fecond purification. Thus, by repeatedly freezing the fame fea-water, and feparating the fluid from the consealed part in every operation, it is at faft perfectly purified, fo as to be entirely divefted of falt, and as fit for dink and other purpofes as the pureft water that is ufed.

At firtt the fea-water, in order to be congealed, requires a very great degree of cold, as mentioned above, the ice formed in it confifts rather of fcales or filaments than of a compact body, and the quantity of the fluid parts bears a confiderable proportion to the quantity of ice. But as the water, by undergoing the fucceffive congelations, becomes more and more pure, fo it becomes capable of being congealed by a fmaller and imaller degree of cold; the ice is at the fame time more compaet, and in greater quantity; the fluid part at lalt becoming very inconfiderable.

SEA.Weed, or Alga Marina, is commonly ufed as a manure on the fea-coaft, where it can be procured in aburdance. *The beft fort grows on rocks, and is that from which kelp is made. The next to this is called the penfy fea-rweed; and the wortt is that with a long ftalk. In the neighbourhood of Berwick, the farmers mix it with ftable-dung and earth, and thus obtain ad great quantity of excellent manure. Sea-weed is found alfo to be a very fit manure for gardens, as it not only enriches them, but deftroys the vermin by which they are ufually infefted.

SEAL, a puncheon, piece of metal, or other matter, ufually either round or oval'; whereon are engraven the arins, device, \&c. of fome prince, ftate, community, magiftrate, or private perfon; often with a legend or infeription; the impreffion whereof in wax ferves to make acts, inftruments, \&c. authentic.

The ufe of feals, as a mark of authenticity to letters and other inftruments in writing, is extremely ancient. We read of it among the Jews and Perfians in the earlieft and moft facred records of hiftory. And in the book of Jeremiah there is a very remarkable inftance, not only of an atteftation by feal, but allo of the other ufual formalities attending a Jewifh purchafe. In the civil law allo, feals were the evidence of truth, and were required, on the part of the witneffes at leait, at the attefation of every teftament: But in the times of our Saxon anceftors, they were not much in ufe in England. For though Sir Edward Coke relies on an
intance

Seal. inftance of king Edwyn's making ufe of a feal about 100 years before the conqueft, yet it does not follow that this was the ufage anong the whole nation: and perhaps the charter he mentions may be of doubtful authority, from this very circumftance of its being fealed ; fince we are affured by all our ancient hiftorians that fealing was not then in common ufe. The method of the Saxons was, for fuch as could write to fubfribe their names, and, whether they could write or not, to affix the fign of the crofs; which cuftom our illiterate vulgar do for the moft part to this day keep up, by figning a crofs for their mark when unable to write their names. And indeed this inability to write, and therefore making a crofs in its ftead, is honefly avowed by Cædwalla, a Saxon king, at the end of one of his charters. In like manner, and for the fame unfurmountable reafon, the Normans, a brave but illiterate nation, at their firlt fettlement in France ufed the practice of fealing only, without writing their names; which cuftom continued when learning. made its way among them, though the reafon for doing it had ceafed; and hence the charter of Edward the Confeffor to Weftminfterabbey, himfelf being brought up in Normandy, was witneffed only by his feal, and is generally thought to be the oldeft fealed charter of any authenticity in England. At the Conqueft, the Norman lords brought over into this kingdom their own fafhions; and introduced waxen feals only, inftead of the Englifh method of writing their names, and figning with the fign of the crofs. The impreffions of thefe feals were fometimes a knight on horfeback, fometimes other devices; but coats of arms were not introduced into feals, nor indeed ufed at all till about the reign of Richard I. who brought them from the croifade in the Holy Land, where they were firft invented and painted on the flields of the knights, to diftinguifh the variety of perfons of every Chriftian nation who reforted thither, and who could not, wher clad in complete fteel, be otherwife known or afcertained.

This neglect of figning, and refling only upon the authenticity of feals, remained very long among us; for it was held in all our books, that fealing alone was fufficient to authenticate a deed: and fo the common form of attefting deeds, "fealed and delivered," continues to

## S E A M A N S H I P.

${ }_{\text {dotinn }}$ BY this word we exprefs that noble art, or, more purely, the qualifications which enable a man to exercile the noble art of working a fhip. A ses. MAN , in the language of the profefion, is not merely a mariner or labourer on board a fhip, but a man who undertands the ftructure of this wonderful machine, and every fubordinate part of its mechanifm, fo as to enable him to employ it to the beft advantage for pufh. ing her forward in a particular direction, and for avoiding the numberlefs dangers to which fhe is expofed by the violence of the winds and waves. He alfo knows what courfes can be held by the fhip, according to the wind that blows, and what cannot, and which of thefe is mott conducive to her progrefs in her intended voyage: and he muft be able to perform every part of the
this day ; notwithtanding the fatute 29 Car. II. c. 3 . revives the Saxon cuftom, and exprefsly directs the figning in all grants of lands and many other fpecies of deeds : in which, therefore, figning feems to be now as neceffary as fealing, though it hath been fometimes held that the one inclades the other.
'The king's great feal is that whereby all patents, commiffions, warrants, \&cc. coming down from the king are fealed; the keeping whereof is in the hands of the lord chancellor. The king's privy-feal is a feal that is ufually firft fet to grants that are to pals the great feal.

Seal. See Kefper of the Privy-Seal.
Seal is alfo ufed for the wax or lead, and the impreffion thereon affixed to the thing fealed.

An amalgam of mercury with gold, reduced to the confiftence of butter, by fraining off part of the mercury through leather, has been recommended as a pro. per material for taking off the impreffion of feals in wax. In this fate, the compound fcarcely contains one part of mercury to two of gold ; yet is of a filver whitenefs, as if there was none of the precious metal in it. In this fate it grows foft on being warmed or worked be$t$ ween the fingers; and is therefore proper for the purpofe above-mentioned, but is not fuperior to fome amalgams made with the inferior metals, as is well known to fome impoftors, who have fold for this ufe amalgams of the bafe metals as curious preparations of gold.

Seal, in zoology. See Phoca.

Seam, in mines, the fame with a vein or ftratum of metal.
neceffary operation with his own hands. As the fea. men exprefs it, he muft be able "to hand, reef, and fteer."
We are juftified in calling it a noble art, not only by Imporia its importance, which it is quite needlefs to amplify or and embellifh, but by its immenfe extent and difficulty, and the prodigious number and variety of principles on which it is founded-all of which mutt be poffeffed in fuch a manner that they fhall offer themfelves without reflection in an inftant, otherwife the pretended feaman is but a lubber, and cannot be trufted on his watch.
The art is practifed by perfons without what we call education, and in the humbler walks of life, and therefore it fuffers in the eftimation of the carelefs fpectator. It is thought little of, becaufe little attention is

## S E A M A N S H I P.

paid to it. But if multiplicity, varicty, and intricacy of principles, and a fyftematic knowledre of thefe principles, intitle any art to the appellation of fcientific and liberal, feamanhip claims thefe epithets in an eminent degree. We are amufed with the pedantry of the feaman, which appears in his whole language. Indeed it is the only pedantry that amufes. A fcholar, a foldier, a lawyer, nay, even the elegant courtier, would difguft us, were he to make the thoufandth part of the allutions to his profeffion that is well received from the jolly feaman ; and we do the feaman no more than juftice. His profeffion mayl engrofs his whole mind, otherwife he can never learn it. He poffeffes a prodigious deal of knowledge ; but the honeft tar cannot tell what he knows, or rather what he feels, for his fcience is really at his fingers ends. We can fay with confidence, that if a perfon of education, verfed in mechanics, and acquainted with the fructure of a fhip, were to obferve with attention the movements which are made on board a firf or fecond rate fhip of war during a fhifting ftorm, under the direction of an intelligent officer, he would be rapt in admiration.

What a pity it is that an art fo important, fo difficult, and fo intimately connected with the invariable laws of mechanical nature, hould be fo held by its poffeffors, that it cannot improve, but mult die with each individual. Having no advantages of previous education, they cannot arrange their thoughts; they can hardly be faid to think. They can far lefs exprefs or communicate to others the intuitive knowledge which they poffefs; and their art, acquired by habit alone, is little different from an inftinct. We are as little intitled to expect improvement here as in the architecture of the bee or the beaver. The fpecies (pardon the allufion ye generous hearts of oak) cannot improve. Yet a fhip is a machine. We know the forces which act on it, and we know the refults of its conftructionall thefe are as fixed as the laws of motion. What hinders this to be reduced to a fet of practical maxims, as well founded and as logically deduced as the working of a fteam engine or a cotton mill. The floker or the fpinner acts only with his hands, and may " whiftle as he works for want of thought;" but the rnechanitt, the engineer, thinks for him, improves his machine, and directs him to a better practice. May not the rough feaman look for the fame affiftance; and may not the ingenious fpeculatift in his clofet unravel the intricate thread of mechanifm ${ }^{4}$ which connects all the manual operations with the unchangeable laws of nature, and both furnifh the feaman with a better machine and direct him to a more dexterous ufe of it ?

We cannot help thinking that much may be done ; nay, we may fay that much has been done. We think highly of the progreffive labours of Renaud, Pitot, Bouguer, Du Hamel, Groignard, Bernoulli, Euler, Romme, and others; and are both furprifed and forry that Britain has contributed fo little in thefe attempts. Gordon is the only one of our countrymen who has given a profeffedly fcientific treatife on a fmall branch of the fubject. The government of France has always been ftrongly impreffed with the notion of great improvements being attainable by fytematic ftudy of this art ; and we are indebted to the endeavours of that ingenious nation for any thing of practical importance that has
been obtained. M. Bouguer was profeffor of hydrelogy at one of the marine academies of France, and was enjoined, as part of his duty, to compofe differtations both on the conftruction and the working of fhips. His Traité du Navire, and his Mancuиvre des Vaiffeaux, are undoubtedly very valuable performances: So are thofe of Euler and Bernoulli, confidered as mathematical differtations, and they are wonderful works of genius, confidered as the productions of perfons who hardly ever faw a fhip, and were totally unacquainted with the profeffion of a feaman. In this refpect Bouguer had great fuperiority, having always lived at a fea-port, and having made many very long voyages. His treatifes therefore are infinitely better accommodated to the demands of the feaman, and more directly inftructive; but ftill the author is more a mathematician than an artift, and his performance is intelligible only to mathematicians. It is true, the academical education of the young gentlemen of the French navy is fuch, that a great number of them may acquire the preparatory knowledge that is neceffary; and we are well informed that, in this refpect, the officers of the Britith navy are greatly inferior to them.
But this very circumftance has furniffied to many Argument perfons an argument againft the utility of thofe per-againft the formances. It is faid that, "notwithftanding this fu- utility of perior mathematical education, and the poffeffion of their perfor-: thofe boafted performances of M. Bouguer, the French: are greatly inferior, in point of feamanhhip, to our coun. trymen, who have not a page in their language to in. ftruct them, and who could not perufe it if they had it." Nay, fo little do the French themfelves feem fenfible of the advantage of thefe publications, that no perfon among them has attempted to make a familiar abridgement of them, written in a way fitted to attract atten. tion; and they ftll remain neglected in their original abftrufe and uninterefting form.

We wifh that we could give a fatisfactory anfwer to this obfervation. It is juft, and it is important. Thefe very ingenious and learned differtations are by no means. fo ufeful as we fhould expect. They are large books, and appear to contain much; and as their plan is logical, it feems to occupy the whole fubject, and therefore to have done almoft all that can be done. But, alas! they have only opened the fubject, and the ftudy is yet in its infancy. The whole fcience of the art muft proceed on the knowledge of the impulfions of the wind and water. Thefe are the forces which act on the machine; and its motions, which are the ultimatum of our refearch, whether as an end to be obtained or as a thing to be prevented, muft depend on thefe forces. Now it is with refpect to this fundamental point that we are as 6 yet almoft totally in the dark. And, in the perform. Which are ances of M. Bouguer, as alfo in thofe of the other au- conteffedly thors we have named, the theory of thefe forces, by erroneous which their quantity and the direction of their action fundamen are afcertained, is altogether erroneous; and its refults ta princideviate fo enormoufly from what is obferved in the mo- ples;
tions of a hhip, that the perfon who fhould direct the operations on fhipboard, in conformity to the maxims deducible from M. Bouguer's propofitions, would be baffled in moft of his attempts, and be in. danger of lofing the fhip. The whole proceeds on the fuppofed truth of that theory which ftates the impulfe of a fluid.
to be in the proportion of the fquare of the fine of the angle of incidence; and that its action on any fmall portion, fuch as a fquare foot of the fails or hull, is the fame as if that portion were detached from the reft, and were expofed, fingle and alone, to the wind or water in the faine angle. But we have fhown, in the article Resistance of Fluids, both from theory and experience, that both of thefe principles are erroneous, and this to a very great degree, in cafes which occur moft frequently in practice, that is, in the fmall angles of inclination. When the wind falls nearly perpendicular on the fails, theory is not very erroneous; but in thefe cales, the circumftances of the fhip's fituation are generally fuch that the practice is eafy, occurring almoft without thought ; and in this cafe, too, even confiderable deviations from the very beft practice are of no great moment. The interefting cafes, where the intended movement requires or depends upon very oblique actions of the wind on the fails, and its practicability or impracticability depends on a very fmall variation of this obliquity; a miftake of the force, either as to intenfity or direction, produces a mighty effect on the refulting motion. This is the cafe in failing to windward ; the moft important of all the general problems of feaman!hip. The trim of the fails, and the courfe of the fhip, fo as to gain molt on the wind, are very nice things; that is, they are confined within very narrow limits, and a fmall miftake produces a very confiderable effect. The fame thing obtains in many of the nice problems of tacking, box-hauling, wearing after lying-to in a ftorm, \&cc.
The error in the fecond affertion of the theory is fill greater, and the action on one part of the fail or hull is fo greatly modified by its action on another adjoining part, that a ftay fail is often feen hanging like a loofe raf, altho' there is nothing between it and the wind; and this merely becaufe a great fail in its neighbourhood fends off a lateral ftream of wind, which completely hinders the wind from getting at it. Till the theory of the action of fluids be eftablifhed, therefore, we cannot tell what are the forces which are acting on every point of the fail and hull: Therefore we cannot tell either the mean intenfity or direction of the whole force which acts on any particular fail, nor the intenfity and mean direction of the refiftance to the hull ; circumitances abfolutely neceffary for euabling us to fay what will be their energy in producing a rotation round any particular axis. In like manner, we cannot, by fuch a computation, find the fontaneous axis of converfion (fee Rotation), or the velocity of fuch converfion. In fhort, we cannot pronounce with tolerable confidence à priori what will be the motions in any eafe, or what difpofitions of the fails will produce the movement we wifh to perform. The experienced feaman learns by habit the general effects of every difpofition of the fails; and though his knowledge is far from being accurate, it feldom leads him into any very blundering operation. Perhaps he feldom makes the beft adjuftment poffible, but feldomer ftill does he deviate very far from it; and in the moft gemeral and important problems, fuch as working to windward, the refult of much experience and many corrections has fettled a trim of the fails, which is certainly not far from the truth, but (it muft We acknowledged) deviates widely and uniformly from

## N S H I P.

the theorics of the mathematician's ciofet. The honeft tar, therefore, mult be indulged in his joke on the ufelefs labours of the mathematician, who can neither hand, reef, nor fteer.

After this account of the theoretical performances in the art of feamanhip, and what we have faid in an other place on the fmall hopes we entertain of feeing a perfect theory of the impulfe of fluids, it will not be expected that we enter very minutely on the fubject in this place; nor is it our intention. But let it be obferved, that the theory is defective in ore point only; and although this is a moft important point, and the errors in it deftroy the conclufions of the chief propofi- ay be tions, the reatonings remain in full force, and the modus them. operandi is precifely fuch as is ftated in the theory. The principles of the art are therefore to be found in thefe treatifes; but falfe inferences have been drawn, by computing from erroneous quankities. The rules and the practice of the computation, however, are fill beyond controverfy : Nay, fince the procefs of inveftigation is legitimate, we may make ufe of it in order to difcover the very circumftance in which we are at prefent miftaken; for by converting the propofition, inftead of finding the motions by means of the fuppofed forces, combined with the known mechanifm, we may difcover the forces by means of this mechanifm and the obferved motions.

We fhall therefore in this place give a very general Defign view of the movements of a hhip under fail, fhowing this artic how they are produced and modified by the action of the wind on her fails, the water on her rudder and on her bows. We fhall not attempt a precife determination of any of thefe movements; but we fhall fay enourh to enable the curious landfman to underftand how this mighty machine is managed amidft the fury of the winds and waves : and, what is more to our wifh, we hope to ewable the uninftructed but thinking feaman to generalife that knowledge which he poffeffes; to clars his ideas, and give them a fort of rational fyltem; and even to improve his practice, by making him femfible of the immediate operation of every thing he does, and in what manner it contributes to produce the movement which he has in view.

A thip may be confidered at prefent as a mals of in- A fip ert matter in free fpace, at liberty to move in every di- fidered a rection, according to the forces which impel or refift free fpace her: and when fhe is in actual metion, in the direction impenect refit of her courfe, we may frill confider her as at'reft in ab- by oppo Solute \{pace, but expofed to the impulfe of a current of forces. water moving equally faft in the oppofite direction: for in both cafes the preffure of the water on her bows is the fame; and we know that it is poffible, and frequently happens in currents, that the impulfe of the wind on her fails, and that of the water on her bows, balance each other fo precifely, that the not only does not ftir from the place, but allo remains fteadily in the fame pofition, with her head directed to the fame point of the compafs. 'This ftate of things is eafly conceived by any perfon accuftomed to confider mechanical fubjectis, and every feaman of experience has obferved it. It is of importanee to confider it in this point of view, becaufe it gives us the moft familiar notion of the manner in which: thefe forces of the wind and water are fet imoppofition, ands made to balance or not to balance
cach
each other by the intervention of the fhip, in the fame manner as the goods and the weights balance each other in the fcales by the intervention of a beam or fteelyard.

When a flip proceeds iteadily in her courfe, without changing her rate of failing, or varying the direction of her head, we mult in the firft place conceive the accumulated impulfes of the wind on all her fails as precifely equal and directly oppofite to the impulfe of the water or her bows. In the next place, becaufe the fhip does not change the direction of her keel, fhe refembles the balanced fteelyard, in which the energies of the two weights, which tend to produce rotations in oppofite directions, and thus to change the pofition of the beam, mutually balance each other round the fulcrum ; fo the energies of the actions of the wind on the different fails balance the energies of the water on the different parts of the hull.

The feaman has two principal tafks to perform. The firft is to keep the hip fteadily in that courfe which will bring her fartheft on in the line of her intended voyage. This is frequently very different from that line, and the choice of the beft courfe is fometimes a of the matter of confiderable difficulty. It is fometimes pof. an dif- fible to fhape the courfe precifely along the line of the voyage; and yet the intelligent feaman knows that he will arrive fooner, or with greater fafety, at his port, by taking a different courfe; becaufe he will gain more by increafing his fpeed than he lofes by increafing the difance. Some principle muft direct him in the felection of this courfe. This we muft attempt to lay before the reader.

Having chofen fuch a courfe as he thinks moft advantageous, he muft fet fuch a quantity of fail as the ftrength of the wind will allow him to carry with fafety and effeet, and muft trim the fails properly, or fo-adjuft their pofitions to the direction of the wind, that they may have the greateft poffible tendency to impel the fhip in the line of her courfe, and to keep her fteadily in that direction.

His other tafk is to produce any deviations which he fees proper from the prefent courfe of the fhip; and to produce thefe in the moft certain, the fafeft, and the moft expeditious manner. It is chiefly in this movement that the mechanical nature of a fhip comes into view, and it is here that the fuperior addrefs and refource of an expert feaman is to be perceived.

Under the article Sailing fome notice has been taken of the firf tafk of the feaman, and it was there fhown how a fhip, after having taken up her anchor and fitted her fails, accelerates her motion, by degrees which continually diminifh, till the increafing refiftance of the water becomes precifely equal to the diminifhed impulie of the wind, and then the motion continues uniformly the fame fo long as the wind continues to blow with the fame force and in the fame direction.

It is perfectly confonant to experience that the impulfe of fluids is in the duplicate ratio of the relative velocity. Let it be fuppofed that when water moves one foot per fecond its perpendicular preffure or impulfe on a fquare foot is $m$ pounds. Then, if it be moving with the velocity V eftimated in feet per fecond, its perpendicular impulfe on a furfice $S$, containing any number of fquare feet, mult be $n \mathrm{SV}^{2}$.

In like manner, the impulfe of air on the fame furVow. XVII. Part. I.
face may be reprefented by $n S^{2} V_{2}$; and the proportion of the impulfe of thefe two fluids will be that of $m$ to $n$. We may exprefs this by the ratio of $q$ to I , making $\frac{m}{n}=q$.
M. Bouguer's computations and tables are on the Impulfe of fuppofition that the impulfe of fea-water moving one the water foot per fecond is 23 ounces on a fquare foot, and that computed the impulfe of the wind is the fame when it blows at on the the rate of 24 feet per fecond. Thefe meafures are alliquare foot, French. They by no means agree with the experiments of others ; and what we have already faid, when treating of the Resistance of Fluids, is enough to fhow us that nothing like precife meafures can be expected. It was fhown as the refult of a rational inver. tigation, and confirmed by the experiments of Buat and others, that the impulfions and refiftances at the fame furface, with the fame obliquity of incidence and the fame velocity of motion, are different according to the form and fituation of the adjoining parts. Thus the total refiftance of a thin board is greater than that of a long prifm, having this board for its front or bow, \&c.

We are greatly at a lofs what to give as abfolute meafures of thefe impulfions.
J. With refpect to water. The experiments of the French academy on a prifm two feet broad and deep and four feet long, indicate a refiftance of 0,973 pounds avoirdupois to a fquare foot, moving with the velocity of one foot per fecond at the furface of ftill water.

Mr Buat's experiments on a fquare foot wholly immerfed in a ftream were as follow :

A fquare foot as a thin plate - $\quad, 8,81$ pounds.
Ditto as the front of a box Ditto as the front of a box one foot long - - - 1,42
Ditto as the front of a box three feet long

1,29.
The refiftance of fea-water is about $\frac{x}{2 \frac{1}{5}}$ greater.
2. With refpect to air, the varieties are as great. The refiftance of a fquare foot to air moving with the velocity of one foot per fecond appears from Mr Robins's experiments on 16 fquare inches to be on a fquare foot

> | Chevalier Borda's on 16 inches | 0,005757 |

Precife meafures are not to be expected, nor are they neceffary in this inquiry. Here we are chiefly interefted in their proportions, as they may be varied by their mode of action in the different circumftances of obliquity and velocity.

We begin by recurring to the fundamental propofition concerning the impulfe of fluids, viz. that the abfolute preffure is always in a direction perpendicular to the impelled furface, whatever may be the direction of the ftream of fluid. We muft therefore illuftrate the Direct imo doctrine, by always fuppofing a flat furface of failpulfe on firetched on a yard, which can be braced about in any the fail direction, and giving this fail fuch a pofition and fuch perpendian extent of furface that the impulfe on it may be the che yard. fame both as to direction and intenfity with that on the real fails. 'Thus the confideration is greatly fimplified. The direction of the impulfe is therefore perpendicular to the yard. Its intenfity depends on the ve-

C c
locity
bocity with which the wind meets the fail, and the obliquity of its Aroke. We mall adopt the conflructions founded on the common doctrine, that the impulfe is as the fquare of the fine of the inclination, becaufe they are fimple; whereas, if we were to introduce the values of the oblique impulfes, fuch as they have been obferved in the excellent experiments of the Academy of Paris, the conftructions would be complicated in the extreme, and we could hardly draw any confequences -which would be intelligible to any but expert mathematicians. The conclufions will be crroneous, not in kind but in quantity only; and we fhall point out the neceffary corrections, fo that the final refults will be

If a hip were a round cylindrical body like a flat tub, floating on its bottom, and fitted with a maft and fail in the centre, fhe would always fail in a direction perpendicular to the yard. This is evident. But the is an oblong body, and may be compared to a che!t, whofe length greatly exceeds its breadth. She is fo fhaped, that a moderate force will pufh her through the water with the head or ftern foremoft ; but it requires a very great force to pufh her fidewife with the fame velocity. A fine failing thip of war will require about 12 times as much force to pufh her fidewife as to pufh her head foremoft. In this refpect therefore the will very much refemble a cheft whofe length is 12 times its breadth; and whatever be the proportion of thefe refiftances in different fhips, we may always fubftitute a box which thall have the fame refiftances headwife and fidewife.

Let EFGH (fig. 1.) be the horizontal fection of fuch a box, and $A B$ its middle line, and $C$ its centre. In whatever direction this box may chance to move, the direction of the whole refiftance on its two fides will pafs through C. For as the whole fream lias one inclination to the fide EF, the equivalent of the equal impulfes on every part will be in a line perpendicular to the middle of EF. For the fame reafon, it will be in a line perpendicular to the middle of FG. Thefe perpendiculars muft crols in C. Suppofe a maft erected at C, and YCy to be a yard hoilted on it carrying a fail. Let the yard be firt conceived as braced right athwart at right angles to the keel, as reprefented by $Y^{\prime} y^{\prime}$. Then, whatever be the direction of the wind abaft this fail, it will impel the veffel in the direction CB. But if the fail has the oblique pofition $\mathrm{Y} y$, the impulfe will be in the direction CD perpendicular to CY , and will both pufh the veffel ahead and fidewile: For the impulfe CD is equivalent to the two impulfes CK and CI (the fides of a rectangle of which $C D$ is the diagonal). The force CI puihes the veffel ahead, and CK puthes her fidewife. She muft therefore take fome intermediate direction $a b$, fuch that the refintance of the water to the plane FG is to its refiftance to the plane EF as CI to CK.

The angle $b \mathrm{CB}$ between the real courfe and the direction of the head is called the Leeway; and in the courfe of this differtation we fhall exprefs it by the fymbol $x$. It evidently depends on the fhape of the veffel and on the pofition of the yard. An accurate knowledge of the quantity of leeway, correfponding to different circumftances of obliquity of impulfe, extent of furface, Sxc. is of the utmoft importance in the practice 5

## N S H I P.

of navigation; and even an approximation is valuable. The fubject is fo very difficult that this muft content us for the prefent.

Let $V$ be the velocity of the fhip in the direetion How $\mathrm{C} b$, and let the furfaces FG and FE be called $\mathrm{A}^{\prime}$ and $f$ fid $B^{\prime}$. Then the refiftance to the lateral motion is quanti $m V^{2} \times B^{\prime} \times$ fine ${ }^{2}, b \mathrm{CB}$, and that to the direct motion is $m V^{2} \times \mathrm{A}^{\prime} \times$ fine ${ }^{2}, b \mathrm{CK}$, or $m \mathrm{~V}^{2} \times \mathrm{A}^{\prime} \times \operatorname{cof}^{2}{ }^{2} b \mathrm{CB}$. Therefore thefe refiftances are in the proportion of $\mathrm{B}^{\prime} \times$ fine ${ }^{2}, x$ to $\mathrm{A}^{\prime} \times \operatorname{cof}^{2}, x$ (reprefenting the angle of leeway $b$ CB by the fymbol $x$ ).

Therefore we have CI: CK, or $C I: I D=A^{\prime}$. $\operatorname{cof}^{2} x: B^{\prime} \cdot$ fine $^{2} x,=A^{\prime}: B^{\prime} \cdot \frac{\text { fine }^{2} x}{\operatorname{cof}^{\star} x}=A: B \cdot \tan -$ gent ${ }^{2} x$.
Let the angle YCB, to which the yard is braced up, be called the Trim of the fails, and expreffed by the fymbol $b$. This is the complement of the angle DCI. Now CI:ID $=$ rad. $: \tan . \mathrm{DCI},=1: \tan$. $\mathrm{DCI},=1: \operatorname{cotan} . b$. Therefore we have finally $1: c o-$ $\tan . b=A^{\prime}: B^{\prime} \cdot \tan { }^{3} x$, and $A^{\prime} \cdot \operatorname{cotan} . b=B^{\prime} \cdot \tan \cdot$ gent ${ }^{2} x$, and $\tan ^{2} x=\frac{A}{B}$ cot. $b$. This equation evidently afcertains the mutual relation between the trim of the fails and the leeway in every cafe where we can tell the proportion between the refffances to the direct and broadfide motions of the fhip, and where this proportion does not change by the obliquity of the courfe. Thus, fuppofe the yard braced up to an angle of $30^{\circ}$ with the keel. Then cotan. $3^{\circ}=1,73^{2}$ very nearly. Suppofe alfo that the refiftance fidewife is 12 times greater than the refitance headwife. This gives $A^{\prime}=1$ and $B^{\prime}=12$. Therefore $1,732=12 \times$ tangent ${ }^{2} x$, and tangent ${ }^{2} x=\frac{1,732}{12},=0,14434$, and $\tan$. $x=0,3799$, and $x=29^{\circ} 48^{\prime \prime}$, very nearly two points of leeway.

This computation, or rather the equation which gives room for it, fuppofes the refiftances proportional to the fquares of the fines of incidence. The experiments of the Academy of Paris, of which an abftract is given in the article Resistance of Fluids, fhow that this fuppofition is not far from the truth when the angle of incidence is great. In this prefent cafe the angle of incidence on the front FG is about $70^{\circ}$, and the experiments juft now mentioned how that the real refiftances exceed the theoretical ones only $\frac{1}{8} \sigma$. But the angle of incidence on EF is only $20^{\circ} 48^{\prime}$. Experiment fhows that in this inclination the refiftance is almoft quadruple of the theoretical refiftances. Therefore the lateral refiftance is affumed much too fmall in the prefent inftance. Therefore a much fmaller leeway will fuffice for producing a lateral refiftance which will balance the lateral impulfe CK, arifing from the obliquity of the fail, viz. $30^{\circ}$. The matter of fact is, that a pretty good failing hip, with her fails braced to this angle at a medium, will not make above five or fix degrees leeway in fmooth water and eafy weather; and yet in this fituation the hull and rigging prefent a very great furface to the wind, in the moft improper pofitions, fo as to have a very great effect in increafing her leeway. And if we compute the refiftances for this leeway of fix degrees by the actual experiments of the French A. cademy on that angle, we thall find the refult not far from

## SE. A MA N S HI P.

 long a canal, or fwings to its anchor in a ftream. The track rope is made fat to forme ftaple or bolt E on the deck (fig. 2.), and is paffed between two of the timberheads of the bow at D , and laid hold of at F on there. The men or cattle walk along the path FG, the rope keeps extended in the direction DF, and the lighter arranges itself in an oblique pofition AB , and is thus dragged along in the direction $a b$, parallel to the fide of the canal. Or, if the canal has a current in the oppofire direction $b a$, the lighter may be kept fteady in its place by the rope DF made fat to a polit at F. In this cafe, it is always observed that the lighter fwings in a pofition AB , which is oblique to the ftream $a b$. Now the force which retains it in this pofition, and which precifely balances the action of the stream, is cermainly exerted in the direction DF ; and the lighter would be held in the fame manner if the rope were made fat at C amidship, without any dependence on the timberhead at D ; and it would fill be held in the fame pofition, if, inftead of the fingle rope CF, it were riding by two ropes CG and CH , of which CH 'is in a direction right ahead, but oblique to the stream, and the other CG is perpendicular to CH or AB . And, drawing DI and DK perpendicular to AB and CG , the train on the rope CH is to that on the rope CG as CI to CK. The action of the rope in there cafes is precifely analogous to that of the fail $y \mathrm{Y}$; and the obliquity of the keel to the direction of the moton, or to the direction of the fleam, is analogous to the leeway. All this muff be evident to any perfon accuftomed to mechanical difquifitions.A molt important ufe may be made of this illuttraion. If an accurate model be made of a chip, and if it be placed in a ftream of water, and ridden in this manner by a rope made fart at any point D of the bow, it will arrange itfelf in come determined pofition AB. Where wild be a certain obliquity to the fleam, mean.
fured by the angle $B \circ b$; and there will $b e$ a correfponding obliquity of the rope, measured by the angle FCB. Let $y \mathrm{CY}$ be perpendicular to CF. 'Then CY will be the pofition of the yard, or trim of the fails corresponding to the leeway 6 CB . Then, if we shift the rope to a point of the bow diftant from D by a fall quantity, we foal obtain a new pofition of the Chip, both with sefpect to the fleam and the rope; and in this way may be obtained the relation between the position of the fails and the leeway, independent of all theory, and fufceptible of great accuracy; and this may be done with a variety of models fuited to the molt usual forms of flips.

In farther thinking on this fubject, we are perfuaded $\mathrm{O}_{\mathrm{n}}$ hip so that there experiments, inltead of being made on modele, may with equal cafe be made on a flip of any fire. Let the flip ride in a ftream at a mooring $D$ (fig. 3.) by means of a fort hawser BCD from her bow, hasing a firing $A C$ on it carried out from her quarter. She will fling to her moorings, till he ranges herfelf in a certain pofition AB with refpect to the direction $a b$ of the ftream; and the direction of the hawfer DC will point to forme point E of the line of the keel. Now s it is plain to any perron acquainted with mechanical diff quifitions, that the deviation $\mathrm{BE} b$ is precifely the leeway that the Ship will inake when the average pofition of the fails is that of the line GEH perpendicular to ED ; at leaf this will give the leeway which is produaced by the fails alone. By heaving on the firing, the knot C may be brought intoany other pofition we pleafe; and for every new pofition of the knot the flip will take a new pofition with refpect to the fleam and to the hawfer. And we perfift in laying, that more information will be got by this train of experiments than from any mathematical theory: for all theories of the impulfes of fluids mut proceed on phyfical poftulates with respect to the motions of the filaments, which are exceedingly conjectural.

21
And it mull now be farther obferved, that the fut. The comftitution which we have made of an oblong parallelopi. parifun of ped for a chip, although well fruited to give us clear no- an oblong to tions of the fubject, is of fall ufe in practice: for it is body is next to impoffible (even granting the theory of oblique only useimpulfions) to make chis fubtitution. A hip is of a furl to give form which is not reducible to equations; and therefore $\begin{gathered}\text { clear } 1: 00- \\ \text { ns on }\end{gathered}$ the action of the water on her bow or broadfide can the fubjeefo only be had by a molt laborious and intricate calculaton for almost every fquare foot of its furface. (See Bezout's Lours de Mather, vol. 5. p. 72, \&c.) And this mut be different for every hip. But, which is more unlucky, when we have got a parallelopiped which will have the fame proportion of direct and lateral refiftance for a particular angle of leeway, it will not anEwer for another leeway of the fame flip; for when the leeway changes, the figure actually expofed to the action of the water changes alto. When the leeway is increased, more of the lee-quarte1 is acted on by the water, and a part of the weather-bow is now removed from its action. Another parallelopiped mut therefore be difcovered, whole refiftances shall fruit this new pofition of the keel with refpect to the real course of the flip.

We therefore beg leave to recommend thistrain of experiments to the notice of the Associationforthe Imo. provement of Natal Architecture as a very pro. mifing method forafcertaining this important point. And
C. $\mathrm{C}-2$
we proceed, in the next place, to afcertain the relation between the velocity of the fhip and that of the wind, moditied as they may be by the trim of the fails and the obliquity of the impulfe.

Let AB (fig. 4, 5, and 6.) reprefent the horizontal fection of a hip. In place of all the drawing fails, that is, the fails which are really filled, we can always fubttitute one fail of equal extent, trimmed to the fame angle with the keel. This being fuppofed attached to the - yard DCD, let this yard be finft of all at right angles to the keel, as reprefented in fig. 4. Let the wind blow in the direction WC, and let CE (in the direction WC continued) reprefent the velocity V of the wind. Let CF be the velocity $v$ of the fhip. It muft alfo be in the direction of the fhip's motion, becaufe when the fail is at right angles to the keel, the abfolute impulfe on the fail is in the dircetion of the keel, and there is no lateral impulfe, and confequently no leeway. Draw EF, and complete the parallelogram CFE $e$, producing $e \mathrm{C}$ through the centre of the yard to $w$. Then $w \mathrm{C}$ will be the relative or apparent direction of the wind, and $\mathrm{C}_{e}$ or FE will be its apparent or relative velocity: For if the line $\mathrm{C} e$ be carried along CF, keeping always parallel to its firft pofition, and if a particle of air move uniformly along CE (a fixed line in abfolute fpace) in the fame time, this particle will always be found in that point of CE where it is interfected at that inftant by the moving line $\mathrm{C} e$; fo that if $\mathrm{C} e$ were a tube, the particle of air, which really moves in the line CE , would always be found in the tube $\mathrm{C} e$. While CE is the real direction of the wind, $\mathrm{C} e$ will be the pofition of the vane at the maft head, which will therefore mark the apparent direction of the wind, or its motion relative to the moving hip.

We may conceive this in another way. Suppofe a cannon-hot fired in the direction CE at the paffing Ship, and that it paffes through the maft at $C$ with the velocity of the wind. It will not pafs through the offfide of the fhip at P , in the line CE : for while the fhot moves from $C$ to $P$, the point $P$ has gone forward, and the point $p$ is now in the place where $P$ was when the fhot paffed through the maft. The fhot will therefore pafs through the fhip's fide in the point $p$, and a perfon on board feeing it pals through C and $p$ will fay that its motion was in the line $\mathrm{C} p$.

Thus it happens, that when a hip is in motion the apparent direction of the wind is always ahead of its real direction. The line ru C is always found within of the angle WCB. It is eafy to fee from the conftruction, that the difference between the real and apparent directions of the wind is fo much the more remarkable as the velocity of the fhip is greater: For the angle WC $w$ or $\mathrm{EC} e$ depends on the magnitude of $\mathrm{E} e$ or CF, in proportion to CE. Perfons not much accuf. tomed to attend to thefe matters are apt to think all attention to this difference to be nothing but affectation of nicety. They have no notion that the velocity of a ship can have any fenfible proportion to that of the wind. "Swift as the wind" is a proverbial expreffion; yet the velocity of a hip always bears a very fenfible proportion to that of the wind, and even very frequently exceeds it. We may form a pretty exact notion of the velocity of the wind by obferving the fhadows of the fummer clouds flying along the face of a countiy, and it may be very well meafured by this me.

## N S H I P.

thod. 'The motion of fuch ciouds camot be very different from that of the air below; and when the preffure of the wind on a flat furface, while blowing with a velocity meafured in this way, is compared with its preffure when its velocity is meafured by more unexceptionable methods, they are found to ayree with all defirable accuracy. Now obfervations of this kind frequently repeated, how that what we call'a pleafant brik gale blows at the rate of about 10 miles an hour, or about 15 feet in a fecond, and exerts a preffure of half a pound on a fquare foot Mr Smeaton has frequently obferved the fails of a windmill, driven by fuch a wind, moving faiter, nay much fafter, towards - their extremities, fo that the fail, iuftead of being preffed to the frames on the arms, was taken aback, and fluttering on them. Nay, we know that a good Chip, with all her fails fet and the wird on the beam, will in fuch a fituation fail above 10 knots an hour in fmooth water. There is an oblervation made by every experienced feaman, which hows this difference between the real and apparent directions of the wind very diftinctly. When a fhip that is failing brifkly with the wind on the beam tacks about, and then fails equally well on the other tack, the wind always appears to have fhifted and come more ahead. This is familiar to all feamen. The feaman judges of the direction of the wind by the polition of the fhip's vanes. Suppofe the fhip failing due weft on the ftarboard tack, with the wind apparently N. N. W. the vane pointing S.S. E. If the fhip puts about, and ftands due eaft on the larboard tack, the vane will be found no longer to point S.S.E. but perhaps S.S.W. the wind appearing N. N.E. and the fhip niut be nearly clofehauled in order to make an eaft counfe. The wind appears to have flifted four points. If the fhip tacks again, the wind returns to its old quarter. We have often obferved a greater difference than this. The celebrated aftronomer Dr Bradley, takinr the amufement of failing in a pinnace on the river Thames, obferved this, and was furprifed at it, imagining that the change of wind was owing to the approaching to or retiring from the fhore. The boatmen told him that it always happened at fea, and explained it to him in the beft manner they were able. The explanation ftruck him, and fet him a mufing on an aftronomical phenomenon which he had been puzzled by for fome years, and which he called the aberration of the fixed stars. Every ftar changes its place a fmall matter for half a year, and returns to it at the completion of the year. He compared the ftream of light from the ftar to the wind, and the telefcope of the aftronomer to the fhip's vane, while the earth was like the fhip, moving in oppofite directions when in the oppofite points of its,orbit. The telefcope muft always be pointed ahead of the real direction of the ftar, in the fame manner as the vane is always in a direction ahead of the wind; and thus he afcertained the progreffive motion of light, and difcovered the proportion of its velocity to the velocity of the earth in its orbit, by oblerving the deviation which was neceffarily given to the telefcope. Obferving that the light fhifted its direction about $40^{\prime \prime}$, he concluded its velocity to be about 11,000 times greater than that of the earth ; juft as the intelligent feaman would conclude from this apparent fhifting of the wind, that the velocity of the wind is about triple that of the fhip. This is indeed the beft method
for difoovering the velocity of the wind. Let the direction of the vane at the maft-head be very accurately noticed on both tacks, and let the velocity of the fhip be alfo accurately meafured. The angle between the directions of the frip's head on thefe different tacks being halved, will give the real direction of the wind, which mult be compared with the pofition of the vane in order to determine the angle contained between the real and apparent directions of the wind or the angle EC e; or half of the obferved fhifting of the wind will show the inclination of its true and apparent directions. This being found, the proportion of EC to FC (fig. 6.) is eafily meafured.

We have been very particular on this point, becaufe fince the mutual actions of bodies depend on their rela. tive motions only, we fhould make prodigious miltakes if we eftimated the action of the wind by its real direction and velocity, when they differ fo much from the relative or apparent. the thip (fig. 4.), having its fail at right angles to the keel, and the wind blowing in the direction and with the velocity CE, while the fhip proceeds in the direction of the keel with the velocity CF . Produce E e, which is parallel to BC, till it meet the yard in $g$, and draw FG perpendicular to. $\mathrm{E} g$. Let $a$ reprefent the angle WCD, contained between the fail and the real direction of the wind, and let $b$ be the angle of trim DCB. CE the velocity of the wind was exprefled by V , and CF the velocity of the fhip by $v$.

The abfolute impulfe on the fail is (by the ufual theory) proportional to the fquare of the relative velocity, and to the fquare of the fine of the angle of incidence; that is, to FE: $\times$ fin. ${ }^{2} w$ CD. Now the angle $\mathrm{GFE}=\tau \omega \mathrm{CD}$, and EG is equal to $\mathrm{FE} \times$ fin. GFE ; and EG is equal to $\mathrm{E}-g \mathrm{G}$. But $\mathrm{E} g=$ $\mathrm{EC} \times$ fin. $\mathrm{EC} g,=\mathrm{V} \times$ fin. $a$; and $g \mathrm{G}=\mathrm{CF},=v$. Therefore $\mathrm{EG}=\mathrm{V} \times$ fin. $a-v$, and the impulfe is proportional to $\overline{\mathrm{V} \times \text { in. } a-v}{ }^{2}$. If S reprefent the furface of the fail, the impulfe, in pounds, will be $n \mathrm{~S}$ ( $\mathrm{V} \times$ fin. $a-v)^{2}$.

Let $A$ be the furface which, when it meets the water perpendicularly with the velocity $v$, will fuftain the fame preflure or refilance which the bows of the fhip actually meets with. This impulfe, in pounds, will be $m \mathrm{~A} v^{2}$. 'Therefore, becaufe we are confidering the flip's motion as in a ftate of uniformity, the two preffures balance each other ; and therefore $m \mathrm{~A} v^{2}=n \mathrm{~S}(\mathrm{~V}$ $\times$ fin. $a-v)^{2}$, and $\frac{m}{n} \mathrm{~A} v^{2}=\mathrm{S}(\mathrm{V} \times \mathrm{fin} . a-v)^{2}$; therefore $\sqrt{\frac{m}{n}} \sqrt{ } A \times v=\sqrt{s} \times V \times$ fin. $a-v \sqrt{s}$, and $v=\frac{\sqrt{\frac{n}{\mathrm{~S}}} \times v \times \text { fin. } a}{\sqrt{\frac{m}{n} \mathrm{~A}}+\sqrt{\mathrm{S}}}=\frac{\mathrm{V} \times \text { fil. } a}{\sqrt{\frac{m \mathrm{~A}}{n \mathrm{~S}}+1}}=\frac{\mathrm{V}^{\mathrm{i}} \times \text { fin. } a}{\sqrt{\frac{A}{\mathrm{~S}}}+1}$.

We fee, in the firt place, that the velocity of the frip is (cateris paribus) proportional to the velocity of the wind, and to the fine of its incidence on the fail jointly; for while the furface of the fail S and the equivalent furface for the bows remains the fame, $v$ increafes or diminifhes at the fame rate with $\mathrm{V} \cdot \mathrm{fin} . a-$ When the wind is right aftern, the fine of $a$ is unity,
and then the hip's velocity is $\frac{V}{\sqrt{\frac{m \mathrm{~A}}{n \mathrm{~S}}+1}}$
Note, that the denominator of this fraction is a common number ; for $m$ and $n$ are numbers, and $A$ and $S$ being quantities of one kind, $\frac{A}{S}$ is alfo a number.
It muft alfo be carefully attended to, that $S$ expreffes a quantity of fail actually receiving wind with the inclination $a$. It will not always be trme, therefore, that the velocity will increale as the wind is more abaft, becaufe lome fails will then becalm others. This obfervation is not, however, of great importance; for it is very unufual to put a fhip in the fituation confidered hitherto ; that is, with the yards fquare, unlefs fhe be right before the wind.

If we would difcover the relation between the velocity and the quantity of fail in this fimple cafe of the wind right aft, obferve that the equation $v=\frac{\mathrm{V}}{\sqrt{\frac{m \mathrm{~A}}{n \mathrm{~S}}}+x}$
gives us $\sqrt{\frac{m \mathrm{~A}}{n \mathrm{~S}}} v+v=\mathrm{V}$, and $\sqrt{\frac{m \mathrm{~A}}{n \mathrm{~S}}} v=\mathrm{V}-v$; and $\frac{m \mathrm{~A}}{n \mathrm{~S}} v^{2}=\overline{\mathrm{V}-v^{2}}$, and $\frac{n}{m} \mathrm{~S}=\frac{v^{2}}{(\mathrm{~V}-v)^{2}}$; and becaufe $n$ and $m$ and A are conftant quantities, S is proportional to $\frac{v^{2}}{(\mathrm{~V}-v)^{2}}$, or the furface of fail is proportional to the fquare of the fhip's velocity directly, and to the fquare of the relative velocity inverfely. Thus, if a fhip be failing with $\frac{7}{8}$ of the velocity of the wind, and we would have her fail with $\frac{2}{4}$ of it, we muf quadruple the fails. This is more eafily feen in another way. The velocity of the fhip is proportional to the velocity of the wind ; and therefore the relative velocity is alfo proportional to that of the wind, and the impulfe of the wind is as the fquare of the relative velocity. Therefore, in order to increafe the relative velocity by an increale of fail only, we muft make this increafe of fail in the duplicate proportion of the increafe of velocity.
Let ns, in the next place, confider the motion of a hip whofe fails ftand oblique to the keel.

The conftruction for this purpofe differs a little from its velociry the former, becaufe, when the fails are trimmed to any when the oblique pofition DC.B (fig. 5 . and 6 :), there mult be a fails thand deviation from the direction of the keel, or a leewaj the kect.
$\mathrm{BC} b$. Call this $x$. Let CF be the velocity of the fhip. Draw, as before, $\mathrm{E} g$ perpendicular to the yard, and F G perpendicular to E $g$; alfo draw FH perpendicular to the yard : then, as before, $\mathrm{E} G$, which is in the fubduplicate ratio of the impulfe on the fail, is equal to $\mathrm{E}_{\mathrm{G}}-\mathrm{G} g$. Now $\mathrm{E} g$ is, as before, $=\mathrm{V} \times$ fin. $a$, and $\mathrm{G} g$ is equal to FH , which. is $=\mathrm{CF} \times$ fin. FCH, or $=v \times$ fin. $(b+x)$. Therefore we have the impulfe $=$ ${ }_{n} \mathrm{~S}\left(\mathrm{~V} \cdot \text { fin. } a-v^{\cdot} \text { fin. }(b+x)\right)^{2}$.

This expreffion of the impulfe is perfectly fimilar to that in the former cafe, its only difference confifting in the fubductive part, which is here $v \times$ fin. $\overline{b+x}$ inflead of v. But it expreffes the fame thing as before, viz. the diminution of the impulfe. The impulfe being res. koned folely in the direction perpendicular to the fail,

## S E A M A

 it is diminified folely by the fail withdrawing itfelf in that direstion from the wind; and as $g$ E may be conftdered as the real impulfive motion of the wind, GE muft be confidered as the relative and effective inipulfive motion. The impulfe would have been the fame had the fhip been at reft, and had the wind met it perpendicularly with the velocity GE.We nult now fhow the conrection between this intpulfe and the motion of the flip. The fail, and confequently the fhip, is preffed by the wind in the direction CI perpendicular to the fail or yard with the force which we have juft now determined. This (in the fate of uniform motion) mult be equal and oppofite to the action of the water. .. Draw IL at right angles to the 4. Keel. The impulfe in the direttion CI (which we may eneafure by CI) is equivalent to the impulfes CL and LI. By the firt the thip is impelled right forward, and by the fecond the is driven fidewife. Therefore we mult have a leevay, and a lateral as well as a direct refiftance. We fuppofe the form of the fhip to be - known, and therefore the proportion is known, or difcoverable, between the direa and lateral refiftances correfponding to every angle $x$ of leeway. Let A be the furface whofe perpendicular refiltance is equal to the diyect refittance of the 'hip correfponding to the leeway $z$, that is, whofe refiftance is equal to the refiftance really felt by the 'hip's bows in the direction of the keel when fhe is failing with this leeway; and let B in like manner be the furface whofe perpendicular refiftance is equal to the actual refiftance to the fhip's motion in the direction LI, perpendicular to the keel. (N.B. This is not equivalent to $A^{\prime}$ and $B^{\prime}$ adapted to the recangular box, but to $A^{\prime} \cdot \operatorname{cof}^{2} x$ and $B^{\prime} \cdot$ fill. $^{2} x$.) We have therefore $A: B=C L: L I$, and $L I=\frac{C L \cdot B}{A}$. Alfo, becaufe $\mathrm{CI}=\sqrt{\mathrm{CL}^{2}+\mathrm{LI}^{2}}$, we have $\mathrm{A}: \sqrt{\mathrm{A}^{2}+B^{2}}$ $=C L: C I$, and $C I=\frac{C L \cdot \sqrt{A^{2}+B^{2}}}{A}$. The refift. ance in the direction LC is properly meafured by ${ }^{m} \mathrm{~A} v^{2}$, as has been already obferved. Therefore the refiftance in the direction IC mult be expreffed by $m$ $\sqrt{A^{2}+B^{2}} v^{2}$; or (making $C$ the furface which is equal to $\sqrt{A^{2}+B^{2}}$, and which will therefore have the fame perpendicular refiftance to the water having the velocity $\vartheta$ ) it may be expreffed by $m \mathrm{C} \vartheta^{2}$.

Therefore, becaufe there is an equilibrium between the impulfe and refiftance, we have $m \mathrm{C} v^{3}=n \mathrm{~S}(\mathrm{~V}$. fin. $a-v^{*}$ fin. $\left.\overline{b+x}\right)^{2}$ and $\frac{m}{n} \mathrm{C} v^{2}$, or $q \mathrm{C} v^{2}=$ $\mathrm{S}\left(\mathrm{V} \cdot \mathrm{fin} . a-v^{\cdot} \mathrm{fin} \cdot \overline{b+x}\right)^{2}$, and $\checkmark q \sqrt{ } \mathrm{C} v=\sqrt{ } \mathrm{S}$ (V. fin. $a-v \cdot \operatorname{fin} . \overline{b+x}$ ).

$$
\begin{aligned}
& \text { Therefore } v=\frac{\sqrt{ } \mathrm{S} \cdot \mathrm{~V} \cdot \operatorname{fin} \cdot a}{\sqrt{ } q \sqrt{\mathrm{C}}+\sqrt{ } \cdot \operatorname{fin} . \overline{b+x}}= \\
& \frac{\mathrm{V} \cdot \sin \cdot a}{}=\mathrm{V} \frac{\sin \cdot a}{\sqrt{ } q \frac{\sqrt{ } \mathrm{C}}{\sqrt{S}+\operatorname{lin} \cdot \overline{b+x}}}
\end{aligned}
$$

Obferve that the quantity which is the coefficient of V in this equation is a conmon number; for fiul. a is a number, being a decimal fraction of the radius $\mathbf{y}$. Sin. $\overline{6+x}$ is alfo a number, for the fame reafon. And
since $m$ and $n$ were numbers of pounds, $\frac{m}{n}$ or $\dot{q}$ is a

N S H I P.
common number. And becaufe C and S are furfaceis or quantities of one kind, $\frac{\mathrm{C}}{\mathrm{S}}$ is alro a common nume ber.

This is the fimplef expreffion that we can think of for the velocity acquired by the fhip, though it muft be acknowledged to be too complex to be of very prompt ufe. Its complication arifes from the neceffity of introducing the lecway $x$. This affects the whole of the denominator; for the furface C depends on it, be. ceure $C$ is $=\sqrt{A^{3}+B^{2}}$, and $A$ and $B$ are analogous
to $A^{\prime}$ cor. $x$ and $B^{\prime}$ fin. to $\mathrm{A}^{\prime}$ cor. ${ }^{2} x$ and $\mathrm{B}^{\prime}$ fin. ${ }^{2} x$.

But we can deduce fome important confequences ${ }^{2}$ mor 28 , from this theorem.
While the furface $S$ of the fail actually filled by the wind ced fre der remains the fame, and the angle DCB , which in future the for we fhall call the Trim of the fails, alfo remains the going fame, both the leeway $x$ and the fubfituted furface C rem. remains the fame. The denominator is therefore con. flant; and the velocity of the fhip is proportional to $\checkmark$ S.V. fin. $a$; that is, directly as the velocity of the wind, directly as the abfolute inclination of the wind to the yard, and directly as the fquare root of the furface of the fails.
We afo learn from the conftruction of the figure that FG parallel to the yard cuts $C E$ in a given ratio. For CF is in a conftant ratio to $E_{g}$, as has been juft now dernonftrated. And the angle DCF is confant. Therefore $\mathrm{CF} \cdot \operatorname{fin} . b$, or FH or $\mathrm{G} g$, is proportional to $\mathrm{E}_{g}$, and OC to EC, or EC is cut in one proportion, whatever may be the angle ECD, fo long as the angle DCF is conftant.
We alfo fee that it is very poffible for the velocity of the fhip on an oblique courfe to exceed that of the wind. This will be the cafe when the number $\frac{\text { fin. } a}{\sqrt{q \frac{\mathrm{C}}{\mathrm{S}}+\text { fin. } \overline{b+x}}}$ exceeds unity, or when fin. $a$ is greater than $\sqrt{q \frac{C}{S}}+$ fin. $\overline{b+x_{0}}$. Now this may eafily be by fufficiently enlarging $S$ and dimininhing $\delta+x_{0}$ It is indced frequently feen in fine failers with all their fails fet and not hauled too near the wind.
We remarked above that the angle of leeway $x$ affects the whole denominator of the fraction which expreffes the velocity. Let it be obferved that the angle ICL is the complement of LCD; or of $b$. Therefore CL: $L I$, or $A: B=1: \tan$. $\mathrm{CL},=1: \cot . b$, and $B=A$. cotan. $b$. Now $A$ is equivalent to $A^{\prime} \cdot$ cof. ${ }^{2} x$, and thus $b$ becomes a function of $x_{0} \mathrm{C}$ is evidently fo, being $=\sqrt{ } \overline{A^{2}+B^{2}}$. Therefore before the value of this fraction can be obtained, we mult be able to compute, by our knowledge of the form of the fhip, the value of A for every angle $x$ of leeway. This can be done only by refolving her bows into a great number ot elementary planes, and computing the impulfes on each aud adding them into one fum. The computation is of imnenfe labour, as may be feen by one example given by Bouguer. When the leeway is but fmall, not exceeding ten degrees, the fubfitution of the reetangular prifm of one determined form is abundantly exact for all leeways contained within this limit; and we fhall fooid fee rea-

## S.E: A M

fon for being contented with this approximation. We may now make ufe of the formula exprefling the velocity for folving the chief problems in this part of the feaman's talk.

And firft let it be required to determine the beft poítion of the fail for ftanding on a given courfe $a b$, when C E the direction and velocity of the wind, and its angle with the courfe W C F, are given. This problem has exercifed the talents of the mathematicians ever fince the days of Newton." In the article Preumatics we gave the folution of one: wery nearly related to it, namely, to deternine the pofition of the fail whick would produce the greate impulfe in the direction of the courfe. The folution was to place the yard CD in fuch a pofition that the tangent of the angle FCD may be one half of the tangent of the angleiD $C W$. This will indeed be tlue beft pofition of the fail for beginning the motiox; but as foon as the fhip begins to move in the direction CF, the effective impulfe of the wind is diminifhech, and alfo its inclination to the fail. The angle $\mathrm{DG} w$ dininifhes continually as the fhip accelerates; for $C F$ is now accompanied by its equal $e \mathrm{E}$, and by an angle EC $e$ or WC $w$. CF increafes, and the impulfe on the fail diminifhes, till an equilibrium obtains between the refiftance of the water and the impulfe of the wind. The impulfe is now meafured by $\mathrm{C} \epsilon^{2} \times \mathrm{fin}^{2}{ }^{2} e \mathrm{CD}$ inftead of $\mathrm{CE}^{2} \times \mathrm{fin}^{2} . \mathrm{ECD}$, that is, by $E G^{2}$ initead of $E g^{2}$.
This introduction of the relative motion of the wind renders the actual folution of the problem extremely difficult.' It is very eafily expreffed geometrically: Divide the angle ${ }^{\prime} w \mathrm{CF}$ in fuch a manner that the tangent of DCF may be half of the tangent of $\mathrm{DC} w$, and the problem may be confructed geometrically as fol. lows.

Let WCF (fig. 7 .) be the angle between the fail and courfe. Round the centre C defrribe the circle WDFY; produre $W C$ to $Q_{2}$ fo that $C Q=\frac{1}{3} W C$, and draw QY parallel to CF cutting the circle in Y ; bifect the arch WY in D, and draw DC. DC is the proper pofition of the yard.
Draw the chord WY, cutting $C D$ in $V$ and $C F$ in T ; draw the tangent PD cutting. CF in S and CY in R.
It is evident that WY, PR, are both perpendicular to CD , and are bifected in V and D ; therefore (by reafon of the parallels $\mathrm{QY}, \mathrm{CF}) 4: 3=\mathrm{QW}: \mathrm{CW}$, $=\mathrm{YW}: \mathrm{TW}, \mathrm{E}=\mathrm{RP}: \mathrm{SP}$. Therefore PD : PS $=2: 3$, and $\mathrm{PD}: \mathrm{DS}=2: 1$. 2.E. D. But this divifion cannot be made to the beft advantage till the fthip has attained its greateft velocity, and the angle $w$ CF has been produced.
We muft confider all the three angles, $a, b$, and $x$ as variable in the equation which expreffes the value of $v$, and we muft make the fluxion of this.equation $=0$; theli, by means of the equation $B=A \cdot$ cotan. $b$, we mult obtain the value of $b$ and of $\dot{b}$ in terms of $x$ and $\dot{x}$. With refpect to $n$, obferve, that if we make the angle WCF $=p$, we have $p=a+b+x$; and $p$ being a conftant quantity, we lave $a+b+x=0$. Sabltituting for $a, b, \dot{a}$, and $\dot{b}$, their values in terms of $x$ and $x$, in the Auxionary equation $=0$, we readily obtain $x$, and then $a$ and $b$, which folves the problem.
Let it be required, in the next place, to determine
the courfe and the trim of the fails moft proper for ply ing to windward.

# 30 

In fig. 6. draw FP perpendicular to WC. CF is Problem II. the motion of the fhip; but it is only by the motion ro deterCP that fhe gains to windward. Now CP is $=C F X_{\text {courfe and }}^{\text {mine the }}$ cofin. WCF, or $v^{*}$ cofin. $(a+b+x)$. This muft be ren- trim of the dered a maximum, as follows.
fails mooft -
By means of the equation which expreffes the value proper for of $v$ and the equation $B=A \cdot \operatorname{cotan} . b$, we exterminate pindward. the quantities $v$ and $b$; we then take the fluxion of the quantity into which the expreffon $v^{*}$ cof. $(a+b+x)$ is changed by this operation. Making this fluxion $=o_{3}$ we get the equation which muft folve the problem. This equation will contain the two variable quantities $a$ and $x$ with their fluxions; then make the coefficient of $\dot{x}$ equal to 0 , alfo the coefficient of $\dot{a}$ equal to 0 . This will give two equations which will determine $a$ and $x_{3}$ and from this we get $b=p-a-x$.

Should it be required, in the third place, to find the Problem115 beft courfe and trim of the fails for getting away from To detera given line of coatt CM (fig. 6.), the procefs perfectly meft courfe refembles this laft, which is in fact getting away from and trim of a line of coaft which makes a right angle with the wind. the fails for Therefore, in place of the angle WCF, we muft fubfti-geting atute the angle WCM $\pm W C F$. Call this angle $c$. We way from muf make $v^{*}$ cof. ( $\left.e \pm a \pm b \pm x\right)$ a maximum. The line of analytical procefs is the fame as the former, only $e$ is coaft. here a conftant quantity.

Thefe are the three principal problems which can be Obfervafolved by means of the knowledge that we have obtain-tions on the ed of the motion of the fhip when impelled by an ob preceding lique fail, and therefore making leeway; and they may probiems. be confidered as an abftract of this part of M. Bouguer's work. We have only pointed out the procefs for this folution, and have even omitted fome things taisen notice of by M. Bezout in his very elegant compendium. Our reafons will appear as we go onl. The learned reader will readily fee the extreme difficulty of the fubject, and the immenfe calculations which are neceffary even in the fimpleit cafes, and will grant that it is.out of the power of any but an expert analyf to derive any ufe from them ; but the inathematician can calculate, tables for the ufe of the practical feaman. Thus he can calculate the beft pofition of the fails for advancing in a courfe $90^{\circ}$ from the wind, and the velocity in that courfe; then for $85^{\circ}, 80^{\circ}, 75^{\circ}$, scc. M. Bouguer has given a table of M. $\mathrm{B}^{33}$ u。 this kind; but to avoid the immenfe difficulty of the guer's tzprocefs, he has adapted it to the apparent direction of bie for the wind. We have inferted a few of his numbers, fuit-beat pofied to fuch cafes as can be of fervice, namely, when all tion of the the fails draw, or none ftand in the way of others. Co- fails for ado lumn ilt is the apparent angle of the wind and courfe; anny courfe column 2 d is the correfponding angle of the fails and keel ; and column. 3 d is' the apparent angle of the fails and wind.

| 1 | 2 | 3 |
| :---: | :---: | :---: |
| ${ }_{v 0} \mathrm{CF}$ | DCE | ${ }_{20} \mathrm{CD}$ |
| $103^{\circ} 53^{\prime}$ | $42^{\circ} 30^{\prime}$ | $61^{\circ}{ }^{\circ} 23^{\prime}$ |
| $99 \quad 13$ | $40-$ | 5913 |
| 9425 | 37.30 | 5655 |
| 8928 | $35-$ | 5428 |
| 8423 | 32.30 | 5153 |
| 7906 | $30-$ | 49.06 |
| 23.39 | 2730 | 46.09 |
| 68 -. | 25 - | 43 - |

In all thefe numbers we have the tangent of wCD double of the tangent of DCF.

34 Inurility of thefe calcudations.

But this is really doing but little for the feaman. The apparent direction of the wind is unknown to him till the flip is failing with uniform velocity; and he is ftill uninformed as to the leeway. It is, however, of fervice to him to know, for inftance, that when the angle of the vanes and yards is 56 degrees, the yard fhould be braced up to $37^{\circ} 30^{\circ}$, \&c.

But here occurs a new difficulty. By the conftruction of a fquare-rigged thip it is impofible to give the yards that inclination to the keel which the calculation requires. Few fhips can have their yards braced up to $37^{\circ} 30^{\prime}$; and yet this is required in order to have an incidence of $56^{\circ}$, and to hold a courfe $94^{\circ} 25^{\prime}$ from the apparent direction of the wind, that is, with the wind apparently $4^{\circ} 25^{\prime}$ abaft the beam. A good failing fhip in this pofition may acquire a velocity even exceeding that of the wind Let us fuppofe it only one half of this velocity. We fhall find that the angle WC $w$ is in this cafe about $29^{\circ}$, and the hip is nearly going $123^{\circ}$ from the wind, with the wind almoft perpendicular to the fail ; therefore this utmoft bracing up of the fails is only giving them the pofition fuited to a wind broad on the quarter. It is impoffible therefore to comply with the demand of the mathematician, and the feaman muft be contented to employ a lefs favourable difpofition of his fails in all cafes where his courfe does not lie at leaft eleven points from the wind.

Let us fee whether this reftriction, arifing from neceflity, leaves any thing in our choice, and makes one courfe preferable to another. We fce that there are a predigious number of courfes, and thefe the moft ufual and the moft important, which we muft hold with one trim of the fails; in particular, failing with the wind on the beam, and all cafes of plying to windward, muft be performed with this unfavourable trim of the fails. We are certain that the fmaller we make the angle of incidence, real or apparent, the finaller will be the velocity of the fhip; but it may happen that we fhall gain more to windward, or get fooner away from a lee-coaft, or any object of danger, by failing flowly on one courfe than by failing quickly on another

We have feen that while the trim of the fails remains the fame, the leeway and the angle of the yard and courfe remains the fame, and that the velocity of the fhip is as the finc of the angle of real incidence, that is, as the fine of the angle of the fail and the real direction of the wind.
Let the fhip AB (fig. 8.) hold the courfe CF, with the wind blowing in the direction WC, and having her yards $D C D$ braced up to the fmallett angle $B C D$ which the rigging can admit. Let CF be to CE as the velocity of the fhip to the velocity of the wind; join FE and draw $\mathrm{C} w$ parallel to EF; it is evident that FE is the relative motion of the wind, and $w \mathrm{CD}$ is the relative incidence on the fail. Draw FO parallel to the yard DC, and defcribe a circle through the points COF; then we fay that if the hip, with the fame wind and the fame trim of the fame drawing fails, be made to fail on any other courfe $\mathrm{C} f$, her velocity along CF is to the velocity along $\mathrm{C} f$ as CF is to $\mathrm{C} f$; or, in other words, the thip will employ the fame time in going from C to any point of the circumference CFO
foin $f O$. Then, becaufe the angles CFO, cf $O$ are on
the fame chord CO , they are equal, and $f \mathrm{O}$ is parallel to $d \mathrm{C} d$, the new pofition of the yard correfponding to the new pofition of the keel $a b$, making the angle $d \mathrm{C} b=\mathrm{DCB}$. Alfo, by the nature of the circle, the line CF is to $\mathrm{C} f$ as the fine of the angle COF to the fine of the angle $C O f$, that is (on account of the parallels $\mathrm{CD}, \mathrm{OF}$ and $\mathrm{C} d, \mathrm{O} f$ ), as the fine of WCD to the fine of WC $d$. But when the trim of the fails remains the fame, the velocity of the fhip is as the fine of the angle of the fail with the direction of the wind ; therefore CF is to Cf as the velocity on CF to that on $\mathrm{C} f$, and the propofition is demonftrated.

Let it now be required to determine the beft courfe To det for avoiding a rock R lying in the direction CR , or for mine t withdrawing as faft as poffible from a line of coaft $P Q$. fett co ave Draw CM through R, or parallel to PQ , and let $m$ be ing a the middle of the arch $\mathrm{C} m \mathrm{M}$. It is plain that $m$ is the moft remote from CM of any point of the arch Cm M , and therefore the fhip will recede farther from the coaft PQ in any given time by holding the courfe $\mathrm{C} m$ than by any other courfe.

This courfe is eafily determined ; for the arch $\mathbf{C} m \mathrm{M}$ $=360^{\circ}-(\operatorname{arch} \mathrm{CO}+\operatorname{arch} \mathrm{OM})$, and the arch CO is the meafure of twice the angle CFO, or twice the angle DCB, or twice $\overline{b+x}$, and the arch OM meafures twice the angle ECM.

Thus, fuppofe the tharpeft poffible trim of the fails to be $35^{\circ}$, and the obferved angle ECM to be $70^{\circ}$; then $\mathrm{CO}+\mathrm{OM}$ is $70^{\circ}+140^{\circ}$ or $210^{\circ}$. This being taken from $360^{\circ}$, leaves $150^{\circ}$, of which the half Mm is $75^{\circ}$, and the angle $\mathrm{MC} m$ is $37^{\circ} 30^{\prime}$. 'This added to ECM makes EC $m 107^{\circ} 30^{\prime}$, leaving. WC $m=72^{\circ} 30^{\prime}$, and the fhip mult hold a courfe making an angle of $72^{\circ} 30^{\prime}$ with the real direction of the wind, and WCD will be $37^{\circ} 30^{\prime}$.

This fuppofes no leeway. But if we know that under all the fail which the fhip can carry with fafety and advantage the makes 5 degrees of leeway, the angle DCm of the fail and courfe, or $b+x$, is $40^{\circ}$. Then CO +OM $=220^{\circ}$, which being taken from $360^{\circ}$ leaves $140^{\circ}$, of which the half is $70^{\circ},=\mathrm{Mm}$, and the angle $\mathrm{MC} m=$ $35^{\circ}$, and EC $m=105^{\circ}$, and WC $m=75^{\circ}$, and the fhip muft lie with her head $70^{\circ}$ from the wind, making 5 degrees of leeway, and the angle WCD is $35^{\circ}$.

The general rule for the pofition of the fhip is, that the line on /bipboard wubich bifects the angle $\mathrm{b}+\mathrm{x}$ may alfo bifeat the angle WCM, or make the angle between the courle and the line from which we wifh to withdraw equal to the angle between the fail and the real direction of the wind.

It is plain that this problem includes that of plying to Corulli windward. We have only to fuppofe ECM to be $90^{\circ}$; then, taking our example in the fame fhip, with the fame trim and the fame leeway, we have $b+x=40^{\circ}$. This taken from $90^{\circ}$ leaves $50^{\circ}$ and WC $n=90-25=65$, and the fhip's head mutt lie $60^{\circ}$ from the wind, and the yard muft be $25^{\circ}$ from it.

It muft be obferved here, that it is not always eligible to felect the courfe which will remove the fhip fatteft from the given line' CM ; it may be more prudent to remove from it more fecurely though more flowly. In fuch cafes the procedure is very fimple, viz. to fhape the courfe as near the wind as is poffible.

The reader will alfo eafily fee that the propriety of thefe practices is corrined to thofe courfes only where the practicable trim of the fails is not fufficiently fharp.

## S E A M A N S H I P.

Whenever the courle lies fo far from the wind that it is polfible to make the tangent of the apparent angle of the wind and fail double the tangent of the fail and courfe, it fhould be done.

Thefe are the chief practical confequences which can be deduced from the theory. But we fhould conf:der how far this adjultment of the fails and courfe can be performed. And here occur difficulties fo great as to make it almot impracicable. Wc have always fuppofed the pofition of the furface of the fail to be diflinctly obfervable and meafurable; but this can hardly be affirmed even with refpect to a fail fretched on a yard. Here we fuppofed the furface of the fail to have the fame inclination to the keel that the yard has. This is by no means the cafe; the fail affumes a concave form, of which it is almoft impoffible to affign the direction of the mean impulfe. We believe that this is always confiderably to leeward of a perpendicular to the yard, lying between CI and CE (fig. 6.). This is of fome advantage, being equivalent to a fharper trim. We cannot affirm this, however, with any confidence, becaule it renders the impulie on the weather-leech of the fail fo exceedingly feeble as hardly to have any effect. In failing clofe to the wind the fhip is kept fo near that the weather-leech of the fail is almoft ready to receive the wiad edgewife, and to flutter or fhiver. The moft effective or drawing fails with a fide.wind, efpecially when plying to windward, are the ftayfails. We believe that it is impoffible to fay, with any thing approaching to precifion, what is the polition of the peneral Gurface of a ftayfail, or to calculate the intenfity and direction of the general impulfe; and we affirm with confidence that no man can pronounce on thefe points with any exactnefs. If we can guefs within a third or a fourth part of the truth, it is all we can pretend to ; and after all, it is but a guefs. Add to this, the fails coming in the way of each other, and either becalming them or fending the wind upon them in a direction widely different from that of its free motion. All thefc points we think beyond our power of calculation, and therefore that it is in vain to give the feaman mathematical rules, or"even tables of adjuftment ready calculated; fince he can neither produce that medium pofition of his fails that is required, nor tell what is the pofition which he employs.

This is one of the principal reafons why fo little advantage has been derived from the very ingenious and promifing difquiftions of Bouguer and other mathematicians, and has made us omit the actual folution of the chief problems, contenting ourfelves with pointing out the procefs to fuch readers as have a relifh for thefe analytical operations.

But there is another principal reafon for the fmall progrefs which has been made in the theory of feamanfhip: This is the errors of the theory itfelf, which fuppofes the impulfions of a fluid to be in the duplicate ratio of the fine of incidence. 'The moft careful comparifon which has becn made between the refults of this theory and matter-of fact is to be feen in the experiments made by the members of the Royal Academy of Sciences at Paris, mentiont in the article Resisf ANCE of Fluids. We fubjoin another abftract of them in the following table; where col. Ift gives the angle of incidence; col. 2 d gives the impulfions really obferved; col. 3d the impulfes, had they followed the duplicate

Vol. XIVII. Part I:
ratio of the fines; and col 4 tis the mpulfes, if tney were in the fimple ratio of the fines.

| Angle <br> of <br> incid. | Impul- <br> fiors <br> obferved. | Impulfe <br> as <br> Sinc | Impulle <br> as <br> Sine. |
| :---: | :---: | :---: | :---: |
| 90 | 1000 | 1000 | 1000 |
| 84 | 989 | $9^{8} 9$ | 995 |
| 78 | 958 | 957 | 978 |
| 72 | 908 | 905 | 951 |
| 66 | 845 | 835 | 914 |
| 60 | 771 | 750 | 866 |
| 54 | 693 | 655 | 809 |
| 48 | 615 | 552 | 743 |
| 42 | 543 | 448 | 669 |
| 36 | 480 | 346 | 587 |
| 30 | 440 | 250 | 500 |
| 24 | 424 | 165 | 407 |
| 18 | 414 | 96 | 309 |
| 12 | 406 | 43 | 208 |
| 6 | 400 | 11 | 105 |

Here we fee an enormous difference in the great obliquities. When the angle of incidence is only fix degrees, the obferved impulfe is forty times greater than the theoretical impulfe; at $12^{\circ}$ it is ten times greater; at $18^{\circ}$ it is more than four times greater ; and at $24^{\circ}$ it is almoft three times greater.

No wonder then that the deductions from this theory And the deare fo ufelefs and fo unlike what we familiarly obferve. duations We took notice of this when we were, confidering the frim it ufeleeway of a rectangular box, and thus faw a reafon for ${ }^{1 f f}$, admitting an incomparably fmaller leeway than what would refult from the laborious computations neceffary by the theory. This error in theory has as great an influence on the impullions of air when acting obliquely on a fail; and the experiments of Mr Robins and of the Chevalier Borda on the oblique impulfions of air are perfectly conformable (as far as they go) to thofe of the acadenicians on water. The oblique impulfions of the wind are thereforc mucli morc efficacious for preffing the flip in the direction of her courfe than the theory allows us to fuppofe ; and the progrefs of a hip plying to windward is much greater, both becaufe the soblique impulfes of the wind are more effective, and becaufe the leeway is much fmaller, than we fuppofe. Were not this the cafe, it would be inpoffible for a fquare-rigged fhip to get to windward. The impulfe on her fails when clofe-hauled would be fo trifling that fhe would not have a third part of the velocity which we fee her acquire: and this trifling velocity would be wafted in leeway; for we have feen that the diminution of the oblique impulfes of the water is accompanied by ant increafe of leeway. But we fee that in the great obliquities the impulfions continue to be very confiderable, and that even an incidence of fix degrecs gives an impulfe as great as the theory allows to an incidence of 40 . We may therefore, on all occafions, keep the yards more fquare ; and the lofs which we fuftain by the diminution of the very oblique impulfe will be more than compenfated by its more favourable direction with refpect to the fhip's keel. Let us take an example of this. Suppofe the wind about two points before the bean, making an angle of $68^{\circ}$ with the keel. The theory affigns $43^{\circ}$ for the inclination of the wind to

Dd

## S E A M A

## N S H I P.

the fail, and $25^{9}$ for the trim of the fail. The perpendicular impulfe being fuppofed 1000 , the theoretical inpulfe for $43^{\circ}$ is 405 . This reduced in the proportion of radius to the fine of $25^{\circ}$, gives the impulfe in the direction of the courfe only 197.

But if we eafe off the lee-braces till the yard makes an angle of $50^{\circ}$ with the kcel , and allows the wind an incidence of tio more than $18^{\circ}$, we have the experimented impulfe 414, which, when reduced in the proportion of radius to the fine of $50^{\circ}$, gives an effective impulfe 317. In like manner, the trim $56^{\circ}$, with the incidence $12^{\circ}$, gives an cffective inpulfe 3.37 ; and the trim $62^{\circ}$, with the incidence only $6^{\circ}$, gives 353 .
Hence it would at firl fight appear that the angle DCB of $62^{\circ}$ and WCD of $6^{\circ}$ would be better for holding a courfe within fix points of the wind than any more oblique polition of the fails; but it will only give a greater initial impulfe. As the fhip accelerates, the wind apparently comes ahead, and we mult continue to brace up as the fhip frefhens her way. It is not unufual for her to acquire half or two thirds of the velocity of the wind; in which cafe the wind comes apparently ahead more than two points, when the yards mult be braced up to $35^{\circ}$, and this allows an impulfe no greater than about $7^{\circ}$. Now this is very frequently obferved in grood fhips, which in a brifk gale and fmooth water will go five or fix knots clofe-hauled, the flip's head fix points from the wind, and the fails no more than juit full, but ready to fhiver by the finalleft luff. All this would be impoffible by the ufual theory ; and in this refpect thefe experiments of the French academy give a fine illuttration of the feaman's practice. They account for what we fhould otherwife be much puzzled to explain ; and the great progrefs which is made by a flip clofe-hauled being perfectly agreeable to what we fhould expect from the law of oblique impulion deducible from thefe fo often mentioned experiments, while it is totally incompatible with the common theory, fhould make us abandon the theory without hefitation, and ftrenuoully fet about the eftablifhment of another, variety of circumflances, fo as to furnifh a feries of impulfions for all angles of obliquity. We have but four or five experiments on this fubject, viz. two by Mr Robins and two or three by the Chevalier Borda. Having thus gotten a feries of impulions, it is very practicable to raile on this foundation a practical inftitute, and to give a table of the velocities of a fhip fuited to every angle of inclination and of trim ; for nothing is more certain than the refolution of the impulfe perpendicular to the fail into a force in the direction of the keel, and 2 lateral force.

We are alfo difpofed to think that experiments might be made on a model very nicely rigged with fails, and trimmed in every different degree, which would point out the mean direction of the impulfe on the fails, and the comparative force of thefe impulfes in different directions of the wind. The method would be very fimilar to that for examining the impulfe of the water on the hull. If this can alfo be afcertained experimentally, the intelligent reader will eafily fee that the whole motion of a fhip under fail may be determined for every cafe. Tables may then be conffructed by calculation,
or by graphical operations, which will give the velecities of a thip in every different courfe, and correfponding to every trin of fail. And let it be here obferved, that the trim of the fail is not to be eftinated in degrees of inclination of the yards; becaufe, as we have already remarked, we cannot obferve nor adjuit the lateen fails in this way. But, in making the experiments for afcertaining the impulfe, the exact poftion of the tacks and fheets of the fails are to be noted; and this combination of adjuftments is to pafs by the name of a certain trim. Thus that trim of all the fails may be called 40, whofe direction is experimentally found equivalent to a flat furface trimmed to the obliquity $40^{\circ}$.

Having done this, we may conftruct a figure for each trim fimilar to fig. 8. where, inftead of a circle, we fhall have a curve COM $\mathrm{M}^{\prime} \mathrm{F}^{\prime}$, whofe chords $\mathrm{CF}^{\prime}$, $\varepsilon f^{\prime}$, \&c. are proportional to the velocities in thefe courfes; and by means of this curve we can find the point $m^{\prime}$, which is molt remote from any line CM from which we wifh to withdraw: and thus we may folve all the principal problems of the art.
We hope that it will not be accounted prefumption in us to expect more improvenent frem a theory founded on judicious experiments only, than from a theory of the impulfe of fluids, which is found fo inconfiftent with obfervation, and of whofe fallacy all its authors, from Newton to D'Alembert, entertained ftrong fufpicions. Again, we beg leave to recommend this view of the fubjeef to the attention of the Society for the Improvement of Naval Architecture. Should thefe patriotic gentlemen entertain a favourable ${ }_{f}^{\text {t }}$ opinion of the plan, and honour us with their corre-prove fpondence, we will cherfully impart to them our no-o tions of the way in which both thefe trains of experiments may be profecuted with fuccefs, and refults obtained in which we may confide; and we content ourfelves at prefent with offering to the public thefe hints, which are not the fpeculations of a man of mere fcience, but of one who, with a competent knowledge of the laws of mechanical nature, has the experience of feveral years fervice in the royal navy, where the art of working of fhips was a favourite object of his fcientific attention.

With thefe obfervations we conclude our difcuffion Meai of the firt part of the feaman's tafk, and now proceed ploye to confider the means that are employed to prevent or prod to produce any deviations from the uniform rectilineal viatii courfe which has been felected.

Here the fhip is to be confidered as a body in free cuuri fpace, convertible round her centre of inertia. For whatever may be the point round which fhe turns, this motion may always be confidered as compounded of a rotation round an axis paffing through her centre of gravity or inertia. She is impelled by the wind and by the water acting on many furfaces differently inclined to each other, and the impulfe on each is perpendicular to the furface. In order therefore that fhe may continue fteadily in one courfe, it is not only neceffary that the impelling forces, eftimated in their mean direction, be equal and oppofite to the refifting forces eltimated in their mean direction; but alfo that thefe two directions may pafs, through one point, otherwife fhe will be affected as a $\log$ of wood is when pufhed in oppofite directions by two forces, which are equal indeed, but are applied to different parts of the log. A fhip muft 8

## S E A M A

 be ennfidered as a lever, acted on in different parta by forces in different directions, and the whole balancing each other round that point or axis where the equivalent of all the refifting forces paffes. This may be confidered as a point fupported by this refifing force, and as a fort of fulcrum : therefore, in order that the fhip may maintain her pofition, the energies or momenta of all the impelling forces sound this point muft balance each other.When a fhip fails right afore the wind, with her yards fquare, it is evident that the impulfes on each fide of the keel are equal, as alfo their mechanical momenta round any axis paffing perpendicularly through the keel. So are the actions of the water on her bows. But when fhe fails on an oblique courfe, with her yards braced up on either fide, fhe fuftains a preflure in the direction CI (fig. 5.) perpendicular to the fail. This, by giving her a lateral preffure LI, as well as a preffure CL ahead, caufes her to make leeway, and to move in a line $\mathrm{C} b$ inclined to CB . By this means the balance of action on the two bows is deftroyed; the general impulfe on the lee-bow is increafed; and that on the wea-ther-bow is diminifhed. The combined impulfe is therefore no longer in the direction BC , but (in the ftate of uniform motion) in the direction IC.

Suppofe that in an inftant the whele fails are annihilated and the impelling preffure CI, which precifety balanced the refitting preffure on the bows, removed. The thip tends, by her inertia, to proceed in the direction C $b$. I'his tendency produces a continuation of the refiftance in the oppofite direction IC, which is not direetly oppofed to the tendency of the Thip in the direction $\mathbf{C} b$; therefore the Thip's head would immediately come up to the wind. The experienced feaman will recollect fomething like this when the fails are fuddenly lowered when coming to anchor. It does not happen folely from the obliquity of the action on the bows: It would happen to the parallelopiped of fig. 2. which was fuftaining a lateral impulfion $B \cdot$ fin. $^{2} x$, and a direct impulfion A. cof. ${ }^{2} x$. Thefe are continued for a moment after the annihilation of the fail; but being no longer oppofed by a force in the direction CD, but by a force in the direction $C b$, the force $B \cdot$ fin. ${ }^{2} x$ mult prevail, and the body is not only retarded in its motion, but its head turns towards the wind. But this effeet of the leeway is greatly increafed by the curved form of the fhip's bows. This occafions the centre of effort of all the impulfions of the water on the lee fide of the fhip to be very far forward, and this fo much the more remarkably as fhe is fharper afore. It is in general not much abaft the foremaft. Now the centre of the fhip's tendency to continue her motion is the fame with her centre of gravity, and this is generally but a little before the mainmait. She is therefore in the fame condition nearly as if fhe were pufhed at the mainmaft in a direction parallel to $C b$, and at the foremalt by a force parallel to IC. The evident confequence of this is a tendency to come up to the wind. This is independent of all fituation of the fails, provided only that they have been trimmed obliquely.

This tendency of the fhip's head to windward is called griping in the feaman's language, and is greatelt in fhips which are fharp forward, as we have faid already. This circumftance is eafily undertood. Whatever is the direction of the fhip's motion, the abfolute

N S HII F.
impulfe on that part of the bow immediately contigh ous to $D$ is perpendicular to that very part of the furface. The more acute, therefore, that the angle of the bow is, the more will the impulfe on that part be perpendicular to the keel, and the greater will be its energy to turn the head to windward.

Thus we are enabled to undertand or to fee the pro- Ptopi ictyof priety of the difpofition of the fails of a fhip. We fee the difpotio her crowded with fails forward, and even many fails ex-tion of ths tended far before her bow, fuch as the fpritiail, the tall, of a bowfprit topfail, the fore-topnaat Itaylanl, the jib, and hip. flying jib. The fails abaft are comparatively fmaller. The fails on the mizenmaft are much fmaller that thofe on the fore aft. All the Itayfails hoifted on the mainmaft may be confidered as headfails, becaufe their centres of effort are confiderably before the centre of gravity of the Mip; and notwithfanding this difpofition, it generally requires a fmall action of the rudder to counteract the windward tendency of the lee-bow. This is confidered as a good quality when moderate; becaufe it enables the feaman to throw the fails aback, and ftop the fhip's way in a moment, if the be in danger from any thing ahead; and the fhip which does not carry a little of a weather helm, is always a dull failer.

In order to judge fomewhat more accurately of the action of action of the water and fails, fuppofe the fhip $A B_{\text {the water }}^{\text {Action }}$ (fig. 9.) to have its fails on the mizenmaft $\bar{D}$, the and the mainnalt $E$, and foremalt $F$, braced up or trimmed fails. alike, and that the three lines $\mathrm{D} i, \mathrm{E}_{e}, \mathrm{~F} f$, perpendicular to the fails, are in the proportion of the impulfes on the fails. The fhip is driven ahead and to leeward, and moves in the path $a \mathrm{Cb}$. This path is fo inclined to the line of the keel that the medium direction of the refiftance of the water is parallel to the direction of the impulfe. A line CI may be drawn parallel to the lines $\mathrm{D} i, \mathrm{E}_{e}, \mathrm{~F} f$, and equal to their fum : and it may be drawn from fuch a point $C$, that the actions on all the parts of the hull between C and B may balance the momenta of all the actions on the hull between C and A . This point may juftly be called the centre of effort, or Centre of the centre of refiflance. We cannot determine this point effort for want of a proper theory of the refiftance of fluids. Nay, although experiments like thofe of the Parifian academy fhould give us the moft perfect knowledge of the intenfity of the oblique impulles on a fquare foot, we fhould hardly be benefited by them: for the action of the water on a fquare foot of the hull at $p$, for inftance, is fo modified by the intervention of the fream of water which has ftruck the hull about B , and glided along the bow $\mathrm{B} o p$, that the preffure on $p$ is totally different from what it would have been were it a \{quare foot or furface detached from the reft, and prefented in the fame pofition to the water moving in the direction $b \mathrm{C}$. For it is found, that the refifances given to planes joined fo as to form a wedge, or to curved furfaces, are widely different from the accumulated refiftances, calculated for their feparate parts, agreeably to the experiments of the academy on fingle furfaces. We therefore do not attempt to afcertain the point C by theory; but it may be accurately determined by the experiments which we have fo ftrongly recommended; and we offer this as an additional inducement for profecuting them. To he de-

Draw through C a line perpendicular to CI , that is, terminee. parallel to the fails; and let the lines of impulfe of the by expses-
three fails cut it in the points $i, k$, and $m$. This line im may be confidered as a lever, moveable round C , and acted on at the points $i, k$, and $m$, by three forces. The rotatory momentum of the fails on the mizenmalt is $\mathrm{D} i \times i \mathrm{C}$; that of the fails on the mainmat is $\mathrm{E} e \times k \mathrm{C}$; and the momentum of the fails on the forematt is $\mathrm{F} f \times m \mathrm{C}$. The two firt tend to prefs forward the arm $\mathrm{C} i$, and then to turn the fhip's head towards the wind. The action of the fails on the foremaft tends to pull the arm C m forward, and produce a contrary rotation. If the fhip under thefe thrce fails keeps theadily in her courfe, without the aid of the rudder, we mut have $\mathrm{D} i \times i \mathrm{C}+\mathrm{E} e \times k \mathrm{C}=\mathrm{F} f \times m \mathrm{C}$. This is very poffible, and is often feen in a his) under her mizen-topfail, main-topfail, and fore-topfail, all parallel to one another, and their furfaces duly proportioned by reefing. If more fails are fet, we muft always have a fimilar equilibrium. A certain number of them will lave their efforts directed from the larboard arm of the lever im lying to leeward of CI, and a certain number will have their efforts directed from the ftarboard arm lying to windward of CI. The fum of the products of each of the firlt fet, by their diffances from C , muft be equal to the fum of the fimilar products of the other fet. As this equilibrium is all that is neceffary for preferving the fhip's pofition, and the ceffation of it is immediately followed by a converfion; and as thefe ftates of the flip may be had by means of the three fquare fails only, when their furfaces are properly proportion-ed-it is plain that every movement may be executed and explained by their means. This will greatly fimplify our future difcuffions. We fhall therefore fuppofe in future that there are only the three topfails fet, and that their furfaces are fo adjufted by reefing, that their actions exactly balance each other ronnd that point $C$ of the middle line $A B$, where the actions of the water on the different parts of her botttom in like manner balance each other. This point C may be differently fituated in the fhip according to the leeway fhe makes, depending on the trim of the fails; and therefore although a certain proportion of the three furfaces may balance each other in one flate of leeway, they may happen not to do fo in another ftate. But the equilibrium is evi. dently attainable in every cafe, and we therefore fhall always fuppofe it.

It muft now be obferved, that when this equilibrium is deftroyed, as, for example, by turning the edge of the mizen-topfail to the wind, which the feamen call fivering the mizen-topfail, and which may be confidered as equivalent to the removing the mizen-topfail eatirely, it does not follow that the fhip will round the point C , this point remaining fixed. The thip muft be confidered as a free body, ftill acted on by a naniber of forces, which no longer balance each other; and fhe muft therefore begin to turn round a fpontaneous axis of converfion, which muft be determined in the way fet forth in the article Rotation. It is of importance to point out in general where this axis is fituated. , Therefore let G (fig. 10.) be the centre of gravity of the fhip. Draw the line $q \mathrm{Gv}$ parallel to the yards, cutting $\mathrm{D} d$ in $q, \mathrm{E} e$ in $r, \mathrm{CI}$ in $t$, and $\mathrm{F} f$ in $v$. While the three fails are fet, the line $q$ v may be confidered as a lever acted on by four forces, viz. $\mathbf{D} d$, impelling the lever forward perpendicularly in the point $q ; \mathrm{E} \rho$, impelling it forward in the point $r ; \mathrm{F}_{\mathrm{y}}$ impelling it for-
ward in the point $v$; and CI, impelling it backward in the point $t$. Thele forces balance each other both in refpect of progreffive motion and of rotatory energy: for CI was taken equal to the fum of $\mathrm{D} d, \mathrm{E} e$, and $\mathrm{F} f$; fo that no aeceleration or retardation of the fhip's progrefs in her courfe is fuppofed.

But by taking away the mizen-topfail, both the equilibriums are veftroyed. A part $\mathrm{D} d$ of the accelerating force is taken away ; and yet the flip, by her inertia or inherent force, tends, for a moment, to proceed in the direction $\mathrm{C} p$ with her former velocity ; and by this tendency exerts for a moment the fame preffure CI on the water, and fuftains the fame refiftance IC. She mult therefore be retarded in her motion by the excefs of the refiftance $I C$ over the remaining impelling forces $\mathrm{E}_{e}$ and $\mathrm{F} f$, that is, by a force equal and oppofite to $\mathrm{D} d$. She will therefore be retarded in the fame manner as if the mizen-topfail were fill fet, and a force equal and oppofite to its action were applied to $G$ the centre of gravity, and fhe would foon acquire a finaller velocity, which would again bring all things into equilibrium; and fhe would ftand on in the fame courfe, without changing either her leeway or the pofition of her head.

- But the equilibrium of the lever is alfo deftroyed. It is now acted orn by three forces only, viz. E $e$ and Ff, impelling it forward in the points $r$ and $v$, and $1 C$ impelling it backward in the point t. Makerv:ro= $\mathrm{Ee}+\mathrm{F} f: \mathrm{F} f$, and make op parallel to CI and equal to $\mathrm{E} e+\mathrm{F} f_{0}$. Then we know, from the common principles of mechanies, that the force $o p$ acting at $o$ will have the fame momentum or energy to turn the lever round any point. whatever as the two forces $\mathrm{E}_{e}$ and $\mathrm{F} f$ applied at $r$ and $v$; and now the lever is acted on by two forces, viz. IC, urging it backwards in the point $t$, and $o p$ urging it forwards in the point $o$. It mult therefore turn round like a floating log, which gets two blows in oppofite directions. If we now make IC $-\theta p$ $: o p=t o: t x$, or $I C-o p: I C=t 0: o x$, and apply to the point $x$ a force equal to $I C-o p$ in the direction IC; we know, by the common principles of mechanics, that this force IC-o will produse the fame rotation round any point as the two forces IC and op applied in their proper directions at $t$ and $o$. Let us examine the fituation of the point $x$.

The force $I C-o p$ is evidently $=\mathrm{D} d$, and $o p$ is $=\mathrm{E} e+\mathrm{F} f$. '1 herefore ot:tx= $\mathrm{D} d: o p$. But becaufe, when all the fails were filled, there was an equilibrium round $C$, and therefore round $t$, and becaufe the force $o p$ acting at $o$ is equivalent to $\mathrm{E} e$ and $\mathrm{F} f$ acting at $r$ and $v$, we muft ftill have the equilibrium; and therefore we have the momentum $\mathrm{D} d \times q t=o p$ Xot. Therefore ot: $t q=\mathrm{D} d: o p$, and $t q=t x$. Therefore the point $x$ is the fame with the point $q$.

Therefore, when we fhiver the mizen-topfail, the ro tation of the fhip is the fame as if the fhip were at reft, ${ }_{i}$ and a force equal and oppofite to the action of the mi-mize zen-topfail were applied at $q$ or at D , or at any point fall. in the line $\mathrm{D} q$.

This might lave been fhown in another and fhorter way. Suppofe all fails filled, the fhip is in equilibrio. This will be difturbed by applying to D a force oppo fite to $\mathrm{D} d$; and if the force be alfo equal to $\mathrm{D} d$, it is evident that thefe two forces deftroy each other, and that this application of the force $d D$ is equivalent to
the taking away of the mizen-topfail. But we chofe to give the whole mechanical inveftigation; becaufe it gave us an opportunity of pointing out to the reader, in a cafe of rery eafy comprethenfion, the precife manner in which the fhip is acted on by the different fails and by the water, and what fhare each of them has in the motion ultimately produced. We fhall int repeat this manner of procedure in other cafes, becaufe a little : :flection on the part of the reader will now enable him to trace the modus operandi through all its fteps.

We now fee that, in refpect both of progreffive motion and of converfion, the fhip is affected by fhivering the fail $D$, in the fame manner as if a force equal and oppofite to $\mathrm{D} d$ were applied at D , or at any point in the line $\mathrm{D} d$. We muit now have recourfe to the principles effablifhed under the article Rotation.

Let $p$ reprefent a particle of matter, $r$ its radius vector, or its diftance $p \mathrm{G}$ from an axis paffing through the centre of gravity $G$, and let $M$ reprefent the whole quantity of matter of the fhip. 'Then its momentrum of inertia is $=\int p \cdot r^{2}\left(\right.$ fee Rotation, $n^{\circ}$ 18.) The fhip, impelled in the point $D$ by a force in the direction $d \mathrm{D}$, will begin to turn round a fpontaneous vertical axis, paffing through a point $S$ of the line $q \mathrm{G}$, which is drawn through the centre of gravity G, perpendicular to the direction $d \mathrm{D}$ of the external force, and the diffance GS of this axis from the centre of gravity is $=\frac{\int p \cdot r^{2}}{M \cdot G q}\left(\right.$ fee Rotation, $\left.n^{n} 96.\right)$, and it is taken on the oppofite fide of G from $q$, that is, S and $q$ are on oppolite fides of $G$.

Let us exprefs the external force by the fymbol $F$. It is equivalent to a certain number of pounds, being the preffure of the wind moving with the velocity V and inclination $a$ on the firface of the fail D ; and may therefore be computed either by the theoretical or experimental law of oblique impulfes. Having obtained this, we can afcertain the angular velocity of the rotation and the abfolute velocity of any given point of the fhip by means of the theorems eftablifhed in the article Rotation.

But before we proceed to this inveftigation, we fhall confider the action of the rudder, which operates precifely in the fame manner. Let the fhip AB (fig. 11.) have her rudder in the pofition $A D$, the helm being hard a-ftarboard, while the fhip failing on the ftarboard tack, and making leeway, keeps on the courfe $a b$. The lee furface of the rudder metts the water obliquely. The very foot of the rudder meets it in the direction DE parallel to $a b$. The parts farther up meet it with various obliquities, and with various velocities, as it glides round the bottom of the fhip and falls into the wake. It is abfolutely impoffible to calculate the accumulated impulfe. We fhall not be far miftaken in the defection of each contiguous filament, as it quits the bottom and glides along the rudder; but we neither know the velocity of thefe filaments, nor the deflection and velocity of the filaments gliding without them. We therefore imagine that all computations on this fubject are in vain. But it is enough for our purpofe that we know the direction of the abfolute preffure which they exert on its furface. It is in the direction $\mathrm{D} d$, perpendicular to that furface. We alfo may be confident that this preffure is very confider.

N S H I P.
able, iu proportion to the action of the water on the mip's bows, or of the wind on the fails ; and we may fuppofe it to be nearly in the proportion of the fquare of the velocity of the fhip in her courfe ; but we cannot affirm it to be accurately in that proportion, for reafons that will readily occur to one who confiders the way in which the water falls in behind the hip.
It is obferved, however, that a fine failer always ${ }_{5} 53$ fteers well, and that all movements by means of the fine failer, rudder are performed with great rapidity when the velocity of the fhip is great. We fhall fee by and by, that the fpeed with which the thip performs the angular movennents is in the proportion of her progreffive velocity : For we fhall fee that the fquares of the times of performing the evolution are as the impulfes inverfely, which are as the fquares of the velocities. There is perhaps no force which acts on a flhip that can be more accurately determined by experiment than this. Let the fhip ride in a ftream or tideway whofe velocity is accurately meafured; and let her ride from tivo moorings, fo that leer bow may be a fixed psint. Let a fmall tow-line be laid out from her ftern or quarter at right angles to the kecl, and connected with fome apparatus fitted up on fhore or on board another fhip, by which the ftrain on it may be accurately meafured; a perfon converfant with mechanics will fee many ways in which this can be done. Perhaps the following may How to deo be as good as any : Let the end of the tow-line be fixed ermine it. to fome point as high out of the water as the point of the fhip from which it is given out, and let this be very high. Let a block with a hook be on the rope, and a confiderable weight hung on this hook. 'I'hings being thus prepared, put down the helm to a certain angle, fo as to caule the hip to fheer off from the point to which the far end of the tow-line is attached. This will ftretch the rope, and raife the weight out of the water. Now heave upon the rope, to bring the hip back again to her former pofition, with her keel in the direction of, the ftream. When this pofition is attained, note carefully the form of the rope, that is, the angle which its two parts make with the horizon. Call this angle $a$. Every perfon acquainted with thefe fubjects knows that the horizontal ftrain is equal to half the weight multiplied by the cotangent of $a$, or that 2 is to the cotangent of $a$ as the weight to the horizontal ftrain. Now it is this ftrain which balances and therefore meafures the action of the rudder, or $\mathrm{D} e$ in fig. II. Therefore, to have the abfolute impulfe $\mathrm{D} d$, we muft increafe $\mathrm{D} e$ in the proportion of radius to the fecant of the angle $b$ which the rudder makes with the keel. In a great thip failing fix miles in an hour, the impulfe on the rudder inclined $30^{\circ}$ to the keel is not lefs than 3000 pounds. 'The furface of the rudder of fuch a ihip contains near 80 fquare fect. It is not, however, very neceffary to know this abfolute impulie $\mathrm{D} d$, becaufe it is its part De alone which meafures the energy of the rudder in producing a converlion. Such experiments, made with various politions of the rudder, will give its energies correfponding to thefe pofitions, and will fettle that long difputed point which is the beit pofition for turning a flip. On the hypothefis that the impulfions of fluids are in the duplicate ratio of the fines of incidence, there can be no doubt that it fhould make an angle of $54^{\circ} 44^{\prime}$ with the keel. But the form of a large fhip will not admit of this, becaufe a tiller of a length fufficient for managing the rudder in failing with great velocity has not room to deviate above $30^{\text {? }}$ from the direction of the keel; and in this polition of the rudder the mean obliquity of the filaments of water to ite furface cannot exceed $40^{\circ}$ or $45^{\circ}$. A greater angle would not be of much fervice, for it is never for want of a proper obliquity that the rudder fails of producing a converfion.
Why a fhip A flip miffes flays in rough weather for want of a mifits flays, fufficient progreffive velocity, and becaufe her bows are beat off by the waves: and there is feldom any diff. culty in wearing the fhip, if fhe has any progreffive motion. It is, however, always defirable to give the rudder as much influence as poffible. Its furface fhould be enlarged (efpecially below) as much as can be done confiftently with its ftrength and with the power of the fteerfmen to manage it ; and it fhould be put in the moft favourable fituation for the water to get at it with great velocity ; and it flould be placed as far from the axis of the Raip's motion as poffible. Thefe points are obtained by making the ftern-poft very upright, as has always beer done in the Frencl dockjards. The Britifl thips have a much greater rake ; but our builders are gradually adopting the French forms, experience hawing taught us that their fhips, when in our poffeffion, are much more obedient to the heln than our own. In order to afcertain the motion produced by the action of the rudder, draw from the centre of gravity a line $\mathrm{G} q$ perpendicular to $\mathrm{D} d$ ( $\mathrm{D} d$ being drawn thro' the centre of effort of the rudder). Then, as in the confideration of the action of the fails, we may conceive the line $q G$ as a lever connected with the fhip, and impelled by a force $\mathrm{D} d$ acting perpendicularly at $q$. The -confequence of this will be, an incipient converfion of the faip about a vertical axis paffing through fome point $S$ in the line $q \mathrm{G}$, lying on the other fide of G from $q$; and we have, as in the former cafe, $\mathrm{GS}=$ $\int \frac{p \cdot r^{2}}{M \cdot G q}$.
${ }^{56}$ action Thus the action and effects of the fails and of the

The action of the rud-rueder are perfectly fimilar, and are to be confidered in der fimilar the fante manner. We fee that the action of the rudto that of der, though of a fmall furface in comparifon of the fails, the fails, and very great. mult be very great: For the impulfe of water is many huudred times greater than that of the wind; and the $\operatorname{arm} q \mathrm{G}$ of the lever, by which it aets, is incomparably greater than that by which any of the impulfions on the fails produces its effect ; accordingly the fhip yields much more rapidly to its action than fhe does to the lateral impulfe of a fail.

Obferve here, that if G were a fixed or fupported axis, it would be the fame thing whether the abfolute force $\mathrm{D} d$ of the rudder acts in the direction $\mathrm{D} d$, or its tranfuerfe part $\mathrm{D}_{e}$ acts in the direction $\mathrm{D}_{e}$, both would produce the fame rotation ; but it is not fo in a free body. The force $\mathrm{D} d$ both tends to retard the Ahip's motion and to produce a rotation: It retards it as much as if the fame force $\mathrm{D} d$ liad been immediately applied to the centre. And thus the real motion of the fhip is compounded of a motion of the centre in a direction parallel to $\mathrm{D} d$, and of a motion round the centre. Thefe two conftitute the motion round S .
As the effects of the action of the rudder are both more xemarkable and fomewhat more fimple than thofe of the fails, we fhall employ them as an example of the mechanifm of the motions of converfion in general ; and as we mult content ourflves in a work like this with

N S H I P.
what is very general, we fhall fimplify the inveftigation by attending only to the motion of converfion. We can get an accurate notion of the whole motion, if wanted for any purpofe, by combining the progreffive or retrograde motion parallel to $\mathrm{D} d$ with the motion of rotation which we are about to determine.
In this cafe, then, we obferve, in the firft place, that the angular velocity (fee Rotation, $\mathrm{n}^{\circ}$ 22.) is $\frac{\mathrm{D} \cdot \cdot q \mathrm{G} \text {; }}{\sqrt[\int p r^{2}]{ }}$ and, as was thown in that article, the velocity of rotation increafes in the proportion of the time of the forces uniform action, and the rotation would be uniformly accelerated if the forces did realiy act uniformly. This, however, cannot be the cafe, becaufe, by the fhip's change of pofition and change of progreffive velocity, the direction and intenfity of the impelling force is continually changing. But if tivo hips are performing fimilar evolutions, it is obvious that the changes of force are fimilar in fimilar parts of the evolution. Therefore the confideration of the momentary evolution is fufficient for enabling us to compare the motions of fhips actuated by fimilar forces, which is alt we have in view at prefent.
The velocity $\tau$, generated in any time $t$ by the continuance of an invariable momentary acceleration (which is all that we mean by faying that it is produced by the action of a conttant accelerating force), is as the acceleration and the time jointly. Now what we call the angular velocity is nothing but this momentary acceleration. Therefore the velocity $v$ generated in the time $t$ is $=\frac{F \cdot q G}{\int \rho r^{2}}$.

The expreffionof the angular velocity is alfo the ex- Angul preffion of the velocity $v$ of a point fituated at the di-velocil ftance 1 from the axis G.

Let $z$ be the fpace or arch of revolution defcribed in the time $t$ by this point, whofe diflance from $G$ is $=1$. Then $\dot{z}=v i=\frac{\mathrm{F} \cdot q \mathrm{G}}{\int p r^{2}} t i$, and taking the fluent $z=\frac{\mathrm{F} \cdot q \mathrm{G}}{\int p^{2}}{ }^{t 2}$. This arch meafures the whole angle of rotation accomplifhed in the time $t$. Thefe are therefore as the fquares of the times from the beginning of the rotation.

Thofe evolutions are equal which are meafured by equal arches. Thus two motions of 45 deyrees each ate equal. Therefore becaufe $z$ is the fame in both, the quantity $\frac{\mathrm{F} \cdot q \mathrm{G}}{\int \rho r} t^{2}$ is a conftant quantity, and $t^{2}$ is reciprocally proportional to $\frac{F \cdot q G}{\int \rho r^{2}}$, or is proportional to $\frac{\int_{p r^{2}}}{\overline{\mathrm{~F}} \cdot q \mathrm{G}}$ and $t$ is proportional to $\frac{\sqrt{\int p r^{2}}}{\sqrt{\mathrm{~F} \cdot q \mathrm{G}}}$. That is to fay, the times of the fimilar evolutions of two fhips are as the fquare root of the momentum of inertia directly, and as the fquare root of the momentum of the rudder or fail inverfely. This will enable us to make the comparifon eafily. Let us fuppofe the flips perfectly finilar in form and rigging, and to differ only in length $L$ and $l ; \int P \cdot R^{2}$ is to $\int p^{2}$ as $L^{5}$ to $l^{5}$.

## S E A M A

For the fimilar particles $P$ and $p$ contain quantities of matter which are as the cubes of their lineal dimenfions, that is, as $\mathrm{L}^{3}$ to $l^{3}$. And becaufe the particles are fimilarly fituated, $\mathrm{R}^{2}$ is to $r^{2}$ as $\mathrm{L}^{2}$ to $l^{2}$. Therefore $P \cdot R^{2}: p \cdot r^{2}=1 . .^{5}: l^{5}$. Now F is to $f$ as $\mathrm{I}^{2}$ to $l^{2}$. For the furfaces of the fimilar rudders or fails are as the fquares of their lineal dimenfions, that is, as $L^{2}$ to $l^{2}$. And, laftly, G $q$ is to $g q$ as $L$ to $l$, and therefore $\mathbf{F} \cdot \mathbf{G} q: f \cdot g q=\mathrm{L}^{3}: l^{3}$. Therefore we have $\mathrm{T}^{2}$ : $t^{2}=\int \frac{\mathrm{P} \cdot \mathrm{R}^{2}}{\mathrm{~F} \cdot \mathrm{G} q}: \frac{\int p^{\cdot r^{2}}}{f \cdot g q}=\frac{\mathrm{L}^{5}}{\mathrm{~L}^{3}}: \frac{l^{5}}{l^{3}}=\mathrm{L}^{2}: l^{2}$, and T : $t=\mathrm{L}: l$.

## of fi- Therefore the times of performing fimilar evolutions

 with fimilar fhips are proportional to the lengths of the mips when both are failing equally fatt; and fince the evolutions are fimilar, and the forces vary fimilarly in their different parts, what is here demonftrated of the fmalleft incipient evolutions is true of the whole. They therefore not only deferibe equal angles of revolution, but alfo fimilar curves.A fmall Thip, therefore, works in lefs time and in lefs room than a great fhip, and this in the proportion of its length. This is a great advantage in all cales, particularly in wearing, in order to fail on the other tack clofe-hauled. In this cafe the will always be to windward and ahead of the large fhip, when both are got on the other tack. It would appear at firft fight that the large fhip will have the advantage in tacking. Indeed the large fhip is farther to windward when again trimmed on the other tack than the fmall fhip when the is juft trimmed on the other tack. But this happened before the large fhip had completed her evolution, and the fmall hip, in the mean time, has been going forward on the other tack, and going to windward. She will therefore be before the large Ghip's beam, and perhaps as far to windward.

We have feer that the velocity of rotation is proportional, ceteris paribus, to $\mathrm{F} \times \mathrm{G} q$. F means the ab. folute impulfe on the rudder or fail, and is always perpendicular to its furface. This abfolute impulfe on a fail depends on the obliquity of the wind to its furface. The ufual theory fays, that it is as the fquare of the fine of incidence: but we find this not trne.. We muft content ourfelves with expreffing it by fome as yet un. known function $\phi$ of the angle of incidence $a$, and call it a $a$; and if S be the furface of the fail, and V the velocity of the wind, the abfolute impulfe is $n \mathrm{~V}^{2} \mathrm{~S} \times{ }_{p} a$. This acts (in the cafe of the mizen-topfail, fig. 10.) by the lever $q \mathrm{G}$, which is equal to $\mathrm{DG} \times$ cof. $\mathrm{D} \mathrm{G} q$, and $\mathrm{DG} q$ is equal to the angle of the yard and keel; which angle we formerly called $b$. Therefore its energy in producing a rotation is $n \mathrm{~V}^{2} \mathrm{~S} \times{ }_{\varphi} a \times \mathrm{DG} \times$ cof. b. Leaving out the conftant quantities $n, \mathrm{~V}^{2}, \mathrm{~S}$, and D G, its energy is proportional to $\varphi a \times$ cof. $b$. In order, therefore, that any fail may have the greateft power to produce a rotation round $G$, it muft be fo trimmed that $\phi a \times$ cof. $b$ may be a maximum. Thus, if we would trim the fails on the foremaft, fo as to pay the fhip off from the wind right ahead with the greateft effect, and if we take the experiments of the French academicians as proper meafures of the oblique impulfes of the wind on the fail, we will brace up the yard to an angle of 48 degrees with the keel. The impulfe correfponding to $48^{\circ}$ is 615 , and the cofine of $48^{\circ}$ is 669 . Thefe give a product of 411435 . If we brace the fail
$\mathrm{N} \quad \mathrm{S} \quad \mathrm{H} \quad \mathrm{I}$.
to 54.44 , the angle affigned by the theory, the effective impulfe is 405274 . If we make the angle $45^{\circ}$, the impulfe is 408774 . It appears then that $48^{\circ}$ is preferable to either of the others. But the difference is incontiderable, as in all cafes of maxinum a fmall deviation from the beft pofition is not very detrimental. But the difference between the theory and this experimental meafure will be very great when the impulfes of the wind are of neceffity very oblique. Thus, in tacking fhip, as foon as the headfails are taken aback, they ferve to aid the evolution, as is evident: But if we were now to adopt the maxim inculcated by the theory, we fhould immediately round in the weather-braces, fo as to increafe the impulfe on the fail, becaufe it is then very frall; and although we by this means make yard more fquare, and therefore diminifh the rotatory momentum of this impulfe, yet the impulfe is more increafed (by the theory) than its vertical lever is diminifhed. Let us examine this a little more particularly, becaufe it is reckoned one of the niceft points of feamanhip to aid the fhip's coming round by means of the headfails: and experienced feamen differ in their practice in this mancuvre. Suppofe the yard braced up to $40^{\circ}$, whichis as much as can be ufually done, and that the fail mivers (the bowlines are ufually let go when the helm is put down), the fail immediately takes aback, and in a moment we may fuppofe an incidence of 6 degrees. The impulfe correfponding to this is 400 (by experiment), and the cofine of $40^{\circ}$ is 766 . This gives 306400 for the effective impulfe. To proceed according to the theory, we fhould brace the yard to $70^{\circ}$, which would. give the wind (now $34^{\circ}$ on the weather-bow) an incidence of nearly $36^{\circ}$, and the fail an inclination of $20^{\circ}$. to the intended motion, which is perpendicular to the keel. For the tangent of $20^{6}$ is about $\frac{1}{2}$ of the tangent of $36^{\circ}$. Let us now fee what effective impulte the experimental law of oblique impulfions will give for this adjuftment of the fails. The experimental impulfe for $36^{\circ}$ is 480 ; the cofine of $70^{\circ}$ is 342 ; the product is 164160 , not much exceeding the half of the former. Nay; the impulfe for $36^{\circ}$, calculated by the theory, would have been only $34 \sigma$, and the effective impulfe only 118332. And it mult be farther obferved, that this theoretical adjuftment would tend greatly to check the evolution, and in moft cafes would entirely mar it, by checking the fhip's motion ahead, and confequently the action of the rudder, which is the moft powerful agent. in the evolution ; for here would be a great impulfe directed almoft aftern.

We were juftifiable, therefore, in faying, in the beginning of this article, that a feaman would frequently find himfelf bafled if he were to' work a fhip according. to the rules deduced from M. Bouguer's work; and we fee by this inftance of whrar importance it is to have the oblique impulfions of fluids afcertained experimentally Ihe practice of the moft experienced feaman is directly the oppofite to this theoretical maxim, and its fuccefs: greatly confirms the ufefulnefs of thefe experiments of the academicians fo often praifed by us:

We return again to the general confideration of the : rotatory motion. We found the velocity. $\boldsymbol{r}=\frac{\mathrm{F} \cdot q \mathrm{G}}{\int p r^{2}}$
It is therefore proportional, cateris paribus, to $q$ G: We have feen in what manner $q G$ depends on the pofi-

ice point
fea.:

```
manihip,
```aimip: - 
tion and fituation of the fail or rudder when the point \(G\) is fixed. But it alfo depends on the polition of \(G\). With refpect to the action of the rudder, it is evident that it is fo much the more powerful as it is more re. mote from \(G\). The diftance from G may be increated ether by moving the rudder farther aft or \(G\) fariher forward. And as it is of the utmoll importance that a fhip anfiwer iter lielm with the greatelt promptitude, thofe circumftances have been attended to which dittinguifhed fine fteering thips from fuch as had not this quality; and it is in a great meafure to be afcribed to this, that, in the gradual improvement of naval architecture, the centre of gravity has been placed far forward: Perhaps the notion of a centre of cravity did not come into the thonghts of the rude builders in early times; but they obferved that thofe boats and hips Iteered beft which had their extreme breadth before the middle point, and confequently the bows not fo acute as the ftern. This is fo contrary to what one would expect, that it attracted attention more forcibly ; and, being fomewhat myfterious, it might prompt to attempts of improvement, by exceeding in this fingular maxim. We believe that it has been carried as far as is compatible with other effential requifites in a hip.

We believe that this is the chief circumftance in what is called the trim of a fhip; and it were greatly tance to de termine the bent pace for a thip'o centre of gravity. to be wifhed that the beft place for the centre of gravity could be accurately afcertained. A practice prevails, which is the oppofite of what we are now advancing. It is ufual to load a hhip fo that her keel is not horizontal, but lower abaft. This is found to im- prove her fteerage. The reafon of this is obvious. It increafes the acting furface of the rudder, and allows the water to come at it with much greater freedom and regularity; and it generally diminifhes the kriping of the fhip forward, by removing a part of the bows out of the water. It has not always this effect; for the form of the harping aloft is frequently fuch, that the rendency to gripe is diminifhed by immerfing more of the bow in the water.

But waving thefe circumftances, and attending only to the rotatory energy of the rudder, we fee that it is of advantage to carry the centre of gravity forward. The fame advantage is gained to the action of the after fails. But, on the otlicr hand, the action of the head fails is diminifhed by it; and we may call every fail a headfail whofe centre of gravity is before the cencre ot gravity of the fhip; that is, all the fails hoifted on the bowfprit and foremaft, and the ftayfails hoifted on the mainmaft ; for the centre of gravity is feldom far before the mainmaft.

Suppofe that when the rudder is put into the pofition AD (fig. II.), the centre of ravity could be fhifted to \(g\), fo as to increafe \(q \mathrm{G}\), and that this is done without increafing the fum of the products \(p r^{2}\). It is obvious that the velocity of converfion will be increafed in the proportion of \(q \mathrm{G}\) to \(q g\). This is very poffible, by bringing to that fide of the fhip parts of her loading which were fituated at a diflance from \(G\) on the other fide. Nay, we can make this clange in fuch a manner that \(\int p r^{2}\) fhall even be lefs than it was before, by taking care that every thing which we fhift thall be nearer to \(g\) than it was formerly to G. Suppofe it all placed in one fpot \(m\), and that \(m\) is the quantity of matter fo fhifted, while \(M\) is the quantity of matter in the whole fhip.

\section*{S E A M A N S II I P.}
(RGTATION, \(n \cdot 30\) ) \(\frac{\int p r^{2}}{M}=c\). Therefore, finally, \(v=\)
\(\frac{\mathrm{F}}{\mathrm{M}} \times \frac{c+n z}{c+n z^{2}}\). Had there been no addition of matter made, we fhould have had \(v=\frac{\mathrm{F}}{\mathrm{M}} \times \frac{c}{c e}\). It remains to Ahow, that \(z\) may be fo taken that \(\frac{c}{c e}\) may be lefs than \(\frac{c+n z}{c e+n z^{2}}\). Now, if \(c\) be to \(z\) as \(c e\) to \(z^{2}\), that is, if \(z\) be taken equal to \(e\), the two fractions will be equal. But if \(z\) be lefs than e, that is, if the additional matter is placed anywhere between \(S\) and \(G\), the complex fraction will be greater than the fraction \(\frac{c}{c e}\), and the velocity of rotation will be increafed. There is a particular diftance which will make it the greateft poffible, namely , when z is made \(=\frac{1}{n}\left(\sqrt{c^{2}+n c e}-c\right)\), as will cafly be found by treating the fraction \(\frac{c+n z}{c++n} z^{2}\), with \(z\), confidered as the variable quantity, for a maximum. In what we have been faying on this fubject, we have confidered the rotation only in as much as it is performed round the centre of gravity, although in every moment it is really performed round a fpontaneous axis lying beyond that centre. This was done becaufe it afforded an eafy inveftigation, and any angular motion round the centre of gravity is equal to the angular motion round any other point. Therefore the extent and the time of the evolution are accurately defined. From obferving that the energy of the force \(F\) is proportional to \(q \mathrm{G}\), an inattentive reader will be apt to conceive the centre of gravity as the centre of motion, and the rotation as taking place becanfe the momenta of the fails and rudder, on the oppofite fides of the centre of gravity, do not balance each other. But we mult always keep in mind that this is not the caufe of the rotation. The caufe is the want of equilibrium round the point \(C\) (fig. 10.), where the actions of the water balance each other. During the evolution, which confifts of a rotation combined with a progreffive motion, this point C is continually fhifting, and the unbalanced momenta which continue the rotation always refpect the momentary fituation of the point C . It is neverthelefs always true that the energy of a force \(F\) is proportional (cateris paribus) to \(q G\), and the rotation is always made in the fame direction as if the point \(G\) were really the centre of converfion. \({ }^{-1}\) Itherefore the mainfail acts always (when oblique) by pufhing the ftern away from the wind, although it fhould fometimes act on a point of the vertical lever through C , which is a-head of C .

Thefe obfervations on the effects of the fails and modder in prodncing a converfion, are fufficient for enabling us to explain any cafe of their action which may occur. We have not confidered the effects which they tend to produce by inclining the flip round a horizontal axis, viz. the motions of rolling and pitching. See Rolling and Pitching. To treat this fubject properly would lead us into the whole doctrine of the equilibrium of floating bodies, and it would rather lead to maxims of conftruction than to maxims of manœuvre. M. Bonguer's Truité du Nurire and Euler's Scientia Navalis are excellent performances on this fubject, Vos. XVII. Part L.
and we are not here obliged to have recourfe to any er. roneous theory.
It is eafy to fee that the lateral preflure both of the wind on the fails and of the water on the rudder tençs to incline the fhip to one iide. The fails alfo tend to prefs the fhip's bows into the water, and, if the were kept from advancing, would prefs them down confider. Differene ably. But by the fhip's motion, and the prominent of crations form of her bowes, the refiftance of the water to the ter on the fore part of the fhip produces a force which is directed thip and upwards. The fails alfo have a fmall tendency to raife wind on the thip, for they conltitute a furlace which in general the fails ba. feparates from the plamb-line below. This is remark-other. ably the cafe in the fayfails e particularly the jib and fore-topmat ftayfail. And this helps greatly to foften the plunges of the fhip's bows into the head feas. 'The upward preffure alfo of the water on her bows, which we jult now mentioned, has a great effect in oppofing the immerion of the bows which the fails produce by acting on the long levers furnifhed by the mafts. M. Bouguer gives the name of point velique to the point \(V\) (fig. 12.) of the malt, where it is cut by the line CV, which marks the mean place and direction of the whole impulfe of the water on the bows. And he obferves, that if the mean direction of all the actions of the wind on the fails be made to pafs alfo through this point, there will be a perfect equilibrium, and the fhip will have no tendency to plunge into the water or to rife out of it; for the whole action of the water on the bow's, in the direction CV, is equivalent to, and may be refolved into the action CE, by which the progreffive motion is refifted, and the vertical action CD, by which the fhip is raifed above the water. The force CE mult be oppofed by an equal force. VD, exerted by the wind on the fails, and the force CD ) is oppofed by the weight of the thip. If the mean effort of the fails paffes above the point \(V\), the fhip's bows will be preffed into the water; and if it pals below \(V\), her ftern will be preffed down. But, by the union of thefe forces, fhe will rife and fall with the fea, keeping always in a parallel pofition. We apprehend that it is of very little moment to attend to the fituation of this point. Ex. cept when the fhip is right atore the wind, it is a thoufand chances to one that the line CV of mean reliftance does not pafs through any maft ; and the fact is, thet the fhip cannot be in a ftate of unitorm motion on any. other condition but the perfect union of the line of mean action of the fails, and the line of mean action of the refiftance. But its place fhifts by every change of leeway or of tim; and it is impoffible to keep thefe lines in one conftant point of interfection for a moment, on account of the inceffant changes of the furface of the water on which fhe floats: M. Bouguer's obfervations on this point are, however, very ingenious and original. We conclude this differtation, by deferibing fome of the chief movements or evolutions. What we have Chief erno faid hitherto is intended for the inftruction of the artitt, fatibed. by making him fenfible of the mechanical procedure, The defcription is rather ineant lor the amulement of the landiman, enabling him to underfand operations that are familiar to the feaman. The latter will perhaps fmile at the aukward account given of his bufinefs by one who cannot hand, reef, nor fteer.

\section*{To tack Sbit.}

The fhip mult firft of all be kept full, that is, with E e
a very fenfible angle of incidence on the fails, and by no means hugging the wind. For as this evolution is chiefly performed by the rudder, it is neceffary to give the fhip a good velocity. When the fhip is obferved to luff up of herfelf, that moment is to be catched for beginning the evolution, becaufe the will by her inherent force continue this motion. The helm is then put down. When the officer calls out Helm's a lee, the fore fheet, fore-top bowline, \(\mathrm{j} i b\), and Aag fail fheets forward are let go. The jib is frequently hauled down. 'Ihus the obftacles to the fhip's head coming up to the wind by the action of the rudder are removed. If the mainfail is fet, it is not unufual to clue up the weather fide, which may be conlidered as a headfail, becaule it is before the centre of gravity. The mizen muft be hauled out, and even the fail braced to windward. Its power in paying off the ftern from the wind confpires with the action of the rudder. It is really an aerial rudder. The fails are immediately taken aback. In this ftate the effect of the mizen-topfail would be to obftruct the movement, by preffing the ftern the contrary way to what it did before. It is therefore either immediately braced about fharp on the other tack, or lowered. Bracing it about evidently tends to pay round the ftern from the wind, and thus affift in bringing the head up to the wind. But in this pofition it checks the progreffive motion of the fhip, on which the evolution chiefly depends. For a rapid evolution, therefore, it is as well to lower the mizen-topfail. Meantime, the lreadfails are all aback, and the action of the wind on them tends greatly to pay the fhip round. To increafe this effect, it is not unufual to haul the fore-top bowline again. The fails on the mainmaft are now almoft becalmed; and therefore when the wind is right ahead, or a little before, the mainfail is hauled round and braced up fharp on the other tack with all expedi. tion. The ftayfail fheets are now fhifted over to their places for the other tack. The fhip is now entirely under the power of the headfails, and of the rudder, and their actions confpire to promote the converfion. The thip has acquired an angular motion, and will preferve it, fo that now, the evolution is fecured, and the falls off apace from the wind on the other tack. The farther action of the rudder is therefore unneceflary, and would even be prejudicial, loy caufing the fhip to fall off too much from the wind befure the fails can be fhifted and trimmed for failing on the other tack. It is therefore proper to right the helm when the wind is ripht ahead, that is, to bring the rudder into the direction of the keel. 'The ffitip continues her converfion by her inherent force and the action of the headfails.

When the fhip las fallen off about four points from the wind, the headfails are hauled round, and trimmed fharp on the other tack with all expedition; and although this operation was begun with the wind four points on the bow, it will be fix before the fails are braced up, and therefore the headfails will immediately fill. The after-fails have filled already, while thie headfails were inactive, and therefore immediately check the farther falling of from the wind. All fails now draw, for the flay fail fheets have been hifted over while they were becalmed or fhaking in the wind: The fhip now gathers way, and will obey the fmalleft motion of the helm to bring her clofe to the wind.

We have liere fuppofed, that during all this opera. tion the fip preferves her progreffive motion. She
mutt therefore have defcribed a eurve line, advancing all the while to windward. Fig. 13, is a reprefentation of this evolution when it is performed in the com. pleteft manner. The fhip ftanding on the courfe \(\mathrm{E} a\), with the wind blowing in the direction WF, has her helm put hard a-lee when fhe is in the pofition A. She immediately deviates from her courfe, and defcribing a curve, comes to the pofition \(B\), with the wind blowing in the direction WF of the yards, and the fquare-fails now fhiver. T'he mizentopfail is here reprefented braced fharp on the other tack, by which its tendency to aid the angular motion (while it checks the progref. five motion) is diftinctly feer. The main and forefails are now fhivering, and immediately after are taken aback. The effect of this on the headfails is diftinctly feen to be favourable to the converfion, by puifing the point F in the direction \(\mathrm{F} i\); but for the fame reafon it continues to retard the progreffive motion. When the fhip has attained to the pofition C, the mainfail is hauled round and trimmed for the other tack. The impulfe in the direction \(\mathrm{F} \boldsymbol{i}\) ftill aids the converfion and retards the progreffive motion. When the fhip has attained a pofition between C and D , fuch that the main and mizen topfail yards are in the direction of the wind, there is nothing to counteract the force of the headfails to pay the fhip's head off from the wind. Nay, during the progrefs of the hip to this intermediate pofition, if any wind gets at the main or mizen topfails, it acts on their anterior furfaces, and impels the after parts of the fhip away from the curve \(a b c d\), and thus ain's the revolution. We liave therefore faid, that when once the fails are taken fully aback, and particularly when the wind is brought right ahead, it is farce poffible for the evolution to fail; as foon therefore as the main topfail (trimmed for the other tack) fhivers, we are certain that the headfails will be filled by the time they are hauled round and trimmed. The ftayfails are filled before this, becaufe their fheets hawe bcen hifted, and they ftand much fharper than the fquare-fails; and thus every thing tends to check the falling off from the wind on the other tack, and this no fooner than it fhould be done. ' The fhip immediately gathers way, and holds on in her new courfe \(d\) G.

But it frequently happens, that in this converfion the fhip lofes her whole progreffive motion. 'This fometimes happens while the fails are fhivering before they are taken fully aback. It is evident, that in this cafe there is little hopes of fuccefs, for the fhip now lies like alog, and neither fails nor rudder have any action. The fhip drives to leeward like a log, and the water acting. on the lee-fide of the rudder checks a little the driving of the ftern: The head therefore falls off again, and by and by the fails fill, and the. fhip continues on her former tack. This is called missing stays, and it is generally owing to the flip's having too little ve-locity at the beginning of the evolution. Hence the propriety of keeping the fails well filled for fone. little. time before. Rough weather, too, by raifing a wave which beats violently on the weather-bow, frequently checks the firt -luffing of the fhip, and beats her off again.

If the thip lofes all her motion after the headfails have been fully taken aback, and before we have brought the wind right ahead, the evolution becomes uncertain, but by no means defperate; for the action

\section*{5.EA M A}
of the wind on the headfails will prefently give her ftern-way. Suppofe this to happen when the thip is in the pofition C. Bring the helm over hard to windward, fo that the rudder fhall have the pofition reprefented by the fmall dotted line of. It is evident, that the refiftance of the water to the ftern-way of the rudder acts in a favourable direction, purhing the ftern outwards. In the mean time, the action of the wind on the headfails pufhes the head in the oppofite direction. Thefe actions confpire therefore in promoting the evolution; and if the wind is right ahead, it cannot fail, but may even be completed fpeedily, becaufe the fhip gathers ftern-way, and the action of the rudder becomes very powerful; and as foon as the wind comes on the formerly lee-bow, the action of the water on the now lee-quarter will greatly accelerate the converfion. When the wind therefore has once been brought nearly right ahead, there is no rifk of being bafled.

But fhould the thip have loft all her head-way confiderably before this, the evolution is very uncertain: for the action of the water on the rudder may not be nearly equal to its contrary action on the lee quarter; in which cafe, the action of the wind on the headfails may not be fufficient to make up the difference. When this is obferved, when the fhip goes aftern without changing her pofition, we muft immediately throw the headfails completely aback, and put the helm down again, which will pay off the fhip's head from the wind enough to enable us to fill the fails again on the fame tack, to try our fortune again ; or we muft boxhaul the fhip, in the manner to be defcribed by and by.
Such is the ordinary procefs of tacking fhip; a procefs in which all the different modes of action of the rudder and fails are employed. To execute this evolution in the molt expeditious manner, and fo as to gain ab much on the wind as poffible, is confidered as the teff of an expert feaman. We have defcribed the procefs which is beft calculated for enfuring the niovement. But if the Chip be failing very brikly in fmooth water, fo that there is no danger of miffing flays, we may gain zmore to windward confiderably by keeping fatt the fore-top bowline and the jib and flay-fail fheets till the Equare-fails are all fhivering : For thefe fails, continuing to draw with confiderable force, and balancing each other tolerably fore and aft, keep up the fhip's velocity very much, and thus maintain the power of the rucder. If we now let all fly when the fquare-fails are fhivering, the fhip may be confidered as without fails, but expofed to the action of the water on the lee-bow; from which arifes a ftrong preffure of the bow to windward, which confpires with the action of the rudder to aid the conyerfion. It evidently leaves all that tendency of the bow to windward which arifes from leeway, and even what was counteracted by the formerly uubalanced action of thefe head-fayfails. This method lengthens the whole time of the evolution, but'it advances the fhip to windward. Obferve, too, that keeping fatt the fore-top bowline till the fail fhivers, and then letting it \({ }^{\circ} 0\), infures the taking aback of that fail, and thus inftantly produces an action that is favourable to the evolution.
The moft expert feamen, however, differ among themfelves with refpect to thefe two methods, and the firft is the moft generally practifed in the Britifh navy, becarfe the leaft liable to fail. The forces which op-
pofe the converfion are fooner removed, and the production of a favourable action by the backing of the fore-topfail is alfo fooner obtained, by letting go the fore-top bowline at the firt.

Having entered fo minutcly into the defcription and rationale of this evolution, we have fufficiently turned the reader's attention to the different actions which cooperate in producing the motions of converfion. We thall therefore be very brief in our defeription of the other evolutions.

\section*{To wear Ship.}

When the feaman fees that his hip will not go a bout head to wind, but will mifs ftays, he mult change his tack the other way ; that is, by turning-her head away from the wind, going a little way before the wind, and then hauling the wind on the other tack. This is called wearing or veering fhip. It is moft neceffary in flormy weather with little fail, or in very faint breezes, or in a difabled thip.

The procefs is exceedingly fimple; and the mere nar. ration of the procedure is fufficient for fhowing the propriety of every part of it.
Watch for the moment of the fhip's falling off, and then haul up the mairfail and mizert, and fhiver the mizen-topfail, and put the helm a-weather. When the fhip falls off fenfibly (and not before), let go the bowlines. Eafe away the fore-fheet, raife the fore-tack, and gather aft the weather fore-fheet, as the lee-fheet is eafed away. Round in the weather-braces of the fore and main mafts, and keep the yards nearly bifecting the angle of the wind and keel, fo that when the fhip is before the wind the yards may be fquare. It may even be of advantage to round in the weather-braces of the main-topfail more than thofe of the headfails; for the mainmaft is abaft the centre of gravity. All this while the mizen-topfail mult be kept fhivering, by rounding in the weather-braces as the fhip pays off from the wind. Then the main-topfail will be braced up for the other tack by the time that we have brought the wind on the weather-quarter. After this it will be full, and will aid the evolution. When the wind is right aft, fhift the jib and ftay-fail theets. The evolution now goes on with great rapidity ; therefore brifkly haul on board the fore and main tacks, and haul out the mizen, and fet the mizen-flayfail as foon as they will take the wind the right way. We muft now check the great rapidity with which the fhip comes to the wind on the other tack, by righting the helm before we bring the wind on the beam; and all mult be trimmed fharp fore and aft by this time, that the headfails may take and check the coming-ta. All being trimmed, ftand on clofe by the wind.
We cannot lielp lofing a great deal of ground in this movement. Therefore, though it be very fimple, it requires much attention and rapid execution to do it with as little lofs of ground as poffible. One is apt to imagine at firft that it would be better to keep the headfails braced up on the former tack, or at lealt not to round in the weather-braces fo much as is here directed. When the fhip is right afore the wind, we Thould expect affiftance from the obliquity of the headfails; but the rudder being the principal agent in the evolution, it is found that more is gained by increafing the fhip's velocity, than by a finaller impulfe on the Ee 2
head.
headfails more favourably directed. Experienced feamen differ, however, in their practice in refpect of this particular.

\section*{To loxhaul a Ship.}

Thrs is a procefs performed ouly in critical fituations, as when a rock, a flip, or fome danger, is fuddenly feen right ahead, or when a hhip miffes ftays. It requires the moft rapid execution.

The fhip being clofe liauled on a wind, haul up the mainfail and mizen, and fiver the topfails, and put the helm hard a-lee altogether. Raife the fore-tack, let go the head bowlines, and brace about the headfails fharp on the other tack. The flip will quickly lofe ber way, get fteru-way, and then fall off, by the joint action of the headfails and of the inverted rudder. When fhe has fallen off eight points, brace the afterfails fquare, which have hitherto been kept fhivering. This will at firlt increafe the power of the rudder, by increafing the ftern-way, and at the fame time it makes no oppolition to the converfion which is going on. The continuation of her circular motion will prefently caufe them to take the wind on their after furfaces. This will check the ftern-way, ftop it, and give the fhip a little head-way: Now fhift the helm, fo that the rudder may again act in conjunction with the headfails in paying her off from the wind. This is the critical part of the evolution, becaufe the fhip has little or no way through the water, and will frequently remain long in this pofition. But as there are no counteracting forces, the thip continues to fall off. Then the weather-braces of the after-fails may be gently rounded in, fo that the wind acting on their hinder furfaces may both puith the thip a little ahead and her ftern laterally in conjunc--tion with the rudder. Thus the wind is brought upon the quarter, and the headfails fliver. By this time the thip has acquired fome headway. A continuation of the rotation would now fill the headfails, and their action would be contrary to the intended evolution. They are therefore immediately braced the other way, neally fquare, and the evolution is now completed in the fame manner with wearing fhip.

Some framen brace all the fails aback the moment that the helm is put hard a-lee, but the after-fails no more aback than juft to fquare the yards. This quickly gives the fhip ftern-way, and brings the rudder into action in its inverted direction; and they think that the evolution is accelerated by this method.

There is another problem of feamanfhip deferving of our attention, which cannot properly be called an evolution. This is lying.to. This is done in general by laying fome fails aback, fo as to ftop the head-way produced by others. But there is a confiderable addrefs neceffaly for doing this in fuch a way that the fhip fhall lie eafily, and under command, ready to proceed in her courfe, and eafily brought under weigh.

To bring-to with the fore or main-topfail to the maft, brace that fail tharp aback, haul out the mizen, and clap the helm hard a.lee.

Suppofe the fore topfail to be aback; the other fails fhoot the fhip ahead, and the lee helm makes the fhip come up to the wind, which makes it come more perpendicularly on the fail which is aback. I'hen its impulfe foon exceeds thofe on the other fails, which are now fhivering, or alnaft fhivering. The flip ftands ftill
awhile, and then falls off, fo as to fill the after-fails, which again fhoot her ahead, and the procefs is thus repeated. A fhip lying.to in this way goes a good deal ahead and alfo to leeward. If the main-topfail be aback, the thip fhoots ahead, and comes up till the diminifhed impulfe of the drawing fails in the direction of the keel is balanced by the increafed impulfe on the main-topfail. She lies a long while in this pofition, driving flowly to leeward; and the at laft falls off by the beating of the water on her weather-bow. She falls off but little, and foon comes up again.

Thus a fhip lying:to is rot like a mere \(\log\), but has a certain motion which keeps her under command. To get under weigh again, we muft watch the time of falling off; and when this is juft about to finifh, brace about brifkly, and fill the fail which was aback. To aid this operation, the jib and fore-topmaft ftayfail may be hoilted, and the mizen brailed up: or, when the intended courfe is before the wind or large, back the foretopfail fharp, fliver the inain and mizen toplail, brail up the mizen, and hoift the jib and fore-topmatt ftayfails altogether.

In a ftorm with a contrary wind, or on a lee fhore, a thip is obliged to lie-to under a very low fail. Some fail is abfolutely neceffary, in order to keep the fhip fteadily down, otherwife fhe would kick about like a cork; and roll fo deep as to ftrain and work herfelf to pieces. Different fhips behave beft under different fails. In a very violent gale, the three lower ftayfails are in general well adapted for keeping her fteady, and dittributing the ftrain. This mode feemstalfo well adapted for wearing, which may be done by hauling down the mi-zen-ftayfail. Uisder whatever fail the thip is broughtto in a ftorm, it is always with a. fitted fail, and never with one laid aback. The helm is lafhed down hard a-lee; therefore the fhip fhoots ahead, and comes up till the fea on lier weather-bow beats her off again. Getting under weigh is generally difficult ; becaufe the thip and riggingr are lofty abaft, and hinder her from falling off readily when the helm is put hard a-weather. We muft watch the falling off, and affilt the fhip by fome fmall headfail. Sometimes the crew get up on the weather fore-fhrouds in a crowd, and thus prefent a furface to the wind.

These examples of the three chief evolutions will eno able thofe who are not feamen to underftand the pro* priety of the different fleps, and alfo to underftand the other evolutions as they are defcribed by practical aus thors. We are not acquainted with any performance in our language where the whole are confidered in a connected and fyftematic manner. There is a book on this fubject in French, called Le Manauvrier, by M. Bourdé de Ville-Huet, which is in great reputation in France. A tranfation into Englifh was publihed fome years ago, faid to be the performance of the Chevalier de Saufeuil a French officer. But this appears to be a bookfeller's puff; for it is undoubtedly the work of fome perfon who did not underfand either the French: language, or the fubject, or the mathematical principles. which are employed in the fcientific part. The blun. ders are not fuch as could poffibly be made by a Frenchman not verfant in the Englifh language, but natural: for an Englifhman ignorant of French. No French. gentleman or officer would have tranfated a wokk of 2
this kind (which he profefles to think fo highly of) to ferve the rivals and foes of his country. But indeed it can do no great harm in this way; for the fcientific part of it is abfolutely unintclligible for want of fcience in the tranflator; and the practical part is full of blunders for want of knowledge of the French language.

We offer this account of the fubject with all proper refpect and diffidence. We do not profefs to teach: but by poinfing out the defects of the celebrated works

\section*{\(\mathrm{N} \quad \mathrm{S} \quad \mathrm{H}\) I P .}
of M. Bouguer, and the courfe which may be taken to remove them, while we preferve much valuable knowledge which they contain, we may perhaps excite fome perfons to apply to this fubject, who, by a combination of what is juft in M. Bouguer's theory, with an experimental doctrine of the impulfes of fluids, may produce a treatife of feamanflip which will not be confined to the libraries of mathematicians, but become a manual for fèamen by profeffion.

\section*{\(S E A\)}

SEAMEN, fuch perfons as ferve the king or others at fead by navigation and fighting fhips, \&c. See \(M_{A}\). ritime State.

Seamen fighting, quarrelling, or making any difurbance, may be punifhed by the commiffioners of the navy with fine and imprifonment. Regiftered feamen are exémpted from ferving in any parifh, office, \&ec. and are allowed bounty-money befide their pay. By the law of merchants, the feamen of a veffel are accountable to the mafter or commander, the mafter to the owners, and the owners to the merchants, for damage fuftained either by negligence or otherwife. Where a feaman is hired for a voyáge, and he deferts before it is ended, lie fhall lofe his wages; and in cafe a thip be loft in a ftorm, the feamen lofe their wages, as well as the owners their freight.

Mcans of Preferving the Health of Seamen. See MeDiCINE, \({ }^{\circ} 351\).

In addition to what has been faid on this fubject in the place referred to, we thall fubjoin fome valuable obfervations which we have met with in the fixth volume of the Memoirs of the Royal Society of Medicine à Panis for the years 1784 and 1785.

In 1783 , the marfhal de Caftries, intending to make fome clianges in the regulations of the navy, particularly with regard to diet, propofed to the fociety the two following queftions: 1. "What are the moft wholefome alinients for feamen, confidering the impoffibility of procuring them fref meat? And what kinds of falt meat, or fifh, of pulfe, and of drink, are moft proper for them, and in what quantity, not omitting to inquire into the regimens in ufe anongt other maritime nations for what may be adopted by us, and into what experience has evinced the utility of, from the accounts of the moft celebrated navigators?" 2. "A number of patients labouring under different difeafes being affembled in naval hofpitals, and different conftitutions affected by the fame difeafe requiring difference of diet, what general dietetic rules for an hofpital would be beft adapted to every exigence, dividing the patients into three claffes; the firtt in which liquids alone are proper, the fecond in which we begin to give folids in fmall quantities, and the fate of convalefeence in which a fuller diet is neceffary?" A committee was appointed to draw up an anfwer to thefe, who inveftigated the fubject very minutcly. The refult of their labours is there given at large. The obfervations moft wortliy of notice are, that the fcurvy of the Englifh feamen, who live chiefly on falt-meat, is a putrid dileafe; whilf that of the Dutch, who ufe farinaceeos vegetables and dried pulfe in large quantities, has more of an hydropical tendency. A mixture of both, cren at the fame meals

\section*{S E A}
is recommended. This is fupported by philofophical Seamen, reafoning, and the example of Captain Cook, whon was Seapoys: partly indebted to this mixed regimen for the prefervation of his crew. Salt fifh fhould never be ufed: falt beef grows hard, and after boiling its fibrous parts only remain, which are more calculated to load the fomach than recruit the ftrength. Salt bacon may be kept at fea 18 months; it does not lofe its moift and nutrimental parts, and unites better with pulfe, but fhould not be ufed when rancid. Live animals kept on board. hips tend to produce difeafes amongtt the crew. Rice thould be ufed largely. Our puddings are bad food: the flour would be much better made into bread, which might be done at fea with no great trouble. Sour krout fhould be ufed freely. Muftard, vinegar, furar, melaffes, and honey, are good antifcorbutics, Of drinks, wine is the belt: wort, ipruce-beer, or the Ruflian quas, are good fubltitutes. Spirits are only to be ufed in cold climates, and in fmall quantity. The greater part of the excellent memoir in anfwer to the fecond queftion, perfectly coincides with M. Duhamel du Monceaux's "Means of Preferving the Health of Seamen," and M. Poiffonnier des Perrieres's treatifes "On the Dif" eafes of Seamen," and "On the advantages of changing the Diet of Seamen," and his "Examination of Pringle's Differtation."

SLAPOYS, or Sepoys, natives of Indoftan ferving in a military capacity under the European powers, and difciplined after the European manner.

The Seapoys of the Englifh Eaft India company compofe perhaps the moft numerous, regular, and belt difciplined body of black troops in the world. They are raifed from among the natives of the country, and confift of Moors or Mahometans, Raja-poots, Hindoos, Pariars, befides many intermediate cafts peculiar to themfelves; the whole modelled in all correfponding particulars, and difciplined in every refpect as the army of Great Britain.

The military eftablifiments of Beingal, Madras, and Bombay, have each their refpective numbers, that of Bengal exceeding the reft. The Seapoys are formed into complete, uniform, and regular battalions, as our marching regiments at home, being intended to reprefent and anfwer fully to every purpofe in India to the like troops in Europe. A battalion confifts of 700 men, of complete effective ftrength. In each there are eight companies, including two flank ones or grenadiers. They are refpectively commanded by their owh black and European officers; to each company there is attached a fubaltern, who takes the command, under whom are two native commiffioned officers, bearing the rank of fubidar and jimindar ; of cight fubalterns, fix.

\section*{S E A [22 ] S E A}

Seapory ore lieukenants, the other enfigna : excluave is a ftaff, of adjutant and furgeon. The black non-commiffioned officers anfwer to our ferjeants and corporals, and are called bavildars and naigues. There is alfo to each corps an Englifh ferjeant-major, drill and fore ferjeant: to each battalion is a band of drums and fifes, and to each a pair of colours, A captain commands the whole.

Their jackets, which are made entirely after the Eusopean fafhion, are of a red colour with yellow facings (as worn by all the infantry of the company on the Coromandel coaft), The remaining part of their attire refembles more the country or Indian habit, and confilts of a dark blue turban, broad and round at top, defcending deep to the bottom, the fides of which, of a concave form, are croffed by a white band, running in front, faftened under a rofe above. As an under garment, they have a jacket of linen. A dark blue fafh girding, to anfwer the turban, goes round their middle, On the thighs they have fhort drawers, faftened by a fcolloped baud. Theirlegs are bare, which senders them more ready for action or fervice. Their arms are a firelock and bayonet; their accoutrements or crofs belts black leather, with pouches the fame.

A battalion drawn out cannot but ftrike the fpectators with a lively and fanciful military impreffion, as they unite in their exterior traits refpectively Indian and European.

They are brought to the utmof exactnefs of difci pline; go through their evolutions and manocuvres with a regularity and precifion equal to, and not furpaffed by, European troops. In action they are brave and Iteady, and have been known to ftand where Europeans have given way.
Their difcipline puts them on a footing with European troops, with whom they are always ready to act in concert.

Their utility and fervices are evident : they fecure to the company the internal good order and prefervation of their territorial diftricts, which, though poffible to be enforced with a ftrong hand by Europeans, requires numbers, and can only be conducted with that eafe and addrefs peculiar to the native forces of the country.

They are confidered with refpect in the eyes of the other natives, though they fufficiently, and with a good grace, feel and affert their own confequence. In large garrifons, where the duty is great, as Madras, Pondicherry, Trichinopoly, Vellore, \&c. two or three batta. lions mioght be prefent together, exclufive of Europeans. If fent fingly up the country, they are liable to be detached, fometimes by one or more companies being fent to a ftation dependent on the chief garrifon or headquarters, otherwife they are difperfed through the diftricts, four or five together, with a non-commiffioned officer (this is a part of the fervice which is called going on command), on hills, or in villages, to preferve order, convey intelligence, and affit the tafildar, renter, or cutwall of the place, in cafes of emergency. They alfo enforce the police, and prevent in fuch cafes the country from being infefted with thieves, which othervife have combined, forming a banditi, to rob paffengers and plunder cattle, of which there are fo many intances upon record. As for fuch Britifh officers in the company's fervice as are attached to battalions, they are obliged to follow the fortunes and deftinations of their
men, with their refpective corps, leading a life offen replete with adventures of a peculiar nature. An individual in fuch cafes is frequently fecluded from thafe of his own colour when up the country, or detached upon command, where in a frontier garrifon or hill fort in the interior parts of India none but-natives are to be found. Here he might live as he pleafes, being perfeet. ly abfolute within his jurifdiction. Such fations being lucrative, with management may produce great for tunes. Neither is the condition hard to a perfon converfant in the language of the country, or that of the Sea. poys called Moors (which moft officers in the compa. ny's fervice acquire ) ; otherwife the lofs of fociety is not recompenfed by other advantages, as you forget your own language, grow melancholy, and pafs your days without comfort.

The peace eitablifhment at Madras confifts of 30 Sea. poy battalions, but in time of war is augmented as occafion requires; or frequently each corps is itrengtheried by the addition of two companies, which are reduced again in time of peace, the officers remaining fupernumeraries in the fervice. In garrifon they are quartered in barracks: they live agreeably to the ufage of the country, fleep on the ground on a mat or thin carpet. In their perfons they are cleanly, but appear to beft advantage in their unitorm. Off duty they go as the other natives in poor circumftances; and have only a cloth round their middle and over their fhoulders. As to the different cafts, the Moormen or Muffulmen affert pre-eminence, as coming into the country by conquef. In their perfons they are rather robunt, and in their tempers vindictive. Their religion and drefs is diftinct from the Hindoos, who are mild and paflive in their temper, faithful, fteady, and good foldiers. The Pariars are inferior to the others, live under different cirm cumftances, dwell in huts, and affociate not on equal terms with the reft ; they do all menial offices, are fervants to Europeans, and think themfelves happy when by them employed, though they are equally good Seapoys.

Having thus treated of the company's Seapoys, we fhall obferve that they are kindly attentive to their off. cers when often in circumflances requiring their affit. ance; are guilty of few vices; and have a ftrong at tachment for thofe who have commanded them. That acute hiftoriar, Dr Robertfon has remarked, as a proof that the ingenuity of man has recourfe in fimilar fituav tions to the fame expedients that the European powers have, in forming the eftablifhment of thefe native troops, adopted the fame maxims, and, probably without knowe ing it, have modelled their battalions of Seapoys upon the fame principles as Alexander the Great did his phalanx of Perfians.

SEARCH-wARRANr, in law, a kind of general waprant iffued by juftices of peace or magittrates of towns for fearching all fufpected places for folen goods. In Scotland this was often done formerly; and in fome Englifh law-books there are precedents requiring the conftable to fearch all fuch fulpested places as he and the party complaining fhall think convenient ; but fuch practice is condemned by Lord Hale, Mr Hawkins, and the beft authorities both among the Englifh and Scotch lawyers. However, in cafe of a complaint, and oath made of goods folen, and that the party fufpects that thofe goods are in a particular houfe, and fhows the

\section*{S E A} fearch not only that houfe but other fufpected places ; and to attach the goods, and the party in whofe cuftody they are found, and bring them before him or fome other juftice, to give an account how he came by them, and to abide fuch order as to law fhall appertain; which warrant fhould be directed to the conftable or other public officer, who may enter a fufpected houfe and make fearch.

SEARCHER, an officer in the cultoms, whofe bufinefs it is to fearch and examine fhips outward bound, if they have any prohibited goods on board, \&c. ( 12 Car. II.) There are alfo fearchers of leather, \&c. See Alnager.

SEARCHER, in ordnance, is an iron focket with branches, from four to eight in number, a little bent outwards, with fmall points at their ends; to this focket is fixed a wooden handle, from eight to twelve feet long, of about an inch and a quarter diameter. After the gun has been fired, this fearcher is introduced into it, and turned round, in order to difcover the cavities within. The diftances of thefe cavities, if any be found, are then marked on the outfide with chalk, when another fearcher that has only one point, about which a mixture of wax and tallow is put, is introduced to take the impreffion of the holes; and if there be any hole, a quarter of an inch deep, or of any conliderable length, the gun is rejected as unferviceable.

SEARCLOTH, or Cerecloth, in furgery, a form of external remedy fomewhat harder than an unguent, yet fofter than an emplafter, though it is frequently ufed both for the one and the other. The cerecloth is always fuppofed to have wax in its compofition, which diftinguifhes and even denominates it. In effect, when a liniment or unguent has'wax enough in it, it does not differ from a cerecloth.

SEASIN, in a fhip, the name of a rope by which the boat rides by the fhip's fide wher in harbour, \&e.

SEASONING, the firtt illnefs to which perfons habituated to colder climates are fubject on their arrival in the Weft Indies. This feafoning, unlefs they live very temperately, or are in a proper habit of body (tho' fome people are unmolefted for many months), feldom fuffers them to remain long before it makes its appearance in fome mode or other ; particularly if at firt they expofe themielves in a fhower of rain, or too lonyr in the fon, or in the night-air; or when the body is much heated, if they drink large draughts of cold liequors, or bathe in cold water; or ufe much exercife; or commit excefs in drinking wine or fpirits; or by heating the body and inflaming the blood; or by fubjecting themfelves to any caufe that may fuddenly check perfpiration, which at firft is generally exceffive.

Some people, from a favourable tate of body, have no feafoning. Thin people, and very young people, are moll likely to efcape it. Women generally do from their temperance, and perhaps their menftruation contributes to their fecurity; indeed hot climates are favourable to the delicacy of their habits, and fuitable to their modes of life. Some efcape by great regularity of living ; fome, by the breaking out of the rafh, called the prickly beat; fome by a great degree of perfpiration; and fome by obferving a cooling regimen. The dilorders are various that conftitute this feafoning of
nerv-comers as they are called; depending on age, con. Seafoning ftitution, and habit of body. But all feafoning difeafes are of the inflammatory kind; and yield to antiphlogiftic treatment proportioned to their violence. When all precaution to guard againt ficknefs has failed, and prudence proved abortive to new-comers, they will have this comfort at leaft for their pains, that their diforders will feldom be fevere or expenfive, and will generally have a fpeedy termination; and that their feafoning, as it is emphatically called, will be removed by bleeding, a dofe of falts, reft, and a cooling regimen.

Seasoning of Timber. Sce Timber.
SEASONS, in cofmography, certain portions or quarters of the year, diftinguifhed by the figns which the fun then enters, or by the meridian altitudes of the fun ; confequent on which are different temperatures of the air, different works in tillaye, \&c. See Weaz ther.

The year is divided into four feafons, fpring, fummer, autumn, and winter. The beginnings and endings of each whereof, fee under its proper article. It is to be obferved, the feafons anciently began differently from what they now do: witnefs the old verfes,

\section*{Dat Clemens hyemem; dat Petrus ver cathedratus; Affuat Urbanus; autumnat Bartholomaus.}

SEAT, in the manege, is the pofture or fituation of a horfeman upon the faddle.

SEATON, a fmall fifhing town on-the fouth coafof Devon, between Lyme and Silmouth. Rildon fays "our learned antiquarians would have it to be that Maridunum whereof Antonine ipake, placed between Dunnovaria and Ifca; for Maridunum in Britifh is the fame with Seaton in Englifh, 'a town upon a hill by the fea-fide." This place is memorable for the Danifh princes landing there in the year 937.

SEBACIC AC1D, the acid procured from fat. To obtain it, let fome fuet be melted in a fkillet over the fire, along with fome quicklime in fine powder, and confantly ftirred, raifing the fire towards the end of the operation, and taking care to avoid the vapours, which are very offenfive. By this procefs the febacic acid unites with the lime into a febat of lime, which is difficultly foluble in water; it is, however, feparated from the fatty matters with which it is mixed by folu. tion in a large quantity of boiling water. From this the neutral falt is feparated by evaporation; and, to render it pure, is calcined, rediffolved, and again cryftallized. After this we pour on a proper quantity of fulphuric acid, and the febacic acid palfes over by diftillation. See Fat, and Chemistry-Index.

STSEBAS ГIAN, a handiome, populous, and ftrons town of Spain, in the province of Guipulcoa, with a good and well frequented harbour. It is feated at the fopt of a mountain ; and the harbour fecured by two moles, and a narrow entrance for the fhips. The town is furrounded with a double wall, and to the fea-fide is fortified with battions and half moons. The ftreets are long, broad, and ftraight; and pased with white flagr fones. At the top of the mountain is a citadel, with a garrifon well furnifhed with cannon. I he town carries on a conliderable trade, the greateft part of which confifts of iron and fteel, which fome reckon to be the beft in Europe. They, alfo deal in wool, which comes 1.

SEBASTIANO, called Del Piombo, from an office in the lead mines given him by Pope Clenent VII. was an eminent Venetian painter, born in \(14^{\prime 3} 3\). He was firlt a difciple of old Giovanni Bellino ; continued his ftudies under Giorgione ; and having attained an excellent manner of colouring, went to Rome, where he infinuated himfelf into the favour of Michael Angelo. He has the name of being the firft who invented the art of prepariry plafter-walls for vil-painting ; but was fo flow and lazy in his work, that other hands were often employed to finifh what he began. He died in 1547.

SEBESTEN, in botany. Sce Cordia.
SEBU厌I, a fect among the ancient Samaritans, whom St Epiphanius accufes of changing the time esprefled in the law, for the celebration of the great annual feafts of the Jews,

SEBURAI, Seburex, a name which the Jews give to fuch of their rabbins or doctors as lived and taught fome time after the finifling of the Talniud.

SECACUL, in the materia medica of the ancients, a name given by Avicenna, Serapion, and others, to a root which was like ginger, and was brought from the Eaft Indies, and ufed as a provocative to veluery. The interpreters of their works have rendered this word iringo; and hence fome have fuppofed that our eryngium or eryngo was the root neant by it : but this does not appear to be the cafe on a ftriti inquiry, and there is fome reafon to believe that the fanous root, at this time called ginfeng, was what they meaut.

SECALE, RyE, in botany: A genus of the digynia order, belonging to the triaudria clafs of plants; and in the natural method ranking under the 4 th order, Gramina. The calyx is a glume of two leaves, which are oppofite to one another, erect, linear, pointed, and lefs than the corolla. The corolla confits of two valves, the exterior of which ends in a beard. There are four fpecies, the villofum, oriertale, creticum, and cereale. 'The villofum, or wood rye-grafs, is ditinguifhed by a calyx with wedge-fhaped fcales, and by the fringe of the glume being wooly. The glumes of the orientale are flagey, and the fcales of the calyx fhaped like an awl. The glumes of the creticum are fringed on the outfide. The cereale, or cominon rye, has glumes with rough fringes. It is a native of the ifland of Candia, was introduced into England many ages ago, and is the only fpecies of rye cultivated in this kingdom. There are, however, two varieties, the winter and fpring rye.

The winter rye, which is larger in the grain than the fpring rye, is fown in antumn at the fame time with wheat, and fometimes mixel with it; but as the rye ripens fooner than the wheat, this method muft be very exceptionable. The fpring rye is fown along with the oats, and ufually ripens as foon as the winter rye ; but the grain produced is lighter, and it is therefore feldom fown except where the autumnal crop has failed.
lige is commonly fown on poor, dry, limeftone, or
fandy foils, where wheat will not thrive. By continuing to fow it on fuch a foil for twu or three years, it will at length ripen a month earlier than that which has been raifed for years on ftrong cold ground.

Rye is commonly ufed for bread either alone or mixed with wheat. 'This mixture is called \(m \cdot \rho l n\), and was formerly a very common crop in fome parts of Britain. Mr Marfhall tells us, that the farmers in Yorkfhire belicve that this mixed crop is never affected by mildew, and that a fmall quantity of rye fown among wheat will prevent this deftructive difeafe. Rye is much ufed for bread in fome parts of Sweden and Norway by the poor people. About a century ago rye-bread was alfo much ufed in England; but being inade of a black kind of rye, it was of the fame colour, clammy, very detergent, aud confequently not fo nourilhing as wheat.

Rye is fubject to a difeafe which the French call ergot, and the Englifh borned rye; which fometimes happens when a very hot fummer fucceeds a rainy fpring. Accurding to Tiffot, horned rye is fuch as fuffers an irrcgular vegetation in the middle fubltance between the grain and the leaf, producing an excrefcence of a brownifh colour, about an inch and a half lon?, and two tenths of an inch broad. Bread made of this kind of rye has a naufeons acrid tafte, and produces fpafmo. dic and gangrenous diforders. In 1596 , an epidemic difeafe prevailed in Heffe, which the phylicians afcribed to bread made of horned rye. Some, we are told, were fcized with an epilepfy, and thefe feldom ever recovered; others became lunatic, and continued itupid the reft of their lives: thofe who apparently-recovered had annual returns of their diforder in January and February ; and the difeafe was faid to be contagious at leaft in a certain degree. The facts which we have now mentioned are taken from a work of Tiffot, which was never printed. The fame difeafe was occafioned by the ufe of this bread in feveral parts of the continent in the years \(1648,1675,1702,1716,1722\), and \(173^{6}\); and las been very minutely defcribed by Hoffman, A. O. Goelicke, Vater Burghart, and Js A. Srink.

In the year 1709, one fourth part of all the rye raifed in the province of Saloniz in France was horned, and the furgeon to the bofpital of Orleans had no lefs than 500 patients under his care that were diftempered by eating it: They were called ergots, from ergot (a), the French name for horned rye; they confit. ed chiefly of men and boys, the number of women and girls being very fimall. "The firft fympton was a kind of drunkenneis, then the local diforder bergan in the toes, and thence extended fometimes to the thigh, and the trunk itfelf, even after amputation, which is a good argument againt that operation before the gangrene is ftopped.

In the year :7ro, the celebrated Fontenelle defcribes a cafe in the Hiftory of the Academy of Sciences of France, which exactly refembles that of the poor family at Wattiham. A peafant at Blois, who had eaten horned rye in bread, was feized with a mortification, which firlt caufed all the toes of one foot to fall off,
then
(A) Ergot is French for a cock's fpur, and horned yye was called ergot from the refemblance of its excrefeence in that part.

\section*{S E C [ 225\(]\) S E C}
then the toes of the other, afterwards the remainder of the feet, and, laftly, it eat off the flefh of both his legs and thighs, leaving the bones bare.

Horned rye is not only hurtful to man, but to other animals; it has been known to deftroy even the flies that fettled upon it ; Theep, dogs, deer, geefe, ducks, fwine, and poultry, that were fed with it for experiment, died miferably, fome convulfed, others mortified and ulcerated.

SECANT, in geometry, a line that cuts another or divides it into parts. The fecant of a circle is a line drawn from the circumference on one fide to a point without the circumference on the other; and it is demonftrated by geometers, that of feveral fecants drawn to the fame point, that is the longeft which paffes thro' the centre of the circle. The portions, however, of thefe feveral fecants that are without the circle are fo much the greater as they recede from the centre, and the leaft external portion is of that fecant which paffes through it.

Secant, in trigonometry, denotes a right line drawn from the centre of a circle, which, cutting the circumference, proceeds till it meets with a tangent to the fame circle. See Geometry, \({ }^{\circ}\) 24-28.

Line of Secants, one of thofe lines or fcales which are ufually put upon fectors. How fuch a fcale is formed will be feen by a bare infpection of fig. 53. Plate CCXV.; for C10, \(\mathrm{C}_{20}, \mathrm{C}_{30}\), \& c. drawn from the centre C to the line of tangents BE , being the real \(\mathrm{fe}-\) cants of the arches \(\mathrm{B}_{10}, \mathrm{~B}_{2} 0, \mathrm{~B}_{3} \mathrm{C}\), it is obvious that by marking off the diftances \(\mathrm{B} 10, \mathrm{~B} 20, \mathrm{~B} 30\), upen any other line, we make that line a feale of fecants.

SECEDERS, a numerous body of Preßyterians in Scotland, who have withdrawn from the communion of the eftablifhed church. As they take up their ground upon the eftablifhment of religion from 1638 to 1650 , which they hold to be the pureft period of the Scottifh church, we fhall introduce our account of them by a fhort review of ecclefiatical hiftory from that period to the era of their feceffion. With our ufual candour and impartiality we mean to give a fair ftatement of thofe events with which, as they fay, their feceffion is connected.

James I. having for fome time previous to his death entertained a wifh to form the church of Scotland as much as poffible upon the model of that in England, his fon Charles, with the affiftance of archbifhop Laud, endeavoured to carry the defign into execution, by eftablifhing canons for ecclefiaftical difcipline, and introducing a liturgy into the public fervice of the church.Numbers of the clergy and laity of all ranks took the alarm at what they confidered to be a bold and dangerous innovation; and after frequent applications to the throne, they at laft obtained the royal proclamation for a free parliament and general affembly. The affembly met in 1638 , and began their labours with a repeal of all the acts of the fix preceding parliaments, which had favoured the defigns of James. They condemned the liturgy, together with every branch of the hicrarchy. They cited all the Scottifh bifhops to their bar ; and after having excommunicated nine of them, and depofed five from their epifcopal office, they reftored kirk-feffions, prefbyteries, and fynods provincial as well as national. See Presbyterians.

Vol. XVII. Part I.

Thefe proceedings were ratified by the parliament sceederw which met in 1640 . The law of patronage was in full force for feveral years after this period; yet great care was taken that no miniter fhould be obtruded on the Chriftian people contrary to their inclinations; and in 1649 it was abolifhed as an oppreffive grievance.

The Reftoration of Charles II. in 1660 changed the face of affairs in the church of Scotland. All that the general affembly had done from 1638 to 1650 was rendered null and void, their covenants were' pronounced to be unlawful, epifcopacy was reftored, and the king was declared to be the fupreme head of the church in all caufes civil and ecclefiaftical. During this period the Prefbyterians were fubjected to fines and imprifonment while numbers of them were publicly executed fer their adherence to their political ard religious tenets.

The Revolution in 1688 gave a different turn to the affairs of the church. The firft parliament which met after that event, abolifhed prelacy and the king's fupremacy in ecclefiatical affairs. They ratified the Weftminfter Confeffion of Faith, together with the Prefbyterian form of church-government and difcipline, "as agreeable to the word of God, and moft conducive to the advancement of true piety and godlinefs, and the eftablihment of peace and tranquillity within thefe realms." That fame parliament abolifhed patronage, and lodged the election of minifters in the hands of heritors and elders, with the confent of the congregation.

In the reign of \(Q\). Anne the true Proteftant religion was ratified and eftablifhed, together with the Prefbyterian form of church-government and difcipline; and the unalterable continuance of both was declared to be an effential condition of the union of the two kingdoms in all time coming. In 1712 the law refpecting patronage was revived, in refentment, it has been faid, of that warm attachment which the church of Scotland difcovered to the family of Hanover ; but the feverity of that law was greatly mitigated by the firt parliament of George 1. Itat. 50 . by which it is enacted, that if the prefentee do not fignify his acceptance, the prefentation fhall becóme void and null in law. The church, however, did not avail herfelf of this ftatute; and an event which happened not many years afterwards gave rife to the feceffion.

In 1732 more than 40 miniters prefented an addrefs Origin of to the general affembly, fpecifying ira a variety of in. ftances what they confidered to be great defections from the eftablifhed conftitution of the church, and craving a redrefs of thefe grievances. A petition to the fame effect, fubfcribed by feveral hundreds of elders and private Chriftians, was offered at the fame time; but the affembly refufed a hearing to both, and enacted, that the election of minifters to vacant charges, where an accepted prefentation did not take place, , Ihould be competent only-to a conjunct mecting of elders and heritors, being Proteftants. To this act many objections were made by numbers of minifters and private Chriftians. They afferted that more than 30 to one in every parifh were not poffeffed of landed property, and were on that account deprived of what they decmed their natural right to choofe their own paftors. It was alfo faid, that this act was extremely prejudicial to the honour and intereft of the church, as well as to the edification of the people; and in fine, that it was directly

F \(£\)
contrary

\section*{S E C [226] S E C}
\(\underbrace{\text { Seceders. }}\) partry to the appoin of Jefus Chrilt, and the practice of the apoftles, when they filled up the firft vacancy in the apoftolic college, and appointed the election of deacons and elders in the primitive church.Many of thofe alfo who were thought to be the beft friends of the church, expreffed their fears that this act would have a tendency to overturn the ecclefiaftical conititution which was eftablifhed at the Revolution.

They \({ }^{3}\) oppofe the meafures of meafures of afembly;

Mr Ebenezer Erfkine minitter at Stirling diftinguifhed himfelf by a bold and determined oppofition to the meafures of the affembly in 1732 . Being at that time moderator of the fynod of Perth and Stirling, he opened the meeting at Perth with a fermon from Plalm cxviii. 22. "The ftone which the builders rejected is become the head ftonc of the corner." In the courfe of his fermon he remonftrated with no fimall degrec of freedom againft the act of the preceding affembly with regard to the fettlement of minifters, and alleged that it was contrary to the word of God and the eftablifhed conftitution of the church. A formal complaint was lodged againft him for uttering feveral offenfive expreffions in his fermon before the fynod. Many of the members declared that they heard him utter nothing but found and feafonable doctrine ; but his accufers infifting on their complaint, obtained an appointment of a committee of fynod to collect what were called the offenfive expreffions, and to lay them before the next diet in writing. This was done accordingly ; and Mr Erfkine gave in his anfwers to every article of the complaint. After three days warm reafoning on this affair, the fynod by a majority of fix found him cenfurable; againft which fentence he protefted, and appealed to the next general affembly. When the af fembly met in May 1733, it affirmed the fentence of the fynod, and appointed Mr Erfkine to be rebuked and admonifhed from the chair. Upon which he protefted, that, as the affembly had found him cenfurable, and had rebuked him for doing what he conceived to be agreeable to the word of God and the ftandards of the church, he fhould be at liberty to preach the fame truths, and to teftify againft the fame or fimilar evils, on every proper occafion. To this proteft Meffrs William Wilfon minitter at Perth, Alexander Moncrief minifter at Abernethy, and James Fither minifter at Kinclaven, gave in a written adherence, under the form of inftrument; and thefe four withdrew, intending to return to their refpective charges, and act agreeably to their proteft whenever they fhould have an opportunity. Had the affair refted here, there never would have been a feceffion ; but the affembly refolving to carry on the procefs, cited them by their officer to compear next day. They obeyed the citation ; and a committee was appointed to retire with them, in order to perfuade them to withdraw their proteft. The committee having reported that they ftill adhered to their proteft, the affembly ordered them to appear before the commiffion in Auguft following and retract their proteft; and if they fhould not comply and teftify their forrow for their conduct, the commiffion was empowered to fufpend them from the exercife of their miniftry, with certification that if they fhould act contrary to faid fentence, the commiffion fhould proceed to an higher cenfure.

The commiffion met in Auguft accordingly; and the
four minifters fill adhering to their proteft, were fuf. pended from the exercife of their office, and cited to the next meeting of the commiffion in November following. From this fentence feveral minifters and elders, members of the commiffion, diffented. The commiffion met in November, and the fufpended minifters: compeared. Addreffes, reprefentations, and letters from feveral fynods and prefbyteries, relative to the bufinefs now before the commiffion, were received and read. The fynods of Dumfries, Murray, Rofs, Angus and Mearns, Perth and Stirling, craved that the commiffion would delay proceeding to an higher cenfure. The fynods of Galloway and Fife, as alfo the prefbytery of Dornoch, addreffed the commiffion for lenity, tendernefs, and forbearance, towards the fufpended minifters; and the prefbytery of Aberdeen reprefented, that, in their judgment, the fentence of fufpenfion inflicted on the forefaid minifters was too high, and that it was a ftretch of ccclefiaftical authority. Many members of the commiffion reafoned in the fame manner, and alleged that the act and fentence of laft affembly did not oblige them to proceed to an higher cenfure at this meeting of the commiffion. 'The queftion, however, was put, Proceed to an higher cenfure, or not? and the votes being numbered, were found equal on both fides : upon which Mr John Goldie the moderator gave his cafting vote to proceed to an higher cenfure; which fands in their minutes in thefe words: "The commiffion did and hereby do loofe the relation of Mr Ebenezer Erfkine minifter at Stirling, Mr William Wilfon minifter at Perth, Mr Alexander Moncrief minifter at Abernethy, and Mr James Fifher miniter at Kiģclaven, to their refpective charges, and declare them no longer Depriv minifters of this church; and do hereby prohibit all mi. of theiv nifters of this church to employ them, or any of them, livinge. in any minifterial function. And the commiffion do declare the churches of the faid minifters vacant from and after the date of this fentence."

This fentence being intimated to them, they protefted, that their minifterial office and relation to their refpective charges fhould be held as valid as if no fuch fentence had paffed; and that they were now obliged to make a feceffion from the prevailing party in the ecclefiaftical courts; and that it fhall be lawful and warrantable for them to preach the gofpel, and difcharge every branch of the pattoral office, according to the word of God and the ettablifhed principles of the church of Scotland. Mr Ralph Erfine minifter at Ounfermline, Mr Thonas Mair minifter at Orwel, Mr John M‘Laren minifter at Edinburgh, Mr John Currie miniter at Kinglaffie, Mr James Wardlaw minitter at Dunfermline, and Mr 'Thomas Nairn minifter at Abbothal, protefted againft the fentence of the commiffion, and that it fhould be lawful for them to complain of it to any fubfequent general affembly of the church.

The feceffion properly commenced at this date. And accordingly the ejected miniters-declared in their proteft that they were laid under the difagreeable neceffity of feceding, not from the principles and conftitution of the church of Scotland, to which, they faid, they ftedfaftly adhered, but from the prefent church-courts, which had thrown them out from minitterial communion. The affembly, however, which met in May 1734 did fo far modify the above fentence, that they empowered the fynod of Perth and Stirling to receive the ejected

\section*{S E C [ 227 C \(\quad\left[\begin{array}{llll} & 27 & \text { E }\end{array}\right.\)}
ders. minifters into the communion of the church, and reftore them to their refpective charges ; but with this exprefs direction," that the faid fynod fhould not take upon them to judge of the legality or formality of the former procedure of the church judicatories in relation to this affair, or either approve or cenfure the fame." As this appointment neither condemned the aet of the prece. ding affembly nor the conduct of the commiffion, the feceding minitters confidered it to be rather an act of grace than of juftice, and therefore they faid they could not return to the church-courts upon this ground ; and they publifhed to the world the reafons of their refufal, and the terms upon which they were willing to return to the communion of the eftablifhed church. They now erected themfelves into an ecclefiaftical court, which they called the AIfsciated Preflytery, and preached occafionally to numbers of the people whojoined them in different parts of the country. 'I hey alfo publifhed what they called an AA, Declaration, and Teflimony, to the doctrine, worfhip, government, and difcipline of the church of Scotland, and againfl feveral infances, as they faid, of defection from thefe, both in former avd in the prefent times. Some time atter this feveral minifters of the eftablifhed church joined them, and the Aflociated Prefbytery now conlifted of eight miniffers. But the general affembly which met in \(173^{8}\) finding that the number of Seceders was much increafed, ordered the eight miniflers to be ferved with a libel, and to be cited to the next meeting of the affembly in 1739 . Ihey now ap. peared at the bar as a conflituted prebytery, and having formally declined the affembly's authority, they immediately withdrew. The affembly which met next year depoled them from the office of the minit 'ry; which, however, they continued to exercife in their refpective congregations, who ftill adhered to them, and erected meeting houfes, where they preached till their de th. Mr Jaines Fifher, the laft lirvivor of them, was, by an unanimons call in 1741, tranfated fiom Finclaven to Glaygow, where he continued in the exercife of his minitty among a numerous congregation, refpected by all ranks in that large city, and died in \({ }_{1755}\) much regretied by his people and friends. In 1745 the feceding minifters were become fo numerous, that they were erected into three difficrent prefbyteries, under one tynod, when a very unprofitable difpute divided them into two parties.

The burgefs oath in fome of the royal boroughs of Scotland contains the following claule: "I profefs and allow with my heart the true religion prefently profefled within this realm, and authorifed by the laws thereof. I will abide at and defend the fame to my life's end, reiouncing the Romihh religion called \(P a\) contrary to the principles upon which the feceffion was uirgefs formed, and that therefore every Seceder might lawfully fwear it. Meffrs Alexander Moncrief, Thomas Mair, Adam Gib, and others, contended on the other hand
that the fwearing of the above claufe was a virtual re. Secedere. nunciation of their teftimony. And this controverfy was fo keenly agitated, that they fplit into two different parties, and now meet in different fynods. Thofe of them who affert the lawfulnefs of fwearing the burgefs oath are called Burgbers, and the other party who condemn it are called Antiburgher Seceders. Each party claiming to itfelf the lawful conftitution of the ADociate Synod, the Antiburghers, after feveral previous itteps, excommunicated the Burghers on the ground of their fin and of their contumacy in it. This rupture took place in 1747, fince which period no attempts to effect a And form reunion have been fucceffful. They remain under the feparate. jurifdiction of different fynods, and hold feparate com- communio munion, although much of their former hoftility has \({ }^{\text {ns. }}\) been laid afide. The Antiburghers confider the Burghers as too lax and not fufficiently fledfaft to their tertimony. The Burghers on the other hand contend that the Antiburghers are too rigid, in that they have introduced new terms of communion into the fociety. The Antiburghers having adopted ideas with regard to what they call covenanting, which the Burghers never approved ( A ), have been in ufe of renewing in their feverat congregations the Scottifh Covenant, by caufing their people formally fwear to maintain it. In other refpects the differences between the two parties are not material. The Antiburghers are moft numerous on the north of the Tay, and the Burghers on the fouth of it.

10
What follows in this article is a further account of Hiftory of thofe who are commonly called the Burgber Seceders. the BurghThefe have a greater number of people in their com- \({ }^{\text {er Seceders- }}\) munion than the Antiburghers, and for fome years paft they have greatly increafed in the fouthern and weftern diftricts of Scotland. As there were among them from the commencement of their feceffion feveral ftudents who had been educated at one or other of the univerfities, they appointed one of their minitters to give lectures in theology, and train up candidates for the miniftry. Meffrs William Willon minifter at Ferth and Alexander Moncrief minifter at Abernethy were their profeffors of theology before their fepaation from the Antiburghers.
Since that period Mr Ebenezer Erfkine minifter at Stirling, Mr James Fifher minifter at Glafgow, Mr John Swanflon minitter at Kinrofs, and Mr John Brown miniter at Haddington, have fucceeded each other in this office. At prefent (1794) Mr George Lawfon minitter at Selkirk is their profeflor of theology, and there are between thirty and forty fludents who attend his lectures annually. The number of their minifters is about an hundred, and each of their congregations contain from two hundred and fifty to three thoufand perfons; and there are among them at prefent more than twenty vacant charges. Where a congregation is very numerous, as in Stirling, Dunfernline, and Perth, it is formed into a collegiate charge, and provided with two minitters. They are erected into fix dif-

ferent
(A) This is the account which the Burghers give of their own notions refpecting the covenant. One of the mott enlightened of their opponents, however, affure us that they acknowledge covenanting to be a moral duty, and that the folemn vows of our anceftors are obligatory. But fince the breach in the fynod they have never engaged in this work; giving, as their reafor, that this is not the proper feafon.

\section*{S E C [ 228\(] \quad\) S E C}
ferent prebyteries, united in one general fynod, which commonly meets at Edinburgh in May and Septern\(\operatorname{ber}(\mathrm{B})\). They have alfo a fynod in Ireland compofed of three or four different prefbyteries. They are legally tolerated in Ireland; and government fome years ago granted L. 500 per annum, and of late an additional L. 600 , which, when divided among them, affords to each minifter about L. 20 over and above the tipend which he receives from his hearers. Thefe have befides a prefbytery in Nova Scotia; and fome years ago, it is faid, that the Burgher and the Antiburgher minifters refiding in the United States formed a coalition and joined in a general fynod, which they call the Synod of New York and Pennfylvania. 'They all preach the doctrines contained in the Weftminfter Confeffion of Faith and Catechifms, as they believe thefe to be founded on the facred fcriptures. They catechife their hearers publicly, and vifit them from houfe to houfe once every year. They wiil not give the Lurd's fupper to thofe who are ignorant of the-principles of the golpel, nor to fuch as are fcandalous and immoral in their lives. They condemn private baptifm, nor will they admit thofe who are grofsly ignorant and profane to be fponfors for their children. Believing that the people have a natural right to choofe their own paftors, the fettlement of their minifters always proceeds upon a popular elcction; and the candidate who is elected by the majority is ordained among them. Convinced that the charge of fouls is a truft of the greateft importance, they carefully watch over the morals of their ftudents, and direet them to fuch a courfe of reading and ftudy as they judge moft proper to qualify them for the profitable difcharge of the paftoral duties. At the ordination of their minifters they ufe a formula of the fame kind with that of the eftablifhed church, which their minifters are bound to fubfcribe when called to it ; and if any of them teach doctrines contrary to the feriptures or the Weltminkter Confeffion of Faith, they are fure of being thrown out of their communion. By this means uniformity of fentiment is preferved among them ; nor has any of their minifters, excepting one, been profecuted for error in doctrine fince the commencement of their feceffion.
They believe that the holy fcriptures are the fole criterion of truth, and the only rule to direct mankind to glorify and enjoy God, the chief and eternal grood; and that "the Supreme Judge, by which all controverlies of religion are to be determined, and all the decrecs of councils, opinions of ancient writers, doctrines of men and private firits, are to be examined, and in whofe fentence we are to reft, can be no other but the Holy Spirit fpeaking in the feriptures." They are fully perfuaded, however, that the ftandards of public authority in the church of Scotland exhibit a juft and
confiftent view of the meaning and defign of the holy fcriptures with regard to doctrine, worfhip, government, and diccipline; and they in fo far differ from the diffenters in England, in that they hold thefe ftandards to be not only articles of peace and a teft of orthodoxy, but as a bond of union and fellowfhip. They confider a fimple declaration of adherence to the feriptures as too equivocal a proof of unity in fentiment, becaule Arians, Socinians, and Arminians, make fuch a confeffion of their faith, while they retain fentiments which they (the Seceders) apprehend are fubverfive of the great doetrines of the gofpel. They believe that Jefus Chrift is the only King and Head of the Church, which is his body; that it is his fole prerogative to enact laws for the government, of his kingdom, which is not of this world; and that the church is not poffeffed of a leginative, but only of an executive power, to be exercifed in explaining and applying to their proper objects and end thofe laws which Chriit hath publifhed in the feriptures. Thofe doctrimes which they teach relative to faith and practice are exhibited at great length in an explanation of the Weftminfter Aftembly's Shorter Catechifm, by way of queltion and anfwer, in two volumes, compofed chiefly by Mr James Fifher late of Glafgow, and publifhed by delire of their fynod.

For thefe fifty years paft, the grounds of their feceffion, they allege, have been greatly enlarged by the pirblic adminiftrations of the eflablifhed church, and particularly by the uniform execution of the law refpecting patronage, which, they fay, has obliged many thoufands of private Cliriflians to withdraw from the parifhchurches and join their fociety.

It is certain, however, that their number has rapidly increafed of late, efpecially in the large cities of the kingdom. They have three different congregations in Edinburgh, two in Glafgow, and two in London, befides feveral others in the north of England. In moft of their congregations they celebrate the Lord's fupper twice in the year, and they catechife their young people concerning their knowledge of the principles of religion previouly to their admiffion to that facrament. When any of them fall into the fin of fornication or adultery, the fcandal is regularly purged aecording to the form of procefs in the eftablifhed church; and thofe of the delinquents who do not fubnait to adequate cenfure are publicly declared to be fugitives from difcipline, and are expelled the fociety. They never accept a fum of money as a commutation for the offence. 'They condemn all clandeftine and irregular marriages, nor will they marry any perfons unlefs they have been proclaimed in the parifh church on two different Lord's days at leaft.
When they feparated from the eftablifhed church, And pol they remainted firm in their attachment to the fate; and cal prin
(B) The conftitution of the Antiburgher charch differs very little from that of the Burghers. The fupreme court among them is defigned The General Alfociate Synod, having under its juridiction three provincial fynods in Scolland and one in Ireland. In the former country there are eleven prefbyteries; in the latter, four. They have a few congregations in England, and a prefoytery in connection with them in North America. The number of ninifters belonging to the general fynod is a hundred and thirty.feven; and in Scotland there are nincteen vacancies. They, as well as the Burgher Seceders, have a profeffor of theology, whofe lectures every candidate for the office of a preacher is obliged to attend, we have been told, for no lefs than five or fix feffions : Surely the feffion mult be of fhort duration.

\section*{S E C}
they mere not many years formed into a diftinet fociety, when they expelled from their communion a Mr Thomas Nairn minifter at Kirkcaldy, who had taught doctrines inimical to the civil government of the nation. In I 745 there was not one of their number who joined the then pretender to the Britifh crown. They are flill of the fame fentiments; and in their public affemblies they"always pray for our fovereign King George, with the royal family, and for all who are in authority under them. They are fo far from wifhing the overthrow of the prefent civil government, that when the nation was lately in danger of being thrown into a fermentation by the circulation of inflammatory and feditious writings, they warmly recommended peace and order in fociety (c). No legal difqualifications, as in the cafe of the diffenters in England, exclude them from any place of public truft in the municipal government of the country ; and fome of them are frequently in the magiftracy of the royal borouohs. They are not, however, legally tolerated, but are fupported by the mildnefs of adminiAtration and the liberal fpirit of the times. Avowing their adherence to the doctrines contained in the public flandards of the church of Scotland, together with the preßbyterian form of government, from which they never intended to fecede, they deny that they are either fchifmatics or fectaries, as they have been frequently called : and when they withdrew from the ecclefiaftical courts, they did not, they fay, conflitute a church of their own, different from the national church, but profefs to be a part of that church, endeavouring to hold by her reformed principles, in oppofition to thofe deviations from them which they have fpecified in their AII and Tefimuny. Moft of them live in habits of friendhip and intimacy with their brethren of the eftablifhment, and they piofefs an affectionate regard for all thofe of every denomination who love Jefus Chrift theircerity and truth. In the late re-exhibition of heir teftimony, they have declared to the world, that, were the grounds of their feceffion happily removed, they would account it one of the moft fingular felicities of their time to return with pleafure to the communion of the eftablifhed church.

SECHIUM, in botany : A genus of the fyngenefia order, belonging to the monocia clafs of plants; and in the natural method ranking under the \(34^{\text {th }}\) order, Cucurbitacea. The male calyx is quinquedentate and monophyllous ; the corolla monopetalous; the five filaments are united in an erect tube. In the female flower the pitillum is cylindrical and erect ; the figma large, peltated, and reflected; the pericarpium large, oval, unequal, flefhy, and unilocular, containing one feed, which is fmooth, compreffed, and flefly. Of this there is only one fpecies, viz. the Edulis, or Chocho vine. This is cultivated and grows very luxuriantly in many places in Jamaica. The vines run and fpread very much. The fruit is boiled, and ferved up at table by

229 S E C
way of greens; and the root of the old vime is fome: Seskendorf, what like a yam (Digfiorea), and on being boiled or secker. roalted taftes farinaceous and wholefome.

SECKENDORF (Guy Lewis de), a very learned German, defcended from an ancient and noble family, was born at Aurach in Franconia ili \(\mathbf{s}\) t.26. He was a good linguift, learned in law, hiftory, and divinity ; and is faid to lave been a tolerable painter and engraver. He was honourably employed by feveral of the German princes ; and died counfellor of fate to Frederic III. elector of Brandenburg, and chancellor of the univerfity of Halle, in 1692. He wrote many books, particularly "A hiftory and defence of the Lutheran religion," 2 vols folio, Frankfort, 1602, in Latin.

SECKER (Thomas), a learned and refpectable prelate of the church of England, was born, in 1693 , at a village called Sibtborp, in the vale of Belvoir, Nuttinghamfhire. His father was a Proteftant diffenter, a pious, virtuous, and fenfible man ; who having a finall paternal fortune, followed no profeffion. His mother was the daughter of Mr -George Brough, a fubftantial gentleman farmer of Shelton in the fame county. He: received his education at feveral private fchools and academies in the country, being obliged, by various accidents, to change his mafters frequently.

Notwithftanding this difadvantage, he had at the age of 19 not only made a confiderable progrefs in Greek and Latin, and read the beft writers in both languages, but had acquired a knowledge of French, Hebrews Chaldee, and Syriac ; had learned geography, logic, algebra, geometry, conic lections, and gone through a courfe of lectures on Jewifh antiquities and other points, preparatory to the critical ftudy of the Bible. He had been deftined by his father for orders among the Diffenters. With this view, during the latter years of his: education, his ftudies were chiefly turned towards divinity, in which he had made fuch quick advances, that by the time he was 23 he had carefully read over a great part of the Scriptures, particularly the New. Teftament, in the original, and the beft comments upon it; Eufebius's Ecclefiaftical Hiftory, The Apoftolical Fathers, Whifton's Primitive Chriftianity, and the principal writers for and againlt Minifterial and Lay Conformity. But though the refult of thefe inquiries was a wellgrounded belief of the Chriftian revelation, yet not being at that time able to decide on fome abftrufe fpecu. lative doctrines, nor to determine abfolutely what communion he fhould embrace; he refolved, like a wife and honeft man, to purfue fome profeffion, which fhould leave him at liberty to weigh thofe things more maturely in his thoughts, and not oblige him to declare or teach publicly opinions which were not yet thoroughly: fettled in his own mind.

In 1716 , therefore, he applied himfelf to the ftudy of phyfic, and after gaining all the medical knowledge he
could;
(c) All this is faid of the Burgher Seceders; but we hope it is equally true of thofe who are ftyled Antio burghers. There are indeed fome claufes in the Covenant which they fwear to maintain, that feem not, at firft view, very friendly to civil fubordination ; but let not thofe who entertain any apprehenfion on this account , forget that one of the moft ufeful defences of the Britifh conititution, occafioned by the late factious fpirit of democratic innovation, came from the pen of Dr Young the Antiburgher minifter at Hawick. See Voung's. Efays.

\section*{S E C}

Secker.
could, by reading the ufual preparatory books, and attending the beft lectures during that and the following winter in London, in order to improve himfelf farther, in January 1718-19 he went to Paris. There he lodged in the fame houfe with the famous anatomift Mr Winnow, whofe lectures he attended, as he did thofe of the materia medica, chemiftry, and botany, at the king's gardens. The operations of furgery he faw at the Ho. tel Dieu, and attended alfo for fome time M. Gregoire, the accoucheur, but without any defign of ever practifing that or any other branch of furgery. Here he became acquainted with Mr Martin Benfon, afterwards bifhop of Gloucefter, one of the moft agreeable and virtuous men of his time; with whom he quickly became much connected, and not many years after was united to him by the ftricteft bonds of affinity as well as affection.

During the whole of Mr Secker's continuance at Pa ris, he kept up a conftant correfpondence with Mr Jofeph Butler, afterwards bifhop of Durham, with whom he became acquainted at the academy of one Mr Tones, kept firft at Gloucefter, and afterward at Tewkßury. Mr Butler having been appointed preacher at the Rolls on the recommendation of Dr Clarke and Mr Edward Talbot, fon to bifhop Talbot, he now took occafion to mention his friend Mr Secker, without Secker's knowledge, to Mr 'Talbot, who promifed, in cafe he chofe to take orders in the church of England, to engage the bifhop his father to provide for him. This was communicated to Mr Secker in a letter from Mr Butler about the beginning of May 1720. He had not at that time come to any refolution of quitting the ftudy of phyfic ; but he began to forefee many obftacles to his purfuing that profeflion ; and having never difcontinued his application to theology, his former difficulties both with regard to conformity and fome other doubtful points had gradually leffened, as his judgment became ftronger, and his reading and knowledge more extenfive. It appears alfo from two of his letters fill in being, written from Paris to a friend in England, (both of them prior to the date of Mr Butler's abovementioned), that he was greatly diffatisfied with the divifions and difturbances which at that particular period prevailed among the Diffenters.

In this tlate of mind Mr Butler's unexpected propo. fal found him; which he was therefore very well dilpofed to take into confideration; and after deliberating on the fubject of fuch a change for upwards of two months, he refolved at length to embrace the offer, and for that purpofe quitted France about the beginning of Auguft 1720.

On his arrival in England, he was introduced to Mr Talbot, with whom he cultivated a clofe acquaintance; but it was unfortunately of very fhort duration; for in the month of December that gentleman died of the fmall-pox. This was a great hock to all his friends, who had juftly conceived the higheft expectations of him; but efpecially to an amiable lady whom he had lately married, and who was very near finking under fo fudden and grievous a Atroke. Mr Secker, befide fharing largely in the common grief, had peculiar reafon to lament an accident that feemed to put an end to all his hopes; but he had taken his refolution, and he determined to perfevere. It was fome encouragement to him to find that Mr Talbot had, on his death-bed,
recommended him, together with Mr Benfon and Mr Butler, to his father's notice. Thus did that excellent young man (for he was but 29 when he died), by his nice difcernment of characters, and his confiderate good nature, provide moft effectually, in a few folemn moments, for the welfare of that church from which he himfelf was fo prematurely fnatclied away ; and at the fame time raifed up, when he leaft thought of it, the truef friend and protector to his wife and unborn dauglter; who afterwards found in Mr Secker ail that tender care and affiftance which they could have hoped for from the neareft relation.

It being judged neceffary by Mr Secker's friends that he fhould have a degree at Oxford; and having been informed, that if he fhould previounly take the degree of Dostor in Phyfic at I eyden, it would probably help him in obtaining the other, he went over and took his degree there in March 1721 : and, as part of his exercife for it, he compofed and printed a differtation \(d \theta\) Medicina Slatica, which is fill extant, and is thought by the gentlemen of that profeffion to be a fenfible and learned performance.

In April the fame year, he entered himfelf a gentleman commoner of Exeter college, Oxford; after which he obtained the degree of Bachelor of Arts, in confequence of the chancellor's recommendatory letter to the convocation.

He now fpent a confiderable part of his time in Lone don, where he quickly gained the efteem of fome of the nooft learned and ingenious menof thofe days, particularly of DrClarke, rector of St James's, aud the celebrated dean Burkeley, afterwards bifhop of Cloyne, with whom he every cay became more delighted, and more clofely con. nected. He paid frequent vifits of gratitude and friendChip to Mrs 'lalbot, widow of Mr Lidward Talbot, by whom the had a daughter five months after his deceafe. With her lived Mrs Catharine Benfon, fifter to bithop Benfon, whom in many refpects the greatly refembled. She had been for feveral years Mrs Talbot's infeparable companion, and was of unfpeakable fervice to her at the time of her huband's death, by exerting all her courage, activity, and good fenfe (of which fhe poffefo fed a large flare), to fupport her friend under fo great an affiction, and by afterwards attending her fickly infant with the utmof care and tendernefs, io which, under Providence, was owing the prefervation of a very valuable life.

Bifhop lalbot being in 1721 appointed to the fee of Durham, Mr Secker was in 1722 ordained deacon by him in St James's church, and prieft not long after in the fame place, where he preached his firt lernon March 28. 1723. 'i he bifhop's domeltic chaplain at that time was Dr Runcle, a man of warm fancy and very brilliant converfation, but apt fometimes to be carried by the vivacity of his wit into indifercet and ludicrous expreffions, which created him enemies, and, on one occafion, produced difagrecable confequences. With him Mr Secker was foon after affociated in the bifhop's family, and both taken down by his lordihip to Durham in July \({ }^{1} 723\).

In the following year the bifhop gave Mr Secker the rectory of Houghton-le-Spring. This preferment putting it in his power to fix himfelf in the world, in a manner agreeable to his inclinations, he foon after made a propofal of marriage to Mrs Benfon; which being ac-

\section*{S E C [ 23 I ] S E C}
cepte3, they were married by bifhop Talbot in 1725. At the earneft requeft of both, Mrs Talbot and her daughter confented to live with them, and the two families from that time became one.

About this time bifhop Talbot alfo gave preferments to Mr Butler and Mr Benfon, whofe rife and progrefs in the church is here interwoven with the hiftory of Mr Secker. In the winter of 1725 -6, Mr Butler firft publifhed his incomparable fermons; on which, as Dr Beilby Porteous and Dr Stinton inform us, Mr Secker took pains to render the ftyle more familiar, and the author's meaning more obvious : yet they were at laft by many called obfcure. Mr Secker gave his friend the fame affiftance in that noble work the A nalogy of Religion, \&c.

He now gave up all the time he poffibly could to his refidence at Houghton, applying himfelf with alacrity to all the duties of a country clergyman, and fupporting that ufeful and refpectable character throughout with the fricteft propriety. He omitted nothing which he thought would be of ufe to the fouls and bodies of the people entrufted to his care. He brought down his converfation and his fermons to the level of their underftandings; he vifited them in private, he catechifed the young and ignorant, he received his country neighbours and tenants very kindly and hofpitably, and was of great fervice to the poorer fort of them by his flill in pliyfic, which was the ouly ufe he ever made of it. Though this place was in a very remote part of the world, yet the folitude of it perfectly fuited his ftudious difpofition, and the income arifing from it bounded his ambition. Here he would have been content to live and die ; here, as he has often been heard to declare, he fpent fome of the happieft hours of his life; and it was no thought or choice of his own that removed him to an higher and more public fphere; but Mrs Secker's health, which now began to be very bad, and was thought to be injured by the dampnefs of the fituation, obliged him to think of exchanging it for a more heal. thy one. Accordingly, an exchange was made through the friendly interpofition of \(\mathrm{Mr}_{r}\). Benfon (who generoufly facrificed his own intereft on this occafion, by relinquifhing a prebend of his own to ferve his friend) with Dr Finuey, prebendary of Durham, and rector of Ryton; and Mr Secker was inflituted to Ryton and the prebend June 3. \({ }^{7} 727\). For the two following years he lived chiefly at Durham, going every week to officiate at Ryton, and fending there two or three months together in the fummer.

In July \({ }^{1} 732\) he was appointed chaplain to the king; for which favour lie was indebted to Dr Sherlock, who having heard him preach at Bath, had conceived the highef opinion of his abilities, and thought them well worthy of being brought forward into public notice. From that time an intimacy commenced between them, and he received from that great prelate many folid proofs of efteem and friend fhip,

His month of waiting at St James's happened to be Auguf, and on Sunday the 27 th of that month he preached before the queen, the king being then abroad. A few days after, her majefty fent for him into her clofet, and held a long and gracious converfation with him; in the courfe of which he took an opportunity of mentioning to her his friend Mr Butler. He alfo, not long after this, on Mr Talbot's being made lord chancellor,
found means to have Mr Butler effectually recommended to him for his chaplain. The queen alfo appointed him clerk of her clofet ; from whence he rofe, as his talents became more known, to thofe high dignities which he afterwards attained.

Mr Secker now began to have a public character, and ftood high in the eftimation of thofe who were allowed to be the beft judges of merit: he had already given proofs of abilities that plainly indicated the eminence to which he muft one day rife, as a preacher and a divine ; and it was not long before an opportunity of. fered of placing him in an advantageous point of view. Dr Tyrrwhit, who fucceeded Dr Clarke as rector of St James's in 1729, found that preaching in fo large a church endangered his health. Bifhop Gibfon, therefore, his father-in-law, propofed to the crown that he Thould be made refidentiary of St Paul's, and that Mr Secker fhould fucceed him in the rectory. This arrangement was fo acceptable to thofe in power, that it took place without any difficulty. Mr Secker was in. ftituted rector the 18th of May 1733; and in the beginning of July went to Oxford to take his degree of Doctor of Laws, not being of fufficient ftanding for that of divinity. On this occafion it was that he preached his celcbrated Act Sermon, on the advantages and duties of academical education, which was univerfally allowed to be a mafterpiece of found reafoning and juft compofition : it was printed at the defire of the heads of houfes, and quickly paffed through feveral editions. It is now to be found in the fecond collection of Occafional Sermons, publifhed by himfelf in 1766.

It was thought that the reputation he acquired by this fermon, contributed not a little toward that promotion which very foon followed its publication. For in December 1734, he received a very unexpected notice from bihop Gibfon, that the king had fixed on him to be bifhop of Briftol. Dr Benfon was about the fame time appointed to the fee of Gloucefter, as was Dr Fleming to that of Carlifle; and the three new bifhops were all confecrated together in Lambeth Chapel, Jan. 19. 1734-5, the confecration-fermon being preached by Dr Thomas, afterwards bifhop of Winchefter.

The honours to which Dr Secker was thus raifed in the prime of life did not in the leaft abate his diligence and attention to bufinefs; for which, indeed, there was now more occafion than ever. His learned biographers, Meffrs Porteous and Stinton, now relate the manner in which he fet about the vifitation of his diocefe, and the ceremony of confirmation, which he performed in a great number of places; he alfo preached in feveral churches, fometimes twice a-day. The affairs of his parifh of St James's being likewife in great diforder, he took extraordinary pains to regulate and adjuft every thing, particularly the management of the poor; and thus became of fignal fervice to his parifhioners, even in a temporal view. But, fay our authors, " it was their fpiritual welfare which engaged, as it ought to do, his chief attention. As far as the circumftances of the times, and the populoufnefs of that part of the metropolis allowed, he omitted not even thofe private admonitions and perfonal applications which are often attended with the happieft effects. He allowed out of his own income a falary for reading early and late prayers, which had formerly been paid out of the offertory money. He held a confirmation once every year, and ex-
amined

\section*{S E C [ 232\(]\) S E C}

Beckey. amined the candidates feveral weeks bafore in the veftry, and gave them religious tracts, which he alfo ditributed at other times very liberally to thofe that needed them. He drew un, for the ufe of his parifhioners, that admirable courfe of Lectures on the Church Catechifm which hath been lately publifhed, and not only read them once every week on the ufual days, but alfo every Sunday evening, either at the church or one of the chapels belonging to it."

The fermons which at the fame time, we are told, he fet himfelf to compofe, " were truly excellent and original. His faculties were now in their full vigour, and he had an audience to fpeak before that rendered the utmof exertion of them neceffary. He did not, howcver, feek to gratify the higher part, by amufing them with refined fpeculations, or ingenious eflays, unintelligible to the lower part, and unprofitable to both ; but he laid before them all, with equal freedom and plainnefs, the great Chrittian duties belonging to their refpective fations, and reproved the follies and vices of every rank among them, without diftinction or palliation. He fudied human nature thoroughly in all its various forms, and knew what fort of arguments would have moft weight with each clafs of men. He brought the fubject home to their bofoms, and did not feem to be merely faying ufeful things in their prefence, but addrefling himfelf perfonally to every one of them. Few ever poffeffed, in a higher degree, the rare talent of touching on the moft delicate fubjects with the niceft propriety and decorum, of faying the moft familiar things without being low, the plaineft without being feeble, the boldeft without giving offence. He could defcend with fuch fingular eafe and felicity into the minuteft concerns of common life, could lay open with fo much addrefs the various workings, artifices, and evafrons of the human mind, that his audience often thought their \(\mathrm{ox} \cdot \mathrm{l}\) particular cafes alluded to, and heard with furprife their private fentiments and feelings, their ways of reafoning and principles of acting, exactly ftated and defcribed. His preaching was, at the fame time, highly rational, and truly evangelical. He explained with perfpicuity, he afferted with dignity, the peculiar characteriftic doctrines of the gofpel. He inculcated the utility, the neceffity of them, not merely as fpeculative truths, but as actual inftruments of moral goodnefs, tending to purify the hearts and regulate the lives of men ; and thus, by God's gracious appointment, as well as by the infeparable connection between true faith and right practice, leading them to falvation.
" Thefe important truths he taught with the authosity, she tendernefs, the familiarity, of a parent inftructing his children. Though he neitlier poffeffed nor affeeted the artificial eloquence of an orator who wants to amule or to miffead, yet he had that of an honeft man who wants to convince, of a Chriftian preacher who wants to reform and to fave thofe that hear him. Solid argument, manly fenfe, ufeful directions, mort, nervous, Atriking fentences, awakening queftions, frequent and pertinent applications of fcripture; all thefe following each other in quick fucceffion, and coming evidently from the fpeaker's heart, enforced by his elocution, his figure, his action, and above all by the correfponding fanctity of his example, ftamped conviction on the minds of his hearers, and fent them home with impreffions not eafy to be effaced. It will readily be
imagined that with thefe powers he quickly becume one of the moit admired aad popular preachers of his time."

In 1737 he fucceeded to the fee of Oxford, on the promotion of Dr Potter to that of Canterbury, then vacant by the death of Archbifhop Wake.

In the fpring of 1748 , Mrs Secker died of the gout in her ftomach. She was a woman of great fenfe and merit, but of a weak and fickly conititution. The bifhop's affection and tendernefs for her was fuited to his character. In 1750, he was initalled dean of St Paul's, for which he gave in exchange the reEtory of St James's and his prebend of Durham. "It was no wonder (fay our authors) that, after prefiding over fo extenfive and pepulous a parifh for upwards of 17 years, he thould willingly confent to be releafed from a burden which be gan now to grow too great for his frength. When he preached his farewel fermon, the whole audience melted into tears: he was followed with the prayers and good wifhes of thofe whom every honeft man would be moft ambitious to pleafe; and there are numbers ftill living who retain a ftrong and grateful remembrance of his inceffant and tender folicitude for their welfare. Having now mose leifure both to profecute his own ftudies and to encourage thofe of others, he gave Dr Church confiderable affiltance in his Firft and Second Vindication of the Miraculous Pozers, \&c. againft Dr Middleton, and he was of equal ufe to him in his Analyfis of Lord Bo. lingbroke's Works. About the fame time began the late Archdeacon Sharp's controverfy with the followers of Mr Hutchinfon, which was carried on to the end of the year 1755." Bifhop Secker, we are told, read over all \(\mathrm{Dr}_{\mathrm{r}}\) Sharp's papers, amounting to three volumes 8 vo , and corrected and improved them throughout. But the eafe which this late change of fituation gave him was foon difturbed by a heavy and unexpeeted ftroke, the lofs of his three friends, Bihops Butler, Benfon, and Berkeley, who were all cut off within the fpace of one year.

Our authors next give an account of the part which Dr Secker bore, in the Houfe of Lords, in refpect to the famous repeal of the Jew bill; for which the duke of Newcafle moved, and was feconded by the Bifhop, in a fpeech which, we are told, was remarkably well received. At length his diftinguifhed merit prevailed over all the political obftacles to his advancement, and placed him, without any efforts or application of his own, in that important fation which he had fhown himfelf fo well qualified to adorn. On the death of archbiflop Hutton, he was promoted to the fee of Canterbury, and was confirmed at Bow-church, April 21. 1758; on which occafion our authors oblerve, that in accepting this high and burdenfome ftation, Dr Secker acted on that principle which influenced him through life ; that he facrificed his own eafe and comfort to con: fiderations of public utility ; that the mere fecular advantages of grandeur were objects below his ambition ; and were, as he knew and felt, but poor compenfations for the anxiety and difficulties attending them. He had never once through his whole life afked preferment for himfelf, nor hown any unbecoming eagernefs for it ; and the ufe he made of his newly acquired dignity very clearly fowed, that rank, and wealth, and power, had in no other light any charms for him, than as they en. larged the fphere of his active and induftrious benevolence.

\section*{S E C}

He fought out and encouraged men of real genius or extenfive knowledge; he expended 3001 , in arran. ging and improving the manufcript library at Lambeth; and obferving with concern, that the library of printed books in that palace had received no additions fince the time of Archbifhop Tennifon, he made it his bufinefs to collect books in all languages from moft parts of Europe at a very great expence, with a view of fupplying that chafm; which he accordingly did, by leaving them to the library at his death, and thereby rendered that collection one of the nobleft and moft ufeful in the kingélom.

All defigns and inftitutions which tended to advance good morals and true religion, he patronized with zeal and generofity: he contributed largely to the maintenance of fchools for the poor ; to rebuilding or repairing parfonage houfes and places of worfhip; and gave no lefs than 6001 . towands erecting a chapel in the parih of Lambeth. To the fociety for promoting Chriftian knowledge he was a liberal benefactor ; and to that for propagating the gofpel in foreign parts, of which he was the prefident, he paid much attention; was conftarit at all the meetings of its members, even fometimes when his health would but ill permit, and fuperintended their deliberations with confummate prudence and temper.

Whenever any publications came to his knowledge that were manifefly calculated to corrupt good morals, or fubvert the foundations of Chriftianity, he did his utmoft to ftop the circulation of them; yet the wretched authors themfelves he was fo far from wifhing to treat with any undue rigour, that he has more than once extended his bounty to them in diftrefs. And when their writings could not properly be fuppreffed (as was too often the cafe) by lawful authority, he engaged men of abilities to anfwer them, and rewarded them for their trouble. His attention was everywhere. Even the falfelioods and mifreprefentation of writers in the newfpapers, on religious or ecclefiaftical fubjects, he generally took care to have contradicted; and when they feemed likely to injure, in any material degree, the caufe of virtue and religion, or the reputation of eminent and worthy men, he would fometimes take the trouble of anfwering them himfelf. One inftance of this kind, which does him honour, and deferves mention, was his defence of Bifhop Butler, who, in a pamphlet publifhed in 1767, was accufed of having died a Papitt. The conduct which he obferved towards the feveral divifions and denominations of Chriftians in this kingdom was fuch as fhowed his way of thinking to be truly liberal and catholic. The dangerous fpirit of popery, indeed, he thought thould always be kept under proper legal reftraints, on account of its natural oppofition not only to the religious but the civil rights of mankind. He therefore obferved its movements with care, and exhorted his clergy to do the fame, efpecially there who were fitnated in the midft of Roman Catholic families ; againft whofe influence they were charged to be upon their guard, and were furnifhed with proper books or Vol. XVII. Part I.

\section*{233. ] S E C}
inftructions for that purpofe. He took all fit opportunities of combating the errors of the church of Rome in his own writings ( \(A\) ) ; and the beft anfwers that were publifhed to fome of the late bold apologies for popery were written at his inftance, and under his dircetion.

With the Diffenters his Grace was fincerely defirous of cultivating a good undertanding. He confidered them, in general, as a confcientious and valuable clafs of men. With foine of the moft eminent of them; Watts, Doddridge, Leland, Chandler, Lardner, he maintained an intercourfe of friendhip or civility. By the molt candid and confiderate part of them he was highly reverenced and efteemed; and to fuch among them as needed help he fhowed no lefs kindnefs and liberality than to thofe of his own communion.

Nor was his concern for the Proteftant caufe confined to his own country. He was well known as the great patron and protector of it in various parts of Europe; from whence he had frequent applications for affiftance, which never failed of being favourably received. To' feveral foreign Proteftants he allowed penfions, to others he gave occafional relief, and to fome of their univertities was an annual benefactor.

In public affairs, his Grace acted the part of an honelt citizen, and a worthy member of the Britifh legiflature. From his firt entrance into the Houfe of Peers, his parliamentary conduct was uniformly upright and noble. He kept equally clear from the extremes of factious petulance and fervile dependence ; never wantonly thwarting adminiftration from motives of party zeal or private pique, or perfonal attachment, or a paffion for popularity ; nor yet goinr every length with every miniter from views of intereft or ambition. He admired and loved the conftitution of his country, and wifhed to preferve it unaltered and unimpaired. So long as a due regard to this was maintained, he thought it his duty to fupport the meafures of government; but whenever they were evidently inconfiftent with the public welfare, he oppofed them with freedom and firmnefs. Yet his oppolition was always tempered with the utmoft fidelity, refpect, and decency, to the excellent prince upon the throne; and the molt candid allowances for the unavoidable errors and infirmities even of the very beft minilters, and the peculiarly difficult fituation of thofe who govern a free and high-fpirited people. He feldom ipoke in parliament, except where the interefts of religion and virtue feemed to require it ; but whenever he did, he fooke with propriety and ftrength, and was heard with attention and deference. Though he never attached himfelf blindly to any fet of men, yet his chief political connections were with the late Duke of Newcaftle and Lord Chancellor Hardwicke. To thefe he principally owed his advancement; and he had the good fortune to live long enaugh to how his gratitude to them or their \(c\) 'fcendants.

During more than ten years that Dr Secker enjoyed the fee of Canterbury, he refided conftantly at his archiepifcopal houfe at Lambeth. A few months be. fore his death, the dreadful pains he felt had compelled

\section*{SEC [.234] SEC}

Secker. him to think of trying the Bath waters; but that defign was ftopped by the fatal accident which put an end to his life.
-His Grace had been for many years fubject to the gout, which, in the latter part of his life, returned with more frequency and violence, and did not go off in a regular manner, but left the parts affected for a long time very weak, and was fucceeded by pains in different parts of the body. About a year and a half before he died, after a fit of the gout, he was attacked with a pain in the arm, near the fhoulder, which having continued about \(r_{2}\) months, a fimilar pain feized the upper and outer part of the oppofite thigh, and the arm foon became eafier. This was much more grievous than the former, as it quickly difabled him from walking, and kept him in almoft continual torment, except when he was in a reclining pofition. 1)uring this time he had two or three fits of the gout; but neither the gout nor the medicines alleviated thefe pains; which, with the want of exercife, brought him into a general bad habit of liody.

On Saturday July 30. 1768, he was feized, as he fat at dinner, with a ficknefs at his fomach. He recovered before night; but the next evening, while his phyficians were attending, and his fervants raifing him on his couch, he fuddenly cried out that his thigh-bone was broken. The fhock was fo violent, that the fervants perceived the couch to fhake under him, and the pain fo acute and unexpected, that it overcame the firmnefs he fo remarkably poffeffed. He lay for fome: time in great agonies; but when the furgeons arrived, and difcovered with certainty that the bone was broken; he was perfectly refigned, and aever afterwards afked a queftion about the event. A fever foon enfued. On Tuelday he became lethargic, and cominued fo till about five o'clock on Wednefday afternoon, when he expired with great calmnefs, in the \(75^{\text {th }}\) year of his age.

On examination, the thigh-bone was found to be carious about four inches in length, and at nearly the fame diftance from its head." The difeafe took its rife from the internal part of the bone, and had fo entirely deftroyed its fubftance, that nothing remained at the part where it was broken but a portion of its outward integument; and even this had many perforations, one of which was large enough to admit two fingers, and was filled with a fungous fubftance arifing from within the bone. There was no appearance of matter about the caries, and the furrounding parts were in a found fate. It was apparent that the torture which he underwent during the gradual corrofion of this bone muft have been inexpreffibly great. Out of tendernefs to his family he feldom made any complaints to them, but to his phyficians he frequently declared his pains were fo excruciating, that unlefs fome rclief could be procured he thought it would be impoffible for human, nature to fupport them long. Yet lic bore them for upwards of fix months with aftonifhing patience and fortitude; fat up generally the greater part of the day, admitted his particular friends to fee him, mixed with his family at the ufual hours, fometimes with his ufual cheerfulnefs; and, except fome very llight defects of memory, retained all his faculties and fenfes in their full vigour till within a few days of his death. He was buried, pur fuant to his own directions, in a covered paffage, lead-
ing from a private door of the palace to the north door of Lambeth church; and he forbade any monument or epitaph to be placed over him.

By his will he appointed the R'ev. Dr Daniel Bur. ton, canon of Chritt-church, and Mrs Catherine Talbot, already mentioned in the courfe of thefe memoirs, his executors; and left 13,0001 . in truft to the Drs Porteous and Stinton, his chaplaias ; to pay the intereft thereof to Mrs Talbot and her daughter during their joint lives, or the life of the furvivor; and after the deceafe of both thofe ladies, 11,0001 . of the faid \({ }^{3} 3,000\) l. are to be transferred to charitable purpofes ; amonglt which are josol. to the Society for the Propagation of the Gofpel, and 1000 1. to the fame fociety for a bifhop or bifhops in the king's dominions in America.

The following defeription is given of his perfon: He was tall and comely; in the early part of his life flender, and rather confumptive; but as he advanced in years lis conftitution gained ftrength, and his fize increafed, yet never to a degree of corpulency that was difproportionate or troublefome.

The dignity of his form correfponded with the greatnefs of his mind, and infpired at all times refpeet and awe ; but peculiarly fo when he was engaged in any of the more folemn functions of religion, into which he entered with fuch devout earneftnefs and warmth, with fo juft a confcioufnefs of the place he was in, and the bufinefs he was about, as fecmed to raife him above himfelf, and added new life and fpirit to the natural gracefulnefs of his appearance.

His countenance was open, ingenuous, and expreffive of every thing right. It varied eafily with his fpirits and his feelings, fo as to be a faithful interpreter of his mind, which was incapable of the leaft diffimulation. It could fpeak dejection, and, on occafion, anger, very ftrongly; but when it meant to fhow pleafure or appio. bation, it foftened into a moft gracious fmile, and diffufed over all his features the moft benevolent and reviving complacency that can be imagined.

SECOMI E, in natural hiftory, the name of a genus of foffils of the clafs of feptarixe; the characters of which are, That they are bodies of a dulky hue ; divided, by fepta or partitions of a fparry matter, into feveral more or lefs regular portions; of a moderately firm texture; not giving fire with fteel; but ferment. ing with acid menttrua, and eafily calcining. The feptariæ of this genus are of all others the molt conmon, and are what have been known by the little ex. preffive or miftaken names of the waxen vein, or ludus Helmontii. We have many fpecies of thefe bodies common among us. Of the whitifh or brownifh, we have thirteen; of the yellowith five ; and of the ferru. ginous ones four.

SECOND, in geometry, chronology, \&c. the foth part of a prime or minute, whether of a degree or of an hour.

Second, in mufic, one of the mufical intervals; being only the difference between any found and the next neareft found, whether above or below it.

Second Minor, in mufic. See Interval.
Second Sight, in Erfe called Taifch, is a mode of seeing fupcradded to that which nature generally ber ftows. This gift or faculty, which is neither voluntary

\section*{S E C}
gor corftant, is in general rather troublefome than agreeable to the poffeffors of it, who are chiefly found among the inhabitants of the Highlands of Scotland, thofe of the Weftern Ifles, of the Ifle of Man, and of Ireland. It is an impreffion made either by the mind upon the eye, or by the eye upon the mind, by which things diftant or future are perceived, and feen as if they were prefent. A man on a journey far from home falls from his horfe; another, who is perhaps at work about the houfe, fees him bleeding on the ground, commonly with a landfcape of the place where the accident befals him. Another feer, driving home his cattle, or wandering in idlenefs, or mufing in the funhine, is fuddenly furprifed by the appearance of a bridal ceremony, or funeral proceffion, and counts the mourners or attendants, of whom, if he knows them, he relates the names; if he knows them not, he can defcribe the dreffes. Things diftant are feen at the inftant when they happen.

Of things future, Johnfon fays that he knows no rule pretended to for determining the time between the fight and the event; but we are informed by Mr Grofe, that in general the time of accomplifhment bears fome relation to the time of the day in which the impreffions are received. Thus vifions feen early in the morning (which feldom happens) will be much fooner accomplifhed than thofe appearing at noon; and thofe feen at noon will take place in a much fhorter time than thofe happening at night; fometimes the accomplifhment of the lait does not fall out within a year or more.

Thefe vifions are not confined to folemn or important events; nor is it true, as is commonly reported, that to the fecond fight nothing is prefented but phantoms of - evil. The future vifit of a mountebank, or piper ; a plentiful draught of fifl ; the arrival of common travellers ; or, if poffible, ftill more trifling matters than thefe, -are forefeen by the feers. A gentleman told Dr Joha. fon, that when he had once gone far from his own ifland one of his labouring fervants predicted his return, and defcribed the livery of his attendant, which he had never worn at home; and which had been, without any prewious defign, occafionally given him.

As many men eminent for fcience and literature have admitted the reality of this apparently ufelefs gift, we fhall, without interpofing our own opinion, give the reflections of two of the firft characters of the age upon it, and leave our readers to form their own judgment. By Dr Beattie of Aberdeen it is thus accounted for.

The Highlands of Scotland are a picturefque but a melancholy country. Long tracts of mountainous defert, covered with dark heath, and often obfcured by mifty weather; narrow valleys, thinly inhabited, and bounded by precipices refounding with the fall of torrents; a foil fo rugged, and a climate fo dreary, as in many parts to adnit neither the amufements of pafturage nor the labours of agriculture; the mournful dafhing of waves along the friths and lakes that interlect the country; the portentous noifes which every change of the wind and every increafed diminution of
the waters is apt to raife in a lonely region full of Sccond echoes and rocks and caverns; the grotefque and ghaitly appearance of fuch a landfcape by the light of the moon : objects like thefe diffufe a glpom over the fancy, which may be compatible enough with occafional and focial merriment, but cannot fail to tincture the thoughts of a native in the hour of filence and folitude. If thefe people, notwithftanding their reformation in religion, and more frequent intercourfe with ftrangers, do ftill retain many of their old fuperftitions, we need not doubt but in former times they mult have been mulch more enflaved to the horrors of imagination, when befet with the bugbears of Popery and Paganifm. Moft of their fuperftitions are of a melancholy caft. 'That of fecond fight, by which fome are fill fuppofed to be haunted , is confidered by themfelves as a misfortune, on account of the many dreadful images it is faid to obtrude upon the fancy. It is faid that fome of the Alpine regions do likewife lay claim to a fort of fecond fight. Nor is it wonderful, that perfons of a lively imagination, immured in deep folitude, and furrounded with the ftupendous feenery of clouds, precipices, and torrents, thould dream (even when they think themfelves awake) of thofe few ftriking iaeas with which their lonely lives are diverfified: of corpfes, funeral proceffions, and other fubjects of terror; or of marriages, and the arrival of ftrangers, and fuch like matters of more agrecable curiofity.

Let it be obferved alfo, that the ancient Highlanders of Scotland had hardly any other way of fupporting themfelves than by hunting, fifhing, or war; profeffions that are continually expofed to fatal accidents. And hence, no doupt, additional horrors would often haunt their folitude, and a deeper gloom overfhadow the imagination even of the hardieft nativc.

A fufficicnt evidence can hardly be found for the reality of the fecond fight, or at leaft of what is commonly underfood by that term. A treatife on the fubject was publifhed in the year 1762 , in which many tales were told of perfons whom the author believed to have been favoured, or haunted, with thefe illuminations; but moft of the tales were trifling and ridiculous: and the whole work betrayed, on the part of the compiler, fuch extreme credulity, as could not fail to prejudice many readers againft his fyftem.
That any of thefe vifionaries are apt to be fwayed in their declarations by finifter views, we will not fay : but this may be faid with confidence, that none but ignorant people pretend to be gifted in this way. And in them it may be nothing more, perhaps, than thort fits of fudden fleep or drowlinefs, attended with lively dreams, and arifing from fome bodily diforder, the effect of idlenefs, low fpirits, or a gloomy imagination. For it is admitted, even by the moft credulous Highlanders, that as knowledge and induftry are propaga. ted in their country, the fecond fight difappears in proportion: and nobody ever laid claim to the faculty who was much cmployed in the intercourfe of focial life ( 1 ).

G g 2
Nor
(A) This, however, is denied by Johnfon, who affirms that the Inanders of all degrece, whether of rank or underftanding, univerfally admit it except the minifters, who, according to him, reject it, in confequence of a fyAtem, againft convietion. He affirms, too, that in 1773 there was in the Hebrides a fecond-fighted gentleman, who complained of the terrors to which he was expofed.

\section*{S E G [ 236 J S E C}
second. Nor is it at all extraordinary, that one frould have the appearance of being awake, and fhould even think one's felf fo, during thofe fits of dofing; that they thould come on fudderily, and while one is engaged in fome bufnefs. 'The fame thing happens to perfons much fatigued, or long kept awake, who frequently fall afleep for a moment, or for a long fpace, while they are ftanding, or walking, or riding on horfeback. Add but a lively dream to this flumber, and (which is the frequent effect of difeafe) take away the confcioufnefs of having been afleep, and a fuperfitious man may eafily miftake his dream for a waking vilion; which, however, is foon forgotten when no fubfequent occurrence recals it to his memory; but which, if it fhall be thought to refemble any future event, exalts the poor dreamer into a Highland prophet. This conceit makes him more reclufe and more melancholy than ever; and fo feeds his difeafe, and multiplies his vifions: which, if they are not diffipated by bufinefs or fociety, may continue to haunt him as long as he lives; and which, in their progrefs through the neighbourhood, receive fome new tinctures of the marvellous from every mouth that promotes their circulation. As to the prophetical nature of this fecond fight, it cannot be adnitted at all. That the Deity fhould work a miracle in order to give intimation of the frivolous things that thefe tales are made up of, the arrival of a ftranger, the nailing of a coffin, or the colour of a fuit of clothes; and that thefe intimations fhould be given for no end, and to thofe perfons only who are idle and folitary, who fpeak Gaelic, or who live among mountains and deferts-is like nothing in nature or providence that we are acquainted with; and muft therefore, unlefs it were confirmed by fatisfactory proof (which is not the cafe), be rejected as abfurd and incredible.

Thefe vifions, fuch as they are, may reafonably enough be afcribed to a diftempered fancy. And that in them, as well as in our ordinary dreams, certain appearances fhould, on fome rare occafions, refemble certain events, is to be expected from the laws of chance ; and feems to have in it nothing more marvellous or fupernatural, than that the parrot, who deals out his fcurrilities at random, thould fometimes happen to falute the paffenger by his right appellation.

To the confidence of thefe objections Dr Johnfon replies, that by prefuming to determine what is fit, and what is beneficial, they prefuppofe more knowledge of the univerfal fyftem than man has attained; and therefore depend upon principles too complicated and extenlive for our comprehenfion; and that there can be no fecurity in the confequence when the premifes are not underftood; that the fecond fight is only wonderful becaufe it is rare, for, confidered in itfelf, it involves no more difficulty than dreams, or perhaps than the regu: lar exercife of the cogitative faculty; that a general opinion of communicative impulfes, or vifinary reprefentations, has prevailed in all ages and all nations; that particular inftances have been given with fuch evidence, as neither Bacon nor Bayle has been able to refift; that fudden impreffions, whicl the event has verified, have been felt by more than own or publifh them; that the fecond fight of the Hebrides implies only the local frequency of a power, which is nowhere totally unknown; and that where we are unable to decide by antecedent reafon, we mult be content to yield to the force of tef.
timony. By pretenfion to fecond fight, no profit was ever fought or gained. It is an involuntary affection, in which neither hope nor fear are known to have any part. Thofe who profefs to feel it do not boaft of it as a privilege, nor are confidered by others as advantageoufly diftinguifhed. They have no temptation to feign, and their hearers have no motive to encourage the impofture.
\(S_{E C O N D}\) Terms, in algebra, thofe where the unknown quantity has a degree of power lefs than it has in the term where it is raifed to the higheft. The art of throwing thefe fecond terms out of an equation, that is, of forming a new equation where they have no place, is one of the moft ingenious and ufeful inventions in all algebra.

SECONDARY, in general, fomething that acts as fecond or in fubordination to another.

SECONDARY, or Secundary, an officer who acts as fecond or next to the chief officer. Such are the fecond. aries of the courts of kjig's bench and common pleas ; the fecondaries of the compters, who are next the fheriffs of London in each of the two compters ; two fecondaries of the pipe; fecondaries to the remembrancers \& .

S'econdart Qualities of Bodies. See Metaphysics, \(n^{\circ} 153\).

SECONDAT. See Montesquieu.
SECRE'TARIES bird, the falco ferpentarius and fagittarius of Linnæus, but claffed by Latham under the genus Vultur; which fee.

SECRETARY, an officer who, by his mafter's orders, writes letters, difpatches, and other inftruments, which he renders authentic by his fignet. Of thefe there are feveral kinds; as, 1. Secretaries of ftate, who are officers that have under their management and direction the moft important affairs of the kingdom, and are obliged conftantly to attend on the king : they receive and difpatch whatever comes to their hands, either from the crown, the church, the army, private grants, pardons, difpenfations, \&c. as likewife petitions to the fovereign, which, when read, are returned to them ; all which they difpatch according to the king's direction. They have authority to commit perfons for treafon, and other offences againft the ftate, as confervators of the peace at common law, or as juftices of the peace throughout the kingdom. They are members of the privy-council, which is feldom or never held without one of them being prefent. As to the bufinefs and correfpondence in all parts of this kingdom, it is managed by either of the fecretaries without any diftinction; but with refpeet to foreign affairs, the bufinefs is divided into two provinces or departments, the fouthern and the northern, comprehending all the kingdoms and flates that have any intercourle with Great Britain; each fecretary receiving all letters and addreffes from, and making all difpatches to, the feveral princes and ftates comprehended in his province. Ireland and the Plantations are under the direction of the elder fecretary, who has the fouthern province, which alfo comprehends France, Italy, Switzerland, Spain, Portugal, and Turkey; the northern province includes the Low Coun-

\section*{S E C [237] S E C}
retion tries, Germany, Denmark, Sweden, Poland, and Mufcovy. Each of the fecretaries has an apartment in all the royal houres, both for their own accomnnodation and their officers; they have alfo a table at the king's charge, or elfe board-wages. The two fecretaries for Britain lave each two under fecretariss, and one chief clerk; with an uncertain number of other clerks and tranlators, all wholly depending on them. To the fecretaries of flate belong the cuftody of that feal properly called the fignefs, and the direction of two other offices, one called the paper-office, and the other the fignet office. In addition to thefe, there is at prefent ( 179 :) a fecretary for the war department, whofe office mult be temporary. 2. Secretary of an embaffy, a perfon attending an ambaffador, for writing difpatches relating to the negociation. There is a great difference between the fecretary of an embaffy and the 'ambaffador's fecretary; the laft being a domeftic or menial of the anbaffador, and the firft a fervant or miniter of the prince. 3. The feeretary of war, an officer of the war-office, who has two chief clerks under lim, the laft of which is the fesreta. ry's meffenger. -There are alfo fecretaries in moft of the other offices.

SECRETION, in the animal œconomy. See Physiology, fect. VI.

SEC T, a collective term, comprelending all fach as follow the doctrines and opinions of fome famous divine, philofopher, \&c.

SECTION, in general, denotes a part of a divided thing, or the divilion itfelf. Such, particularly, are the fubdivifions of a chapter; called alfo paragraphs and articles: the mark of a fection is \(\delta\).

Section, in geometry, dcnotes a fide or furface of a body or figure cut off by another; or the place where lines, planes, \&c. cut each other.

SECTOR, in geometry, is a part of a circle comprehended between two radii and the arch; or it is a mixed triangle, formed by two radii and the arch of a circle.

Sector, is allo a mathematical inftrument, of great ufe in finding the proportion between quantities of the fame kind: as between lines and lines, furfaces and furfaces, \&c. whence the French call it the compafs of proportion. The great advantage of the fector above the common fcales, \&c. is, that it is made fo as to fit all radii and all fcales. By the lines of chords, fines, \&c. on the fector, we have lines of chords, fines, \& cc . to any radius betwixt the length and breadth of the fector when open.

The real inventor of this valuable inftrument is unknown; yet of fo much merit has the invention appeared, that it was claimed by Galileo, and difputed by nations.

The fector is founded on the fourth propofition of the fixth book of Euclid; where it is demonftrated, that fimilar triangles have their homologous fides proportional. An idea of the theory of its conftruction may be conceived thus. Let the lines AB, AC (Plate CCCCXLVIII. fig. 5.) reprefent the legs of the fector; and \(A D, A E\), two equal fections from the centre : if, now the points CB and DE be connected, the lines CB and DE will be parallel; therefore the triangles ADE ,

ACB will be fimilar ; and confequently the fides AD , \(\mathrm{DE}, \mathrm{AB}\), and BC , proportional ; that is, as AD : \(D E:: A B: B C\) : whence, if \(A D\) be the half, third, or fourth part of \(A B ; D E\) will be a half, third, or fourthpart of CB : and the fame holds of all the reft. If, therefore, \(A D\) be the chord, fine, or tangent, of any number of degrees to the radius \(\mathrm{AB} ; \mathrm{DE}\) will be the fame to the radius BC.
 two rulers or legs, of brafs or ivory, or any other matter, reprefenting the radii, moveable round an axis or joint, the middle of which expreffes the centre; whence are drawn on the faces of the rulers feveral fcales, which may be diftinguifhed into fingle and double.
The double fcales, or lines graduated upon the faces. of the inftrument, and which are to be ufed as fectoral lines, proceed from the ceritre; and are, 1. Two fcales of equal parts, one on each leg, marked LiN. or L. each of thefe fcales, from the great extenfivenefs of its ufe, is called the line of lines. \(\quad 2\). Two lines of chords marked сно. or с. 3. Two lines of fecants marked sec. or s. A line of polygons marked poL. Upon the other face the fectoral lines are, 1 . Two lines of fines marked' sin. or s. 2. Two lines of tangents marked tan. or T. 3. Between the line of tangents and fines there is another line of tangents to a leffer radius, to Supply the defect of the former; and extending from \(45^{\circ}\) to \(75^{\circ}\), marked \(t\).
Each pair of thefe lines (except the line of poly. gons) is fo adjufted as to make equal angles at the centre; and courequently at whatever diftance the fector be opened, the angles will be alway refpectively equal. That is, the diftance between 10 and 10 on the line of lines, will be equal to 60 and 60 on the line of chords, 90 and 90 on the line of fines, and 45 and 45 on the line of tangents.
Befices the fectoral fcales, there are others on each face, placed parallel to the outward edges, and ufed as. thofe of the common plane fcale. 1. Thefe are a line of inches. 2. A line of latitudes. 3. A line of hours. 4. A line of inclination of meridians. 5. A line of chords. Thiree logarithmic fcales, namely, one of numbers, one of fines, and one of tangents ; thefe are ufed when the fector is fully opened, the legs forming oneline ( 1 ).
The value of the divifions on moft of the lines are To read determined by the figures adjacent to them; thefe pro- ind enticeed by tens, which conftitute the divifions of the firf mate the order, and are numbered accordingly; but the value of the fifionsor on the divifions on the line of lines, that are diftinguifhed and lines. by figures, is entirely arbitrary, and may reprefent any value that is given to them; hence the figures \(\mathrm{I}, 2,3\), 4 , \&cc. may denote either \(10,20,30,40\), or 100 , 200, 302,400 , and fo on.
The line of lines is divided into ten equal parts, nums bered \(1,2,3\), to 10 ; thele may be called divifions of the \(f i f t\) order; each of thefe are again fubdivided into 10 . other equal parts, which may be called divifions of the fecond order ; each of thefe is divided into two equal parts, forming divifons of the third order. The divifions on all the fcales are contained between four parallel lines;
thof 3
(A) The lines are placed in different orders on different fectors, but they may eafily be found by thefe generai directions. thofe of the third order extend to the moft diftant ; thofe of the third to the leatt; thofe of the fecond to the intermediate parallel.

When the whole line of tines reprefents 100 , the divifions of the firt order, or thofe to which the figures are annexed, reprefent tens; thofe of the fecond order units; thofe of the third oider the halves of thefe units. If the whole line reprefent ten, then the divifions of - the firf order are units; thofe of the fecond tenths; the © thirds twentieths.

In the line of tangents, the divifions to which the numbers are affixed, are the degrees exprefled by thofe numbers. Every fifth degree is denoted by a line fomewhat longer than the reft ; between every number and each fifth degree, there are four divifions,-longer than the intermediate adjacent ones, thefe are whole degrees; the fhorter oues, or thofe of the third order, are 30 minutes.

From the centre, to 60 degrees, the line of fines is divided like the line of tangents, from 60 to 70 ; it is divided only to every degree, from 70 to 80 , to every two degrees, from 80 to 90 ; the divifion muft be eftimated by the eye.

The divifions on the line of chords are to be eftimated in the fame manner as the tangents.

The leffer line of tangents is graduated every two degrees, from 45 to 50 ; but from 50 to 60 to every degree; from 60 to the end, to half degrees.

The line of fecants from 0 to 10 is to be eftimated by the eye; from 20 to 50 , it is divided to every two degrees; from 50 to 60 , to every degree; from 60 to the end, to every half degree.
Ufe of the Line of Equal Parts on the SECTor. 1. To divide a given line into any number of equal parts, fuppafe feven. 'Take the given line in your compaffes; and fetting one foot in a divifion of equal parts, that

5
To mea fure the peTimeter of a polygon. may be divided by feven, for example 70, whofe fewenth part is 10 , open the fector till the other point fall exactly on 70 , in the fame line on the other leg. In this difpofition, applying one point of the compaffes to 10 in the fame line; fhut them till the other fall in 10 in the fame line on the other leg, and this opening will be the feventh part of the given line. Note, if the line to be divided be too long to be applied to the legs of the fector, divide only one half or one fourth by feven, and the double or quadruple thereof will be the feventh part of the whole.
2. 'Io meafure the lines of the perimeter of a polygon, one of which contains a given number of equal parts. Take the given line in your compaffes, and fet it parallel, upon the line of equal parts, to the number on each leg expreffing its length. I'lre fector remaining thus, fet off the length of each of the other lines parallel to the former, and the number each of them falls on will exprefs its length.
3. A right line being given, and the namber of parts it contains, fuppofe 120 , to take from it a fhorter line, containing any number of the fame parts, fuppofe 25. Take the given line in your compafles, opera the fector till the two feet fall on 120 on each legr then will the diftance between 25 on one leg, and the fame number on the other, give the line required.
4. To multiply by the line of equal parts on the fector. Take the lateral diftance from the centre of the
line to the given multiplicator: open the fector till you fit that lateral diflance to the parallel of 1 and \(I_{2}\) or 10 and 10 , and keep rhe fector in that difpofition ; then take in the compaffes the parallel diftance of the multiplicand, which diflance, meafured laterally on the fame line, will give the product required. Thus, fuppofe it were required to find the product of 8 multiplied by 4: take the lateral diftance from the centre of the line to 4 in your compaffes, i. e. place one foot of the compaffes in the beginuing of the divifions, and extend the other along the line to 4 . Open the fector till yon fit this lateral diftance to the parallel of 1 and 1 , or 10 and 10 . Then take the parallel diftance of 8 , the multiplicand; i. e. extend the compaffes from 8 , in this line, on one leg, to 8 in the fame line on the other; and that extent, meafured laterally, will give the product required.
5. To divide by the line of equal parts on the feetor. Extend the compaffes laterally from the beginning of the line to 1 , and open the fector till you fit that extent to the parallel of the divifor; then take the parallel diftance of the dividend, which extent, meafured in a lateral direction, will give the quotient required. Thus, fuppofe it was required to divide 36 by 4 ; extend the compaffes laterally, the beginning of the line to 1 , and fit to that extent the parallel of 4 , the divifor; then extend the compaffes parallel, from 36 on one leg to 36 on the other, and that extent, meafured laterally, will give 9 , the quotient required.
6. Proportion by the line of equal parts. Make the Prupo lateral diftance of the fecond term the parallel diftauce of the firt term, the parallel diftance of the third term is the fourth proportioual. Exampic. To find a fourth proportional to 8,4 , and 6 , take the lateral diftance of 4 , and make it the parallel dittance of 8 ; then the parallel diftance of 5 , extended from the centre, fhall reach to the fourth proportional 3 .

In the fame manner, a third proportional is found to two numbers. Thus, to find a third proportional to 8 and 4, the fector remaining as in the former exainple, the parallel diftance of 4, extended from the centre, fhall reach to the third proportional 2. In all thefe cafes, if the number to be made a parallel diftance be too great for the fector, fome aliquot part of it is to be taken, and the anfwer is to be multiplied by the num. ber by which the firlt number was divided.

Uje of the Line of Chords on the SECTOR. I. To open the lector fo as the two lines of chords may make an angle or number of degrees, fuppofe 40. Take the diftance from the joint to 40 , the number of the degrees propofed, on the line of chords; open the fector till the diftance from 60 to 60 , on each leg, be equal to the given diftance of 40 ; then will the two lines on the fector form an angle of 40 degrees, as was required.
-2. The fector being opened, to find the degrees of its aperture. Take the extent from 60 to 60 , and lay it off on the line of chords from the centre ; the number whereon it terminates will fhow the degrees, \&c. required.
3. To lay off any number of degrees upon the circuunference of a circle. Open the fector till the diAtance between 60 and 60 be equal to the radius of the given circle; then take the parallel extent of the chord of the number of degrees on each leg of the fector, and

\section*{S E C \\ 239 \\ S E C}
lay it off on the circumference of the given circle. Hence any regular polygon may be cafily infcribed in a given circle.

Ufe of the Line of Polygons on the Srctor. 1. To infcribe a regular polygon in a given circle. Take the femidiameter of the given circle in the compaffes, and adjult it to the number 6 , on the line of polygons, on each leg of the fecior : then, the fector remaining thus opened, take the diftance of the two equal numbers, expreffing the number of fides the polygon is to have; c. gr . the difance from 5 to 5 for a pentagon, from 7 107 for a heptagon, \&c. Thefe diltances carried about the circumference of the circle, will divide it into fo many equal parts.
2. To defcribe a regular polygon, e. gr. a pentagon, on a given right line. Take the length of the line in the compaffes, and appiy it to the extent of the number 5, 5, on the lines of polygons. The fector thus opencd, upon the fame lines take the extent from 6 to 6 ; this will be the femidiameter of the circle the polygon is to be infrribed in. If then, with this diftance, from the ends of the given line, you defcribe two arches of a circle, their interfection will be the centre of the circle.
3. On a right line, to defcribe an ifoceles triangle, having the angles at the bafe double that at the vertex. Open the fector, till the ends of the given line fall on 10 and 10 on each leg; then take the diftance from \(\sigma\) to \(\sigma\). This will be the length of the two equal fides of the triangle.

Ufe of the Lines of Sines, Tangents, and Secants, on the Sector. By the feveral lines difpofed on the fector, we have fcales to feveral radii; fo that having a length or radius given, not exceeding the length of the fector when opened, we find the chord, fine, \&c. thereto : e. gr. Suppofe the chord, fine, or tangent, of 10 degrees, to a radius of 3 inches required; make 3 inclies the aperture, between 60 and 60 , on the lines of chords of the two legs; then will the fame extent reach from 45 to 45 on the line of tangents, and from 90 to 90 on the line of the fines on the other fide; fo that to whatever radius the line of chom is fet, to the fame are all the others fet. In this difpofition, therefore, if the aperture between 10 and 10 , on the lines of chords, be taken with the compaffes, it will give the chord of 10 degrees. If the aperture of 10 and 10 be in like manner taken on the lines of fines, it will be the fine of 10 degrees. Laftly, if the aperture of 10 and 10 be in like manner taken on the lines of tangents, it gives the tangent of 10 degrees.

If the chord, or tangent, of 70 degrees were reequired; for the chord, the aperture of half the arch, viz. 35 , mufl be taken, as before; which diftance, repeated twice, gives the chord of 70 degrees. To find the tangent of 70 degrees to the fame radius, the fmall line of tangents muft be ufed, the other only reaching 2045 : making, therefore, 3 inches the aperture bet ween 4.5 and 45 on the fmall line; the extent between 70 and 70 degrees on the fame, will be the tangent of 70 degrees to 3 inches radius.

To find the fecant of an arch, make the given radins the aperture between \(\circ\) and \(\circ\) on the lines of fecants : then will the aperture of 10 and 10 , or 70 and 70 , on
faid lines, give the tangent of \(10^{\circ}\) or \(70^{\circ}\).
If the converfe of any of thefe things were required,
that is, if the radius be required, to which a given Seckir, line is the fine, tangent, or fecant, it is but making the given line, if a chord, the aperture on the line of chords, between 10 ánd 10 , and then the fector will ftand at the radius required ; that is, the aperture between 60 and 60 on the faid line is the radius. If the given line were a fine, tangent, or fecant, it is but making it the aperture of the given number of degrees; then will the diftance of 90 and 90 on the fines, of 45 and 45 on the tangents, of 0 and 0 on the \(\mathrm{fe}-\) cants, be the radius.

\section*{Afronomical Sector. See Astronomical Secior.}

\section*{Diaing Sector. See Dialing.}

SECUILAR, that which relates to affairs of the pre。 fent world, in which fenfe the word ftands oppofed to Spiritual, ecclefafical: thus we fay fecular power, \&c.

Secular, is more peculiarly ufed for a perfon who lives at liberty in the world, not flut up in a monaftery, nor bound by vows, or fubjected to the particular rules of any religious community ; in which fenfe it fands oppofed to regular. The Romifh clergy are divided into fecular and regular, of which the latter are bound by monaftic rules, the former not.

Secular Gumes, in antiquity, folemn games held among the Romans once in an age. Thefe games lafted three days and as many nights; during which time facrifices were performed, theatrical fhews exhibited, with combats, fports, \&c. in the circus. The occafion of thefe games, according to Valerius Maximus, was to ftop the progrefs of a plague. Valerius Publicola was the firft who celebrated them at Rame in the year of the city 245. The folemnity was as follows: The whole world was invited by a herald to a feaft which they had never feen already, nor ever fhould fee again: Some days before the games began, the quindecemviri in the Capitol and the Palatine temple, diftributed to the people purifying compofitions, of various kinds, as flambeaus, fulphur, \&c. Fron hence the populace paffed to, Diana's temple on the Aventine mount, with wheat, barley, and oats, as an offering. After this, whole nights were fpent in devotion to the Deftinies. When the time of the games was fully come, the people affembled in the Campus Martius, and facrificed to Jupiter, Juno, A pollo, Latona, Diana, the Parcæ, Ceres, Pluto, and Proferpine. On the firf night of the fealt the emperor, with the quindecemviri, caufed three altars to be erected on the banks of the I'iber, which they fprinkled with the blood of three lambs, and then proceeded to regular facrifice. A fpace was next marked out for a theatre, which was illuminated with innumerable flambeaus and fires. Here they fung hymns, and celebrated all kinds of fports. On the day after, having offered victims at the Capitol, they went to the Campus Martius, and celebrated fports to the honour of Apollo and Diana. Thefe lafted till next day, when the noble matrons, at the hour appointed by the oracle, wert to the Capitol to fing hymns to Jupiter. On the third day, which concluded the folemnity, twenty-feven boys, and as many girls, fung, in the temple of Palatine Apollo. hymus and verfes in Greek and Latin, to recommend the city to the protection of thofe deities whom they defigned particularly to honour by their facrifices.

The inimitable Carmen Seculare of Horace was comapofed for this laft day, in the Sécular Games, held by Auguftus.

\section*{S E C}

Secular II Secundus. \(\rightarrow\)

It has been much difputed whether thefe games were held every hundred, or every hundred and ten years. Valerius Antius, Varro, and Livy, are quoted in fupport of the former opinion: In favour of the latter may be produced'the quindecemviral regifters, the edicts of Augutus, and the words of Horace in the Secular poem,

\section*{Catus undenos decies per annos.}

It was a general belief, that the girls who bore a part in the fong fhould be fooneft married; and that the children who did not dance and fing at the coming of Apollo, hould die unmarried, and at an early period of life.

Secular Poem, a poem fung or rehearled at the fecular games; of which kind we have a very fine piece among the works of Horace, being a fapphic ode at the end of his epodes.

SECULARIZATION, the act of converting a regular perfon, place, or benefice, into a fecular oné. Almoft all the cathedral churches were anciently regular, that is, the canons were to be religious; but they have been fince fecularized. For the fecularization of a regular church, there is required the authority of the pope, that of the prince, the bifhop of the place, the patron, and even the confent of the pople. Religious that want to be releafed from their vow; obtain briefs of fecularization from the pope.

SECUNDINES, in anatomy, the feveral coats or membranes wherein the fœtus is wrapped up in the mother's womb; as the chorion and amnios, with the placenta, \&c.

SECUNDUS (Joannes Nicolaius), an elegant writer of Latin poetry, was born at the Hague in the year 1511. His defcent was from an ancient and honourable family in the Netherlands; and his father Nicolaus Everardus, who was born in the neighbourhood of Middleburg, feems to have been high in the favour of the emperor Charles V. as he was employed by that monarch in feveral ftations of confiderable importance. We find him firt a member of the grand parliament or council of Mechelen, afterwards prefident of the ftates of Holland and Zealand at the Hague, and laftly holding a fimilar office at Mechelen, where he died, Auguft 5. 1532, aged 70.

Thefe various employments did not occupy the whole of Everardus's time. Notwithftanding the multiplicity of his bufinefs, he found leifure to cultivate letters with great fuccefs, and even to act as preceptor to his own children, who were five fons and three daughters. They all took the name of Nicolaii from their father; but on what account our author was called Secundus is not known. It could not be from the order of his birth, for he was the youngeft fon. Perhaps the name was not given him till he became eminent ; and then, according to the fafhion of the age, it might have its rife from fome pun, fuch as his being Poetarum nemini Se cundus. Poetry, however, was by no means the profeffion which his father wifhed him to follow. He intended him for the law, and when he could no longer direct his fudies himfelf, placed him under the care of Jacobus Valeardus. This man is faid to have been every way well qualified to difcharge the important truft which was committed to him; and he certainly gained the affection of his pupil, who, in one of his poems,
mentions the death of Valeardus with every appearance of unfeigned forrow. Another tutor was foon provided; but it does not appear that Secundus devoted much of his time to legal purfuits. Poetry and the fifter arts of painting and fculpture had engaged his mind at a very early period; and the imagination, on which thefe have laid hold, can with difficulty fubmit to the dry ftady of mufty civilians. Secundus is faid to have written verfes when but ten years old ; and from the valt quantity which he left behind him, we have reafon to conclude that fuch writing was his principal employ. ment. He found time, however, to carve figures of all his own family, of his miftreffes, of the emperor Charles V. of feveral eminent perfonages of thofe times, and of many of his intimate friends; and in the laft edition of his works publifhed by Scirverius at Leyden, 163 I , there is a print of one of his miftrefles with this inicription round it; Vatis amatoris Julia sculpta manu.

Secundus having nearly attained the age of twenty one, and being determined, as it would feem, to comply as far as poffible with the wifhes of his father, quitted Mechelen, and went to France, where at Bourges, a city in the Orleanois, he ftudied the civil law under the celebrated Andreas Alciatus. Alciatus was one of the moft learned civilians of that age ; but what undoubtedly endeared him much more to our author was his general acquaintance with polite literatúre, and more particularly his tafte in poetry. Having ftudied a year under this eminent profeffor, and taken his degrees, Secundus returned to Mechelen, where he remained only a very few months. In 1533 he went into Spain with warm recommendations to the count of Naffau and other perfons of high rank ; and foon afterwards became fecretary to the cardinal archbifhop of Toledo in a department of bufinefs which required no other qualifications than what he poffeffed in a very eminent degree, a facility in writing with elegance the Latia language. It was during his refidence with this cardinal that he wrote his \(B a f i a\), a feries of wanton poems, of which the fifth, feventh, and ninth carmina of Catullus feem to have given the hint. Secundus was not, however, a fervile imitator of Catullus. His expreffions feem to be borrowed rather from Tibullus and Propertius; and in the warmth of his defcriptions he furpaffes every thing that has been written on fimilar fubjects by Catullus, Tibullus, Propertius, C. Gallus, Ovid, or Horace.

In 1535 he accompanied the emperor Charles V. to the fiege of Tunis, but gained no laurels as a foldier. The hardfhips which were endured at that memorable fiege were but little fuited to the foft eifpofition of a votary of Venus and the mufes; and upon an enterprife which might have furnifhed ample matter for an epic poem, it is remarkable that Secundus wrote nothing which has been deemed worthy of prefervation. Having returned from his martial expedition, he was fent by the cardinal to Rome to congratulate the pope upon the fuccefs of the emperor's arms; but was taken fo ill on the road, that he was not able to complete his journey. He was advifed to feek, without a moment's delay, the benefit of his native air; and that happily recovered him.

Having now quitted the fervice of the archbifhop of 'Ioledo, Secundus was employed in the fame office of fecretary by the bifhop of Utrecht; and fo much had

\section*{S E C}
he hitherto diftinguifined himfelf by the clafical elegance of his compofitions, that he was foon called upon to fill the important pof of private Latin feeretary to the emperor, who was then in Italy. This was the moft ho. nourable office to which our author was ever appointed; but before hc could enter upon it death put a ftop to his career of glory. Having arrived at Saint 1 mand in the diftrict of Tournay, in order to meet, upon bufinefs, with the bihhop of Utrecht, he was on the 8th of October 1536 cut off by a violent fever, in the very flower of his age, not having quite completed his twenty-fifth y ear. He was interred in thic church of the Benedictines, of which his patron, the bifhop, was ablot or pro-albot; and his near relations erected to his memory a marble monument, with a plain Latin infcription.
The works of Secundus have gone through feveral editions, of which the beft and moft copious is that of Scriverius already mentioned. It confifts of Jul 1a, Eleg. Lib. i.; Amores, Eleg. Lib. 2.; ad Diversos Fleg. Lib. 3.; Basia, fyled by the editor incomparabilis et divinus prorfus liber; Epigrammata; Odarum liber unus; Epistolarum liber unus Elegiaca; Epistola. rum liber alier, heroico carmine foriptus; Funerum liber unus; Sylve et Carminum fragmenta; Poemata nonnulla fratrum; Itineraria Secundi tria, Scc.; Epistole totidem, foluta oratione. Of thefe works it would be fuperfluons in us to give any character after the ample teftimonies prefixed to them of Lelius Greg. Gyraldus, the elder Sculizer, Theodore Beza, and others equally celebrated in the republic of letters, who all §peak of them with rapture. A French critic, indeed, after having affirmed that the genius of Secundus never produced any thing which was not excellent in its kind, adds, with too much truth, Mais fa mufe eft un peu trop lafcive. For this fault our author makes the following apology in an epigram addrefled to the grammarians;
Carmina cur fpargam cunctis lafciva libellis, Queritis? Infullos arceo grammaticos.
Fortia magnanimi canerem fi Cæfaris arma, Factave Divorum religiofa virûm :
Quot mifer exciperemque notas, patererque lituras ? Quot fierem teneris fupplicium pueris?
At nunc uda mihi dietant cum Bas1a carmen, Pruriet et verfu mentula multa meo;
Me leget innuptæ juvenis placiturus amicæ, Et placitura nova blanda puella viro :
Et quemcunque juvat lepidorum de grege vatum Otia fettivis ludere deliciis.
Lutibus et latis procul hinc abfifite, sevr Grammatici, injuftas et cohibite manus.
Ne puer, ab malleis cæfus lacrymanfque leporis; Duram fortemeis ossibus optet humum.
SECURIDACA, a plant belonging to the clafs of diadelphia, and to the order of octandria The calyx has three leaves, which are fmall, deciduons, and coloured. The corolia is papilionaceous. The vexillum, confirting of two petals, is oblong, fraight, and conjoined to the carina at the bafe. The carina is of the fane length with the alx. The legumen is ovated, unilocular, monofpermous, and ending in a ligulated ala. There are two fpecies, the ereita and rolubilis. The erecta has an uppight ftem: the volubilis or fcandens is a climbing plant, and is a native of the Weft Indies.
SECUTORES, a fpccies of gladiators among the Vol. XVII. Part I.

\section*{\(241]\) \\ S E D}

Romans, whofe arns were a helmet, a fhield, and a fword or a leaden bullet. They were armed in this manner, becaufe they had to contend with the retiarii, who were dreffed in a fhort tunic, bore a three-pointed lance in their left hand, and a net in their right. The retiarius attempted to caft lis net over the head of the fecutor; and if he fucceeded, he drew it together and flew him with his trident: but if he miffed his aim, he immediately betook himfelf to flight till he could find a fecond opportunity of intangling his adverfary with his net. He was purfued by the fecutor, who endeavoured to difpatch him in his flight.
Secutores was alfo a name given to fuch gladiators who took the place of thofe killed in the combat, or who engaged the conqueror. This poft was ufually taken by lot.

SEDAN is a town of Champagne in France, in E. Long. 4. 45. N. Lat. 49. 46. This is the capital of a principality of the fame name, fituated on the Maefe, fix miles from Bouillon, and fifteen from Charleville. Its fituation on the frontiers of the territory of Liege, Namur, and Limburg, formerly rendered it one of the keys of the kingdom. It is extremely well fortified, and defended by a flrong citadel. The cafte is fituated on a rock, furrounded with large towers and ftrong walls : here you fee a moft beautiful magazine of ancient arms. 'The governor's palace is oppofite the caftle. From the ramparts you have a moft agreeable profpect of the Maefe and the neighbouring country. Though the town is but fmall, yet it is full of tradefmen, as tanners, weavers, dyers, \&c. the manufacture of five cloth in this city employing a great number of hands. The principality of Sedan formerly belonged to the duke of Bouillon, who was obliged in the beginning of the lait century to refign it to the crown.

SEDAN-ChAR is a covered vehicle for carrying a fingle perfon, fufpended by two poles, and borne by two men, hence denominated cbairmen. They were firt introduced in London in 1634 , when Sir Sanders Duncomb obtained the fole privilege to ufe, let, and hire a number of the faid covered chairs for fourteen years.
SEDITION, among civilians, is ufed for a factious commotion of the people, or an affembly of a number of citizens without lawful authority, tending to difturb the peace and order of the fociety. This offence is of different kinds : Iome feditions more immediately threatening the fupreme power, and the fubverion of the prefent conititution of the fate; others tending only towards the redrefs of private grievances. Among the Romans, therefore, it was vatioufly punifhed, according as its end and tendency threatened greater nifchief. See lib. i. Cod. de Sediitofis, and Mat. de Crimin. lib. ii. n. 5. de Lafa Majefate. In the punifhment, the authors and ringleaders were ju!ly diftinguifhed from thofe who, with lefs wicked intention, joined and made part of the multitude.
The fame diftinction holds in the law of England and in that of :cotland. Some kinds of fcdition in England amount to high treafon, and come with in the Atat. 25 Edw. III. as levying war againft the king. And feveral feditions are mentioned in the Scotch acts of parliament as treafonable. Bayne's Cirim. Law of Scotland, p. 33,34. The law of Scotland makes riotous and tunultuous affemblies a fpecies of fedition. But the law there, as well as in England, is now chiefly

Hh
regulated

Sedan,
Sedition.

\section*{S E D \\ S E D}

Sedatives regulated by the riot act, made 1 Geo. I. only it is to be Sedley. obferved, that the proper oflicers in Scotland, to make the proclamation thereby enacted, are fheriffs, ftewards, and bailies of regalities, or their deputies ; magiftrates of royal boroughs, and all other inferior judges and magiftrates; ligh and petty conftables, or other officers of the peace, in ary county, tewartry, city, or town. And in that part of the ifland, the punifhment of the offence is any thing flort of death which the judges, in their diferetion, may appoint.

SEDATIVES, in medicine, a general name for fuch medicines as weaken the powers of nature, fuch as blood-letting, cooling falts, purgatives, \&ec.

SE DEFENDENDO, in law, a plea ufed for him that is charged with the death of another, by alleginy, that he was under a neceffity of doing what he did in his own defence: as that the other affanted him in fuch a manner, that if he had not done what he did, he muit have been in hazard of his own life. See Homicide and Murder.

SEDIMEN:', the fettlement or dregs of any thing, or that grofs heavy pait of a fluid body which funks to the bottom ot the veffel when at relt.

SEDLEY (Sir Charles), an Englifh poct and wit, the fon of Sir John Sedley of Aylesford in Kent, was born about the year 1639. At the reftoration he came to London to join the general jubilee; and commenced wit, courtier, pott, and gallant. He was fo much admired, that he became a kind of oracle among the pocts; which made king Charles tell hin, that Nature had given him a patent to be Apollo's viceroy. The productions of his pen were fome plays, and feveral delicately tender amorous poems, in which the foftnefs of the verfes was fo exquifite, as to be called by the duke of Buckingham Sedley's witchoraft. "I here were no marks of genius or true poetry to be defcried, (fay the authors of the Biograpbia Britannica); the art wholly confifted in raifing loofe thoughts and lewd defires, without giving any alarm; and fo the poifon worked gently and irrefittibly. Our author, we may be fure, did not efcape the infection of his own art, or rather was firft tainted himfelf before he fpread the infection to others." - A very ingenious writer of the prefent day, however, fpeaks much more favourably of Sir Charles Sedley's writings. "He ftudied human nature ; and was diftinguifhed for the art of making himfelf agreeable, particularly to the ladies; for the verfes of Lord Rochefter, beginning with, Sedley bas that prevailing gentle art, \&c. Io often quoted, allude not to his auritings, but to lis perfonal addrefs." [Langhorn's Effufions, \&c.]-But while he thus grew in reputation for wit and in favour with the king, he grew poor and debauched : his eftate was impaired, and his morals were corrupted. One of his frolics, however, being followed by an indictment and a heavy fine, Sir Charles took a more ferious turn, applied himfelf to bufinefs, and be came a member of parliament, in which he was a frequent fpeaker. We find him in the Houle of Commons in the reign of James II. whofe attempts upon the conftitution he vigoroufly withftood; and he was very active in bringing on the revolution. This was thought more extraordinary, as he had received favours from James. But that prince had taken a fancy to Sir Charles's daughter (though it feems fhe was not very handfome), and, in confequence of his intrigues with
her, he created Mifs Sedley countefs of Dorcheiter. This honour, fo far from pleafins, greatly fhocked Sir Charles. However libertine lie himfelf had been, yet he could not bear the thoughts of his daughter's difhonour ; and with regard to her exaltation, he only confidered it as rendering her more conficuouny infamous. He therefore conceived a hatred for the kin \(₹\); and trom this, as well as other motives, readily joined to difpoffefs hin of the throne. A witty Gying of Sedley's, on this occation, is recorded. "I hate ingratitude, (faid Sir Charles) ; and therefore, as the king has made my daughter a comitefs, I will endeavour to make his daughter a queen ;" meaning the princefs Mary, married to the prince of Orange, who difpuffefled James of the throne at the revolution. He lived to the beginning of queen Anne's reign; and his works were printed in 2 vols \(8 \mathrm{vo}, 1719\).

SEDR, or SEDRE, the high=prieft of the fect of Ali among the Perfians. The iedre is appointed by the emperor of Perfia, who ufually confers the dimnity on his neareft relation. The jurifdiction of the fedre extends over all effects deftined for pious purpofes, over all mofques, hofpitals, colleges, fepulchres, and monafteries. He difpofes of all ecclefiatical employments, and nominates all the fuperiors of religious houfes. His decifions in matters of religion are received as fo many infallible oracles; he judges of all criminal matters in his own houfe withont appeal. His authority is balanced by that of the mudfitehid; or firt theologue of the empire.

SEDUCTION, is the act of tempting and drawing afide from the right path, and comprehends every endeavour to corrupt any individual of the human race. This isthe import of the word in its largeft and moft general fenfe; but it is commonly employed to exprefs the act of tempting a virtuons woman to part with her claftity.
The feducer of female innocence practifes the fame ftratagems of fraud to get poffelfion of a woman's perfon, that the fruindler employs to get poffeffion of his neighbour's goods or money; yet the law of honour, which pretends to abhor deceit, and which impels its votaries to murder every man who prefumes, however juftly, to fufpect them of fraud, or to queftion their veracity, applands the addrefs of a fuccelsful intrigue, tho \({ }^{9}\) it be well known that the feducer could not have obtained his end without fwearing to the truth of a thou* fand falfehoods, and calling upon God to witnefs promifes which he ncver meant to fulfil.

The law of honour is indeed a very capricious rule, which accommodates itfelf to the pleafures and conve. niences of higher life; but the law of the land, which is enacted for the equal protection of high and low, may be fuppofed to view the guilt of feduction with a more impartial eye. Yet for this offence, even the laws of this kingdom have provided no other punifhment than a pecuniary fatisfaction to the injured family : which, in England, can be obtained only by one of the quainteft fictions in the world, by the father's bringing his action againft the feducer for the lofs of his daughter's fervice during her pregnancy and nurturing. See Paley's Moral Pbilofophy, Book III. Part iii. Chap. 3.

The moralift, however, who eftimates the merit or demerit of actions, not by laws of human appointment, but by their general confequences as eftablifhed by the laws of nature, muft confider the feducer as a criminal

\section*{S E D}
of the deepeft guilt. In every civilized country, and in many countries where civilization has made but fmall progrefs, the virtue of women is collected as it were into a fingle point, which they are to guard above all things, as that on which their happinefs and reputation wholly depend. At firft fight this may appear a cap:icious regulation; but a moment's reflection will convince us of the contrary. In the married flate fo much confidence is neceffarily repofed in the fidelity of women to the beds of their hubands, and evils fo great refult from the violation of that fidelity, that whatever contributes in any degree to its prefervation, muft be agreeable to him who, in eftablifhing the laws of nature, intended them to be fubfervient to the real happinefs of all his creatures. But nothing contributes fo much to preferve the fidelity of wives to thcir hufbands, as the impreffing upon the minds of women the higheft veneration for the virtue of chaflity. She who, when unmarried, has been accuffomed to grant favours to different men, will not find it eafy, if indeed poffible, to refift afterwards the allurements of variety. It is therefore a wife inftitution, and agreeable to the will of Him who made us, to train up women fo as that they may look upon the lofs of their chaftity as the moft difgraceful of all crimes; as that which finks them in the order of fociety, and robs them of all their value. In this light virtuous women actuafly look upon the lofs of chaftity. The importance of that virtue has been fo deeply imprefled upon their minds, and is fo clofely affociated with the principle of honour, that they cannot think but with abhorrence upon the very deed by which it is loft. Fe therefore who by fraud and falfehood perfuades the unfufpecting girl to deviate in one inftance from the honour of the lex, weakens in a great degree her moral principle; and if he reconcile her to a repetition of her crime, he deftroys that principle entirely, as fhe has been taught to confider all other virtues as inferior to that of chatity. Hence it is that the hearts of proftitutes are generally fteeled againft the miferies of their fellow-creatures ; that they lend their aid to the feducer in his practices upon other gills; that they lie and fwear and fteal without compunction ; and that too many of them hefitate not to commit murder if it can ferve any felifh purpofe of their own.

The lofs of virtue, though the greateft that man or woman can fuftain, is not the only injury which the feducer brings upoul the girl whom he deceives. She cannot at once reconcile herfelf to proftitution, or even to the lofs of character; and while a fenfe of flame remains in her mind, the mifery which fhe fuffers mutt be exquifite. She knows that fhe has forfeited what in the female character is moot valued by both fexes; and the muft be under the perpetual dread of a difcovery. She cannot even confide in the honour of her feducer, who may reveal her fecret in a fit of drunkennefs, and thus tob her of her fame as well as of her virtue; and while fhe is in this flate of anxious uncertainty, the agony of her mind mult be infupportable. That it is fo in fact, the many inftances of child murder by unmarried women of every rank leave us no room to doubt. The affection of a mother to her new-born child is one of the molt unequivocal and ftrongeft inflincts in human nature (fee Instinct); and nothing fhort of the extremity of diftrefs could prompt any one fo far to op-
pofe her nature as to
her imploring infant.
Even this deed of horror feldom prevents a detection of the mother's failty, which is indeed commonly difcovered, though no child has been the coniequence of her intrigue. He who can feduce is bafe enough to betray; and no woman can part witl her honour, and retain any well-grounded hope that her amour haall be kept fecret. The villain to whom fhe furrendered will glory in his victory, if it was with difficulty obtained; and if fhe furrendered at difcretion, her own behaviour will reveal her fecret. Her reputation is then irretrievably loft, and no future circumppection will be of the fmalleft avail to recover it. She will be flemned by the virtuous part of her own fex, and treated as a mere inftrument of pleafure by the other. In fuch circumftances fle cannot expect to be married with advantage. She may perhaps be able to captivate the heart of a heedlefs youth, and prevail upon him to unite his fate to her's before the delirium of his paffion fhall give him time for reflection; fle may be addrefled by a man who is a ftranger to her ftory, and married while he has no fufpicion of her fecret; or the may be folicited by one of a flation inferior to her own, who, though acquainted with every thing that has befallen her, can barter the dclicacy of wedded love for fome pecuniary advantage ; but from none of thefe marriages can fhe look for hap. pinefs. The delirium which prompted the firt will foon vanifh, and leave the hurband to the bitternefs of his own reflections, which can hardly fail to produce cruelty to the wife. Of the fecret, to which, in the fecond cafe, the lover was a ftranger, the hufband will foon make a difcovery, or at leadt find room for harbouring ittrong fufpicions; and fufpicions of having been deceived in a point fo delicate have hitherto been uniformly the parents of mifery. In the third cafe, the man married her merely for money, of which having got the poffeffion, he has no farther inducement to treat her with refpect. Such are fome of the confequences of feduction, even when the perion feduced has the good fortune to get afterwards a hufband; but this is a fortune which few in her circumftances can reafouably expect. By far the greater part of thofe who have been defrauded of their virtue by the arts of the feducer fink deeper and deeper into guilt, till they become at laft common proftitutes. The public is then deprived of their fervice as wives and parents; aid inftead of contributing to the population of the flate, and to the fum of domentic felicity, there outcafts of fociety become feducers in their turn, corrupting the morals of every young man whofe appetites they can iuflame, and of every young woman whom they can entice to their own practices.
All this complication of evil is produced at firt by arts, which, if emplojed to deprive a man of his property, wonld fubject the offender to the execration of his fellow-fubjects, and to an ignominious death : but while the forger of a bill is purfued with relentlefs rigour by the minifters of juftice, and the fwindler loaded with univerfal reproach, the man who by fraud and forgery has enticed an innocent girl to gratify his defires at the expence of her virtue, and thus introduced her into a path which mut infallibly lead to her own ruin, as well as to repeated injuries to the public at

\section*{S E D}

Sedustion. large, is not defpifed by his own fex, and is too often Sedum careffed even by the virtuous part of the other. Yet
the lofs of property may be eafily repaired; the lofs of honour is irreparable! It is vain to plead in alleviation of this guilt, that women fhould be on their guard again!t the arts of the feducer. Moft unqueftionably they fhould; but arts have been ufed which hardly any degree of caution would have been fufficient to counteract. It may as well be faid that the trader fhould be on his guard againit the arts of the forger, and accept of no bill without previoufly confulting him in whofe name it is written. Cafes, indeed, occur in trade, in which this caution would be impoffible; but he muft be little acquainted with the workings of the human heart, who does not know that fituations likewife occur in life, in which it is equally impoffible for a girl of virtue and tendernefs to refitt the arts of the man who has completly gained her affections.

The mentioning of this circumftance leads us to confider another fpecies of feduction, which, though not fo highly criminal as the former, is yet fàr removed from innocence; we mean the practice which is too prevalent among young men of fortune of employing every art in their power to gain the hearts of heedlefs girls whom they refolve neither to marry nor to rob of their honour. Should a man adhere to the latter part of this refolution, which is more than common fortitude can always promife for itfelf, the injury which he does to the object of his amufement is yet very great, as he raifes hopes of the moft fanguine kind merely to difappoint them, and diverts her affections perhaps for ever from fuch men as, had they been fixed on one of them, might have rendered her completely happy. Difappointments of this kind have fometimes been fatal to the unhappy girl; and even when they have neither deprived her of life, nor difordered her reafon, they have often kept her wholly from marriage, which, whatever it be to a man, is that from which every woman expects her chief happinefs. We cannot therefore conclude this article more properly than with warning our fernale readers not to give up their liearts haftily to men whofe fation in life is much higher than their own; and we beg leave to affure every one of them, that the man who folicits the laft favour under the moft folemn promife of a fubfequent marriage, is a bafe feducer, who prefers a momentary gratification of his own to her honour and happinefs through life, and has no intention to fulfil his promife. Or, if he fhould by any means be compelled to fulfil it, The may depend upon much ill treatment in return for her premature compliance with his bafe defires.

SEDUM, orpine, in botany : A genus of the pentagynia order, belonging to the decandria clafs of plants; and in the natural method ranking under the I 3 th order, Succulenta. The calyx is quinquefid; the corolla is pentapetalous, pointed, and fpreading; there are five nectariferous fquamæ or fcales at the bafe of the germen. 'The capfules are five.

The fpecies are 20 in number. 1. The Verticillatum; 2. Telephium; 3. Anacampferos; 4. Aizoon; 5. Hybridum ; 6. Populifolium ; 7. Stellatum ; 8. Cepaea; 9. Libanoticum ; 10. Dafyphyllum; 11 . Re. flexum ; 12. Rupeftre; 13. Lineare; 14. Hifpanicum; 15. Album; 16. Acre; 17. Sexangulare; 18. Annuum;
19. Villofum; 20. Atratum. The following feecies are the moft remarkable.
1. The telephium, common orpine, or live-long; hath a perennial root, compofed of many knobbed tubercles, fending up erect, round, fucculent ftalks, branching half a yard or two feet high, garnifhed with oblong, plane, ferrated, fucculent leaves, and the ftalks terminated by a leafy corymbus of flowers, of different colours in the varieties. This fpecies is an inhabitant of woods and dry places in England, \&c. but has been long a refident of gardens for variety and medical ufe. 2. The anacampferos, or decumbent evergreen Italian orpine, hath a fibrous perennial root, decumbent or trailing ftalks, wedge-fhaped entire leaves, and the ftalks terminated by a corymbus of purple flowers. 3. 'The rupeftre, rock fedum, or flone-crop of St Vincent's rock, hath flender, trailing, purple ftalks; fhort, thick, awl. fhaped, fucculent, glaucous leaves in clufters, quinquefarioufly imbricated round the falks, and the ftalks ter. minated by roundifh cymofe bunches of bright yellow
fiowers. It growa naturally on St Vincent's rock fiowers. It grows naturally on St Vincent's rock near Briftol, and other rocky places in Europe. 4. 'The aizoon, or Siberian yellow orpine, hath a tuberculate, fibrous, perennial root; many upright, round, fucculeut, ftalks, a foot high ; lanceolated, plane, ferrated, thickifh leaves; and the ftalks terminated by a clofe-fitting cymofe clufter of bright yellow flowers. 5. The reflexum, reflexed fmall yellow fedum, or prick-madan, hath a flender fibrous perennial root; fmall trailing fucculent ftalks, garnifhed with thick, awl-fhaped, fucculent leaves fparfedly, the lower ones recurved, and the ftalks terminated by reflexed fpikes of kright yellow flowers. It grows naturally on old walls and buildings in England, \&c. 6. 'The acre, acrid fedum, common ftone-crop of the wall, or wall-pepper, hath fmall fibry roots, very flender fucculent ftalks four or five inches high, very finall, fuboval, gibbous, erect, alternate leaves, clofe together, and the ftalks terminated by trifid cy* mofe bunches of fmall yellow flowers. This fort grows abundantly on rocks, old walls, and tops of buildings, almoft every where, which often appear covered with the flowers in fummer. 7. The fexangulare, or fexangular ftone-crop, hath a fibry perennial root; thick, fhort, fucculent ftalks; fmall, fuboval, gibbous, erect leaves clofe together, arranged fix ways imbricatim, and the Italks terminated by bunches of yellow flowers. It grows on rocky and other dry places in England, \&c. 8. The album, or white fone-crop, hath fibry perennial roots; trailing flender ftalks, fix or eight inches long; oblong, obturf, feffile, fpreading leaves; and the ftalks terminated by branchy cymofe bunches of white flowers. This grows on old walls, rocks, and buildings, in Eng. land, \&c. 9. The hifpanicum, or Spaniih fedum, hath fibrous perennial roots, crowned with cluters of taper, acute, fucculent leaves; flender fucculent ftalks, four or five inches high, garnifhed alfo with taper leaves, and terminated by downy cymofe clufters of white flowers.

All thefe fecies of fedum are hardy herbaceous fucculent perennials, durable in root, but moftly annual in ftalk, \&c. which, rifing in fpring, flower in June, July, and Auguft, in different forts; the flowers confilting univerfally of five fpreading petals, gentrally crowning the ftalks numeroufly in corymbofe and cymofe bunches and fpikes, appearing tolerably confpicuous, and are

\section*{S E E}

\section*{245 ]}
pictures. On the left hand, as one enters, is the chan cel, which is furnifhed with an altar covered with cloth
fucceeded by plenty of feeds in autumn, by which they may be propagated, alfo abundantly by parting the roots, and by flips or cuttings of the ftalks in fummer; in all of which methods they readily grow and fpread very faft into tufted bunches: being all of fucculent growth, they confequently deliglit moft in dry foils, or in any dry rubbifhy earth.

Ujes. As flowering plants, they are mofly employed to embellifh rock-work, ruins, and the like places, planting either the roots or cuttings of the fhoots in a little mud or any moif foil at firt, placing it in the crevices, where they will foon root and fix themfelves, and fpread about very agreeably. For economical purpofes, the reflexum and rupeftre are cultivated in Holland and Germany, to mix with lettuce in fallads, The wall-pepper is fo acrid, that it blifters the flin when ap. plied externally. Taken inwardly, it excites vomiting. In fcorbutic cafes and quartan agues, it is faid to be an excellent medicine under proper management. Goats eat it; cows, horfes, fheep, and fwine, refufe it.

SEED, in phyfiology, a fubftance prepared by nature for the reproduction and confervation of the fpecies both in animals and plants. See Botany, fect. iv. p. 435. ; and Physiology, fect. xii.

SEEDLINGS, among gardeners, denote fuch roots of gilliflowers, \&c. as come from feed fown. Alfo the young tender thoots of any plants that are newly fown.

SEEDY, in the brandy trade, a term ufed by the dealers to denote a fault that is found in feveral parcels of French brandy, which renders them unfaleable. The French fuppofe that thefe brandies obtain the flavour which they exprefs by this name, from weeds that grow among the vines from whence the wine of which this brandy is preffed was made.

SEEING, the perceiving of external objects by means of the eye. For an account of the organs of fight, and the nature of vifion, fee Anatomy, fect. vi. and Optics, page 292, et feq.

SEEKS, a religious fect fettled at Patna, and fo called from a word contained in one of the commandments of their founder, which fignifies learn thou. In books giving an account of oriental fects and oriental cuftoms, we find mention made both of Seeks and Siks; and we are ftrongly inclined to think that the fame tribe is meant to be denominated by both words. If fo, different authors write very differently of their principles and manners. We have already related what we then knew of the Seiks under the article Hindoos, p. 530 ; but in the Afiatic Refearches, Mr Wilkins gives a much more amiable account of the Seeks, which we lay before our readers with pleafure.

The Seeks are a fect diftinguiked both from the Muffulmans and the worfhippers of Brahma; and, from our author's account of them, muft be an amiable people. He afked leave to enter-into their chapel : 'i hey faid it was a place of worhip, open to all men, but intimated that he mult take off his fhoes. On complying with this ceremony, he was politely conducted into the hall, and feated upon a carpet in the midft of the affembly. The whole building forms a fquare of about 40 feet. The hall is in the centre, divided from four other apartments by wooden arches, upon pillars of the fame materials. The walls above the arches were hung with European looking-glaffes in gilt frames, and with
of gold, raifed a little above the ground in a declining pofition. About it were feveral flower-pots and rofewater bottles, and three urns to receive the donations of the charitable. On a low defk, near the altar, ftood a great book, of folio fize, from which fome portions are daily read in the divine fervice. When notice was given that it was noon, the congregation arranged themfelves upon the carpet on each fide of the hall. The great book and defls were brought from the altar, and placed at the oppofite extremity. An old filver-haired man kneeled down before the defk, with his face towards the altar, and by him fat a man with a drum, and two or three with cymbals. The book was now opened, and the old man began to chant to the time of the inftruments, and at the conclufion of every verfe moft of the congregation joined chorus in a refponfe, with countenances exhibiting great marks of joy. Their tones were not harf ; the time was quick ; and Mr Wilkins learned that the fubject was a hymn in praife of the unity,omniprefence, and omnipotence of the Deity. The hymn concluded, the whole company got up and prefented their faces, with joined hands, towards the altar in the attitude of prayer. The prayer was a fort of litanty pronounced by a young man in a loud and diftinct voice ; the people joining, at certain periods, in a general refponfe. 'Ihis prayer was followed by a fhort bleffing from the old man, and an invitation to the affembly to partake of a friendly feaft. A hare was offered to Mr Wilkins, who was too polite to refufe it. It was a kind of fweetmeat compofed of fugar and flower mixed up with clarified butter. They were next ferved with a few fugar plums; and thus ended the feaft and ceremony.

In the courfe of converfation Mr Wilkins learned that the founder of this feet was Naneck Sah, who lived about 400 years ago; who left behind him a book, compofed by himfelf in verfe, containing the doctrines he had eftablifhed ; that this book teaches, that there is but one God, filling all fpace, and pervading all matter; and that there will be a day of retribution, when virtue will be rewarded, and vice punifhed. (Our author forgot to afk in what manner.) It forbids murder, theft, and fuch other deeds as are by the majority of mankind efteemed crimes, and inculcates the practice of all the virtues ; but, particularly, a univerfal philanthropy and hofpitality to ftrangers and travellers. It not only commands univerfal toleration, but forbids difputes with thofe of another perfuafion. If any one fhow a fincere inclination to be admitted among them, any five or more Seeks being affembled in any place, even on the highway, they fend to the firt thop where fweetmeats are fold, and procure a very fmall quantity of a particular kind called batāfā (Mr Wilkins does not tell us of what it is compofed), which having diluted in pure water, they fprinkle fome of it on the body and eyes of the profelyte, whilft one of the beft inftructed repeats to him the chief canons of their faith, and exacts from him a folemn promife to abide by them the reft of his life . They offered to admit Mr Wilkins into their fociety; but he declined the honour, contenting himfelf with their alphabet, which they told him to guard as the apple of his eye, as it was a facred character. Mr Wilkins finds is but little different from the Dewanagari.

\section*{S E G [ 246\(] \quad\) S E G}

Segeherg The language itfelf is a mixture of Perfian, Arabic, and Shanfcrit, grafted upon the provincial dialect of Punjah, which is a kind of Hindowee, or, as we commonly call it, Moors.

SEGEBERG, a town of Germany, in the duchy of Holftein, and in Wagria; with a caltle flanding on a hivh mountain, confifting of limeftone, large quantities of which are carried to Hambury and Lubeck. It belongs to Denmark, and is feated on the river Treve, in E. Lony. 1o. 9. N. Lat. 54. o.

SEGEDIN, a ftrong town of Lower Hungary, in the county of Czongrad, with a caftle. The Imperialifts took it from the '「urks in 1686. It is feated at the confluence of the rivers Teffe aad 'Mafroch, in E. Long. 20.35. N. Lat. 46.28.

SEGMENT of \(a\) Circle, in geometry, is that part of the circle contained between a chord and an arch of the fame circle.

SEGNA, a city of Croatia, belonging to the houfe of Auftria, and feated on the coaft of the Gulph of Venice. It was formerly a place of ftrength and great importance ; but it has fuffered many calamities, and its inhabitants at prefent do not amount to 7000 . In the beginning of this century it fent 50 merchant fhips to fea; but the inconveriency of its fituation and badnefs of its harbour, in which the fea is never calm, difcouraged navigation, and Segna has now very few fhips belonging to it. Among the cuftoms of the Segnans, Mr Fortis mentions one relative to the dead, which for its fingularity may be worthy of notice.
Fiortis's Travels int
Dulnatia.
the aqueduct, which the fingular fituation of the city renders neceflary. As it is built upon two hills, and the valley by which they are feparated, and extends confiderably in every direction, it was difficult for a part of the citizens to be fupplied with water. The difficulty was removed, according to the opinion of the learned, in the reign of Trajan, by this aqueduct, which is one of the noft aftonifhing and the bett preferved of the Roman works. In the opinion of \(\mathrm{Mr}^{\text {r }}\) Swinburne, S who furveyed it in 1776, and who feems to have given Trand a very accurate account of the curiofities of Segovia, it is fuperior in elegance of proportion to the Pont du Gard at Nifmes. It is fo perfectly well preferved, that it does not feem leaky in any part. From the firft low arches to the refervoir in the town, its length is 2400 Spanifh feet; its greateft height (in the Plaza del Azobejo at the foot of the walls) is 104; it is there compofed of a double row of arches, built of large fquare ftones without mortar, and over them a hollow wall of coarfer materials for the channel of the water, covered with large oblong flags. Of the lower ranye of arcades, which are 15 feet wide by 65 high, there are 42 . The upper arches are 119 in number, their height 27 Spanifh feet, their breadth feventeen, the tranfverfal thicknefs, or depth of the piers, eight feet.

The cathedral is a mixture of the Gothic and Moorifh architecture. The infide is very fpacious and of majeftic fimplicity. The windows are well difpofed, and the great altar has been lately decorated with the fineft Grenadian marble. But it is to be regretted, that in this cathedral, as well as in molt others of Spain, the choir is placed in the middle of the nave. 'I he church is nearly upon the model of the great church of Salamanca, but it is not fo highly finifhed.

The alcazar, or ancient palace of the Moors, ftands in one of the fineft pofitions poffible, on a rock rifing above the open country. A very pretty river wafhes the foot of the precipice, and the city lies admirably well on each fide on the brow of the hill; the declivity is woody, and the banks charmingly rural ; the fnowy mountains and dark forefts of Saint Ildefonzo compofe an awful back-ground to the picture. Towards the town there is a large court before the great outward tower, which, as the prifon of Gil Blas, is fo well defcribed by Le Sage, that the fubject requires no farther explanation. The reft of the buildings form an antique palace, which has feldom been inhabited by any but prifoners fince the reign of Ferdinand and Ifabella, who were much attached to this fituation. There are fome magnificent halls in it, with much gilding in the ceilings, in a femi-barbarous tafte. All the kings of Spain are feated in ftate along the cornice of the great faloon; but it is doubtful whether they are like the princes whofe names they bear; if that refemblance, however, be wanting, they have no other merit to claim. The royal apartments are now occupied by a college of young gentlemen cadets, educated at the king's expence in all the fciences requifite for forming an engio neer. The grand-mafter of the ordnance refides at Segovia, which is the head eftablifhment of the Spariif artillery.

The mint is below the alcazar, a large building, the moft ancient place of coinage in the kingdom. The machines for melting, flamping, and milling the coin, are worked by water: but there is reafon to believe

\section*{§ E J [ 247 ] S F. J}

Iovia that Seville has at prefent more bufineis, as being neartr the fource of riches, the port of Cadiz, where the ingots of America are landed.

The unevennefs of the crown of the hill gives a wild look to this city. Moft of the Atreets are crooked and dirty, the houfes wooden and very wretched; nor do the inhabitants appear much the richer for their cloth manufactory. Indeed, it is not in a very flourifhing condition, but what cloth they make is very fine.
The country about Segovia has the reputation of being the beft for rearing the kind of theep that oroduces the beautiful Spanifh wool; but as thofe flocks wander over many other parts of the kingdom, Segovia feems to have no exclufive title to this revutation. Seqovia (fays Mir 'Townfend, whofe valuable travels will be read with much pleafure) was once famous for its cloth made on the king's account ; but other nations have fince become rivals in this branch, and the manufacture in this city has been gradually declining. When the king gave it up to a private company, he left about 30501 . in trade ; but now he is no lenger a partner in the bufinefs. In the year 1612 were made here 25,500 pieces of cloth, which confumed \(4+, 625\) quintals of wool, employed 34,18 ? perfons; but at prefent they make only about 4000 pieces. The principal imperfections of this cloth are, that the thread is not even, and that much greafe remains in it when it is delivered to the dyer; in confequence of which the colour is apt to tail. Yet, independently of imperfections, fo many are the difadvantages under which the manufacture la. bours, that foreigners can afford to pay 31. for the arroba of fine wool, for which the Spaniard gives no more than 20 fhillings, and after all his charges can command the market even in the ports of Spain.

Segovia (New), a town of North America, in New Spain, and in the audience of Guatimala; feated on the river Yare, on the confines of the province of Honduras. W. Long. 84. 30. N. Lat I 3. \(25 \cdot\)
Segovia, al town of America, in 'Terra Firma, and in the province of Venezutla, feated on a river, near a very high mountain, where there are mines of gold. W. Long. 65. 30. N. Lat. 8. 20.
Segovia, a town of Afia, in the ifland of Manila, and one of the largeft of the Philippines, feated at the north end of the ifland, 240 miles north of Manila, and finbject to Spain. E. Long. 120. 59. N. Lat. IS. 36.

SEGREANT, is the herald's word for a griffin when drawn in a leaping pofture and difplaying his wings as if ready to fly.

SEGUE, in the Italian mufic, is often found before aria, alleluja, amen, \&c. to fhow that thofe portions or parts are to be fung immediately after the laft note of that part over which it is writ; but if thefe words \(\sqrt{2}\) placet, or ad libitum, are joined therewith, it fignifies, that thefe portions may be fung or not at pleafire.

SEGUIERIA, in botany; a plant belonşing to the clafs of polyandria, and the order of monogynia. The calyx is pentaphyllous; the phylla are oblong, concave, coloured, and permanent; there is no corolla. The capfute is oblong and monofpermous, the large ala terminating in fmall lateral alæ. There is only one fpecies, the americana.

SE JAN' , a term ufed in heraldry, when a lion, or
other beaft, is drawn in an efcutcheon fitting like a cat
Sejaคия; with his fore-feet ftraight.
SEJANUS (Rlius), a native of Vulfinum in Tufcany, who ditinguifhed himfelf in the court of Tiberius. His father's name was Seius Strabo; a Roman knight, commander of the pretorian guards. His mather was defcended from the Junian family. Sejanus firt gained the favours of Caius Cæfar, the grandfon of Auguftus, but afterwards he attached himfelf to the intereft and the views of Tiberius, who then fat on the imperial throne. The emperor, who was naturally of a fufpicious temper, was free and open with Sejanus, and while he diftruited others, he comınunicated his greateff fecrets to this fawning favourite. Scjanus improved this confidence; and when he had found that he poffefed the efteem of 'Tiberius, he next endeavoured to become the favourite of the foldiers, and the darling of the fenate. As commander of the pretorian guards he was the fecond man in Rome, and in that important office he made ufe of infinuations and every mean artifice to make himfelf beloved and revered. His affability and condefcenfion gained him the hearts of the common foldiers, and, by appointing his own favourites and adherents to places of trult and honour, all the officens an: 1 centurions of the army became devoted to his interelt. The views of Sejanus in this were well known; yet, to. advance with more fuccefs, he actempted to gain the atfection of the fenators. In this he met with no oppofition. A man who has the difpofal of places of honour and dignity, and who has the command of the public money, cannot but be the favourite of thofe who are in need of his affitance. It is even faid, that Sejanus. gained to his views all the wives of the fenators, by a private and moft fecret promife of marriage to each of them, whenever he had made himfelf independent and fovereign of Rome. Yet, however fuccefsful with the beft and nobleft families in the empire, Sejanus had to combat numbers in the houfe of the emperor; but thefe feeming obftacles were foon removed. All the children and grandchildren of Tiberius were facrificed to the ambition of che favourite under various pretences; and Drufus the fon of the emperor, by friking Sejanus, made his deftruction fure and inevitable. Livia, the wife of Drufus, was gained by Sejanus; and, though. the mother of many children, fhe was prevailed upon to affit her adulterer in the murder of her huband, and fhe confented to marry him when Drufus was dead. No fooner was Drufus poifoned, than Sejanus openly declared his wifh to marry Livia. This was ftrongly oppofed by Tiberius; and the emperor, by recommending Germanicus to the fenators for his fucceffor, rendered Sejanus bold and determined. He was more urgent in his demands; and when he could not gain the confent of the emperor, he perfuaded him to retire to folitude from the noife of Rome and the troubles of the government. 'S iberius, naturally fond of eafe and luxury, yielded to his reprefentations and retired to Campania, leaving Se janus at the head of the empire. This was highly gratifying to the favourite, but he was not without a mafter. Prudence and moderation might have made him what he wifhed to be; but having offended the emperor beyond forgivenefs, he refolved to retrieve his lofs, and by one vigorous effort to decide the fate of the empire. He called together his friends and followers; he paid

\section*{S E J}
court to fuch as feemed diffaffected; he held forth rewards and promifes; and, having increafed the number of his partifans, formed a bold confpiracy, refolved by any means to feize the fovereign power.

A powerful league was formed with aftonifhing rapidity, and great numbers of all defcriptions, fenators as well as military men, entered into the plot. Among thefe, Satrins Secundus was the confidential friend and prime agent of the minilter: Whatever was this man's motive, whether fear, or views of intereft, or ingratitude (forno principle of honour can be inputed to him), he refolved to betray the fecret to Tiberius. For this purpofe he addreffed himfelf to Antonia, the daughter of Anthony the triumvir, the widow of Drufus, and the mother of Germanicus. When this illuftrious wroman, who was honoured by the court and revered by the people, heard the particulars, fhe fent difpatches to the emperor by one of her flaves. Tiberius was aftonifhed, but not difmayed. The danger preffed; his habitual flownefs was out of feafon; the time called for vigour and decifive meafures. He fent Macro to Rome, with a fpecial commiffion to take upon him the command of the pretorian guards. He added full inftructions for lis conduct in all emergencies. Early in the morning on the 15 th, befere the kalends of November, a report was fpread, that letters had arrived at Rome, in which the emperor fignified his intention to affociate Sejanus with himfelf in the tribunitian power. The fenate was fummoned to meet in the temple of Apollo, near the imperial palace. Sejanus attended without delay. A party of the prætorians followed him. Macro met him in the veftibule of the temple. He approached the minifter with all demonftrations of profound refpect, and taking him afide, "Be not furprifed (he faid) that you have no letter from the prince: it is his pleafure to declare you his colleague in the tribunitian power; but he thinks that a matter of fo much importance fhould be communicated to the fathers by che voice of the confuls. I an going to deliver the emperor's orders." Sejanus, tlated with joy, and fluffed with his new dignity, enter. ed the fenate-houre; Macro followed him. As foon as the confuls arrived, he delivered the letter from Tiberius, and immediately went forth to the protorian guards. He informed them, that by order of the prince, a large donative was to be diftributed among the foldiers. He added, that, by a new commiffion, he himfelf was appointed their commanding officer ; and, if they followed him to the camp, they would there receive the promifed bounty. 'The lure was not thrown out in vain: the protorian guards quitted their ftation. . Laco, who flood near at hand, immediately furrom the fenate-houfe with a body of the city co. horts.

The letter to the confuls was confufed, obfcure, and tedious, only glancing at Scjanus, till at laft the language of invective left no room for doubt. Sejanus kept his feat like a man benumbed, fenfelefs and ftupid with aftonifhment. His friends, who a little before congratulated him on his new dignity, deferted him on every fide. He was commanded by the conful to rife and follow him, and being loaded with irons, was conducted to prifon. His downfal filled the city with exultation. The populace, who worfhipped him in the hour of profperity, rejoiced to fee the fad cataftrophe to which he was now reduced. They followed in crowds,
rending the air with flouts, and pouring forth a toment of abufe and fcurrilous language. The prifoner endeavoured to hide his tace ; but the mob delighted to fee renorfe and flame and guilt and horror in every feature of his diftracted countenance. They reviled him for his acts of cruelty; they laughed at his wild ambition ; they tore down his imares, and dafhed his flatues to pieces. He was doomed by Tliberius to fuffer death on that very day ; but, as he had a powerful faction in the fenate, it was not thought advifable, for the mere formality of a regular condemnation, to hazard a debate. Private orders were given to Macro to difpatch him without delay; but the conful, feeing the difpofitions of the people, and the calm neutrality of the pretorian guards, judged it belt to re-aflemble the fathers. They met in the temple of Concord. With one voice Sejanus was condemned to die, and the fentence was executed without delay. He was ftrangled in the prifon. His body was dragged to the Gemoniæ, and, after every fpecies of infult from the populace, at the end of three days wầs thrown into the Tiber. Such was the tragic end of that ambitious favourite. He fell a terrible example to all, who, in any age or country, may hereafter endeavour by their vices to rife above their fellow-citizens.

SEIGNIOR, is, in its general fignification, the fame with lord; but is particularly ufed for the lord of the fee as of a manor, as feigneur amonr the feudits is he wha grants a fee or benefit out of the land to another; and the reafon is, becaufe having granted away the ufe and profit of the land, the property or dominion he ftill re. tains in himfelf.

SEIGNIORAGE, is a royalty or prerogative of the king, whereby he claims an allowance of gold and filver bought in the mafs to be exchanged for coin. As feigniorage, out of every pound weight of gold, the king had for his coin 5 s . of which he paid to the mafter of the mint fometimes is. and fometimes is. 6 d . Upon every pound weight of filver, the feipniorage anfwered to the king in the time of Edward III: was 18 pennyweights, which then amounted to about I 8 . out of which he fometimes paid 8 d . at others 9 d . to the mafter. In the reign of king Henry V. the king's feigniorage of every pound of filver was 15 d . \&cc.

SEIGNIORY, is borrowed from the French feig. neurie, i. c. dominatus, imperium. principatus; and fignifies with us a manor or lordfhip, feigniory de fokemans. Seigniory in grofs, feems to be the title of him who is not lord by means of any manor, but immediately in his own perfon; as tenure in capite, whereby one holds of the king as of his crown, is feigniory in grofs.

SEIKS. See Hindostan, p. \(530^{\circ}\)
SEISIN, in law, fignifies poffeffion. In this fenfe we fay, premier feifin, for the firft poffeffion, \&c.

Seifin is divided into that in deed or in fact, and that in law. A feifin in deed is where a poffeffion is actually taken : but a feifin in law is, where lands defcend, and the party has not entered thereon; or in other words, it is where a perfon lias a right to lands, \&cc. and is by wrong diffeifed of them. A feifin in law is held to be fufficient to avow on; though to the bringing of an affize, actual feifin is required; and where feifin is alleged, the perfon pleading it mult fhow of what eftate he is feifed, \&c.

Seifin of a fuperior fervice is deemed to be a feifin

\section*{S E I \\ 249 \\ ] \\ S E I}
fini, of all fuperior and cafaal fervices that are incident thercto; and feifin of a leffee for years, is fufficient for him in reverfion.

Livery of SEISIN, in law, an effential ceremony in the conveyance of landed property; being no other than the pure feodal inveftiture, or delivery of corporal poffeffion of the land or tenement. This was held abfolutely neceffary to complete the donation; Nam feudam fine invefitura nullo modo confitui potuit: and an eftate was then only perfect when, as Fleta expreffes it in our law, fit juris et Seifina conjunciio. See Feof. ment.

Inveftitures, in their original rife, were probably intended to demonftrate in conquered countries the actual poffeffion of the lord; and that he did not grant a bare litigious right, which the foldier was ill qualified to profecute, but a peaceable and firm poffeffion. And, at a time when writing was feldom practifed, a mere oral gift, at a diftance from the fpot that was given, was not likely to be either long or accurately retained in the memory of byftanders, who were very little interefted in the grant. Afterwards they were retained as a public and notorious act, that the country might take notice of and teftify the tranfer of the eftate; and that fuch as claimed title by other means might know againft whom to bring their actions.

In all well-governed nations, fome notoriety of this kind has been ever held requifite, in order to acquire and afcertain the property of lands. In the Roman law, plenum dominium was not faid to fubfift unlefs where a man had both the right and the corporal poleffion; which poffefion could not be acquired without both an actual intention to poffefs, and an actual feifin, or entry into the premiffes, or part of them in the name of the whole. And even in ecclefiaftical promotions, where the freehold paffes to the perfon promoted, corporal poffeffion is required at this day to veft the property completely in the new proprietor; who, according to the diftinction of the canonits, acquires the jus ad rem, or inchoate and imperfect right, by nomination and inftitution; but not the jus in re, or complete and full right, unlefs by corporal poffeffion. Therefore in dignities poffeffion is given by inftalment ; in rectories and vicarages by indiction; without which no temporal rights accrue to the minifter, though every ecclefiaftical power is vefted in him by inftitution. So alfo even in defcents of lands, by our law, which are calt on the heir by act of the law itfelf, the heir has not plenum dominium, or full and complete ownerfhip, till he has made an actual corporal entry into the lands: for if he dies before entry made, bis heir fhall not be entitled to take the poffeffion, but the heir of the perfon who was laft actually feifed. It is not therefore only a mere right to enter, but the actual entry, that makes a man complete owner; fo as to tranfmit the inheritance to his own heirs: non jus, fed Seifina, facit fipitem.

Yet the corporal tradition of lands being fometimes inconvenient, a fymbolical delivery of poffeffion was in many cafes anciently allowed; by transferring fomething near at hand, in the prefence of credible witneffes, which by agreement fhould ferve to reprefent the very thing defigned to be conveyed; and an occupancy of this fign or fymbol was permitted as equivafent to occupancy of the land itfelf. Among the Jews we find the evidence of a purchafe thus defined in the Vor. XVII. Part.I.
book of Ruth: "Now this was the manner in former time in Ifrael, concerning redeeming and concerning changing, for to confirm all things : a man plucked off his fhoe, and gave it to his neighbour ; and this was a teftimony in Ifrael." Among the ancient Goths and Swedes, contracts for the fale of lands were made in the prefence of witneffes, who extended the cloak of the buyer, while the feller caft a clod of the land into it, in order to give poffeffion ; and a ftaff or wand was alfo delivered from the vender to the vendee, which paffed through the hands of the witneffes. With our Saxon anceftors the delivery of a turf was a neceffary folemnity to eftablifh the conveyance of lands. And, to this day, the conveyance of our copyhold eftates is ufually made from the feller to the lord or his fteward by delivery of a rod or verge, and then from the lord to the purchafer by re-delivery of the fame in the prefence of a jury of tenants.
Conveyances in writing were the laft and moft refined improvement. The mere delivery of poffeffion, either actual or fymbolical, depending on the ocular teftimony and remembrance of the witneffes, was liable to be forgotten or mifreprefented, and became frequently incapable of proof. Befides, the new occafions and neceffities introduced by the advancement of commerce, required means to be devifed of charging and incumbering eftates, and of making them liable to a multitude of conditions and minute defignations, for the purpofes of raifing money, without an abfolute fale of the land; and fometimes the like proceedings were found ufeful in order to make a decent and competent provifion for the numerous branches of a family, and for other domeftic views. None of whic could be effected by a mere, fimple, corporal transfer of the foil from one man to another, which was principally calculated for conveying an abfolute unlimited dominion. Written deeds were therefore introduced, in order to fpecify and perpetuate the peculiar purpofes of the party who convey. ed : yet ftill, for a very long feries of years, they were never made ufe of, but in company with the more an. cient and notorious method of transfer by delivery of corporal poffeffion.
Livery of feifin, by the common law, is neceflary to be made upon every grant of an eftate of freehold in hereditaments corporeal, whether of inheritance or for life only. In hereditaments incorporeal it is impoffible to be made; for they are not the object of the fenfes: and in leafes for years, or other chattel interefts, it is not neceffary. In leafes for years indeed an actual entry is neceffary, to veft the eftate in the leffee: for a bare leafe gives him only a right to enter, which is called his intereft in the term, or interefle termini : and when he enters in purfuance of that right, he is then, and not before, in poffeffion of his term, and complete tenant for years. This entry by the tenant himfelf ferves the purpofe of notoriety, as well as livery of feifin from the granter could have done; which it would have been improper to have given in this cafe, becaufe that folemnity is ap. propriated to the conveyance of a freehold. And this is one reafon why freeholds cannot be made to commence in futuro, becaufe they cannot (at the common law) be made but by livery of feifin; which livery, being an actual manual tradition of the land, muft take effect in prafenti, or not at all.

Livery of feiin is either in deed or in law.
Ii
Livery

Seifin.
\(\underbrace{\text { Beinn. }}\)

\section*{S E I \\ [ 25}

Livery in deed is thus performed. The feoffor, leffor, or his attorney, together with the feoffee, leffec, or his attorney, (for this may as effectually be done by deputy or attorney as by the principals themfelves in perfon), come to the land or to the houfe; and there, in the prefence of witneffes, declare the contents of the feoffment or leafe on which livery is to be made. And then the feoffor, if it be of land, doth deliver to the feoffee, all other perfons being out of the ground, a clod or turf, or a twig or bough there growing, with words to this effect: "I deliver thefe to you in the naime of feifin of all the lands and tenements contained in this deed." But, if it be of a looufe, the feoffor mutt take the ring or latch of the door, the houfe being quite empty, and deliver it to the feoffee in the fame form ; and then the feoffee muft enter alone, and fhut the door, and then open it, and let in the others. If the conveyance or feoffinent be of divers lands, lying fcatered in one and the fame county, ther in the feoffor's poffeflion, livery of feifin of any parcel, in the name of the reft, fufficeth for all ; but if they be in feveral counties, there muft be as many liveries as there are counties. For, if the title to thefe lands comes to be difputed, there mult be as many trials as there are counties, and the jury of one county are no judges of the notoriety of a fact in another. Befides, anciently, this feirin was obliged to be delivered coram prribus de vicineto, before the peers or freeholders of the neighbourhood, who attefted fuch dellivery in the body or on the back of the deed; according to the rile of the feodal law, Pares debent in. terefle invelitura feudi, et non alii: for which this 'reafon \({ }_{34}\) exprefsly given; becaufe the peers or vaffals of the lord, being bound by their oath of fealty, will take care that no fraud be committed to his prejudice, which thrangers might be apt to counive at. And though aftenwards the ocular atteftation of the pares was held unnece flary, and livery might be made before any cre'dible witueffes, yet the trial, in cafe it was difputed, (like that of all other ntteftations), was fill referved to the pares or jury of the county. Alfo, if the lands be vat on leafe, though all lie in the fame county, there mult be as maty liveries as there are tenants: becaufe no Sivery can be made in this cafe, but by the confent of the particular tenant; and the confent of one will not bind the relt. And in all thefe cafes it is prudent, and wual, to endorfe the livery of feifin on the back of the deed, fpecifying the manner, place, and time of making it ; together with the names of the witnefles. And thus invech for livery in deed.

Livery in law is where the fame is not made on the land, but in fight of it only ; the feoffor faying to the feoffee, "I give you youder land, enter and take puffeffion." Here, it the feoffee enters during the life of the feoffor, it is a good livery, but not otherwife ; unlefa he dares not enter through fear of his life or bodily harm; and then his continual claim; made yearly in due form of law, as near as poffible to the lands, will fuffice wichout an entry. 'This livery in law cannot, however, be given or received by attomey, but only by the parties themfelves.

SEIZE, in the fea-language; is to make faft or bind, particularly to faften two ropes together with rope-yarn. The feizing of a toat is a rope tied to a ring or little chain in the fore-fhip of the boat, by which means it is faltened to the fide of the fhip.

SEIZURE S L L
SEIZURE, in commerce, an arreft of fome merchandife, moveable, or other matter, either in confe. quence of fome law or of fome exprefs odder of the fovereign: Contraband goods, thofe fraudulently entered, or landed without entering at all, or at wrong places, are fubject to feizure. In feizures among us, one half goes to the informer, and the other half to the king.

SELAGO, in botany : A genus of the angiofpermia order, belonging to the didynamia clafs of plants; and in the natural method ranking under the 48 th order, Aggregate. The calyx is quinquefid : the tube of the corolla capillary, with the limb nearly equal, and a fingle feed. There are 22 fpecies.

SEI.DEN (John), called by Grotius the glory of Evyland \({ }^{2}\), was born at Salvington in Suffex in 158 . He was educated at the free fehoor at Chichefter; whence he was fent to Hart-Hall in the univerfity of Oxford, where he ftaid four years. In \(16 \mathrm{f}: 2\), he entered himfelf in Clifford's Inn, in order to fludy the law ; and about two years after removed to the Inne: 'Femple, where he foon acquired great reputation by kis. learning. He had already publifhed feveral of his works; and this year wrote verfes in Latin, Greek, and Enylifh, upon Mr William Browne's Britannia's Paftorals. In 1614 , he publifhed his Titles of Honour; and in 1616, his Notes on Sir John Fortefcue's book De Laudibus Legrum Anglia.. In 1618 , he publiffed his Hitory of Tythes; which gave great offence to the clergy, and was animadverted upon ly feveral writers; and for that book he was called before the high commiffion court, and obliged to make a public acknowledyment of his forrow for having publifhed it. In 1621 , being fent for by the parlianent, though he was not then a member of that houfe, and giving his opinion very ftrongly in favour of their privileges in oppofition to the conrt, he was committed to the cuftody of the fheriff of London, but was fet at liberty after five weeks confinement. In 1623 , he was chofen burgefs for Lancalter; but, amidt all the divifinns of the nation, kept himfelf ncute1, profecuting his fludies with fuch application, that though he was the next year chofen reader of Lyon's \(\operatorname{lnn}\), he refufed to perform that office. In 1625 , he was chofen burgeefs for Great Bedwin in Wiltrhire, to ferve in the firt parliament of king Charles I. in. which he declared himfelf warmly againft thie duke of Buckinghan! ; and on his Grace's being impeached by the House of Commons, was appointed one of the managers of the articles againt hin. In 1627 and 1628 , lee oppofed the court party with great vigour. The parliament being prorogued to January 20. \(\mathrm{r} 62 \mathrm{~g}, \mathrm{Mr}\) Selden retired to the earl of Kent's houfe at Wreft, in: Bedfordfhire, where he fnifhed lis Marmora Arundeliana. The parliament being met, he, among others, again difltinguifhed himfelf by his zeal againft the court; when the king diffolving the parliament, ordered feveral: of the members to be brought before the King's-Benchbar, and coinmitted to the Tower. Among thefe was. Mr Selden, whoinfifting on the benefit of the laws, and: retufing to make his lubmiffion, was removed to the: King's Bench prifon. Being here in danger of his life on account of the plague then raging in Soutliwark, he petitioned the lord high treafurer, at the end of Trini-ty-term, to intercede with his Majefty that he might be removed to the Gate-Houfe, Welminfter, which was granted : but in Michaelmas term following, the judgez objecting to the lord treafurer's. warrant, by which he

\section*{S E L}
had been removed to the Gate-houfe, an order was made for conyeying him back to the King's Bench, whence he was releafed in the latter end of the fame year ; but Efteen years after, the parliament ordered him 50001. for the loffes he had. fuftained on this occafion. He was afterwards committed, with feveral other gentlemen, for difperfing a libel; but the author, who was abroad, being difcovered, they were at length fet at liberty. In 1634 , a difpute arifing between the Englifh and Dutch concerning the herring-fifhery on the Britifh coaft, he was prevailed upon by archbifhop Laud to draw up his Mare C'laufum, in anfwer to Grotius's Mare Liberum: which greatly recommended him to the favour of the court. In 1640, he was chofen member for the univerfity (- Oxford; when he again oppofed the court, though he might, by complying, lave raifed himfelf to very confiderable polts. In 1643 , he was appointed one of the lay.members to fit in the affembly of divines at Wenminfter, and was the fame year appointed keeper of the records in the 'lower. Whiltt he attended his duty in the affembly, a warm debate arofe refpecting the diftance of Jericho from Jerufalem. The party which contended for the fhortef diftance, urged, as a proof of their opinion being well founded, that fifhes were carried from the one city to the other, and fold in the market. Their adverfaries were ready to yield to the force of this conclufive argument, when Selden, swo defpifed both parties, as well as the frivolouinefs of their difpute, exclaimed, "Perhaps the fifhes were falt. ed!" 'This unexpected remark left the victory doubtful, and renewed the debate; and our author, who was fick of fuch trifling, foon found employment more fuit\(\epsilon d\) to his genius; for, in 1645 , he was made one of the commiffioners of the admiralty. The fame year he was unanimoufly elected mafter of Trinity-college, Cambridge ; but declined accepting. He died in 1654 ; and was interred in the Temple-church, where a monument is erected to his memory. Dr Wilkes obferves, that he was a man of uncommon gravity and greatnefs of foul, averfe to flattery, liberal to fcholars, charitable to the poor; and though he had great latitude in his principles with regard to ecclefialtical power, yet he had a fincere regard for the church of England. He wrote many learned works befides thofe already mentioned; the principal of which are, 1. De Fure Natuvali \& Gentium juxta Difciplinam Hebraorum. 2. De Nuptiis E Divorciis. 3. De Anno Civili veterum Hebrecrusm. 4. De Nummis. 5. De Diis Syris. 6. Uxor Atbraica. \%\% Fani Anglorum Facies altera, \&c. All his works were printed together in 1726 , in 3 vols folio.

SELENITES, in natural hiftory, the name of alarge clals of foffils, the characters of which are thefe: they are bodies compofed of flender and fcarce vifible filaments, arranged isto fine, even, and thin flakes; and thofe difpofed into regular figures, in the feveral different genera, approaching to a rhomboide, or hexangular columin, or a rectangted parallelogram; fiffile, like the talcs, but they not only lie in a horizontal, but alfo in a perpendicular direction: they are flexile in a fmall degree, but not at all elaftic; they do not ferment with acid mentrua, but readily calcine in the fire. 'Of this clafs there are feven orders of bodies, and under thole ten genera. The felenita of the firf order are thofe compoled of horizontal plates, and approaching to a thomi oidal form : of the fecond are thofe compofed of borizontal plates, arranged into a columnar and angular

\section*{251.] \\ S E L}
form: of the third are thofe whofe filaments are farce Selenites vifibly arranged into plates, but which, in the whole maffes, appear rather of a ftriated than of a tubulated flructure: of the fourth are thofe which are flat, but of no determinately angular figure: of the fifth are thofe formed of plates, perpendicularly arranged : of the fixth are thofe formed of congeries of plates, arranged into the figure of a ftar; and of the feventh are thofe of a complex and indeterminate figure.

Of the firft of thefe orders there are three genera. 1. The leptodecarbombes. 2. The pachodecarbombes. 3. The tetradecarbombes. Of the fecond order there are alfo three genera. 1. The \(i\) /chnambluces. 2. The ifambluces. 3. The oxucia. Of the third order there is only one known genus, the inamblucia. Of the fourth order there is alfo only one known genus, the fanidia. Of the fifth order there is alfo only one known genus, the cathetolifer. Of the fixth order, there are two genera. I. The lepaffra.2. The trichefira. Of the leventh order there is only one genus, the fymplexia.

If he ftructure of the felenitre of all the genera of the firt order is exactly alike; they are all compofed of a great number of broad flakes or plates, in a great meafure externally refembling the flakes of the foliaceous talcs : thefe are of the length and breadth of the whole mafs; the top and bottom being each only one fuch plate, and thofe between them, in like manner, each complete and fingle; and the body may always be eafily and evenly fplit, according to the direction of thefe flakea. Thefe differ, however, extremely from the talcs, for they are each compofed of a number of paral. lel threads or filaments, which are ufually difpofed parallelly to the fides of the body, though fometimes parallelly to its ends. In many of the fpecies they are alfo divided by parallel lines, placed at a confiderable diftance from each other, and the plates in fplitting often break at thefe lines; add to this, that they are not elaftic, and that they readily calcine. The ftructure of thofe of the fecond order is the fane with that of the firft ; but that in many of the fecimens of them the filaments of which the plates are compofed run in two directions, and meet in an obtufe angle; and in the middle there is generally feen in this cafe a ftraight line running the whole length of the column and finall parcels of clay infinuating themfelves into this crack, reprefent in it the figure of an ear of grafs fo naturally, as to have deceived many into a belief that there was really an ear of grafs there. - The other orders confitting only of fingle genera, the fructure of each is explained under the generical name.

SELENITES, in chemittry, called alfo gy价fun fpatofum, a feccies of sypfun or plafter of l'aris. See Gypsum.

SELENOGRAPHY, a branch of cofmngraphy, which deferibes the moon and all the parts and appear* ances thereof, as geography does thoie of the earth. See Monon.
SEI.EUCIA, (anc. geogr.), furnamed Balylonia, becaufe fituated on its confines, at the comfuence of the Euphrates and Tigris. Ptolemy places it in Mefopotamia. It is called alfo Seleucia ad Tigrim, (Pclybius, Strabo, Ifidorus, Characenus) ; wafhed on the fouth by the Euphrates, on the eaft by the Tigris, (Theophylactns) ; generaily agreed to have been built or enlarged by Seleucus Nicanor, nafter of the eait after Alexander; by means of which Babylon came to be deferted.

\section*{S E L [ \(\left.25^{\circ}\right] \quad\) S E L}

Seleucidx It is faid to have been originally called Coche, (Ammian, Self. Self.

Iezeis's Materia Medica. Eutropius) ; though others, as Arrian, diftinguifh it, as a village, from Selucia: and, according to Zofmus, the ancient name of Selucia was Zochafia. Now called Bagdad. E. Long. 44. 21. N. Lat. 33. 10. T here were many other cities of the fame name, all built by Selencris Nicanor.

SELEUCIDA, in chronology. Era of the Seleucidx, or the Syro-Macedonian era, is a computation of time, commencing from the eftabliffment of the Seleucidæ, a race of Greek kings, who,reigned as fuc* ceffors of Alexander the Great in Syria, as the Ptolemics did in Egypt. This era we find expreffed in the books of the Maccabees, and on a great number of Greek medals ftruck by the cities of Syria, \&c. The Rabbins call it the era of contracts, and the Arabs therik dikarnain, that is, the "era of the two horns." According to the belt accounts, the firft year of this era falls in the year 311 B . C. being 12 years after Alexander's death.

SELEUCUS (Nicancr), one of the chief generals under Alexander the Great, and, after his death, founder of the race of princes called Seleucida. He is equally celebrated as a renowned warrior, and as the father of his people; yet his virtucs could not protect him from the fatal ambition of Ceraunus, one of his courtiers, by whom he was affaffinated 280 B . C.

SELF:Heal, the Prunella Vulgaris of Linnæus. The ftem is erect, and about eight or ten inches high. The leaves grow on foot ftalks, are ovato-oblong, fightly indented, and fomewhat hairy. The bracter are heart-fhaped, oppofite, and fringed. The flowers are white or purplif, grow in denfe fpikes, and are terminal. This plant is pcremnial, grows wild in mcadows and pafture grounds, and flowers in June and July.

This herb is xecommended as a mild reftringent and vulnerary in fpittings of blood, and other hemorrhagies and fluxes; and in gargarims againft aphtliæ and inflam. mations of the fauces. Its virtues do not appear to be very great ; to the tafte it difcovers a very fight aufterity or bitterifhnefs, which is more fenfible in the flowery tops than in the leaves, though the latter are generally directed for medicinal ufe.
\(S_{\text {FLF-C.Command, }}\) is that fteady equanimity which enables a man in every fitiration to exert his reafoning faculty with coolnefs, and to do what the prefent circumftances require. It depends much upon the natural temperament of the body, and much upon the moral cultivation of the mind. He who enjoys good health, and has braced his frame by exercife, has always a greater command of himfelf than a man of equal mental powers, who has fuffered his conftitution to become relaxed by indolence; and he who has from his early youth been accuftomed to make his paffions fubmit to his reafon, muft, in any fuddell emergency, be more capable of acting properly than he who has tamely yielded to his paffion. Hence it is that reclure and literary men, when forced into the buttle of public life, are incapable of acting where promptnefs is requifite; and that men who have once or twice yielded to a fenfe of impending danger feldom acquire afterwards that command of themfelves which may be necefflary to extricate them from fubfequent dangers. In one of the earlict battles fought by the late king of Pruffia, the fovereign was among the firft men who quitted the field:
had he behaved in the fame manner a fecond and a third time, he would never have become that hero whofe actions aftonifhed Europe. A celebrated engineer among ourfelves, who was well known to the writer of this fhort article, had little fcience, and was a ftranger to the principles of his own art ; but being poffeffed of a firm and vigorous frame, and having been accuftomed to ftruggle with dangers and difficulties, he had fuch a conftant command of himfelf, as enabled him to employ with great coolnefs every neceffary refource in the day of battle.

But it is not only in battle, and in the face of immediate danger, that fclf-command is neceffary to enable a man to act with propriety. There is no fituation in life where difficulties, greater or lefs, are not to be cncountered; and he who would pafs through life with comfort to himfelf, and with utility to the public, muft endeavour to keep his paffions in conftant fubjection to his reafon. No man can enjoy without inquictude what he cannot lofe without pain; and no man who is overwhelmed with defpondency under any fudden misfortune can exert the talents neceffary to retrieve his, circumftances. We ought, therefore, by every means to endeavour to obtain a conftant command of ourfelves; and nowhere fhall we find better leffons for this purpofe than in. ancient Lacedcmon. There certain occupations were appointed for each fex, for every hour, and for every fea. fon of life. In a life always active, the paffions have no opportunity to deceíve, feduce, or corrupt; and the nervous fyftem acquires a firmnefs which makes it a fis: inftrument to a vigorous mind.

Self-Defonce implies not only the prefervation of one's life, but alfo the protection of his property, be caufe without-property life cannot be preferved in a civilized nation. The extent of property effential to life is indeed fmall, and this confideration may enable us to decide a queftion which fome moralifts have made intri, cate. By what neans, it has been akked, may a man proted his property? May he kill the perfon who at* tacks it, if he cannot otherwife repel the attack ?
'That a man, in the ftate of nature, may kill the peri fon who makes an attack on his life, if he cannot otherwife repel the attack, is a truth which has never been controverted; and he may do the tame in civil fociety; if his danger be fo imminent that it cannot be exerted by the interpofition of the protection provided for indis viduals by the ftate. In all poffible fituations, except the three following, whatever is abfolutely neceffary to the prefervation of life may be lawfully performed, for the. law of felf-prefervation is the firt and moft facred of thofe laws which are impreffed upon every mind by the author of nature.

The three excepted fituations are thofe of a foldier in the day of battle, of a criminal about to fuffer by the laws of his country, and of a man called upon to re nounce his relision. The foldier hazards his life in the moft honourable of all caufes, and cannot betray his truit, or play the coward, without incurring a high degree of moial turpitude. He knows that the very pro. fefion in which he is engaged neceffarily fubjects him to danger ; and he voluntarily incurred that danger for the good of his country, which, with great propriety, annexes to his profeffion peculiar privileges and much glory. The criminal under fentence of death cannot, witheut adding to his guilt, refift the execution of that

\section*{S E L [253] S E L}

Sentence ; for the power of inflicing punifhment is ef- could not fubfift ; but in a fate of nature every mant fential to fociety, and fociety is the ordinance of God, (fee Society). The man who is called upon to renounce his religion ought to fubmit to the cruelleft death rather than comply with that requeft, fince religion is his only fecurity for future and permanent happinefs. But in every other fituation, that which is abfolutely neceflary to the prefervation of life is. undoubtedly lawful. Hence it is, that a perfon finking in water is never thought to be guilty of any crime, though he drag his nighbour after him by his endeavours to fave himfelf; and hence, too, a man in danger of perifhing by fhipwreck may drive another from a plank which cannot carry them both, for fince one of two lives mult be loft, no law, human or divine, calls upon either of them to prefer his neighbour's life to his own.

But though the rights of felf-defence authorife us to repel every attack made upon our life, and in cafes of extremity to fave ourfelves at the expence of the life of our innocent neighbour, it is not fo evident that, rather than give to an unjuf demand a few fhillings or pounds, we may lawfully deprive a fellow creature of life, and the public of a citizen. A few pounds loft may be eafily regained; but life when loft can never be recovered. If thefe pounds, indeed, be the whole of a man's property; if they include his clothes, his food, and the houfe where he fhelters his head-there cannot be a doubt but that, rather than part with them, he may lawfully kill the aggreffor, for no man can exitt without fhelter, food, and raiment. But it is feldom that an attempt is made, or is indeed practicable, to rob a man at once of all that he poffeffes. The queftion then of any importance is, May a man put a robber to death rather than part with a fmall part of his property? Mr Paley doubts whether he conld innocently do fo in a fate of nature, " becaufe it cannot be contended to be for the augmentation of human happinefs, that one man fhould lofe his life or limb, rather than another a pennyworth of his property." He allows, that in civil fociety the life of the aggreffor may be always taken away by the perfon aggrieved, or meant to be aggrieved, when the crime attempted is fuch as would fubjeet its perpetrator to death by the laws of his country.
It is not often that we feel ourfelves difpofed to differ in opinion from this moft valuable and intelligent writer; but on the prefent occafion we cannot help thinking that he does not reafon with his ufual precifion. To us he even feems to lofe fight of his own principles. No legiflature can have a right to take away life in civil fociety, but in fuch cafes as individuals have the fame right in a fate of nature. If therefore a man, in the fate of nature, have not a right to protect his property by killing the aggreflor, when it cannot be otherwife protected, it appears to us felf evident that no legillature can have a right to inflict the punifhment of death upon fuch offences; but if the laws inflicting death upon the crime of robbery be morally evil, it is certain that an individual cannot be innocent when he prevents robbery by the death of the robber, merely becaufe he knows that the laws of his country have decreed that punifhment. againft thofe convicted of that crime. But we think that the protection of property by the death of the aggieffor may be completely vindicated upon more general principles. It is neceffary, in every ftate, that property be protected, or mankind
muft be the defender of his own property, which in that ftate muft neceffarily be fmall: and if he be not al. lowed to defend it by every mean in his power, he will not long be able to protect it at all. By giving him fuch liberty, a few individuals may, irdeed, occafionally lofe their lives and limbs for the prefervation of a very. fmall portion of private propetty; but we believe that the fum of human happinefs will be more augmented by cutting off fuch worthlefs wretches than by expofing property to perpetual depredation; and therefore, if general utility be the criterion of moral good, we muft be of opinion that a man may in every cafe lawfully kill a robber 1 ather than comply with his unjuft demand.
But if a man may without guilt preferve his proper. ty by the death of the aggreflor, when it cannot be preferved by any other means, much more may a woman have recourfe to the laft extremity to protect her chaf. tity from forcible violation. This, indeed, is admitted by Mr Paley himfelf, and will be controverted by no man who reflects on the importance of the female cha. racter, and the probable confequences of the fmallett deviation from the eftablifhed laws of female honour, See Seduction.
Self-Knoruledge, the knowledge of one's own character, abilities, opinions, virtues, and vices. This has always been confidered as a difficult though important aequifition. It is difficult, becaufe it is difagreeable to invelligate our errors, our faults, and vices; becaufe we are apt to be partial to ourfelves, even when we have done wrong; and becaufe time and habitual attention are requifite to enable us to difcover our real character.* But thefe difficulties are more than counterbalanced by the advantages of felf.knowledge.

By knowing the extent of our abilities, we thall neyer rafhly engace in enterprifes where our ineffectual exertions may be productive of harm: by inveftigating our opinions, we may difcover thofe which have no foundation, and thofe alfo which lead us infenfibly into vice. By examining our virtues and vices, we fhall learn what principles ought to be ftrengthened, and. what habits ought to be removed.

Man is a rational and intelligent being, capable of great improvement, and liable to great vices. If he acts without examining his principles, he may be hurried by blind paffion into crimes. If he afpires at noble and valuable acquifitions, he muft act upon a plan, with deliberation and fore-thought; for he is not like a vege. table, which attains perfection by the influence of exterial caufes: he has powers within himfelf which mult be exerted, and exerted with judgment, in order to attain the periection of his natuie. 'To enable him to employ thefe powers aright, ke muft know, firft, what is his duty; and, fecondly, he muft often review his \({ }^{3}\) principles and conduct, that he may difcover whether he is performing his duty, or in what circumftances he has failed. When he fond that he has fallen into error and vice, he will naturally inquire what caufes have produced this effect, that lie may avoid the fame for the time to come. This is the method by which every reformation in religion and fcience has been produced; and the method by which the arts have been improved. Before Lord Bacon introduced the new way of philofophizing, he mult frit have coafidered wherein true philofophy confifted; fecondly, he muit have inquired

\section*{S E L} was falfe or ufelefs: and after determining thefe two points, he was qualified to defcribe the way by which the fludy of philofophy could be fuccefsfully purfued without deviating into hypothefis and error. Luther found out the errors of the church of Rome by comparing their doetines with the Scriptures. Bur had this comparifon never been made, the reformation could never have taken place. Without felf-knowledge, or without that knowledge of our character which is derived from a comparifon of our principles and conduct with a perfect ftandard of morality, we can never form plans and refolutions, or make any exertion to abandon the vicious habits which we have contracted, and ftrengthen thofe virtuous principles in which we are deficient.

As much may be learned from the errors of thofe who have been in fimilar fituations with ourfelves; fo many ufeful cautions may be obtained from our own errors; and he that will remember thefe, will feldom be twice guilty of the fame vice.
It was evidently the intention of Providence that man fhould be guided chiefly by experience. It is by the obfervations which we make on what we fee paffing around us, or from what we fuffer in our own perfon, that we form maxims for the conduct of life. 'the more minutely therefore we attend to our principles, and the more maxims we form, we fhall be the better fitted to attain moral perfection.

With refpect to our underftanding, to mark the errors which we have fallen into, either by its natural defects or by negligence, is alfo of great importance ; for the greateft genius and moft profound fcholar are liable to thefe errors, and often coinmit them as well as the weak and illiterate. But by obferving them, and tracing them to their caufes, they at length acquire an habitual accuracy. It is true, that men of feeble minds can never by knowing their own defects exalt themfelves to the rank of genius; but fuch knowledge will enable them to improve their underftandings, and fo to appreciate their own powers, as feldom to attempt what is beyond their ftrength. They may thus become ufeful members of fociety ; and though they will not probably be admired for their abilities, they will yet efcape the ridicule which is poured upon vanity.

It is difficult to lay down precife rules for the acquifition of this felf-knowledge, becaufe almoft every man is blinded by a fallacy peculiar to himfelf. But when one has got rid of that partiality which arifes from felflove, he may eafily form a juft eftinate of his moral improvements, by comparing the general courfe of his conduct with the ftandard of his duty; and if he has any doubt of the extent of his intellectual attainments, he will moft readily difcover the truth by comparing them with the attainments of others who have been moft fuccefsful in the fame purfnits. Should vanity arife in his nind from fuch a comparifon, let him then compare the extent of his knowledge with what is yet to be known, and he will then be in little danger of thinking of himfelf more highly than he ought to think. See PREJUDice and Stip.Paitiality.

S6LF. Lovie, is that inftinctive principle which impels every animal, rational and irrational, to preferve its life and promote its own happinefs.' It is very generally confounded with felfifhnefs; but we think that the one progenfity is diftinet from the other. Every man loves lim.
feif; but every man is not felifin. The felfin man grafps at all immediate advantages, regardlefs of the conlequences which his conduct may have upon his neighbour. Self-love only prompts him who is actuated by it to procure to himfelf the greatef pollible fum of happinefs during the whole of his exiftence. In this purfuit the rational felf-lover will often forego a prefent enjoyment to obtain a greater and more permanent one in revertion; and he will as often fubmit to a prefent pain to avoid a greater hereafter. Self-love, as diftinguifhed from felfifhnefs, always compreliends the whole of a man's exiftence, and in that extended fenfe of the phrafe, we hefitate not to fay that every man is a felflover; for, with eternity in his view, it is furely not poffible for the moft difinterefted of the liuman race not to prefer himfelf to all other men, if their future and everlafting interefs could come into competition. This indeed they never can do; for though the introduction of evil into the world, and the different ranks which it makes neceffary in fociety, put it in the power of a man to raife himfelf, in the prefent fate, by the depreffion of his neighbour, or by the practice of injuftice, yet in the purfuit of a prize which is to be gained only by fobernefs, righteoufnels, and piety, there can be no rivalthip among the different competitors. The fuccefs of one is no injury to another ; and therefore, in this fenfe of the phrafe, felf. love is not only lawful, but abfolutely unavoidable. It has been a queftion in morale, whether it be not likewife the incentive to every action, however virtuous or apparently difinterefted?

Thofe who maintain the affirmative fide of this queftion fay, that the profpect of immediate pleafure, or the dread of immediate pain, is the only apparent motive to action in the minds of infants, and indeed of all who look not before them, and infer the future from the palt. 'They own, that when a boy has had fome experience, and is capable of making comparifons, he will often decline an immediate enjoyment which he has formerly found productive of future evil more than equivalert to all its good; but in doing fo they think, and they think juftly, that he is ftill actuated by the principle of felf-love, purfuing the greateft good of which he knows himfelf to be capable. After experiencing that truth, equity, and benevolence in all his dealirgs is the readieft, and indeed the only certain, method of fecuring to himfelf the kindnefs and good offices of his fellow-creatures, and much more when he has learned that they will recommend him to the Supreme Being, upon whom depends his exiftence and all his enjoyments, they admit that he will practice truth, equity, and benevolence; but ftill, from the fame principle, purfuing his own ultinate happinefs as the object which he has always in view. The profpect of this great object will make him feel an exquifite pleafure in the performance of the actions which he conceives as neceflary to its attainment, till at laft, without attending in each inftance to their confequences, he will, by the great affociating principle which has been explained eliewhere (fee Meraphysics, part ift, chap. 1.) feel a refined enjoyment in the actions themielves, and perform them, as occafions offer, without deliberation or reflection. Such, they think, is the origin of benevolence itfelf, and indeed of every virtue.
Thofe who take the other fide of the queftion, can hardly deny that felf-love thus modifed may prompt to

\section*{SEL [ 255 [ S E L}
virtuous and apparently difnterefted conduet ; but they think it degrading the dignity of man to fuppofe him actuated folely by motives which can be traced back to a defire of his own happinefs. They obferve, that the Author of our nature has not left the prefervation of the individual, or the continuance of the fpecies, to the deductions of our reafon, computing the fum of happinefs which the actions necefiary to thefe ends produce to ourfelves : on the contrary, He has taken care of both, by the furer impulfe of inflinct planted in us for thefe very purpofes. And is it conceivable, fay they, that He would leave the care of our fellow-creatures a matter of indifference, till each man fhould be able to difcover or be taught that by loving his neighbour, and doing him all the good in his power, he would be mote effectually promoting his own happinefs? It is difhonouring virtue, they cortinue, to make it proceed in any in. flance from a profpect of happinefs, or a dread of mifery; and they appeal from theory to fact, as extibited in the conduet of favage tribes, who deliberate little on the confecuences of their actions.

Their antagonifts reply, that the conduct of favage tribes is to be couffdered as that of children in civilized nations, regulated entively by the examples which they have before them; that their actions cannot be the effspring of innate inftincts, otherwife favage virtues would, under fimilar circumftances, every where be the fame, which is contrary to fact ; that virtue proceeds from ant interefted rootive on either fuppofition; and that the motive which the inftinctive fcheme loolds up is the moft felfifh of the two. 'The other theory fuppofes, that the governing motive is the hope of future hafpinefs and the dread of future mifery ; the inftinctive fcheme fupply a prefent motive in the felf.complacency arifing in the heart from a confcioufnefs of right conduct. The former is a rational motive, the latter has nothing morè to do with reafon than the enjoyment arifing from eating or drinking, or from the intercourfe betwecn the fexes. But we inean rot to purfue the fubject farther, as we have faid enough on it in the articles Benevolfnce, Instinct, Passion, and PhiIanthropy. We fhall therefore conclude with obferving, that there is certainly a virtuous as well as a vicious felf-love, and that " true felf-love and focial are the fame."

\section*{Sflf-Murder. See Suicide.}

SEIF-Partiality, is a plirafe employed by feme philofophers * to exprefs that weaknefs of human nature through which men overvalue themfelves when compared with others. It is diftinguifted from general partiality, by thofe who make ufe of the expreffion, becaufe it is thought that a man is led to over-rate his own accomplifhments, tither by a particular inftinct, or by a procefs of intellect different from that by which he over-rates the accomplifments of his friends or children. The former kind of partiality is wholly felfifh; the latter partakes much of benevolence.
T'This diftinction may perhaps se deemed plaufible by thofe who confider the human mind as little more than a bundle of inftinets; but it mult appear per ectly ridiculons to fuch as refotve the greater part of apparent inflichts into early and deep-rooted affociations of ideas. If the partialities which moft men have to their friends, their families, and themfelves, be inftinctive, they are
certainly inftinets of different kinds; but an inftinctive partiality is a contradiction in terms. Partiality is founded on a comparifon between two or more objects; but genuine inftincts form no comparifons. See \(I_{\text {N- }}\) stinct. No man can be faid to be partial to the late Dr Johnfon, merely for thinking highly of his intellectual powers; nor was the Doctor partial to himfelf, tho' he thought in this refpect with the generality of his countrymen ; but if, upon a comparifon with Milton, he was deemed the greater poet of the two, fuch a judgment will be allowed to be partial, whether formed by himifelf or by any of his admirers. We apprehend, however, that the procefs of its formation was the fame in every mind by which it was held.

The origin of felf-partiality is not difficult to be found ; and our partialities to our friends may be traced to a fimilar fource. By the conftitution of our nature we are impelled to fhun pain and to purfue pleafure ; but remorfe, the feverelt of all pains, is the neverfailing confequence of vicious conduct. Remorfe arifes, from the dread of that punifhment which we believe will in a future flate be inflicted on vice unrepented of in this; and therefore every vicious perfon endeavours by all pofible means to banifh that dread from his own mind. One way of effecting this is to compare his own life with the lives of others; for he fancies that if numbers be as wicked as himfelf, the benevolent Lord of all things will not involve them in one common ruin. Hence, by magnifying to himfelf the temptations which led him aftray, and diminifhing the injuries which his conduct has done in the worid, and by adopting a courfe diametrically the reverfe, when eftimating the morality or immorality of the conduct of his neighbours, he foon comes to believe that he is at leaft not more wicked than they. 'ithus is felf-partiality formed' in thie mind, and quickly blinds him who is under its int. fluence fo completely, as to hide from him the very faults which he fees and blames in others. Hence the coward thinks himfelf only cautious, the mifer frugal. Partiality is formed in the very fame manner to natural or acquired accomplifhments, whether'mental or corporeal. Thefe always procure refpect to him who is poffeffed of them; and as refpect is accompanied with many advantases, every man wifhes to obtain it for himfelf. If he fail in his attempts, he confoles himfelf with the perfuafion that it is at leaft due to his merits, and that it is only withbeld by the envy of the public. He compares the particular branch of fcience or bodily. accomplifhment in which he limfelf molt excels, with thofe which have conferred fplendor on his rival; and eatily finds that his own excellencies are of the higheft order, and entitled to the greatelt fhare of public efteem. Hence the polite feholar defpifes the mathematician; the reader of Ariflotle and Plato all the modern difcoveries in phylical and noral feience; and the mere experimentalift holds in the moft fovereign contempt a critical knowledge of the ancient languages. The pupil: of the ancients denies the merits of the moderns, whilk the mere modern allows nothing to the ancients ; and thus each becomes partial to his own acquifitions, and of courfe to himfelf, for having been at the trouble to make them.

Partiality to our friends and families is generated in: the very fame way. Whenever we acquire fuch an af-
fections

\section*{S EL \\ S E L}
fection for them as to confider their happinefs as adding to our own (fee Passion), we magnify their excellencies, and diminim their defects, for the fame reafon, and by the fame procefs, that we marnify and diminifh our own. All partialities, however, are prejudices, and prejudices of the worlt kind. They ought therefore to be guarded againft with the utmoft care, by the fame means which we have elfewhere recommended (fee Prejudice and Metaphysigs, \(\mathrm{n}^{\circ}\) 98.); and he who is partial to his own virtue or his own knowledge, will do well to compare the former, not with the conduct of his neighbour, but with the exprefs rule of his duty ; and to confider the latter as no farther valuable than as it contributes to the fum of hu. man happinefs.

SELIM I. emperor of the Turks, was the fecond fon of Bajazet II. He made war upon his father, and though defeated in 1511, he at laft dethroned him and took him prifoner, and immediately difpatched him by poifon, together with his elder brother Achmet, and his younger Korkud, an amiable and enlightened prince. Having eftablifhed his throne by thefe crimes, he march ed againft Campfon-Gaury fovereign of Egypt, gained a great victory at Aleppo, and new their general. But though the fultan perifhed in that battle, the Mameluks determined to oppofe the emperor. Selim entering their country at the head of his army, defeated the Egyptians in two battles, and ordered Toumonbai, the new clected fultan, who had fallen into his hands, to be hung on a gibbet. He then took Cairo and Alexandria, and in a fhort time reduced all Egypt to fubjection, Thus ended the dominion of the Mameluks in Egypt, which had continued for more than 260 years. He confirmed the ancient privileges of the Venetians in Egypt and Syria, by which they carried on their commerce with India, and formed a league with them to deftroy the power of the Portuguefe in that country. (See India, \(n^{\circ} 37\) ). Selim had before this gained a great victory over the Perfians, and Atripped them of Tauris and Keman. He was preparing to attack Chriftendom when he was feized with an ulcerous fore in the back. Thinking that the air of Adrianople would reftore his health, he ordered himfelf to be conducted thither ; but he died at Clari in Thrace on his road to that city, in the year 1520 , in the very fpot where he had poifoned his father. He reigned 8 years, and lived 54 . He was a prince of great courage, fobriety, and liberality : he was fond of hiftory, and wrote fome verfes. But thefe good qualities were obfcured by the moft abominable crimes that ever difgraced human nature : he made his way to the throne by thed. ding the blood of his father, and fecured it by murdering his brothers and eight nephews, and every bafhaw who had been faithful to his duty.

SELINUM, in botany: A genus of the digynia order, belonging to the pentandria clafs of plants; and in the natural method ranking under the 45 th order, Umbellate. 'The fruit is oval, cblong, compreffed, plane, and ftriated in the middle: the involucrum is reflexed ; the petals curdate and cqual. There are feven fpecies, the fylveftre, palultre, cuftriacum, carvifolia, chabraci, feguieri, monnieri.

SELKIRK (Alexander), whofe adventures gave rife to a well known hikrical romance, was born at Larro, in the county of ife, ahout the year 1676, and was bred a feaman. He went from England, in

1703, in the capacity of failing-mater of a fmall veffel called the Cinque-Ports Galley, Charles Pickering captain, burthen about 96 tons, with 16 guns and 63 men 3 and in September the fame year failed from Corke, in company with another fhip of 26 guns and 120 men , called the St George, commanded by that famous navigator William Dampier, intending to cruize on the Spaniards in the South Sea. On the coaft of Brazil, Pickering died, and was fucceeded in his command by his lieutenant Thomas Stradlinc. They proceeded on their voyage round Cape Horn to the ifland of Juan Fernandes, whence they were' driven by the appearance of two French fhips of 36 guns each, and left five of Stradling's men there on thore, who were taken off by the French. Hence they failed to the coaft of America, where Dampier and Stradling quarrelled, and fepa. rated by agreement, on the Igth of May 1704. In September following, Stradling came again to the ifland of Juan Fernandes, where Selkirk and his captain had a difference, which, with the circumftance of the fhip's being very leaky, and in bad condition, induced him to determine on flaying there alone; but when his companions were about to depart, his refolution was fhaken, and he defired to be taken on board again. The captain, however, refufed to admit him, and he was obliged to remain, having nothing but his clothes, bedding, a gun, and a fmall quantity of powder and ball; a hatchet, knife, and kettle; his books, and mathematical and nautical inftruments. He kept up his fpirits tolerably till he faw the veffel put off, when (as he afterwarda related) his heart yearned within him, and melted at parting with his comrades and all human fociety at once.
> " - Yet believe me, Areas,
> Such is the rooted love we bear mankind, All ruffians as they were, I never heard A found fo difmal as their parting cars."'

> Thomjon's Agamemnon.

Thus left fole monarch of the inland, with plenty of the neceffaries of life, he found himfelf in a fituation hardly fupportable. He had fifh, goat's fteth, turnips and other vegetables; yet he grew dejected, languid, and melancholy, to fuch a degree as to be fcarce able to refrain from doing violence to himfelf. Eighteen month's paffed before he could, by reafoning, reading his bible, and Itudy, be thoroughly reconciled to his condition. At length he grew happy, employiug him. felf in decorating his huts, chafing the goats, whom he equalled in fpeed, and fcarcely ever failed of catching. He alfo tamed young kids, laming them to prevent their becoming wild; and he kept a guard of tame cats about him, to defend him when afleep from the rats, who were very troublefome. When his clothes were worn out, he made others of goats \(\AA\) kins, hut could not fucceed in making moes, with the ufe of which, however, habit, in time, enabled him to difpenfe. His only liquor was water. He computed that he had causht 1000 goats during his abode in the ifland; of which he had let go 50n, after marking them by fitting their ears. Conamodore Anfon's people, who were there about 30 years after, found the firf goat which they fhot upon landing was thus marked, and as it appeared to be very old, concluded that it had been under the power of Selkirk. Bur it appears by captain Carteret's account of his voyage in the Swallow floop, that other perfons practifed this mode of marking, as he found a

\section*{S E I}
goat with his ears thus flit on the neighbouring ifland o! Mas-a-fuera, where Selkink never was. He máde companions of his tame goats and cats, often dancing and finging, with them. 'Though he conitantly performed his devotions at fated hours, and read aloud; yet, when he was taken off the ifland, his language, from difufe of converfation, was become fearcely intelligible. In this folitude he continued four years and four months; during which time only two incidents happened which he thought worth relating, the occurrences of every day being in his circumftances nearly fimilar. The onc was, that, purfuing a goat eagerly, he caught it juft on the edge of a precipice, which was covered with buthes, fo that he did not perceive it, and he fell over to the bottom, where he lay (according to captain Roger's account) 24 hours fenfelefs; but, as he related to Sir R. Steele, he computed, by the alteration of the moon, that he had lain three days. When he came to himfelf, he found the goat lying under him dead. It was with great difficulty that he could crawl to his habitation, whence he was unable to ftir for ten days, and did not recover of his bruifes for a long time. The other event was the arrival of a fhip, which. he at firft fuppofed to be French : and fuch is the natural love of fociety in the human mind, that he was eager to abandon lis folitary felicity, and furrender himfelf to them, although enemies; but upon their landing, approaching them, he found them to be Spaniards, of whom he had too great a dread to truft himfelf in their hands. They were by this time fo near that it required all his agility to efcape, which he effected by climbing into a thick tree, being fhot at feveral times as he ran off. Fortunately the Spaniards did not difoover him, though they flayed fornc time under the tree where he was hid, and killed fome goats juft by. In this folitude Selkirk remained until the 2d of February r 70 , when he faw two fhips come into the bay, and knew them to be Englifh. He immediately lighted a fire as a fignal; and on their coming on hore, found they were the Duke captain Rogers, and the Duchefs captain Courtney, two privateers from \(\mathrm{B}_{1}\) ifol. He gave them the beft entertainment he could afford; and, as they had been a long time at fea without frefh provifions, the woats which he caught were highly acceptable. His habitation confifting of two huts, one to fleep in, the other to drefs his food in, was fo obfcurely fituated, and fo difficult of accefs, that only ene of the fhip's officers would accompany him to it. Dampier, who was pilot on board the Duke, and knew Selkirk very well, told captain Rogers, that, when on board the Cinque-Ports, he was the beft feaman on board that veffel; upon which captain Rogers appointed him mafter's mate of the Duke. After a fortnight's ftay at Juan Fernandes, the fhips proceeded on their cruize agaimf the Spaniards; plundered a town on the coaft of Peru; took a Manilla thip off Celifornia; and returncd by way of the Eaft Indies to England, where they arrived the ift of October 1711; Selkirk having been abfent eight years, more than half of which time he had fpent alone in the inand. The public curiofity being excited refpecting him, he was induced to put his papers into the hands of Defoe, to arrange and form them into a resular narrative. Thefe papers mult have been drawn up after he left Juan Fernandes, as he had no means of recording his tranfactions there. Captain Cooke remarks, as an extraordinary circumftance, that he had

Vol. XVII. Part 1.
\(257]\)
S E L
contrived to keep an account of the days of the weck Stlkirk, and month : but this might be done, as Defoe makes SelkirkRobinfon Crufoe do, by cutting notches in a polt, or many other methods. From this account of Selkirk, Defoe took the idea of writing a more extenfive work, the romance of Robinfon Crufoe, and very difhonefly defrauded the original proprietor of his fhare of the profits. Of the time or place or manner of this extraordinary man's death we have received no account ; but in 1792 the cheft and mufket which Selkirk had with him on the ifland were in the pofleffion of his grandnephew, John Selkirk weaver in Largo, where doubtlefs they are at prefent.

Selkirk, the capital of the county of the fame name, is a fnall town pleafantly fituated on a rifing ground, and enjoys an extenfive profpect in all directions, efpecially up and down the siver Etterick. It is remarkable for nothing but thofe plaintive airs produced in its neighbourhood, the natural fimplicity of which are the pride of Scotland and the admiration of ftrangers. W. Long. 2. 46. N. Lat. 55. 26.

SELKIRKSHIRE, called alfo the Sheriffom of Etterick Forefl, a county of Scotlaud, extending about 20 miles in length from ealt to weft, and about 12 in breadth from fouth to north. It borders on the morth with part of ' \(T\) weeddale and Mid-Lothian ; on the fouth and eaft with Teviotdale; and on the weft with Annandale. This county was formerly referved by the Scottioh princes for the pleafure of the chace, and where they had houfes for the reception of their train. At that time the face of the country was covered with woods, in which there were great numbers of red and fallow deer, whence it had the name of Etterick Foreft. The woods, however, are now almoft entirely cut down, and the county is chiefly fupported by the breed of fheep. They are generally fold into the fouth, but fometimes into the Highlands, about the month of March, where they are kept during fummer ; and after being improved by the mountain-grafs, are returned into the Lowlands in the beginning of winter.

This county, thoush not very populous at prefent, was once the nurfe of heroes, who were juftly accounted the bulwark of their native foil, being ever ready to brave danger and death in its defence. Or̈ this we have a memorable proof in the pathetic lamentations of their wives and daughters for the difafter of the field of Flowden, "s where thieir brave forefters were a' wed away." The rivers Etterick and Yarrow unite a little Statifical above the town of Selkirk, and terminate in the Tweed. Account of For five miles above its junction with the Etterick, the Scotlind, Tweed is fill adomed with woods, and leads the pleafed imagination to contemplate what this country muft have been in former times. 'The Yarrow, for about five miles above its junction with Etterick, exhibits nature in a bold and ftriking afpect. Its native woods fill remain, through which the ftream has cut its turbid courfe, deeply ingulphed amidft rugged 1ocks. Here, certainly in a flood, food the defrriptive Thomfon when he faw it
"Work and boil, and foam and thunder through."
Upon a peninfula, cut out by the furrounding ftream, in the middle of this fantaftically wild fcene of grandeur and bcauty, flands the caftle of Newark, which has been fuppofed by many to be the birth-place of Mary Scot the flower of Yarrow; but this we believe to be a miftake.

SELLA

\section*{S E L - [ 258 ]}

Sella, Seltzer.

SELLA turcica, is a deep depreffion between the clinoid apophyfes of the fphenoid bone. See AnatoMY, p. 682.

SELTZER wATER, is a mineral water which Springs up at Lower Seltzer, a village in the electorate of'Triers, about 10 miles fron Frankfort on the Mayne. It is a very ufeful medicinal water. "It contains, according to fome, a very fmall portion of calcareous earth, of a native mineral alkali, and an acid; but of the ee the quantity is too fmall to attribute any medicinal virtues to; but it contains alfo near 1.7 th of its bulk of fixed air, which is more than is found in any other mineral water, and to this it owes its principal virtues. Others have faid that it is of the very fame nature with Pyrmont water, and contains a fubtile aqueous fluid, a volatile iron, and a predominant alkali, all joined together into one brifk fpirituous water. The confequence of thefe different opinions refpecting its conftituent parts is, that different methods have been recommended for imitating it.

According to the former analyfis, artificial Seltzer water may be prepared by adding one fcruple of mag. nefia alba, fix fcruples of foffil alkali, and four fcruples of common falt, to each gallon of water, and faturating the water with fixed air or carbonic acid. According to the latter it may be imitated by adding to a quart of the pureft and lighteft water thirty drops of a ftrong folution of iron made in fpirit of falt, a drachm of oil of tartar per deliquium, and thirty drops of fpirit of vitriol, or a little more or lefs as is found neceffary, not to let the alkali of the oil of tartar prevail too ftrongly, tho' it muft prevail a little. If the proportions be carefully obferved, and the whole of thefe ingredients fhaken brinkly together, the artificial Seltzer or Pyrmont water thus made will ftrongly refemble the natural, and have the fante good effect in medicine.

But as fixed air is the only efficacious medicinal part of the compofition of Seltzer water, the beft method of imitating it is by impregnating common water with that acid by a procefs for which we are indebted to Dr Priftley. The firft idea of this kind occurred to him in 1767 , when, having placed fhallow veffels of water within the region of fixed air, on the furface of the fermenting veffels of a brewery, and left them all night in that fituation, he found that the water had acquired a very fenfible and pleafant impregnation. He proceeded to accelerate the impregnation by pouring the water from one veffel into another, while they were both held within the fphere of the fixed air. The method of effecting this by air diflodged from chalk and other calcareous fubftances did not occur to him till the year 1772 , when he publifhed his directions for this purpofe, together with a drawing of the neceffary apparatus, which he had before communicated to the Board of Admiralty. That apparatus has now given way to another invented by Dr Nooth, which is made of glafs, and tlands on a wooden veffel \(d d\) (fig r.) refembling a tea-board : the middle veffel \(B\) has a neck which is inferted into the mouth of the veffel A , to which it is ground air-tight. The lower neck of the veffel B has a glafs topper S , compoied of two parts, both having holes fufficient to let a good quantity of air pals through them. Between thele two parts is left a fmall fpace, containing a plano. convex lens, which acts like. a valve, in letting the air pafs. from below upwares, and
hindering its return into the veffel A. The upper veffel \(C\) terminates below in a tube \(r t\), which being crooked, hinders the immediate afcent of the bubbles of fixed air into that veffel, before they reach the furface of the water in the veffel B. The veffel C is alfo ground airtight to the upper neck or the middle veffel \(B\), and has a flopper \(p\) fitted to its upper mouth, which has a hole through its middle. The upper veffel C holds juft half as much as the middle one B ; and the end \(t\) of the crooked tube goes no lower than the middle of the veffel B.

For the ufe of this apparatus : Fill the middle veffel B with fpring or any other wholefome water, and join to it the veffel C. Pour water into the veffel A (by the opening \(m\), or otherwife) fo as to cover the rifing part of its bottom : for this about three-fourths of a pint will be fufficient. Fill an ounce phial with oil of vitriol, and add it to the water, fhaking the veffel fo as to mix them well together. As heat is generated, it will be beft to add the oil by a little at a time, otherwife the veffel may be broken. Put to this, through a wide glafs or paper funnel, about an ounce of powdered raw chalk or marble. White marble being firt granulated, or pounded like coarfe fand, is better for the purpofe than pounded chalk, becaufe it is harder ; and therefore the action of the diluted acid upon it is flower, and lafts to a confiderable time. On this account the fupply of fixed air from it is more regular than with the chalk: and befides, when no more air is produced, the water may be decanted from the veffel A, and the white fediment wafhed off, and the remaining granulated marble may be employed again, by adding to it frefh water and a new quantity of oil of vitriol. The funnel in this procefs is made ufe of, in order to prevent the powder from touching the infide of the veffel's mouth; for if that happens, it will ftick fo ftrongly to the neck of the veffel B as not to admit of their being feparated without breaking. Place immediately the two veffels B and C (faftened to each other) into the mouth of the veffel \(A\), as in the figure, and all the fixed air which is. difengaged from the chalk or marble by the oil of vi triol will pafs up through the valve in \(S\) into the veffel B. When this fixed air comes to the top of the veffel \(B\), it will difodge from thence as much water as is equal to its bulk; which water will be forced uip through the crooked tube into the upper veffel C.

Care muft be taken not to thake the veffel \(A\) when the powdered chalk is put in ; otherwife a great and fudden effervefcence will enfue, which will perhaps expel part of the contents. In this cafe it may be neceffary to open a little the fopper \(p\), in order to give vent, otherwife the veffel A may burf. It will be proper alfo to throw away the contents and wafh the veffel; for the matter will ftick between the necks of the veffels, and cement them together. The operation muft then be begun afrefh. But if the chalk be put into the veffel loofely wrapt up in paper, this accident will be ftill better guarded againft. When the effervefcence goes on well, the veffel C will foon be filled with water, and the veffel B half filled with air; which will eafily be known to be the cafe by the air going up in large bubbles through the crooked tube \(r \%\).

When this is obferved, take off the two veffels \(B\) and C together as they are, and fhake them fo that the water and air within them may be much agitared. A great

\section*{S E L}
part of the fixed air will be abforbed into the water, as will appear by the end of the crooked tube being confiderably under the furface of the water in the veffil. The fhaking them for two or three minutes will be fufficient for this purpofe. Thefe veffels muft not be Thaken while joined to the under one A, otherwife too great an effervefcence will be occafioned in the latter, together with the ill confequence above mentioned. After the water and air have been fufficiently agitated, loofen the upper veffel C , fo that the remaining water may fall down into \(B\), and the unabforded air pafs out. Put thefe veffels together, and replace them into the mouth of A , in order that B may be again half filled with fixed air. Shake the veffels B and C , and let out the unabforbed air as before. By repeating the operation three or four times, the water will be fufficiently impregnated.

Whenever the effervefcence nearly ceafes in the veffel A, it may be renewed by giving it a gentle fhake, fo that the powdered chalk or marble at the bottom may be mixed with the oil of vitriol and water above it ; for then a greater quantity of fixed air will be difengaged. When the effervefcence can be no longer renewed by fhaking the veffel A, either more chalk muft be put in, or more oil of vitriol ; or more water, if neither of thefe produce the defired effect.

Mr Magellan has aill further improved this contrivance. He has țwo fets of the veffels B and C . While he is fhaking the air and water contained in one of thefe fets, the other may be recciving fixed air from the veffel A. By this means twice the quantity of water may be impregnated in the fame time. He has a wooden ftand on which to fix the veffels \(B, C\), when taken off from \(A\), which is very convenient. He has a fmall tin trough for meafuring the quantity of chalk or marble requifite for one operation, and a wide glafs funnel for putting it through into the veffel \(A\), to prevent its fticking to the fides, as mentioned before.

He has alfo contrived a ftopper without a hole, to be ufed occafionally inftead of the perforated one \(p\). It muft be of a conical figure, and very loofe; but fo exactly and fmoothly ground as to be air-tight merely by its preffure. Its ufe is to comprefs the fixed air on the water, and thereby increafe the impregnation. For by keeping the air on the water in this compreffed flate, the latter may be made to fparkle like champaign. And if the veffels are ftrong, there will be no danger of their burfing in the operation.
The water thus impregnated may be drawn out at the opening \(k\). But if it is not wanted immediately, it will be better to let it remain in the machine, where it has no communication with the external air ; otherwife the fixed air flies off by degrees, and the water becomes vapid and flat. But it may be kept a long time in bottles well ftopped, efpecially if they are placed with their mouths downwards.

Dr Withering of Birmingham has lately contrived a new apparatus for imprernating water with fixed air, which, he fays, is preferable to that in common ufe, becaufe it can be made at lefs expence, and is more eafily prepared; becaufe the whole quantity of fixable air produced is converted to ufe, without any wafte of the vitriolic acid; becaufe it impregnates three times the quantity of water at one time more completely and with lefs trouble; and the impregnated water will al-

\section*{2591 \\ S E L}
ways retain its virtue, if the joints and cocks of the machine are made perfectly air-tight; for which purpofe they fhould once a-year be fupplied with a fmall quantity of unfalted lard. This apparatus is exhibited by fig. 2. and confifts of a glafs veffel \(A\), about ten inches high in the cylindrical part, and fix inches and a half in diameter; another glafs veffel \(B\), about twelve inches high in the conical part, one inch and a half in the neck, and five inches in diameter at the bottom ; a copper pipe C paffing through the fopper of the veffel \(B\), and tied faft in the flexible tube \(D\), made of ftrong leather, air-tight, and kept hollow by means of a firal wire paffing through its whole length; a conical brals pipe E , with a ftop-cock faftened to the tube D ; another conical pipe F, with a flop cock G, into which the end of the tube \(E\) is accurately ground fo as to be air-tight, and cutting off all communication with the atmofphere when the pipe \(E\) is removed; two large hog's bladders \(\mathrm{H}, \mathrm{H}\), each of which ought to hold two quarts; a ftop-cock \(I\) to prevent the water rifing into the bladders when the veffel A is agitated; a bladder K tied to the crooked tube with the flop-cock L , which occafionally opens or fhuts the communication with the veffel B ; a glafs funnel M , accurately fitted with the glafs ftopper N ; an aperture O , fitted with a glafs ftopper or a filver cock, from which the impregnated water is to be drawn for ufe; and, laftly, the tube \(P\) opening into the veffel \(A\). When this apparatus is ufed, let the veffel A be filled with pure water, and any other ingredients that are required, in a proper proportion; into the veffel \(B\) put as much marble or whiting, in fmall lumps, as will cover its bottom to the height of about two inches, and pour in water to the height reprefented by the dotted line ; let the mouth of the veffel A be well fitted with a cork, and through a hole in the cork pafs the tube \(P\), putting upon the cork melted fealing-wax of the fofteft kind, or model-ling-wax, fo as to make the whole air-tight. Let the mouth of the veffel B be flopped with a piece of mahogany, turned into a conical figure in a lathe, and of a fize fomewhat larger than the mouth of the glafs will admit ; put this piece of wood into melted bees-wax, and heat the wax till the wood begins to grow black: when cool, turn it again till it fits the mouth of the veffel : the tubes \(C, L\), and \(M\) are fitted into holes and bored through the wooden ftopper previous to its being immerfed in the wax ; pufh thefe tubes through the holes, and prefs the fopper into the orifice of the veffel \(B\), and cement the whole with fealing or model-ling-wax ; fhut the ftop-cocks I and \(L\), having previoully preffed the air out of the bladder K : open the ftop-cocks G and E ; then fqueeze the air out of the bladders \(\mathrm{H}, \mathrm{H}\), and afterwards prefs the conical pipe \(\mathbf{E}\) into the pipe F ; pour about a large fpoonful of oil of vitriol through the funnel \(M\), and ftop it with its fooper \(N\). The fixable air let loofe by the effervefcence in the veffel B , rifing through the tube C, paffes into the bladders \(\mathrm{H}, \mathrm{H}\), and diftends them. In this cafe open the ftop-cock \(I\), and from the aperture O draw out about a quart of water; and the fpace before accupied by the water will be filled with fixahle air, which foon begins to be abforbed by the remaining water, and is ftill fupplied from the bladders \(\mathrm{H}, \mathrm{H}\), and from the effervefcing mixture in the veffel B. When the bladders are confiderably collapfed, more vitriolic acid muft be added through the,

Kk 2
funned

\section*{S E L [ 260 ] S E M}

When an impregnation is fpeedily required turn the fop-cocks at \(G\) and \(E\), and open that at \(I\); then feparate the pipe I from the tube F, and agitate the veffel \(A\); the fixable air will pals into the bladde: \(\mathbb{K}\), and may be preffed into the two other bladders, when the parts of the apparatus are united. During the agitation, the ftop-cock at I fhould be clofed, and opened only occationatly to fupply out of the bladders \(\mathrm{H}, \mathrm{H}\), the fixable air abforbed by the water. If a frong impregnation be required, this procefs fhould be carried on in a room, the heat of which does not exceed forty.eight degrees of Fahrenheit's thermometer. Dr Withering obferves, that the impregnated water reetives no tafte from the bladders; and that if the veffel A with its inpregnated water be feparated from the veffel \(B\) at the conical parting E, F, it may be inclofed in a pyramidal mahogany cafe, out of the lower part of which the filver cock at O-projects; and thus ferve for am ornamental as well as luxurious and falubrious addition to the fide-board, particularly in the fummer and autumnal feafons.
'The artificial mineral waters thus made, are more plealant to the tafte than the natural Pyrmont or Seltzer waters ; which, befedes their fixed air, contain faline particles of a difagreeable tafte, which are known to contribute little or nothing to their medicinal virtues, and may, in fome cafes, be hurtful. They are likewife confiderably ftronger. Agcording to Sir John Pringle, thefe waters may be made more nearly to refemble genuine Pyrmont water, by adding to each pint of them from eight to ten drops of tinitura martis sum fpiritu falis. Or this may be done, by adding to the water in the middle veffel B (fig. 1.), in the proportion of about thirty grains of Epfom falt, ten grains of common falt, a fcruple of magnefia alba, and a drain of iron filings or iron wire, clean and free from ruft, to one gallon of fpring water, and impregnating the whole with fixed air in the nanner already deferibed. Let them remain, till the other ingredients and as much of the iron as is neceffary are diffolved; which will be in two or three days: or the magrefia may be omitted, and then the operation will be finifhed in lefs than half that time'. Thefe waters may be rendered ferruginous or chalybeate very eafily, by putting in the middle veffel two or more flender phials, filled with enttings of fine iron-bindins wire, or with fmall iron rails; becaufe the impregnated water, will diffotve the iron fo faft, as to become well faturated with it in a few hours, according to the experiments of Mr Lane. But the method of rendering thefe artificial waters chalybeate, ufed by Dr Hulme, is to add one grain of falt of fteel to each pint (fixteen ounces) of water already impregnated with fixed air.

But the ingenious Mr Bewley has invented a fill better method of exhibiting fixed air as a medicine. He directs a fcruple of alkaline falt to be diffolved in a fufficient quantity (a quarter of a pint, or lefs) of water, which is to be impregnated with as much fixed air as it can imbibe : this is to be taken at one dofe. Mr Bewley directs it to be prepared in larger quantities at a time, and calls it his mephitic julep. If immediately offter it a fpoonful of lemon jurice, mixed with two or three fpoonfuls of water, and fweetened with fugar, be drunk, the fixed air will be extricated in the ftomach;
and thus a mueh greater quantity of it may be given than the fame quantity of water alone can be made to imbibe. Fixed air acts as a corruborant ; and thereforc may be given with fuccels in weakmefs of the ftomach, and in vomitings arifiny from that caufe. It has alfo been given with finccefs in the ftone and in nephritic complaints. When the lungs are purnlent, fixed air mixed with the air drawn into the lungs has repeatedly been found to perform a cure. The bark alfo may be given with advantage in water impregnated with fised air, is they both coincide in their effect. Fixed air may be applied by means of a fyringe, funnel, or otherwife, to inflamed breafts, putrid uleers, mortified parts, ulcerated fore throats, and has been found in fuch and fimilar cafes to have very 1 emarkable efficacy. It may alfo be given internally at the fame time. In putrid dyfenteries, and in putrid ftools, fixed air may be given by way of clyfter. Fermentino cataplafins are of fervice, chiefly as they fupply fixed air to the part. In cafes of putridity fixed air has been fuccefsfully appplied to the furface of the body expofed to ftreams of it. It is alfo found an excellent cooling as well as Atrengthening beverage in hot relaxing weather, and has the advantage of being pleafant to the tafte.

SEM, or Shem, the fon of Noah, memorable for his filial piety in concealing the folly and difgrace of his father; for which he received a remarkable benediction, about 2476 B. C. He lived to the age of 600 years.

\section*{Ras Sem. See RAs Sem and Pbtrafiet City.}

SEMECARPUS, in botany ; a genus of the trigy. nia order, belonging to the pentandria clafo of plants. The corolla is quinquepetalous; the drupa is heartfhaped, cellulous, and monofpermous. There is but one fpecies.
SEMEN, seed. See Botany, fect. iv. p. 435.
With refpect to number, plants are either firnifhed with one feed, as fea-pink and biftort; two, as woodroof and the umbelliferous plants; three, as fpurge ; four, as the lip flowers of Tournefort and rough-leaved plants of Ray ; or many, as ranunculus, anemone, and poppy.
The form of feeds is likewife extremely various, being either large or fmall, roind, oval, heart-fhaped, kit-ney-fhaped, angular, prickly, rough, hairy, wrinkled, fleek or mining, black, white, or brown. Moft feeds have only one cell or internal cavity ; thofe of leffer burdock, valerian, lamb's lettuce, cornelian cherry, and febeften, have two.

With refpect to fubftance, feeds are either foft, membranaceous, or of a hard bony fublance; as in gromwell, tamarind, and all the nuciferous plants.
In point of magnitude, feeds are either very large, as in the cocoa-nut; or very fmall, as in campanula, ammannia, rampions, and throat-wort.

With refpecz to fituation, they are either difperfed promifcuoully through the pulp (Semina nidulantia), as in water-lily; affixed to a future or joining of the valves of the feed-veffel, as in the crofs-fhaped and pea-bloom fiowers; or placed upou a placenta or receptacle withm the feed veffel, as in tobacco and thorn-apple.

Seeds are faid to be naked (femina nuda) which are not contained in a cover or veffel: fuch are thofe of the lip and compound flowers, the umbelliferous and rough-leaved plants; covered feeds (Semina tecta) are

\section*{S E M}
contained in fome veffel, whether of the eapfule, pod, berry, apple, or cherry kind.

A fimple feed is fuch as bearz neither crown, wiog, nor downy pappus ; the varieties in feeds, arifing from thefe circuniftances, are particularly enumerated under their refpective heads.

In affimilating the animal and vegetable kingdoms, Linnæus denominates feeds the eggs of plants. The fecundity of plants is frequently marvellous; from a fingle plant or ftalk of Indian Turkey wheat, are produced, in one fummer, 2000 feeds; of elecampane, 3000 ; of fun-flower, 4000 ; of poppy, 32,000; of a fpike of cat's tail, 10,000 and upwards : a fingle fruit, or feed-veffel, of tobacco, contains 1000 feeds; that of white poppy, 8000 . Mr Ray relates, from experiments made by himfelf, that 1012 tabacco-feeds are equal in weight to one grain ; and that the weirst of the whole quantum of feeds in a fingle tobacco-plant, is fuch as muft, according to the above proportion, determine their number to be 360,000 . The fame author eftimates the annual produce of a fingle falk of fpleen-wort to be upwards of one million of feeds.

The diffemination of plants refpectrs the different methods or vehicles by which nature has contrived to difprerfe their feeds for the purpole of increafe. Thele by naturalits are generally reckoned Jour.
1. Rivers and running waters. 2. The wind. 3. Animals. 4. An elaftic lpring, peculiar to the feeds themfelves.
1. The feeds which are carried along by rivers and torrents are frequently conveyed many hundreds of leagues from their native foil, and caft upon a very different climate, to which, however, by degrees they render themfelves familiar.
2. Thofe which are carried by the wind, are either winged, as in fir-tree, trumpet-flower, tulip.tree, birch, arbor-vite, meadow rue, and Jeffamine, and fome umbelliferous plants; furnifhed with a pappus, or downy crown, as in valerian, poplar, reed, fucculent fwallowwort, cotton-tree, and many of the compound flowers; placed within a winged calyx or feed-veffel, as in fcabious, fea-pink, dock, diofcorea, afh, maple, and elmtrees, logwood and woad ; or laftly, contained within a fwelled calyx or feed-veffel, as in winter-cherry, cucubalus, melilot, bladder-nut, fumatory, bladder-fena, heartfeed, and chick-peafe.
3. Many birds fwallow the feeds of vanelloe, juniper, miletoe, oats, millet, and other graffes, and void them entire. Squirrels, rats, parrots, and other animals, fuffer many of the feeds which they devour to efcape, and thus in effect diffeminate them. Moles, ants, earthworms, and other infees,s, by ploughing up the earth, admit a free paffare to thofe feeds which have been fcattered upon its furface. Again, fome feeds attach themfelves to animals, by means of hooks, crotchets, or hairs, which are either affixed to the feeds themfelves, as in hound's tongue, moufe.ear, vervain, carrot, baftard-parfley, fanicle, water hemp-agrimony, arclopus and verbefina; to their calyx, as in burdock, agrimeny, rhexia, fmall wild buglofs, dock, nettle, pellitory, and lead worr; or to their fruit or feed.veffel, as in liquorice, enchanter's night fhade, crofs-wort, clivers, French honeyfuckle, and arrow headed grafs.
4. The feeds which difperfe themfelves by an elaftic force, have that force refident either in their calyx, as
in oats and the greater number of ferns; in their pas. purs, as in ceritaurea crupina; or in their capfule, as in geramium, herb-bennet, African fpiraa, fraxinella, horfe tail, balfan, Malabar nut, cucumber, elatcrium, and male balfam apple.

\section*{Sfmen Sancliam, or Santonicum. See Artemisia.}

SEMENDRIAH, a town of Turkey in Europe, in the province of Servia, with a good citadel. It is the capital of a fanciacate, was taken by the 'Iurks in 1690 , and is feated on the Danube, in E. Long. 21.45. N. Lat. 45. 0.

SEMENIINAE FER1e, in antiquity, fealts held annually among the Romans, to obtain of the gods a plentiful harveft. 'J.hey were celebrated in the temple of Tellus, where folemn facrifices were offered to Tellus and Ceres. Thefe fcafts were held about feed-tine, ufually in the month of January ; for, as Macrobius obferves, they were moveabie feafts.

SEMI, a word borrowed from the Latin, fignifying bulf; but only ufed in compofition with other words, as in the following articles.

Semf-Arians, in ecclefiaftical hiftory, a branch of the ancient Arians, confifting, according to Epiphanius, of fuch as, in appearance, condemued the errors of that herefiarch, but yet acquiefced in fome of the principles thereof, only palliating and hiding them under fofter and more moderate terms. Though they feparated from the Arian faction (fie Aatans), they could never be brought to acknowledge that the Son was homooutios, that is, confubftantial, or of the fame fubftance with the Father; they would only allow him to be homoioufios, that is, of a like fubfance with the Father, or fimilar to the Father in his effence, not by nature, but by a peculiar privilege.

The femi-arianifm of the moderns confits in their maintaining that the Son was from all eternity begotten by the will of the Father, contrary to the doctrine of the ortliodox, who feem to teach that the eternal generation is neceffary. Such at leaft are the refpective opinions of Dr Clarke and Bifhop Bull. See '「heologr.

Semicircle, in geometry, half a circle, or that figure comprehended between the diameter of the circle and half its circumference.

Semicolon, in grammar, one of the points or ftops ufed to diffinguifh the feveral nembers of a fentence from each other.

I'he mark or character of the femicolon is (;), and has its name as, being of fomewhat lefs effeet than a co lou1; or as demanding a fhorter paufe.

The proper ufe of the femicolon is to diftinguifh the conjunct members of a fentence. Now, by a conjunct member of a fentence is meant fuch a one as contains at leaft two fimple members. - Whenever, then, a fentence can be divided into feveral members of the fame degree, which are again divifible into other fimple menbers, the former are to be feparated by a femicolon. For inftance: "If fortune bear a great fway over hisa, who has nicely ftated and concerted every circumitance of an affair; we muft not commit every thing, without referve, to fortune, left fhe have too reat a hold of us." Again: Si quantum in agro locifque defertis auddria potef, tantum in foro aique judiciis impudentia valeret; non mil nus in caufa cederet Aulus Gacinna Serta Aibutii impu*

\section*{S E M}

\section*{S E M}

Semicnb:um
aentix, quam tum in vi fucienda reffit audacia. An inftance in a more cumplex fentence we have in Cicero: Res familiaris primum bene parta fit, nuelloque turpi quaf. tw: : tum quam plurimis, modo dignis, Se utilem prabeat; deincie aureatur rātione, diligentia,-par \(/\) imonia; nec libidini potius luxuriaque, quam liberalitati et beneficentic pareat.

But though the proper ufe of the femicolon be to diftinguifh conjunct members, it is not neceffary that all the members divided hereby be conjunct. For upon dividing a fentence into great and equal parts, if one of them be corjunct, all thofe other parts of the fame degree are to be diftinguifhed by a femicolon. - Sometimes alfo it happens, that members that are oppofite to each other, but relate to the fame verb, are feparated by a femicolon. Thus Cicero: Ex bac parte pudor, illinc petulantia; binc fides, illinc fraudatio; binc pietas, illine fcelus, \&c. To this likewife may be referred fuch fentences, where the whole going before, the parts follow: as "The parts of oratory are four ; invention, difpofition, elocution, and pronunciation."

Semicubium, in medicine, an half-bath, wherein the patient is only placed up to the navel.

Semidiameter, half the diameter, or a right line drawn from the centre of a circle or fphere to its circumference: being the fame with what is otherwife called the radius.

Semiflosculus, in botany, a term ufed to exprefs the fiowers of the fyngenefia clafs. Thefe femifofculi are petals, hollow in their lower part, but in their upper flat, and continued in the fhape of a tongue.

Semitone, in mufic. See Interval.
SEMINAL, fomething belonging to thefemen or feed. SEMINARY, in its primary fenfe, the ground where any thing is fown, to be afterwards tranfplanted.

Seminary, in a figurative fenfe, is frequently applied to places of education, whence fcholars are tranfplanted into life.-In Catholic countries it is particularly ufed for a kind of college or fchool, where youth are inftructed in the ceremonies, \&c. of the facred :miniftry. Of thefe there are great numbers; it being ordained by the council of Trent, that there be a feminary belonging to each cathedral, under the direction of the bifhop.

SEMINATION, denotes the manner or act of fhedfing and difperfing the feeds of plants. See Semen.

SEMIPELAGIANS, in ecclefiaftical hitory, a name anciently, and even at this day, given to fuch as setain fome tincture of Pelagianifm. See Pelagians.

Caffian, who had been a deacon of Conftantinople, and was afterwards a prieft at Marfeilles, was the chief of thefe Semipelagians; whofe leading principles were, 1. That God did not difpenfe his grace to one more than another in confequence of predeftination, i. e. an eternal and abfolute decree, but was willing to fave all men, if they complied with the terms of his gofpel. 2. That Chrift died for all men. 3. That the grace purchafed by Chrift, and neceffary to falvation, was offered to all men. 4. That man, before he received grace, was capable of faith and holy defires. 5. That man was born free, and was confequently capable of refifting the influences of grace, or of complying with its fuggetion. The Semipelagians were very numerous; and the doctrine of Caffian, though varioufly explained, was received in the greatef part of the monaftic fchools in Gaul, from whence it fpread itfelf far and wide thro'
the European provinces. As to the Greeks and other Semi eaftern Chriftians, they had enbraced the Semipelagian doctrines before Caffian, and ftill adhere to them. In the 6th century, the controverfy between the Semipelagians and the difciples of Auguftin prevailed much, and continued to divide the weftern churches.

SEMIRAMIS (fab. hift.), a celebrated queen of Affyria, daughter of the goddefs Derceto, by a young Affyian. She was expoled in a defert ; but her life was preferved by doves for one whole year, till Simmas, one of the fhepherds of Ninus, found her and brought her up as his own child. Semiramis, when grown up, married Menones, the governor of Nineveh, and accompanied him to the fiege of Bactria; where, by her advice and prudent directions, fhe haftened the king's operations, and took the city. Thefe eminent fervices, together with her uncommon beauty, endeared her to Ninus. The monarch afked her of her hufband, and offered him his daughter Sofana in her ftead; but Menones, who tenderly loved Semiramis, refufed; and when Ninus had added threats to entreatief, he hanged himfelf. No fooner was Menones dead, than Semiramis, who was of an afpiring foul, married Ninus, by whom fhe had a fon called Winyas. Ninus was fo fond of Semiramis, that at her requeft he refigned the crown, and commanded her to be proclaimed queen and fole emprefs of Affyria. Of this, however, he had caufe to repent: Semiramis put him to death, the better to eftablifh herfelf on the throne; and when fhe had no enemies to fear at home, fhe began to repair the capital of her empire, and by her ineans Babylon became the molt fuperb and magnificent city in the world. She vifited every part of her dominions, and left every where immortal monuments of her greatnefs and benevolence. 'To render the roads paffable and communication eafy, the hollowed mountains and filled up valleys, and water was conveyed at a great expence by large and convenient aqueducts to barren deferts and unfruitful plains. She was not lefs diftinguifhed as a warrior: Many of the neighbouring nations were conquered; and when Semiramis was once told as fhe was dreffing her hair, that Babylon had revolted, fhe left her toilette with precipitation, and though only half dreffed, fhe refufed to have the reft of her head adorned before the fedition was quelled and tranquillity re eftablifhed. Semiramis has been accufed of licentioufnefs; and fome authors have obferved that fhe regularly called the ftrongeft and ftoutef men in her army to her arms, and afterwards put them to death, that they might not be living witneffes of her incontinence. Her paffion for her fon was alfo unnatural ; and it was this criminal propenfity which induced Ninyas to deftroy his mother with his own hands. Some fay that Semiramis was changed into a dove after death, and received immortal honours in Affyria. It is fuppofed that fhe lived about II centuries before the Chrittian era, and that fhe died in the 62d year of her age and the 25 th of her reign. Many fabulous reports have been propagated about Semiramis, and fome have declared that for fome time fle difguifed herfelf and paffed for her fon Ninyas. Lempriere's Bibliotheca Claffica.

SEMPERVIVUM, houseleek, in botany: A genus of plants belonging to the order of dodecagynia, and to the clafs of dodecandria; and in the natural method ranking under the 13 th order, Succulente. The calyx is divided into 12 parts; the petals are 12, and the capfutes

\section*{S E N [ 263 ] S E N}
pervi- 12 , containing many feeds. 'I'here are 12 fpecies; the arboreum, canarienfe, glutinofum, glandulofum, tectorum, globiferum, villofum, tortuofum, arachnoideum, montanum, fedeforme, and menanthes. Linnæus has only eight of thefe. The tectorum alone is a native of Britain. 'I'he ftalk is about a foot high; the radical leaves are thick, oval, pointed, fringed, and fpreading in a rofe; thofe on the ftem are imbricated and membranous : the flowers are pale red and feffile, and grow on curved terminal bunches. It is frequent on the tops of houfes, and flowers in July.

The following chemical defcription of this fpecies is given by Lewis: "'The leaves of houfe-leek, of no remarkable fmell, difcover to the tafte a mild fubacid aufterity: their expreffed juice, of a pale yellowifh hue when filtered, yields on infpiffation a deep yellow, tenacious, mucilaginous mafs, confiderably acidulous and acerb : from whence it may be prefumed, that this herb has fome claim to the refrigerant and reftringent virtues that have been afcribed to it. It is obfervable that the filtered juice, on the addition of an equal quantity of rectified fpirit of wine, forms a light white coagulum, like cream of fine pomatum, of a weak but penetrating tafte: this, freed from the fluid part, and expofed to the air, almoft totally exhales. From this experiment it is concluded by fome, that houfe-leek contains a volatile alkaline falt: but the juice coagulates in the fame manner with volatile alkalis themfelves, as alfo with fixed alkalis: Acids produce no coagulation."

SENAAR, or Sennaar. See Sennaar.
SENATE, in general, is an affembly or council of fenators; that is, of the principal inhabitants of a ftate, who have a fhare in the government.

The fenate of ancient Rome is of all others the moft celebrated. It exercifed no contentious jurifdiction; but appointed judges, either from among the fenators or knights, to determine proceffes : it alfo appointed go. vernors of provinces, and difpofed of the revenues of the commonwealth, \&c. Yet did not the whole fovereign power refide in the fenate, fince it could not elect magiftrates, make laws, or decide of war and peace; in all which cafes the fenate was obliged to confult the peoplè.

The fenate, when firft inftituted by Romulus, confifted of 100 members; to whom he afterwards added the fame number when the Sabines had miggrated to Rome. ' 'arquin the ancient made the fenate confift of 300 , and this number remained fixed for a long time; but afterwards it fluctuated greatly, and was increafed firft to 700 , and aiterwards to 900 by J. Cæfar, who filled the fenate with men of every rank and order. Under Auguftus the fenators amounted to 1000 , but this number was reduced, and fixed to 600 . The place of a fenator was always beftowed upon merit: the monarchs had the privilege of choofing the members; and after the expulfion of the Tarquins, it was one of the rights of the confuls, till the election of the cenfors, who from their office feemed moft capable of making choice of men whofe character was irreproachable, whofe morals were pure, and relations honourable. Only particular families were admitted into the fenate; and when the plebeians were permitted to fhare the honours of the ftate, it was then required that they hould be born of free citizens. It was alio required that the candidates fould be knights
before their admiffion into the fenate. They were to be above the age of 25 , and to have previounly paffed through the inferior offices of quæftor, tribune of the people, edile, pretor, and conful.

The fenate always. met of courfe on the ift of January, for the inauguration of the new confuls; and in all months, univerfally, there were three days, viz. the kalends, nones, and ides, on which it regularly met : but it always met on extraordinary occafions, when called together by conful, tribune, or dictator.

To render their decrees valid and authentic, a certain number of members was requifite, and fuch as were abfent without fome proper caufe were always. fined. In the reign of Augultus, \(4=0\) fenators were requifite to make a fenate. Nothing was tranfacted before fun-rife or after fun-fet. In their office the fenators were the guardians of religion, they difpofed of the provinces as they pleafed, they prorogued the af. femblies of the people, they appointed thankfivings, nominated their ambaffadors, diftributed the public mo. ney, and in fhort had the management of every thing political or civil in the republic, except the creating of magiftrates, the enaeting of laws, and the declarations. of war or peace, which were confined to the affemblies of the people.

SENANOR, in general, denotes a member of fome fenate.

The dignity of a Roman fenator could not be fupported without the poffeffion of 80,000 fefterces, or about 7000 1. Englifh money; and therefore fuch as fquandered away their money, and whofe`fortune was reduced below this fum, were generally ftruck out of the lift of fenators. This regulation was not made in the firt ages of the republic, when the Romans boafted of their poverty. The fenators were not permitted to be of any trade or profeffion. They were diftinguifhed from the reft of the people by their drefs; they wore the laticlave, half-boots of a black colour, with a cref. cent or filver buckle in the form of a \(C\); but this laft honour was confined only to the defcendants of thofe hundred fenators who had been elected by Romulus, as the letter \(C\) feems to imply. See the preceding article.

Among us, fenator is a member of parliament. In: the laws of king Edward the Confeffor, we are told that the Britons called thofe fenators whom the Saxons. called afterwards aldermen and borough-maflers; though not for their age, but their wifdom; for fome of them. were young men, but very well flkilled in the laws. Kenulph king of the Mercians granted a charter, which ran thus, viz. Confilio ot confenfu epifcoporum et fenato rum gentis fuce largitus fuit dicto monafterio, \&c.

In Scotland, the lords of feffion are called fenators, of the college of juftice.

SENATUS Auctoritas: See the next article.
Senazus.Confultum, which made part of the Row man law. When any public matter was introduced? into the fenate, which was always called referre ad fenatum, any fenator whofe opinion was afked, was permitted to fpeak upon it as long: as he pleafed, and on that account it was often ufual for the fenators to protract their fpeeches till it was tow late to determine. When the queftion was put, they paffed to the fide of that fpeaker whofe opinion they approved, and a majority of votes was eafly collected, without the trouble

\section*{S E N [ 264\(]\) S E N}
of counting the numbers. When the majority was known, the matter was determined, and a fenatus confultum was immediately written by the clerks of the houfe, at the feet of the chief magiftrates, and it was figned by all the principal members of the houfe. When there was not a fufficient number of members to make a fenate, the decifion was called fenatus auctoritas, but it was of no force if it did not afterwards pafs into a fenatus confultum.

The Jenatus confulta were at firft left in the cuftody of the kings, and afterward of the confuls, who could Supprefs or preferve them ; but about the year of Rome 304, they were always depofited in the temple of Ce res, and afterwards in the treafury, by the ediles of the people.

SENECA (Lucius Annzus), a Stoic philofopher, was born at Corduba in Spain, about the beginning of the Chriftian era, of an Equeft in family, which had probably been tranfplanted thither in a colony from Rome. He was the fecond fon of Marcus Annæus Seneca, commonly called the rbetorician, whofe - remains are printed under the title of Suaforia \(\mathcal{E}^{\circ}\) Controverfia, cum Declamationum Excerptis; and his youngeft brother Annæus Mela (for there were three of them) had the honour of being father to the poet Lucan. He was removed to Rome, together with his father and the reft of his family, while he was yet in his infancy. There he was educated in the moft liberal manner, and under the beft mafters. He learned eloquence from his father; but his genius rather leading him to philofophy, he put himfelf under the foics Attalus, Sotion, and Papirius Fabianus; men famous in their way, and of whom he has made honourable mention in his writings. It is probable, too, that he travelled when he was young, fince we find him, in feveral parts of his works, particularly in his فेuefiones Naturales, making very exzet and curious oblervations upon Egypt and the Nile. But this, though entirely agreeable to his own humour, did not at all correfpond with that fcheme or plan of life which his father had drawn out for him ; who therefore forced him to the bar, and put him upon foliciting for public employments ; fo that he afterwards becamc qureftor, pretor, and, as Lipfius will have it, even conful.

In the firlt year of the reign of Claudius, when Julia the daughter of Germanicus was accufed of adultery by Meffalina, and banifhed, Seneca was banifhed too, being charged as one of the adulterers. Corfica was the feat of his exile, where he lived eight years ; * happy in the midft of thofe things which ufually make other people miferable; inter eas res beatus, qua folent miferos facere :" and where he wrote his books of confolation, addreffed to his mother Helvia, and to his friend Polybius, and perhaps fome of thofe tragedies which go under his name; for he fays, modo fe levioribus fudtis ibi oblectaffe. Agrippina being married to Claudius, upon the death of Meffalina, the prevailed with the emperor to recal Seneca from banifhment; and afterwards procured him to be tutor to her fon Nero, whom the defigned for the empire. Africanus Burrhus, a prætorian præfeet, was joined with him in this important charge : and thefe two preceptors, who were entrufted with equal authority, had each his refpective department. By the bounty and generofity of his royal pupil, Seneca ac-
quired that prodigious wealth which rendered him in a manner equal to kings. His houfes and walks were the moft magnificent in Rome. His villas were innus merable: and he had immenfe fums of money placed out at intereft in almoft every part of the world. The hiftorian Dio reports him to have had 250,:c0 l. Sterling at intereft in Britain alone; and reckons his calling it in all at a fum, as one of the caufes of a war wich that nation.

All this wealth, however, together with the luxury and effeminacy of a court, does not appear to liave had any ill effect npon the temper and difpofition of Seneca. He continued abfemious, exact in his manners, and, above all, free from the vices fo commonly preva. lent in fuch places, flattery and ambition. "I had ra. ther (faid he to Nero) offend you by fpeaking the truth, than pleafe you by lying and flattery : maluerim veris offendere, quam placere adulando." How well he acquitted himfelf in quality of preceptor to his prince, may be known from the five firft years of Nero's reign, which have always been confidered as a perfect pattern of good goverument; and if that emperor had but been as obfervant of his mafter through the whole courfe of it, as he was at the beginning, he would have been the delight, and not, as he afterwards proved, the curfe and deteftation of mankind. But when Poppra and Tigellinus had got the command of his humour, and hurried him into the moft extravagant and abominable vices, he foon grew weary of his mafter, whofe life mult indeed have been a conftant rebuke to him. Seneca, perceiving that his favour declined at court, and that he had many accufers about the prince, who were perpetually whifpering in his ear the great riches of Seneca, his magnificent houfes and fine gardens, and what a favourite through means of thefe he was grown with the people, made an offer of them all to Nero. Nero refufed to accept them: which, however, did not hinder Seneca from changing his way of life; for, as Tacitus relater, he " \(\mathrm{k} \in \mathrm{pt}\) no more levees, declined the ufual civilities which had been paid to him, and, under a pretence of indifpofition, or fome engagement or other, avoided as much as poffible appearing in public."

Nero, in the mean time, who, as it is fuppofed, had difatched Burrhus by poifon, could not be eafy till he had rid hinfelf of Seneca alfo: For Burihus was the manager of his military concerns, and Seneca conducted his civil affairs. Accordingly, he attempted, by means of Cleonicus, a freedman of Seneca, to take him off by poifon; but this not fucceeding, he ordered him to be put to death, upon an information that he was privy to Pifo's confpiracy againft his perfon. Not that he had any real proof of Seneca's being at all concerned in this plot, but only that he was glad to lay hold of any pretence for deftroying him. He left Seneca, however, at liberty to choofe his manner of dying ; who caufed his veins to be opened immediately. His wife Paulina, who was very young in comparifon of himfelf, had yet the refolution and affection to bear him company, and thereupon ordered her veins to be opened at the lame time; but as Nero was not willing to make his cruelty more odious and infupportable than there feemed occafion for, he gave orders to have her death prevented: upon which her wounds were bound up, and the blood flopped, in jult time enough to fave her ; tho', as 'Tacitus fays, the looked fo mifer-

\section*{S E N}
ably pale and wan all her life after, that it was eafy to read the lofs of her blood and fpirits in her countenance. In the mean time, Seneca, finding his death now and lingering, defired Statius Annæus his phyfician to give him a dole of poilon, which had been prepared fome time before in cafe it fhould be wanted; but this not having its ufual effect, he was carried to a hot bath, where he was at length ftifled with the feams. He died, as Lipfius conjectures, in the 6id or 64th year of his age, and in about the ioth or inth of Ne ro's reign. 'Tacitus, on mentioning his death, oblerves, that, as he entered the bath, he took of the water, and witll it fprinkled fome of his neareft domeftics, faying "That lie offered thofe libations to Jupiter the Deliverer." Thefe words are an evident proof that Seneca was not a Chriftian, as fome have imagined him to have been; and that the 13 epifles from Seneca to St Paul, and from St Paul to Seneca, are fuppofititious pieces. His philofophical works are well known. They confift of 124 epifles and diftinct treatifes; and, except his books of phyfical queftions, are chiefly of the moral kind, treating of anger, confolation, providence, tranquillity of mind, conftancy, clemency, the fhortnefs of life, a happy life, recirement, benefits. He has been juftly cenfured by Quintilian and other critics, as one of the firft corrupters of the Roman ftyle ; but his works are highly valuable, on account of the vaft erudition which they difcover, and the beautiful moral fentiments which they contain.

SENECIO, Groundsel, in botany: A genus belonging to the clafs of fyngenefia, and to the order of polygamia fuperflua; and in the natural claffification ranked under the 49th order, Compofite. The receptacle is naked; the pappus fimple; the calyx cylindrical and calyculated. The fcales are equal and contiguous, fo as to feem entire; thofe at the bafe are few, and have their apices or points decayed. There are 57 fpecies. Of thefe, feven are Britifh, the vulgaris, vifcofus, fylvaticus, erucifolius, jacobrea, paludofus, and faracenicus.
1. The vulgaris, or common groundfel, has its corollæ naked, its leaves feffile, fmooth, and finuated, their fegments fhort, broad, and minutely ferrated; the flowers are yellow, and without radii. This weed grows in cultivated ground everywhere, and flowers in May. Its leaves have been ufed in medicine externally as a vulnerary and refrigerant, and internally as a mild emetic ; but they have little or no efficacy. 2. The vifcofus, or cotton groundfel, has its corollæ revolute, its leav ves pinnatifid, vifcid, and downy. The fcales of the calyx are lax and hairy, and are of the fame length with the perianthium. 3. The Jylvaticus, or mountain groundfel, has its corollæ revolute, its leaves pinnatifid and dentated, the flem comrybous and erect. It flowers in July, and is frequent in woods and heaths. 4. The erucifolius, hoary perennial ragwort ; the corollæ are radiaut ; the leaves are pinnatifid, dentated, and downy beneath ; the ftem is ercet, and two feet high ; the flowers are yellow, and grow in clufters. This plant is frequent in woods and hedges. 5. The jacobaa, common ragwort ; the corollæ are radiant ; the leaves pinnated and lyre-haped, and of a dark-green colour; the ftalk 3. erect, round, and generally purplifh ; the flowers grow in clufters on the tops of the ftalks. The leaves have a bitterifh fubacrid tafte, and extremely naufeous. SiVox. XVII. Part I.
mon Paulli fays, that a decoction of them cured many Senegal. foldiers of an epidemic dyfentery. 6. The paludofus, marfh ragwort ; the corollx are radiant; the leaves fword-fhaped, acutely ferrated, and fomewhat downy underneath; the ftem is erect, branched towards the top, and four or five feet high ; the flowers are large and yellow. This plant is frequent in fens and ditches in England. 7. The faracenicus, broad-leaved ragwort; the corollæ are radiant; the leaves are lanceolated, ferrated, and fomewhat fmooth; the ftem is crect, fimple, and four or five feet high ; there are feveral flowers on each footftalk, which are yellow, and grow in clufters on the top. The plant grows in moitt paftures in Ensland ; and flowers in July or Auguft.

SENEGAL, a part of Negroland in Africa, the boundaries of which are not known. See Guinea.

IJle of SENEGAL, fometimes called Saint Louis, is a fmall ifland in the mouth of the river Senegal, and according to Mafkelyne's tables is fituated in N. Lat. 15.53. W. Long. 16. 31. The Dutch were the firf Euro peans who fettled at Senegal; but their colony was expelled by the French in 1687 . It was taken by the Englifh in 1692 ; and retaken by the French the year following. It was a fecond time taken poffeffion of by the Englifh in 1758 ; but in 17 :9 the French recovered it, and it was ceded by the Britifh crown by the treaty of 1783.

The beft account of this ifland which we have feen, is given in the interefting voyage of M. Saugnier to the coaft of Africa. This adventurer vifited Senegal in June 1785
" The ifland (fays he), properly fpeaking, is only a bank of fand in the middle of the river. It is 1000 geometrical paces long, and about 60 in its greateft width ; is almolt on a level with the river and with the fea, being defended from the latter by Barbary point, which is of greater elevation than the colony. The eatern branch of the river is the more confiderable of the two, being about 400 toifes acrofs; the weftern branch is only from 50 to 200 toifes wide. The ifle confifts entirely of burning fands, on the barren furface of which you fometimes meet with fcattered fints, thrown out among their ballaft by veffels coming from Goree, or with the ruins of buildings formerly erected by Europeans. There is fcarcely fuch a thing as a garden upon the ifland; European feeds in general not thriving here. It is not furprifing that the foil is fo unproductive; for the air is ftrongly impregnated with fea falt, which pervades every thing, and confumes even iron in a very fhort fpace of time. The heats are exceffive, and rendered ftill more infupportable by the reflection of the fand; fo that from ten in the morning until four in the afternoon it is almoft impoffible to do any work. During the months of January, February, March, and April, the heats are moderated; but in Auguft and the following months they become fo oppreffive as even to affect the natives themfelves. What effect then mult they have upon the Eurupeans, fuddenly tranfported into this burning climate? The nights are a little lefs fultry; not always, however, but only when the fea-breeze fets in. It is then that the inhabitants of the colony breathe a frefher air, for which they have been longing the whole of the day ; but this air in our climate would feem aburning vapour. The nights are neverthelefs troublefome, notwithftanding the comforts of the

\section*{S E N [ 266 \} S E N}

Sengal. Sea-breeze. The inftant the fun is fet, we are affailed by an infinity of gnats, which are called mufquitos; their ftings are very painful, and their multitudes incredible. The inhabitants find but a poor cefence in their gauze, curtains. For :ny own part, accuftomed as I had been to live amoing the Moors, I was but little annoyed by thefe infects. Being half a favage, I felt no defire to recommend myfelf to the favourable regard of the fair fex, and I was therefore under no neceffity of taking care of my perfon. In imitation of my former mafters, I fmeared niyfelf with butter, and this expedient preferved me at all times from thefe impertinent ftingers, thefe fiteful enemies to the repofe of the human kind.
"If the profpect of Senegal is not agreeable to the eye, much lefs are its environs, which are covered over only with fand, and over-run with mangles. It may be faid, withont exargeration, that there is not a more forlorn fituation to be found on the face of the inlabited qrlobe, or a place in which the common neceffaries of life are procured with greater difficuities. Water, that indifpenlable aliment of man, is here not potable. Wells are dug int the fand to the depth of five or fix feet, and water is ohtained by thefe means ; but whatever pains are taken to freffen it, it ever retains a brackifh tafte. I have diflilled this water myfelf, and oblerved that it always had a difagrecable favour, which cannot fail to be hurtful to the health: it is true, that when the river is high, its ftreams arc frefh, but the water is only the more dangerous. It proves the caufe of moit of thofe maladies which carry off the Europeans fo rapidly, that at the cud of every three years the colony has a frefl fer of inhabitants. Thic blacks themfelves, although accnfomed to the climate, are not in this feafon free from difeafe."

The fort of St Louis is a quadrangle, and has two baftions of confiderable ftrength; but the greateft fecurity of the fort is its natural fituation. The cannon of the fort are numerous, and the arfenal well fupplied with fmall arms and ftores. Befides this fort the French had no other upon the river, except Fort St Jofeph, which ftands about four leargues below the cataract at Govina, though they had a few factorics in different parts.
The principal commodity of this country is that of gum Senagal (fee Gum-Senegal), which is a valuable branch of commerce, as it is ufed in many arts and manufactures, particularly by the painters in water-colours, the filk weavers, and dyers.

The French import from the river Senegal not only gum-arabic, but elephants teeth, hides, bets-wax, goldduft, cotton, oftrich feathers, ambergris, indigo, and civet.

Notwithfanding the barrennefs of the fpot, Senegal contains more than 6000 negroes, including the captives of the Tapades, or negroes born of the black ir1habitants of the country. They are never put up to fell, unlefs convicted of fome crine. Their huts, conftructed in the form of bee-lives, and fupported upon four ftakes, furround the habitations of the negro inhabitants. The entire height of thofe huts may rife to about 12 feet, the width in every direction is commonly from 10 to 12 . The beds are compofed of hurdles laid upon crols-bars, fupported by forked ftakes at the height of about a foot lrom the ground. Here the flaves
fleep promilcuouny, men, woincn, giuls, and boys: A set fire is made in the middle of the hut, which is filled with fmoke, fufficient to ftifle any man but a negro.

The inen a:e tall, and the women are accounted the handfomet negreffes of all Arrica. The Senegaliais may be confidered as the moft courayeous people of that part of the world, without even excepting the Moors. Their courage, however, is more nearly allied to temerity than to bravery. In the courfe of the voyage to Galam, they meet the greateft dansers with gaiety and fong ; they dread neither mulket nor cannon, and are equally fearlefs of the cayman or crocodile. Should one of their companions be killed, and devoured by thefe animals before their face, they are not deterred from plunging into the water, if the working of the thip require it. Thefe excellent qualifications which diftinguifh them, and on which they value themfelves fo much, do not, however, preferve them from the common contagion of the country, which inclines them alk to rapine. 'They are emulous to furpafs one another in all the arts of over-reaching and fraud. The conduct of the Europeans has, no doubt, encouraged thefe vices as much as the leffons of the marabous, who in. culcate the duty of plundering the Chriftians to the ut moft of their power.

The Yolof negroes of Senegal are either Chriftians or Mahometans, or rather one and the other, or with more truth neither; religrion being a matter of indifference to them. Thofe on the continent are of the fame way of thinking, and their religious practices are kept up ouly for the fake of form. A bar of iron, a few beads, will make them change their opinion at will. By fuch means are they acted upon; a fufficient proof of their want of all religious principle. The marabous, or priefts, and the men of their law, are no better than the reft. "I have examined the character of feveral of this order of men (fays M. Saugnier), and even among. the nation of the Poules, who are confidered as great fanatics, I difcovered that they were only publicly attached to their opinions. 'This white man (fay they) does fo; he is better in ormed than I, and why fhould not I imitate his example ?" This way of reafoning is common to all that tract of country.

The colony of Senegal is furrounded with iflands, which, on account of the proximity of the fea, are all more unhealthy than that on which the town is built. They are full of fanding pools, that, when dried up by the fun, exhale a putrid vapour that carries mortality with it, and defolates thefe iflands. It is doubtlefs the fame caufe that takes off fo many of the French at Senegal during the dangerous feafon of the year. This alfo may be in part occafioned by the bad quality of the water, which flows from the ponds in the neighbourhood of the colony, and though incorporated with that of the river, comes down little agitated by the current, and is eafily diftinguifhed by a vapidnefs of tafte. 'This particular is, in my opinion, effentially worthy of notice, and if properly attended to by our medical men, might become the means of preferving many lives.

S'enfgal-River, fee Niger. As fo little is known refpecting this river, which is one of the greateft in A. frica, any additional information muft be interefting. We fhall therefore prefent our readers with the account contained in the communications prefented to the Affocia-

\section*{S E N [ 267}

SENESCHAL, (Senefchallus), derived from the Sericfliat German fein "a houfe or place," and fcale " an officer," is a fteward, and fignifies one who has the difpenling of juftice in fome particular cafes: As the high fenefchal or fteward of England ; Penefichal de la totel de roi, "fleward of the king's houfehold, fenefchal, or fteward of courts, Scc." Co. Lit. 6r. Croke's f̌urifd. 102. Kitch. 83. See Stevard.

SENNA, the leaf of the caffia fenna of Linnæus. See Cassia:

Senna appears to have been cultivated in England in the time of Parkinfon ( \(1 G_{4}\) ) ; and Miller tells us, that Woodville's by keeping thefe plants in a hot-bed all the fummer, Medical Bea he frequently had them in flower; but adds, it is very \({ }^{\text {t.ny }}\). rarely that they perfect their feeds in England. There can be little doubt, however, but that fome of the Britill poffefions may be found well enough adapted to the growth of this vegetable, and that the patriotic views of the Society for encouraging Arts, \&c. which has offered a reward to thofe who fucceed in the attempt, will be ultimately accomplifhed.

Senna, which is in common ufe as a purgative, was firf known to the Arabian phyficians Serapion and Mefue: the firit among the Greeks who takes any notice of it is Actuarins, but he only fpeaks of the fruit, and not of the leaves. To remove the difagreeable tafte of this medicine, Dr Cullen recommends coriander feeds; and, for preventing the gripings with which it is fometimes attended, he thinks the warmer aromatics, as cardamoms or ginger, would be more effectual.
'I'he Senna Italica, or blunt-leaved fenna, is a variety of the Alexandrian fpecies; which, by its cultivation in the fouth of France (Provence), has been found to affume this change. It is lefs purgative than the pointedleaved femm, and is therefore to be given in larger dofes. It was employed as a cathartic by Dr Wright at Lond. Med. Jamaica, where it grows on the fand barks near the fea. Four.

SENNAAR, a country of Africa, bordering upon vol. s. Abyffinia, with the title of a kingdom ; the prefent government of which was eftablifhed in the 16 th century by a race of negroes named, in their own language, Shillook. This country, together with all the northern parts of Africa, had been over-run by the Saracens during the rapid conquefts of the khalifs; but inftead of erecting any ditinct principalities here, as in other parts, they had incorporated themfelves with the old inhabitants called Shepherds, whom they found at their arrival; had converted them to their religion, and become one people with them. In 1504 the Slillook, a people before unknown, came from the weltern banks of the river Bahiar el Abiad, which empties itfelf into the Nile, and conqnered the country ; allowing the Arabs; however, to retain their poffeffions on condition of paying them a certain tribute. Thefe founded the city of Sennaar, and have ever fince continued to carry on an intercourfe with Egypt in the way of merchandife. At the eftablifhment of their monarchy the whole nation were Pagans, but foon after became converts to Mohammedanifm, and took the name of Funge, an appellation figuifying " lords or conquerors," and likeL 12 wife
(A) The map alluded to is that which accompanies the volume which contains the proceedings of the Affociations. This work was printed in 1791.

8cnnazr.

Bruce's
Traveis,
vol. 4.
wife free citizens. Mr Bruce, who paffed through this country in his return from Abyffinia, gives a lift of 20 kings who have reigned in it fince the conqueft of the Shill ook.
'This country is inhabited by a people fo barbarous and brutih, that no hiftory of them can be expected. One of the moft remarkable of their cuftoms is, that the king afcends the throne with the expectation of beins murdered whenever the general council of the nation thinks proper. 'The dreadful office of executioner belongs to one fingle officer, ftyled, in the language of the country, Siii el Coom ; and who is always a relation of the monarch himfelf. It was from his regifters that Mr Bruce took the lift of the kings already mentioned, with the number of years they reigned, and which may therefore be received as authentic. 'The Sid el Coom in office at the time that Mr Bruce vifited this country was named Achmet, and was one of his beft friends. He had murdered the late king, with three of his fons, one of whom was an infant at its mother's brealt; he was alfo in daily expectation of performing the fame office to the reigning fovereign. He was by no means referved concerning the nature of his office, but anfwered freely every queftion that was put to him. When afked by Mr Buce why he murdered the king's young fon in his father's prefence? he anfwered, that he did it from a principle of duty to the king himfelf, who had a ri ht to fee his fon killed in a lawful and regular manner, which was by cutting his throat with a fword, and not in a more painful or ignominious way, which the malice of his enemies might poffibly have in. flicted.

The king, he faid, was very little concerned at the fight of his fon's death, but he was fo very unwilling to die himflef, that he often preffed the executioner to let him efcape; but finding his intreaties ineffectual, he fubmitted at laft without reliftance. On being afked, whether he was not afraid of coming into the prefence of the king, confidering the office he might poffibly have to perform? he replied, that he was not in the leaft afraid on this account; that it was his duty to be with the king every morning, and very late in the evening; that the king knew he would have no hand in promoting his death; but that, when the matter was abfolutely determined, the reft was only an affair of decency; and it would undonbtedly be his own choice, rather to fall by the hand of his own relation in private than by a hired affaffin, an Arab, or a Chriflian flave, in the fight of the populace. Baady the king's father, having the misfortune to be taken prifoner, was fent to Atbara to Welled Haffan the governor of that province to be put to death there. But the king, who was a ftrong man, and always armed, kept fo much upon his guard, that Welled could find no opportunity of killing him but by running him through the back with a lance as he was warhing his hands. Fo: this Welled himfelf was afterwards put to death; not on account of the murder itfelf, but becaufe, in the firft place, he, who was not the proper executioner, had prefumed to put the king to death; and, in the next, becaufe he had done it with a lance, whereas the only lawful initrument was a fword.

On the death of any of the fovereigns of this country, his eldelt fon fucceeds to the throne of courfe; on which as many of his brothers as can be found are ap-
prehended, and put to death by the Sid el Cooma in the manner already related. Women are excluded from the fovereignty here as well as in Abyffinia. The princeffes of Senuaar, however, are worfe off than thofe of Abyffinia, having no fettled income, nor being treated in any degree better than the daugh. ters of private perfons. The king is obliged, once in his lifttime, to plough and fow a piece of ground; whence he is named Baady, the "countryman or peafant ;" a title as common among the monarchs of sennaar as Cæfar was amoug the Romans. The royal family were originally negroes; but as the kings frequently marry Arab women, the white colour of the mother is communicated to the child. 'This, we are told by Mr Bruce, is invariably the cafe when a negro man of Sennaar marries an Arab woman; and it holds equally good when an Arab man marries a negro woman; and he likewife informs us, that he never faw one black \(A\). rab all the time he was at Sennaar.

The foil and climate of this country is extremely un. favourable both to man and beaft. 'I'he men are frong and remarkable for their lize, but fhort-lived; and there is fuch a mortality among the children, that were it not for a conftant importation of flaves, the metropolis would be depopulated. The fhortnefs of their lives, howevcr, may perhaps be accounted for, from their indulging themfelves from their infancy in every kind of excefs. No horfe, mule, nor afs, will live at Sennaar or for many miles round it. The cafe is the fame with bullocks, fheep, dogs, cats, and poultry ; all of them mult go to the fards every half-year. It is difficult to account for this mortality; though Mr Bruce affures us it is the cafe everywhere about the metropolis of this country, where the foil is a fat earth during the firlt feafon of the rains. Two greyhounds which he brought along with him from Atbara, and the mules he brought from A byffinia, lived only a few weeks after their arrival at Sennaar. Several of the kings of Sennaar have tried to keep lions, but it was always found impoffible to preferve them alive after the rains. They will live, however, as well as other quadrupeds, in the fands, at 110 great diftance from the capital. - No fpecies of tree except the lemon flowers near this city; the cultivation of the rofe has often been attempted, but always without fuccefs. In other refpects, however, the foil of Sennaar is exceedingly fertile, being faid to yield 300 fold; but this is thought by Mr Bruce to be a great exaggeration. It is all fown with dora or millet, which is the principal food of the people; wheat and rice are alfo produced here, which are fold by the pound, even in years of plenty. The foil all round is frongly im. preguated with falt, fo that a fufficient quantity to Cerve the inhabitants is extracted from it.

Sennaar, a city of Africa, the capital of the king. dom of that name. It ftands, according to Mr Bruce's oblervations, in N. Lat. \(3^{\prime} 34^{\prime} 36^{\prime \prime}\) E. Long. \(33^{\circ}\) \(30^{\prime} 30^{\prime \prime}\) on the weftern fide of the Nile, and clofe upon the banks of it ; the ground on which it flands being jult high enough to prevent the inundation. The town is very populous, and contains a great many houfes. In Poncet's time they were all of one ftory ; but now moft of the officers have houfes of two ftories high. They are built of clay mixed with a very little ftraw, and have all flat roofs; which fhows that the rains here mule

\section*{S E N [ 260 ] S E N}
muft be much lefs in quantity than to the fouthward. this very extenfive plain winds the Nile, a delightful Seanaar During the time of Mr Bruce's refidence here, however, there was one week of continual rain, and the Nile, after loud thunder and great darknefs to the forth, increafed violently; the whole itream being covered with the wrecks of houfes and their furniture; fo that he fuppofed it had deftroyed many villages to the fouthward. About 12 miles to the north-weit of Sennaar is a collection of villarges named Shaddly, from a great faint of that name, who conftructed feveral granaries here. 'Ihele are no ocher than large pits dug in the ground, and well plaftered in the infide with clay, then filled with grain when it is at its loweft price, and afterwards covered up and plattered again at top: thefe pits they call \(m\) ztamores. On any profpect of dearth they are opened, and the corn fold to the people. - About 24 miles north of Shaddly there is another fet of granaries named Wed.Aboud, ftill greater than Shaddly; and upon thefe two the fubfiltence of the Arabs principally deyends: for as thefe people are at continual war with cach other, and direct their fury rather againft the crops than the perfons of their enemies, the whole of thein would be unavoidably farved, were it not for this extraordinary refource. Small villages of foldiers are fcattered up and down this country to guard the grain atter it is fown, which is only that fpecies of millet named Dora; the foil, it is faid, being incapable of producing auy other. There are great hollows made in the earth at proper diftances throughout the country, which fill with water in the rainy feafon, and are afterwards of great ufe to the Arabs as they pafs from the cultivated parts to the fands. The fly, which is fuch a dreadful enemy to the cattle, is never feen to the northward of Shaddly.

To the weflward of thefe granarics the country is quite full of trees as far as the river Abiad, or El-aice. In this extenfive plain there arife two ridges of mountains, one called yibbel Moira, or the Mountain of zvater; the other Fibbel Segud, or the Cold Mountain. Both of them enjoy a fine climate, and ferve for a protection to the farms about Shaddly and Aboud already mentioned. Here alfo are fortreffes placed in the way of the A rabs, which ferve to oblige them to pay tribute in their flight from the cultivated country, during the aiains, to the dry lands of Atbara. Each of thefe difricts is governed by the defcendant of their ancient and native princes, who long refifted all the power of the Arabs. Sacrifices of a horrid nature are faid to have been offered up on thefe mountains till about the year 1554, when one of the kings of Sennaar bcfieged firt one and then the other of the princes in their mountains; and having forced them to furrender, he faftened a chain of gold to each of their ears, expofed them in the market-place at Sennaar, and fold them for flaves at lefs than a farthing each. Soon after this they were circumcifed, converted to the Mahometan religion, and reftored to their kingdoms.
" Nothing (fays Mr Bruce) is more pleafant than the country around Sennaar in the end of Auguft and beginning of September. The grain, being now fprung up, makes the whole of this iminenfe plain appear a level green land, interfperfed with great lakes of water, and ornamented at certain intervals with groups of villages; the conical tops of the houles prefenting at a diftance the appearance of fmall encampments. Through
river there, above a mile broad, full to the very brim, but never averflowing. Everywhere on thefe banks are feen herds of the mot beautiful cattle of various kinds. 'I'he banks of the Nile about Sennaar refemble the plealanteft part of Holland in the fummer feafon; but foon after, when the rains ceafe, and the fun exerts its utmoft influence, the dora begins to ripen, the leaves to turn yell wow to rot, the lakes to putrefy, finell, become full of vermin, and all its beauty fuddenly difappears: bare fcorched Nubia returns, and all its terrors of poifonous winds and moving fands, glowing and ventilated with fultry blats, which are followed by a troop of terrible attendants; cpilepfies, apoplexies, violent fevers, obftinate agues, and lingering painful dyfenteries, ftill more obttinate and mortal.
"War and treafon feem to be the only employment, of this horrid people, whom Heaven has feparated by almoft impaffable delerts from the reft of mankind; confining them to an accurfed fpot, feeminsly to give them an earncf in time of the only other courfe which he has referved to them for an eternal hereafter."

With regard to the climate of the country round Sennaar, Mr Bruce has feveral very curious obfervations. The thermometer rifes in the fhade to 1.19 degrees; but the degree indicated by this inftrument does net at all correfpond with the fenfations occafioned by it; nor with the colour of the people who live under it. " Nations of blacks (fays he) live within latitude 13 and 14 degrecs; about 10 degrees fouth of them, nearly. under the line, all the people are white, as we had an. opportunity of obferving daily in the Galla Sennaar, which is in latitude 13 degrees, is hotter by the thermometer 50 degrees, when the fun is moft diltant from. it, than Gondar, which is a degree farther fouth, when the fun is vertical. - Cold and hot (fays our author) are terms merely relative, not determined by the latitude, but elevation of the place. When, therefore, we fay bot, fome other explanation is neceffary concerning the place where we are, in order to give an adequate idea of the fenfations of that heat upon the body, and the effects of it upon the lungs. The degree of the thermometer conveys this but very imperfectly; 90 degrees is exceffively høt at Loheia in Arabia Felix; and yet the latitude of Loheia is but 55 degrees; whereas 90 degrees at Sennaar is only warm as to fenfe; though. Sennaar, as we have already faid, is in latitude 13 degrees.
"At Sennaar, then, I call it cold, when one fully clothed and at reft fecls himfelf in want of fire. I call it cool, when one fully clothed and at reft feels he could bear more covering all over, or in part, than he has at that time. I call it temperate, when a man fo clothed, and at reft, feels no fuch want, and can take moderate exercife, fuch as walkin: \(y\) about a room without fweating. I call it zuarm, when a man, fo clothed, does not fweat when at reft; but, upon taking moderate exercife, fweats, and again cools. I call it hot, when a man at reft, or with moderate excrcife, fweat exceffively. I call it very bot, when a man with thin, or little clothing, fweats much, though at reft. I call it exceffive hot, when a man, in his fhit and at reft, fweats exceffively, when all motion is painful, and the knees feel feeble, as if after a fever. I call it extreme bot, when the ftength fails, a difpofition to faint comes on, a flraitnefs is found

\section*{S E N}

Semnasr. in the temples, as if a fnall cord was drawn tight about the head, the voice impaired, the fkin dry, and the head feens more than ordinarily large and light. This, I appreliend, denotes death at hand; but this is rarely or never effected by the fun alone, without the addition of that poifonous wind which purfued us through Atbara, where it has, no doubt, contribured to the total extinetion of every thing that hath the breath of life. A thernometer, graduated upon this fcale, wonld exhibit a figure very different from the common one; for I ain convinced by experiment, that a web of the finett muflin, wrapt round the body at Sennaar, will occafion at middday a greater fenfation of heat in the body, than a rife of 5 degrees in the thermometer of Fahrenheit.
"At Sennaar, from 70 to 78 degrees of Fahrenheit's thermometer is cool ; fiom 79 to \(9^{2}\) temperate ; at 92 degrees begins warmth. Although the degree of the thermometer marks a greater heat than is felt by the body of us frangers, it feems to me thiat the fenfations of the natives bear ftill a lefs proportion to that degree than ours. On the 2d of Auguit, while I was lying perfectly encrvated on a carpet in a room deluged with water at 12 o'clock, the thermometer at 116, I faw feveral black labourers pulling down a houfe, working with great vigour, without any fymptoms of being incommoded."

The drefs of the petple of Sennaar confifts only of a long fhirt of blue cloth, which wraps, them up from the under sart of the neck to the feet. It does not, however, conceal the neck in the men, though it does in the women. The men fometimes have a fafh ticd about their middle; and beth men and women go barefooted in the houfes, whatever their rank may bc. The floors of their apartments, efpecially thofe of the women, are covered with Perlian carpets. Both men and woraen anoint themjelycs, at lealt once a-day, with camel's greafe mixed with civet, which, they imagine, fortens their fins, and preferves them from cutaneous eruptions; of which they are fo fearful, that they confine themfelves to the houfe if they obferve the frialleft pimple on their ikins. With the fame view of preferving their fkins, though they lave a clean fhirt every day, they fleep with a greafed one at night, having no other covering but this. Their bed is a tanned bull's hide, which this conftant greafing foftens very much ; it is alfo very cool, though it gives a fmell to their bodies from which they cannot be freed by any wafhing.

Our author gives a very curious defcription of the queens and ladies of the court at Sennaar. He had accefs to them as a phyfician, and was permitted to pay his vift alone. He was firlt fhown into a large fquare apartment, where there were about 50 black women, all quite naked excepting a very narrow piece of cotton rag about their waifts. As he was muling whether thefe were all queens, one of them took him by the hand, and led him into another apartment much better lighted than the former. Here he faw three women fitting upon a bench or fofa covered with blue Surat cloth; they themfelves being clothed from the neck to the feet with cotton fhirts of the fame colour. Thefe were three of the king's wives ; his favourite, who was one of the number, appeared to be about fix feet high, and fo corpulent that our traveller imagined her to be the largeft creature he had feen next to the elephant
and rhinoceros. Her features perfectly refembled thofe of a negro: a ring of gold paffed through her under lip, and weighed it down, till, like a flap, it covered her chin, leaving her teeth bare, which were finall and very fine. The infidc of her lip was made black with antimony. Her ears reached down to her floulders, and had the appearance of wings : there was a gold ring in each of them about five inches in diameter, and toracwhat fmailer than a man's little finger; the weight of which had drawn down the hole where her ear was pierced fo much that three fingers might eafily pafs above the ring. She had a gold necklace like that called Efclavage, of feveral rows, one telow another; to which wese hung rows of fequins pierced. She had two manacles of gold upon her ancles larger than thofe uied for chaining felons. Our author could-not imagine how it was pofiible for her to walk with them, till he was informed that they werc hollow. The others were dreffed much in the fame manncr ; only there was one who had chains coming from her ears to the outfide of each notril, where they were faftened. A ring was alfo put through the gritle of her nofe, and which hung down to the opening of her mouth; having all together fomething of the appearance of a horfe's bridle; and Mr Bruce thinks that fhe mult have breathed with difficulty.
The poorer fort of the people of Sennar live upon the flour or bread of millet; the rich make puddings of this, toalting the flour before the fire, and putting milk and butter into it ; befides which they ufe beef partly roafted and partly raw. They have very fine and fat horned cattle, but the meat commonly fold in the market is camel's flefh. The liver and fpare rib of this animal are always eaten raw ; nor did our author fee one inftance to the contrary all the time he was in the country. Hog's flefh is not fold in the market; bet all the common people of Senuaar eat it openly ; thofe in office, who pretend to be Mahometans, doing the fame in fecret.

There are no manufactures in this country, and the principal article of trade is blue Surat cloth. In former times, when caravans could pars with fafety, Indian goods were brought in quantities from Jidda to Sen naar, and then difiperfed over the country of the blacks. The returns wele made in gold, a powder called Tibbar, civet, rhinocerofes horns, ivory, oftrich feathers, and above all ftaves or glafs, more of thefe being exported from Sennaar than from all the Eaft of Atrica. This trade, however, as well as that of the gold and ivory, is almoft deftroyed; though the gold is ftill reputed to be the bctt and pureft in Africa, and is therefore bonght at Mocha to be carried to India, where it all centres at laft.

SENNERTUS (Daniel), an eminent phyfician, was born in 1572 at Breflaw; and in 1593 he was fent to Wittemberg, where he made great progrefs in philofophy and phyfic. He vifited the univerfities of Leipfic, Jena, Prancfort upon the Oder, and Berlin ; but foon returned to Wittemberg, where he was promoted to the degree of doctor of phyfic, and foon after to a profefforfhip in the fame faculty. He was the firft who introduced the ftudy of chemiftry into that univerfity ; he gained a great reputaxion by his works and practice, and was very generous to the poor. He died of the plague at Wittenberg, in 1637. He raifed himfelf

\section*{S E N \\ \([271]\) \\ S E N}
may appear frange at firf view: fome of our moralits themfelves are offended at it in Lord Shafterbury, as being accuftomed to deduce every approbation or averfion
enemies by contradicting the ancients. He thought the feed of all living creatures animated, and that the foul of this feed produces ormanization.- He was accufed of impiety for afferting that the fouls of beafts are not material ; for this was affirmed to be the fame thing with afferting that they are immortal ; but he rejected this confequence, as he vicll might do. See Metaphysics, Part III, chap. vi.

SENONES, (anc. geog.), a people of G.llia Celtica, fituated on the Sequana to the fouth of the Parifil, near the confuence of the Jeama or Yonne with che abuve-mentioned river. Their moft confiderable exploit was their invafion of Italy, and taking and burning Rome, as related under that article. This was done by a colony of them long before tranfported into Italy, and lettled on the Adriatic. 'Their capital, Agendicum in, Gaul, was in the lower age called Senones, now Sens. In Italy the Senones extended themfelves as far as the river Aefis; but were afterwards driven beyond the Rubicon, which became the boundary of Gallia Ci falpina, (Polybius, Strabc.)

SENSATION, in philofophy, the perception of external objects by means of the fenfes. See Metaрнуsics, Part I. chap. i.
SENSE, a faculty of the foul whereby it perceives external objects by means of the impreffions they make on certain organs of the body. See Metaphysics, Part I. and Anatomy, \(1^{2} 137\), \&ic.

Common SENSE, is a term that has been varioufly ufed botlı by ancient and mocern writers. With fome it has been fynonymous with public fenfe; with others it has denoted prudence; in certain inftances, it has been confounded with fome of the powers of tafte; and, accordingly, thofe who commit egregious blunders with regard to decorum, faying and doing what is offenfive to their company, and inconfiftent with their own character, have been charged with a defect in common fenfe. Some men are diftinguifhed by an uncommon acutenefs in difcovering the characters of others; and this talent has been fumetimes called common finfe; fimilar to which is that ufe of the term, which makes it to fugnify that experience and kuowledge of life which is acquired by living in fociety. To this meaning Quintilian refers, fpeaking of the advantages of a public education: Senfum ipfum qui communis dicitur, ubi difcet, cum fe a congreflu, qui non bominibus folum, fed mutis quoque animalibus naturalis efl, fegregarit? Lib. i. cap. 2.

But the term common fenfe hath in modern times been ufed to fignify that power of the mind which perceives truth, or commands belief, not by progreffive argumentation, but by an inftantaneous, inftinctive, and irrefitible impulfe; derived neither from education nor from habit, but from nature ; acting independently of our will, whenever its object is prefented, according to an eftablifhed law, and therefore called fenfe; and acting in a fimilar manner upon all, or at leaft upon a great majority of mankind, and therefore called common jenfe. See Metaphysics, \(\mathrm{n}^{\circ} 127\).

Moral SENSE, is a determination of the mind to be pleafed with the contemplation of thofe affections, actions, or characters, of rational agents, which we call grod or viriuous.
'Ihis moral fenfe of beauty in actions and affections.
from rational views of interelt. It is certain that his Lordhip has carried the influence of the moral fenfe very far, and fome of his followers have carried it farther. The advocates for the felfifh fyitem feem to drive their opinions to the oppofite extreme, and we have elfewhere endeavoured to fhow that the truth lies between the contending parties. See Moral Philosophy, n? 27,-32.

Public SeNSE is defined by the noble author of the Charaterillics to be an innate propenity to be pleafed with the happinefs of others, and to be uneafy at their mifery. It is found, he fays, in a greater or lefs degree in all men, and was fometimes called xavovonike, or fenfus communis, by ancient writers.

Of the reality of this public fenfe we have great doubts. 'i'he conduct of favages, who are more under' the influence of orisinal inftinct than civilized men, gives no countenance to it. Their affections feem all to be felfifh, or at leaft to fpring from felf-love varioufly modified. For the happinefs of their wives they have very little regard, confidering them merely as inftruments of their own pleafure, and valuing them for nothing elfe. Hence they make them toil, while they themfelves indulge in liftefs idlenefs. To their children we belitve they exhibit ftrong fymptoms of attachment, as foon as they derive affitance from them in war, or in the bufinefs of the chace; but during the helplefs years of infancy, the child is left by the felfifh father wholly to the care and protection of its wretched mother; who, impelled by the forgé of all females to their young, cherifhes her offspring with great fondnefs. The favage is, indeed, fifceptible of ftrong attachments, fimilar to that which we call friendmip; but fuch attachments are no proofs of difinterefted benevolence, or what his Lordfhip calls the public fenfe. Two barbarous heroes are probably firt linked together by the ob. fervation of each other's prowefs in war, or their fisill in purfuing their game; for fuch obfervation cannot fail to flow them that they may be ufeful to one another ; and we have ellewhere fhown how real friendfhip may fpring from fentiments originally felfifh. The favage is very much attached to his lorde or tribe, and this attachment refembles patriotifm : but patriotifm itfelf is not a fentiment of pure benevolence delighting in the happinefs of others, and grieving at their mifery ; for the patriot prefers his own country to all others, and is not very frrupulous with refpect to the rectitude of the neans by which he promotes its interelt, or depreffes its rivals. The favage purfues with relentlefs rigour the enemies of himfelt or of the tribe to which he belongs; Shows no mercy to them when in his power, but puts them to the cruelleft death, and carrics their fcalps to the leader of his party. Thefe facts, which cannot be controverted, are perfectly irreconcileable with innate benevolence, or a public fenfe comprehending the whole race of men ; and fhow the truth of that theory by which we have in another place endeavoured to account for all the paffions, focial as well as felfifh. See Pas* SION.

SENSIBLE NOTE, in mufic, is that which confttutes a third major above the dominant, and a femi8
tones

\section*{S E N \\ [ 272 ] \\ S.EN}

Senfibility tone beneath the tonic. \(S i\), or B , is the fenfible note in the tone of \(u t\) or C fol 必; or G tharp, in the tone of \(l a\) or \(A\)
They call it the fenfible note on this account, that it caufes to be perceived the tone or natural feries of the key and the tonic itfelf; upon which, after the chord of the dominaut, the fenfible note taking the fhorteft road, is under a neceffity of rifing; which has made fome authors treat this fenfible note as a major diffonance, for want of obferving, that diffonance, being a relation, cannot be coniltituted unlefs by two notes between which it fubrifts.

It is not meant that the fenfible note is the feventh of the toue, becaufe, in the minor mode, this feventh cannot be a fenfible note but in afcending; for, in defcending, it is at the diftance of a full note from the tonic, and of a third minor from the dominant.

SENSIBILIT'Y, is a nice and delicate perception of pleafure or pain, beauty or deformity. It is very nearly allied to tafte; and, as far as it is natural, feems to depend upon the organization of the nervous fyltem. It is capable, however, of cultivation, and is experienced in a much higher degree in civilized than in favage nations, and among perfons liberally educated than among boors and illiterate mechanics. The man who has cultivated any of the fine arts has a much quicker and more exquifite perception of beauty and deformity in the execution of that art, than another of equal or even greater natural powers, who has but cafually infpected its productions. He who has been long accuftomed to that decorum of manners which characterizes the polite part of the world, perceives almoft inftantaneouny the fmalleft deviation from it, and feels himfelf almoft as much hurt by behaviour harmlefs in itfelf, as by the groffeft rudenefs; and the man who has long proceeded fteadily in the paths of virtue, and often painted to himfelf the deformity of vice, and the miferies of which it is productive, is more quickly alarmed at any deviation from rectitude, than another who, though his life has been ftained by no crime, has yet thought lefs upon the principles of virtue and confequences of vice.

Every thing which can be called fenfibility, and is not born with man, may be refolved into affociation, and is to be regulated accordingly; for fenfibilities may be acquired which are inimical to happinefs and to the practice of virtue. The man is not to be envied who has fo accuftomed himfelf to the forms of polite addrefs as to be hurt by the unaffected language and maniers of the honeft peafant, with whom he may have occation to tranfact bufinefs; nor is he likely to acquire much ufeful knowledge who has fo feduloufly ftudied the beauties of compofition as to be unable to read without difguit a book of fcience or of hiftory, of which the fyle comes not up to his ftandard of perfection. That fenfibility which we either have from nature, or neceffarily acquire, of the miferies of others, is of the greateft ufe when properly regulated, as it powerfully impels us to relieve their diftrefs; but if it by any means become fo exquifite as to make us fhun the fight of mifery, it counteracts the cnd for which it was implantcd in our sature, and only deprives us of happinefs, while it contributes nothing to the good of others. Indeed there is reafon to believe that all fuch extreme fenfibilities are Selfifh affectations, employed as apologies for withholding from the iniferable that relief which it is in our power
to give ; for there is not a fact better eftablifhed in the senfih fcience of human nature, than that paifive perceptions senfit grow gradually weaker by repetition, while active habits daily acquire frength.

It is of great importance to a literary man to cultivate his tafte, becaufe it is the fource of much elegant and refined pleafure, (fee TASTE); but there is a degree of faftidioufnefs which renders that pleafure impof fible to be obtained, and is the certain indication of expiring letters. It is neceffary to fubmit to the artificial rules of politenefs, for they tend to promote the peace and harmony of fociety, and are fometimes a uieful fubAitute for moral virtue; but he who with refpect to them has fo much fenfibility as to be difgufted with all whofe manners are not equally polifhed with his own, is a very troublefome member of fociety. It is every man's duty to cultivate his moral fenfibilities, fo as to make them fubfervient to the purpofes for which they were given to him; but if he either feel, or pretend to feel, the miferies of others to fo exquifite a degree as to be unable to afford them the relief which they have a right to expect, his fenfibilities are of no good tendency.
Thầt the man of true fenfibility has more pains and more pleafures than the callous wretch, is univerfally admitted, as well as that his enjoyments and fufferings are more exquifite in their kinds; and as no man lives for himfelf alone, no man will acknowledge his want of fenfibility, or exprefs a wifh that his heart were callous. It is, however, a matter of fome moment to diftinguifh real fenfibilities from ridiculous affections; thofe which tend to increafe the fum of human happinefs from fuch as have a contrary tendency, and to cultivate them all in fuch amanner as to make them anfwer the ends for which they were implanted in us by the beneficent Author of nature. This can be done only by watching over them as over other affociations, (fee Metaphysics, \(n^{\circledR} 98\).); for exceffive fenfibility, as it is not the gift of nature, is the bane of human happinefs. "Too much tendernefs (as Rouffeau well obferves) proves the bittereft curfe inftead of the moft fruitful bleffing; vexation and dif. appointment are its certain confequences. The temperature of the air, the change of the feafons, the brilliancy of the fun, or thicknefs of the fogs, are fo many moving fprings to the unhappy poffeffor, and he becomes the wanton fport of their arbitration."

SENSitíve-plant. See Mimosa, Dionea, and Hedysarum.

The fenfitive plants are well known to poffefs a kind of motion, by which the leaves and ftalks are contracted and fall down upon being flightly touched, or fhaken with fome degree of violence.

The contraction of the leaves and branches of the fenfitive plant when touched, is a very fingular phenomenon. Different hypothefes have been formed by botanifts in order to explain it ; but we are difpofed to believe that thefe have generally been deduced rather from analogical reafoning than from a collection of facts and obfervations. We fhall therefore give an account of all the important facts which we have been able to collect upon this curious fubject ; and then draw fuch conclufions as obvioufly refult from them, without, however, attempting to fupport any old, or to eftablifh a new, hypothefis.
1. It is difficult to touch the leaf of a healthy fenfitive plant fo delicately that it will not immediately col-

\section*{S E N}
[ 273 ]
S E N
litive. laple ( A ), the folioia or little leaves moving at their bafe till they come into contact, and then applying themfelves clofe together. If the leaf be touched with a little more force, the oppofite leaf will exhibit the fame appearance. If a little more force be applied, the partial footfalks bend down towards the common foot ftalk from which they iffue, making with it a more acute angle than before. If the touch be more violent ftill, all the leaves fituated on the fame fide with the one that has been touched will inftantly collaple, and the partial footRalk will approach the common foottalk to which it is attached, in the farae manner as the partial footftalk of the leaf approaches the ftem or branch from which it iffues ; fo that the whole 'plant, from having its branches extended, will immediately appear like a weeping birch.
2. Thefe motions of the plant are performed by means of three diftinct and fendible articulations. The firft, that of the foliola or lobes to the partial footftalk ; the fecond, that of the partial footftalk to the common one ; the third, that of the common footfalk to the trunk. The primary motion of all which is the clofing of the leaf upon the partial footftalk, which is performed in a fimilar manner, and by a fimilar articulation. This, however, is much lefs vifible than the others. Thefe motions are wholly independent on one another, as may be proved by experiment. It appears that if the partial footftalks are moved, and collapfe toward the petioli, or thefe toward the trunk, the little leaves, whofe motion is ufually primary to thefe, fhould be affected allo ; yet experiment proves that it is poffible to touch the footftalks in fuch a manner as to affect them only, and make them apply themfelves to the trunk, while the leaves feel nothing of the touch; but this cannot be, unlefs the footitalks are fo difpofed as that they can fall to the trunk, without fuffering their leaves to touch any part of the plant in their paffage, becaufe, if they do, they are immediately affected.
3. Winds and heavy rains make the leaves of the fenfitive plant contract and clofe; but no fuch effect is produced from flight fhowers.
4. At night, or when expofed to much cold in the day, the leaves meet and clofe in the fame manner as when touched, folding their upper furfaces together, and in part over each other, like fcales or tiles, fo as to expofe as little as poffible of the upper furface to the air. The oppofite fides of the leaves (foliola) do not come clofe together in the night, for when touched they apply themfelves clofer together. Dr Darwin kept a fenfitive plant in a dark place for fome hours after daybreak ; the leaves and footfalks were collapfed as in its moft profound neep; and, on expofing it to the light, above 20 minutes paffed before it was expanded.
5. In the month of Auguft, a Cenfitive plant was carried in a pot out of its ufual place into a dark cave, the motion that it received in the cariage fhut up its leaves, and they did not open till 24 hours afterwards; at this time they became moderately open, but were afVol. XVIL. Part. I.
tewards fubject to no changes at night or morning, but Senfitive, remained three days and nights with their leaves in the fane moderately open ftate. At the end of this time they were brought out again into the air, and there recovered their natural periodical motions, fhutting every nigbt, and opening every morning, as naturally and as ftrongly as if the plant had not been in this forced ftate; and while in the cave, it was obferved to be very little lefs affected with the touch than when abroad in the open air.
6. The great hcats of fummer, when there is open funhine at noon, affect the plant in fome degree like cold, caufing it to fhut up its leaves a little, but never in any very great degree. 'The plant, however, is leaft of all affected about nine o'clock in the morning, and that is confequently the propereft time to make experiments on it. A branch of the fenfitive plant cut off, and laid by, retains yet its property of fhutting up and opening in the morning for fome days; and it holds it longer if kept with one end in water, than if left to dry more fuddenly.
7. The leaves only of the ferfitive plant fhut up in the night, not the branches \({ }^{4}\); and if it be touched at this time, the branches are affected in the fame manner as in the day, fhutting up, or approaching to the ftalk or trunk, in the fame manner, and often with more force. It is of no confequence what the fubftance is with which the plant is touched, it anfwers alike to all; but there may be obferved a little fpot, diftinguifhable by its paler colour in the articulations of its leaves, where the greateft and niceft fenfibility is evidently placed.
8. Duhamel having obferved, about the 15 th of September, in moderate weather, the natural motion of a branch of a fenfitive plant, remarked, that at nine in the morning it formed with the ftem an angle of 100 degrecs; at noon, 112 degrees; at three afternoon, it returned to 100 ; and after touching the branch, the angle was reduced to 90 . Three quarters of an hour after it had mounted to 112 ; and, at eight at night, it defcended again, withour being touched,'to 90 . The day after, in finer weather, the fame branch, at eight in the morning, made an angle of 135 degrees with the ftem; after being touched, the angle was diminifhed to 80 ; an hour after, it refe again to 135 ; being touched a fecond time, it defcended again to 80 ; an hour and a half after, it had rifen to 145 ; and upon being touched a third tirae, defcended to 135 ; and remained in that pofition till five o'clock in the afternoon, when being touched a fourth time it fell to 110 .
9. The parts of the plants which have collapfed afterwards unfold themfelves, and return to their former expanded ftate. The time required for that purpofe varies, according to the vigour of the plant, the feafon of the year, the hour of the day, the ftate of the atmofphere. Sometimes half an hour is reçuifite, fometimes only ten minutes. The order in which the parts recover themfelves varies in like manner: fometines it is the common footftalk; fometimes the rib to which M m
the
(A) As the nature of the fenfitive plant is curious, we wifh to make the defcription of it intelligible to thofe who are not acquainted with the technical language of botany. We have therefore ufed the word leaf inftead of foliolum, or lobe.

\section*{S E N}
the leaves are attached; and fometimes the leaves themfelves are expanded, before the other parts have made any attempt to be reinftated in their former pofition.

1o. If, without fhaking the other fmaller leaves, we cut off the half of a leaf or lobe belonging to the latt pair, at the extremity or fummit of a wing, the leaf cut, and its antagonift, that is to fay, the firft pair, beyin to approach each other; then the fecond, and to on' fucceffively, till all the leffer leaves, or lobes of that wing, have collapfed in like manner. Frequently, after 12 or 15 feconds, the lobes of the other wings, which were not immediately affected by the ftroke, fhut; whilft the falk and its wing, beginning at the bottom, and proceeding in order to the top, gradually recover themfelves. If, inftead of one of the leffer extreme leaves, we cut off one belonging to the pair that is next the footitalk, its antagonift fhuts, as do the other pairs fucceffively, from the bottom to the top. If all the leaves of one fide of a wing be cut off, the oppofite leaves are not affected, but remain expanded. With fome addrefs, it is poffible even to cut off a branch without hurting the leaves, or making them fall. The common footftalk of the winged leaves being cut as far as three-fourths of its diameter, all the parts which hang down collapfe, but quickly recover without appearing to have fuffered any confiderable violence by the fhock. An incifion being made into one of the principal branches to the depth of one-half the dianeter, the branches fituated betwixt the fection and the root will fall down; thofe above the incifion remain as bcfore, and the leffer leaves continue open; but this direction is foon deftroyed, by cutting off one of the lobes at the extremity, as was obferved above. Laftly, a whole wing being cut off with precaution near its infertion into the common footfalk, the other wings are not affected by it, and its own lobes do not fhut. No motion enfues from piercing thebranch with a needle or other fharp inftrument.
II. If the end of one of the leaves be burned with the flame of a candle, or by a burning glafs, or by touching it with hot iron, it clofes up in a moment, and the oppofite leaf does the fame, and after that the whole feries of leaves on each fide of the partial or little footftalk ; then the footftalk itfelf ; then the branch or common footitalk; all do the fame, if the burning has been in a fufficient degree. This proves that there is a very nice communication between all the parts of the plant, by means of which the burning, which only is applied to the extremity of one leaf, diffufes its influence through every part of the fhrub. If a drop of aquafortis be carefully laid upon a leaf of the fenfitive plant, fo as not to fhake it in the leaft, the leaf does not begin to move till the acrid liquor corrodes the fubftance of it ; but at that time, not only that particular leaf, but all the leaves placed on the fame foottalk, clofe themfelves up. The vapour of burning fulphur has alfo this effect on many leaves at once, according as they are more or lefs expoled to it ; but, a bottle of very acrid and fulphureous fpirit of vitriol, placed under the branches unftopped, produces no fuch effect. Wetting the leaves with fpirit of wine has been obferved allo to have no effect, nor the rubbing oil of almonds over them; though this laft application deftroys many plants.

From the preceding experiments the following con-
clufions may be fairly drawn: 1. The contraction of the parts of the fenfitive plant is occafioned by an external force, and the contraction is in proportion to the force. 2. All bodies which can exert any force affect the fenfitive plant; fome by the touch or by agitation, as the wind, rain, \&c.; fome by chemical influence, as heat and cold. 3. Touching or agitating the plant produces a greater effect than an incifion or cutting off a part, or by applying heat or cold.

Attempts liave been made to explain thefe curious phenomena. Dr Darwin, in the notes to his admired poem, intitled, The Botanic Garden, lays it down as a principle, that "the fleep of animals confifts in a fufpenfion of voluntary motion; and as vegetables are fubject to fleep as well as animals, there is reafon to conclude (fays he) that the various action of clofing their petals and foliage may be juftly afcribed to a voluntary power; for without the faculty of volition fleep would not have been neceffary to them." Whether this definition of fleep when applied to animals be juft, we fhall not inquire ; but it is evident the fuppofed analogy between the fleep of animals and the fleep of plants has led Dr Darwin to admit this aftonifhing conclufion, that plants have volition. As volition prefuppofes a mind or foul, it were to be wifhed that he had given us fome information concerning the nature of a vegetable foul, which can think and will. We fufpect, however, that this vegetable foul will turn out to be a mere mechanical or chemical one; for it is affected by external forces uniformly in the fame way, its volition is merely paffive, and never makes any fuccefsful refiftance againft thofe caufes by which it is influenced. All this is a mere abufe of words. The fleep of plants is a metaphorical expreffion, and has not the leaft refemblance to the fleep of animals. Plants are faid to fleep when the flowers or leaves are contracted or folded together; but we never heard that there is any fimilar contraction in the body of an animal during fleep.
The fibres of vegetables have been compared with the mufcles of animals, and the motions of the fenfitive plant have been fuppofed the fame with mufcular motion. Between the fibres of vegetables and the mufcles of animals, however, there is not the leaft fimilarity. If mufcles be cut through, fo as to be feparaced from the joints to which they are attached, their powers are completely deftroyed ; but this is not the cafe with vegetable fibres. The following very ingenious experiment, which was communicated to us by a refpectable member of the Univerfity of Edinburgh, is decifive on this fubject. He felected a growing poppy at that period of its growth, before unfolding, when the head and neck are bent down almoft double. He cut the falk where it was curved half through on the under fide, and half through at a fmall diftance on the upper fide, and half through in the middle point between the two fections, fo that the ends of the fibres were feparated from the ftalk. Notwithflanding thefe feveral cuttings on the neck, the poppy raifed its head, and affumed a more erect pofition. There is, therefore, a complete diftinction between mufcular motion and the motions of a plant, for no motion can take place in the limb of an animal when the mufcles of that limb are cut.

In fine, we look upon all attempts to explain the motions of plants as abfurd, and all reafoning from fupgored analogy between animals and vegetables as the
fource

\section*{S E N}
ence fource of wild conjecture, and not of found philofophy. We view the contraction and expanfion of the fenfitive plant in the fame light as we do gravitation, chemical attraction, electricity, and magnetifm, as a fingular fact, the circumftances of which we may be fully acquainted with, but muft defpair of underftanding its caufe.

What has been faid under this article chiefly refers to the mimofa fenfitiva and pudica. For a full account of the notions of vegetables in general, fee Vegetable Motion, under the article Motion.

SENTENCE, in law, a judgment paffed in court by the judge in fome procefs, either civil or criminal. See Judgment.

Sentence, in grammar, denotes a period; or a fet of words comprehending fome perfect fenfe or fentiment of the mind. The bufinefs of pointing is to diftinguifh the feveral parts and members of fentences, fo as to render the fenfe thereof as clear, diftinct, and full as puffible. See Punctuation.

In every fentence there are two parts neceffarily required; a noun for the fubject, and a definite verb: whatever is found more than thefe two, affects one of them, either immediately, or by the intervention of fome other, whereby the firft is affected.

Again, every fentence is either fimple or compound: a fimple fentence is that confifting of one fingle fubject, and one finite verb. - A compound fentence contains feveral fubjects and finite verbs, either exprefsly or implicitly.

A fimple fentence needs no point or diftinction; only a period to clofe it: as, "A good man loves virtue for itfelf." - In fuch a fentence, the feveral adjuncts af. fect either the fubject or the verb in a different manner. Thus the word good expreffes the quality of the fubject, virtue the object of the action, and for itfelf the end thercof. - Now none of thefe adjuncts can be feparated from the reft of the fentence: for if one be, why fhould not all the reft? and if all be, the fentence will be minced into almolt as many parts as there are words.

But if feveral adjuncts be attributed in the fame manner either to the fubject or the verb, the fentence becomes compound, and is to be divided into parts.

In every compound fentence, as many fubjects, or as many finite verbs as there are, either exprefsly or implied, fo many diftinctions may there be. Thus, "My hopés, fears, joys, pains, all centre in you." And thus Catilina abiit, exce/fit, evafit, erupit.-I' Ihe reafon of which pointing is obvious; for as many fubjects or finite verbs as there are in a fentence, fo many members does it really contain. Whenever, therefore, there occur more nouns than verbs, or contrariwife, they are to be conceived as equal. Since, as every fubject requires its verbs, fo every verb requires its fubject, wherewith it may agree : excepting, perhaps, in fome figurative expreffious.

SEN I'ICOS.厌 (from fentis, a "briar or bramble) ;" the name of the 35 th order in Linnæus's fragments of a natural method, confifting of rofe, bramble, and other plants, which refemble them in port and external ftructure. See Botany, page 465 .

SENTIMENT, according to Lord Kames, is a term appropriated to fuch thoughts as are prompted by paffien. It differs from a perception; for a perception fignifies the act by which we become confcious
of external objects. It differs from con\{cioufnefs of an Sertimento interral action, fuch as thinking, fulpending thought, inclining, refolving, willing, \&c. And it differs from the conception of a relation among objects; a conception of that kind being termed opinion.

Sentiments, in poetry. To talk in the language of mufic, each paffion hath a certain tone, to which every fentiment procceding from it ought to be tuned with the greateft accuracy: which is no eafy work, efpecially where fuch harmony ought to be fupported during the courfe of a long theatrical reprefentation. In order to reach fuch delicacy of execution, it is neceffary that a writer aflume the precife character and paffion of the perfonage reprefented; which requires an uncommon genius. But it is the only difficulty; for the writer, who, annihilating himfelf, can thus become another perfon, need be in no pain about the fentiments that belong to the affumed character: thefe will flow without the leaft ftudy, or even preconcep. tion ; and will frequently be as delightfully new to himfelf as to his reader. But if a lively picture even of a fingle emotion require an effort of genius, how much greater the effort to compofe a paffionate dialogue with as many different tones of paffion as there are fpeakers? With what ductility of feeling muft that writer be endued, who approaches perfection in fuch a work; when it is neceffary to affume different and even oppofite characters and paffions in the quickeft fucceffion? Yet this work, difficult as it is, yields to that of compofing a dialogue in genteel comedy, exhibiting characters without paffion. The reafors is, that the different tones of character are more delicate, and lefs in fight, than thofe of paffion; and, accordingly, many writers, who have no genius for drawing characters, make a thift to reprefent, tolerably well, an ordinary paffion in its fimple movements. But of all works of this kind, what is truly the molt difficult, is a characteriftical dialogue upon any philofophical fubject ; to interweave characters with reafoning, by fuiting to the character of each fpeaker a peculiarity not only of thought but of expreffion, requires the perfection of genius, tafte, and judgment.
How difficult dialogue.writing is, will be evident, even without reafoning, from the miferable compofitions of that kind found without number in all languages. The art of mimicking any fingularity in gefture or in voice, is a rare talent, though directed by fight and hearing, the acuteft and mott lively of our external fenfes: how much more rare mult that talent be, of imitating characters and internal emotions, tracing all their different tints, and reprefenting them in a lively manner by natural fentiments properly expreffed? 'I'he truth is, fuch execution is too delicate for an ordinary genius; and for that reafon the bulk of writers, inftead of expreffing a paffion as one does who feels it, content themfelves with defcribing it in the language of a fpectator. To awake paffion by an internal effort merely, without any external caufe, requires great fenfibility; and yet that operation is neceffary, not lefs to the writer than to the actor; becaufe none but thofe who actually feel a paffion can reprefent it to the life. The writer's part is the more complicated: he mult add compofition to paffion : and muft, in the quickeft fucceffion, adopt every different character. But a very humble flight of imagination may ferve to convert a

\section*{S E N [ 276 ] S E N}

Sentiments. writer into a fpectator, fo as to figure, in fome obfcure manner, an action as paffing in his fight and hearing. In that figured fituation, heing led naturally to write like a fpectator, he entertains his readers with his own reflections, with cool defcription, and florid declamation ; inftead of making them eye-witneffes, as it were, to a real event, and to every movement of genuine paífion. Thus moit of our plays appear to be calt in the fame mould; perfonages without character, the mere outlines of paffion, a tirefome monotony, and a pompous declamatory ftyle.

This defcriptive manner of reprefenting paffion is a very cold entertainment; our fympathy is nor raifed by defcription; we muft firft be lulled into a dream of reality, and every thing mutt appear as paffing in our fight. Unhappy is the player of genius who acts a part in what may be termed a defcriptive tragedy; after affuming the very paffion that is to be reprefented, how is lie cramped in action, when he muft utter, not the fentiments of the paffion he feels, but a cold defcription in the language of a byftander? It is that imperfection, undoubtedly, in: the bulk of our plays, which confines our ftage almoft entively to Shakcfpeare, notwithftanding his many irregularities. In our late Englifh tragedies, we fometimes find fentiments tolerably well adapted to a plain paffion: but we muft not in any of them expect a fentiment expreffive of character; and, upon that very account, our late performances of the dramatic kind are for the moft part into. lerably infipid.

But it may be proper to illuftrate this fubject by examples. The firft examples thall be of fentiments that appear the legitimate offspring of paffion; to which fhall be oppofed what are defcriptive only, and illegitimate : and in making this comparifon, the inftances fhall be borrowed from Shakefpeare and Corneille, who for genius in dramatic compofition ftand uppermoft in the rolls of fame.
I. Shakefpeare fhall furnifh the firt example, being of fentiments dictated by a violent and perturbed paffion:

Lear. -_- Filial ingratitude!
Is it not as if this mouth fhould tear this hand For lifting food to't? - But I'll punifh lome; No, I will weep no more. - In fuch a night, To fhut me out !-P Pour on, I will endure. In fuch a night as this! O Regan, Gonerill, Your old kind father, whofe frank heart gave allO! that way madnefs lies; let me fhun that ; No more of that.

Kent. Good, my lord, enter here.
Lear. Prithee, go in thyfelf, feek thine own eafe, This tempeft will not give me leave to ponder On things would hurt me more:-but I'll go in ; In, bey, go firft. You houfelefs poverty Nay, get thee in ; I'll pray, and then I'll fleepPoor naked wretches, wherefoe'cr you are, That bide the pelting of this pitilefs form! How fhall your houfelefs heads, and unfed fides, Your loop'd and window'd raggednefs defend you From feafons fuch as thefe!-OI have ts'en Too little care of this! take phyfic, Pomp; Expofe thyfelf to feel what wretches feel,

That thou may'A Make the fuperflux to them, And thow the heav'ns more jult.

King Lear, aEt 3. fc. 5.
With regard to the French author, truth obliges us to acknowledge, that he defribes in the ftyle of a fpectator, inftead of expreffing paffion like one who feels it ; which naturally betrays him into a tirefome monotony, and a pompous declamatory Eyle. It is fcarce neceffary to give examples, for he never varies from that tone. We fhall, however, take two paffages at a venture, in order to be confronted with thofe tranfcribed above. In the tragedy of Cinna, after the confpiracy was difcovered, Æmilia, having nothing in view but racks and death to herfelf and her lover, receives a pardon from Auguitus, attended with the brightelt circumftances of magnanimity and tenderncfs. This is a lucky fituation for reprefenting the paffions of furprife and gratitude in their different ftages, which feem naturally to be what follow. Thefe paffions, raifed at once to the utmoft pitch, and being at firlt too big for utterance, mult, for fome moments, be expreffed by violent geftures only : fo foon as there is vent for words, the firft expreffions are broken and interrupted: at laft, we ought to expect a tide of intermingled fentiments, occafioned by the fluctuation of the mind between the two paffions. AEmilia is made to behave in a very difo ferent manner : with extreme coolnefs the defcribes her own fituation, as if fhe were merely a fpectator; or rao ther the poet takes the tafk off her hands:
Et je me rends, Seigneur, à ces hautes bontés: Je recouvre la vûe auprès de leurs clartés. Je connois mon forfait qui mc fembloit juftice; Et ce que n'avoit pû la terreur du fupplice, Je fens naitre en mon ame un repentir puiffant, Et mon cour en fecret me dit, qu'il y confent. Le ciel a réfolu votre grandeur fuprême ;
Et pour preuve, Seigneur, je n'en veux que moi-même. J'ofe avec vanité me donner cet éclat, Paifqu'il change mon cœur, qu'il veut changer l'ćtat. Ma laine va mourir, que j'ai crue immortelle; Elle eft morte, et ce cour devient fujet fidele; Et prenant déformais cettc haine en horreur, L'ardeur de vous fervir fuccede à fa fureur.

Aa 5.jc. 3
So much in general upon the genuine fentiments of paffion. We proceed to particular obfervations. And, firft, paffions feldom continue uniform any confiderable time : they generally fluctuate, fwelling and fubfiding by turns, ofren in a quick fucceffion; and the fentiments cannot be juft unlefs they correfpond to fuch fluctuation. Accordingly, a climax never fhows better than in expreffing a fwelling paffion: the following paflage may fuffice for an illuftration.

> Almeria. -How haft thou charm'd

The wildnefs of the waves and rocks to this ; That thus rclenting they have giv'n thee back
To earth, to light and life, to love and me ?
\[
\text { Mourning Bride, act 1. } f \mathrm{c}_{\mathrm{o}} \mathrm{~m}
\]

I would not be the villain that thou think'it For the whole fpace that's in the tyrant's grafp, And the rich earth to boot.

Macbelh, ais 4. Jc. 4 .

\section*{S E N \\ \(\left[\begin{array}{ll}277\end{array}\right]\) \\ \(S\) E N}
ents. The following paffage expreffes finely the progrefs of conviction.

Let me not fir, nor breathe, left I diffolve That tender, lovely form, of painted air, So like Almeria. Ha! it finks, it falls; I'll catch it e'er it goes, and grafp her fade: 'Tis life! 'tis warm!'tis fhe! 'tis fhe herfelf! It is Almeria! 'tis, it is my wife!

In the progrefs of thought our refolutions become more vigorous as well as our paffions.
If ever I do yield or give confent,
By any action, word, or thought, to wed
Another lord; may then jutt heav'in fhow'r down, \&cc.
Mourning Bride, adt 1. fc. s .
And this leads to a fecond obfervation, That the dif. ferent ftages of a paffion, and its different directions, from birth to extinction, mult be carefully reprefented in their order ; becaufe otherwife the fentiments, by being mifplaced, will appear forced and unnatural. Refentinerit, for example, when provoked by an atrocious injury, difcharges itfelf firft upon the author: fentiments therefore of revenge come always firft, and muft in fome meafure be exhaufted before the perion injured think of grieving for himfelf. In the Cid of Corneille, Don Diegue having been affronted in a cruel manner, expreffes fcarce any fentiment of revenge, but is totally occupied, in contemplating the low fituation to which he is reduced by the affront :
O rage! ô defefpoir! ô vieilleffe ennemie! N'ai-je donc tant vecu que pour cette infamie? Et ne fuis-je blanchi dans les travaux guerriers; Que pour voir en un jour fletrir tant de lauriers? Mon bras, qu'avec refpect tout l'Efpagne admire, Mon bras qui taut de fois a fauvé cet empire, Tant de fois affermi le trône de fon roi,
Trahit donc ma querelle, et ne fait rien pour moi! O cruel fouvenir de ma gloire paffé !
Oeuvre de tant de jours en un jour effacée! Nouvelle dignité fatale à mon bonheur! Precipice élevé d'où tombe mon honneur ! Faut-il de votre êclat voir triompher le comte; Et mourir fans vengeance, ou vivre dans la honte? Comte, fois de mon prince à prefent gouverneur, Ce haut rang n'admet point un homme fans honneur ; Et ton jaloux orgueil par cet affront infigne, Malgré le choix du roi, m'en a fû rendre indigne. Et toi, de mes exploits glorieux inftrument, Mais d'un corps tout de glace inutile ornement, Fer jadis tant a craindre, ct qui dans cette offenfe, M'as fervi de parade, et non pas de defenfe, Va, quitte deformais le dernier des humains, Paffe pour me venger en de meilleures mains.
\[
\text { Le Cid, aid 1. fc. } 7
\]

Thefe fentiments are certainly not the firft that are fuggefted by the paffion of refentment. As the firft movements of refentment are always directed to its object, the very fame is the cafe of grief. Yet with relation to the fudden and fevere diftemper that feized Alexander bathing in the river Cydnus, Quintus Curtius defribes the firlt emotions of the army as directed to themfelves, lamenting that they were left without a leader, far from home, and had fcarce any hibpes of re-
turning in fafety : their king's diftrefs, which muft nat- Sentiments. turally have been their firf concern, occupies them but in the fecond place according to that author. In the Aminta of Taffo, Sylvia, upon a report-of her lover's death, which fhe believed certain, inftead of bemoaning the lofs of her beloved, turns her thoughts upon herfelf, and wonders her heart does not break:

Ohime, ben fon di faffo,
Poi che quefta novella non m'uccide. Act. 4. \(\delta c, 2\).
In the tragedy of Jane Shore, Alicia, in the full purpofe' of deftroying her rival, has the following reflec. tion:
Oh Jealoufy! thou bane of pleafing friend/hip,
Thou worft invader of our tender bofoms;
How does thy rancour poifon all our foftnefs, A nd turn our gentle nature into bitternefs! See where fhe comes ! Once my heart's deareft bleffing * Now my chang'd eyes are blafted with her beauty, Loathe that known face, and ficken to behold her.
\[
A A 3 \cdot \int c \cdot x
\]

Thefe are the reflections of a cool fpectator. "A paffion, while it has the afcendant, and is freely indulged, fuggefts not to the perfon who feels it any fentiment to its own prejudice : reflections like the foregoing occur not readily till the paffion has fpent its vigour.
A perfon fometimes is agitated at once by different paffions; and the mind in that cafe, vibrating like a pendulum, vents itfelf in fentiments that partake of the fame vibration. This we give as a third obfervation :

2ueen. Would I had never trod this Englifh earths Or felt the flatteries that grow upon it!
Ye've angels faces, but heav'n knows your hearts. What fhall become of me now? wretched lady! I am the moft unhappy woman living.
Alas! poor wenches, where are now your fortunes?
[To ber womer,
Shipwreck'd upon a kingdom, where no pity,
No friends, no hope, no kindred, weep for me!
Almoft no grave allow'd me.
Henry VIII. alt 3. Jc. y.
Othello. Oh devil, devil!
If that the earth could teem with woman's tears, Each drop fle falls would prove a crocodile.
Out of my fight!
Defdemona. I will not Alay t'offend you. [Going. Lodovico. Truly, an obedient lady :
I do befeech your lordfhip, call her back.
Oth. Miftrefs
Def. My lord.
Oth. What would you with her, Sir?
Lod. Who, I, my lord ?
Oth. Ay; you did wifh that I would make her turno:
Sir, fhe can turn and turn, and yet go on ;
And turn again. And fhe can weep, Sir, weep;
And fhe's obedient: as you fay, obedient:
Very obedient-proceed you in your tears-
Concerning this, Sir,-oh well-painted paffion !-
I am commanded home-get you away,
I'll fend for you anon-Sir, I obey the mandate,
And will return to Venice. Hence, avaunt!
[Exit Defdemona
Othello, act 4. fc. 6.
Etinilia.

\section*{S E N [ 278 ] S E N}

Sentiments. AIEmilia. Oh! my good lord, I would fpeak a word with you.
Othello. Yes, 'tis Amilia-By and by. - She's dead.
'Tis like fhe comes to fpeak of Caffio's death;
The noife was high.-Ha! no more moving?
Still as the grave. Shall the come in ? wer't good ?
I think the ftirs again - No - what's the beft?
If fhe come in, the 'll, fure, fpeak to my wife:
My wife! my wife! what wife? I have no wife; Oh infupportable? oh heavy hour!

Othello, ata 5.fc. 7.
A fourth obfervation is, That nature, which gave us paffions, and made them extremely beneficial when moderate, intended undoubtedly that they fhould be fubjected to the government of reafon and confcience. It is therefore againft the order of nature, that paffion in any cafe fhould take the lead in contradiction to reafon and confcience : fuch a ftate of mind is a fort of anarchy which every one is afhamed of and endeavours to hide or diffemble. Even love, however laudable, is attended with a confcious fhame when it becomes immoderate : it is covered from the world, and difclofed only to the beloved object:

Et que l'amour fouvent de remors combattu
Paroiffe une foibleffe, et non une vertu.
Boileau, l'Art Poet. chant. 3. l. 101.
O , they love leaft that let men know they love.
Two Gentlemen of Verona, aid 1. \(\int c .3\).
Hence a capital rule in the reprefentation of immoderate paffions, that they ought to be hid or diffembled as much as poflible. A nd this holds in an efpecial manner with refpect to criminal paffions : one never counfels the commiffion of a crime in plain terms; guilt muft not appear in its native colours, even in thought ; the propofal muft be made by hints, and by reprefenting the action in fome favourable light. Of the propriety of fentiment upon fuch an occafion, Shakefpeare, in the Tempeft, has given us a beauriful example, in a fpeech by the ufurping duke of Milan, advifing Sebaltian to murder his brother the king of Naples:

> Antonio

Worthy Sebaftian,-O, what might-no more.
And yet, methinks, I fee it in thy face
What thou fhouldif be : the occafion fpeaks thee, and My ftrong imagination fees a crown Dropping upon thy head.

AC 2. fc. 2.
A picture of this kind, perhaps ftill finer, is exhibited in King Fohn, where that tyrant folicits (at 3. fc. 5.) Hubert to murder the young prince Arthur; but it is too long to be inferted here.

IJ. As things are beft illuftrated by their contraries, we proceed to faulty fentiments, difdaining to be indebted for examples to any but the moft approved authors. The firt clafs fhall confift of fentiments that accord not with the paffion; or, in other words, fentiments that the paffion does not naturally fuggeft. In the fecond clafs fhall be ranged fentiments that may belong to an ordinary paffion, but unfuitable to it as tinctured by a fingular character. Thoughts that properly are not fentiments, but rather defcriptions, make a third. Sentiments that belong to the paffion reprefented, but are faulty as being introduced too early or
too late, make a fourth. Vicious fentiments expofed Sen in their native drefs, inftead of being concealed or difguifed, make a fifth. And in the latt clafs fhall be collected fentiments fuited to no character nor paffion, and therefore unnatural.
The firft clafs contains faulty fentiments of various kinds, which we flall endeavour to diftinguifh from each other.
1. Of fentiments that are faulty by being above the tone of the paffion, the following may ferve as an example:

> Otbello._

If after every tempeft come fuch calms,
May the winds blow till they have waken'd death : And let the labouring bark climb hills of feas Olympus high, and duck again as low As hell's from heaven?

Othello, act 2. fc. 6.
This fentiment may be fuggefted by violent and inflamed paffion ; but is not fuited to the fatisfaction, however great, that one feels upon efcaping danger.
2. Inftance of fentiments below the tone of the paffion. Ptolemy, by putting Pompey to death, having incurred the difpleafure of \(\mathrm{C} æ f \mathrm{far}\), was in the utmoft dread of being dethroned: in that agitating fituation, Corneille makes him utter a fpeech full of cool reflection, that is in no degree expreffive of the paffion.

Ah! fi je t'avois crû, je n'aurois pas de maitre,
Je ferois dans le trône où le ciel m'a fait naitre ;
Mais c'eft une imprudence affez commune aux rois, D'écouter trop d'avis, et fe tromper au choix.
Le Deftin les aveugle au bord du précipice,
Ou fi quelque lumiere en leur ame fe gliffe,
Cette fauffe clarté dont il les eblouit,
Le plonge dans une gouffre, et puis s'evanouit.

> La Mort de Pompé, ą̃ 4. fc. r.
3. Sentiments that agree not with the tone of the paffion; as where a pleafant fentiment is grafted upon a painful paffion, or the contrary. In the following inftances, the fentiments are too gay for a ferious paf. fion:

No happier tafk thefe faded eyes purfue;
To read and weep is all they now can do.
Eloifa to Abelard. 1. 47.
Again ;
Heav'n firft taught letters for fome wretch's aid, Some banifh'd lover, or fome captive maid :
'They live, they fpeak, they breathe what love infpires, Warm from the foul, and faithful to its fires;
The virgin's wifh without her fears impart, Excufe the blufh, and pour out all the heart; Speed the foft intercourfe from foul to foul, And waft a figh from Indus to the pole.

Eloifa to Abelard, l. 5 I.
Thefe thoughts are pretty: they fuit Pope, but not Eloifa.

Satan, enraged by a threatening of the angel Gabriel, anfwers thus:

Then when I am thy captive, talk of clains, Proud limitary cherub; but ere then Far heavier load thyfelf expect to feel From my prevailing arm, though heaven's King

\section*{S E N}

Ride on thy winge, and thou with thy compecre, Us'd to the yoke, draw'f his triumphant wheels In progreis thro' the road of heav'n \(\operatorname{lar}\)-pav'd.

Paradife Lof, b. 4.
The concluding epithet forms a grand and delightful image, which cannot be the genuine offspring of rage.
4. Sentiments too artificial for a ferious paffion. The firf example is a fpeech of Percy expiring.

O, Harry, thou haft robb'd me of my growth : I better brook the lofs of brittle life,
Than thofe proud titles thou haft won of me; [flefh. They wound my thoughts worfe than thy fword my But thought's the flave of life, and life time's fool ; And time, that takes furvey of all the world, Muft have a Itop.

Firft Part, Henry IV. ait 5. Jc. g.
'Tle fentiments of the Mourning Bride are for the molt part no lefs delicate than juft copies of nature : in the following exception the pieture is beautiful, but too artful to be fuggefted by fevere grief.

Almeria. O no! Time gives increafe to my afflictions.
The circling hours, that gather all the woes Which are diffus'd through the revolving year, Come heavy laden with th' oppreffive weight To me; with me, fucceflively, they leave The fighs, the tears, the groans, the reftefs cares, And all the damps of grief, that did retard their flight; They fhake their downy wings, and fcatter all The dire collected dews on my poor head; 'Then fly with joy and fwiftnefs from me. AIE r. \(\int c\). r. In the fame play, Almeria feeing a dead body, which fhe took to be Alphonfo's, expreffes fentiments ftrained and artiecial, which nature fuggefts not to any perfon upon fuch an occafion:

Had they or hearts or eyes, that did this deed?
Could eyes endure to guide fuch cruel hands?
Are not my eyes guilty alike with theirs,
'I'hat thus can gaze, and yet not turn to fone ?
-I'do not weep! The fpring's of tears are dry'd,
And of a fudden \(I\) am calm, as if
[der'd !
All things were well; and yet my hufband's mur-
Yes, yes, I know to mourn : I'll fluice this heart,
'The fource of wo, and let the torrent in.
ACt 5.fc. 1 I.
Pope's elegy to the memory of an unfortunate lady, expreffes delicately the molt tender concern and forrow that one can fcel for the deplorable fate of a perfon of worth. Such a poem, deeply ferious and pathetic, re. jects with difdain all fiction. Upon that account, the following paffage deferves no quarter; for it is not the language of the heart, but of the imagination indulging its flights at eafe, and by that means is eminently difcordant with the fubject. It would be a ftill more fe. vere cenfure, if it fhould be afcribed to imitation, copying indifcreetly what has been faid by others :

What tho' no weeping loves thy afhes grace, Nor polifh'd marble emulate thy face? What though no facred earth allow thee room, Nor hallow'd dirge be mutter'd o'er thy tomb?

\section*{S E N}

Yet fhall thy grave with rifing fow'rs be dreft, And the green turf lie lightly on thy breaft: There fhall the morn her earlieft tears beftow, There the firft rofes of the year fhall blow; While angels with their filver wings o'erfhade The ground, now facred by thy relics made.
5. Fanciful or finical fertiments. Sentiments that degenerate into point or conceit, however they may amufe in an idle hour, can never be the offspring of any ferious or important paffion. In the ferufalem of Taffo, Iancred, after a fingle combat, fpent with fatigue and lofs of blood, falls into a fwoon; in which fituation, underftood to be dead, he is difcovered by Erminia, who was in love with him to diftraction. A more happy fituation cannot be imagined, to raife grief in an inflant to its higheft pitch; and yet, in venting her forrow, fhe defcends moft abominably into antithefis and conceit even of the lowelt kind:
\(E\) in lui versò d'inefficabil vena
Lacrime, e voce di fofpiri mifta.
In che mifero punto hor qui me mena
Fortuna? a che veduta amara e trifta?
Dopo gran tempo i' ti ritrovo à pena
Tancredi, e ti riveggio, e non fon vifta
Vifta non fon da te, benche prefente
T trovando ti perdo eternamente.
Canto 19. A. 105.
Armida's lamentation refpecting her lover Rinaldo is ixthe fame vicious tafte. Vid. canto 20. ftan. 124, 125, 126.

Queen. Give me no help in Iamentation, I am not barren to bring forth complaints: All fprings reduce their currents to mine eyes, That I, being govern'd by the wat'ry moon, May fend forth plenteous tears to drown the world, Ah, for my huband, for my dear lord Edward.

King Richard III. act. 2. fc. 2.
Jane Shore utters her laft breath in a witty conceit:
Then all is well, and I fhall fleep in peace-
'Tis very dark, and I have loft you now
Was there not fomething I would have bequeath'd you? But I have nothing left me to beftow,
Nothing but one fad figh. Oh mercy, Heav'n! [Dies, \(A E L 5\).
Gilford to Lady Jane Gray, when both were condemned to die :

Thou ftand'ft unmov'd ;
Calm temper fits upon thy beanteous brow;
'Thy eyes that flow'd fo faft for Edward's lofs,
Gaze unconcern'd upon the ruin round thee,
As if thou had'ft refolv'd to brave thy fate,
And triumph in the midft of defolation.
Ha ! fee, it fwells, the liquid cryftal rifes,
It ftarts in fpite of thee .....but I will catch if,
Nor let the earth be wet with dew fo rich.
Lady Jane Gray, adt 4. near the end.
The concluding fentiment is altogether finical, unfuitable to the importance of the occafion, and even to the dignity of the paffion of love,

Corneille,

\section*{S E N}

\section*{Sentiments.}
 jection, That his fentiments are fometimes too much refined for perfons in deep diftrefs, obferves, that if poets did not induloe fentiments more ingenious or refined than are prompted by paffion, their performances wotld often be low, and extreme grief would never fuggeft but exclamations merely. This is in plain language to af. fert, that forced thoughts are more agreeable than thofe that are natural, and ought to be preferred.

The fecond clafs is of fentiments that may belong to an ordinary paffion, but are not perfectly concordant with it, as tinctured by a fingular character.

In the laft act of that excellent comedy The Carelefs Hufond, Lady Eafy, upon Sir Charles's reformation, is made to exprefs more violent and turbulent fentiments of joy than are confiftent with the mildnefs of her character.

Lady Eafy. O the foft treafure! O the dear reward of long-defiring love.-Thus! thus to have you mine, is fomething more than happinefs ; 'tis double life, and madnefs of abounding joy.

The following inftances are defcriptions rather than fentiments, which compofe a third clafs.

Of this defcriptive manner of painting the paffions, there is in the Hippolytus of Euripides, a\&t v. an illuftrious inftance, viz, the fpeech of Thefeus, upon hearing of his fon's difmal exit. In Racine's tragedy of Efther, the queen hearing of the decree iffued againft her people, intead of expreffing fentiments fuitable to the occafion, turns her attention upon herfelf, and de"fcribes with accuracy her own fituation.
Jufte ciel! tout mon fang dans mes veines fe glace.
ACI 1. Jc. 3 .
Again,
Aman. C'en eft fait. Mon orgueil eft forcé de plier. 'L'inexorable Aman eft reduit à prier.

Efther, at 3. Sc. 5.
Atbalie. Quel prodige nouveau me trouble et m'embarraffe?
La douceur de fa voix, fon enfance, fa grace,
Font infenfiblement à mon inimitié
Succeder - Je ferois fenfible à la pitié?
Athalie, ald 2. fc. 7.
Titus. O de ma paffion fureur defefperée! Brutus of Voltaire, ald 3. fc. 6.
What other are the foregroing inftances but defcribing the paffion another feels?

The fourth clafs is of fentiments expreffed too early or too late.

Some examples mentioned above belong to this clafs. Add the following from \(V\) enice Preferv'd, at 5. at the clofe of the fcene between Belvidera and her father Priuli. The account given by Belvidera of the danger She was in, and of her hubband's threatening to murder her, ought naturally to have alarmed her relenting fa. ther, and to have mace him exprefs the moft perturbed fentiments. Infead of which, he diffolves into tendernefs and love for his daughter, as if he had already delivered her from danger, and as if the se were a perfect tranquillity:

\section*{280 ]}

Cantt thou forgive me all my follies pâf!
I'll henceforth be indeed a father ; never, Never more thus expofe, but cherifh thee, Dear as the vital warmth that feeds my life, Dear as thofe eyes that weep in fomdnefs o'er thee: Peace to thy heart.
Immoral fentiments expofed in their native colours, inftead of being concealed or difguifed, compole the firib clafs.
'The Lady Macbeth, projecting the death of the king, has the following foliloquy:

The raven laimfelf's not hoarfe That croaks the fatal entrance of Duncan Under my battlements. Come, all you fpirits That tend on mortal thoughts, unfex me liere, And fill me from the crown to the toe, top full Of direct cruelty; make thick my blood, Stop up th' accefs and paffage to remorfe, That no compunctious vifitings of nature Shake my fell purpofe.

Macbeth, ad 1. fc. 7.
This fpeech is not natural. A treacherous murder was never perpetrated even by the moft hardened mifcreant without compunction : and that the lady here muft have been in horrible agitation, appears from her invoking the infernal fpirits to fill her with cruelty, and to ftop up all avenues to remorfe. But in that fate of mind it is a never-failing artifice of felf-deceit to draw the thickeft veil over the wicked action, and to extenuate it by all the circumftances that imagination can fuggeft : and if the crime cannot bear difguife, the next attempt is to thruit it out of mind altogether, and to rufh or to action without thought. This laft was the hußand's method.

Strange things I lave in head, that will to hand ; Whicl muft be acted ere they mutt be fcann'd.

The lady follows neither of thefe courfes, but in a deliberate manner endeavours to fortify her heart in the commiffion of an execrable crime, without even atternpting to colour it. This, we think, is not natural ; we hope there is no fuch wretch to be found as is here re prefentea!.

The laft clafs comprehends fentiments that are unnatural, as being fuited to no character nor paffion. Thefe may be fubdivided into three branches : firft, fentiments unfuitable to the conftitution of man, and to the laws of his nature; fecond, inconfiftent fentiments; third, fentiments that are pure rant and extravagance.

When the fable is of human affairs, every event, every incident, and every circumftance, ought to be natural, otherwife the imitation is imperfect. But an imperfect imitation is a venial fault, compared with that of running crofs to nature. In the Hippolytus of Euripides (act iv. fc. 5.), Hippolytus, winhing for another felf in his own fituation, "How much (fays he) fhould I be touched with his misfortune !" as if it were natural to grieve more for the misfortune of another than for one's own.

Ofmyn. Yet I behold her - yct - and now no more. Turn your lights inward, eyes, and view my thought ; So fhall you ttill behold her-'Twill not be.

\section*{S E N}
menke O impotenes of fight! mechanic fenfe, Which to exterior objects ow't thy faculty, Not feeing of election, but neceffity. Thus do our eyes, as do all common mirrors, Succeffively reflect fucceeding images. Nor what they would, but muft; a ftar or toad ; Juft as the hand of chance adminiters !

Mourning Bride, ait 2. fc. 8. No men, in his fenfes, ever thought of applying his eyes to difcover what paffes in his mind ; far lefs of blaming his eyes for not feeing a thought or idea. In Moliere's l'Avare (nct iv. fc. 7.) Harpagon, being robbed of his money, feizes himfelf by the arm, miftaking it for that of the robber. And again he expreffes himfelf as follows:

Je veux aller querir la juffice, et faire donner la queftion à toute ma maifon; à fervantes, à valets, à fils, à fille, et à moi auffi.
This is fo abfurd as fcarce to provoke a fmile, if it be not at the author.

Of the fecond branch the following example may fuffice:
- Now bid me rum,

And I will frive with things impolfibles,
Yea, get the better of them.
Fulius Cafar, all 2. fc. 3 .
Of the third branch, take the following famples. Lucan, talking of Pompey's fepulchre,
-_ Romanum nomen, et omne Imperium magno eft tumuli modus. Obrue faxa Crinine plena deûm. Si tota eft Herculis Oete, Et juga tota vacant Bromio Nyfeia; quare Unus in Egypto Magno lapis? Omnia Lagi Rura tenere poteft, fi nullo cefpite nomen Hzeterit. Eiremus pripuli, cinerumque tuorum, Magne, metu nullas Nili calcemus arenas.
L. viii. 1.798.

Thus, in Rowe's tranflation :
Where there are feas, or air, or earth, or fies, Where'er Rome's empire fretches, Pompey lies.
Far be the vile memorial then convey \(d\) !
Nor let this ftone the partial gods upbraid.
Shall Hercules all Oeta's heights demand,
And Nyfa's hill for Bacchus only ftand;
While one poor pebble is the warrior's doom
That fought the caufe of libety and Rome?
If Fate decrees he muft in Egypt lie,
I.et the whole fertile realm his grave fupply, Yield the wide country to his awful fhade, Nor let us dare on any part to tread,
Fearful we violate the mighty dead.
The following paffages are pure rant. Coriolanus, foaking to his mother,

What is this?
Your knees to me? to your cerrected fon? Then let the pebbles on the hungry beach Fillop the fars: then let the mutinous winds Strike the proud cedars 'gainft the fiery fun: Murd'ring impofibility, to make
What cannot be, light work.
Vow XVII. Part I.

\section*{\(\lceil 2817\) S E P}

Cafar. - Danger knows full weils
That Cefar is more dangerous than he.
We were two lions litter'd in one day,
And I the elder and more terrible.
Julius Cafar, all 2. fc. 4 .
Ventidius. But you, ere love mifled your wand'ring eyes,
Were fure the chief and beft of human race,
Fram'd in the very pride and boaft of nature,
So perfect, that the gods who form'd you wonder'd
At their own fkill, and cry'd, A lucky hit
Has mended our defign. Dryden, All for Love, ą r .
Not to talk of the impiety of this fentiment, it is ludicrous inftead of being lofty.
The famous epitaph on Raphael is not lefs abfurd than any of the foregoing paffages:

\section*{Raphael, timuit, quo fofpite, vinci,}

Rerum magna parens, et moriente mori.
Insitated by Pope, in his epitaph on Sir Godfrey Knelo ler:

Living, great Nature fear'd he might outvie
Her works; and dying, fears hertelf may die.
Such is the force of imitation; for Pope of himpelf would never have been guilty of a thought fo extravagant.

SENTINEL, or SENTRY, in military affairs, a private foldier placed in fome poft to watch the ap. proach of the enemy, to prevent furprifes, to flop fuch as would pafs without orders or difcovering who they are. They are placed before the arms of all guards, at the tents and doors of general officers, colonels of regiments, \& c.

SRNTINEL Perdu, a foldier pofted near an enemy, or in fome very dangerous poft where he is in hazard of being loft.

All fentinels are to be vigilant on their pofts; neither are they to fing, fmoke tobacco, nor fuffer anty noife to be made near them. They are to have a watchful eye over the things committed to their charge. They are not to fuffer any light to remain, or any fire to be made, near their pofts in the night-time; neither is any fentry to be relieved or removed from his poft but by the corporal of the guard. They are not to fuffer any one to tonch or handle their arms, or in the night-time to come within ten yards of their port.

No perfon is to ftrike or abufe a fentry on his poft : but when he has committed a crime, he is to be relieved, and then punifhed according to the rules and are ticles of war.

A fentinel, on his poft in the night, is to know nobody but by the counter-fign: when he challenges, and is anfwered, Relief, he calls out, Stand, relief! ad vance, corporal! upon which the corporal halts his men, and advances alone within a yard of the fentry's firelock (firft ordering his party to reft, on which the fentry does the fame), and gives him the counter-fign, taking care that no one hear it.

SEPIA, the Cittle-fish, a genus belonging to the order of vermes molufca. There are eight brachia interfperfed on the interior fide, with little round ferrated cups, by the contraction of which the animal lays fait hold of any thing. Befides thefe cight arms,

\title{
S E P \\ \(\left[\begin{array}{ll}282\end{array}\right]\) \\ S E P
}
it has two tentacula longer than-the arms, and frequently pedunculated. The mouth is lituated in the centre of the arms, and is horny and hooked, like the bill of a hawk. The eyes are below the tentacula, towards the body of the animal. The body is flefhy, and received into a fheath as far as the breaft. Their food are tun--sies, fprats, lobters, and other fhell-fifh. With their arms and trunks they faften themfelves, to refift the motion of the waves. Their beak is like that of a parrot. "The females are diftinguifhed by two paps. 'They co. pulate as the polypi do, by a mutual embrace, and lay their eggs upon fea-weed and plants, in parcels like bunches of grapes. Immediately after they are laid they are white, and the males pafs over and impregnate then with a black liquor, after which they grow larger. Oll \(_{11}\) opening the cgg, the embryo-cuttle is found alive. The males are very conftant, accompany their females everywhere, face every danger is their defence, and refcue them intrepidly at the hazard of their own lives. The timorous females fly as foon as they fee the males wounded. The noife of a cuttle-tifh, on being dragged out of the water, refembles the grunting of a hog. When the male is purfued by the fea-wolf or other ravenous fifh, he fhuns the danger by Atratagem. He fquirts his black liquor, fometimes to the quantity of a dram, by which the water becomes black as ink, under flelter of which he baffles the purfuit of his enemy. This ink or black liquor has been denominated by Mr le Cat atbiops animal, and is referved in a particular grland. In its liquid ftate it refembles that of the choroid in man; and would then communicate an indelible dye; when dry, it might be taken for the product of the black liquor in negroes dried, and made a precipitate by fpirit of wine. This xthiops animal in ne!roes as well as in the cuttle-fifh, is nore abundant after death than even during life. It may ferve either for writing or printing; in the former of which ways the Romans ufed it. It is faid to be an ingredient in the compofition of Indian ink mixed with rice. 'There are five fpecies.
r. The loligo, or great cuttle, with fhort arms and long tentacula; the lower part of the body rhomboid and pinnated, the upper thick and cylindric. 'They in. liabit all our feas, whe: ? having blackened the water by the effufion of their ink, they abfcond, and with their tail leap out of the water. 'They are gregarious and fwift in their motions: they take their prey by means of their arms; and embracing it, bring it to their central mouth. They adhere to the rocks, when they wifh to i) quiefcent, by means of the concave difes that are placed along their arms.
2. 'The octopodia, with eight arms, connected at their bottom by a membrane. This is the polypus of Pliny, which he dittinguifhes from the loligo and fepia iny the want of the tail and tentacula. They inhabit our feas, but are moft at home in the Mediterranean. In hot climates thefe are found of an enormous fize. The Indians affirm, that fome have been feen two fathoms broad over their centre, and each arm nine fathoms long. When the Indians navigate their little boats, they go in dread of them; and left thefe animals fhould fling their arms over and fink them, they never fail without an ax to cut them off. When ufed for food they are ferved un red from their own liquor,
which from boiling with the addition of nitre becomes red. Barthol. fays, upon cutting one of them open, fo great a light broke forth, that at night, upon taking away the candle, the whole houfe feemed to be in a bluze.
3. The media, or middle cuttle, with a long, flender, cylindric body; tail finned, pointed, and carinated on each fide ; two long teritacula ; the body almoft tranfparent, grcen, but convertible into a dirty brown; confirming the remark of Pliny*, that they change their colour through fear, adapting it, chameleon-like, to that of the place they are in. The eyes are large and fmaragdine.
4. The fepiola, or fmall cuttle, with a fhort body, rounded at the bottom, has a round fin on each fide and two teritacula. They are taken off Flinthhire, but chiefly inhabit the Mediterranean.
5. The officinalis, or officinal cuttle, with an ovated body, has fins along the whole of the fides, almoft meeting at the bottom; and two long tentacula. 'The body contains the bone, the cuttle-bone of the fhops, which was formerly ufed as an abforbent. The bones are frequently flung on all our fhores; the animal very rarely. The conger eels bite off their arms, or feet ; but they grow again, as does the lizard's tail (Plin. ix. 29). They are preyed upon by the plaife. This finh emits (in common with the other fpecies), when frighted or purfued, the black liquor which the ancients fuppofed darkened the circumambient wave, and concealed. it from the enemy.

The endanger'd cuttle thus evades his fears, And native hoards of fluid fafety bears. A pitchy ink peculiar glands fupply, Whofe fhades the fharpeft beam of light defy. Purfu'd, he bids the fable fountains flow, And, wrapt in clouds, eludes th' impending foe.
The fifh retreats unfeen, while felf-born nisht, With pious fhade befriends her parent's fight.
The ancients fometimes made ufe of it inftead of ink: Perfius mentions the fpecies in his defcription of the: noble fudent.

> Fam liber, et licolor pofitis membrana capillis, Inque munus charta, nodufque venit arundo.
> Tum querimur, craflus calamo quod pendeat bumor ; Nigra quod infufa venefcat fepia lympha.
> At length, his book he fpreads, his pen he takes : 1 tis papers here in learned order lays, And there his parchment's fmoother fide difplays. But oh! what croffes wait on fludious men! 'The cuttle's juice hangs clotted at our pen. In all my life fuch fuuff I never knerw, So gummy thick - Dilute it, it will do. Nay, now'tis water!

> Dryden.

This animal was efteemed a delicacy by the ancientes, and is eaten even at prefent by the Italians. Rondeletius gives us two receipts for the dreffing, which may be continued to this day. Athenæus alfo leaves us the method of making an antique cuttle-fifh faufage; and we learn from Ariftotle, that thofe animals are in higheft feafon when pregnant.

SEPIARIÆ, (from fepes, " a hedge"), the name of the \(44^{\text {th }}\) order of Linnæus's Fragments of a Natural

Method,

\section*{S E P}

Method, confifting of a beautiful collection of woody plants, fome of which, from their fize and elegance, are very proper furniture for hedges. See Botany, p. 467.

SEPS, in zoology, a fpecies of Lacerta.
SEPTARIE, in natural hittory, a large clafs of foffils, commonly known by the names of luctus Helmontii and waxen veins.

They are defined to be foffils not inflammable, nor foluble in water; of a moderately firm texture and dukky hue, divided by feveral fepta or thin partitions, and compofed of a fparry matter greatly debafed by earth; not giving fire with fteel; fermenting with acids, and in great part diffolved by them; and calcining in a moderate fire.

Of this clafs there are two diftinct orders of bodies, and under thofe fix genera. The feptarix of the firt order are thofe which are ufually found in large malfes, of a fimple uniform conftruction, but divided by large fepta either into larger and more irregular portions, or into fmaller and more equal ones, called talc. The genera of this order are four. 1. Thofe divided by fepta of fpar, called fecomia : 2. 'I hofe divided by fepta of earthy matter, called gaiopbragmia: 3. Thofe divided by fepta of the matter of the pyrites, called pyritercia: And, 4. Thofe divided by fepta of fpar, with an admixture of cryftal, called diuugoploragmia.

Thofe of the fecond order are fuch as are ufually found in fmaller maffes, of a cruftated ftructure, formed by various incruftations round a central nucleus, and divided by very thin fepta. Of this order are only two genera. I. Thofe with a fhort roundifh nucleus, incloled within the budy of the mafs; and, 2. Thofe with a long nucleus, ftanding out beyond the ends of the mafs.

SEPTAS, in botany : A genus of plants belonging to the order of Heptagynia, and the clafs of Heptandria; and in the iatural fyftem ranged under the \(13^{\text {th }}\) order, Succulenta. The calyx is divided into feven parts; the petals are feven; the germens feven: the capfules are alfo feven, and contain many feeds. There is only one species, the Capenfis, which is a native of the Cape of Good Hope, is round-leaved, and flowers in Augult or September.

SEPTEMBER, the ninth month of the year, confifting of only thirty days; it took its name as being the feventh month, reckoning from March, with which the Romans began their year.

SEPTENNIAL, any thing lafting feven years.
Septennial Elections. Blackftone, in his Commentaries, Vol. I. p. 189. fays, (atter obferving that the utmoft extent of time allowed the fame parliament to fit by the ftat. 6 W. and M. c. 2. was three years), "But, by the ftatute 1 Geo. I. ft. 2. c. 38. (in order profefedly to prevent the great and continucd expences of frequent elections, and the violent heats and animufities confequent thereupon, and for the peace and fecurity of the government, juft then recovering from the late rebellion), this term was prolonged to feven years; and what aloue is an iuftance of the valt authority of parliament, the very fame houfe that was chofen for three years enacted its own continuance for feven."
SEPTENTRIO, in aftronomy, a conftellation, more ufually called urfa minor.

In cofmography, the term feptentrio denotes the fame with north: and lence feptentrional is applied to any thing belonging to the north; as jettentrional \(\sqrt{d} \mathrm{~g} n \mathrm{~s}\), pa. rallels, \&c.

SEPTICS, are thofe fubftances which promote pu* trefaction, chiefly the calcareous earths, magnefia, and teftaceous powders. From the many curious experiments made by Sir John Pringle to afcertain the feptic and antifeptic virtues of natural bodies, it appears that there are very few fubftances of a truly Septic nature. Thofe commonly reputed fuch by authors, as the alcaline and volatile falts, he found to be no wife fiftic. However, he difcovered fone, where it feemed lealt likely to find any fuch quality; thefe were chalk, common falt, and teftaccous powders. He mixed twenty grains of crabs eyes, prepared with fix drams of ox's gall, and an equal quantity of water. Into another phial he put an equal quantity of gall and water, but no crabs-eyes. Both thefe mixtures being placed in the furnace, the putrefaction began much fooner, where the powder was, than in the other phial. On making a like experiment with chalk, its feptic virtue was found to be much greater than that of the crabs-eyes: nay, what the doctor had never met with before, in a mixture of two drams of flefh, with two ounces of water and thirty grains of prepared chalk, the flefh was refolved into a perfect mucus in a few days.

To try whether the teftaceous powders would alfo diffolve vegetable fubftances, the doctor mixed them with barley and water, and compared this mixture with another of barley and water alone. After a long maceration by a fire, the plain water was found to fwell the barley, and turn mucilaginous and four; but that with the powder kept the grain to its natural fize, and though it foftened it, yet made no mucilage, and remained fweet.

Nothing could be more unexpected, than to find fea falt a haltener of putrefaction; but the fact is thus; one dram of falr preferves two drams of frefh beef in two ounces of water, above thirty hours uncorrupted, in a heat equal to that of the human body; or, which is the fame thing, this quantity of falt keeps flefh fweet \(t\) wenty hours longer than pure water ; but then half a dram of falt does not preferve it above two hour3 longer. T'wenty-five grains have little or no antifeptic virtue, and ten, fifteen, or even twenty grains, mamifettly both hatten and heighten the corruption. The quantity which had the moft putrefying quality, was found to be about ten grains to the above proportion of flefh and water.

Many inferences might be drawn from this experiment : one is, that fince falt is never taken in aliment beyond the proportion of the corrupting quantities, it would appear that it is fubfervient to digeftion chiefly by its \(J e_{1} t i c\).virtue, that is, by fottening and refolving meats ; an action very different from what is commonly believed.

It is to be obferved, that the above experiments were made with the falt kept for domeftic ufes. See Pringle's Obferv. on the Dileafes of the army, p. \(34^{x}\), et feq.

SEPTIZON, or Septizonium, in Roman antiqui. ty, a celebrated maufoleum, built by Septimus Severus, in the tenth region of the city of Kome: it was fo \(\mathrm{Nn}_{2}\)
called

Septrage- called from feltem and zona, by reafon it confifted of fima, Sepruapint Sopranint feven ftories, each of which was furrounded by a row of columns.
SEPTUAGESIMA, in the kalendar, denotes the third Sunday before Lent, or before Quadragefima Sunday: fuppofed by fome to take its name from its being about feventy days before Eafter.

SEPTUAGINT, the name given to a Greek verfion of the books of the Old Teftament, from its being fuppofed to be the work of feventy-two Jews, who are ufually called the jeventy interpreters, becaufe feventy is a round number.

The hiftory of this verfion is exprefsly written by Arifteas, an officer of the guards to Ptolemy Philadelphus, the fubftance of whofe account is as follows: Prolemy having erected a fine library at Alexandria, which he took care to fill with the moft curious and valuable books from all parts of the world, was informed that the Jews had one containing the laws of Mofes, and the hitory of that people ; and being defirous of enriching his library with a Greek tranflation of it, applied to the high-prieft of the Jews; and to engage him to comply with his requeft, fet at liberty all the Jews whom his father Ptolemy Soter had reduced to flavery. After fuch a ttep, he eaflly obtained what he defired; Eleazar the Jewifh high-prieft fent back his ambaffadors with an exact copy of the Mofaical law, written in letters of gold, and fix elders of each tribe, in all Ceventy-two; who were received with marks of refpect by the king, and then conducted into the ine of Pharos, where they were lodged in a houle prepared for their reception, and fupplied with every thing ne. ceffary. They fet about the tranflation without lofs of time, and finifhed it in feventy-two days: and the whole being read in the prefence of the king, he admired the profound wifdom of the laws of Mofes; and fent back the deputies laden with prefents, for themfelves, the highprieft, and the temple.

Ariftobulus, who was tutor to Ptolemy Phyfcon, Philo who lived in our Saviour's time, and was contemporary with the apoftles, and Jofephus, fpeak of this tranflation as made by 72 interpreters, by the care of Demetrius Phalereus in the reign of Ptolemy Philadelphus. All the Chriftian writers, during the firft 15 centuries of the Chritian era, have admitted this account of the Septuagint as an undoubted fact. But fince the reformation, critics have boldly called it in queftion, becaufe it was attended with circumftances which they think inconfiftent, or, at leaft, improbable. Du Pin has afked, why were 72 interpreters employed, fince 12 would have been fufficient? Such an objection is trifling. We may as well afk, why did king James I. employ 54 tranflators in rendering the Bible into Englifh, fince \(D u\) Pin. thinks 12 would have been fufficient ?
1. Prideaux objects, that the Septuagint is not written in the Jewif, but in the Alexandrian, dialect; and could not therefore be the work of natives of Paleftine. But thefe dialects were probably at that time the fame, for both Jews and Alexandrians had received the Greek language from the Macedonians about 50 years before.
2. Prideaux farther contends, that all the bonks of the Old Teftament could not be trannlated at the fame time; for they exhibit great difference of flyle. To this it is
fufficient to reply, that they were the work of 72 men, Septur each of whom had feparate portions affigned them.
3. The Dean alfo urges, that Ariftras, Ariftobulus, Philo, and Jofephus, all directly tell us, that the law was tranflated without mentioning any of the other facred books. But nothing was more common among writers of the Jewifh nation than to give this name to the Scriptures as a whole. In the New Teftament law is ufed as fynonymous with what we call the Old Teftament. Befides, it is exprefsly faid by Ariftobulus, in a fragment quoted by Eufebius (Prap. Eqian. 1. 1.), that the whole Sacred Scripture was rightly tranlated through the means of Demetrius Phalereus, and by the command of Philadelphus. Jofephus indeed, fays the learned Dean, afferts, in the preface to his Antiquities, that the Jewif interpreters did not tran@ate for Ptolemy the whole Scriptures, but the law only. Here the evidence is contradictory, and we have to determine, whether Ariftobulus or Jofephus be moft worthy of credit. We do not mean, however, to accule either of forgery, but only to inquire which had the beft opportunities of knowing the truth. Ariftobulus was an Alexandrian Jew, tutor to an Egyptian king, and lived within 100 years after the tranflation was made, and certainly had accefs to fee it in the royal library. Jofephus was a native of Paleftine, and lived not until 300 years or more after the tranflation was made, and many yeare after it was burnt along with the whole library of A. lexandria in the wars of Julius Cæfar. Suppofing the veracity of thefe two writers equal, as we have no proof of the contrary, which of them ought we to confider as the beft evidence? Ariftobulus furely. Prideaux, indeed, feems doubtful whether there was ever fuch a man; and Dr Hody fuppofes that the Commentaries on the five books of Mofes, which bear the name of Ariftobulus, were a forgery of the fecond century. To prove the exiftence of any human being, who lived 2000 years before us, and did not perform fuch works as no mere man ever performed, is a tak which we are not difpofed to undertake; and we believe it would not be leis difficult to prove that Philo and Jofephus exifted, than that fuch a perfon as Ariftobulus did not exift. If the writings which have paffed under his name were a forgery of the fecond century, it is furprifing that they Chould have impofed upon Clemens Alexandrinus, who lived in the fame century, and was a man of abilities, learning, and well acquainted with the writings of the ancients. Eufebius, too, in his Prap. Evan. quotes the commentaries of Ariftobulus. But, continues the learned Dean, "Clemens Alexandrinus is the firt au* thor that mentions them. Now, had any fuch commentaries exitted in the time of Philo and Jofephus, they would furely have mentioned them. But is the circumftance of its not being quoted by every fucceeding author a fufficient reafon to difprove the authenticity of any book? Neither Philonor Jofephus undertook to give a lift of preceding authors, and it was by no means the uniform practice of thefe times always to name the authors from whom they derived their intor mation."
4. Prideaux farther contends, that the fum which Ptolemy is faid to have given to the interpreters is too great to be credible. If his computation were juft, it certainly would be fo. He makes it. L. 2,000,0 a

\section*{S E P [ 285\(] \quad\) S E P}
gint. Sterling, but other writers* reduce it to L. \(85,42.1\), - and fome to L. 56,947 ; neither of which is a fum fo very extraordinary in fo great and magnificent a prince as Philadelphus, who fpent, according to a paftage in Athenæus (lib. v.), no lefs than 10,000 talents on the furniture of one tent; which is fix times more than what was fpent in the whole of the embaffy and tranflation, which amounted only to 1552 talents.
5. Prideaux fays, " that what convicts the whole flory of Ariteas of fallity is, that he makes Demetrius Pha. lereus to be the chief actor in it, and a great favourite of the king; whereas Philadelphus, as foon as his father was dead, caft him into prifon, where he foon after died." But it may be replied, that Philadelphus reign. ed two years jointly with his father Lagus, and it is not faid by Hermippus that Demetrius was out of favour with Philadelphus during his father's life. Now, if the Septuagint was tranflated in the beginning of the reign of Philadelphus, as Eufebius and Jerome think, the difficulty will be removed. Demetrius might have been librarian daring the reign of Philadelphus, and yet imprifoned on the death of Lagus. Indeed, as the caufe of Philadelphus's difpleafure was the advice which Demetrius gave to his father, to prefer the fons of Arfinoë before the fon of Berenice, he could fcarcely fhow it till his father's death. The Septuagint tranflation might therefore be begun while Philadelphus reigned jointly with his father, but not be finifhed till after his father's death.
6. Befides the objections which have been confidered, there is only one that deferves notice. The ancient Chriftians not only differ from one another concerning the time in which Ariftobulus lived, but even contradiet themfelves in different parts of their works. Sometimes they tell us, he dedicated his book to Ptolemy Philometer, at other times they fay, it was addreffed to Philadelphus and his father. Sometimes they make him the fame perfon who is mentioned in 2 Maccabees, chap I. and fometimes one of the 72 interpreters 152 years before. It is difficult to explain how authors fall into fuch inconfiftencies, but it is probably occafioned by their quoting from memory. This was certainly the practice of almoft all the early Chriftian writers, and fometimes of the apoftles themfelves. Miftakes were therefore inevitable. Jofephus has varied in the circumftances of the fame event, in his antiquities and wars of the Jews, probably from the fame caufe; but we do not hence conclude, that every circumftance of fuch a relation is entirely falfe. In the account of the Marquis of Argyle's death in the reign of Charles II. we have a very remarkable contradiction. Lord Clarendon relates, that he was condemned to be hanged, which was performed the fame day: on the contrary, Burnet, Woodrow, Heath, Echard, concur in ftating, that he was beheaded; and that he was condemned rapb. upon the Saturday and executed upon the Monday \(\dagger\). Was any reader of Englifh hiftory ever iceptic enough to raife from hence a queftion, whether the Marquis of Argyle was executed or not? Yet this ought to be left in uncertainty according to the way of reafoning in which the facts refpecting the tranflation of the Septuagint is attempted to be difproved.

Such are the objections which the learned and ingenious Prideaux has raifed againft the common account of the Septuagint tranflation, and fuch are the anfwers
which may be given to them. We have chofen to fup- Septuagint port that opinion which is fanctioned by hiftorical evidence, in preference to the conjectures of modern critics however ingenious; being perfuaded, that there are mae ny things recorded in hiftory, which, though perfectly true, yet, from our imperfect knowledge of the conco. mitant circumftances, may, at a diftant period, feem liable to objections. To thofe who require pofitive evidence, it may be fated thus. Ariftæas, Ariftobuluss Philo, and Jofephus, affure us, that the law was tranf. lated. 'Taking the law in the moft reftricted fenfe, we have at leaft fufficient authority to affert, that the Pentateuch was rendered into Greek under Ptolemy Phila。 delphus. Aritobulus affirms, that the whole Scriptures were tranflated by the 72 . Jofephus confines their labours to the books of Mofes. He therefnre who cannot determine to which of the two the greateft refpect is due, may fufpend his opinion. It is certain, however, that many of the other books were tranflated before the age of our Saviour; for they are quoted both by him and his apoftles: and, perhaps, by a minute exa. mination of ancient authors, in the fame way that Dr Lardner has examined the Chriftian fathers to prove the antiquity of the New Tettament, the precife period in which the whole books of the Septuagint were compofed might, with confiderable accuracy, be afcertained.

For 400 years this tranflation was in high eftimation with the Jews. It was read in their fynagogues in preference to the Hebrew; not only in thofe places where Greek was the common language, but in miny fynagogues of Jerufalem and Judea. But when they faw that it was equally valued by the Chriftians, they be came jealous of it, and at length, in the fecond century, Aquila, an apoftate Chriftian, attempted to fubftitute another Greek tranflation in its place In this work he was careful to give the ancient prophecies concerning the Meffiah a different turn from the Septuagint, that they might not be applicable to Chrift. In the fame defign he was followed by Symmachus and Theodotion, who alfo, as St Jerome informs us; wrote out of hatred to Chriltianity.

In the mean time, the Septuagint, from the ignorance, boldnefs, and careleffnefs of tranfcribers, became full of errors. To correct thefe, Origen publifhed a new edition in the beginning of the third century, in which he placed the tranflations of Aquila, Syinmachus, ant Theodotion. This edition was called \(/\) etrupla, the tranflations being arranged oppofite to one another in four columns. He alfo added one column, containing the Hebrew text in - H ebrew letters, and another exhibiting; it in Greek. In a fecond edition he publifhed two ad ditional Greek verfions; one of which was found at Ni. copolis, and the other at Jericho: this was called the Hexapla By comparing fo many tranflations, Origen endeavoured to form a correct copy of the Scriptures. Where they all agreed, he confidered them right. The paflages which he found in the LXX, but not in the Hebrew text, he marked with an obelifk:- what he found in the Hebrew, but not in the LXX, he marked with an afterilk St Jerome fays, that the additions which Origen made to the LXX, and marked with an: afterifk, were taken trom Theodotion. From this valuable work of Origen the verfion of the L.XX was, tranfcribed in a leparate volume, with the atterilks and?
abelijks
nology ware extant till the time of Eufebius, and fome septuagint obelifks for the ufe of the churches ; and from this circumftance the great work itfelf was neglected and lof. About the year 300 two new editions of the LXX were publifhed'; the one by Hefychius an Egyptian bifhop, and the other by Lucian a prefbyter of Antioch. But as thele authors did not mark with any note of diftinction the alterations which they had made, their edition does not poffefs the advantages of Origen's.

The beft edition of the LXX is that of Dr Grabe, which was publifhed in the beginning of the prefent century. He had accefs to two MSS, nearly of equal antiquity, the one found in the Vatican library at Rome, the other in the Royal library at St James's, which was prefented to Charles I. by Cyril, patriarch of Alexandria, and hence is commonly called the Aiexandrine MS. Anxious to difcover which of thefe was according to the edition of Origen, Dr Grabe collected the fragments of the Hexapla, and found they agreed with the Alexandrian MS. but not with the Vatican where it differed with the other. Hence he concluded that the Alexandrine MS. was taken from the edition of Origen. By comparing the quotations from fripture in the works of Athanafius and St Cyril (who were patriarchs of Alexandria at the time St Jerome fays Hefychius's edition of the LXX was there ufed) with the Vatican MS. he found they agreed fo well that he juftly inferred that that MS. was taken from the edition of Hefychius.

This verfion was in ufe to the time of our bleffed Saviour, and is that out of which moft of the citations in the New Teftament, from the Old, are taken. It was alfo the ordinary and canonical tranlation made ufe of by the Chriftian church in the earlieft ages; and it ftill fubfifts in the churches both of the eaft and svelt.

Thofe who defire a more particular account of the Sepruagint tranflations may confult Hody de Bibliorum Textibus, Prideaux's Connections, Owen's Inquiry into the Septuagint Verfion, Blair's Lectures on the Canon, and Michaelis's Introduction to the New Teftament, laft edition.

SEPTUAGINT Cbronology, the chronology which is formed from the dates and periods of time mentioned in the Septuagint tranflation of the Old Teftament. It reckons 1500 years more from the creation to Abraham than the Hebrew bible. Dr Kennicot, in the differtation prefixed to his Hebrew bible, has fhown it to be very probable that the chronology of the Hebrew feriptures, fince the peried juft mentioned, was corrupted by the Jews, between the years 175 and 200, and that the chronology of the Septuagint is more agreeable to truth. It is a fact, that during the fecond and third centuries the Hebrew fcriptures were almoit entirely. in the hands of the Jews, while the Septuagint was confined to the Chriftians. The Jews had therefore a very favourable opportunity for this corruption. 'The following is the reafon which is given by oriental writers: It being a very ancient tradition, that the Meffiah was to come in the fixth chiliad, becaufc he was to come in the lait days (founded on a myytical application of the fix days creation), the contrivance was to. Sorten the age of the world from about 5500 to 3760 ; and thence to prove that Tefus could not be the Mrefrah. Dr Kennicot adds, that fome Hebrew copies having the larger chro-
till the year 700.
SEPTUM, in anatomy, an inclofure or partition ; a term applied to feveral parts of the body, which ferve to feparate one part from another; as, Jeptum narium, or partition between the noftrils, \&c.

SEPULCHRAL, fomething belonging to fepulchres or tombs: thus a fepulchral column is a column erected over a tomb, with an infcription on its fhaft ; and fepulchral lamps, thofe faid to have been found burning in the tombs of feveral martyrs and others. See Lamp.
SEPULCHRE, a tomb or place dcflined for the interment of the dead. 'This term is chiefly ufed in fpeaking of the burying-plates of the ancients, thofe of the moderns being ufually called tombs.
Scpulchres were held facred and inviolable ; and the care taken of them has always bcen held a religious duty, grounded on the fear of God, and the belief of the foul's immortality. Thofe who have fearched or violated them have been thought odious by all nations, and were always feverely punifhed.
The Egyptians called Cepulchres eternal houfes, in contradiftinction to their ordinary houfes or palaces, which they called inns, on account of their fhort ftay in the one in comparifon of their long abode in the other. See 'Іомв.
Regular Canons of St Sepulchre, a religious order, formerly inftituted at Jerufalem, in honour of the holy fepulchre, or the tomb of Jefus Chrift.

Many of thefe canons were brought from the Holy Land into Eurcpe, particularly into France, by Louis the Younger ; into Poland, by Jaxa, a Polifh gentleman ; and into Flanders, by the counts thereof; many alfo came into England. This order was, however, fuppreffed by pope Innocent VIII. who gave its revenues and effects to that of our Lady of Bethlelem: which allo becoming extinct, they were beftowed on the knights of St John of Jerufalem. But the fup. preffion did not take effect in Poland, where they ftill fublift, as alfo in feveral provinces of Germany. Thefe canons follow the rule of St Auguftine.

Knights of the Holy Sepulchre, a military order, eftablifhed in Paleftinc about the year 1114.

The knights of this order in Flanders chofe Philip II. king of Spain, for their mafter, in 15.58 , and afterwards his fon; but the grand-malter of the order of Malta prevailed on the laft to refign; and when afterwards the duke of Nevers affuned the fame quality in France, the fame grand-mafter, by his intereft and credit, procured a like renunciation of him, and a confirmation of the union of this order to that of Malta.

SEQUANI, a pcople anciently forming a part of Gallia Celtica, but annexed to Belgica by Auguftus, feparated from the Helvetii by mount Jura, with the Rhine on the eaft (Strabo), bordering on the Edui, and Seguftiano to the fouth, and Lingones to the weit (Tacitus). Now Franche Comte.

SEQUESTRATION, in cominon law, is fetting afide the thing in controverfy from the poffeffion of both the parties that contend for it. In which fenfe it is etther voluntary, as when done by the confent of the parties; or neceffary, as where it is done by the
fra- judge, of his own authority, whether the parties will or not.

Sequestration, in the civil law, is the act of the ordinary, difpofing of the goods and chattels of one deceafed, whofe eftate no man will meddle with.

A widow is alfo faid to fequefter, when fhe difclaims having any thing to do with the eftate of her deceafed hufband.

Among the Romanifts, in queftions of marriage, where the wife complains of impotency in the hufband, fhe is to be fequeftered into a convent, or into the hands of matrons, till the procefs be determined.
- Sequestration is alfo ufed for the act of gathering the fruits of a benefice void, to the ufe of the next incumbent.

Sometimes a benefice is kept under fequeftration for many years, when it is of fo fmall value, that no clergyman fit to ferve the cure will be at the charge of taking it by inflitution; in which cafe the fequeftration is committed either to the curate alone, or to the curate and church-wardens jointly. Sometimes the profits of a living in controverfy, either by the confent of the parties, or the judge's authority, are fequeftered and placed for fafety in a third hand, till the fuit is determined, a minitter being appointed by the judge to ferve the cure, and allowed a certain falary out of the profits. Sometimes the profits of a living are fequeftered for neglect of duty, for dilapidations, or for fatisfying the debts of the incumbent.

Sequestration, in chancery, is a commiffion ufually directed to feven perfons therein named, empowering them to feize the defendant's perfonal eflate, and the profits of his real, and to detain them, fubject to the order of the court. It iffues on the return of the ferjeant at arms, wherein it is certified, that the defendant had fecreted himfelf.

Sequeftrations were firft introduced by Sir Nicholas Bacon, lord keeper in the reign of Queen Elizabeth; before which the court found fome difficulty in enforcing its procefs and decrees; and they do not feem to be in the nature of procefs to bring in the defendant, but only intended to enforce the performance of tlie court's decree.

A fequeftration is alfo made, in London, upon alı action of debt ; the courfe of proceeding in which cafe is this: The action being entered, the officer goes to the defendant's fhop or warehoufe, when no perfon is there, and takes a padlock, and langs it on the door, uttering thefe words: "I do fequefter this warehoufe, and the goods and merclandize therein, of the defendant in this action, to the ufe of the plaintiff," sc. after which he fets on his feal, and makes a return of the fequeftration in the compter; and four days being paffed after the return made, the plaintiff may, at the next court, have judgment to open the fhop or warelioufe, and to have the goods appraifed by two freemen, who are to be fworn at the next court held for that compter; and then the ferjeant puts his hand to the bill of appraifement, and the court grants judgment thereon ; but yet the defendant may put in bail before fatisfaction, and by that means diffolve the fequeftration; and after fatisfaction, may put in bail to dilprove the debt, sic.

In the time of the civil wars, fegtueftration was ufed
for a feizing of the eftates of delinquents for the ufe of Sequefra。 the commonwealth.

Secuestration, in Scots law. See Law, p. 683. \({ }_{\text {Seraglio. }}\) SEQUIN, a gold coin, ftruck at Venice, and in feveral parts of the Grand Signiur's dominions. In Turkey it is called dabab, or piece of gold, and according to Volney is in value about 6s. 3 d . Sterling. It varies, however, confiderably in its value in different countries. At Venice it is equal to about 9s. 2d. Sterling.

The Venctian fequins are in great requeft in Syria, from the fimenefs of their flandard, and the practice they have of employing them for womens trinkets. The fafion of thefe trinkets does not require much art ; the piece of gold is fimply pierced, in order to fufpend it by a chain, likewife of gold, which flows upon the breaft. The more fequins that are attached to this chain, and the greater the number of thefe chains, the more is a woman thought to be ornamented. This is the favourite luxury, and the emulation of all ranks. Even the female peafants, for want of gold, wear piaftres or fmaller pieces ; but the women of a certain rank difdain filver ; they will accept of nothing but fequins of Venice, or large Spanifh pieces, and crufadoes. Some of them wear 200 or 300 , as well lying flat, as ftrung one on another, and hung near the forehead, at the edge of the head-drefs. It is a real load : but they do not think they can pay too dearly for the fatisfaction of exhibiting this treafure at the public bath, before a crowd of rivals, to awaken whofe jealoufy conttitutes their chief pleafure. 'I he effect of this luxury on commerce, is the withdrawing confiderable fums from circulation, which remain dead; befides, that when any of thefe pieces return into common ufe, having loft their weight by being pierced, it becomes neceffary to weigh them. The practice of weighing money is general in Syria, Egypt, and all Turkey. No piece, however effaced, is refufed there ; the merchant draws out his ccales and weighs it, as in the days of Abraham, when he puichafed his fepulchre. In confiderable payments, an agent of exchange is fent for, who counts paras by thoulands, rejects a great many pieces. of falle moncy, and weighs all the fequins, either feparatcly or together.

SERAGLIO, formed from the Perfian word ferazu, or Turkih word farai, which fignifies a houfe, and is commonly ufed to exprefs the houfe or palace of a prince. In this fenfe it is frequently ufed at Conftantinople ; the houfes of foreign ambaffadors are called \(/ e\) raglics. But it is commonly ufed by way of eminence for the palace of the grand fignior at Conftantinople, where he keeps his court, and where his concubines are lodged, and where the youth are trained up for the chief polts of the empire.
'It is a triangle abont three Italian miles round, whol: ly within the city, at the end of the promontory Chryfoceras, now called the Seraglio Point. The buildings run back to the top of the hill, and from thence are gardens that reach to the edge of the fea. It is inclofed with a very ligh and ftrong wall, upon which there: are feveral watch towers: and it has many gates, fome of which open towards the fea-fide, and the reft into the city; but the chief gate is one of the latter, which is conftantly guarded by a company of capoochees, or porters; and in the night it is well guarded towards

\section*{S E R [ 288 ] S E R}
\$epagho the fea, The outward appearance is not very beautirate edifices in the form of pavilions and domes.

The ladies of the feraglio are a collection of beauti, ful young women, chiefly fent as prefents from the prowinces and the Greek inlands, moft of them the children of Chriftian parents The brave prince Heraclius hath for fome years paft abolifhed the infamous tribute of children of both fexes, which Georgia formerly paid every year to the Porte. The number of women in the harem depends on the tafte of the reigning morarch or fultan. Sclim had 2000, Achmet had but 300, and the late fulean had nearly 1600 . On their admiffion they are committed to the care of old ladies, taught fewing and embroidery, mufic, dancing, and other accomplifhments, and furnifhed with the richeft clothes and ornaments. They all fleep in feparate beds, and between every fifth there is a preceptrefs. Their chief governefs is called Katon Kiaga, or governefs of the noble young ladies. There is not one fervant among them, for they are obliged to wait on one another by rotation ; the laft that is entered ferves her who preceded her and herfelf. Thefe ladies are fcarcely ever fuffered to go abroad, except when the grand fignior removes from one place to another, when a troop of black eunuchs conveys them to the boats, which are inclofed with lattices and linen curtains; and when they go by land they are put into clofe chariots, and fignals are made at certain diftances, to give notice that none approach the roads through which they march. The boats of the harem, which carry the grand fignior's wives, are manned with 24 rowers, and have white covered tilts, Thut alternately by Venetian blinds. Among the emperor's attendants are a number of mutes, who act and converfe by figns with great quicknefs, and fome dwarfs, who are exhibited for the diverfion of his majefty.

When he permits the women to walk in the gardens of the feraglio, all people are ordered to retire, and on every fide there is a guard of black eunuchs, with fa. bres in their hands, while others go their rounds in order to hinder any perfon from feeing them. If, unfortunately, any one is found in the garden, even thro' ignorance or inadvertence, he is undoubtedly killed, and his head brought to the feet of the grand fignior, who gives a great reward to the guard for their viegilance. Sometimes the grand fignior paffes into the gardens to amufe himfelf when the women are there; and it is then that they make ufe of their utmoft efforts, by dancing, finging, feduciň geftures, and amorous blandifhments, to enfnare the affections of the monarch. It is not permitted that the monarch fhould take a virgin to his bed, except during the folemn feftivals, and on occafion of fome extraordinary rejoicings, or the arrival of fome good news. Upon fuch occafions, if the ful. tan choofes a new companion to his bed, he enters into the apartment of the women, who are ranged in files by the governeffes, to whom he fpeaks, and intimates the perfon he likes beft : the ceremony of the handkerchief, which the grand firnior is faid to throw to the girl that he elects, is an inle tale, without any founda. tion. As foon as the grand firnior has chofen the girl that he has deftined to be the partner of his bed, all the others follow her to the bath, waking and perfuming ber, and drefling her fuperbly, conducting her finging,
dancing, and rejoicing, to the bed-chamber of the grand fignior, who is generally, on fuch an occafion, already in bed. Scarcely has the new-elected favourite entered the chamber, introduced by the grand eunuch who is upon guard, than fhe kneels down, and when the fultan calls her, fhe creeps into bed to him at the foot of the bed, if the fultan does not order her, by efpecial grace, to approach by the fide: after a certain time, upon a fignal given by the fultan, the governef's of the girls, with all her fuite, enter the aparthlent, and take her back again, conducting her with the fame ceremony to the womens apartments; and if by good fortune fhe becomes pregnant, and is delive:ed of a boy, fhe is called afaki fultanefs, that is to fay, fultanefs-mother ; for the firft fon the has the honour to be crowned, and the has the liberty of forming her court. Eunuchs are alfo affirned for her guard, and for her particular fervice. No other ladies, though delivered of boys, are either crowned or maintained with fuch coftly diftinction as the firit ; however, they have their fervice apart, and handfome appointments. Af. ter the death of the lultan, the mothers of the male children are fhut up in the old feraglio, from whence they can never come out any more, unlefs any of their fons afcend the throne. Baron de 'lott in. forms us, that the female have who becomes the mother of a fultan, and lives long enough to fee her fon mount the throne, is the only woman who at that period alone acquires the diftinction of fultuna-mother; fhe is till then in the interior of her prifon with her fon. The title of bache kadun, principal woman, is the firt dignity of the grand fignior's harem; and the hath a larger allowance than thole who have the title of fecond, third, and fourth woman, which are the fuur free women the Koıan allows.

This is a defcription of the grand fignior's feraglio : we fhall now add an account of the feraglio or harem, as it is often called, of the emperor of Morocco, from the very interefting tour of Mr Lempriere. 'This gentleman being a furgeon by profeffion, was admitted into the harem to prefcribe for fome of the ladies who were indifpored, and was therefore enabled to give a particular account of this female prifon, and, what is fill more curious, of the manners and behaviour of its inhabitants.

The harem forms a part of the palace. The apartments, which are all on the ground floor, are fquare, very lofty, and four of them inclofe a fpacious fquare court, into which they open by means of large folding doors. In the centre of thefe courts, which are floored with blue and white checquered tiling, is a fountain, fupplied by pipes from a large refervoir on the outfide of the palace, which ferves for the frequent ablutions recommended by the Mahometan religion, as well as for other purpofes. The whole of the harem confaits of about twelve of thefe fquare courts, conmunicating with each other by narrow paffages, which afford a tree accefs from one part of it to another, and of which all the women are allowed to avail themielves.
The apartments are ornamented on the outlide with beautitul carved wood. In the infide molt of the roo:ns are hung with rich damakk of various colours; the floors are covered with beautiful carpets, and there are matreffes difpofed at different diftances, for the pura poles of fitting and Aeeping.

S E"R \(\int 28\)
Bcfides thefe, the apartments are furnifhed at each extremity with an elegant European mahogany bed-
ftead, hung with damafk, having on it feveral matreffes placed one over the other, whifich are covered with various coloured filks; but thefe beds are merely placed there to ornament the room. In all the apartments, without exception, the ceiling is wood, carved and painted. The principal ornaments in fome were large and valuable looking-glaffes, hung on different parts of the walls. In others, clocks and watches of different fizes, in glafs cafes, were difpofed in the fame manner.

The fultana Lalla Batoom and another favourite were indulged with a whole fquare to themfelves; but the concubines were only each allowed a lingle room.

Each female had a feparate daily allowance from the emperor, proportioned to the eftimation in which they were held by hin. The late emperor's allowance was very trifling: Lalla Douyaw, the favourite fultana, had very little more than half-a-crown Englifh a-day, and the others lefs in proportion. It muft be allowed, that the emperor made them, occafional prefents of money, drefs, and trinkets; but this could never be fufficient to fupport the number of domeftics and other expences they mult incur. Their greateft dependence therefore was on the prefents they received from thofe Europeans and Moors who vifited the court, and who employed their influence in obtaining fome particular favour from the emperor. This was the moft fuccefsful mode that could be adopted. When Mr Lempriere was at Morocco, a Jew, defirous of obtaining a very advantageous favour from the emperor, for which he had been a long time unfuccefsfully foliciting, fent to all the principal ladies of the harem prefents of pearls to a very large amount; the confequence was, that they all went in a body to the emperor, and immediately obtained the wifhed-for conceffion.

The ladies feparately furnifh their own rooms, hire their own domeftics, and, in fact, do what they pleafe in the harem, but are not permitted to go out without an exprefs order from the emperor, who very feldom grants them that favour, except when they are to be removed from one palace to another. In that cafe, a party of foldiers is difpatched a little diftance before them, to difperfe the male paffengers in particular, and to prevent the poffibility of their being feen. This previous Itep being taken, a piece of linen cloth is tied round the lower part of the face, and afterwards thefe miferable females cover themfelves entirely with their laicks, and either mount mules, which they ride like men, or, what is more ufual, are put into a fquare carriage or litter, conftrueted for this pupofe, which by its lattice-work allows them to fee without being feen. In this manner they fet off, under the charge of a guard of black eunuchs. This journey, and fometimes a walk within the bounds of the palace, with which they are, however, feldom indulged, is the only exercife they are permitted to take.

The late emperor's harem confifted of between 60 and 100 females, befides their domeftics and flaves, which were very numerous. Many of the concubines were Moorifh women, who had been prefented to the emperor, as the Moors confider it an honour to have their daughters in the harem; feveral were European nlaves, who had cither been made captives, or purchased by the emperor ; and fome were Negroes.

Vol. XVII. Part 1.

\section*{S E R}

In this group the Europeans, or their defcendants, had by far the greateft claim to the character of handfome. There was one in particular, who was a native of Spain, and taken into the harem at about the fame age as Lalla Douyaw, who was indeed a perfect beauty. Nor was this lady quite fingular in that refpect, for many others were alnoft equally handfome.

The euntuchs, who have the entire clarge of the women, and who in fact live always among them, are the children of Negro flaves. They are generally either very fhort and tat, or elfe tall, deformed, and lame. Their voices have that particular tone which is obfervable in youths who are juft arriving at manhood; and their perfons altogether afford a difgufting inage of weaknefs and effeminacy.

The fame gentleman gives us a very curious account of the manners and ignorance of thefe immured females, from his own obfervation, when vifiting the prince's harem. "Attended by an eunuch (fays he), after paffing the gate of the harem, which is always locked, and nnder the care of a guard of eunuchs, we entered a narrow and dark paffage, which foon brought us to the court, into which the womens chambers open. We here faw numbers of both black and white women and children ; fome concubines, fome flaves, and others hired domeftics.
"Upon their obferving the unufual figure of an European, the whole multitude in a body furrounded me, and expreffed the utmoft aftonifhment at my drefs and appearance. Some ftood motionlefs, with their hands lifted up, their eyes fixed, and their mouths open, in the ufual attitude of wonder and furprife. Some burft into immoderate fits of laughter; while others again came up, and with uncommon attention eyed me from head to foot. The parts of my drefs which feemed moft to attract their notice were my buckles, buttons, and flockings; for neither men nor women in this country wear any thing of the kind. With refpect to the club of my hair, they feemed utterly at a lofs in what view to confider it ; but the powder which I wore they conceived to be employed for the purpofe of deftroying vermin. Moft of the children, when they faw me, ran away in the moft perfect contternation; and on the whole, I appeared as fingular an animal, and I dare fay had the honour of exciting as much curiofity and attention, as a lion or a man-tiger juft imported from abroad, and introduced into a country town in England on a market-day. Every time I vifited the harem, I was furrounded and laughed at by this curious mob, who, on my entering the gate, followed me clofe to the very chamber to which I was proceeding, and on my return univerfally efcorted me out.
"The greateft part of the women were uncommonly fat and unwieldy; had black and full eyes, round faces, with fmall nofes. They were of different complexions; fome very fair, fome fallow, and vothers again perfect Negrues.
"One of my new patients being ready to receive me, I was defired to walk into her 100 m ; where, to my great furprife, I faw nothing but a curtain drawn quite acrofs the apartment, fimilar to that of a theatre which feparates the fage from the audience. A female domeftic brought a very low ftool, placed it near the curtain, and told me I was to lit down there, and feel her miitrefs's pulfe.

\section*{S E R [ 290 ] S E, R}

Seraglio." "The lady, who had by this time fummoned up'courage to feeak, introduced her hand from the bottom of the curtain, and defired me to inform her of all her complaints, which the conceived I might perfectly do by merely feeling the pulfe. It was in vain to afl her where her pain was feated, whether in her foonach, head, or back; the only anfwer I could procure was a requeft to feel the pulfe of the other hand, and then point out the feat of the difeafe, and the nature of the pain.
"Having neither fatisfied my curiofity by exhibiting her face, nor made me acquainted with the nature of hier complaint, I was under the neceffity of informing her in pofitive terms, that to undertand the difeafe, it was abfolutely neceffary to fee the tongue as well as to feel the pulfe; and that without it I could do nothing for her. My eloquence, or rather that of my Jewifh interpreter, was, however, for a long time exerted in vain ; and I am perfuaded the would have difmiffed me without any further inquiry, had not her invention fupplied her with a happy expedient to remove her embarrafment. She contrived at laft to cut a hole through the curtain, through which fhe extruded her tongue, and thus complied with my injunction as far as it was neceffary in a medical view, but moft cffectually difappointed my curiofity.
"I was afterwards ordered to look at another of the prince's wives, who was affected with a fcrophulous twelling in her neck. This lady was, in the fame manner as the other, at firf excluded from my fight ; but as the was obliged to flow me her complaint, I had an opporiunity of fecing her face, and obferved it to be very handfome."

It is curious to obferve the ftrange and childifh notions of perfons who have been totally fecluded from the world. All the ladies of the harem expected that our: author fhould have inftantly difcovered their complaints upon feeling the pulfe, and that he could cure every difeafe inftantaneoully. He found them proud and vain of their perfons, and extremely ignorant. "Among many ridiculous queftions, they afked my interpreter (fays Mr Lempriere) if I could read and write ; upon being anfwered in the affirmative, they expreffed the utmof furprife and admiration at the abilities of the Chriftians. There was not one among them who could do either ; thefe rudiments of learning are indeed only the lot of a few of their men, who on that acsount are named Talls, or explaincrs of the Mahometan law."

It is melancholy to reflect on the fituation of thefe unfortunate women. Being confidered as the mere inftruments of pleafure, no attention is paid to the improvement of their minds. They have no employment to occupy their time. Their needle-work is performed by Jeweffes; their food is deeffed, and their chambers taken care of, by flaves and domettics. They have no anufement but a rude and karbarous kind of melancholy mufic, without melody, variety, or tafte; and converfation with one another, which muft indeed be very confined, uniform, and inanimate, as they never fee a new object. Excluded from the enjoyment of frefh air and exercife, fo neceffary for the lupport of health and life; dt prived of all fociety but that of their fellow fufferers, a foc:ety to which moft of them would frefer fulitude itfell; they are only to be confidered as
the moft abject of flaves-flaves to the vices and caprice of a licentious tyrant, who exacts even from his wives themfelves a degree of fubmiffion and refpect. which borders upon idolatry, and which God and na. ture never meant fhould be paid to a mortal.

SERAI, a building on the high-road, or in large cities in India, erected for the accommodation of travel. lers.

SERAPH, or Seraphim; a fpirit of the higheft rank in the hierarchy of angels; who are thus called from their being fuppofed to be moft inflamed with divine love, by their nearer and more immediate atterdance at the throne of God, and to communicate their fervour to the remoter and inferior orders. See AN. GER.

SERAPHIC, burning or inflamed with love or zeal, like a feraphim: thus St Bonaventure is called the \(\rho_{\mathrm{e}}\) raphic doctor, from his abundant zeal and fervour.
SERAPIAS, in botany : A genus of plants belonging to the order of diandria, and to the clafs of gynandria; and in the natural fyltem arranged under the 7 th order, Orchidec. The nectarium is egg-fhaped and gibo bous, with an egg-fhaped lip. The fpecies, according to Linnæus, are ten. 1. Latifolia; 2. Longifolia: 3. Grandiflora, or enfifolia ; 4. Lancifolia; 5. Rubra; 6. Lingua ; 7. Cordigera; 8. Capenfis ; 9. Erecta ; 10. Falcata. The three firft are natives of Britain. 1. The Latifolia, or broad-leaved helleborine, is diftinguifhed by fibrous bulbs, by ovate ftem-clafping leaves, and pendulous flowers. The flalk is erect, about a cubit high, and furnifhed with fix or eight nervous oval leaves; the fpike is about fix inches long ; the three upper petals are of a green colour, and of an oval. acute form ; the lateral ones are a little fhorter, and of a white colour, with a little tinge of green. 2. The Paluflris, or marth helleborine, grows in rough boggy' paftures and marthes, and flowers in July. It is diftin. guifhed by fibrous bulbs, fword-fhaped feffile leaves, pendulous flowers; and the lip of the nectarium is obtufe, fomewhat ferrated, and longer than the petals. The flowers grow to the number of 15 or 20 in a loofe fpike. The three exterior petals are green mixed with red; the lateral ones are white with a red blufh ; anc the nectarium is marked with red lines and yellow tu. berculous fpots. 3. The Grandiflora, or white-flowered lelleborine, grows in woods, and flowers in June. Its characteriflics are, fibrous bulbs, fword-fhaped leaves, erect flowers; and the lip of the nectarium is obtufe and fhorter than the petals. The flowers are large and ereet, and confifting of fix or eight in a thin fike; the petals are all white, and connive together ; the lip of the nectarium is inclofed within the petals, is white and ftreaked with three yellow prominenit lines.
SERAPION, a phylician of Alexandria. He and Philinus of the ine of Cos were both feholars of Herophilus, and were founders of the empiric feet; whick happened about 287 B. C.

SERAPIS, in mythology, an Egyptian deity, who was worhipped undér various names and attributes, as the tutelary god of Egypt in general, and as the patron of feveral of their principal citics. 'Facitus informs us, that he was worhipped as a kind of univerfal deity that reprefented Efculapius, Ofiris, Jupiter, and Pluto; and he was fometimes taken for Jupiter Ammon, the Sun, and Neptune : and the honours that were rendered to

\section*{S E R [297] S E R}
him at Alexandria were more follem and extuardinary than thofe of any other place.

Plutarch and Clemens of Alexandria, as well as Ta. Hif, citus*, inform us, that while the firt Ptolemy was em. 3. ployed in fortifying Alexandria with walls, adorning it with temples and Aately buildings, there appeared to him in his fleep a youns man of extraoroinary beauty, of a fature more than human, admonifhing him to difpatch into Pontus fome of his mont trufty friends to bring from thence his ttatue: he affured him, that the city and kingdom which poffeffed it hould prove happy, glorious, and powerfu'. The young man ha. ving thus fooke, difappeared, mounting up into heaven in a blaze of fire.

Ptolemy difoovered his vifion to the priefts but find. ing them ignonant of Pontus, he had recourfe to an \(A\). thenian, who informed him that near Sinope, a city of Pontus, there was a temple much reforted to by the nativea, which was confecrated to Pluto, where he had a flatue, near which food that of a woman. Ptolemy, neglecting the injunctions of the apparition, it again appeared to him in a menacing attitude; and the king immediately difpatched ambaffadors to the Serapian monarch, loaded with prefents, The king of Sinope confented: but his fubjects oppofed the removal of the ttatue. The god, however, of his own accord, as we and in three days landed in Alexandria. The ftatue of Serapis was erected in one of the fuburbs of the city, where a magnificent temple was afterwards reared.

The tatue of Serapis, according to Macrobius, was of a human form, with a banket or bufhel on his head, fignifying plenty; his right hand leaned on the head of a ferpent, whofe body was wound round a figure swith three heads, of a dog, a lion; and a wolf; in his Jeft hand he held a meafure of a cubit length, as it were to take the height of the waters of the Nile. The figure of Serapis is found on many ancient medals.

The farnous temple of Serapis at Alexandria was deftroyed by order of Theodofius; and the celebrated fratue of this deity was broken in pieces, and its limbs carried firt in triumph by the Chriftians through the city, and then thrown into a fierce fire \({ }^{2}\) kindled for that purpofe in the amphitheatre. As the Egyptians afcribed the pecrflowing of the Nile, to which was owing the fertility of their country, to the benign influence of their god Serapis, they concluded, that now he was deftroyed, the river would no longer overflow, and that a general famine would enfue; but when they obferved, on the contrary, that the Nile fwelled to a greater height than had been known in the memory of man, and thereby produced an inmenfe plenty of all kinds of provifions, many of the pagans renouncing the wor Sip of idols, adored the Cod of the Chritians.

SERENA gurta, the fame as amaurofis. See MeDICINE, n \(^{\circ} 360\).

SERENADE, a kind of concert given in the night by a lover to his miftrefs, under her window, Thefe fometimes only confift of inftrumental mufic, but at other times voices are added: the mufic and fongs com. pofed for thefe occafions are alfo called ferenodes.

SERENE, a title of honour given to feveral princes and to the principal magiftrates of republics. The king of Britain, the republic and doge of Venice, and the children of the king of Spain, are called mof ferene;
and when the pope or the facred college write to the emperaf, to kings, or to the doge, they give them no other title. In like manner, the emperor gives no other title to any king, except to the king of France.

SERENUS (Samrionicus), a celebrated phyfician in the reigns of the emperor Severus and Caracalla, in and about the year 200. Fie wrote feveral treatifes on hiftory and the works of nature; but there ia anly one of them extant, which is a very indifferent poem on the Remedies of Difeafes. He was murdered at a featival by the order of Caracalla. He had a library that contained 62,000 volumes, which Quintus Screnus Sam. monieus his fon gave to Gordian the Younger, to whom he was preceptor.
SERES (Ptolemy) ; a people of the Farther Afia: bounded on the weft by Scythia extra Imaum; on the north and ealt, by Terra Incognitas and on the fouth, by India extra Gangem. According to thefe limits, their country anfwers nearly to Cathoy or North China. Other authors vary greatly in placing them, though the generality agree in placing them far to the eatt. Mela places them between the Indi and Scythro: and perhaps beyond the Indi, if we diftinguif the Sina from them. The ancients commend them for their cotton manufactures, different from the produce of the bombyees or filk-worms, called feres by the Greeks whence ferica " filk."

SERGE; woollen quilted ftuff, manufactured on e loom with four treddles, after the manner of rateens, and other fuffs that have the whale. The goodnefs of ferges is known by the quilting, as that of cloths by the fpinning. Of ferges there are various kinds, deno. minated either from the different qualities thereof, or from the places where they are wrought. The moft confiderable is the London ferge, now highly valued abroad, particularly in France, where a manufacture is carried on with confiderable fuccefs, under the title of Serge façon do Londres.

The method of making the Loudon ferge we fhall now defcribe: For wool, the longeft is chofen for the warp, and the fhorteft for the woof. Before either kind is ufed, it is firft fcoured, by putting it in a copper of liquor, fomewhat more than lukewarm, compoled of three parts of fair water and one of urine. After having fayed long enough therein for the liquor to diffolve, and take off the greafe, \&c. it is firred brikly about with a wooden prel; taken out of the liquor, drained, and wathed in a running water, dried in the fhade, beaten with fticks on a wooden rack to drive out the coarfer duft and filth, and then picked clean with the hands. Thus far prepared, it is greafed with oil of olives, and the longeft part, deftined for the warp, is combed with large combs, heated in a little furnace for the purpofe. To clear off the oil again, the wool is put in a liquor compofed of hot water, with foap melted therein: whence being taken out, wrung, and dried, it is fpun on the wheel.

As to the fhorter wool, intended for the woof, it is only carded on the knec with fmall cards, and then fpun on the wheel, without being fooured of its oil. It muft be remarked, that the thread for the warp is al. ways to be fpun much finer, and better twifted than that of the woof, The wool both for the warp and the woof being fpun, and the thread divided into fixains, that of the woof is put on foools (unlefs it have beer

\(I\)

\section*{S E R}

Serge, fpun upon them) fit for the cavity or eye of the fhuttle; and that for the warp is wound on a kind of wooden
bobbins to fit it for warping. When warped, it is ftiffened with a kind of fize, whereof that made of the fhreds of parchment is held the beft; and when dry is put on the loom.

When mounted on the loom, the workman raifing and lowering the tbreads (which are paffed through i reed), by means of four treddles placed underneath the loom, which he makes to act tranfverfely, equally, and alternately, one after another, with his feet, in proportion as the threads are raifed and lowered, throws the fhuttle acrofs from one fide to the other; and each time that the fluttle is thrown, and the thread of the woof is croffed between thofe of the warp, ftrikes it with the frame to which the reed is faftened, through thofe teeth the threads of the warp pafs; and this ftroke he repeats twice or thrice, or even more, till he judges the croffing of the ferge fufficiently clofe : thus he proceeds till the warp is all flled with woof.

The ferge now taken off the loom is carried to the fuller, who fcours it in the trough of his mill with a kind of fat earth, called fuller's earth, firtt purged of all ftones and filth. After three or four hours foouring, the fuller's earth is wafhed out in fair water, brought by little and little into the trough, out of which it is taken when all the earth is cleared ; then, with a kind of iron pincers or plyers, they pull off all the knots, ends, ftraws, \&c. Aticking out on the furface on either fide; and then returning it into the fulling trongh, where it is worked with water fomewhat more than lukewarm, with foap diffolved therein for near two hours : it is then wafhed out till fuch time as the water becomes quite clear, and there be no figns of foap left ; then it is taken out of the trough, the knots, sic. again pulled off, and then put on the tenter to dry, taking care as falt as it dries to ftretch it out both in length and breadth till it be brought to its juft dimenfions. When well dried, it is taken off the tenter, and dyed, fhorn, and preffed.

SERGEANT, or SErjeant at Law, or of the Coif, is the higheft degree taken at the common law, as that of Doctor is of the civil law ; and as thefe are fuppofed to be the moft learned and experienced in the practice of the courts, there is one court appointed for them to plead in by themfelves, which is the common pleas, where the common law of England is moft frictly obferved: but they are not reftricted from pleading in any other court, where the judges, who cannot have that honour till they have taken the degree of ferjeant at law, call them brathers.

Srrgeant at Arms, or Mace, an officer appointed to attend the perfon of the king; to arreft traitors, and fuch perfons of quality as offend; and to attend the lord high fteward, when fitting in judgment on a traitor.

Of thefe, by ftatute 13 Rich. II. cap. 6. there are not to be above 30 in the realm. There are now nine at court at L. 100 per annum falary each; they are called the king's fergeants at arms, to diftinguifh them from others: they are created with great ceremony, the perfon kneeling before the king, his majefty lays the mace on his right fhoulder, and fays, Rife up, fergeant at arms, and sfquire for ever. They have, befides, a patent for the office, which they hold for life.

They have their attendance in the prefence-chamber,
where the band of gentlemen-penfioners wait ; and, receiving the king at the door, they carry the maces before him to the chapcl door, whilf the band of penfioners ftand foremoft, and make a lane for the king, as they alfo do when the king goes to the houfe of lords.

There are four other fergeants at anms, created in the fame manner ; one, who attends the lord chancellor; a fecond, the lord treafurer; a third, the fpeaker of the houfe of commons; and a fourth, the lord mayor of London on folemn occafions.

They have a confiderable fhare of the fees of honour, and travelling charges allowed them when in waiting, viz. five fhillings per day when the court is within ten miles of London, and ten fhillings when twenty miles from London. The places are in the lord chamberlain's gift.

There are alfo fergeants of the mace of an inferior kind, who attend the mayor or other head officer of a corporation.

Common \(S_{\text {ERGEAN }}\), an officer in the city of London, who attends the lord mayor and court of aldermen on court days, and is in council with them on all occafions, within and without the precincts or liberties of the city. He is to take care of orphans entes, either by taking account of them, or to fign their indentures, before their paffing the lord mayor and court of aldermen : and he was likewife to let and manage the orphans eftates, according to his judgment to their beft advantage. See Recorder.

Sergeant, in war, is an uncommiffioned officer in a company of foot or troop of dragoons, armed with an halbert, and appointed to fee difcipline obferved, to teach the foldiers the exercife of their arms, to order, ftraiten, and form their ranks, fles, \&c. He receives the orders from the adjutant, which he communicates to his officers. Each company generally has two fergeants.

SERGEANTY (Serjeantia), fignifies, in law, a fervice that cannot be due by a tenant to any lord but the king ; and this is either grand Sergeanty, or petit. The firft is a tenure by which the one holds his lands of the king by fuch fervices as he ought to do in perfon to the king at his coronation; and may alfo concern matters military, or fervices of honour in peace; as to be the king's butler, carver, \&cc. Petit fergeanty is where a man holds lands of the king to furnifh liim yearly with fome fmall thing towards his wars; and in effect payable as rent. Though all tenures are turned into foccage by the 12 Car. II. cap. 24. yet the honorary fervices of grand fergeanty fill remain, being therein excepted. See KNIGHT-Service.

SERIES, in general, denotes a continual fucceffion of things in the fame order, and having the fame rela tion or connection with each other : in this fenfe we fay, a feries of emperors, kings, bifhops, \&c.

In natural hiftory, a feries is ufed for an order or fubdivifion of fome clais of natural bodies; comprehending all fuch as are diltinguifhed from the other bodies of that clafs, by certain characters which they poffefs in common, and which the reft of the bodies of that caft have not.

Series, in arithmetic and algebra, a rank or number of terms in fucceffion, increafing or diminifhing in fome certain ratio or proportion. There are feveral Variou \({ }^{2}\) kinds of feries; as aritbmetical, geometrical, infinite, \&cc. kindso

S E R
The two firft of thefe are, however, more generally known or diftinguifhed by the names of arithmetical and geometrical progrefion. 'Thele feriefes have already been explained and illuftrated in the article Algebra, particularly the two firft: it therefore only remains, in this place, to add a little to what has already been done to the latt of thefe; namely,

Infinite Series,
Is formed by dividing the numerator of a fraction by, its denominator, that denominator being a compound quantity ; or by extracting the root of a furd.

An infinite feries is either converging or diverging.
rging A converging feries is that in which the magnitude writ of the feveral terms gradually diminifh; and a diverging feries is that in which the fucceflive terms increafe in magnitude.

The law of an infinite feries is the order in which the terms are obferved to proceed. This law is often eafily difcovered from a few of the firft terms of the feries; and then the feries may be continued as far ac may be thought neceffary, without any farther divifion, or evolution.

An infinite feries, as has already been obferved, is obtained by divifion or evolution; but as that method is very tedious, various other methods have been propofed for performing the fame in a more eafy manner; as, by affuming a feries with unknown coefficients, by the binomial theorem, \&c.
I. Of the Method of Series by Divifion and Evolution. Rule.
d of Let the divifion or evolution of the given fraction, ting which is to be converted into an infinite feries, be pertinnal formed as in Chapters I. and IV. of our article Alge. in in
feries,
ifion,
Examples.
1. Convert the fraction \(\frac{1}{1-x}\) into an infinite feries?

Hence the fraction \(\frac{1}{1-x}=1+x+x^{2}+x^{3}+x^{4}\), \&c, From infpection of the terms of this feries, it appeare that each term is formed by multiplying the preceding term by \(x\); and hence it may be continued as far as may be thought neceffary without continuing the divi. fion.
2. Let the fraction \(\frac{a y}{1+x}\) be converted into an infi- Series. nite feries?
\[
\begin{aligned}
& 1+x) a y \quad\left(a y-a y x+a y x^{2}-a y x^{3}+a y x^{4}, \& c .\right. \\
& a y+a y x \\
& \text {-ayx } \\
& -a y x-a y x^{2} \\
& \frac{a y x^{2}}{\frac{a y x^{2}+a y x^{3}}{-a y x^{3}}}
\end{aligned}
\]

Hence \(\frac{a y}{1+x}=a y \times \overline{1-x+x^{2}-x^{3}+x^{4}}\), sc.
and the law of the feries is obvious.
3. Reduce the fraction \(\frac{m^{2}+x^{2}}{m+x}\) into an infinite feries :
\[
\begin{aligned}
& \begin{array}{c}
m+x) m^{2}+x^{2}\left(m-x+\frac{2 x^{2}}{m}-\frac{2 x^{3}}{m^{2}}+\frac{2 x^{4}}{m^{3}+m x}, \& x . . ~\right.
\end{array} \\
& \begin{array}{l}
-m x+x^{2} \\
-m x-x^{2} \\
2 x^{2}
\end{array} \\
& \frac{2 x^{2}+\frac{2 x^{3}}{m}}{-\frac{2 x^{3}}{m}} \\
& -\frac{2 x^{3}}{m}-\frac{2 x^{4}}{m^{2}} \\
& \frac{2 x^{4}}{m^{2}}, \& c_{0}
\end{aligned}
\]

Hence \(\frac{m^{2}+x^{2}}{m+x}=m-x+\frac{2 x}{m} \times \overline{\frac{x}{1}-\frac{x^{2}}{m}+\frac{x^{3}}{m^{2}}}\), \&c. anct the law of the feries is evident.
4. Convert the quantity \(\frac{a^{2}}{a^{2}+2 a y+y^{2}}\) into an infinite teries?
\[
\begin{gathered}
\frac{\left.a^{2}+2 a y+y^{2}\right) a^{2}}{a^{2}+2 a y+y^{2}}\left(1-\frac{2 y}{a}+\frac{3 y^{2}}{a^{2}}-\frac{4 y^{3}}{a^{3}}, \& c_{3}\right. \\
\frac{-2 a y-y^{2}}{3 y^{2}+\frac{2 y^{3}}{a}} \\
3 y^{2}+\frac{6 y^{3}}{a}+\frac{3 y^{3}}{a} \\
-\frac{4 y^{3}}{a}-\frac{3 y^{4}}{a^{2}}
\end{gathered}
\]

Whane

Serics,
\(\qquad\) Whence \(\frac{a^{2}}{a^{2}+2 a y+y^{2}}=1-\frac{2 y}{a}+\frac{3 y^{3}}{a^{2}}-\frac{4 y^{3}}{a^{3}}\) \& \& 0.; and each term is found by multiplying the preceding by \(\frac{y}{a}\) and increafing the coefficient by unity.
And evoly. tion.
\[
\begin{aligned}
& \text { 5. Let } \sqrt{a^{2}+x^{2}} \text { be converted into an infinite feries.? } \\
& \left.a^{2}+x^{2}\right) a+\frac{x^{2}}{2 a}-\frac{x^{4}}{8 a^{3}}+\frac{x^{a}}{16 a^{5}}-\frac{x^{8}}{128 m^{7}} \\
& \left.2 a+\frac{x^{2}}{2 a}\right)^{x^{2}}+\frac{x^{4}}{4 a^{2}} \\
& \left.2 a+\frac{x^{2}}{a}-\frac{x^{4}}{8 a^{3}}\right)-\frac{x}{4 a^{2}} \\
& -\frac{x^{4}}{4 a^{2}}-\frac{x-6}{8 c^{4}}+\frac{x^{8}}{64 a^{6}} \\
& \left.2 a+\frac{x^{2}}{a}-\frac{x^{4}}{4 a^{3}}+\frac{a^{6}}{16 u^{5}}\right) \frac{x^{6}}{8 a^{4}}-\frac{x^{9}}{64 a^{6}} \\
& \frac{x^{6}}{8 a 4}+\frac{x^{8}}{16 u^{6}}-\frac{x^{10}}{64 a^{a^{2}}}+\frac{x^{13}}{256 a^{10}} \\
& -\frac{5 x^{8}}{64 a^{6}}+\frac{x^{10}}{64 a^{8}}-\frac{x^{x_{2}}}{256 a^{10}}
\end{aligned}
\]

Hence the fquare root of \(a^{2}+x^{2}=a+\frac{x^{3}}{2 a}-\frac{x^{4}}{8 a^{3}}+\frac{x^{4}}{16 a^{5}}-\) \(\frac{x^{8}}{128 x^{7}}, \& c\).

In continuing the operation, thofe terms may be neglected whofe dimenfions exceed thofe of the laft term to which the root is to be continued.

\section*{II. Of the Method of Series by alfuming a Series with unknown Coefficients.}

8 Rule. Affume a feries with unknown coefficients of ara aflum- to reprefent that required. Let this feries be multiplied ed feries ; or involved, according to the nature of the queltion; and the quantities of the fame dimenfion being put equal to each other, the coefficients will be determined; and hence the required feries will be known.

Examples. 1. Let \(\frac{1}{a-x}\) be converted into an infinite feries? Affume \(\frac{1}{a-x}=\mathrm{A}+\mathrm{B} x+\mathrm{C} x^{2}+\mathrm{D} x^{3}+\) Ex4, \&c.

Then this affumed feries, multiplied by \(a-x\), gives \(\mathrm{x}=a \mathrm{~A}+a \mathrm{~B} x+a \mathrm{C} x^{2}+a \mathrm{D} x^{3}+a \mathrm{E} x^{4}\), \&c.
\(-\mathbf{A} x-\mathbf{B} x^{2}-\mathbf{C} x^{3}-\mathbf{D} x^{4}\), \& c.
Now, by equating the coefficients of the fame powers of \(x\), we have \(a \mathrm{~A}=1, a \mathrm{~B}-\mathrm{A}=0, a \mathrm{C}-\mathrm{B}=0, a \mathrm{D}\) \(-\mathrm{C}=0, a \mathrm{E}-\mathrm{D}=0\), \&c. Hence \(\mathrm{A}=\frac{\mathrm{I}}{a}, \mathrm{~B}=\frac{\mathrm{A}}{a}\) \(=\frac{\mathrm{I}}{a^{2}}, \mathrm{C}=\frac{\mathrm{B}}{a}=\frac{\mathrm{I}}{a^{3}}, \mathrm{D}=\frac{\mathrm{C}}{a}=\frac{1}{a^{4}}, \mathrm{E}=\frac{\mathrm{D}}{a}=\frac{1}{a^{5}}\), \&c. ; whence, by fubftitution, we have \(\frac{1}{a-x}=\frac{1}{a}+\frac{x}{a^{2}}\) \(+\frac{x^{2}}{a^{3}}+\frac{x^{3}}{a^{4}}+\frac{x^{4}}{a^{5}}, \& \mathrm{c}\).
2. Convert the quantity \(\frac{c^{2}}{c^{2}+2 c y-y^{2}}\) into an infinite feries ?

Let the affimed ferics be \(A+B y+C y^{3}+D y^{\prime}\), *as which multiplied bv \(6^{2}+2 c y-y^{2}\), gives
\[
\begin{aligned}
& c^{2}=c^{2} A+c^{2} B y+c^{2} C y^{2}+c^{2} D y^{3}, *<c \\
& \begin{array}{r}
+2 c A y+2 c B y^{2}+3 c \mathrm{C} y^{3} \\
-\mathrm{A} y^{2}-\mathrm{B} y^{3} .
\end{array}
\end{aligned}
\]

Now, by equating the coefficients of the homologous terms, we have \(c^{2}=c^{2} A_{2} c^{2} B+2 c A=0, c^{2} C+2 c\) \(B-A=0, c^{2} D+2 c C-B=0, \& c_{1}:\) whence \(A=\) \(1, B=-\frac{2 A}{c}=-\frac{2}{c}, C=\frac{A-2 c B}{c^{2}}=\frac{1+4}{c^{2}}=\frac{3}{c^{2}}, D=\) \(\frac{B-2 c C}{c^{2}}=\frac{-2-10}{c^{3}}=-\frac{12}{c^{3}}\), \&x. \(;\) whence \(\frac{c^{2}}{c^{2}+2 c y-y^{2}}\) \(=1-\frac{2 y}{c}+\frac{5 y^{2}}{c^{2}}-\frac{12 y^{3}}{c^{3}}\), \&c.
3. Required the fquare root of \(a^{3}-x^{2}\) ?

Let \(a^{2}-x^{2} \frac{3}{3}=A+B x^{2}+C x^{4}+D x^{6}\), \&x. which being fquared gives
\(a^{2}-x^{2}=A^{2}+2 A B x^{2}+B^{3} x^{4}+2 A D x^{6}, \& C_{0}\)
\[
+2 \hat{A C} x^{4}+2 B C^{3} x^{6} .
\]

Hence \(A_{2}=a^{2}, 2 A B+1=0, B^{4}+2 A C=a_{0}\) \(2 \mathrm{AD}+2 \mathrm{BC}=0\), \& \(c\). Then \(\mathrm{A}=a, \mathrm{~B}=-\) \(\frac{1}{2 A}=-\frac{1}{2 a}, C=-\frac{B^{2}}{2 A}=\frac{1}{8 a^{3}}, D=-\frac{B C}{A}=\frac{1}{16 a^{5}}\) \&c. ; whence \(\overline{a^{2}-x^{3}}=8-\frac{x^{2}}{24}-\frac{x^{4}}{8 a^{3}}-\frac{x^{6}}{16 a^{5}}\) \& \(C_{0}\)

\section*{III. Of the Metbod of reducing a fraenional Nuantity inte an Infinite Series by the Binomial Thborem.}
\(A_{8}\) this method has already been illuftrated in the And article Alorbra, we thall therefore briefly ftate the lfaac theorem, and add a few examples.

\section*{Binomial Theorem.}
\[
\begin{aligned}
& \overline{a+b})^{\frac{m}{n}}=a^{\frac{m}{n}}+\frac{m}{n} a^{\frac{m-n}{n}} b+\frac{m}{n} \times \frac{m-n}{2 n} \times a^{\frac{m-2 n}{n}} b^{\frac{m-3 n}{}} \\
& +\frac{m}{n} \times \frac{m-n}{2 n} \times \frac{m-2 n}{3 n} \times a^{\frac{n-3 n}{n} b^{3}, \& c .} \\
& \text { Or } a^{\frac{m}{n} \times r+\frac{b}{a}}=\frac{\frac{m}{n}}{+\frac{m}{n} \times \frac{m-n}{n} \times \frac{m}{2 n} \times \frac{m-2 n}{a} \times \frac{m}{3 n} \times \frac{m-n}{2 n} \times \frac{b^{\frac{b^{3}}{a^{3}}}}{a^{3}}}
\end{aligned}
\]

\section*{EXAMPLES。}
1. Let \(\frac{a}{a x-x^{2} \frac{1}{2}}\) be converted into an infinite fes ries ? Now \(\frac{a}{a x-\left.x^{2}\right|^{\frac{3}{2}}}=a \times \overline{a x-\left.x^{2}\right|^{-\frac{x}{2}}}=\frac{a}{\left.a x\right|^{\frac{1}{2}}} \times\) \(\left.1-\left.\frac{x}{a}\right|^{\frac{8}{2}}=\left.\frac{\frac{x}{a}}{x}\right|^{\frac{x}{2}} \times 1-\frac{x}{a} \right\rvert\,\). And this laft expreffion, being compared with the general theorem, gives \(\frac{b}{a}=\frac{x}{a}, m=\) - \(1, n=2\). Hence, by fubftitution, we have \(\frac{a}{a x-\left.x^{2}\right|^{\frac{3}{3}}}\) \(=\left.\frac{a}{2}\right|^{\frac{2}{2}} \times x-\frac{\frac{x}{2}}{2} \times \frac{x}{a}-\frac{8}{2} \times-\frac{1-2}{4} \times \frac{x^{2}}{a^{2}}-\frac{3}{2} \times\)

S E R
\(\frac{-1-2}{4} \times \frac{-1-4}{6} \times \frac{x^{3}}{a^{3}}, 8 c=\left.\frac{a}{x}\right|^{\frac{x}{2}}+1+\frac{x}{2 a}+\frac{3 x^{2}}{8 a^{2}}\) \(+\frac{5 x^{3}}{16 a^{3}}+\frac{35^{x^{4}}}{128 a^{4}}, 8 \mathrm{cc}\).
2. Required the fquare root of \(a^{2}+x^{2}:\)

By comparing this with the general theorem, we have \(a=a^{2}, b=x^{2}, m=1, n=2\). Hence, by fubftitutimon, the ferries becomes \(a \times 1+\frac{2}{2} \times \frac{x^{2}}{a^{2}}+\frac{3}{2} \times \frac{1-2}{2 \times 2}\) \(\overline{x^{x^{4}}+\frac{1}{a^{4}} \times \frac{1-2}{2 \times 2}} \times \frac{\mathrm{I}-4}{3 \times 2} \times \frac{x^{6}}{a^{6}}, 2 \mathrm{c} .=a \times \overline{\mathrm{I}+\frac{x^{2}}{2 a}}\) \(-\frac{x^{4}}{8 a^{4}}+\frac{x^{6}}{16 a^{6}}-\frac{5 x^{8}}{128 a^{8}}\), \&c. And \(\overline{a^{2}-b^{2}} \left\lvert\, \frac{1}{2}=\right.\) \(8 x_{1}-\frac{x^{2}}{2 a}-\frac{x^{4}}{8 a^{4}}-\frac{\overline{x^{6}}}{16 a^{6}}-\frac{5 x^{8}}{128 a^{8}}\), \&cc.

In order to apply this to numbers, let the fquare root of 85 be required ? Now, the fquare root of 85 \(=\sqrt{8 \mathrm{I}+4}\); hence \(a=9\), and \(x^{2}=4\).
\[
\text { Then } 1=9 \text {, ne } 1.000000
\]
\[
\begin{aligned}
& \frac{x^{2}}{2 a^{2}}=\frac{4}{2 \times 81}=0.024691 \\
& \frac{x^{4}}{8 a^{4}}=\frac{4 \times 4}{8 \times 81 \times 81}=0.000304 \\
& \frac{x^{6}}{16 a^{6}}=\frac{4 \times 4 \times 4}{16 \times 81 \times 81 \times 81}=\frac{0.000007}{1.024394}
\end{aligned}
\]
\[
\begin{gathered}
\text { Square root of } 85
\end{gathered}=\overline{9.219546}
\] true except the lat decimal.
3. Required the cube root of \(a^{3}+b^{3}\) ? \(a=x^{3}, b=y^{3}, m=1, n=3\). Hence \(a^{3}+b^{3} \left\lvert\, \frac{1}{3}=\right.\) \(a^{3} \times 1+\frac{1}{3} \times \frac{y^{3}}{x^{3}}+\frac{1}{3} \times \frac{1-3}{6} \times \frac{y^{6}}{x^{6}}+\frac{1}{3} \times \frac{1-3}{6} \times\) \(\overline{\frac{1}{9}} \times \frac{y^{9}}{x^{9}}, \&<c=a \times \overline{1+\frac{y^{3}}{3^{x^{3}}}-\frac{y^{6}}{9 x^{6}}+\frac{5 y^{9}}{81^{9}}-}\) \(\frac{\frac{9}{10 y^{12}}}{243 x^{12}}\), \&cc. And \(\overline{\left.a^{3}-b^{3}\right)^{\frac{1}{3}}}=a \times \overline{1-\frac{y^{3}}{3 x^{3}}-\frac{y^{6}}{9 x^{6}}}\) \(\frac{5 y^{9}}{81 x^{9}}-\frac{10 y^{12}}{243 x^{12}}, \& c\).

Let the cube root of 600 be required ? Now \(\overline{600 \frac{1}{3}}\).
\(=8 \times \overline{1+\frac{88}{513}} / \frac{1}{3}\). . Then \(y^{3}=88, x^{3}=512, m=1\),
and \(n=3\).
]」- E -

\[
\begin{aligned}
& \text { Sum of the pofitive terms, } \\
& \text { Sum of the negative terms, } 0.05769968 \\
& \text { Difference, }
\end{aligned}
\]

Cube root of \(600,=8.43432664\).
In operations of this kind, the neareft power to the given number, whether greater or left than it, is to be ufed, as by that means the faeries will converge more quickly.

An infinite faeries may be involved to any given involution power, or any propofed root of a given fries may be and evolvesextracted by means of the following general theorem. ten of an \(z^{m} \times\left(a+b x+c x^{2}+d x^{3}+e x^{4}, \& \mathrm{c} \text {. }\right)^{m}=z^{m ;} \quad\) infinite feds multiplied by
\[
\begin{aligned}
& \left.\begin{array}{r}
a^{m}+m b a^{m-1} x+m \cdot \frac{m-1}{2} \cdot a^{m-2} b^{2} \\
+m a a^{m-1} c
\end{array}\right\} x^{3} \\
& \left.\begin{array}{r}
+m \cdot \frac{m-1}{2} \cdot \frac{m-2}{3} \cdot a^{m-3} b^{3} \\
+m \cdot \frac{m-1}{2} \cdot 2 a^{m-2} b c \\

\end{aligned}
\]

Now:

\section*{S E R \\ [ 296 ] \\ S E R}

Scries. Now each term of the given feries is to be compared above theorem; and by fubfitution in the fecond, the with the correfpondent terms in the firft part of the fevcral terms of the required feries will be obtained.

\section*{Exampzes.}
17. What is the fquare of the feries \(y-y^{3}+y^{5}-y^{7}+\& c\). ?

By comparing this with the general theorem, we find \(z=y, a=1, b=0, c=-1, d=0, g=-1, \& c\). and \(m=2\); whence \(y-y^{3}+y^{5}-y^{7} l^{2}=y^{2} \times\left(1-2 a x^{2}+c^{2} x^{4}-2 c e x^{6}\right), \& c_{0}=y^{2} \times\left(x-2 y^{2}+3 y^{4}-4 y^{6}\right)\), \&xc. \(=y^{2}-2 y^{4}+3 y^{6}-4 y^{8}, \& \mathrm{cc}\).
\[
\left.+3 e x^{4}-2 g x^{6}\right)^{\prime}
\]

2d. Required the fourth power of the feries \(1+x+x^{2}+x 3, \& c\). ?
Here \(z=1, a=1, b=1, c=1, d=1, \& m=4\).
Then \(\overline{1+x+x^{2}+x^{3}, 8 x c^{4}}=1+4 b x+6 b^{2} x^{2}+4 b^{3} x^{3}+b^{4} x^{4}, \& c_{0}\)
\[
+4 e
\]
\(=1+4 x+10 x^{2}+20 x^{3}+35 x^{4}\), \& \(\mathrm{c}_{0}\)
\(3 d_{0}\) What is the \{quare of \(\frac{1}{x}+\frac{1}{x^{2}}+\frac{1}{x^{3}}+\frac{1}{x^{4}} ; 8 x c\).
In this cafe \(z=\frac{1}{x}, x=\frac{1}{x}, a=1, b=1, c=1, d=1, \& m=2\).
Then \(\overline{\frac{1}{x}+\frac{1}{x^{2}}+\frac{1}{x^{3}}}\) \&c. \(\left.\right|^{2}=\frac{1}{x^{2}} \times\left(\mathrm{I}+2 b \times \frac{1}{x}+b^{2} \times \frac{1}{x^{2}}+2 b c \times \frac{1}{x^{3}}+2 b d \times{ }_{x^{4}}^{1}, \& c\right.\)
\[
\begin{aligned}
& \quad+2 c+2 d+c^{2} \\
& =\frac{1}{x^{2}} \times\left(1+\frac{2}{x}+\frac{3}{x^{2}}+\frac{4}{x^{3}}+\frac{5}{x^{4}}, \& c .\right) \\
& =\quad \frac{1}{x^{2}}+\frac{2}{x^{3}}+\frac{3}{x^{4}}+\frac{4}{x^{5}}+\frac{5}{x^{6}}, \& c .
\end{aligned}
\]
\(4^{\text {th }}\), What is the fquare root of \(-\frac{1}{r^{2}-\frac{z^{2}}{2}+\frac{z^{0}}{4 r^{2}}-\frac{z^{6}}{6 r^{4}}+\frac{z^{8}}{8 r^{6}}, \& \mathrm{c}_{\text {. }}}\)
The quantity reduced is \(\frac{1}{r^{2}} \times \frac{1}{1-\frac{z^{2}}{2 r^{2}}+\frac{z^{4}}{4 r^{2}}-\frac{z^{6}}{6 r^{6}}+\frac{z^{8}}{8 r^{4}}}\), \&c.
In this examplez \(=\frac{1}{r^{r}}, x=x^{2}, a=1, b=-\frac{1}{2 r^{2}}, c=\frac{1}{4 r^{4}}, d=-\frac{1}{6 r o}\), \&cc. and \(m=-\frac{1}{2}, \frac{m-1=-}{2}\) \(\frac{3}{4}, \frac{m-2}{3}=-\frac{5}{6}, \frac{m-3}{4}=-\frac{7}{8}, 8 \mathrm{cc}\).
Then \(\frac{1}{r^{2}-\frac{z^{2}}{2}+\frac{z^{4}}{4 r^{2}}, \& \mathrm{cc}}=\frac{1}{r} \times\left(1+\frac{x}{4 r^{2}}+\frac{3 x^{2}}{3^{2} r^{4}}+\frac{5 x^{3}}{128 r^{6}}, 8 \varepsilon\right.\).
\[
-\frac{1}{8 r^{4}}-\frac{3}{3^{2 r^{6}}}
\]
\[
+\frac{1}{12 r^{6}}
\]
\[
=\frac{1}{r}+\frac{x}{4 r^{3}}+\frac{x^{2}}{32 r^{5}}+\frac{11 x^{3}}{384 r^{7}}, 8 \mathrm{c}
\]

II Harmonic SERIES, a feries of terms formed in harmonimonical fe-cal proportion. It has been already obferved in the ties. article Proportion, that if three numbers be in harmonical proportion, the firft is to the third as the difference between the firt and fecond is to the difference between the fecond and third.
Let \(a, b\), and \(x\) be three terms in harmonical proportion: then \(a: x:: a-b: b-x\)
whence \(a x-b x=a b-a x_{0}\)
and \(2 a x-b x=a b\)
then \(x=\frac{a b}{2 a-b}\). Hence the three
firt terms of this feries is \(a, b, \frac{a b}{2 a-8}\).

Again, let \(x\) be the fourth term; to find which in The \({ }^{x}\) terms of \(a\) and \(b\), we have
\[
b: x:: b-\frac{a b}{2 a-b}: \frac{a b}{2 a-b}+ \pm
\]

Then \(b x-\frac{a b}{2 a-b^{\circ}} \cdot x=\frac{a b^{2}}{2 a-b}-b_{x}\)
\[
\frac{3 a b-2 b^{2}}{2 a-b} \cdot x=\frac{a b^{2}}{2 a-b}
\]
\[
x=\frac{a b^{2}}{2 a-b} \cdot \frac{2 a-b}{3 a b-2 b^{2}}=\frac{a b}{3 a-2 b} ;
\]
therefore the four firft terms are \(a, b \cdot \frac{a b}{2 a-b}, \frac{a b}{3 a-2 b}\).
Whence the law of the feries is obvious, and it may be
\[
\begin{aligned}
& \begin{aligned}

\section*{S E R}
continued as follows, a.b. \(\frac{a b}{2 a-b}, \frac{a b}{3 a-2 b}, \frac{a b}{4 a-3 b^{b}}\), \(\frac{a b}{5 a-4 b}, 8 \mathrm{cc}\). and the \(n^{\text {th }}\) term is \(\frac{a b}{n-1 . a-n-2 . b}\).

If, in a feries of terms in harmonical proportion, \(a\) and \(b\) be two affirmative quantities, and fuch that \(a<b\); then this feries, which is pofitive at firf, will become negarive as foon as \(\overline{n-2} \cdot b\) exceeds \(\overline{n-1}, a\). But if \(a>b\), the feries will converge, anid although produced to infinity will not become negative.
Let \(a\) and \(b\) be equal to 2 and 1 refpectively ; then this feries becomes \(\frac{2}{2} \cdot \frac{2}{2} \cdot \frac{2}{2} \cdot \frac{2}{4}, 8 \%\) c. and fince, if each term of an harmonical feries be divided by the fame quantity, the feries will fill be harmonical. Therefore \(\frac{x}{x} \cdot \frac{1}{2} \cdot \frac{1}{3} \cdot \frac{.4}{4} \cdot \frac{5}{5}\), , \(\& c\). is an harmonical feries: whence the denominators of this feries form a feries of numbers in arithmetical progreffion ; and converfely, thé reciprocals of an arithmetical progreffion are in harmonical proportion.
*Recurring SERREs, a feries of which any term is formed by the addition of a certain number of preceding terms, multiplied or divided by any determinate numbers whether pofitive or negative. Thus 2.3.19. 101. 543. 2917. 15671 , \&c. is a recurring feries, each term of which is formed by the addition of the two preceding terms, the firt of which being previoufly multiplied by the conttant quantity 2 and the other by 5. Thus the third term \(19=2 \times 2+3 \times 5\); the fourth term 101 \(=\) \(3 \times 2+19 \times 5,8 c\).
The principal operation in a feries of this nature is that of finding its flum. - For this purpofe, the two firft and two laft terms of the feries muft be given, together with the confant multipliers.
Let \(a, b, c, d, e, f, \& c\). be any number of terms of a feries formed according to the above law, each fuccefive term being equal to the fum of the products of the two preceding terms, the firlt being multiplied by the given quantity, \(m\), and the other by the given quantity n. Hence we will have the following feries of equations \(c=m a+n h, d=m b+n c, e=m c+\) \(\dot{n} d, f=m d+n e, \& \mathrm{cc}\). Then adding thefe equations, we obtain \(c+d+e+f=m \times \bar{a}+b+c+d+n \times\) \(\bar{b}+c+d+e\). Now the firlt member of this equation is the fum of all the terms except the two firlt ; the quantity by which \(m_{\text {a }}\) is multiplied in the fecond member is the fum of all the terms except the two laft; and that by which \(n\) is multiplied is the fum of all the terms except the firit and laft. Now let \(s=\) fum of the feries; thens \(-a-b=m \times s-e-f+n \times s=a-f\) Hence \(s=\frac{m \times e+f+n \times \overline{a+f}-a-b}{m+n-1}\),

Let the fum of the firft feven terms of the above
ies be required? feries be required?

\section*{S E R}

Reverfion of SERTES is the method of finding the Serich. value of the quantity whofe feveral powers are involved in a feries, in terms of the quantity which is equal to the given feries.
In order to this, a feries muft be affumed, which being involved and fubflituted for the quantity equal to the feries, and its powers, neglecting thofe terms whofe powers exceed the higheft power to which it is propofed to extend the feries.
Let it be required to revert the feries \(a x+b x^{2}+\). \(c x^{3}+d x^{4}+e x^{5}, \& c .=y\); or, to find \(x\) in an infinite feries expreffed in the powers of \(y\).

Subflitute \(y^{\mathrm{n}}\) for \(x\), and the indices of the powers of \(y\) in the equation will be \(n, 2 n, 3 n, \& \mathrm{c}\). and I , therefore \(n=1\); and the differences are 0. I. 2.3.4.5. \&c. Hence, in this cafe, the feries to be affumed is \(A y+B j z\) \(+\mathrm{C} y^{3}+\mathrm{D} y^{4}\), \&c. which being involved and fubftituted for the refpective powers of \(x\), then we have
\(a x=a \mathrm{~A} y+a \mathrm{~B} y^{2}+a \mathrm{C} y^{3}+a \mathrm{D} y^{4}, \& \mathrm{c} . ?\)
\(\left.b x^{2}=+b \mathrm{~A}^{2} y^{2}+2 b \mathrm{AB} y^{3}+2 b \mathrm{AC} y^{4}\right\}\)
\(\left.\left.\begin{array}{r}b x^{2}=+b A^{2} y^{2}+2 b A B y^{3}+2 b A C y^{4} \\ +b B^{2} y^{4}\end{array}\right\} \& \mathrm{c}.\right\}=y\)
\[
\begin{array}{ll}
c x^{3}= \\
d x^{4}= & +c \mathrm{~A}^{3} y_{3}^{3}+3 \mathrm{~A}^{2} \mathrm{~A}^{2} \mathrm{By}^{4} 4 \mathrm{kc} . \\
+d \mathrm{~A}^{4} y^{4}, \& \mathrm{cc} .
\end{array}
\]

Whence, by comparing the homologous terms, we have \(a \dot{\mathrm{~A}} y=y\); therefore \(\mathrm{A}=\frac{1}{a}, \mathrm{~B}=\frac{b}{a^{3}}, \mathrm{C}\) \(\left(=-\frac{2 b \mathrm{AB}+c \mathrm{~A}_{3}}{a}\right)=\frac{2^{2 b^{2}}-a^{3} c}{a^{5}} ; \mathrm{D}\) \(\left(=-\frac{2 b \mathrm{AC}+b \mathrm{~B}^{2}+3 c \mathrm{~A}^{2} \mathrm{~B}+d \mathrm{~A}_{4}}{a}\right)=\) \(\frac{5 a b c-5 b^{3}-a^{2} d}{a^{7}}\), \&c. and confequently \(x=\frac{y}{a}-\) \(\frac{b y^{2}}{a^{3}}+\frac{2 b^{2}-a \dot{c}}{a^{5}} \times y^{3}-\frac{5 b^{3}-5 a b c+a^{2} d}{a^{7}} \times y^{4}, 8 c\).

\section*{Examples.}
\(1 / 2\) Let \(x-\frac{x^{2}}{2}+\frac{x^{3}}{3}-\frac{x^{4}}{4}, \& \mathrm{c} .=y\). There \(a\) be ing in this cafe equal to \(1, b=-\frac{1}{2}, c \frac{1}{3}, d=-\frac{1}{4}\); \&c. we fhall, by fubftituting thefe values, have \(x=y+\) \(\frac{y^{2}}{2}+\frac{y^{3}}{6}+\frac{y^{4}}{24}, \& \mathrm{c}\).
\(x ? ?^{2 d, \text { Let } x-x^{2}+x^{3}-x^{4}+x s, 8 c c .=y ; \text { to find. } . ~ . ~}\)
In this example we have \(x=x, a=1, b=-1\), \(c=1, d=-1, \& c\). ; whence \(x=\frac{y}{x}+\frac{1}{x} y^{2}+\) \(\frac{2-1}{1} y^{3}+\frac{-5+5-1}{1} y^{4}, 8 c .=y+y^{2}+y^{3}+y^{4}\), \&c.
\[
\begin{aligned}
& 3^{d, \text { Let } a}=r-\frac{x^{2}}{2 r}+\frac{x^{4}}{24 r^{3}}-\frac{x^{6}}{720 r^{5}}+\frac{x^{3}}{4032 r^{3}} \\
& \text { \&c. to find } x \text { ? }
\end{aligned}
\]
\(\underset{x^{8}}{ } \quad\) Put \(r-a=v\); then \(v=\frac{x^{2}}{2 r}-\frac{x^{4}}{24 r^{3}}+\frac{x^{6}}{720 r^{5}}-\) \(\frac{x^{8}}{403^{2 r^{27}}}\) - \&ce. By comparifon we find \(x=x^{2}, y=v\); \(a=\frac{1}{2 r_{0}} b=\frac{-1}{24 r^{3}}, c=\frac{1}{7^{20 r^{5}},} d=\frac{-1}{4032 r^{r}}\) \& \&

Hence \(x^{2}=2 r v-\frac{\frac{-1}{24 r^{3}}}{\frac{1}{8 r^{3}}} v+\frac{\frac{1}{288 r^{0}}-\frac{1}{1440 r^{6}}}{\frac{1}{32 r^{5}}}\) \(\dot{b}^{3}, 8 \mathrm{sc} .=2 r v+\frac{1}{3} v^{2}+\frac{4}{45 v^{3}}+\frac{1}{35 r^{2}} v^{4}, \& c:\) whence \(x=\sqrt{2 r v} \times\left(t+\frac{v}{12 r}+\frac{3 v}{160 r^{2}}+\frac{5 v^{3}}{896 r v \text { ? }}\right.\) sc.
Summation of SsRIss is the method of finding the fum of the terms of an infinite feries produced to inAnity, or the fum of any number of terms of fuch a teries.
The value of any arithmetieal feries, as \(1^{2}+2^{2}+3^{3}\) \(\pm 4^{2} \ldots \ldots \ldots\) 放, varies according as \((n)\) the number of its terms varies; and therefore, if it can be exprefsed in a general manner, it muft be explicable by \(n\) and its powers with determinate coefficients, , and thofe powers, in this cafe, mult be rational, or fuch whore indices are whole pofitive numbers; becaufe the progreeffion, being a whole number, cannot admit of furd quantities. Laflty, it will appear that the greatelt of the faid indices cannot exceed the common index of the feries by more than unity : for, otherwife, when \(n\) is taken indefinitely great, the highett power of \(n\) would be indefnitely greater than the fum of all the reft of the terms.
Thus the higheft power of \(n\), in an expreflion exhibiting the value of \(1^{2}+2^{2}+3^{2}+4^{2} \ldots n^{2}\), cannot be greater than \(n^{3}\); for \(1^{2}+2^{2}+3^{2}+4^{2} \ldots . . n^{2}\) is manifeftly lefs than \(n^{3}\), or \(n^{2}+n^{2}+n^{3}+\), \&c. continued to \(n\) terms ; but \(n^{4}\), when \(n\) is indefnitely great, is indefinitely greater than \(n^{3}\), or any other inferior power of \(n\), and therefore cannot enter into the equation. This being premifed, the method of invettigation may be as fellows:

\section*{Examples.}
1. Required the fum of \(n\) terms of the feries \(\mathrm{r}+2+\) \(3+4+\ldots, n\) ?
Let \(A n^{2}+B n\) be affumed, according to the foregoing obfervations, as an univerfal exprefion for the value of \(1+2+3+4 \cdots, n\), where \(A\) and \(B\) reprefent unknown but determinate quantities. Therefore, fince the equation is fuppofed to hold univerfally, whatfoever is the number of terms, it is evident, that if the number of terms be increafed by unity, or, which is the fame thing, if \(n+1\) be wrote therein inftead of \(n\), the equation will fill fubfift; and we thall have \(\mathrm{A} \times\left.\overline{n+1}\right|^{2}+\mathrm{B} \times n+1=\mathrm{r}+2+3+4 \cdots n+\overline{n-1}\). From which the firft equation being fubtracted, there remaits \(\mathrm{A} \times\left.\overline{n+1}\right|^{2}-\mathrm{A} n^{2}+\mathrm{B} \times \overline{n-1}-\mathrm{B} n=n+1\); this contracted will be \(2 \mathrm{~A} n+\mathrm{A}+\mathrm{B}=n+1\); whence we have \(\overline{2 A-1} \times n+A+B-1=0\) : Wherefore, by taking \(2 \mathrm{~A}-\mathrm{I}=0\), and \(\mathrm{A}+\mathrm{B}-\mathrm{I}\) \(=0\), we have \(\mathrm{A}=\frac{1}{2}\), and \(\mathrm{B}=\frac{x}{2}\); and confequently
\(i+2+3+4 \cdots \cdots n\left(=A n^{2}+B n\right)=\frac{n^{2}}{2}+\frac{n}{2}=\) \(\frac{n \times n+1}{2}\)
What is the fum of the ten frit terms of the feries \(1+z+3\), \&c. ?
In this cafe \(n=10\), then \(\frac{n \times \overline{n+1}}{3}=\frac{10 \times 11}{2}=55\).

\section*{S E R}
2. Recquired the fum of the feries \(x^{2}+2^{2}+3^{2} \ldots \ldots, n^{3}\), or \(1,+4+9+16 \ldots \ldots n\) ?
Let \(A n^{3}+13 n^{2}+C n\), according to the aforefaid obfervations, be affumed \(=1^{2}+2^{2}+3^{2} \ldots . . n^{2}\); then, as in the preceding cafe, we fhall have \(A \times \overline{n+1}!^{3}\) \(\pm B \times\left.\overline{n+1}\right|^{2}+C \times \overline{n+1}=1^{2}+2^{2}+3^{2} \ldots \ldots n^{2} \times\) \(n+\left.1\right|^{2}\); that is, by involving \(n+1\) to its feveral pow ers, \(\mathrm{A} n^{3}+3 \mathrm{~A} n^{2}+3 \mathrm{~A} n+\mathrm{A}+\mathrm{B} n^{2}+2 \mathrm{~B} n+\mathrm{B}\) \(+C n+C=1^{2}+2^{2}+3^{2} \ldots n^{2}+\left.\overline{n+1}\right|^{2}\); from which fubtracting the former equation, we obtain \(3 \mathrm{~A}^{2}+\) \(3 \mathrm{~A} n+\mathrm{A}+2 \mathrm{~B} n+\mathrm{B}+\mathrm{C}\left(=\overline{n+1}{ }^{2}\right)=n^{2}+2 n+1:\) and confequently \(\overline{3 A}-1 \times n^{2}+\overline{3 A+2 B-2} \times n\) \(+A+B+C-1=0 ;\) whence \(3 A-1=0,3 A\) \(+2 B-2=0\), and \(A+B+C-1=0\); therefore \(A=\frac{1}{3}, B=\frac{2-3 A}{3}=\frac{x}{2}, C=1-A-B=\frac{3}{6}\) and confequently \(1+4+9+16 \ldots . n^{2}=\frac{n^{2}}{3}+\frac{n^{2}}{2}+\frac{n}{6}\) or \(\frac{n \cdot n+1}{6} \cdot 2 \overline{n+1}\)
What is the fum of the ten firit terms of the feries \(1^{2}+2^{2}+3^{2}, 8 . c . ?\)
Here \(n=10\), then \(\frac{n \cdot \overline{n+1} \cdot \overline{2 n+1}}{6}=\frac{10 \times 1 \times 1 \times 21}{6}\) \(=385\).
3. Required the fum of the feries \(1^{3}+2^{3}+3^{3}+4^{3} \ldots . . n 3^{3}\) or \(1+8+27+64 \cdots n^{3}\) ?
By putting \(\mathrm{A}^{4}+\mathrm{B} n^{3}+\mathrm{C} n^{2}+\mathrm{D} n=1+8+\) \(27+64 \ldots . n^{3}\); and proceeding as abuve, we thall have \(4 \mathrm{~A} n^{3}+6 a n^{2}+4 a n+\mathrm{A}+3 \mathrm{~B} n^{2}+3 \mathrm{~B} n+\mathrm{B}+2 \mathrm{C} n\) \(\left.+\mathrm{C}+\mathrm{D}(=n+1)^{3}\right)=n^{3}+3 n^{2}+1\), and therefore \(4 \cdot A-1 \times n^{3}+6 A+3 B-3 \times n^{2}+4 A+3^{B+2 C}-3\) \(\times n+A+B+C+D-I=0\). Hence \(A=\frac{1}{4}\), \(B\left(=\frac{3-6 A}{3}\right)=\frac{3}{2}, C\left(=\frac{3-4 A-3 B}{2}\right)=\frac{i}{4}\) \(D(=1-A-B-C)=0\); and therefore \(1^{3}+2^{3}\) \(+3^{3}+4^{3} \cdots n^{3}=\frac{n^{4}}{4}+\frac{n^{3}}{2}+\frac{n^{2}}{4}\), or \(=\frac{n^{2} \times n+1}{4}{ }^{2}\). In the very fame manner it will be found, that
\(1^{4}+2^{4}+3^{4} \cdots \cdots n^{4}=\frac{n^{5}}{5}+\frac{n^{4}}{2_{s}}+\frac{n^{3}}{3}-\frac{n}{30}\)
\(1^{5}+2^{5}+3^{5} \cdots \cdots n^{5}=\frac{n^{6}}{6}+\frac{n^{5}}{2}+\frac{5 n^{4}}{12}-\frac{n^{2}}{12}\)
\(1^{0}+2^{6}+3 \cdots \cdots \cdot n^{6}=\frac{n^{7}}{7}+\frac{n^{6}}{2}+\frac{n^{5}}{2}-\frac{n^{3}}{6}+\frac{n}{4^{2}}\)
What is the fum of the ten firf terms of the ferie \(1^{3}+2^{3}+3^{3}\), \&c. ?
\(n=10\), then \(\frac{n^{2} \times n+1^{2}}{4}=\frac{100 \times 121}{4}=25 \times 121\) \(=3025\) :
4. Required the fum of \(n\) terms of the feries of triangular numbers \(0,1,3,6,10 \ldots \ldots . n\) ?
Let \(\mathrm{A} n^{3}+\mathrm{B} n^{2}+\mathrm{C} n=0,1,2,3 \ldots \ldots n,=\) s.Now the \(\overline{n+1}\) th term of this Series, by Example 2. is \(\frac{n^{2}}{2}+\frac{n}{2}\). Then A. \(\overline{n+I)^{3}}+\mathrm{B} \cdot \overline{n+1)^{2}} \cdot \mathrm{C}\). \(\overline{n+1}=s+\frac{n^{2}}{2}+\frac{n}{2}\). Now, the firt equation being fubtracted from this, we have \(3 A n^{2}+\overline{3 A+} \overline{2 B}\) \(X n+A+B+C=\frac{n^{2}}{2}+\frac{n}{2} \quad\) Or, \(3 A n^{2}+3 A n+\)
\(A+C=\frac{n^{3}}{2}+\frac{\pi}{3}-2 B \times n-B\).
Whence, by equating the homologaus terms, we have \(3 \mathrm{~A}=\frac{1}{2}\), and \(\mathrm{A}=\frac{1}{8}: \frac{\mathrm{r}}{3}-2 \mathrm{~B}=3 \mathrm{~A}\); whence \(2 \mathrm{~B}=\frac{\mathrm{r}}{2}-\frac{1}{2}=0, \mathrm{~A}+\mathrm{C}=-\mathrm{B}\). Hence \(\mathrm{C}=-\frac{1}{\gamma}\). Now, thefe values being fubftituted in the above equation, gives the fum \(=\frac{n^{3}}{6}-\frac{n}{6}=\)
\(\frac{n \cdot \overline{n-1} \cdot \overline{n+1}}{1 \cdot 2} \cdot 3\); and if \(n+1\) be put for \(n\), the fum of \(n\) terms of this feries will be \(\frac{n \cdot \overline{n+1} \cdot \overline{n+2}}{1 \cdot e^{2} \cdot}\),

By proceedins in the fame manner, the fum of \(n\) terms of pyramidal numbers, \(\}, 4,10,20,35\), \&c..... \(n\) will be found \(=\frac{n \cdot \overline{n+1} \cdot \overline{n+2} \cdot \overline{n+3}}{1 \cdot 2} \cdot \frac{4}{3} \cdot \frac{4}{4}\) the fum of any feries of figurate numbers is determined by a like formula, the law of continuation being obvious.

What is the fum of the ten firf terms of triangular numbers \(\mathrm{r}, 3,6,10,15\), \&c.?

Here \(n=10\); then \(\frac{n \cdot n+1 \cdot \overline{n+2}}{1 \cdot 2}=\frac{10 \times 11 \times 12}{6}\) \(=220\).
5. Let the fum of the feries \(\frac{1}{R}+\frac{2}{R^{2}}+\frac{3}{R^{3}}\) continued to \(n\) terms be required?
If we multiply this feries indefinitely continued by \(\left.\overline{\mathrm{R}-\mathrm{I}}\right|^{2}\), or \(\mathrm{R}^{2}-2 \mathrm{R}+\mathrm{I}\), the product is R ; therefore the amount of the indefinite feries \(i \frac{R}{\overline{R-1 \mid}}{ }^{2}\), and the fum of \(n\) terms may be found by fubtracting the terins after the \(n\)th from that amount. Now, the terms after the \(n\)th are \(\frac{n+1}{R^{n}+1}+\frac{n+2}{R^{n}+2}\), \&c. which may be divided into the two following feries:
Firft, \(\frac{n}{\mathrm{R}^{\mathrm{n}}} \times \frac{1}{\mathrm{R}}+\frac{1}{\mathrm{R}^{2}}+\frac{1}{\mathrm{R}^{3}}, 8 \mathrm{cc} .=\frac{n}{\mathrm{R}^{n}} \times \frac{1}{\mathrm{R}-\mathrm{I}^{\prime}}\)
Second, \(\frac{1}{R^{2}} \times \overline{\frac{1}{R}+\frac{2}{R^{2}}+\frac{3}{R^{3}}}\), \&cc. \(=\frac{1}{R^{n}} \times \frac{R}{R-\left.1\right|^{2}}\)
Now, if we write \(a\) for \(\frac{1}{R^{n}}\), and \(r\) for \(R-1\), and fubtract the fum of thefe two feries from the amount of the propofed feries indefinitely continued, the remainder will be found \(=\frac{1-a}{r} \times \mathrm{R}-\frac{n a}{r}\).
6. Let the fum of the feries \(\frac{n-1}{n \mathrm{R}}+\frac{n-2}{n \mathrm{R}^{2}}+\frac{n-3}{n \mathrm{R}^{2}}\) \&c. be required ?
This feries is equal to the difference of the two folbowing.
Firt, \(\frac{n}{n \mathrm{R}}+\frac{n}{n \mathrm{R}^{2}}+\frac{n}{n \mathrm{R}^{3}}, \& \mathrm{c} .=\frac{1}{\mathrm{R}}+\frac{1}{\mathrm{R}^{2}}+\frac{1}{\mathrm{R}^{3}}, \& \mathrm{c} .=\) \(\frac{1-a}{r}\).
Gecond, \(\frac{1}{n R}+\frac{2}{n R^{2}}+\frac{3}{n R^{3}}, 8 c=\frac{1}{n} \times \frac{1}{R}+\frac{1}{R^{2}}+\frac{1}{R^{3}}\) esc. \(=\frac{1}{-} \times \frac{1-a}{r} \times R-\frac{a}{r}\)

The difference of thefe feries is \(\frac{1-a}{r}-\frac{R}{n} \times \frac{1-a}{r}+\frac{a}{r}\), Scringapa. tamp.
tang which reduced becomes
\[
\frac{+a-1}{n} \times r+a-1
\]

To proceed farther would lead us far beyond the limits affigned for this article; we muft therefore refer thofe who require more information on this fubject to the following authors.- Bertrand's Diveloppement, \&c. vol. 1 ; Dodion's Mathematical Repofitory, vol. 1 ; L: merfon's Algebra ; Appendix to Gravefend's Algebra; Hutton's Paper on Cubic Equations and Infinite Séries, in the Philofoplical Tranfactions for \(1780 y\) Mac. laurin's Fluxions; Malcolm's Arithmetic ; Mafere's Annuities; and Scriptores Logarithmici, \&c.; De Moivre's Doctrine of Chances, and a Paper by the fame author in the Philofophical Tranfactions, \({ }^{\circ} 240\); Simpfon's'A1gebra, Effays, Fluxions, and Mifcellanies; Sterling's Summatio et Interpolatio Serierum; Syntagma Mathefios, \&c.

SERINGAPATAM, the capital of Myfore, the dominions of 'Tippoo Sultan, is fituated in an iffand of the Cavery river, about 290 or 390 miles from \(\mathrm{Ma}-\) dras. The ifland, upon furvey, appeared to be about four miles in length by one and a half in breadth, acrofs the middle, where it is likewife higheft, whence it gradually falls and narrows towards the extremities. The weft end of the ifland, on which there is a fort of confiderable ftrength, flopes more, efpecially towards the north; and the ground riling on the oppofite fide of the river commands a diftinct view of every part of the fort. The fort and outworks occupy about a mile of the weft end of the inand, and are diftinguifhed by magnificent buildings, and ancient Hindoo pagodas, contrafted with the more lofty and fplendid monuments lately raifed in honour of the Mahometan faith. The great garden, called the Laul Baug, covers about as much of the eaft end of the inland as the fort and outworks do of the weft; and the whole intermediate fpace, except a fmall inclofure on the north bank near the fort, was, before the laft war, filled with houfes, and formed an extenfive luburb, of which the greateft part was de. Atroyed by Tippoo to make room for batteries to defend the inland when attacked by the combined forces of Earl Cornwallis and the Mahratta chiefs in Februatry 1792. This fuburb, or town of modern ftructure, is about half a mile fyuare, divided into regular crofs freets, all wide, and thaded on each fide by trees. It is furrounded by a flrong mud wall, contains many good houfes, and feems to have been preferved by the Sultan for the accommodation of merchants, and for the convenience of troops fationed on that part of the ifland for its defence. A little to the caftward of the town is the entrance to the great garden, which was laid out in regutlar fhady walks of large cypress trees, and abounding with fruit-trees, lowiers, and vegetables of every defeription. It poffeffed all the beauty and elegance of a country ictirement, and was dignified by the mauloleum of Hyder the late fultan, and a fuperb new' palace built by his fon. This noble garden was devoted to deftruction; and the trees which had Thaded their proud malter, and contributed to his pleafures, were formed into the means of protecting his enemies in fubverting his empire. Before that event,' fo glorious to the arms of England, this infulated metropolis Ppz
ffays

\section*{S E R}

Seringham (fays Major Dirom) mut have been the richeft, mott Seriphus. convenient, and beautiful fpot poffeffed in the prefent
age by any native prince in India; but when the allies left it, the Sultan's fort and city only remained in repair amidft all the wrecks of his former grandeur, the ifland prefenting nothing but the appearance of wretched barrennefs. Tippoo is a man of talents, enterprife, and great wealth ; but, in the opinion of our author, the remaining years of his ill-fated life will be unequal to renew the beauties of his terreftrial paradife. N. Lat. \(32^{\circ} 31^{\prime} 45^{\prime \prime}\). E. Long. \(96^{\circ} 46^{\prime} 45^{\prime \prime}\).

SERINGHAM, an ifland of Indoftan, formed about fix miles north-weft of 'Trinchinopoly by the river Cavery, which divides itfelf into two branches: that to the northward takes the name of Coleroon, but the fouthern branch preferves its old name the Cavery. Each of thefe rivers, after a courfe of about 90 miles, empty themfelves into the fea; the Coleroon at Devicottah, and the Cavery near 'Tranquebar, at about 20 miles diftance from one another. In this ifland, facing Trinchinppoly, ftond a famous pagoda furrounded by feven fquare walls of ttone, 25 feet high and four feet thick. The fpace between the outward and fecond walls meafured 3 Io feet, and fo proportionably of the reft. Each inclofure had four large gates, with a high tower; which were placed, one in the middle of each fide of the inclofure, and oppofite to the four cardinal points. The outward wall was about four miles in circumference, and its gateway to the fouth was ornamented with pillars, fome of which were fingle ftones 33 feet in length and five in diameter ; while thofe that formed the roof were ftill larger; - and in the inmoft inclofure were the chapels. - A bout half a mile to the eaft was another large pagoda called \(\mathcal{Y} u m b i k i f n a\), which had but one in =lofure.

The pagoda of Seringham was held in great veneration, from a belief that it contained the identical image of the god Wiftnou worfhipped by Brama; and pilgrims came here from all parts of India with offerings of money to procure abfolution. A large part of the revenue of the ifland was allotted for the maintenance of the Bramins who inhabited the pagoda; and thefe, with their families, formerly amounted to no fewer than 40,000 perfons, all maintained by the fupertitious liberality of the adjacent country.

SERIOLA, in botany: A genus of plants belonging to the order of polygamia æqualis, and to the clatis of fyngenefia; and in the natural fyftem ranged under the 49th order, Compofita. The receptacle is paleaceous; the calyx fimple; and the pappus is fonewhat plumofe. There are four fpecies; 1. The Levigata. 2. Ethnenfis. 3. Cretenfis. 4. Urens. The firft is a native of the ifland of Candia, and flowers in July and Auguit; the fecond is a native of Italy; and the fourth is a nakive of the fouth of Europe.

SERIPHIUM, in botany; a genus of plants belonging to the order of monogamia, and to the clafs of fyngenefia. 'The calyx is imbricated ; the corolla is manopetalous and regular, with one oblong feed under it. There is only one fpecies, the cinereum, which is a native of the Cape of Good Hope.

SERIPHUS (anc. geog.), one of the Cyclades or iflands in the Ægean fea, called Saxum Seriphium by Tracitus, as if all a rock; one of the ufual places of banifhment among the Romans. The people, Seriphii;

\section*{300 ] S ER}
who, together with the Siphnii, joined Greece againf Xerxes, were almoft the only iflanders who refufed to give him earth and water in token of fubmiffion, (Herodotus). Seriphia Rana, a proverbial faying con. cerning a perfon who can neither fing nor fay; frogs in this ifland being faid to be dumb, (Pliny).

SERMON, a difcourfe delivered in public, for the purpofe of religious infruction and improvement.

Funeral Skrmon. See Funeral Orations.
SERON of ALmonds, is the quantity of two hundred weight; of anife feed, it is from three to four hundred; of Caftile foap, froni two hurdred and an half to three hundred and three quarters.

SEROSITY, in medicine, the watery part of the blood.

SERPENS, in aftronomy, a conftllation in the northern hemifphere, called more particularly Serperis \(O_{p}\) biuchi. The flars in the conftellation Serpens, in Ptolemy's catalogue, are 18; in Tycho's, 13 ; in Hevelius's, 22 ; and in the Britannic catalogue, 64 .
SERPENS Biceps, or Double-beaded Snake; a monfter of the ferpent kind, there being no permanent fpecies of this confornation. That reprefented on Plate CCCCXLIX. and copied from Edwards, came from the ifland of Barbadoes ; and was faid to have been taken out of an egg of the fize of a fmall pullet's egg by a man who found it under-ground as he was digging. The heads were not in an horizontal pofition when the fnake lay on its belly, but inclined to each other on their uader-fides, leaving an opening for the throat to come in between the two heads underneath, as is dxpreffed at A. 'The upper.fide, for the whole length, was covered with fmall icales, falling one over another ; the belly was covered with fingle fcales running acrofs it, in the form of half rings. It was all over of a yellowifh colour, without any fpots or variation. Mr Edwards alfo informs us, that a perfon brought to hiin a common Englifh friake, which had two lieads quite feparate from each other, the necks parting about an inch from the head.

Serpens, Serpent, in the Linnæan fyftem of zoology, an order-of animals belonging to the clafs of amplibiz, and comprelending fix genera, viz. the crotalus, or rattle-fnake; the boa, including ten fpecies; the co. luber, or viper; the anguis, or fnake : the ampbijoand, or annulated fnake, the body and tail of which are compofed of annular fegments; and the caciilia, or tentaculated fnake, the body and tail of which are wrinkled, without fcales, and the upper part furnifhed with two feelers; and including two fpecies. See an account of thefe genera under their refpective names.

The charaters of ferpents, according to Linnæus, Difii are thefe: They are amphibious animals, breathing guith through the mouth by means of lungs only; having a of cer tapering body, no diftinct neck; the jaws not articulated, but dilatable, and deftitute of feet, fins, and ears.

The ferpent has from the beginning been the eneiny Gene of man; and it has hitherto cuntinued to terrify and annoy him, notwitlifanding all the arts which have been practifed to deftroy it. Formidable in itfelf, it deters the invader from the purfuit ; and from its \(f\) gure, eapable of finding fhelter in a little fpace, it is not eafily difcovered by thofe who would venture to encounter it. Thus poffeffed at once of potent aims, and inacceffible or fecure retreats, it baffles all the

\section*{S E R}
ppens. arts of man, though ever fo earnefly bent upon its deftruction. For this reafon, there is fcarce a country in the world that does not fill give birth to this poifonous brood, that feems fornied to quell human pride, and reprefs the boafts of fecurity. Mankind have driven the lion, the tiger, and the wolf, from their vicinity; but the fnake and the viper ftill defy their power.

Their numbers, however, are thinned by human affiduity; and it is poffible fome of the kinds are whol ly defitroyed. In none of the countries of Europe are they fufficiently numerous to be truly terrible. The various malignity that has been afcribed to European ferpents of old is now atterly unknown; there are not above three or four kinds that are dangerous, and their poifon operates in all in the fame manner. The drowly death, the ftarting of the blood from every pore, the infatiable and burning thirft, the melting đown the folid mafs of the whole form into one heap of putrefaction, faid to be occafoned by the bites of African ferpents, are horrors with which we are entirely unacquainted.

But though we have thus reduced thefe dangers, having been incapable of wholly removing them, in other parts of tile world they ftill rage with all their ancient mailignity. In the warm countries that lie within the tropics, as well as in the cold regions of the north, where the inhabitants are few, the ferpents propagate in equal proportion. But of all countries thofe regions have them in the greateft abundance where the fields are unpeopled and fertile, and where the climate fupplies warmth and humidity. All along the fwampy banks of the river Niger or Oroonoko, where the fun is hot, the forefts thick, and the men but few, the ferpents cling among the branches of the trees in infinite numbers, and carry on an unceafing war againft all other animals in their vicinity. Travellers have affured us, that they have often feen large fnakes twining round the trunk of a tall tree, encompaffing it like a wreath, and thus rifing and defcending at pleafure. We are not, therefore, to reject as wholly fabulous the accounts left us by the ancients of the terrible devaltations committed by a fingle ferpent. It is probable, in early times, when the arts were little known, and mankind were but thinly fcattered over the earth, that ferpents, continuing undifturbed poffeffors of the forelt, grew to an amazing magnitude ; and every other tribe of animals fell before them. 'It then might have happened, that ferpents reigned the tyrants of a diftrict for centuries together. To animals of this kiad, grown by time and rapacity to 100 or 150 feet in length, the Hion, the tiger, and even the elephant itfelf, were but fectle opponents. 'That horrible fotor, which even the commoneft and the moft larmlefs fnakes are ftill found to diffufe, might, in thelc larger ones, become too powerful for any living being to withftand; and while they preyed without diftinction, they might thus alfo have poifoned the atmofphere around them. In this manner, having for ages lived in the hidden and unpeopled foreft, and finding, as their appetites were more powerful, the quantity of their prey decreafing, it is pooffible they might venture boldly from their retreats isto the more cultivated parts of the country, and carry confternation among mankind, as they had before defolation among the lower ranks of nature. We hare many hiftories of antiquity, prefenting us fuch a pic-
ture, and exhibiting a whole nation finking under the ravages of a fingle ferpent. At that time man had not learned the art of uniting the efforts of many to effect one great purpofe. Oppofing multitudes only added new victims to the general calamity, and increafed mutual embarraffment and terror. The animal was therefore to be fingly oppofed by him who had the greateft ftrength, the beft armour, and the moft undaunted courage. In fuch an encounter, hundreds muft have fallen ; till one, more lucky than the refl, by a fortunate blow, or by taking the monfter in its torpid interval, and furcharged with fpoil, might kill, and thus rid his country of the deftroyer; Such was the original occupation of heroes ; and thofe who firt obtained that name, from their deftroying the ravagers of the earth, gained it much more defervedly than their fucceffors, who acquired their reputation only for their fkill in deftroying each other. But as we defcend into more enlightened antiquity, we find thefe animals lefs formidable, as being attacked in a more fucceffful manner. We are told, that while Regulus led his army along the banks of the river Bagrada in Africa, an enormous ferpent difputed his paffage over. We are aflured by Pliny, that it was 120 feet long, and that it had deftroyed many of the army. At laft, however, the battering engines were brought out againft it ; and thefe affailing it at a diftance, it was foon deftroyed. Its fpoils were carried to Rome, and the general was decreed an ovation for his fuccefs. There are, perhaps, few facts better afcertained in hiftory than this: an ovation was a remarkable honour; and was given only for fome fignal exploit that did not deferve a triumph: no hiftorian would offer to invent that part of the flory at leaft, without being fubject to the moft fhameful detection. The fkin was kept for feveral years after in the Capin tol; and Pliny fays he faw it there. At prefent, ino deed, fuch ravages from ferpents are fcarce feen in any part of the world; not but that, in Africa and America, fome of them are powerful enough to brave the affaults of men to this day.

\section*{Nequent expleri corda tuendo Terribiles oculos villofaque fetis periore.}

If we take a furvey of ferpents in general, they have marks by which they are diftinguifhed from all the relt of animated nature. They have the length and the fupplenefs of the eel, but want fins to fwim with ; they have the fcaly covering and pointed tail of the lizard, but they want legs to walk with; they have the crawling motion of the worm, but, unlike that animal, they have lungs to breathe with: like all the reptide kind, they are refentful when offended; and nature has fupplied them with -terrible alms to revenge every injury.

Though they are poffeffed of very different degrees \({ }^{3}{ }^{3}\). of malignity, yet they are all formidable to man, and tion of have a trong fimilitude of form to each other. With their refpect to their conformation, all ferpents have a very moutho wide mouth in proportion to the fize of the head ; and, what is very extraordinary, they can gape and fwallow the head of another animal which is three times as big as their own. However, it is noway furprifing that the fkin of the fnảke fhould ftretch to receive fo large a morfel ; the wonder feems how the jaws could take it

\section*{5 ER}

Berpenta in. To explain this, it muft be obferved, that the jaws of this animal do not open as ours, in the manner of a pair of hinges, where bones are applied to bones, and play upon one another : on the contrary, the ferpent's jaws are lield together at the ronts by a ftretching muf. cular kin ; by which means they open as widely as the animal choofes to ftretch them, and admit of a prey much thicker than the fnake's own body. The throat, tike ftretching leather, dilates to admit the morfel; the fomach receives it in part, and the reft remains in the gullet, till putrefaction and the juices of the ferpent's body unite to diffolve it.

Some ferpents lave fangs or canine teeth, and others are without them. The teeth in all are crooked and hollow; and, by a peculiar contrivance, are capable of Eyes. being erected or depreffed at pleafure.

The eyes of all ferpents are fmall, if compared to the length of the body; and though differently coloured in different kinds, yet the appearance of all is malign and heavy ; and, from their known qualities, they ftrike the imagination with the idea of a creature meditating mifchief. In fome, the upper eyelid is wanting, and the ferpent winks only with that below; in others, the animal has a nictitating membrane or nkin, refembling that which is found in birds, which keeps the eye clean and preferves the fight. The fubflance of the eye in all is hard and horny; the cryftalline humour occupying a great part of the globe.

The holes for hearing are very vifible in all: but there are no conduits for fmelling; though it is probable that fome of them enjoy that fenfe in tolerable perfection.

The tongue in all thefe animals is long and forky. It is compofed of two long flefhy fubftances, which terminate in harp points, and are very pliable. At the root it is connected very ftrongly to the neck by two tendons, that give it a variety of play. Some of the viper kind have tongues a fifth part of the length of their bodies; they are continually darting them out; but they are entirely harmilefs, and only terrify thofe who are ignorant of the real fituation of their poifon.

If from the jaws we go on to the gullet, we fhall find it very wide for the animal's fize, and capable of being diftended to a great degree ; at the bottom of this lies the ftomach, which is not fo capacious, and receives orily a part of the prey, while the reft contimues in the gullet for digeftion. When the fubftarce in the ftomach is diffolved into chyle, it paffes into the inteftines, and from thence goes to nourifhment, or to be excluded by the vent.

Like moft other animals, ferpents are furniged with lunge, which we fuppofe are ferviceable in breathing, though we cannot perceive the manner in which this operation is performed; for though lerpents are often feell apparently to draw in their breath, yet we cannot find the fmallet figns of their ever refpiring it again. Their lungs, however, are long and large, and doubtlefs are neceffary to promote their languid circulation. The heart is formed as in the tortoife, the frog, and the lizard kinds, fo as to work without the affiftance of the lungs. It is fingle; the greateft part of the blood flowing from the great veif to the great artery by the fhorteft courfe. By this contrivance of nature we eafily gather two confequences; that fnakes are amphibious, being equally capable of livmg on land
and in the water; "and that alfo they are torpid in win semp ter, like the bat, the lizard, and other animals formed in the fame manner.

The vent in thefe animals ferves for the emiffion of Mode the urine and the frece, and for the purpofes of gene-g ration. The inftrument of generation in the male is double, being forked like the tongue: the ovaries in the female are double alfo; and the aperture is very large, in order to receive the double inftrument of the male. They copulate in their retreats ; and it is faid by the ancients, that in this fituation they appear like one ferpent with two heads.

As the body of this animal is long, flender, and ca-Numbe pable of bending in every direction, the number of joints 8 is joints in the back-bone are numerous beyond what one the hac would imagine. In the senerality of quadrupeds, they amount to not above 30 or 40 ; in the ferpent kind they amount to 145 from the head to the vent, and 25 more from that to the tail. 'The number of thefe joints muft give the back-bone a furprifing degree of pliancy: but this is ftill increafed by the manner in which each of thefe joints are locked, into the other. In man and quadrupeds, the flat furfaces of the bones are laid one againft the other, and bound tight by finews; but in fe:pents, the bones play one within the other like ball and focket, fo that they have full motion upon each other in every direction.

Though the number of joints in the back.bone is Numb great, yet that of the ribs is ftill greater; for, from rib: the head to the vent, there are two ribs to every joint, which makes their number 290 in all. Thefe ribs are furnifhed with mufcles, four in number; whirh being inferted into the head, run along to the end of the tail, and give the animal great ftrength and agility in all its motions.

The fkin alfo contributes to its motions, being compofed of a number of fcales, united to each other by a tranfparent membrane, which grows harder as it grows older, until the animal changes, which is generally done twice a-year. This cover then burfs near the head, and the ferpent creeps from it by an undulatury motion, in a new fkin, much more vivid than the former. If the old flough be then viewed, every fcale will be diftinctly feert like a piece of net-work, and will be found greatelt where the part of the body they covered was largeft.

There is much geometrical neatnefs in the difpofal of the ferpent's fcales, for affifting the animal's finuous motion. As the edges of the foremoft fcales lie oyer the ends of their following feales, to thofe edges, when the fcales are erected, which the animal has a power of doing in a fmall degree, catch in the ground, like the nails in the wheel of a chariot, and fo promote and facilitate the animal's progreffive motion. The erecting thefe fcales is by means of a multitude of dintinet mufcles with which each is fupplied, and one end of which sis tacked each to the middle of the foregning.

In fome of the ferpent kind there is the exacteft fym--metry in thefe fcales; in others they are difpofed more irtegularly. In fome there are larger fcales on the bil\(1 y\), and often antwering to the mumber of ribs; in others, however, the animal is without them. Upon this fight difference, Linnæus has founded his diftinctions of the various claffes of the ferpent tribe.

When we come to compare ferpents with each other, Their
When we come to compare ferpents with each other,

\section*{S E R [303] S E R}
pent. the firt great diftinction appears in their fize; no other tribe of animals differing fo widely in this particular. This tribe of animals, like that of fifhes, feems to have no bounds put to their growth: their bones are in a great meafure cartilaginous, and they are confequently capable of great extenfion : the older, therefore, a ferpent becomes, the larger it grows; and as they feem to live to a great age, they arrive at an enormous fize.

Leguat affures us, that he faw one in Java that was 50 feet long. Carli mentions their growing to above 40 feet; and we bave now the fain of one in the Britifh Mufrum that meafures 326 . Mr Wentworth, who bad large concerns in the Berbices in America, affures us, that in that country they grow to an enormous length. He one day fent out a foldier, with an Indian, to kill wild-fowl for the table; and they accordinsly went fome miles from the fort : in purfuing their game, the Indian, who generally marched before, begimning to tire, went to reft himfelf upon the fallen trunk of a tree, as he fuppofed it to be; but when he was juft going to fit down, the enormous monfter began to move; and the poor favage perceiving that he had approached a bon, the greateft of all the ferpent kind, dropped down in an agony. The foldier, who perceived at fome diftance what had happened, levelled at the ferpent's head, and by a lucky aim fhot it dead: however, he continued his fire until he was affured that the animal was killed; and then going up to refcue his companion, who was fallen motionlefs by its fide, he, to his aftonifhment, found him dead likewife, being killed by the fright. Upon his return to the fort, and telling what had happened, Mr Wentwerth ordered the animal to be brought up, when it was meafured, and found to be 36 feet logg. He had the fkin fluffed, and then fent to Europe as a prefent to the prince of Orange, in whefe cabinet it was lately to be feen at the Hague : but the fkin is fhrunk, by drying, two or three feet. In the Eaft Indies they grow allo to an enormous fize, particularly in the ifland of Java, where, we are affured, that one of them will deftroy and devour a buf. falo. See Boa.

But it is happy for mankind that the rapacity of thefe frightful creatures is often their punifhment; for when. ever any of the ferpent kind have gorged themfelves in this manner, whenever their body is feen particularly diftended with food, they then become torpid, and may be approached and deftroyed with fafety. Fatient of hunger to a furprifing degree, whenever they feize and fwallow their prey, they feem, like furfeited gluttons, unwieldy, fupid, helplefs, and Aeepy : they at that time feek fome retreat, where they may lurk for feveral days together, and digeft their meal in fafety: the fmalleft effort at that time is capable of deftroying them; they can fcarce make any refiftance; and they are equally unqualified for flight or oppofition : that is the happy opportunity of attacking them with fuccefs; at that, time the naked Indian himfelf does not fear to affail them. But it is otherwife when this fleepy interval of digeftion is over; they then iffue, with famifhed appetites, from their retreats, and with accumulated terrors, while every animal of the foreft flies before them.

But theugh thefe animals are of all others the moft voracious, and though the morfel which they fwallow without chewing, is greater than what any other crea-
ture, either by land or water, ean devour; yet no ani. Serpens mals upon earth bear abitinence fo long as they., A - o fingle neal, with many of the fuake kind, feems to be the adventure of a feafon; it is an occurrence, of which they lhave been for weeks, nay fometimes for months, in patient expectation. When they have feized their prey, their indultry for feveral weeks is entirely dife 0 tinued; the fortunate capture of an hour often fatisfies them for the remaining period of their annual activity. As their blood is colder than that of mot other terrefo trial animals, and as it circulates but flowly throurh their bodies, fo their powers of digeftion are but feeble. Their prey continues, for a long time, partly in the ftomach, partly in the gullet, and is often feen in part hanging out of the mouth. In this manner it digefts by degrees; and in proportion as the part below is diffolved, the part above is taken in. It is not therefore till this tedious operation is entirely performed, that the ferpent renews its appetite and its activity.- But fhould any accident prevent it from iffuing once more from its cell, it ftill can continue to bear famine for weeks, months, nay for years together. Vipers * are of * \(6 \mathrm{ec} \cdot A b_{\text {w }}\) ten kept in boxes for fix or eight months, without any: finence. food whatever; and there are little ferpents fometimes fent over to Europe from Grand Cairo, that live for feveral years in glaffes, and never eat at all, nor even ftain the glafo with their excrements.

Other creatures have a choice in their provifion: but the ferpent indifcriminately preys upon all; the buf. falo, the tiger, and the gazelle. One would think that the porcupine's quills might be fufficient to protect it ; but whatever has life ferves to appeafe the hunger of thefe devouring creatures: porcupines, with all their quills, have frequently been found in their fomachs when killed and opened; nay, they molt frequently are feen to devour each other.
